During the last cent. H. has been revolutionized. The deciphering of the Egyptian and Babylonian inscriptions opened up a new world. The researches of archaeologists have enabled us to trace the development of prehistoric man, and have revealed forgotten civilizations such as that of Crete. The anthropological studies of primitive society and religion, headed by Frazer's *Golden Bough*, have laid bare the bases of

HUNTINGDONSHIRE and Peterborough. English co. bounded by Beds, Northants, Lincs, and Cambs, and watered by the Ouse. A large part consists of rich fenland. Much of the co. is now arable, but the western areas still support herds of cattle. Though largely agricultural, the co. has important brickworks at Fletton and paper is manufactured at St. Neots. Huntingdon, the co. town, is becoming a centre for light industries. Other centres are Peterborough, the largest town, Ramsey, St. Ives and Godmanchester. H. is noted for its magnificent medieval church spires. Area 486 sq. m.; pop. (1967) 189,560.

HUNTINGTON, Ellsworth (1876–1947). American geographer. His research and explorations in Mesopotamia, Turkestan, Palestine, and Asia Minor were chiefly concerned with climate and its relation to human activities, and the distribution of civilizations.

HUNYADI (hoon'yodi), János Corvinus (1387–1456). Hungarian statesman and general. B. in Transylvania, reputedly the natural son of the emperor Sigismund, he campaigned successfully against the Turks. He had just driven them from before Belgrade when he d. of the plague.

HUPEI (hoo'peh). Prov. of central China, through which flow the Yangtze-kiang and its tributary the Han-shui. In the W. the land is high, the Yangtze breaking through from Szechwan in gorges, but elsewhere the prov. is low-lying fertile land. In summer rice and cotton are the principal crops, in winter cereals, beans, and vegetables. The greatest urban centre is Wuhan, the cap. Area 72,600 sq. m.; pop. (1957) 30,790,000.

HU'RONS. French nickname (*hure*, head of pig, etc.) for the Wyandot, nomadic Red Indian tribes related to the Iroquois, and living near Lakes Huron, Erie and Ontario in the 16–17th cents. They were decimated by the Iroquois, but some still survive in Quebec and Oklahoma. *Lake Huron*, second largest of the Great Lakes (q.v.), has an area of 23,010 sq. m., of which 13,900 sq. m. are in Canada.

HURRICANE. A violent revolving storm. The name is derived from a Carib word *huracan*, and applied originally only to the W. Indies, but is now used in many countries, though in the E. Indies and the China Seas similar storms are known as typhoons. Hs. are accompanied by a fall in pressure, and winds of up to 100 m.p.h. or more. They have a revolving

HURSTMONCEUX. First built in 1446 by Sir Roger de Flennes, a hero of Agincourt and Treasurer of the Household to Henry VI, the castle has been completely restored (left) and since 1958 has been the home of the Royal Greenwich Observatory (above).

Photos: A. W. Kerr and British Travel and Holidays Association.

speed of 10–15 m.p.h., and blow at over 75 m.p.h. On the Beaufort Scale it is force 12; the severer stages of H. are force 13 (83–92 m.p.h.), 14 (93–103), 15 (104–114), 16 (115–125) and 17 (126–136).

HURSTMONCEUX (hurstmonsoo'). English village, in Sussex, 7 m. N. of Eastbourne, with a 15th cent. but greatly restored castle. To this the Royal Greenwich Observatory moved from Greenwich, 1950–7.

HU SHIH (1891–1962). Chinese scholar and philosopher. An adviser of Chiang Kai Shek, though critical of the Kuomintang's curtailment of civil liberties, he was ambassador to the U.S. 1938–42. Largely through his influence as prof. at Peking Nat. Univ. 1917–26, the Mandarin dialect was abandoned for the colloquial *pai-hua* in modern Chinese writing.

HUSS, John (c. 1373–1415). Bohemian reformer. B. in S. Bohemia, he was ed. at Prague univ. of which he became rector in 1402. He attacked ecclesiastical abuses and was excommunicated. His preaching attracted popular support, and in 1411 Prague was laid under a papal interdict. In 1413 he was summoned to appear before the Council of Constance. There he defended Wycliffe and rejected the Pope's authority, and was burnt at the stake on 6 July 1415.

His followers were known as *Hussites*, and from a body of religious reformers they developed into a nationalist party opposed to German and papal influence in Bohemia. War began in 1419, and the Bohemians were for some years successful under the leadership of Žižka. Subsequently the movement split; and Roman Catholicism was re-established in 1620. The traditions of one section, the Taborites, are carried on by the Moravian Church.

HUSSEIN I
Courtesy of the Jordan
Embassy.

HUSSEIN Ibn Ali (hoosān') (c. 1854–1931). King of the Hejaz. B. in Mecca, he was appointed Sherif of Mecca in 1908. After negotiations with the British he headed an Arab revolt in 1916, and with the aid of T. E. Lawrence raised an army against the Turks. He assumed the title of king of the Hejaz in 1916, but in 1924 was driven out by the Wahabis under Ibn Saud. He d. in Transjordan. His great-grandson Hussein I (1935–), grandson of Abdullah (q.v.),

197 centuries and 61,221 runs in first-class cricket. He played for England 1907-30, and for Surrey from 1905 until his retirement in 1935.

HOBOKEN. City and port of New Jersey, U.S.A., on the Hudson, adjoining Jersey City. H., incorporated 1849, is on the site of a Dutch farm destroyed by Indians in 1643. Pop. (1960) 48,441.

HOCHE (ôsh), Lazare (1768-97). French general. Commissioned in 1792 from the ranks, in 1793 he commanded the Fr. army in Lorraine, expelling the

HOBBEEMA. Dated 1659 'Avenue at Middelharnis' shows a scene on Over Flakkee, then and subsequently an island off southern Holland, until in the 1960s by reclamation part of the mainland. Courtesy of the National Gallery.

Prussians, and in 1796 commanded an unsuccessful attempt to invade Ireland.

HOCHHUTH (hohkh'hoot), Rolf (1933-). Swiss dramatist. Municipal playwright at Basle from 1963, he is best-known for the controversial *Soldiers* (1968), with its implication that Churchill was involved in a plot to assassinate Sikorski (q.v.).

HO CHI MINH (1892-). N. Vietnamese politician. B. in N. Vietnam, he was trained in Moscow, headed the Communist Vietminh from 1941, and, having campaigned against the French 1946-54, became Pres. and P.M. of the Democratic Rep. at the armistice. Aided by the Communist bloc, he has done much to develop industrial potential, and although he relinquished the premiership in 1955, he was re-elected Pres. in 1960.

HOCHEY. A game using hooked sticks, not unlike the modern ones, was played by the ancient Greeks, and under the names of 'hurley' and 'shinty' a primitive form of the game was played in Ireland and Scotland. Modern H. dates from 1875 when the Men's H. Association rules were drafted.

It is played between 2 teams, each of not more than 11 players. The ground is 100 yds. long and 55-60 yds. wide. Goals, 7 ft. high by 4 yds. wide, are placed within a striking circle of 16 yds. radius, from which all shots at goal must be made. The white ball weighs 5½ to 5¾ oz., its circumference being 8½ in. to 9½ in., and the stick must not exceed 2 in. in diameter or 28 oz. in weight. Game is started by a 'bully-off' in which the centre-forwards strike the

stick 3 times before playing the ball. The ball may be stopped with the hand or foot or other part of the body, but not held, picked up, thrown or kicked, except by the goalkeeper in his own striking circle. If the ball is sent into touch, it is returned to play by a 'roll-in', i.e. rolled in by hand. The game is divided into two 35 min. periods; it is controlled by two umpires, one for each half of the field. The women's game is governed by the Women's H. Board of Great Britain and Ireland.

HOCKNEY, David (1937-). British artist. Trained at Bradford School of Art and the Royal College of Art, he made his first reputation in the Young Contemporaries Show of 1961. His work is colourful, inventive and innocently joyous, as in his representations of water.

HODGKIN, Alan Lloyd (1917-). British physiologist. Both H. and A. F. Huxley, former students of Lord Adrian (q.v.), were engaged in research on the mechanism of conduction in peripheral nerves 1946-60, during which they were elected F.R.S., and in 1963 with Sir John Eccles (q.v.) shared the Nobel prize for physiology and medicine.

HODGKIN, Dorothy Crowfoot (1910-). British chemist. Wolfson research prof. of the Royal Society at Oxford Univ. from 1960, she was awarded a Nobel prize 1964 for work on the determination by X-ray studies of the structure of important biochemical compounds, e.g. vitamin B12, a liver extract used in combating pernicious anaemia, and penicillin. She m. in 1937 Thomas Lionel H. (1910-), lecturer in the govt. of new states, Univ. of Oxford, from 1965. In 1965 she was awarded the O.M.

HODGKINS, Frances (1870-1947). New Zealand landscape and still-life artist. She eventually settled in Paris and did some of her best work between the ages of 60 and 70. Her paintings have a poetic quality.

HODGSON, Ralph (1871-1962). British poet. B. in Yorks, he is best remembered for the anthology pieces 'The Bull' and 'The Song of Honour' in *Poems* (1917). He was an expert breeder of bull-terriers and lived in the U.S. in later life.

HODSON, James Lansdale (1891-1956). British author. His novels deal mainly with working-class life in his native Lancs., e.g. *Harvest in the North* (1934) and *God's in his Heaven* (1935).

HOE (hō), Richard March (1812-86). American inventor. He was the head of a New York press-manufacturing business who invented the rotary press in 1846, and also a device to fold newspapers as they came from the press.

HOFFA, James Riddle (1913-). American trade unionist. Pres. of the 1½-million-strong International Brotherhood of Teamsters (expelled from the A.F.L.-C.I.O. in 1957 and banned from re-entry) from 1957, he was indicted by a Federal Grand Jury in 1962 for accepting more than \$1,000,000 in illegal payments and charged by the Senate Permanent Subcommittee on Investigations with defiant indifference to the interests of his members and to misuse of union funds by corrupt officials. In 1964 he was sentenced to 8 yrs. gaol for trying to bribe the Federal Court Jury in 1962 hearing a conspiracy charge against him.

HOFFMAN, Paul Gray (1891-). American administrator. B. in Chicago, he was chairman of the Studebaker Corporation from 1953 and of the combined Studebaker-Packard corporation 1954-6. In 1959 he was appointed managing director of the newly created U.N. Special Fund for economic assistance to under-developed countries, and became administrator United Nations Development Programme in 1966.

HOFFMANN, Ernst Theodor Amadeus (1776-1822) German composer and writer. A lawyer in Berlin, he enjoyed great success with his opera *Uriel* (1816) and his *Fantastic Tales* inspired Offenbach's *Tales of H.*

HYACINTHE, Père. Name borne by the French preacher Charles Loyson (1827–1912), when he was a Carmelite monk. One of the most famous pulpit orators of the day, he denounced ecclesiastical abuses with great boldness and was excommunicated in 1869. In 1872 he m. an American, and in his latter years was a Liberal Catholic curate in Paris and Geneva.

HYDASPES. Classical name of r. JHELUM.

HYDE, Douglas (1860–1949). Irish scholar and statesman, known in Gaelic as 'the lovely little branch'. Founder-pres. of the Gaelic League 1893–1915, he was Pres. of Eire 1938–45. His works incl. *Love Songs of Connacht* (1894).

HYDE PARK. One of the largest open spaces in London, England. It occupies c. 350 acres in Westminster (373 before the Park Lane traffic scheme was carried out). It adjoins Kensington Gardens (264 acres), and incl. the Serpentine (32 acres). Here was held in 1851 the Great Exhibition. Rotten Row is a famous riding track.

HYDERABAD. Capital city of the Indian state of Andhra Pradesh on the Musi, a tributary of the Kistna. Most famous of its buildings is the Jama Masjid mosque. Pop. (1961) 1,252,337.

H. was formerly cap. of the princely state of H. which occupied the greater part of the Deccan, and was by far the largest of the Indian princely states. The majority of its people were Hindu, but the ruler, called the Nizam, belonged to a Moslem dynasty. Relations between the Nizam and the British had been regulated by a series of agreements; and when the partition of British India was pending in 1947 the Nizam declared his wish to assume complete independence. This the new govt. of India would not allow; and after being subjected to a show of force the Nizam acceded to India in 1950, H. becoming a state of the Union. In 1956 the state disappeared from the map: it was divided between Bombay state (included in that part of it in 1960 created Maharashtra), Mysore, and Andhra.

HYDERABAD. City of W. Pakistan. H. was the capital of Sind until 1843, when Sind was conquered by the British. Still a military headquarters, it has many industries and a medical school. Pop. (1961) 434,537.

HYDER ALI (hi'der ah'lē) (c. 1722–82). Indian Moslem warrior. In command of the army in Mysore from 1749, he became the actual ruler of the state 1759 and rivalled British power in the area until his triple defeat by Sir Eyre Coote in 1781 during the Anglo-French wars. He was the father of Tipoo (q.v.).

HYDRA (hi'dra). Genus of freshwater animals, simplest of the order Hydrozoa. The body is a double-layered tube (with 6–10 hollow tentacles round the mouth) measuring $\frac{1}{2}$ in. extended but capable of contracting to a small knob. Multiplication is by the formation of buds, by division into 2 or more pieces, and by sexual reproduction (there are no organs except those of reproduction). Usually fixed to waterweed, the H. feeds on minute animals which are caught and paralysed by the stinging cells on the tentacles.

HYDRANGEA (hidrān'-jya). Flowering shrub (*Hydrangea macrophylla*) of the Saxifragaceae family and native to Japan, so named from the Gk. for water vessel, after its cup-like seed capsules. Also called hortensia, it normally produces round heads of pink flowers, but these may be blue if certain chemicals, e.g. alum or iron, are in the soil.

HYDRAULICS (hidraw'-liks). The science that

HYDRA. Specimen with: A, vegetative buds; B, with sex cells (1, egg; 2, sperm) and C, contracted.

HYDRAULICS. A tidal model of the Tees estuary, built in one of the large wave basins at the Department of Scientific and Industrial Research, Hydraulics Research Station, Wallingford, Berkshire, England. The model has been used to determine the feasibility of maintaining, under the action of waves and tidal currents, a deepened channel across the bar at the entrance to the estuary. Courtesy of Hydraulics Research Station.

deals with the dynamics of liquids (hydrodynamics) especially as applied to engineering. It generally refers to the study of water and falls into 2 main branches: *hydrostatics*, which deals with the equilibrium of liquids and the laws relating to liquid pressure, and incl. the study of pressure on submerged areas of any shape or inclination (water gates, dams, tanks, divers, diving bells, hydraulic presses, etc.), the measurement of pressure by means of manometers or pressure gauges, and buoyancy and flotation problems; and *hydrokinetics*, which deals with the problems of liquids in motion and incl. flow of all different types (from steady uniform to unsteady non-uniform) through pipes, conduits, orifices, nozzles, weirs, etc., discharge of water through siphons, valves, branching or looping lines, flow of water in rivers, problems connected with hydraulic turbines, pumps, and other machinery.

HYDROCEPHALUS (hidrosē'alus). Excess of fluid within the skull; 'water on the brain'. In infants it may be congenital and was once commonly due to tubercular inflammation of the brain membranes (meninges), or to blocking by local inflammation of the channel between the ventricles of the brain and the spinal column. The head is much enlarged, and the condition may be fatal; but sometimes can resolve spontaneously or be treated by surgical inclusion of a valve.

HYDROCHLORIC (hidrōklō'rik) **ACID** (HCl aq.). A chemical reagent, known also as muriatic acid or spirits of salts, consisting of gaseous hydrogen chloride in water. H.A. is used extensively in industry in reactions with metals, e.g. the recovery of zinc from galvanized scrap iron and the production of chlorides and chlorine. Highly corrosive, it will attack most metals and dissolve metallic oxides. Oxidizing agents react with it to form chlorine, the salts of H.A. being known as chlorides.

HYDROCYANIC (hidrosī-a'nik) **ACID**. Also known as prussic acid, H.A. is a solution of hydrocyanic gas (HCN) in water and is a colourless, highly poisonous, volatile liquid with a characteristic smell of bitter almonds. Hydrogen cyanide is made by the reaction of sodium cyanide with dilute sulphuric acid and is used for fumigation. It forms a series of salts called cyanides, sodium cyanide being used in the cyanide process for extracting gold and silver from ores.

HYDRODYNAMICS. Science of fluids in motion. The theory of H. is concerned almost entirely with perfect fluids, such as water, alcohol, and ether, and indeed most liquids which are not classed as viscous

Pinakothek. In 1515 H. went to Basle, where he became friendly with Erasmus, and in 1517 to Lucerne, where he painted the façades of houses. He was working in Basle again 1519–26, and to this period belong the wood engravings for the *Dance of Death*. He also executed title pages for Luther's translation of the N.T. and More's *Utopia*, and did a number of woodcuts of O.T. subjects. One of his most famous works is the 'Meyer Madonna', a fine altar-piece at Darmstadt. In 1527 he came to England, and in 1536 became court painter to Henry VIII. He d. of the plague. See illus. p. 469.

HOLBERG, Ludwig von, baron (1684–1754). Danish historian and dramatist. B. in Bergen, he travelled widely 1704–16, and subsequently obtained professorships at Copenhagen univ. It was at this time that he determined to found a Danish literature written in the vernacular. He produced many dramatic and satirical works between 1719 and 1731, and 1721–7 directed the Copenhagen theatre.

HOLBROOKE, Josef (1878–1958). British composer. His romantic works, e.g. 'The Raven', a symphonic poem, the operatic trilogy *The Cauldron of Annwen* and quantities of chamber music were the height of fashion in the post-Victorian period. He was also well known as a critic.

HOLDEN, Charles (1874–1960). British architect, remembered for his Underground stations, incl. Piccadilly, and the buildings of the Univ. of London.

HOLFORD, William Graham, baron (1907–). British architect. B. in Johannesburg, he was Lever prof. of civic design at Liverpool from 1936, where he had studied and was to plan the nuclear laboratories, and in 1948 became prof. of town planning at London. His varied work has been influential: he was pres. R.I.B.A. 1960–2 and was created a life peer 1965.

HOLINSHEAD, Ralph (c. 1520–c. 1580). English chronicler. B. probably in Cheshire, he went to London as assistant to a printer, and pub. in 1578 2 vols. of the *Chronicles of England, Scotland and Ireland*, which were largely used by Shakespeare.

HOLLAND, Henry Richard Vassall Fox, 3rd baron H. (1773–1840). British Whig statesman. The son of the 2nd Lord Holland, he became Lord Privy Seal in 1806–7. His seat at Holland House was for many years the centre of Whig political and literary society.

HOLLAND, Sidney George (1893–1961). New Zealand statesman. In 1940 he succeeded to the leadership of the National Party, then in opposition, but was P.M. 1949–57.

HOLLAND, North and South. Two provs. of the Netherlands. N.H. occupies the peninsula jutting northwards between the North Sea and the IJsselmeer. Most of it is below sea-level, protected from the sea by a series of sand dunes and artificial dykes. The cap. is Haarlem; other towns are Amsterdam, the largest and most important, Hilversum, Den Helder, and the cheese centres Alkmaar and Edam. Area 1,016 sq. m.; pop. (1966) 2,200,602.

S.H., to the S. of N.H., is also low-lying. The Hague is its cap.; other important towns are Rotterdam, Leyden, Gouda, and Delft. Dairy cattle are reared and dairy products are important; there are petroleum refineries at Rotterdam, distilleries at Schiedam. Area 1,085 sq. m.; pop. (1966) 2,902,572.

Because the provs. of N. and S. H. have always been the wealthiest parts of the Netherlands (q.v.), the name HOLLAND is frequently used for the whole country – even by Dutchmen.

HOLLAND. Parts of. Separate administrative co. within Lincolnshire, England. The principal town is Boston. Area 419 sq. m.; pop. (1967) 105,120.

HOLLAR, Wenceslaus (1607–77). Bohemian engraver. B. at Prague, he went to England in 1637, and was appointed drawing master to the Prince of Wales. He made numerous plates of views of London and of various other cities which he visited.

HOLLY. Trees and bushes of the *Ilex* genus of the Aquifoliaceae family. The evergreen European H.

(*I. aquifolium*) may grow 60–80 ft. high and has a smooth grey bark and highly polished leaves, wavy and spined at the edges. The small whitish flowers, borne in May, are followed by scarlet berries. Branches of both the British and American species are used for Christmas decoration.

HOLLYHOCK. Garden perennial, *Althaea rosea*, of the Malvaceae family. Originally a native of Asia, the H. was introduced into Britain some 3

cents. ago. The flower spikes up to 10 ft. in height.

HOLLYWOOD. Suburb of Los Angeles, California, U.S.A., from 1911 the centre of the U.S. film industry. The film stars' homes are chiefly situated at Beverly Hills nearby.

HOLMES, Oliver Wendell (1809–94). American writer. B. at Cambridge, Mass., he became prof. of anatomy at Dartmouth (1838–40) and at Harvard (1847–82). In 1857 he founded with Lowell the *Atlantic Monthly*, in which were pub. the essays and verse collected in 1858 as *The Autocrat of the Breakfast-Table*, a record of the imaginary conversation of boarding-house guests. This was followed by *The Professor at the Breakfast-Table* and the novel *Elsie Venner* (1861).

HOLMIUM (Lat. *Holmia* for Stockholm). Symbol Ho, at. wt. 164.94, at. no. 67. Discovered by Cleve in 1897, H. is one of the rare earth metals and has not yet been isolated. It occurs in various minerals such as gadolinite.

HOLOGRAPHY. The technique of reconstructing a 3-dimensional image from the reflected waves of a source of single frequency: it operates equally well in sound and light. It is thought that bats owe their ability to weave through wire obstructions etc. to a system of bioholography.

HOLST, Gustav Theodore (1874–1934). British composer. B. at Cheltenham, of Swedish descent, he studied at the R.C.M. under Stanford, became a trombonist, and was a teacher in London and Reading. He composed operas (*Savitri*, *At the Boar's Head*, etc.), ballets, choral works ('Hymns from the Rig Veda', 'The Hymn of Jesus', etc.), orchestral suites (among which is 'The Planets'), songs, etc.

HOLT, Harold Edward (1908–67). Australian statesman. B. in Sydney, son of a teacher, he was Min. of Labour 1940–1 and 1949–58, and Federal Treasurer 1958–66, when he succeeded Menzies as P.M. He was drowned in a swimming accident.

HOLTBY, Winifred (1898–1935). British novelist. An ardent advocate of women's freedom and racial toleration, she is best known for her novel *South Riding* (1936), set in her native Yorkshire. See also VERA BRITAIN.

HOLYHEAD (hol'ihed). Seaport (U.D.) on the N. coast of H. Island, off Anglesey, Wales. H. Island is linked by road and railway bridges with Anglesey, and there are regular sailings between H. and Dublin. Pop. (1961) 10,408.

HOLY ISLAND. English island 2 m. off the coast of Northumberland, to which it is connected by a causeway. St. Aidan founded a monastery there in 635.

HOLYHEAD ISLAND is sometimes called Holy Island.

HOLY LAND. See PALESTINE.

HOLYOAKE, George Jacob (1817–1906). British progressive. B. in Birmingham, he early became an Owenite and a Chartist, and in 1842 was imprisoned

H. (*H. brunnea*) found on the S. African coasts; and the spotted **H. (*H. crocuta*)** common S. of the Sahara. Remarkably strong, both in its bone-cracking jaws and muscular power, the **H.** has always had value as a scavenger, though it will also attack live cattle and sometimes human beings.

HYÈRES (ē-ār'). French town in the dept. of Var. It has a mild climate, and is a popular winter health resort, with some industry: e.g. olive-oil presses; export of violets, strawberries, vegetables. Pop. (1962) 33,693.

HYGIEIA (hēj-ē'ya). In Gk. mythology, the goddess of health, the dau. of Aesculapius.

HYGIENE (hijēn). The science of health, whose aim is the preservation of health, the prevention of disease, and the prolongation of life by proper attention to physical laws. It is chiefly concerned with such external conditions as the purity of air and water, sunlight, the cleanliness of body and dwelling-place, dietary rules, conditions of labour and recreation, etc.

HYGROMETER (higrom'-). Instrument for measuring the absolute or relative humidity (q.v.) of the atmosphere. The relative humidity is usually measured by means of a special type of **H.** consisting of 2 identical mercury thermometers, the bulb of one being dry and that of the other kept moist by a covering of muslin dipping into a reservoir of water. The evaporation from the wet bulb cools that thermometer relatively to the dry one, and tables are supplied giving values of the relative humidity at the temperature of the dry bulb for various values of the difference of temperature between the 2 thermometers.

HYKSOS (hik'sōz) ('Shepherd kings' or 'princes of the desert'). A Semitic people which overran Egypt in the 18th cent. B.C. and established their own dynasty, which lasted till 1580 B.C.

HYLTON, Jack (1892–1965). British impresario. Originally famous from 1922 as a band leader, he in later years concentrated on presenting such shows as *Salad Days* and the *Crazy Gang* series.

HYMANS (ēmōns'), Paul (1865–1941). Belgian statesman. He entered the Chamber in 1900 as a Lib., and acted as Belgian Minister in London during the F.W.W. He was For. Min. 1918–20, 1924–5, 1927–34, and 1934–5.

HYMEN (hi'men). In Greek mythology, the son of Apollo and one of the Muses, he was the god of marriage and in art is represented as a youth carrying a bridal torch.

HYMENOPTERA. Order of insects, including ants, bees, etc., with a waist, and the saw-flies without a waist. They have 4 membranous wings. The female possesses an ovipositor or a sting, and the mouthparts of both sexes are suited to biting or sucking. They go through a complete metamorphosis.

HYMNS. Any compositions celebrating a deity which are intended to be sung or chanted. The use of **Hs.** has been common to most great ancient and modern religions. Christian hymnology originates with the O.T. psalms, those in the N.T. following closely in the same tradition. From the 4th cent. Latin was used as well as Greek in hymn-writing. St. Ambrose is thought to have introduced congregational singing and the full development of church music. In the 6th cent. pope Gregory the Great instituted the more severe mode of the Gregorian chant. Greatest of the medieval hymn-writers was the 12th cent. Adam of St. Victor.

The earliest English hymn is the 7th cent. fragment by Caedmon, but in general hymn-writing in the vernacular waited on the Reformation, and even in the 18th cent. Church of England services relied on the metrical psalms of Sternhold and Hopkins, and of Tate and Brady. Among 17th cent. writers are Herbert, Baxter, Ken, and Bunyan. In 1737 the first modern hymn book was pub. by John and Charles Wesley; other

writers are Toplady, Newton, the poet Cowper, Watts, and the Taylor sisters. To counterbalance the Nonconformist predominance of the 18th cent. the 19th produced Heber, Newman, Keble, Lyte, and many others. Anglican worship is based on the *Hymns Ancient and Modern* (1861), ed. by Sir H. W. Baker, and notable for translations of ancient hymns, often by J. M. Neale. Most famous of the Scottish writers is Horatius Bonar. The popular **H.** was developed in America by Moody and Sankey, and in England by the Salvation Army. Richest of the Continental countries in **Hs.** is Germany, with writers such as Luther and Gerhardt.

HYNDMAN, Henry Mayers (1842–1921). British Socialist. He was a Tory democrat before he came across Marx's *Capital*, which converted him to scientific socialism. In 1881 he was a founder of the Democratic Federation which in 1884 became the Social Democratic Federation. He wrote *England for All* (1881), and devoted his life to Socialist propaganda.

HYOSCINE (hi-ōsin) or **Scopolamine** (C₁₇H₂₁O₄N). An important alkaloid used for its hypnotic powers, in medicine in combination with morphine, to produce 'twilight sleep'.

HYPATIA (hi-pā'shia) (A.D. 370–415). Greek woman philosopher, b. at Alexandria. She studied Neo-Platonism at Athens, and succeeded her father Theon as prof. of philosophy at Alexandria. St. Cyril, bishop of Alexandria, becoming jealous of her influence, denounced her as a pagan enchantress, and inspired a mob of monks to murder her.

HYPHESIS. Classical name of the r. BEAS.

HYPNOTICS. Substances which produce a state like natural sleep. They depress the brain centres governing consciousness and mental activity. Taken in excess they suspend sensation and the power of movement, or even the action of the lungs and heart. The best-known are the alcohols, chlorals, and barbiturates.

HYPNOTISM. The production of a state in which consciousness and will are suspended but other functions are not impaired. The patient is then extremely susceptible to suggestion and will carry out orders at once or long after he has been awakened, and may be made insensible to pain. The **H. Act** 1952 controlled exploitation of **H.** as entertainment.

HYPODERMIC (hipo-) **SYRINGE**. An instrument used for injecting fluids beneath the skin. It consists of a small graduated tube of glass and sometimes also of metal, with a close-fitting piston and a nozzle on to which a hollow needle can be fitted. Various types incl. disposable plastic, and automatic spring-loaded **H.Ss.**

HYPOTENUSE. The side of a right-angled triangle opposite the right angle. See also **PYTHAGORAS**.

HYPOTHERMIA. Use of cooling anaesthesia – also known as hibernation – to lower the temperature of the body for heart surgery and to tide over a dangerous phase of illness. Notable cases incl. that of Mrs. Ellen Moore, unconscious for 169 days after head injury, who was kept in a virtual state of **H.** for a week at Newcastle General Hospital. Her child was afterwards born normally. The body's metabolism slows down at low temperatures, and less strain is imposed upon the vital organs, particularly the brain and the heart.

HYPSONETER (hipsom'-). A double steam vessel for testing the accuracy of a thermometer at the boiling point of water. It was originally used for determining heights by changes in the b.p. with changes in pressure – hence the name from the Gk. *hypsos*, height.

HYRAX

Wolf's *Prolegomena*, which attempted to prove that the *Iliad* was derived from earlier ballads. The origin of the poems remains a subject of controversy; in its later stages the controversy has been much affected by excavations at Troy, Mycenae, and in Crete.

HOMER, Winslow (1836–1910). American artist. B. in Boston, he estab. his reputation as a realist genre painter with 'Prisoners from the Front' (1866). He is celebrated for his farm and sea scenes, and for water-colours (influenced by English practice) of free brilliance, as in his West Indian studies.

HOME RULE. The slogan of the Irish nationalist movement 1870–1914; it stood for the repeal of the Act of Union, and the establishment of an Irish parliament within the framework of the British Empire. The slogan was popularized after 1870 by Isaac Butt and Parnell, his successor in the nationalist leadership. Gladstone's H.R. bills of 1886 and 1893 were both defeated; Asquith's H.R. bill became law in 1914, but was suspended during the F.W.W. After 1918 the demand for an independent Irish republic replaced that for H.R.

HOMOEOPATHY (homi-o'pathi). A system of medicine, introduced by the German physician Samuel Hahnemann (1755–1843), based on the treatment of morbid conditions by what would induce such diseases in healthy bodies, and on the administration of simple drugs in small quantities only. It is opposed to allopathy (q.v.).

HOMOPTERA. Sub-order of insects in the order Hemiptera (q.v.), generally distinguished from the Heteroptera by the uniform consistency of the front wings. It includes the cicadas, aphides, and scale insects.

HOMOSEXUALITY. Sexual propensity for the same sex, often considered an inborn genetic variant, but more probably a circumventive adaptation for coping with fears of heterosexuality. The Sexual Offences Act (1967) legalized homosexual acts between consenting adults in private in England and Wales.

HÖMS. City, cap. of H. dist., in Syria, near the Orontes, 55 m. N.E. of Tripoli. It is the trade centre of an area producing silk, cereals, fruit; and makes silk textiles and jewellery. Zenobia, queen of Palmyra, was defeated at H. by Aurelian in 272. Pop. (1960) 148,386.

HÖNAN. Prov. of N. China, crossed by the Hwang-ho. The cap. is Chengchow. It produces grain, cotton, soya beans, tobacco, ground-nuts, cotton textiles, processed foods. Area 64,500 sq. m.; pop. (1957) 48,670,000.

HONDECOETER (hon'dekooter), Melchior (1636–95). Dutch artist. B. at Utrecht, he became famous for his paintings of birds.

HONDO. Another name for HONSHU.

HONDURAS. Central American republic. The country is mountainous, the loftiest range being the Montañas de Selaque, rising to c. 7,000 ft. The extensive forests are exploited for mahogany and other valuable timber; rich mineral deposits incl. gold and silver. The country is well watered, and agriculture is important, the chief product being bananas; others are coffee, maize, sugar cane, and cattle. Road and rail links are limited, air transport being more usual, consequently the mineral potential is unexploited. The cap. is Tegucigalpa.

H. was discovered by Columbus in 1502, and first settled by Spaniards in 1524. Freedom from Spain was gained in 1821, and H. left the Fed. of Central America to become an independent state in 1838. A military coup in 1963 was followed 1965 by a return to constitutional rule. There is a single Congress of Deputies, elected by popular vote (men and women over 18) for 6 years, as is the president. Area 43,227 sq. m.; pop. (1966) 2,362,800.

HONDURAS, British. See BRITISH HONDURAS.

HONEGGER, Arthur (1892–1955). Swiss composer.

B. at Le Havre, he was ed. at Zürich and Paris, and in the 1920s joined the group of French composers known as *Les Six*. Later his work became more deeply expressive, and is very varied in form, esp. opera (*Antigone*), ballet (*Skating Rink*), oratorio (*Le roi David*), programme music ('Pacific 231' inspired by a railway engine), and the *Symphonie liturgique*.

HONEYSUCKLE

HONEY-EATER, or **Honey-Sucker**. Name given to Australasian birds in the family Meliphagidae. They possess long tongues by means of which they can collect nectar from flowers.

HONEYSUCKLE. Popular name for plants of the *Lonicera* genus of the Caprifoliaceae family. The common British H., or Woodbine (*L. periclymenum*) is a climbing plant with sweet-scented flowers, purple and yellow-tinted outside and creamy-white inside. The N. American trumpet H. (*L. sempervirens*) is very handsome and incl. scarlet and yellow varieties.

HONFLEUR (onflör). Seaport on the N. coast of France, on the S. shore of the Seine estuary opposite Le Havre, in Calvados dept. Much of its trade is carried on with England. Pop. (1962) 9,132.

HONG KONG (Cantonese, 'fragrant harbour').

HONAN. The steep curved road leading to Sanmen gorge, where the first major water conservancy undertaking was constructed on the main course of the Hwang Ho (Yellow river), comprising a dam and a hydro-electric power station. Photo: Camera Press.

H. (*H. brunnea*) found on the S. African coasts; and the spotted H. (*H. crocuta*) common S. of the Sahara. Remarkably strong, both in its bone-cracking jaws and muscular power, the H. has always had value as a scavenger, though it will also attack live cattle and sometimes human beings.

HYÈRES (ē-ār'). French town in the dept. of Var. It has a mild climate, and is a popular winter health resort, with some industry: e.g. olive-oil presses; export of violets, strawberries, vegetables. Pop. (1962) 33,693.

HYGIEIA (hēj-ē'ya). In Gk. mythology, the goddess of health, the dau. of Aesculapius.

HYGIENE (hijēn). The science of health, whose aim is the preservation of health, the prevention of disease, and the prolongation of life by proper attention to physical laws. It is chiefly concerned with such external conditions as the purity of air and water, sunlight, the cleanliness of body and dwelling-place, dietary rules, conditions of labour and recreation, etc.

HYGROMETER (hīgrom'-). Instrument for measuring the absolute or relative humidity (q.v.) of the atmosphere. The relative humidity is usually measured by means of a special type of H. consisting of 2 identical mercury thermometers, the bulb of one being dry and that of the other kept moist by a covering of muslin dipping into a reservoir of water. The evaporation from the wet bulb cools that thermometer relatively to the dry one, and tables are supplied giving values of the relative humidity at the temperature of the dry bulb for various values of the difference of temperature between the 2 thermometers.

HYKSOS (hik'sōz) ('Shepherd kings' or 'princes of the desert'). A Semitic people which overran Egypt in the 18th cent. B.C. and established their own dynasty, which lasted till 1580 B.C.

HYLTON, Jack (1892-1965). British impresario. Originally famous from 1922 as a band leader, he in later years concentrated on presenting such shows as *Salad Days* and the *Crazy Gang* series.

HYMANS (ēmōnz'), Paul (1865-1941). Belgian statesman. He entered the Chamber in 1900 as a Lib., and acted as Belgian Minister in London during the F.W.W. He was For. Min. 1918-20, 1924-5, 1927-34, and 1934-5.

HYMEN (hī'men). In Greek mythology, the son of Apollo and one of the Muses, he was the god of marriage and in art is represented as a youth carrying a bridal torch.

HYMENOPTERA. Order of insects, including ants, bees, etc., with a waist, and the saw-flies without a waist. They have 4 membranous wings. The female possesses an ovipositor or a sting, and the mouth-parts of both sexes are suited to biting or sucking. They go through a complete metamorphosis.

HYMNS. Any compositions celebrating a deity which are intended to be sung or chanted. The use of Hs. has been common to most great ancient and modern religions. Christian hymnology originates with the O.T. psalms, those in the N.T. following closely in the same tradition. From the 4th cent. Latin was used as well as Greek in hymn-writing. St. Ambrose is thought to have introduced congregational singing and the full development of church music. In the 6th cent. pope Gregory the Great instituted the more severe mode of the Gregorian chant. Greatest of the medieval hymn-writers was the 12th cent. Adam of St. Victor.

The earliest English hymn is the 7th cent. fragment by Caedmon, but in general hymn-writing in the vernacular waited on the Reformation, and even in the 18th cent. Church of England services relied on the metrical psalms of Sternhold and Hopkins, and of Tate and Brady. Among 17th cent. writers are Herbert, Baxter, Ken, and Bunyan. In 1737 the first modern hymn book was pub. by John and Charles Wesley; other

writers are Toplady, Newton, the poet Cowper, Watts, and the Taylor sisters. To counterbalance the Nonconformist predominance of the 18th cent. the 19th produced Heber, Newman, Keble, Lyte, and many others. Anglican worship is based on the *Hymns Ancient and Modern* (1861), ed. by Sir H. W. Baker, and notable for translations of ancient hymns, often by J. M. Neale. Most famous of the Scottish writers is Horatius Bonar. The popular H. was developed in America by Moody and Sankey, and in England by the Salvation Army. Richest of the Continental countries in Hs. is Germany, with writers such as Luther and Gerhardt.

HYNDMAN, Henry Mayers (1842-1921). British Socialist. He was a Tory democrat before he came across Marx's *Capital*, which converted him to scientific socialism. In 1881 he was a founder of the Democratic Federation which in 1884 became the Social Democratic Federation. He wrote *England for All* (1881), and devoted his life to Socialist propaganda.

HYOSCINE (hi-ōsin) or *Scopolamine* (C₁₇H₂₁O₄N). An important alkaloid used for its hypnotic powers, in medicine in combination with morphine, to produce 'twilight sleep'.

HYPATIA (hīpā'shia) (A.D. 370-415). Greek woman philosopher, b. at Alexandria. She studied Neo-Platonism at Athens, and succeeded her father Theon as prof. of philosophy at Alexandria. St. Cyril, bishop of Alexandria, becoming jealous of her influence, denounced her as a pagan enchantress, and inspired a mob of monks to murder her.

HYPHISIS. Classical name of the r. BEAS.

HYPNOTICS. Substances which produce a state like natural sleep. They depress the brain centres governing consciousness and mental activity. Taken in excess they suspend sensation and the power of movement, or even the action of the lungs and heart. The best-known are the alcohols, chlorals, and barbiturates.

HYPNOTISM. The production of a state in which consciousness and will are suspended but other functions are not impaired. The patient is then extremely susceptible to suggestion and will carry out orders at once or long after he has been awakened, and may be made insensible to pain. The H. Act 1952 controlled exploitation of H. as entertainment.

HYPODERMIC (hipo-) **SYRINGE**. An instrument used for injecting fluids beneath the skin. It consists of a small graduated tube of glass and sometimes also of metal, with a close-fitting piston and a nozzle on to which a hollow needle can be fitted. Various types incl. disposable plastic, and automatic spring-loaded H.Ss.

HYPOTENUSE. The side of a right-angled triangle opposite the right angle. See also PYTHAGORAS.

HYPOTHERMIA. Use of cooling anaesthesia - also known as hibernation - to lower the temperature of the body for heart surgery and to tide over a dangerous phase of illness. Notable cases incl. that of Mrs. Ellen Moore, unconscious for 169 days after head injury, who was kept in a virtual state of H. for a week at Newcastle General Hospital. Her child was afterwards born normally. The body's metabolism slows down at low temperatures, and less strain is imposed upon the vital organs, particularly the brain and the heart.

HYPSONETER (hipsom'-). A double steam vessel for testing the accuracy of a thermometer at the boiling point of water. It was originally used for determining heights by changes in the b.p. with changes in pressure - hence the name from the Gk. *hypsos*, height.

HYRAX

administrator, he was subsequently associated with numerous international relief organizations, and became Food Administrator for the U.S. 1917-19. Sec. of Commerce 1921-8, he then defeated the Democratic candidate for the Presidency, 'Al' Smith, but lost public confidence after the stock-market crash of 1929, when he opposed direct govt. aid for the unemployed in the depression that followed, and in 1933 was succeeded by Roosevelt. In 1946 the U.S. govt. appointed him chairman of the committee co-ordinating world food supplies.

HOOVER, John Edgar (1895-). American lawyer. B. in Washington, he became in 1921 assistant to William J. Burns and in 1924 succeeded him as director of the F.B.I., which he reorganized to reach a new peak of efficiency and comprehensiveness, e.g. the finger-print file was enlarged to over 100 million. He estab. a reputation for utter impartiality.

HOOVER DAM. U.S. dam on the Colorado r., between Arizona and Nevada. It is 726 ft. high (highest in the U.S.A.), 1,244 ft. long at the top, and was completed in 1936. The water it impounds forms Lake Mead, 115 m. long; it is used for flood and river control, irrigation, power production, and navigation. H.D. was started in 1928 during Hoover's presidency, and was named after him; the Wall Street collapse in 1929 and subsequent depression made him so unpopular that the dam was renamed Boulder Dam when it was opened. Hoover's recovery of public respect as chairman of the U.S. famine emergency committee in 1945-6 led to the restoration of the dam's original name by Truman in 1947.

HOPE, Anthony. Pseudonym of British novelist Sir Anthony Hope Hawkins (1863-1933). B. in London, he is best known for his romance *The Prisoner of Zenda* (1894), set in the imaginary Balkan state of Ruritania, and its sequel *Rupert of Hentzau* (1898). His *Dolly Dialogues* (1894) are a social satire.

HOPE, Bob. Stage-name of comedian Leslie Townes H. (1904-), b. in Britain but taken to the U.S. in 1907. The most expert exponent of the deadpan wisecrack, he has made numerous films, incl. the celebrated 'Road' series with Dorothy Lamour and Bing Crosby (q.v.), with whom he sustains a constant mock-feud.

HOPEI. Prov. of N.E. China, mountainous in the N. and W. The cap. is Tientsin; Peking is a special municipality within H. It produces wheat, cotton, fruit, oilseeds, coal, iron, gold, salt; and makes cement and textiles. Area 84,900 sq. m.; pop. (1957) 44,720,000.

HOPKINS, Sir Frederick Gowland (1861-1947). British biochemist. Prof. at Cambridge from 1914 and Sir William Dunn prof. 1921-43, he revolutionized the conception of the sources of muscular energy and oxidation of tissues, and did fundamental research on vitamins. In 1929 he was awarded the Nobel prize for medicine, and in 1935 the O.M. His dau. is Jacquetta Hawkes (q.v.).

HOPKINS, Gerald Manley (1844-89). British poet. B. at Stratford, Essex, he was converted in 1866 to the Church of Rome, and in 1868 began training as a Jesuit. He preached and ministered as a priest in Ireland and England and subsequently taught. He d. of typhoid. His poetry is profoundly religious and records his struggle to gain faith and peace, but also shows great freshness of feeling and delight in nature. A complete edition was issued by Robert Bridges in 1918. His employment of 'sprung rhythm', allied to the Old and Middle English alliterative verse, has greatly influenced later 20th cent. poetry. His *Journals and Papers* were published in 1959, and three volumes of letters 1955-6.

HOPKINS, Harry L. (1890-1946). American statesman. B. in Iowa, he became in 1935 head of W.P.A. (Works Progress Administration). After a period as Sec. of Commerce 1938-40 he was appointed super-

visor of the Lend-Lease programme in 1941, and undertook wartime missions to Britain and Russia.

HOPPNER, John (1758-1810). British artist. B. in London, he was ed. at the R.A. by George III, and specialized in portraits, notably of the royalprince sses, William Pitt, Lord Grenville, Rodney and Nelson. He became portrait painter to the Prince of Wales in 1789 and R.A. in 1795. Lawrence was a rival.

HOP FRUITS

HOPS. Female cone-heads of the hop plant, *Humulus lupulus*, Moraceae family. The plant has a perennial rootstock, climbs by a twining stem, and produces green leaves and small flowers. H. grow in rich soil throughout Europe and N. America, and are picked and dried in oast houses. They are used as a tonic, and as a flavouring in beer.

HORACE (ho'ras) (Quintus Horatius Flaccus) (65-8 B.C.). Roman poet. B. at Venusia, S. Italy, the son of a freedman, he fought with the republicans at Philippi, lost his estate, and was reduced to poverty. Virgil introduced him c. 38 to Maecenas, who gave him a small estate and procured him the friendship and patronage of Augustus. His Satires, pub. 35-30 B.C., survey the follies of contemporary society. His lyrical poems, the Epodes and the 4 books of Odes (c. 24-15 B.C.), written in a variety of metres, deal with both personal and political themes. In later life H. wrote his Epistles, a series of verse letters, and the critical treatise in verse *De Arte Poetica*. His works are distinguished by their style, their wit, and their good sense.

HORDER, Thomas Jeeves, 1st baron (1871-1955). British physician. He attended Edward VII, Edward VIII, George VI, and Elizabeth II, and was a determined opponent of the Health Service as lowering professional standards.

HORE-BELISHA (hawr-belē'sha), Leslie, baron (1895-1957). British politician. A National Lib., he was Min. of Transport 1934-7, introducing 'B. beacons' to mark pedestrian crossings, and as War Min. from 1937, until removal by Chamberlain in 1940 on grounds of temperament, introduced peace-time conscription in 1939. He was created a peer in 1954.

HOREHOUND. Genus of plants (*Marrubium*) of the Labiatae family. The common H. (*M. vulgare*), found in Europe, N. Africa and W. Asia and naturalized in N. America, has a thick hairy stem and clusters of dirty-white flowers; it has medicinal uses.

HORI'ZON. The distance to which one can see across the surface of the sea or a level plain, i.e. c. 3 m. at c. 5 ft. above sea level, and just over 40 m. at 1,000 ft.

HO'RMONES. Products of the endocrine glands.

The chief are those of the thyroid, parathyroid, pituitary, suprarenal, pancreas, ovaries, and testicles. They have been called 'blood messengers'. Their purpose is to bring about changes in the functions of various organs according to the body's requirements. Their combined action and interaction are delicately balanced and closely bound up with those of the nervous system. Generally speaking, the pituitary gland, in the skull, is the 'leader of the orchestra';

HOREHOUND

ICEBERG. A constant hazard to shipping, icebergs drift with the sea currents, sometimes with more than two-thirds of their mass submerged, but they often assume shapes of great beauty, as here off the Greenland coast.

Courtesy of the National Travel Association of Denmark

ICE AGE. The earlier part of the Pleistocene period in geology, immediately preceding historic times. N. Europe and America underwent glacial conditions similar to the polar regions. The American mountains show signs of former glacial activity and the ice-sheet spread over N. Europe, reaching Ireland and the Atlantic, leaving its remains as far S. as Switzerland. Several ice ages are distinguished, and man was contemporary with at least the later glaciations.

ICEBERG. A floating mass or hill of ice, rising sometimes to 270 feet above the sea. Polar glaciers which reach the coast become extended into a broad foot; as this enters the sea, masses break off and drift towards temperate latitudes, becoming a menace to shipping. The sinking of the *Titanic* in 1912 was caused by collision with an iceberg.

ICE-CREAM. A dairy product composed mostly of milk, with sweetening added. The milk is pasteurized, homogenized, then whipped and frozen. To these basic ingredients flavouring may be added after the mixing process, when the I. emerges partially hard. Its final hardening is achieved in containers in which it is kept for several hours at about -10° F. Traditionally a trade in the hands of Italian immigrants, the making of I. became a mechanized industry first in the U.S.A. and then in the 1920s-30s in Britain, with rapid post-S.W.W. expansion. This involved the production of new-type 'hard' I. adapted for storage and transport, but from the mid-1950s a soft I. frozen on the premises where it is sold has regained popularity.

ICE HOCKEY. Game played on ice between 2 teams, each of 6 players. Derived from ordinary H., the game was 1st played on ice in Canada in 1867, and is the national sport.

The skating space or rink is 61 m. long and 30 m. wide, divided into 3 zones by 2 blue lines. The goals

(1-22 m. high by 1-83 m. wide) stand at either end of the rink on lines which are 4 m. from the ends of the rink. All players wear protective clothing. The 6 players are: Goal Keeper, Right Defence, Left Defence, Centre, Right Wing and Left Wing, and 8 reserves are allowed to each team. The puck (a rubber disc) must not be passed forward from one zone to the other between 2 players of the same side, and must precede the attacking players into the attacking zone. The puck must be kept continually in motion. Rough tackling is prohibited. The game is increasingly popular in Britain.

ICEL. See MERSIN.

ICELAND. Island forming an independent repub. in the N. Atlantic just S. of the Arctic Circle and 230 m. S.E. of Greenland. In the main, it is a plateau of volcanic rocks of some 2,500 ft. in height rising to 6,952 ft. in the ice-sheet of Vatnajökull. Short, turbulent rivers and waterfalls are numerous. There are over 100 volcanoes, of which some 25 have been active in historical times. Fields of lava cover hundreds of square miles, and hot springs are numerous. More than three-quarters of I.'s area is unproductive, wild, and inhospitable.

ICELAND. Active volcanoes show that the forces which formed our globe are still at work here. In the early Tertiary period the Brito-Arctic basalt region may have linked Iceland with Greenland and Britain.

Courtesy of Icelandair.

The climate is mild and wet. The pop. is almost all Icelandic. Reykjavik, the cap., is the only large town. Though water power is plentiful and being increasingly used, there are few manufactures. Fishing is the chief occupation, cod and herring being the principal exports. There are no railways, but there are regular air services within I. and abroad.

Norse voyagers had probably visited I. before 874, when a few hundred settlers arrived. In 930 the first general assembly or Althing founded the republic of I. In 1000 the people adopted Christianity, and in c. 1263 submitted to the authority of the king of Norway. Norway, and with it I., came under Danish rule in 1381. I. remained attached to Denmark after Norway became independent in 1814; it received its own legislature (Althing) in 1871, home rule in 1903, and in 1918 was recognized by Denmark as independent (except for foreign affairs), but linked with Denmark by having the same king. After the German invasion of Denmark in 1940, a small British force was sent to help in the defence of I., which in 1941 proclaimed itself an independent rep., a status confirmed by an act of the Althing in 1944. U.S. troops, who took over the defence of I. in 1942, were withdrawn after the end of hostilities. I., a founder member of N.A.T.O., accorded the use of Keflavik to that body as a base, and forces from the U.S.A. were re-established there. Area 39,758 sq. m.; pop. (1968) 199,526.

HORSE-FLY or Forest Fly. Insect (*Hippobosca Equina*) of the family Tabanidae. Yellowish-brown, it feeds by sucking blood from the flanks of horses.

HORSE GUARDS. Name given to a building in Whitehall, London, England, erected in 1753 by Vardy from a design by Kent, on the site of the Tilt Yard of Whitehall palace. This spot has been occupied by the Household Cavalry or 'Horse Guards' since the Royal Horse Guards were formed in 1661.

HORSE RACING. Sometimes called the national sport of England, where it had its origin in organized form, it has been popular there since at least the 12th cent. and was greatly encouraged by the Stuarts, James I instituting H.R. on Newmarket Heath, where it developed further under Charles I and Charles II, and Queen Anne having Ascot racecourse laid out in 1711. All English thoroughbreds, and through them most of the world's best horses, descend in direct male line from 3 Arabian Hs. introduced in the 18th cent., the Byerly Turk, Darley Arabian, and Godolphin

American H.R. (c. 20,000 races) dwarfs that of other countries, betting on the Totalizator (the only legal method) is on an immense scale, and prize money may reach \$75,000, especially in such classics as the Coaching Club Oaks, Belmont Stakes, and Withers Stakes at Belmont Park; the Preakness Stakes at Pimlico (Baltimore) and the Kentucky Derby at Louisville. *See also* HARNESS RACING.

HORSERADISH. Plant (*Cochlearia armoracia*) of the Cruciferae family, native to S.E. Europe and naturalized in Britain and America. The thick, cream-coloured and tapering root is used in pharmacy and cookery (a piquant condiment with beef).

HORSETAIL. Genus of plants (*Equisetum*) which, with certain fossil forms, constitutes the family Equisetaceae. The common H. (*E. arvense*) is a frequent weed in Britain and N. America. The giant H. (*E. telemateia*) has sterile stems up to 10 ft. high and occurs both in the Old World and on the N. American Pacific seaboard.

HORSHAM. English town and market centre (U.D.) on the r. Arun, in W. Sussex, 16 m. S.E. of Guildford. Christ's Hospital is c. 2 m. S.W. Pop. (1961) 21,155.

HORSLEY, Colin (1920–). New Zealand pianist. B. at Wanganui, he was ed. at the R.C.M., where he became prof. in 1953.

HORSLEY, John Calcott (1817–1903). English artist. B. in London, he was a skilled painter of attractive domestic scenes on the Dutch model and of portraits: his frescoes for the Houses of Parliament are less happy. He became R.A. in 1856, and pub. *Recollections* (1903). *See* CHRISTMAS CARD.

HORST-WESSEL-LIED. Song introduced by the Nazis as a 2nd German national anthem. The text was written by Horst Wessel (1907–30), a Nazi 'martyr', to a traditional tune.

HORTHY DE NAGYBANYA (hortē de nodybahn'yo), Nicolas (1868–1957). Hungarian statesman. Leader of the counter-revolutionary 'White' govt., he became regent in 1920, on the overthrow of the Communist Bela Kun régime by Rumanian intervention. He pursued a moderate policy, trying (although allied to Hitler) to retain independence of action: in 1944 his country was taken over by the Nazis and he was deported to Germany. Liberated by the Americans, he subsequently lived in exile.

HORTICULTURE. The art of growing flowers, fruit, and vegetables. Courses in H. usually include outdoor gardening, poultry farming, and hothouse care. In Britain the Royal Horticultural Soc. (1804) holds shows at Westminster, and has gardens at Wisley, in Surrey. In the U.S.A. there is no general organization like the R.H.S., but many local societies based upon geography and particular crops, e.g. American Rose Society and Mass. Fruit Growers Association, as there are also in Britain.

HORUS. Hawk-headed Egyptian god, the son of Isis and Osiris. The Greeks called him Harpocrates.

HOSPITAL. Institution for the care of the sick and injured. In ancient times temples of deities such as Aesculapius (q.v.) offered facilities for treatment, and the Church had by the 4th cent. founded Hs. for lepers, cripples, the blind, and sick poor. The oldest surviving H. in Europe is the Hôtel Dieu, Paris; in Britain the most ancient are St. Bartholomew's (1132) and St. Thomas's (1200); and in N. America the H. of Jesus of Nazareth, Mexico (1524). Medical knowledge advanced during the Renaissance, and Hs. increasingly became secularized following the Reformation. In the 19th cent. real progress was made in H. design, administration and staffing, cf. Florence Nightingale, and in the 20th there has been a dominant trend to specialization.

In Britain Hs. have formed part of the National Health Service since 1948 and give free treatment, although most also provide for some private patients

HORSE RACING. Hyperion, famed thoroughbred who won the 1933 Derby in the record time of 2 min. 34 sec.

Arabian, and towards the end of that cent. the principal flat races were estab. (Derby, Oaks, St. Leger, 2,000 Guineas, 1,000 Guineas, and Ascot Gold Cup): the Jockey Club (1751) is the governing body and the season is March–Nov. Steeplechasing was not regularized as a sport until the 19th cent., the most important event being the Grand National (q.v.) at Aintree (1839): Liverpool then became the chief seat of steeple-chasing, for which the season is August Bank Holiday to Whitsun, and the governing body is the National Hunt Committee. Certain rules governing H.R. generally were laid down by Parliament in 1740, and incl. the basis of the present weight-for-age scale. Bookmaking is subject to legal provisions (*see* BETTING) and the law does not recognize betting debts unless incurred with the Totalizator (q.v.). The chief courses are Epsom, Newmarket, Ascot, Goodwood, Doncaster, Sandown Park, York, and Aintree.

H.R. has spread all over the world, to France, Australia, S. America, and the U.S.A., where it was introduced by Col. Richard Nicolls, commander of the English forces invading New Amsterdam (New York) in 1664, who laid out a 2-mile course very near the present one at Belmont Park. Now a year-round institution, race meetings may last 50–60 days and – also in contrast to English practice – are run over shorter distances, and from mechanical starting gates or stalls (this method, almost universal elsewhere, was first used for all British classic races in 1967): there is no centralized governing body. The scale of

IGUANA

IGUANA. Lizard of the family Iguanidae, which incl. c. 700 species and is chiefly confined to the Americas. The common I. (*Iguana iguana*) of Central and S. America may reach 6 ft. and is a favourite food of the Indians.

IGUANODON. Amphibious reptile belonging to the herbivorous dinosaurs (q.v.), whose remains are found in strata of the Lower Cretaceous age. The I. varied in length from 16 to 32 ft., and when standing upright reached a height of some 13 ft. It walked on its hind legs, balancing its body by its long tail.

IJSSELMEER (ē'selmāer). Lake in the Netherlands, the remains after land reclamation of the former Zuider Zee, which was cut off from the North Sea in 1932 by the closing of a dyke more than 21 m. long from N. Holland via the former is. of Wieringen to Friesland. By 1944 the water of the lake had become fresh. Area 470 sq. m.

IKEBANA. The Japanese art of flower arrangement. It dates from the 7th cent. when arrangements of flowers were placed as offerings in Buddhist temples, a practice learned from China. In the 15th cent. I. became a favourite pastime of the nobility. Oldest of modern Japanese I. schools is Ikenobo at Kyoto (7th cent.), and there is an I. International.

IKHNATON. Pharaoh of Egypt of the 18th dynasty, son of Amenhotep III (q.v.), with whom he may have ruled jointly for a time. One of his wives was Nefertiti, by whom he had 6 daus., and who is frequently represented with him. Two of his daus. were m. to his successors Smenkhare and Tutankaton (later Tutankhamen, q.v.), but though he developed (rather than originated) the cult of Aten or Aton, changing his name from Amenhotep to I., it is unlikely that he neglected imperial affairs.

ILBERT, Courtenay Adrian (1888-1956). British horologist. His lifelong interest culminated in ownership of the finest private library and the best representative collection of clocks and watches in the world. Acquired by the B.M. in 1958, the latter incl. Mudge's lever clock and Mary Qn. of Scots' hour-glass.

ILE-DE-FRANCE (ēl-de-frāns). District and former prov. of France, bounded by the Marne, Seine, and Oise, with Paris as its centre, from which the early kings spread their authority over the country.

ILFRACOMBE (-koom). English holiday resort (U.D.) on the N. coast of Devon, 9 m. N.N.W. of Barnstaple. Pop. (1961) 8,701.

ILKESTON. Market town (bor.) in Derbyshire, England. Hosiery and lace are manufactured, and there are coal-mines. Pop. (1961) 34,612.

ILKLEY. English spa (U.D.) in Yorks W. Riding, on the r. Wharfe. The famous Ilkley Moor stretches southwards. I. was a Roman military station, and there are Saxon crosses. Pop. (1961) 18,519.

ILLE (ēl). French r., 28 m. long, which rises in Lake Boulet and enters the Vilaine at Rennes. It gives its name to the dept. of Ille-et-Vilaine.

ILLINGWORTH, Leslie (1902-). British political cartoonist, long a contributor to *Punch* and on the staff of the *Daily Mail* from 1929.

ILLINOIS (īlīnoī'). North-central state of the U.S.A., forming part of the great central prairie. The chief rivers are the Mississippi, Illinois, Ohio, and Rock. The soil is fertile and much land has been reclaimed through drainage. I. is an important agricultural state. The chief industries are slaughtering and meat-packing, centred at Chicago. Minerals include coal, petroleum, and pig-iron. The chief towns include Chicago (2nd largest in the U.S.A.), Peoria, Rockford, East St. Louis, and Springfield, the capital.

The first Europeans to reach I. were French missionaries in the 17th cent. I. became part of the French province of Louisiana, 1712, but in 1763 was ceded to Britain. In 1783 it passed to the U.S.A., and was admitted to the Union in 1818. Area 56,400 sq. m.; pop. (1960) 10,081,158.

ILLYRIA. Name anciently given to the region lying along the E. coast of the Adriatic from the Corinthian Gulf northwards. It was conquered by Philip of Macedon, and became a Roman province in A.D. 9. Several Roman emperors came from Illyria.

ILMENITE (ilmenit). Ore of iron, composed of the oxides of iron and titanium, FeO. TiO₂, with some magnesia. The mineral is black, with a metallic lustre, and closely resembles haematite.

ILYUSHIN, Sergei Vladimirovich (1894-). Soviet aircraft designer. Ed. at the Air Force Engineering Academy, he became prof. at the N. E. Zhukovsky Air Force Engineering Academy. He is known for such aircraft as the *Moscow* (IL-18) a turbo-prop. airliner (1957).

IMAGE RETAINING PANEL. Metal-ceramic type plate with a fluorescent phosphor layer, electrically operated and responsive not only to visible light but to X-rays, near infra-red, ultra-violet, and nuclear radiation. The image lasts for some 30 min., but the plate is rendered blank and re-usable by switching

IMAGE RETAINING PANEL. An ordinary door-key is placed on the panel in ordinary light (left) and when the light is switched off and the key removed an image is printed on the plate (right), the remainder of which glows with a yellowish light. Courtesy of Thorn Electrical.

off the current. It has great potentialities in the fields of cancer surgery (when used with the electron microscope), radiography (when immediately visible X-ray images might be produced with less than the usual dosage), nucleonics, laser research, etc.

IMAGISTS. Name given to a school of poets which flourished in England and America from 1909 to 1917. It originated with T. E. Hulme and incl. F. S. Flint, Richard Aldington and T. S. Eliot in England, and Ezra Pound, 'H.D.' (Hilda Doolittle) and Amy Lowell in America. It inculcated precision of language and the use of clear, hard images.

IMAGO. The sexually mature stage of an insect. **IMAM** (imahm'). Arabic word denoting: (1) one of the 4 successors of Mohammed or one of the 4 leaders of the orthodox sects; (2) one of the great leaders of Shi'ites; or (3) one who leads the prayers in a mosque.

IMBROS. Greek name of a Turkish is. in the Aegean. Occupied by Greek forces during the F.W.W., I. passed to Turkey in 1924 under the Treaty of Lausanne, 1923. Area 108 sq. m.; pop. (est.) 6,500.

IMHOTEP (ī. c. 2800 B.C.). Egyptian physician. Adviser to King Zoser (3rd dynasty), he is thought to have designed the step-pyramid at Sakkara, and was later worshipped as son of the god Ptah, being identified by the Greeks with Aesclepius (q.v.). In 1964 excavation at the N. Sakkara necropolis was begun by W. B. Emery (q.v.) to find the tomb of H., an ancient centre of healing: remarkable works of art and other remains were recovered.

IMMACULATE CONCEPTION. A dogma of the R.C. Church which states that the Virgin Mary was by a special act of grace preserved free from original

des Refusés, an exhibition in 1863 of work rejected by the official Salon, followed by their own exhibitions 1874–86. Their work aroused fierce opposition; the term I. was first used abusively to describe Monet's painting 'Impression, Sunrise'. Among their followers

IMPRESSIONISM, Exhibited in Paris at the first Impressionist Exhibition in 1874 was *La Loge* ('The Box') by Renoir. The models were the artist's brother Edmond, and the Montmartre model Nini.
Courtauld Institute Galleries, London.
Photo: © by S.P.A.D.E.M., Paris, 1964.

were the American Whistler (q.v.), who introduced the term into England, and the Englishmen Sickert and Wilson Steer (qq.v.).

IMROZ, Turkish form of **IMBROS**.

INCANDESCENCE. The emission of light from a substance in consequence of its high temperature. The colour of the emitted light from liquids or solids depends on their temperature, and for solids generally the higher the temperature the whiter the light. Gases may become incandescent through ionization as in the glowing vacuum discharge tube. The oxides of cerium and thorium are highly incandescent and for this reason are used in gas mantles. The light from a filament lamp is due to the I. of the filament, rendered white-hot when a current is passing through it.

INCARNATION (Lat. *caro*, flesh). In Christian theology, the doctrine that the Second Person of the Trinity assumed human form and human nature as Jesus Christ. I. is also a feature of many other religions, e.g. Hinduism.

INCAS (ing'kahs). Name ordinarily given to the population of Peru before the coming of the Spaniards, but rightly restricted to the ruling caste; the ruler himself was known as the Inca. They probably entered Peru from the S.E. c. 1100. Children were bound to follow their ancestral occupation, and all products were the property of the State. The official religion was sun-worship. The Is. mummified their dead. They had no system of writing, but reached a high level in architecture, pottery, weaving, etc.

INCENDIARY BOMB. Usually dropped by aircraft, I.Bs. containing inflammable matter were used in the F.W.W., and in the S.W.W. were a major weapon in attacks on cities. To hinder firefighters,

delayed-action high-explosive Bs. were usually dropped with them.

INCEST. Sexual intercourse between persons so related that marriage between them is barred by law. I. is biologically undesirable because hereditary weaknesses are emphasized by inbreeding, and sociologically because it affects the emotional stability of the family unit.

INCH. In *place-names* in Scotland and Ireland, an islet or land by a river. As a measure of *length*, it is a twelfth of a foot. As a measure of *rainfall*, it is the amount which would cover the ground to a depth of one inch, if none of the water was evaporated, absorbed, or ran off.

INCHCAPE ROCK. Islet to the S.E. of Arbroath, Angus, Scotland, 12 m. out to sea, on which stands a lighthouse, built 1807–11. It is also called Bell Rock because of a warning bell placed there by the abbot of Aberbrothock (Arbroath).

INCHON. Port and summer resort on the W. coast of S. Korea, 20 m. W.S.W. of Seoul. Its ice-free harbour was opened to foreign trade in 1883. It has steel mills and textile and match factories, etc. Pop. (1966) 528,579.

INCOME TAX. Direct tax levied on annual income which, so far as the tax is concerned, may incl. the value of receipts other than in cash. In the U.K., the rate of tax and allowances vary from time to time; they are set out yearly in the annual Finance Act which implements the recommendations agreed to by the House of Commons in the Budget presented to it by the Chancellor of the Exchequer. William Pitt introduced an I.T. 1799–1801 to finance the wars with revolutionary France; it was re-imposed 1803–16 for the same purpose, and was so hated that all records were destroyed when it came to an end. Peel reintroduced the tax in 1842 and it has been levied ever since, becoming a more and more important part of govt. finance. At its lowest, 1874–6, it was 2d. in the £; at its highest, 1941–6, 10s. in the £. See P.A.Y.E.

In the U.S.A. every citizen or resident with a gross income of \$600 or more must file a report for federal income-tax consideration unless he or she was 65 before the end of the tax year, when a return has to be made only if the gross income is \$1,200 or more. Rate of tax, which is reckoned on a percentage basis, and allowances, are fixed by Congress from year to year. A state I.T. also is levied in all the states except Conn., Fla., Ill., Maine, Nev., Ohio, Pa., R.I., S.Dak., Tex., Wash., and Wyo.; the amount of tax and allowances vary from state to state. There is some adjustment between federal and state taxes in states which levy an I.T.

Most countries levy I.T., generally considered as bearing less heavily on the poor than indirect taxes: see **TAXATION**. However, in Communist states in which the salaries of most workers are fixed by the state, I.T. becomes illogical. From 1960 the U.S.S.R. gradually began abolition, factory and office workers becoming exempt, and higher grades – to reduce differentials – having their salaries reduced by the amount of tax they would otherwise have paid.

INCUBUS. A male spirit who in the popular belief of the Middle Ages cohabited with women in their sleep. Witches and demons were supposed to result from such intercourse.

INCUNABULA. Bibliographical term signifying the books printed during the 15th century.

INDEMNITY. An undertaking to compensate another for damage, loss, trouble, or expenses, or the money paid by way of such compensation. An *Act of I.* is one passed with the object of relieving persons from certain penalties to which they have become liable, or to legalize transactions which infringe the law.

INDEPENDENCE. Residential and industrial city in Missouri, U.S.A., lying E. of Kansas City. Pres.

the system of Brahmanism; this was periodically modified by reforming movements, the most important of which, Buddhism and Jainism, arose c. 500 B.C. The sub-continent, except the far S., was first unified under the Mauryan emperors (321–184 B.C.), one of whom, Asoka (264–c. 227), who was a Buddhist, ranks among the most enlightened rulers in history. The N. was not again united until the period of the Gupta dynasty (c. A.D. 300–500), 'the golden age of Hinduism'; its rule was ended by the raids of the White Huns, which plunged I. into anarchy.

During the 11th and 12th cents. raids on I. were made by Moslem adventurers, Turkish, Arab, and Afghan, and in 1206 the first Moslem dynasty was set up at Delhi. The next 3 cents. witnessed the establishment of Moslem rule throughout the N. and the Deccan, although the S. maintained its independence under the Hindu Vijayanagar dynasty (14th–16th cents.). The most brilliant period of Moslem India began with the founding of the Mogul empire by Babur in 1527, and its consolidation by his grandson Akbar (1556–1605). After 1707 the Mogul empire (which lasted nominally until 1858) fell into decline, and a period of anarchy ensued.

Portuguese, Dutch, French, and English traders had been establishing trading bases on the coast since the 16th cent. During the Seven Years War (1756–63) the E. India Co., eliminating their French rivals, made themselves masters of Bengal and the Carnatic, and within a cent. direct or indirect British rule was established all over I. After the mutiny of 1857–8 the rule of the E. India Co. was abolished, and I. passed under the British crown. National feeling found a rallying-point in the National Congress (founded 1885), and from 1906 onward periodic waves of nationalist agitation – after the F.W.W. under the leadership of Gandhi – swept the country. These were met by concessions in the direction of self-govt., culminating in 1947 in the division of British I. into the dominions of India (predominantly Hindu) and Pakistan (predominantly Moslem). See INDIA OF THE PRINCES.

INDIA, UNION OF. Rep. in Asia. Covering the greater part of the Indian sub-continent, it incl. the most fertile areas, in particular the Ganges valley. Agriculture, long handicapped by the social, religious and economic system and the small-size holdings, has achieved a rising standard of technology since independence, although failure of the monsoon (as in 1965/6 and 1966/7) is still a near disaster. Rice, wheat and cereals are grown, and industrial crops incl. cotton, jute, tea, oil seeds, and cane sugar. Industry has been modernized and expanded, and alongside the Tata iron and steel works at Jamshedpur on the Bihar coalfield, there are new industrial complexes such as Hindustan Steel, with plants at Rourkela, Bhilai and Durgapur, which is also I.'s largest supplier of nitrogenous fertilizers. Machinery and machine tools, petroleum products, textiles, etc., are produced, and hydro-electric installations have been built and extended, espec. in the Deccan.

On coming into existence in 1947, as the Dom. of India, the Union consisted of the former Brit. Provs.: the United Provs. (Uttar Pradesh), Bihar, Bombay, Central Provs., Orissa, Madras, most of Assam, W. Bengal and E. Punjab; by 1950 all the princely states within this area (see INDIA OF THE PRINCES, also KASHMIR) had been absorbed by the Union. In 1950 I. became a rep. within the Brit. Commonwealth. Internal developments have since incl. reorganization of some states on linguistic and other grounds, fluctuating violence in communal disturbances between Hindu and Moslem, and the emergence in the late 1960s of regional agitation, as in Assam and Maharashtra, against immigrants from other states. Relations with Pakistan have continued to be complicated by such issues as Kashmir and Kutch (q.v.), and there

has been border tension with Communist China. The Congress Party has maintained political supremacy, though by 1968 less undisputedly: see GANDHI, NEHRU, SHASTRI, INDIRA GANDHI. Hindi is the official language of the Union, but English has continued as an additional official language.

THE UNION OF INDIA

States	Area in 1,000 sq. m.	Pop. in millions	Capital
Andhra Pradesh	106.2	35.98	Hyderabad
Assam	40.0	11.07	Shillong

Pondicherry	.2	.37	—
Tripura	4.0	1.14	Agartala
	1,175.41	435.22	

N.B. This table, in which pop. figures are based on the 1961 census, does not include Jammu and Kashmir (q.v.) in dispute between India and Pakistan: India occupies 53,065 sq. m.; pop. 3,560,976.

A pres., elected for 5 years by an electoral college, is head of state; there is a cabinet under a P.M. – a post first held by Nehru (q.v.); parliament consists of the House of the People, Lok Sabha, directly elected, on a basis of adult suffrage, for 5 years, and the indissoluble Council of States, Rajya Sabha, indirectly elected, one-third of whose members retire every 2 years. Delhi is the cap.; other large cities are Calcutta, Bombay and Madras. Area 1,173,639 sq. m.; pop. (1968) 520,000,000; rising by 13 m. in a year, so that a massive family planning programme is under way.

INDIANA. E. north-central state of the U.S.A. The surface is undulating prairie, except in the S. along the r. Ohio where there is a range of hills. The chief rivers are the Wabash and its tributaries. The soil is fertile, and agriculture is an important industry. The chief crops are maize, winter wheat, rye, and oats. Tobacco also is cultivated. Mineral products incl. coal, limestone, natural gas, and petroleum; steel, agricultural machinery, motor-cars, refrigerators and other domestic appliances are manufactured. The chief towns are Indianapolis, the cap., Fort Wayne, Gary, South Bend, Evansville, and Hammond. In the early 18th cent. French traders reached I., and the first settlements were established in 1731–5. It was admitted to the Union in 1816. Area, 36,291 sq. m.; pop. (1960) 4,662,498.

coast of S. America and the Eskimoes, among whom the means of subsistence was hunting or food-gathering, at the one extreme and at the other the civilizations of the Mayas (later adopted by the Aztecs), and of Peru, which produced works of very great artistic worth. Totemism (q.v.), is a notable feature in the social organization. In religion, while Mexico had advanced to an anthropomorphic pantheon, and the Incas worshipped the sun, the majority of the peoples remained at the stage of formless animism. The number of A.I.s., also referred to as Amerindians, is estimated to be c. 10 million: those in U.S.A. number (1968) c. 600,000.

INDIA OF THE PRINCES (Indian states). Name formerly applied to the 562 native states ruled by Indian princes. Occupying an area of 715,964 sq. m. (45 per cent of the total area of pre-partition India) and with a population of over 93 million they were inextricably mixed up with the former British provs. Most of the states were Hindu, and their rulers mainly Rajputs (q.v.). When India was overwhelmed by the Moslems, the Rajput states in the deserts of the N.W., the outer Himalayas, and the central highlands, were saved by their isolation and by the fine fighting qualities of their inhabitants. As the Mogul empire disintegrated other states were set up by soldiers of fortune, e.g. Baroda, Hyderabad, Gwalior, Indore, Bhopal, Patiala, Bahawalpur, and Kolhapur: Mysore, Travancore, and Cochin were also non-Rajput states. At partition of British India in 1947 the princes were given independence by the British govt., but were advised to adhere to either India or Pakistan. Between 1947 and 1950 all except Kashmir (q.v.) were incorporated in the one or the other country.

INDIGESTION. See **DYSPEPSIA**.

INDIGO. Deep violet-blue dye originally obtained from plants of the *Indigofera* genus of the Leguminosae, but now replaced by the synthetic product.

INDIUM. Soft, silvery, malleable, rare metallic element; symbol In, at. wt. 114.82, at. no. 49. Discovered in 1863 by Reich and Richter, it was named I. after its indigo-blue spectrum. It occurs in minute traces in zinc ores, etc., and is obtained by electrolysis from solutions of complex salts. Due to its large neutron capture cross-section, I. is used to monitor the neutron emission from reactors. Other uses incl. the manufacture of junctions in semi-conductor devices, and corrosion-resistant coatings for aircraft sleeve bearings.

INDO-ARYAN LANGUAGES. One of the 2 branches of the Aryan group of the Indo-European family, the other being the Iranian (q.v.). Aryan tribes entered India c. 2000–1500 B.C., and from the latter date comes the earliest specimen of I.-A., the *Rig-Veda*. Its language, called Vedic, is distinguished from Sanskrit, the later classical language which represents a codification of the language in use on the watershed between the Indus and the Ganges; Sanskrit has remained in use for sacred and literary purposes. Buddhism and Jainism were important in the development of local forms, or Prakrits, which are the direct ancestors of the modern Aryan vernaculars of N. India. They fall into 2 major groups – the languages of the centre: W. Hindi (whence Hindustani or Urdu), E. Hindi, Punjabi, Gujarati, and Rajasthani, while Sinhalese, spoken by the greater part of Ceylon, is a descendant of the now extinct Pali; and those of the outer band: Kashmiri, Lahnda, Sindhi, Marathi, Bihari, Bengali, and Assamese.

INDO-CHINA, French. Former collective name for a group of Asian countries that became independent after the S.W.W. See **CAMBODIA, LAOS, VIET-NAM**.

INDO-EUROPEAN (Indo-Germanic). Name of one of the world's largest families of languages, to which English and the majority of modern European languages belong. The common I.-E. language must have begun to split into branches as early as 2000 B.C.

What we know of its phonology, syntax, morphology, and vocabulary is a reconstruction, based on a comparison of the features of those languages now existing, or which have died out in historical times.

In classifying the I.-E. languages, use is made of the broad cleavage resulting from the different treatment of the palatal stops, which in one group, called the *centum* languages (from the Lat. for 100), have become simple velars, and in the other, the *satem* group (from the Zend form of the same word), have become fricatives. In the main, the former group is found W. of a line from the S.E. corner of the Baltic Sea to the head of the Adriatic, but including Greek; the latter E. of that line.

INDONESIA. The constant threat of disaster from the volcano of Mt. Merapi shadows the lives of the Javanese whose villages and rice terraces are hidden by the forests at its feet. Courtesy of Indonesian Embassy.

INDONE'SIA, Republic of. Asian state composed of the E. Indian islands of Sumatra, Java, Madura, the Lesser Sundas (Nusa Tenggara), the Moluccas (Maluku), Celebes (Sulawesi), and c. 3,000 smaller islands, together with Kalimantan (S. part of Borneo) and W. Irian (W. part of New Guinea).

Before the S.W.W. the rep. formed the Netherlands Indies, occupied 1942–5 by the Japanese who actively promoted the movement for independence from the Dutch. At the end of the fighting, the rep. of I., incl. all the Netherlands Indies except western New Guinea, was proclaimed, and was recognized by the Dutch in 1949; a union set up between the two countries at the same time was abrogated by I. in 1956. Under the leadership of Pres. Sukarno (q.v.), the rep. laid claim to Netherlands New Guinea which in 1962 was ceded to the U.N., in 1963 to Indonesia, but the 'confrontation' of Malaysia over Sabah and Sarawak 1963–6 ended in *détente*. This was a consequence of a revision of policy by Gen. Soeharto (q.v.) who took power 1966 and banned the Communist Party. He became pres. 1968, and elections were planned for 1971. Wild inflation was stemmed, aid was granted by the West for development, and commerce began to return to normal.

Agriculture is the chief industry, important products being sugar, rice, tea, coffee, cassava, sweet potatoes, and soya beans. Plantation-grown rubber, copra, tobacco, coconut oil, kapok, and pepper are valuable exports. Tin and petroleum are the principal minerals; textiles, paper, matches, and chemicals are made. The cap. is Djakarta: other towns incl. Surabaya, Semarang, and Bandung. Area 895,000 sq. m.; pop. (1967) 112,300,000.

INDORE. Indian city in Madhya Pradesh, on the Malwa plain, N. of the Vindhya hills. It is the seat of several colleges, and has a fine palace, residence of the

dying under one year of age. Improved nutrition and medical care have considerably lowered figures throughout the world, e.g. in the 18th cent. in the U.K. 50 per cent. died, compared with under 2½ per cent in 1961. The table incl. I.M. figures for selected countries to give a world range.

INFECTION. Invasion of the body by micro-organisms. These may be viruses (q.v.) or bacteria (q.v.) incl. cocci and bacilli. Among other diseases, viruses cause smallpox, chickenpox, shingles, measles, mumps, German measles, infantile paralysis, influenza, colds, and sleeping sickness; cocci cause diseases with short incubation periods and acute fever, e.g. scarlet fever, meningitis, and gonorrhoea; bacilli cause diseases with long incubation periods and course, e.g. diphtheria, whooping cough, and typhus. Both cocci and bacilli tend to be carried by immune persons. The effects of I. are due to the body's reaction to the poisons (toxins) produced by the organisms (see IMMUNITY). I. may be contracted from a sufferer from the disease; or from a carrier who may be immune or developing the disease himself or convalescent; or from contaminated objects, such as food, drink, bedclothes, or books; or from discharges, such as spray expelled in coughing or sneezing (common cold), or spittle (tuberculosis), or faeces (typhoid). Some infections are carried by insects (malaria by the mosquito, typhus by the louse), or on the feet of flies (food poisoning). Some may be introduced through a breach in the skin, e.g. gonorrhoea and lockjaw (tetanus). Contagion is infection by direct contact.

INFELD, Leopold (1898–1968). Polish physicist. He held a Rockefeller scholarship at Cambridge 1933–5, and was prof. of applied mathematics at Toronto 1939–50, and at Warsaw from 1950. A former sec. and the biographer of Albert Einstein, he has pub. *The World in Modern Science* (1934) and *The Evolution of Physics* (1938), with Einstein.

INFERIORITY COMPLEX. Term used in psycho-analysis for a complex pattern of richly emotional ideas connected with what the patient rightly or wrongly believes to be his inferiority. In order to compensate for his inferiority he often tends to assume an opposite character.

INFLAMMATION. The reaction of tissues to injury. This may be caused by violence, a foreign body, poison, or invasion by harmful bacteria. The signs are heat, swelling, redness, pain, and loss of function. These result from the pouring of white blood cells and lymph into the affected region, with the object of combating the injurious agent and repairing the damage. Collections of dead white cells form the thick, yellowish fluid called pus. When the body's local defences win the fight the inflammation resolves. When they lose it, the I. spreads and may endanger life.

INFLATION and DEFLATION. Economic terms. I. is an abnormal increase in the quantity of money relative to the available supply of goods – 'too much money chasing too few goods', tending to decrease purchasing power; and D. is the reverse process, when the supply of money is contracted, thus increasing its purchasing power. Both these conditions can only exist when currency is not fixed to a gold or silver standard. Rising prices caused by moderate I. tend to stimulate producers and lower unemployment, but at the same time are detrimental to those living on fixed incomes. When carried to extremes, such as after the F.W.W., I. spirals uncontrollably upward until the fall in the value of the currency issued becomes more rapid than the quantitative increase in the currency issued. In present-day practice, govts. attempt to minimize I. by restricting credit and maintaining adequate reserves of gold. Since the S.W.W. the general trend has been one of I.

INFLUENZA. An acute infectious fever caused by Pfeiffer's bacillus or a filtrable virus. Incubation takes 2–5 days. The first signs are usually headache,

catarrh, fever, shivering, and aching. The onset is sharp and the whole attack clear-cut, as distinct from the heavy cold often mis-called influenza. Bronchitis or pneumonia may follow, or the brain or stomach may be chiefly affected. A malignant type occasionally becomes epidemic, e.g. in 1918 and the milder 'Hong Kong' flu of 1968–9; a World I. Centre, financed by W.H.O. is at Mill Hill, N. London.

INFLUENZA. Made visible by the electron microscope, influenza virus particles are seen in this micrograph at a magnification of 600,000x, the bar being 50 millimicrons, i.e. 500 Angström units.

Photo: R. W. Horne, Cavendish Laboratory, Cambridge.

INFRA-RED RADIATION. Invisible electromagnetic radiation of wavelength between about 0.75–1,000 microns (1 micron is a millionth of a meter), i.e. between the limit of the red end of the visible spectrum and the shortest microwaves. All bodies above the absolute zero of temperature absorb and radiate I.R.R. Absorption spectra are made use of in chemical analysis, particularly for organic compounds, and objects which radiate I.R.R. can be photographed or made visible in the dark, or through mist or fog, on specially sensitized emulsions. This is important for military purposes. I.R.R. is also used in medical photography and treatment, in industry, astronomy and criminology. The strong absorption of many substances for I.R.R. is a useful method of applying heat, as in baking and toasting.

INGE (ing), William Ralph (1860–1954). British churchman. Prof. of divinity at Cambridge 1907–11 and dean of St. Paul's 1911–34, he earned the title 'the gloomy dean' by his pessimistic criticism of modern life. His works incl. *Outspoken Essays* (1919 and 1922). He was created a K.C.V.O. in 1930.

INGERSOLL, Robert Hawley (1859–1928). American watch manufacturer. B. in Delta, Michigan, he pioneered mass-production methods, with his famous one-dollar watch (1892).

INGELBRECHT, Désiré-Émile (1880–1965). Fr. composer and conductor. Appointed to the Opéra in 1945, he has written of his work there in *Le Chef d'orchestre parle au public* (1957), etc. His compositions incl. *Cantique des Créatures de S. François d'Assise* (1919); the ballet *El Greco* (1920); and *Les Heures claires* (1961), songs based on poems by Verhaeren.

INGLEBOROUGH. Hill, 2,373 ft. in height, in the W. Riding of Yorks, England, with remains of an Iron Age town on top. I. cave is 1,000 ft. in length.

INGOLSTADT. Town on the Danube, dating from 1250, 43 m. N.N.W. of Munich, W. Germany. The industries incl. foundry work and manufacture of machinery. Pop. (1960) 50,700.

INGRES (ahgr), Jean Auguste Dominique 1780–1867. French painter. After studying under David (1797–8) he worked in Rome (1806–20) and Florence (1820–4), executing some of his finest portraits. In 1826 he became prof. of fine arts at the Academy in Paris, and in 1832 director of the French Academy in Rome, returning to Paris in 1841. His draughtsmanship, whether in his highly finished portraits or his female nudes, e.g. 'Odalisque' (1814) and 'La Source' (1856), is superb.

INQUEST—INSECT

PERIODIC SYSTEM OF THE CHEMICAL ELEMENTS

IA	IIA	IIIA	IVA	VA	VIA	VIIA	VIII						IB	IIB	IIIB	IVB	VB	VIB	VIIIB	O	
H 1															non-metals					He 2	
Li 3	Be 4	metals														B 5	C 6	N 7	O 8	F 9	Ne 10
Na 11	Mg 12	transition elements														Al 13	Si 14	P 15	S 16	Cl 17	Ar 18
K 19	Ca 20	Sc 21	Ti 22	V 23	Cr 24	Mn 25	Fe 26	Co 27	Ni 28	Cu 29	Zn 30	Ga 31	Ge 32	As 33	Se 34	Br 35	Kr 36				
Rb 37	Sr 38	Y 39	Zr 40	Nb 41	Mo 42	Tc 43	Ru 44	Rh 45	Pd 46	Ag 47	Cd 48	In 49	Sn 50	Sb 51	Te 52	I 53	Xe 54				
Cs 55	Ba 56	La 57	Hf 72	Ta 73	W 74	Re 75	Os 76	Ir 77	Pt 78	Au 79	Hg 80	Tl 81	Pb 82	Bi 83	Po 84	At 85	Rn 86				
Fr 87	Ra 88	Ac 89	Th 90	Pa 91	U 92	increasingly electronegative															
Rare Earths (Lanthanides)		La 57	Ce 58	Pr 59	Nd 60	Pm 61	Sm 62	Eu 63	Gd 64	Tb 65	Dy 66	Ho 67	Er 68	Tm 69	Yb 70	Lu 71					
Transuranics (Actinides)		Ac 89	Th 90	Pa 91	U 92	Np 93	Pu 94	Am 95	Cm 96	Bk 97	Cf 98	Es 99	Fm 100	Md 101	No 102	Lw 103					

are now no 'missing' elements, nos. 43, 61, 85, 87, etc., all highly radioactive, having been made. The last period contains similar elements, and since preceding periods contain 2, 8, 8, 18, 18, and 32 elements, it would be expected that the last should be a very long period and 11 elements beyond uranium have been prepared artificially (plutonium, neptunium, americium, curium, berkelium, californium, einsteinium, fermium, mendelevium, nobelium, and lawrencium. Research continues, as in the unsuccessful attempt at Berkeley in 1968 to find traces of no. 110—thought to be relatively stable—in platinum ore.

The modern quantum theory of the atom (unlike the old Rutherford-Bohr theory) is able to give a satisfactory explanation of the numbers 2, 8, 18, and 32, of elements in the periods, and the structures of the shells of electrons in practically all atoms are known from the spectroscopic data; the explanation of the appearance of the 15 rare earth elements in period 6 is due to the filling up of an incomplete inner shell by successive additions of electrons as the atomic number increases in steps, whilst the outer valency shell, on which the chemical properties depend, remains unaltered. Elements, the atoms of which have incomplete inner shells, are called transitional elements in the wider sense: they include, besides the rare earths proper, and the group VIII metals, the elements from scandium to zinc, from yttrium to cadmium, and from hafnium to mercury, inclusive.

INQUEST. In English law, an inquiry held by a coroner (q.v.).

INQUISITION. An ecclesiastical tribunal in the R.C. Church, charged with the suppression of heresy. Its existence is usually dated from the Synod of Toulouse in 1229. The *Medieval I.* operated mainly in France and Italy, and to a lesser extent in the Empire and Spain; it never gained a footing in England. The Reformation led to a great revival in its activity in Italy and Spain. The I. or Holy Office (re-named Sacred Congregation for the Doctrine of the Faith 1965) still deals with ecclesiastical discipline, its jurisdiction confined to the Vatican City.

The *Spanish I.* was reorganized in 1480 under royal, not papal, control. Its jurisdiction was extended in the 16th cent. to the Spanish colonies in America. Executions continued until 1781. Napoleon suppressed it in 1808, but it was restored by Ferdinand VII

in 1814, only to be abolished again in 1834.

Trials by the I. were conducted in secret, and torture was used to force the prisoner to admit his guilt. Those who confessed were condemned to flogging, fines, or penances; the obstinate to imprisonment or to death by burning. See INDEX.

INSANITY. Social inadequacy due to mental disorder. The word as used popularly has much the same meaning as the legal term mental disease, formerly lunacy. This means a condition which renders the patient so dangerous to himself or others or both, or so helpless, that he should be placed under care. Many mentally diseased or disordered persons are not socially inadequate. In medicine the corresponding term is psychosis.

INSECT. Small invertebrate animal whose body is divided into head, thorax, and abdomen. The head bears a pair of feelers or antennae, and attached to the thorax are 3 pairs of legs and usually 2 pairs of wings. Is. are placed in the class Insecta of the phylum Arthropoda, and their scientific study forms that branch of zoology termed Entomology. About 1,000,000 species are known, and several thousand new ones are discovered every year. Is. vary in size

INSECT. Diagrams of Coleopteran and Hymenopterous insects. A, antenna; B, palpi; C, mandible; D, compound eye; E, claw; F, head; G, thorax; H, scutellum; J, elytra; K, suture; L, femur; M, tibia; N, fore-wing; O, hind-wing; P, tarsus; Q, abdomen; R, stigma; S, spur.

of improving cattle herds through outstanding sires, it has also been used in the case of human beings. Semen may sometimes be obtained from the husband – A.I.H. (husband) – or from a stranger who usually remains unknown except to the doctor involved – A.I.D. (donor). Further developments of A.I. are the possibilities of pre-determination of the sex of the child, the light 'y' chromosome sperms rising and the heavier 'x' chromosome sperms sinking (see GENETICS), and of external fertilisation of eggs which might then be either reimplanted in the womb or eventually grown to maturity in the laboratory.

INSTALMENT CREDIT. See HIRE PURCHASE.

INSULIN. The hormone secreted by the islets of Langerhans in the pancreas. It is necessary for the utilization of sugar, by the body and its deficiency causes diabetes. McLeod, Banting, and Best discovered its existence in 1921 and how to extract it and use it in the treatment of diabetes.

INSURANCE. By a contract of I. the insured party is guaranteed a specified indemnity in return for valuable consideration, otherwise known as the premium, which is scientifically calculated on the basis of experience in proportion to the risk involved. As practised by I. companies, mutual associations and societies, I. can be classified under the headings: fire, marine, accident and life – the last division being distinguished by the term 'assurance'. An assurance policy guarantees the payment of a definite sum upon the occurrence of a specific event which is accepted as being inevitable, e.g. death, whereas I. is strictly the provision effected by prudent men against a fortuitous and 'unexpected' contingency.

The practice of I. is strictly governed by various correlated common-law principles, of which indemnity is the most important. This ensures that an insured person shall not be more than fully indemnified, thus preventing anyone profiting, as a result of his loss or misfortune, from the I. fund of which the I. co. is the trustee. It is also affected by various statutes, e.g. in Britain the Road Traffic Act (1960), which requires drivers of certain classes of vehicles to effect valid third-party cover. In Britain the Min. of Social Security (1966) admin. under the Nat. I. Acts of 1946–68 industrial injuries, maternity, sickness, unemployment, widow's benefits, etc., and family allowances and retirement pensions, but in 1968 there were proposals for a new scheme of Nat. I. based on earnings-related benefits and contributions. See LLOYDS.

INTAGLIO (intal'yō). Term applied to an engraving which is cut into some material. It is applied more specifically to a gem which has a pattern cut into one surface. In printing, the term is applied to a process in which ink is laid in incisions and hollows on the plate, as in etching, photogravure, etc.

INTELLIGENCE, Military and Political. See under SECRET SERVICE.

INTELLIGENCE TESTS. See MENTAL TESTS.

INTER-AFRICAN AND MALAGASY ORGANIZATION. Estab. in 1962, with a membership of 16 independent African states under indigenous rule, it provided for co-operation in economic, cultural, and political fields. This *Union africaine et malgache* (UAM), which settled disputes between Gaboon and Congo (Brazzaville) 1962 and Dahomey and Niger 1963–4, was replaced 1964 by the *Union africaine et malgache de coopération économique* (UAMCE), which was in turn replaced in 1965 by the *Joint African and Malagasy Organization*. See ORGANIZATION OF AFRICAN UNITY.

INTEREST. Payment for the use of borrowed money or capital. It is calculated at so much per cent (U.K. £100; U.S. \$100; etc.) per annum. The money lent is called the principal, and principal and interest equal the amount. *Simple Interest* is charged on the principal alone. *Compound I.* is charged on the amount of principal and interest as and when it falls due.

INTERIOR DECORATION. The decoration of the inside of a building. Among early names associated with I.D. in England are those of Inigo Jones and Grinling Gibbons, but the first architects to design a building as an integrated whole were the Adam brothers, e.g. Syon House, Middlesex. Craftsmen who have given their names to different styles of furniture design include Chippendale, Hepplewhite and Sheraton. In Victorian times William Morris became famous for his designs of carpets, wallpaper, furniture, etc. Associated with him were the Pre-Raphaelites: Burne Jones, D. G. Rossetti, and others. In more recent times the trend has been to a less ornate and more functional style, fostered by the interaction of architects and designers working in teams, whether to remodel existing interiors, e.g. Misha Black and Hugh Casson, in British post offices, or in new buildings, e.g. Gio Ponti's Pirelli building (Milan) Oscar Niemeyer's capital city of Brasilia; and the many works of Le Corbusier (France), Eero Saarinen, and Skidmore Owings and Merrill (U.S.A.).

INTERLAKEN (in'terlahken). Town and tourist centre on the Aar between lakes Brienz and Thun, Switzerland. The site was first occupied in 1130 by a monastery, suppressed in 1528. Pop. (1960) 4,738.

INTERNAL COMBUSTION ENGINE. An engine in which energy supplied by a burning fuel is directly transformed into mechanical energy by the controlled burning of the fuel in an enclosed cylinder behind a piston. The term is usually applied to the petrol engine.

INTERNATIONAL. The. Name given to a number of international bodies set up by Socialist and labour organizations to co-ordinate their policies. The 1st International (International Working Men's Association) was formed in London in 1864, under the virtual leadership of Karl Marx (q.v.). The 2nd (Socialist) International, founded in 1889, was a loose federation of national Socialist parties, which lasted until 1939.

The 3rd (Communist) International, generally known as the Comintern, was founded at Moscow in 1919. Like the 1st I. it had a common programme and a strongly centralized leadership, and after the triumph of Hitler in 1933 it advocated a 'popular front' of Communists, Socialists, and Liberals against Fascism. In 1943 it was dissolved. The 4th International, founded in 1936, consists of a number of groups supporting the policy of Trotsky (q.v.).

INTERNATIONAL BANK for Reconstruction and Development. Estab. in 1945 as a result of the Bretton Woods Conference of 1944, and related to the U.N., it facilitates productive investment among its members, and fosters the long-range growth of international trade. The H.Q. are at Washington. Membership is dependent on participation in the International Monetary Fund (1945) which encourages co-operation on monetary problems, e.g. convertibility and stability of currencies. Affiliated to the I.B. are the International Finance Corporation (1956), promoting economic development in less developed areas by making investments in private enterprise without government guarantee; and the International Development Association (1960), assisting on a more flexible basis such essential projects in undeveloped countries as water supply, sanitation and highways, which may not be directly productive or revenue-producing. See BANKING.

INTERNATIONAL BRIGADE. The international volunteer force which fought on the republican side in the Spanish Civil War of 1936–9.

INTERNATIONAL CIVIL AVIATION ORGANIZATION. Estab. in 1947 (provisionally 1945) and related to the U.N., it encourages safety measures, and uniform regulations in the operation of air services; simplified procedures for customs, immigration and public health; and more safely efficient techniques and equipment.

INVERNESS. An inlet of the sea, Loch Nevis has an austere beauty. Photo: George Outram & Co. Ltd.

INVERNESS. Co. town (royal burgh) of Inverness-shire, Scotland. Situated in a sheltered position at the mouth of the Ness, I. is a railway junction and a tourist centre for the Highlands (q.v.). Sheep and wool are gathered in from all parts of the Highlands for the annual market. Industrial activity incl. tanning, engineering, railway workshops, distilling, and tweed manufacture. Pop. (1961) 29,773.

INVERNESS-SHIRE. Largest of the Scottish counties. It is a Highland co., including within its boundaries the highest peak in Britain, Ben Nevis (4,406 ft.), and some of the islands of the Hebrides. Striking across the co. from N.E. to S.W. is Glen More, occupied by the Moray Firth, Loch Ness, Loch Lochy, and Loch Linnhe, with their connecting rivers. The glen has been utilized by the Caledonian Canal. The main rivers are the Spey, Nairn, and Findhorn. Little of the co.'s surface is suitable for agriculture. On the moors sheep, Highland cattle, and Highland ponies are raised. There are fishing industries centred on Fort William and in the Hebrides, and other industrial development includes distilling, woollen manufacture, and aluminium processing, brewing, and spinning. The principal centres are Inverness, the co. town, and Fort William. Area 4,211 sq. m.; pop. (1961) 83,425.

INVESTMENT TRUST. See **SAVING AND TRUST.**

INYOKERN. Village in the Mojave desert, California, U.S.A., 45 m. N.N.W. of Mojave. It is the site of a U.S. Naval Ordnance test station at which research is carried out in rocket flight and propulsion. Founded in 1944, it is the centre of a military reservation covering some thousand sq. m.

I'O. In Gk. legend, the dau. of Inachus, king of Argos. She was beloved by Zeus, who (to evade the jealousy of Hera) transformed her into a heifer. She finally recovered her original human form on the banks of the Nile, and bore a son to Zeus.

IODINE (I'odin). A non-metallic element (Gk. *iodēs* violet) discovered by Courtois in 1811: symbol I, at. wt. 126.91, at. no. 53. It is a violet-black lustrous solid volatilizing at ordinary temperatures to a bluish-violet gas with an irritating odour, and forming a characteristic blue colour with starch. Not found in the free state, it occurs in saltpetre and as iodides in sea-water from which it is taken up by seaweeds and sponges and may be extracted from their ashes. Most of the world's supplies were formerly extracted from Chile saltpetre deposits but the current process, using finely divided silver on brines from salt wells, has greatly increased production and lowered cost. It is used in photography, externally in medicine (tincture of I. is an alcoholic solution) as an antiseptic, and also internally; and in chemicals and dyes. It collects in the thyroid gland; lack of it producing goitre, and excess myxoedema. Iodine-131 (a radioactive isotope) is widely used in medical diagnosis, research and treatment.

IODOFORM (CHI₃). An antiseptic which crystallizes into yellow hexagonal plates. It is soluble in ether, alcohol, and chloroform, but not in water.

ION. An atom or group of atoms which carries a positive or negative electric charge. When neutral atoms or molecules lose valence electrons, positive I.s. are formed, when they gain valence electrons, negative I.s. are formed. In general salts such as chlorides, sulphates, nitrates, etc., dissolve in water to form both positive and negative I.s. in equal quantities, the metal I. being the positive one. Gaseous I.s. may be produced by the action of radiation or charged particles.

IONA. Island of the Inner Hebrides, Scotland, in Argyll co., separated from the Ross of Mull by the narrow Sound of Iona; a rocky stretch of land of some 2,200 acres, the highest point rising to 332 ft. Patches of grassland are used as grazing for cattle and sheep, agriculture and fishing are the principal occupations of the people. In 563 St. Columba founded a monastery which became a great centre of Celtic Christianity, it was destroyed in 807 by Norse pirates. A new Benedictine monastery (founded 1203) was the seat of the bishopric of Sodor 1499–1578, but later fell into ruin. Restoration began shortly after it was presented to the Church of Scotland by the duke of Argyll in 1899, and, from the establishment of the I. Community in 1938, was completed by them. Pop. (1961) 130.

IONESCO (ēones'kō), Eugène (1912–). French playwright. B. in Rumania, and for a time prof. of literature at Bucharest, he settled in Paris in 1938. Barely staged and allegorical in content, his plays incl. *Les Chaises* (*The Chairs*: 1952), in which a senile married couple converse, and *Rhinocéros* (*The Rhinoceros*: 1959), an attack on totalitarianism, in which every character except one turns into a rhinoceros.

IONIA. District on the W. coast of Asia Minor, inhabited in classical times by Greeks of the Ionian branch. It incl. a number of cities, e.g. Ephesus, Miletus, and later Smyrna, which were subject in turn to Lydia, Persia, Macedonia, and Rome (133 B.C.).

IONIAN ISLANDS. Group of islands off the W. and S. coasts of Greece consisting of Corfu, Cephalonia, Zante, Ithaca, Levkas, and Paxo. In 1815 they became a British protectorate, but were ceded to Greece in 1864. Area 860 sq. m.; pop. (1961) 212,277.

IONIAN SEA. That part of the Mediterranean that lies between Italy and Greece, to the S. of the Adriatic and containing the Ionian islands.

IONIDES, Basil (1884–1950). British architect. B. in London, he was chiefly famous for his interior

IONA. Against the setting of the cruciform cathedral they have helped to restore, members of the Iona Community – a religious brotherhood for training students – gather round their founder, George Macleod (q.v.), at their 21st anniversary celebration. Photo: W. Pintail.

HYRAX (hɪ'raks). Order of mammals (Hyracoidea) found in Africa and Syria. They are about the size of a rabbit, with a plump body, short legs, and brownish fur. There are 4 toes on the front limbs, and 3 on the hind, each of which has a hoof. They are good climbers, and live among rocks and in desert places.

HYSSOP (his'op). Herb (*Hyssopus officinalis*) of the Labiatae family, once grown for its medical properties. It produces small blue flowers and narrow, pointed, aromatic leaves. Hedge H. (*Gratiola officinalis*) belongs to the Scrophulariaceae.

HYSTERECTOMY. Surgical removal of the womb, usually for fibroid or malignant tumours.

HYSTERIA. A nervous disorder in which the patient simulates various kinds of disabilities in order to avoid responsibility or an unpleasant situation. In contrast with the deceptions of the malingerer, those of the hysteric are involuntary and for the most part unrealized. The commonest symptoms include paraly-

sis of one or more limbs, deafness, blindness, dumbness, recurrent cough, vomiting, and general illness. The object of the hysterical reaction is to enable the hysteric to be dependent on others without loss of self-regard. The patient is commonly extremely selfish, self-centred and emotionally insincere and immature.

HYTHE (hɪdh). English seaside resort (bor.), one of the Cinque Ports on the S. coast of Kent, 5 m. W. of Folkestone. Pop. (1961) 10,028.

HYSSOP

I Ninth letter of the Roman alphabet, deriving, as regards its form, from the sign for one of the several breaths of the Semitic languages. Its vocalic value was first given it by the Greeks.

IASI (yashe). Rumanian city, 10 m. W. of the Prut, cap. of I. region. There are machine, chemical and textile industries, and a univ. (1860). Pop. (1966) 160,880.

IBADAN (ebah'dahn). Largest city in Nigeria, in the S.W., 100 m. N.N.E. of Lagos. It is a trading centre - palm oil, cotton and tobacco, and has a univ. (1962). Pop. (1963) 600,000.

IBÁÑEZ (évahn'yeth), Vicente Blasco (1867-1928). Spanish novelist and politician. B. at Valencia, he played an active part in revolutionary politics. His novels incl. *Blood and Sand* (1913), and *The Four Horsemen of the Apocalypse* (1918).

IBERIA. Name given by ancient Greek navigators to the Spanish peninsula, derived from the r. Iberus (Ebro). Anthropologists have given the name Iberians to a pre-Celtish Neolithic race, traces of whom are found in the Span. peninsula, S. France, the Canary Is., Corsica, and part of N. Africa.

IBEX. Wild goat (*Capra ibex*), native to the snowy regions of the Alps. The name has also been applied to the Asiatic ibex (*C. sibirica*).

IBI-GAMIN. Another name for KAMET.

IBIS. Genus of wading birds related to the storks and herons, but having a long curved beak. Various species occur in the warmer regions of the world, including the scarlet I. of America and the glossy I. found in all 5 continents. The sacred I. of ancient Egypt (*I. aethiopica*) is still found in the Nile basin.

IBIZA. Spanish form of IVIZA.

IBN BATUTA (bahtoo'tah), properly Abu Abdallah Mohammed (1304-77). Arab traveller who wrote on the history of Islam in the post-Mongol period.

IBN SAUD (sowd) (1880-1953). King of Saudi Arabia. His father was the son of the sultan of Nejd, at whose capital, Riyadh, I.S. was born. In 1891 a rival

tribe seized Riyadh, and I.S. went into exile with his father, who resigned his claim to the throne in his favour. In 1902 I.S. recaptured Riyadh and recovered the kingdom, and by 1921 he had brought all C. Arabia under his rule. In 1924 he invaded the Hejaz, of which he was proclaimed king in 1926. Nejd and the Hejaz were united in 1932 in the kingdom of Saudi Arabia.

IBSEN, Henrik Johan (1828-1906). Norwegian poet-dramatist. B. at Skien, he failed entry to Christiania univ. 1850, and was dramatic adviser to theatres at Bergen and Christiania, producing *The Vikings in Helgeland* (1858), *The Pretenders* (1864), and other plays. His satirical *Love's Comedy* (1862) aroused opposition, and the years 1864-91 he mainly spent abroad, in Italy or Germany. The first plays written abroad were the great verse dramas *Brand* (1866) and *Peer Gynt* (1867).

The political satire *The League of Youth* (1869) began the series of realistic dramas which revolutionized the European theatre. There followed *The Pillars of Society*; *A Doll's House*; *Ghosts*, which aroused furious opposition; I.'s rejoinder, *An Enemy of the People* (1882); the satiric tragi-comedy *The Wild Duck* (1884); *Rosmersholm* (1886); *The Lady from the Sea* (1888); and *Hedda Gabler* (1890). In 1891 I. returned to Norway, recognized at last as her greatest living writer. His last plays were *The Master Builder* (1892), which recaptures the poetic spirit of his earlier work; *Little Eyolf* (1894); *John Gabriel Borkman* (1896); and *When We Dead Awaken* (1899), a final statement of his philosophy.

ICARUS. Asteroid c. 1 m. in diameter, discovered 1949 and named after the son of Daedalus (q.v.), whose orbital plane intersects with that of Earth. Its orbital period is 409 days and it passes through the plane twice a year. Unlike planets, asteroids are subject to severe orbital perturbations, and collision is theoretically possible.

ICE. The solid formed by water when it freezes. It is colourless, crystalline, and shapes hexagonally. The freezing point, adopted as a thermometric standard, is 0° for the Centigrade and Réaumur scales, and 32° for the Fahrenheit. I. expands in the act of freezing, becoming less dense than water (0.9175 at 0°C). The absorption of heat on melting, and its expulsion on freezing, are expressed as the latent heat of fusion of I.

IRELAND. One of the British Isles, lying to the west of Great Britain, from which it is separated by the Irish Sea. It is divided into 4 provs.: Ulster, Leinster, Munster, and Connacht; 2 states, Northern Ireland and Rep. of Ireland (see table, and under those heads).

The centre of Ireland is a lowland, mainly 200–400 ft. high, but hills are present especially round the coasts, although there are few peaks above 3,000 ft. high, the highest being Carruntuohill (the inverted reaping hook), 3,414 ft., in Macgillcuddy's Reeks, co. Kerry. The entire western coastline is an intricate alternation of bays and estuaries. Several of the rivers flow in sluggish courses through the central lowland, and then cut through fiord-like valleys to the sea. The Shannon in particular falls 100 ft. in its last 16 m. above Limerick and is harnessed at Ardnacrusha (1929) for production of electricity.

The lowland bogs, which cover parts of central Ireland, are intermingled with fertile limestone country where dairy farming is the chief occupation. The bogs are an important source of fuel, in the form of peat, I. being poorly supplied with coal.

The climate is mild, moist, and changeable. The annual rainfall on the lowlands varies from 30 in. in the E. to 80 in. in some western districts, but much higher falls are recorded in the mountains, and as a result it gained the name 'the emerald isle'.

History. In prehistoric times I. underwent a number of invasions from Europe, the most important of which was that of the Gaels in the 3rd cent. B.C. Gaelic I. was divided into kingdoms, nominally

subject to an *Ardri* or High King; the chiefs were elected under the tribal or Brehon law, and were usually at war with one another. Christianity was introduced by St. Patrick in c. A.D. 432, and during the 5th–6th cents. I. became the home of a high civilization, sending out missionaries to Britain and Europe. From c. 800 the Danes began to raid I., and later to colonize, founding Dublin and other coast towns, until they were decisively defeated by Brian Boru at Clontarf in 1014.

Anglo-Norman adventurers invaded I. in 1167, but by the end of the Middle Ages English rule was still confined to the Pale, the territory around Dublin. The Tudors adopted a policy of conquest, confiscation of Irish land, and plantation by English settlers, and further imposed the Reformation and English Law on I. The most important of the plantations was that of Ulster, carried out under James I in 1610. The Irish in 1641 took advantage of the opening struggle in England between king and parliament to begin a revolt which was crushed in 1649 by Cromwell, the estates of all 'rebels' being confiscated. Another revolt in 1689–91 was also defeated, and the R.C. majority held down by penal laws. The subordination of the Irish parliament to that of England, and of Irish economic interests to English, led to the rise of a Protestant patriot party, which in 1782 forced the British government to remove many commercial restrictions and grant the Irish parliament its independence. This did not satisfy the mass of the people, who in 1798, influenced by French revolutionary ideas, rose in rebellion, but were again defeated; and in 1800 Pitt induced the Irish parliament to vote itself out of existence by the Act of Union, effective 1 Jan. 1801, under which Ireland was given parliamentary representation at Westminster.

The national movement was revived by O'Connell (q.v.), who secured Catholic emancipation in 1829, and raised the demand for repeal of the union. The Young Ireland and Fenian movements, which organized revolts in 1848 and 1867 respectively, adopted a completely separatist policy. The agitation of the Fenians, and later of the Land League (founded 1879), combined with the parliamentary tactics of Parnell (q.v.), drove Gladstone in turn to disestablish the Irish Church, carry 2 Land Acts safeguarding tenants' rights, and introduce 2 unsuccessful Home Rule Bills. Conservative governments sought to conciliate the peasantry by enabling them to buy their holdings. A new Home Rule Bill in 1912 nearly led

IRELAND. The famed subtropical beauty of Killarney's lakes gives little hint of the intensive industrialization overtaking the surrounding area. No motor transport is allowed to penetrate here and the tourist makes use of a modified version of the traditional jaunting car. Courtesy of the Irish Tourist Board.

ICELANDIC. The I. language is the most archaic of the Scandinavian group, and has retained many primitive forms. Early I. literature is mainly anonymous, and seems to have arisen in the Norse colonies in the British Isles. It consists largely in the 2 Eddas (q.v.), and in numerous narratives in prose and verse called *sagas*, among which the *Saga of Burnt Nial* is the best. Ari Thorgilsson (1067–1148) composed a history of the kings of Norway; the *Landnámabók*, narrating the early settlement of Iceland, was the work of a number of writers. Snorri Sturlason wrote the later, or prose, Edda, based partly on Ari. After a period of translation and adaptation of medieval romances, there followed, from 1300, a long eclipse of I. literature, which was ended by hymn-writers of the Reformation. A renaissance took place in the 19th cent., especially in the fields of lyric poetry and the novel, and in the 20th Laxness (q.v.) is outstanding.

ICELAND MOSS. Lichen (*Cetraria islandica*)—not a moss—which is common in I., and in other mountainous areas of the northern hemisphere. A lightish brown and 3–4 in. high, it can be processed as a foodstuff.

ICELAND SPAR. Form of calcite (q.v.) originally found in Iceland. The crystals cleave into perfect rhombohedra; in its purest form, which is not uncommon, I.S. is quite transparent, and is used in optical instruments.

ICHANG (échang). Port at the head of navigation of the Yangtze Kiang, in Hupei prov., China. Coal and iron are found nearby; it handles rice, tea, cotton and other products of the locality, and has an airport. Pop. c. 80,000.

ICHNEUMON FLY. Name given to parasitic flies in the family Ichneumonidae. There are several thousand species in Europe, N. America and other regions. The eggs are laid in the eggs, larvae or pupae of insects, usually in the order Lepidoptera.

ICKES (ik'is), Harold L. (1874–1952). American Democratic statesman. He was Sec. of the Interior from 1933, and an outspoken supporter of the 'New Deal' reforms, but after Franklin Roosevelt's death he came into conflict with Pres. Truman, and in Feb. 1946 resigned.

ICON. Representations in the Greek or Orthodox Eastern Church of Christ, of an angel or a saint, in painting, low relief or mosaic. A *riza*, or gold and silver covering which leaves only the face and hands visible, and often adorned with jewels presented by the faithful in thanksgiving, is often added as a protection. One of the most famous Is. is the Virgin of Kazan (q.v.).

ICONIUM. Ancient city of Asia Minor. St. Paul visited it. In the 12th cent. under the Seljuk Turks it achieved great prosperity, but later decayed with the Seljuk state. Konya (q.v.) occupies the site.

ICONOCLASTS (Gk. image-breakers). Name applied in the 8th and 9th cents. to the Christian party in Byzantium, who refused to tolerate the use of images in churches. In 843 the Is. were finally defeated. The same name was applied to those opposing the use of images, etc., at the Reformation.

IDAHO. A N.W. state of the U.S.A. Much of I. is mountainous arid land, drained by waterways on which many rapids and waterfalls prevent navigation. The Snake is the chief river. The climate is generally mild. The chief towns are Boise (the capital), Pocatello, and Idaho Falls. The Mormon Church is the chief religious denomination. Lumbering, agriculture, and livestock raising are the leading industries, the chief crop being wheat. Minerals include lead, zinc, antimony, silver, gold, and copper. I. was admitted into the Union in 1890. Area 83,557 sq. m.; pop. (1960) 667,191.

IDDESLEIGH (id'zli), Stafford Henry Northcote. 1st earl of (1818–87). British Cons. politician. He collaborated on the report (1853–4) which led to the

reform of the conditions of entry into and promotion in the Civil Service. As Chancellor of the Exchequer 1874–80, he introd. the New Sinking Fund (1876) to provide for the reduction of the national debt. He was For. Sec. 1886–7.

IDENTIKIT. The inventor (left) studies a set of cards, together with Peter Pitchess, Sheriff of Los Angeles County, who carried out the preliminary testing and worked out the operational procedures.

IDENTIKIT. System aiding the identification of 'wanted' criminals. Witnesses select from cards, each bearing a variant drawing of a single feature (hair, eyes, nose, mouth, etc.), their choices resulting in a composite likeness which is then photographed and circulated. Evolved by Hugh C. McDonald (1913–), it was adopted in Los Angeles in 1959, and first used with success in Britain in a murder hunt in 1961.

IDES (idz). In the calendar of ancient Rome, the 15th day in March, May, July, and October, and the 13th day in all the other months. The word originally indicated the day of the full moon. Julius Caesar was assassinated on the I. or 15th of March, 44 B.C.

IDRISS I (1890–). King of Libya. Mohammed Sayed Idriss el-Senusi succeeded his uncle in charge of affairs of the Senusiya Order in 1916, became amir of Cyrenaica and in 1951 king of Libya.

IF (éf). Small French is. in the Mediterranean about 2 m. off Marseilles, with a castle, Château d'If, built c. 1529. This was used as a state prison, and is the scene of the imprisonment of Dantès in Dumas' *Count of Monte Cristo*.

IFNI. Territory in N.W. Africa held by Spain from 1860 (it became an overseas prov. 1958) until 1969, when it was transferred to Morocco. The pop. are nomadic Berbers, and camels, goats, and sheep are raised. The cap. is Sidi Ifni, pop. 16,000. Area 741 sq. m.; pop. (1968) 40,000.

IGARKA (égahr'ka). River port on the r. Yenisei, Krasnoyarsk Territory, R.S.F.S.R. The exporting centre for central Siberia, it was founded in 1929, and handles timber floated 1,000 m. down the river, coal from Tunguska, and wheat from S. Siberia. It has an airport. Pop. (est.) 25,000.

IGNATIUS (igná'shius) (1st–2nd cent. A.D.). Early Christian Father. Traditionally he was a disciple of St. John the Apostle and the successor of St. Peter as bishop of Antioch. He was thrown to the wild beasts at Rome c. A.D. 115–17. Seven Epistles attributed to him are generally regarded as genuine.

IGNIS FATUUS. Name applied to the pale flame sometimes seen over marshy land and thought to be caused by the spontaneous combustion of methane. It is also known as will-o'-the-wisp.

account of the Viking invasions by an eye-witness.

The Early Modern Irish period is often referred to as the Classical age of Irish literature. The 'official' or 'court' verse of the 13th to 17th cents. was produced by a succession of professional poets, notably Tadhg Dall Ó Huiginn (d. c. 1617) and Donnchadh Mór Ó Dálaigh (d. 1244); and Geoffrey Keating (d. c. 1646) wrote in both verse and prose.

The bardic schools ceased to exist by the end of the 17th cent. Metre became accentual, and not as before syllabic. The greatest exponents of the new school were Egan O'Rahilly (early 18th cent.), and the religious poet Tadhg Gaelach Ó Súilleabháin. The present revivalist movement has produced writers such as Brian Ó Nualláin, Maurice Ó Sullivan and Thomas Ó Crohan.

IRISH REPUBLICAN ARMY. Illegal extremist organization dedicated to the formation of a united Irish republic. Led until 1927 by De Valera (q.v.), the organization has continued under various leaders, and been responsible for numerous raids and bombings in England and Ireland, during which stringent measures were taken against it by successive govts. Five years of terrorist activity against N. Ireland formally ceased in 1962, possibly due to the defeat of the Sinn Féin candidates at the 1961 election, and renewed govt. counter-measures. Future activity will depend on the feelings of dissenting minorities with a 'pledge of eternal resistance to British forces of occupation in Ireland'.

IRISH SWEEPSTAKE. See under LOTTERY.

IRISH TERRIER. A brown or reddish-brown Irish breed of dog. The coat is rough, the head long and narrow, forelegs straight and strong, chest narrow, and back straight.

IRKUTSK (irkootsk'). City of the R.S.F.S.R., cap. of I. region, S. Siberia, situated on the Angara river, 45 m. N.W. of Lake Baikal. I., founded in 1652, began to grow after the Trans-Siberian railway reached it in 1898. Coal is found nearby; iron and steel, machine tools and gold-dredging machinery for the goldfields lying to the N., and timber are among its products. The city is a cultural centre with a univ. founded in 1918. Pop. (1967) 409,000.

IRON. The most widely spread of all metals except aluminium (Anglo-Saxon iron; Lat. *ferrum*), symbol Fe, at. wt. 55.85, at. no. 26, said to have been worked into implements by the Egyptians c. 3,000 B.C. It is always extracted from 4 main ores: (1) *magnetite*, a black oxide with as much as 68 per cent of iron, found in Swedish Lapland and the Urals; (2) *hematite* or kidney ore, another oxide, red in colour, with as much as 50 to 60 per cent of iron, found W. of Lake Superior, in the Ukraine, in Spain, in Brazil, and in Algeria and Tunis; (3) *limonite*, a brown oxide, with 35 per cent of iron, found in Luxemburg and Lorraine; and lastly (4) *siderite*, a carbonaceous ore, with about 26-42 per cent of iron worked in Yorks, Leics, and Northants. It was the manufacture of steel on a large scale that made the modern demands for I., which is the basis of all steel. Apart from constructional uses, when mixed with carbon and other elements, I. is most important chemically. In electrical equipment, it forms the basis of all permanent and electromagnets and the cores of transformers and magnetic amplifiers. I. is used for anodes in electronic rectifiers, because it is not corroded by mercury. Traces of I. salts in glass give a sharp cut-off for short U.V. rays, and the I.-arc contains a large collection of reference wavelengths useful in spectroscopy.

IRON AGE. Period in which mankind's weapons and tools were of iron, beginning c. 1000 B.C.

IRON CROSS. A Prussian decoration, instituted in 1813 and consisting of a Maltese cross of iron, edged with silver. See illus. under MEDALS.

IRON CURTAIN. In Europe after the S.W.W. the division between democratic West and Communist E.: first used by Churchill in speech at Fulton,

Missouri, 1946.

IRON GATE. Narrow passage, interrupted by rapids, in the Danube below Orsova in Rumania. In 1964 a combined hydro-electric and navigation scheme was undertaken by Rumania and Yugoslavia which will transform the gorge into a 90 m. long lake and eliminate the rapids as a navigation hazard.

IRON GUARD. Rumanian Fascist organization, founded in 1927 by Corneliu Codreanu. Violently nationalist, anti-democratic and anti-Semitic, under German pressure I.G. members became in 1940 the nucleus of the govt. Fascist Party. However, on the forced cession of N. Transylvania, R.'s most valued possession, to Hungary, the I.G. overthrew King Carol II, and initiated a reign of terror against the former régime, culminating in an extremist revolt (1941) against the German-controlled govt., which suppressed the revolt and the organization.

IRON PYRITES. Common ore of iron, being the sulphide FeS₂, with about 46 per cent iron content. A brass-yellow, metallic mineral resembling gold (hence 'fool's gold'), it occurs in cubic crystals.

IRONSIDE, William Edmund, 1st baron (1880-1959). British field marshal, C.I.G.S. from 1938 until Dunkirk, and then for 2 months C.-in-C. Home Forces. He was created field marshal in 1940 and a baron in 1941. His diaries 1937-40 were pub. 1962.

IROQUOIS (irohkwoi'). Confederation of N. American Indians. Always friendly to the British and Dutch, they played a most important part in the Anglo-French American wars. They now live in reservations on the Canadian-U.S. border.

IRRADIATION. The process of exposing to radiation with a definite purpose in view. Ultra-violet I. is used in the food and pharmaceutical industries for making vitamin products. X-radiation and radiation from radium and radioactive isotopes are used in industry and medicine for diagnostic photography and in the treatment of certain malignant conditions. Radiation from particle accelerators and nuclear reactors is used in industry, agriculture and medicine; for making radioactive isotopes; and for preservation and sterilization of foods, drugs and prepacked surgical requirements. Gamma rays are used to control infestation in stored grain and other foodstuffs; I. with electrons, gamma-rays or neutrons is used to produce desired properties in plastics.

IRRAWADDY. Chief river of Burma. Its sources are the Mali and N'mai rivers. It crosses the centre of Burma, and flows roughly N. to S., for 1,300 m. into the Bay of Bengal. The chief tributaries are the Chindwin and Shweli.

IRRAWADDY. The fertile soil of the valley and plain of the great river formed the cradle of Burma's civilization, and its waters are still the country's main highway.

Courtesy of the Burmah Oil Co. Ltd.

sin from the very moment of her conception. This article of the Catholic faith was for cents. the subject of heated controversy, but became a dogma in 1854.

IMMIGRATION and EMIGRATION. The movement of people into a foreign country in which they intend to settle. Notable immigrants into Britain incl. the Flemish weavers, and wool-traders of the 16th cent.; the French Protestants persecuted after the Edict of Nantes in 1685; refugees from eastern Europe in the 2nd half of the 19th cent.; from Nazi Germany between 1933 and 1939, and from many European countries during and after the S.W.W. It is est. that the U.K. absorbed c. 1,000,000 Commonwealth immigrants 1953-68, many from the overpopulated W. Indies, India and Pakistan, and the govt. est. that by 1985 there would be c. 2,500,000 coloured immigrants and their descendants in the U.K. This raised problems of housing, education, etc., hence the controversial Commonwealth Immigration Acts of 1962 and 1968 to control the increasing influx: see **KENYA**. From 1815 until the S.W.W. some 20,000,000 people emigrated from the U.K. to countries outside Europe. In the 1960s the annual emigration figure rose to 300,000, about two-thirds going to Commonwealth countries, notably Australia and Canada, and there was concern because of the selective 'Brain Drain' to N. America, where c. 40,000 doctors, engineers, scientists, and technologists emigrated 1961-8. The U.S.A. has received emigrants on a larger scale than any other country, c. 44,500,000 from the end of the American War of Independence until 1969. See **ALIEN**.

IMMINGHAM. Seaport in Lindsey, Lincolnshire, England, on the Humber estuary 5 m. N.W. of Grimsby. Built 1906-12, it developed rapidly, and following construction (1968) of the largest bulk handling shipping terminal in Europe, was expected to be Britain's premier port, in terms of tonnage handled, by the 1970s.

IMMUNITY. Resistance to poison or, more usually, to infection. Natural immunity is in the inborn power to resist microbes or their toxins; but I. can be acquired by an attack of the disease, e.g. a person rarely contracts smallpox or typhoid fever twice; by repeated exposure to small doses of infection, e.g. the resistance of the normal person to tuberculosis; or by treatment (artificial I.), e.g. vaccination against smallpox, inoculation against typhoid. Artificial I. is either active, when the resistance is developed in the body as a reaction to the organism or its toxins; or passive, as when a quantity of serum from an immune person or animal is injected into the body. The real nature of I. is still a matter of theory.

IMPEACHMENT. A judicial procedure whereby ministers and high officers of state are brought to trial before the House of Lords for serious offences, the Commons acting as prosecutors. Before the rise of the cabinet system, I. provided a means whereby parliament could control the king's ministers. The first example occurred in 1376. Later Is. were those of Bacon (1621), Strafford (1641), and Warren Hastings (1788). Under the U.S. constitution persons may be impeached by the House of Representatives and tried by the Senate; the best-known example is the trial of Pres. Andrew Johnson in 1868.

IMPERIAL COLLEGE OF SCIENCE AND TECHNOLOGY. Institution estab. at S. Kensington, London, in 1907. For advanced scientific training and research, applied especially to industry. It is part of the Univ. of London.

IMPERIAL CONFERENCE. See **COMMONWEALTH CONFERENCE**.

IMPERIALISM. In its original sense, the system of government by an emperor, or a policy of colonial expansion, I. is often used to denote any policy of political, military or economic expansion carried out at the expense of weaker peoples. The heyday of

British I. was between c. 1880 and 1900. but since the S.W.W. the increasing demand for self-determination has led to independence in most of the colonial countries, and as regards Britain a furtherance of the Commonwealth at the expense of the Empire. From the growing consciousness of her new-found strength in the 1890s, the U.S.A. began to look outward. After the Spanish American War, the Philippines, Puerto Rico and Guam were obtained, the Hawaiian is. annexed, and the Panama Canal zone acquired in 1903. The Philippines became a repub. in 1946, Puerto Rico a Commonwealth in 1952, and Hawaii the 50th state of the Union in 1959. Communist countries have developed their own variants of I.

IMPERIAL WAR MUSEUM. National museum founded in 1917, as a memorial to the men and women of the Empire in the F.W.W. Its scope has since been extended to incl. records of all operations fought by British forces since 1914, incl. the S.W.W. Its present building (formerly the Royal Bethlehem, or Bedlam, Hospital) in Lambeth Rd., London, was opened 1936.

IMPETIGO. A minor skin disease of children. Pimples appear, usually on the face, and start to

IMPERIAL COLLEGE OF SCIENCE AND TECHNOLOGY. New construction in Prince Consort Road reflects the spirit of expansion: to the left is the Physics Building, and to the right the Hill Building, named after Sir Roderic Hill (q.v.), departments of aeronautics and chemical engineering and technology.

Courtesy of the Imperial College of Science and Technology

exude pus; they break, run together, and dry into yellow crusts, which eventually fall off and leave no scar unless scratched. The cause is infection by a streptococcus, sometimes introduced by louse bites, and later a staphylococcus. It is highly contagious.

IMPHAL. Indian city, cap. of Manipur territory (former hill state), 140 m. E.S.E. of Shillong. It is a road and trade centre. In 1944, when the Japanese invaded Assam, it was besieged from March to June, but held out with the help of supplies dropped by air. Pop. (1961) 132,000.

IMPRESSIONISM. Movement in painting which originated in France in the 1860s, its chief exponents being Manet, Monet, Degas, Renoir, and Pissarro (qq.v.). They sought to capture a fleeting aspect of some scene, guided not by their memory or knowledge of the object, but painting it as though seen for the first time. In nature, they argued, colour is an illusion created by the play of light upon an object, and there are no outlines. Colours are modified by atmosphere and the inclination of the sunlight at different times of day, and even shadows are not entirely colourless. The Impressionists did not mix their pigments but dabbed them side by side on the canvas in the pure state. Their technique was influenced by the work of Constable and Turner, and also by contemporary spectroscopic discoveries.

The starting-point of the movement was the *Salon*

moved to Tehran. Notable features are the Great Square, the Grand Mosque, and the Hall of the Forty Pillars. Pop. (1964) 339,909.

ISHAM, Ralph (1890–1955). American financier. A collector of books and MSS., he was responsible for the acquisition in 1927 and 1930 of the neglected private papers of James Boswell (q.v.), from his descendant Lord Talbot of Malahide, and for the discovery and publication of further papers, e.g. those found by Prof. Abbott at Fettercairn House in 1931.

ISHERWOOD, Christopher William Bradshaw (1904–). English novelist. Ed. at Cambridge, as described in the autobiographical *Lions and Shadows* (1938), he later spent a fruitful period in Germany which inspired *Mr. Norris Changes Trains* (1935) and *Goodbye to Berlin* (1939). Returning to England, he collaborated with Auden (q.v.) in 3 verse plays. He then went to Hollywood as a scriptwriter, and joined the Huxley-Beard group, who were practising a form of Yoga in the Californian desert, and from 1944 collaborated with Swami Prabhavananda in a translation of the *Bhagavad-Gita*, etc.

ISHMAEL (ish'mā-el). O.T. character, the son of Abraham and Hagar, his wife's Egyptian handmaid, and regarded as the father of the Arab people. Driven out into the desert with his mother because of Sarah's jealousy, Ishmael grew up to be a famous archer in the wilderness of Paran. Mohammed claimed to be his descendant.

ISHTAR or Istar. The 'Lady of Heaven', the chief goddess in the Babylonian and Assyrian pantheon. She was identified with Astarte.

I'SINGLASS. Pure form of gelatin obtained from the cleaned and dried swimming-bladder of various fish, particularly the sturgeon. I. is used in the clarification of wines and beer, and in cookery.

I'SIS. The principal goddess of ancient Egypt. She was the dau. of Geb and Nut (earth and sky), and as the sister-wife of Osiris searched for his body after his death at the hands of his brother Set. Her son Horus then defeated and captured Set, but cut off his mother's head because she would not allow Set to be killed. She was later identified with Hathor (q.v.). The cult of Isis ultimately spread to Greece and Rome.

ISIS. Name sometimes given to the upper stretches of the Thames, England, above Oxford.

ISKENDERUN (iskenderoon). Town and naval base in Hatay, Turkey. It is the main port for the area, with an oil pipeline to Batman, and was founded by Alexander the Great, 333 B.C. Pop. (1960) 24,000.

I'SLAM (Arabic for 'submission' i.e. to the will of Allah). One of the great world religions, also known as Mohammedanism, after its founder the prophet Mohammed (q.v.). The fundamental beliefs are contained in the creed: There is no God but Allah, and Mohammed is the Prophet or Apostle of Allah. The Oneness of God is emphasized [cf. the Christian Trinity], as are his omnipotence, beneficence, and inscrutability. He only is divine and idolatry or saint-worship is therefore regarded as blasphemous. Mohammedans (Muslims or Moslems) also believe in the Creation, the Fall of Adam, the Angels and the Jinn (q.v.), Heaven and Hell, a Day of Judgment, God's predestination of good and evil, and in a succession of scriptures revealed by Allah to a line of prophets, incl. the Pentateuch given to Moses, and the Gospel of Jesus; the ultimate and perfect revelation is in the Koran (q.v.) of Mohammed. The latter embodies the Islamic Law (the Shari'a or 'Highway'), which can be clarified by reference to the *sunna* (practice) of the Prophet, as transmitted by his Companions: the *Sunni* sect also employ *ijma'* (endorsement by universal consent of practices and beliefs not warranted by the Koran or the *sunna*).

Each individual Muslim is personally responsible for his religious life; there is no separate 'church'

organization or privileged priesthood, although the descendants of Mohammed, the *Hashim* family, are a class apart and wield great influence. Five practical obligations – 'The Pillars of the Faith' – are demanded of each Muslim: recitation of the Creed, at least once, and with understanding and faith; worship of Allah at the 5 appointed times each day, facing towards Mecca, the Holy City (q.v.); almsgiving; fasting from day-break till sunset throughout the month of *Ramadan* for all Muslims except the sick, travellers, soldiers on active service, etc.; and at least once in his lifetime the pilgrimage to Mecca.

The law also covers the institutions of the seclusion and veiling of women, marriage, divorce, inheritance, etc.; requires the circumcision of all male Muslims; authorizes up to 4 wives; forbids wine, the flesh of swine, usury, etc. The Koran recognizes slavery, but only of non-Muslim captives; the white slaves (*mamluks*), usually Turks, in the Islamic slave-army were often manumitted and received administrative appointments, occasionally founding their own dynasties, e.g. the slave kings of Delhi and the Mamelukes (q.v.) in Egypt. (See also JANISSARIES.) The duty of the Holy War or *jihad* against Unbelievers as the enemies of Allah was once preached and practised, and Arabic conquests spread I. to Asia, Russia, N. Africa, Spain (expelled 15th cent. A.D.), Pakistan and India, the Balkans, Indonesia and China. The last Holy War, however, proclaimed by the sultan of Turkey in 1914 against the Allies in the F.W.W., was of little importance, and I. has since lost influence in the Balkans; it has, however, been spread in the last 2 cents. by immigrant groups, and missionary work, e.g. by the Ahmadiyya (q.v.) movement, to the rest of Africa, and to N. and S. America. The number of Muslims is est. at c. 430 millions, of whom c. 12 m. are in Europe, c. 328 m. in Asia, and c. 88 m. in Africa.

The supreme political and religious ruler of the I. Community was the Caliph (q.v.), aided by the Vizier (wazir 'helper'). The 3 main sects into which I. became divided, the *Sunnis* (the majority party), the *Shi'ahs* or *Shi'ites* (qq.v.) and the *Kharijites*, originated in differing theories on the office of the Caliph, but have since developed differences in theology, etc.; later sects incl. the *Wahhabis* (q.v.) and the *Ahmadiyyas*. I. was distinctive as a comprehensive political, legal and social system based on a religion, as opposed to a religious institution contained within a secular state. In the last 2 cents., nationalism, in e.g. Turkey, India and Pakistan, has often come before the ideal of a united Islam, and this, together with western influence on systems of govt., has led to basic changes in secular matters.

ISLA'MABAD. Cap. of Pakistan from 1967, in the Potwar district of W. Pakistan, at the foot of the Margala Hills and immediately N.W. of Rawalpindi. Designed by Doxiadis (q.v.) it is well landscaped and the Civic Centre on Capital Avenue is a notable feature. Pop. (1966) 30,000.

ISLAY (i'lā). Most southerly island of the Inner Hebrides, Scotland, forming part of the co. of Argyll, separated from Jura by the Sound of Islay. The principal towns are Bowmore and Port Ellen. Area 235 sq. m.; pop. (1961) 3,866.

ISLE OF ELY. See ELY, ISLE OF.

ISLE OF MAN. Island in the Irish Sea lying almost equidistant from Scotland to the N., Ireland to the W., Wales to the S., and England to the E. Nearly 50 per cent of the island is cultivated, oats being the principal crop. The cap. is Douglas; other towns incl. Ramsey, Peel, and Castletown. Shipping and air services link the I. of M. with England, Scotland and Ireland. The island is a popular holiday resort, and annual motor-cycle races are held.

Among the island's fauna is the tailless Manx cat. Pile dwellings, etc., show evidence of prehistoric settlement, and Christianity spread throughout the

Harry S. Truman spent his boyhood at I., and later made it his home; 3½ million documents relating to his presidency were in 1957 deposited (see *MISSOURI*) in the Harry S. Truman Federal Library. I. was made a city during the gold rush of 1849. Industries incl. making of steel and Portland cement, petroleum refining, flour milling. Mormons are the largest religious group in the pop., which in 1960 was 62,328.

INDEPENDENCE DAY. The day (4 July) on which the Declaration of Independence of 1776 is commemorated in the U.S.A. It is a public holiday.

INDEPENDENT LABOUR PARTY. Soc. party, founded at Bradford in 1893. In 1900 it joined with trade unions and Fabians in founding the Labour Representation Committee, the nucleus of the Lab. Party. Many members left the I.L.P. to join the Com. Party in 1921, and in 1932 all connections with the Lab. Party were severed. After the S.W.W. it consistently dwindled. See *MAXTON*.

INDEX. In finance, usually the selection of 30 leading industrial ordinary shares used by the *Financial Times* as an indicator of the general movement of the Stock Exchange market; the U.S. equivalent is the *Dow Jones Index*. See also *COST OF LIVING*.

INDEX LIBRORUM PROHIBITORUM. The list of books formerly officially forbidden to members of the R.C. Church. The process of condemning books and bringing the Index up to date was in the hands of a congregation of cardinals, consultants, and examiners from the 16th cent. until 1966.

INDIA. Geographical and historical name for the great S. Asian peninsula or sub-continent lying between the Himalayas and the Indian Ocean. It incl. the reps. of India and Pakistan, and the state of Kashmir, in dispute between them. Ceylon lies off its S.E. point; the princely states of Sikkim, Bhutan, and Nepal and Chinese-controlled Tibet lie to the N. Total area 1,620,000 sq. m.; pop. (1968) c. 720,000,000.

Physical. The country is in the form of a large triangle based on the Himalaya mountains, the Arabian Sea lying on the W. coast, and the Bay of

sides of the triangular plateau are formed by the E. and W. Ghats.

Climate. In the N. the peninsula has a continental climate, with considerable variations of temperature between winter and summer, when the thermometer at Jacobabad in W. Pakistan may reach 127°F in the shade. In the S. the climate is more equable, though the winter temperature at Bombay (well within

INDIA. In spite of government endeavour, water supplies are still short in the great cities, as here in Calcutta, so that even hydrants connected to untreated river-water are eagerly used, with a resultant spread of water-borne disease.

Courtesy of W.H.O.

the tropics) has been as low as 52° F. Rainfall varies greatly, but is constantly heavy in Bengal and in upper Assam (average at Cherpunji, 400 in. annually); while the monsoon brings heavy seasonal rain to the alluvial plains south of the mountains. Farther south there is an arid region, with waterless deserts. The weather system of the peninsula falls into 2 parts. N. of the Vindhya there is copious rainfall during the S.W. monsoon; to the south the rains are more moderate, but the monsoon continues some weeks longer. The cold months in the peninsula are Jan. and Feb.; March, April, and May are hot. In June, July, Aug., Sept., and Oct. comes the S.E. monsoon, which is reversed during the remaining 2 months.

Peoples. Descendants of the earliest known inhabitants, a Negrito or Negroid people, are still found in scattered tribes in S. India; the Andamanese also belong to this group. Southern India is mainly inhabited by Dravidians, and the Aryo-Dravidian (Hindustani) type is found in the Ganges valley. People of Indo-Aryan stock occur in Kashmir and neighbouring regions, and Scytho-Dravidian and Mongolo-Dravidian peoples inhabit regions east of the Indus and Bengal respectively. In the N.W. Turco-Iranian types prevail, and Mongolians have penetrated into the N.E.

Vast areas of the sub-continent are fertile, and some areas less fertile naturally have been made so by artificial irrigation. Agriculture is the chief occupation in both republics. Minerals exist in considerable quantity: e.g. coal, iron ore, manganese, petroleum, and their exploitation is being developed. Both India and Pakistan have ambitious plans for developing hydro-electric power.

History. The earliest Indian civilization was that of the Indus valley (c. 2500–c. 1600 B.C.); this may have been built up by the Dravidians, the ancestors of the main people of the S. From c. 1500 B.C. waves of Aryans entered I. from the N.W., and gradually overran the N. and the Deccan, intermarrying with the Dravidians. From their religious beliefs developed

INDIA. Typical of rural India is the bo-tree (q.v.) which serves as the village meeting-place. Here in its shade, beside the mud-walled huts, teaching is given. Photo: S.P.G.

Bengal on the E. It has common land frontiers with Persia, Afghanistan, China (Tibet), and Burma. There are 3 main geographical divisions: (1) the Himalayas, a vast crescent-shaped range including the highest mountains in the world. (2) The river plains, extending across the widest part of the country and comprising the systems of the Indus, the Ganges, and the Brahmaputra. This region is the most populous. (3) The Deccan or southern tableland, which forms the greater part of the peninsula proper. The northern side of the tableland is formed by the Vindhya mts. The other

are made and distributed by the U.K.A.E.A. (q.v.).

ISPAHAN. See ISFAHAN.

ISRAEL. Independent republic of S.W. Asia, part of Palestine (q.v.). It was set up in 1948 immediately on the ending of the British League of Nations mandate for Palestine, and was accepted as a member of the U.N. in 1949. The Law of Return, 1950, provides that 'every Jew shall be entitled to come to Israel as an immigrant'. The head of state is a pres. elected directly for 5 years: the first holder of the office was Chaim Weizmann (q.v.). A single-chamber parliament (Knesset) is elected on a system of proportional representation for 4 years by universal suffrage. There is a cabinet headed by a P.M. (a post first held by David Ben-Gurion, q.v.). I., at once attacked by neighbouring Arab states, succeeded in holding them at bay, and armistices were concluded in 1949 with Jordan, Lebanon, Syria, and Egypt. Intermittent incidents continued, however, with large-scale fighting against Egypt (q.v.) in the Sinai campaign 1956, and the Israeli-Arab war of 5-10 June 1967, when Israeli forces again under Major-Gen. Moshe Dayan overran the Sinai peninsula, gained control of the Old City of Jerusalem, conquered the whole of Jordan W. of the r. Jordan, and invaded Syria to within 40 m. of Damascus. Guerrilla operations against I. by the rival Arab organizations, Popular Front for the Liberation of Palestine and Al Fatah, continued, accompanied by reprisals by Israel: technically the attack is on Zionism not the Jews.

The cap. is (the Israeli part of) Jerusalem; other large towns are Haifa and Tel Aviv-Jaffa. Hebrew is the national language, Judaism the official religion; other beliefs are tolerated. Intensive efforts, incl. development of artificial irrigation (e.g. in the Negev), are making for an improved agriculture in this formerly poor country. The salt deposits of the Dead Sea are the chief mineral resource; copper is found in the S. near Eilat. Manufactures incl. textiles, chemicals, plastics, tobacco, and precision instruments. Area 8,000 sq. m.; pop. (1967) 2,657,000 (incl. 312,000 non-Jews).

Historically, ISRAEL was the name of the northern kingdom of Palestine formed by those Jewish tribes which, after the death of Solomon, seceded from the rule of his son Rehoboam, and elected Jeroboam as their king.

ISTANBUL (-bool'). City and chief seaport of Turkey, formerly cap. of the Turkish Empire. Occupying the site of the ancient Byzantium and Constantinople (qq.v.), I. stands on the western shore of the Bosphorus at the point where it enters

the Sea of Marmara, thus controlling the route between the Mediterranean and the Black Sea. To the N. of the promontory on which I. stands is the 4 m. long harbour of the Golden Horn. Surrounding the nucleus of the city on the promontory are a number of suburbs: Galata (the shipping and banking centre) and Pera (the European quarter) are N.E. of the Golden Horn, but W. of the Bosphorus; Uskudar (the industrial and commercial centre) lies on the E. (Asiatic) side of the Bosphorus. Industries are numerous and varied.

Famous monuments are the Great Mosque, formerly the church of St. Sophia, which was built by Justinian in the 6th cent. on the site of the building erected by Constantine and rebuilt by Theodosius II in 415; and the alleged sarcophagus of Alexander (c. 300 B.C.) and that of the emperor Constantine.

In 1453 the city, which for 11 cents. had been the capital of the Roman Empire, was taken by the Turks and remained capital of the Ottoman Empire until 1923, when Ankara became the capital of the Turkish republic. Pop. (1965) 2,230,911.

ITALIAN. One of the main Romance languages derived from Latin, which it closely resembles. It originated in its present form in Tuscany in the Middle Ages, acquiring prestige through its use by Dante, though the renewed use and influence of Latin during the Renaissance period tended to make of written Italian a stilted and artificial language bearing little resemblance to the popular tongue. By the middle of the 19th cent. Florentine usage had come to be universally accepted as a basis for the written language. However, outside Tuscany, dialect is still the general conversational medium. D'Annunzio (q.v.) coined many new words.

Literature. It originated in the 13th cent. with the Sicilian school which imitated Provençal poetry. The contemporary works of St. Francis of Assisi and Jacopone da Todi reflect the religious faith of the time. Guido Guinicelli (1230-c. 1275) and Guido Cavalcanti (c. 1250-1300) developed the spiritual conception of love and influenced Dante Alighieri, whose *Divina Commedia* is the greatest work of I.L. Petrarch was a humanist and a poet, while Boccaccio is principally known for his short stories.

The 15th cent. marked the beginning of the Renaissance. Boiardo dealt with the Carolingian epics in his *Orlando Innamorato* which was completed and transformed by Lodovico Ariosto as *Orlando Furioso*. Their contemporaries Niccolò Machiavelli and Francesco Guicciardini (1483-1540) are outstanding historians. Torquato Tasso wrote his epic *Gerusalemme Liberata* in the spirit of the Counter-Reformation.

The 17th cent. was characterized by the exaggeration of the poets Giovanni Battista Marini (1569-1625) and Gabriello Chiabrera (1552-1638). In 1690 the 'Academy of Arcadia' was formed: its members incl. Innocenzo Frugoni (1692-1768) and Metastasio. Other writers incl. Salvatore Rosa, the satirist. During the 18th cent. Giuseppe Parini (1729-99) ridiculed the abuses of his day, while Vittorio Alfieri attacked tyranny in his dramas. Carlo Goldoni wrote comedies and Ugo Foscolo (1778-1827) is chiefly remembered for his patriotic verse. Giacomo Leopardi is not only the greatest lyrical poet since Dante, but also a master of Italian prose; the Romantic, Alessandro Manzoni, is best known as a novelist, and influenced amongst others the novelist Antonio Fogazzaro. A later outstanding literary figure and poet, Giosuè Carducci, was followed by the verbose Gabriele d'Annunzio, writing of sensuality and violence, and Benedetto Croce, historian and philosopher, who between them dominated I. literature at the turn of the cent.; other writers were the realist novelist Giovanni Verga, the dramatist Luigi Pirandello, and the novelists Ignazio Silone and Italo Svevo. Poets of the period incl.

ISTANBUL. The Galata bridge crosses the Golden Horn to the part of the city built on the site of ancient Byzantium. It also serves to divide this splendid natural anchorage into an outer harbour, and inner harbour and naval port.

INDIANAPOLIS. Capital and largest city of Indiana, U.S.A. There is a large grain trade, and industries include meat packing and chemical and motor-vehicle manufacture. I. is a centre of both railway and air transport. Pop. (1960) 476,258.

INDIAN ART. The history of Indian art may be traced back to the ancient Indus valley civilization of c. 3000 B.C., which seems to have had a definite influence on the Brahmanical art of later periods. The

Asiatic (Mon-Khmer 550,000 and Munda 3,974,000) and Karen (1,114,000). For the use of English, see *under INDIA and PAKISTAN.*

INDIAN LITERATURE. For the literature of ancient India see **SANSKRIT**; **VEDA**; **PALI**; **PRAKRIT**. The great no. of Indian languages and the wealth of the literary output in India through medieval to modern times makes any brief survey impossible. Among recent developments the emergence in the last cent. of Bengali as an important literary tongue is remarkable, cf. the work of philologist Ram Mohan Roy, founder of Brahma Samaj (q.v.), who paved the way for such writers as novelist Bankim Chandra Chatterji (q.v.) and Romesh Chunder Dutt (1848–1909). A token of the reputation of Bengali among literatures of the modern world was the award to Rabindranath Tagore of a Nobel prize in 1913: notable among later writers are the poets Buddhadeva Bose and Amiya Chakravarty. Hindi has been developed rather as a political weapon than a literary medium during the struggle for independence and its aftermath, but especially important as literary languages are Urdu (the novelist Prem Chand and poet-philosopher Iqbal, q.v.) and Gujarati (the poet Nalanal Devi and the writings of Gandhi). The long association with Britain has estab. English as almost a native tongue for many Indians, and writers in English – though wholly Indian in the character of their work – incl. the novelist Dhan Gopal Mukerji, the poet Sarojini Naidu (1879–1949), Sri Aurobindo (1872–1950), and Dom Moraes, and Nehru. Tagore wrote little creatively in English, but translated many of his own works.

INDIAN MUTINY. The revolt against the British in India of the Bengal army in 1857–8. The movement was confined to the N., from Bengal to the Punjab, and C. India; it drew its main support from the army and the recently dethroned princes, but in certain areas it developed into a peasant rising or a general

INDIANS. Blackfeet Indian in ceremonial costume.

although a Mongoloid strain predominated. Stature differs widely, and, if Eskimoes are included, the A.Is. include some of the shortest as well as (in Patagonia) some of the tallest races. There is also a great cultural diversity; the very low culture of the Is. of the N.

Maurya period (3rd cent. B.C.) has its most notable example in the palace of Asoka, and was characterized by sculptured gateways and reliefs. The Kusana and Andhra periods (1st–4th cents. A.D.) led to the mature and voluptuous art of the Gupta period, which spread widely over S.E. Asia. Mathura, Sarnath, Ajanta, and Aurangabad were centres of Buddhist sculpture, and remarkable examples of Brahmanical art were also produced. The same tradition led in the 6th and 7th cents. to the painting of frescoes, usually depicting incidents in the legends of the Buddhist, Hindu, and Jain religions. The 7th cent. saw the highest peak of I.A.; the magnificent rock sculpture of the descent of the Ganges at Mamallapuram bears witness to the virility of this period. Medieval art gradually lost the simplicity and force of the classical period, and while continuing on the same general lines tended to become more and more elaborate. Sculpture was generally of a religious character, but the Gujarat school also excelled in decorating dwelling houses. A brilliant school of miniature paintings arose in 16th cent. Rajputana. The Moguls introduced a school of painting based on Persian forms; Indian artists absorbed and expanded this art with great technical virtuosity.

After a period of decline I.A. has enjoyed a renaissance in modern times, e.g. the work of Abanindranath Tagore and his brother Gaganendranath (qq.v.), Amrita Sher-Gil, Jamini Roy, and Sailoz Mookherjee.

INDIAN CORN. See **MAIZE.**

INDIAN LANGUAGES. Languages spoken in India total 220, falling into 5 main groups. Much the most important is the Indo-European or Aryan, languages belonging to which are spoken by over 230,000,000 people. This group includes Hindi (q.v.), Pushtu, Pali, Urdu, etc., and is ultimately derived from the ancient Sanskrit. Its range includes the whole of N. India. Dravidian languages come next, with about 64,000,000 speakers, mainly in the south, where they include the 4 literary languages. Dravidian tongues are also used in the hills of central India, and an isolated pocket exists in Baluchistan. The Tibeto-Chinese group includes no fewer than 145 languages, some of which are spoken in Assam and on the slopes of the Himalayas. Other groups are the Austro-

revolt. Outstanding episodes were the seizure of Delhi by the rebels and its siege and recapture by the British, and the defence of Lucknow by a British garrison. The I.M. led to the substitution in 1858 of direct administration by the Crown for the rule of the E. India Co.

INDIAN OCEAN. Ocean lying between Africa and Australia, with India to the N. In the S. it merges into the Antarctic seas, the arbitrary boundary being a line from Cape Agulhas to S. Tasmania. Area 28,350,000 sq. m.; average depth is 13,000 ft.; the deepest known part is Java Trench (24,440 ft.), off the S. coast of Java. See **BRIT. I.O. TERR.**

INDIANS, American. Name given to the pre-European inhabitants of America. Their ancestors, who entered America in successive immigrations via the Bering Straits, did not belong to one ethnic stock,

maharaja when I. was cap. of the former princely state of I. Pop. (1961) 395,035.

INDRA. Hindu deity of the early Vedic era. He was the god of the firmament and thus the god of all-pervading power, and is depicted as a man on a white elephant. In one of his 4 arms he carries a thunderbolt.

INDRE (andr). French r. rising in the Auvergne mountains and flowing for 115 m. generally N.W. to join the Loire below Tours. It gives its name to the depts. of Indre and Indre-et-Loire.

INDUCTANCE. Either that property of an element, or circuit, which when carrying a current is characterized by the formation of a magnetic field and the storage of magnetic energy; or the magnitude of the capability of an element or a circuit to store magnetic energy when carrying a current.

INDUCTOR. An element possessing the characteristic of inductance.

INDULGENCES (Lat. *indulgere*, to grant). According to the R.C. Church the total or partial remission of temporal punishment for sins which remain to be expiated after penitence and confession has secured exemption from eternal punishment. The doctrine of I. began as the commutation of the Church penances for sin, such as fasting, for suitable works of charity or money gifts to the Church, and became a great source of church revenue. The system was grossly abused, and the height of degradation was reached when abp. Albert of Mainz and Magdeburg sold I. through the agency of the Dominican Tetzel. This trade in I. roused Luther in 1517 to draw up his 95 'Theses' and initiate the Reformation. The Council of Trent in 1563 recommended moderate retention of I., but the Vatican Council debated continuance 1965.

INDUS. River of Asia which rises in Tibet in glaciers on the N. slopes of Kailas range in the Himalayas, flows N.W. across Kashmir, then turns S.W. to flow through W. Pakistan to the Arabian Sea which it enters through a delta, 125 m. wide, below Hyderabad. It is c. 1,800 m. long, and with its 5 tributaries forms a river system with twice the annual flow of the Nile. The lower I. has an extensive irrigation system dependent on the Lloyd barrage (1932), but the

INDUSTRIAL REVOLUTION. Child labour, an accompaniment of the earlier stages of Britain's industrial revolution, still exists in the East, but this little girl is not unhappy as she deftly spins.

system for the upper I. area was cut in two by the partition of Punjab in 1947. A treaty of 1960 allotted India the use of the 3 eastern rivers (Ravi, Beas and Sutlej) and Pakistan the 3 western (Indus, Jhelum, and Chenab), and initiated a development plan.

From c. 2500-c. 1600 B.C. the lower Indus valley was the site of a prehistoric civilization of city-dwellers, destroyed and overrun by Aryan invaders from the N. See **INDUS VALLEY CIVILIZATION**.

INDUSTRIAL REVOLUTION. The sudden acceleration of technical development which occurred in Europe from the late 18th cent., and which transferred the balance of political power from the landowner to the industrial capitalist, and created an organized industrial working class. The great achievement of the first phase (to 1830) was the invention of the steam engine in Britain, originally developed for draining mines (see **NEWCOMEN**), but rapidly put to use in factories and in the railways (see **WATT**, **ARKWRIGHT**, **CROMPTON**, and **TREVITHICK**). In the second phase, from 1830 to the early 20th cent., the I.R. enlarged its scope from Europe to the world, with some initial exploitation of 'colonial' possessions by European powers as a preliminary to their independent development, and the internal combustion engine and electricity were developed. Then in 1911 Rutherford split the atom at Manchester and the prospect of nuclear power opened, and electronic devices were developed which made possible automation (q.v.), with the eventual prospect of even managerial decision-making being in the hands of 'machines'. See **CYBERNETICS**.

INDUS VALLEY CIVILIZATION. The culture of prehistoric N.W. India, which flourished in the 3rd millennium B.C. Complete, well-planned cities have been unearthed, notably Harappa in the Punjab and Mohenjo Daro in Sind. Sculptures in alabaster and marble, jewellery, etc., bear witness to a high civilization. There are evidences of a flourishing economy based on agriculture and cattle rearing; spinning and weaving and manufacture of cotton were practised. It seems that the founders of the I.V.C. were of the dolichocephalic Mediterranean type of S. Asia and Europe, who came in from the W. They used on seals an indigenous - hitherto undeciphered - script.

INDY (andē), Vincent d' (1851-1931). French composer. B. in Paris, he studied under César Franck, and was one of the founders of the *Schola Cantorum*, in which the ideals of Franck were embodied. His works incl. operas (*Fervaal*), symphonies, tone poems (*Istar*), chamber music, etc.

INFANT. See **MINOR**.

INFANTE and **INFANTA** (Lat. *infans*, an infant). Title given in Spain and Portugal to the sons (other than the heir-apparent) and daughters respectively of the sovereign. The heir-apparent in Spain bore the title of Prince of the Asturias, and the title of I. was also given to other members of the royal family.

INFANTICIDE. In modern states the killing of children is a criminal offence, but it was a recognized practice until recent times as the simplest method of population control in India and China, and among ancient peoples incl. the Greeks. Girls were the most frequent victims, but in communities where bride-prices were high they might be regarded as the greater asset and boys were disposed of.

INFANTILE PARALYSIS. See **POLIOMYELITIS**.

1889. An attempt to seize Ethiopia was decisively defeated at Adowa in 1896. War with Turkey in 1911–12 gave Tripoli and Cyrenaica. I.'s intervention in the F.W.W. on the Allied side secured her Trieste, the Trentino, and S. Tirol. The post-war period was marked by intense political and industrial unrest, culminating in 1922 in the establishment of Mussolini's Fascist dictatorship. The régime embraced a policy of aggression with the conquest of Ethiopia in 1935–6 and of Albania in 1939, and I. entered the S.W.W. in 1940 as the ally of Germany. Defeat in Africa 1941–3 and the Allied conquest of Sicily in 1943 resulted in Mussolini's downfall; the new govt. declared war on Germany, and until 1945 I. was a battlefield between German occupying forces and the advancing Allies. In 1946 Victor Emmanuel III, who had been king since 1900, abdicated in favour of his son Humbert (Umberto) II, who abdicated later in the year, following a referendum in which 12,718,641 votes were cast for a rep., 10,718,502 for the monarchy; whereupon a rep. was proclaimed.

A peace treaty between I. and the Allies was signed and ratified in 1947. It deprived I. of its colonial empire and transferred to Yugoslavia Zara (Zadar) and part of Venezia Giulia; to France 4 small areas in the Alpes Maritimes; to Greece the Dodecanese. Trieste (q.v.), which the Allies proposed to make a free territory, was in 1954 returned to I. Post-war expansion and economic development has been rapid. The Christian Democrats (centre-left) have led numerous Coalitions since the S.W.W.; there is the largest Communist Party in W. Europe.

ITCH. Irritation of nerve endings in skin or mucous membrane not amounting to pain. 'The itch' is scabies, an eruption produced by the burrowing into the skin of the female of the minute parasite *Acarus scabiei*.

ITO (ē'tō), Hirobumi, Prince (1841–1909). Japanese statesman. He assisted in the modernization of the Japanese state, and between 1886 and 1901 he was 4 times P.M. He drafted the constitution of 1890, and the Anglo-Japanese Alliance of 1902 was largely his work. In 1906 he became resident-gen. in Korea, and was made a prince (1907). He was shot dead by a Korean at Harbin.

IVAN III (ēvahn') (1440–1505), called 'the Great'. Grand duke of Moscow, he succeeded his father in

1462; by some historians he is called the first tsar of Russia. In 1480 Ivan effectually revolted against Tartar overlordship by refusing to pay the customary tribute to the Grand Khan Ahmed, who was slain in battle in the following year. He adopted the double-headed eagle as the symbol of the Russian state.

IVAN IV (1530–84). Tsar of Russia, called 'the Terrible'. Son of the grand duke of Muscovy, he became grand duke on the death of his father in 1533 and was actual ruler from 1544. In 1547 he was crowned the first tsar of Russia, and embarked upon a period of internal consolidation and external conquest of Kazan, Astrakhan and W. Siberia. After 1560 he developed into a ferocious tyrant, and from 1564 he lived away from Moscow, his life being passed in alternate debauchery and religious austerities.

IVANOV (ēvahn'of), Vsevolod Vyacheslavovich (1895–1963). Russian novelist. B. in Siberia, he worked at a multitude of jobs before settling in Petrograd in 1921 to write. His most famous book is *Armoured Train* 14–69 (1933), which was very successfully dramatized and represents the spirit of the insurgent proletariat.

IVANOVO. Cap. of I. region, R.S.F.S.R., 150 m. N.E. of Moscow; an industrial centre with textile, chemical, and engineering works. Pop. (1967) 398,000.

IVEAGH (i-va), Edward Cecil Guinness, 1st earl of (1847–1927). British philanthropist. A son of Sir Benjamin G., he became chairman of the Dublin brewery, but retired in 1889. He estab. the Guinness' Trust for the building of working-class homes in Dublin and London, etc., and bequeathed Ken Wood, Hampstead, to the nation. He was created earl of Iveagh in 1919.

IVES (ivz), Burl Icle Ivanhoe (1909–). American singer. Making his début as an actor in 1938, he has appeared in musical and straight plays and in films, but is best known as a ballad singer to a banjo accompaniment, having made more than 300 records. He has pub. the autobiographical *The Wayfaring Stranger* (1948) and ed. collections of songs, e.g. *America's Musical Heritage*.

IVES, Charles Edward (1874–1954). American experimental composer, in daily life a business man, whose use of smaller intervals than the semi-tone rendered his songs and 5 symphonies hard to perform.

IVES, Frederic Eugene (1856–1937). American inventor. B. in Connecticut, he became manager of the photography laboratory at Cornell university, and there in 1878 invented a half-tone process. By 1886 he had evolved the half-tone process now generally in use. Among his many other inventions was the three-colour process of colour printing.

IVIZA (ēv'ē'tah), One of the Balearic is. in the Mediterranean Sea, lying 60 m. E. of Spain, to which it belongs. Area 221 sq. m.; pop. (est.) 37,000. The cap., also called I., has a 13th cent. cathedral. Pop. (est.) 14,000.

IVORY. The hard white substance of which the teeth of certain animals are composed. Most valuable are the tusks of the African and Indian elephants, in which the dentine is of unusual hardness and density. Articles manufactured from it include piano keys, billiard balls, and handles of cutlery, brushes, etc. I. has been used as a

IVORY. Pendant mask of the 16th century, representing an oba or king of Benin. British Museum.

ITCH MITE

INITIATIVE and REFERENDUM. Devices whereby the voters may play a direct part in making laws. In the case of the *Initiative* a proposed law is drawn up and signed by petitioners, and submitted to the legislature. A *Referendum* may be taken on a law that has been passed by the legislature but which will not become operative until the people have expressed their will concerning it. If the R. gives an affirmative vote, then the law is confirmed and comes into force.

Switzerland was the pioneer in these devices, but both have been introduced into a number of the states and cities of U.S.A.

Another device is the *Recall*, whereby the voters are given the opportunity of demanding the dismissal from office of officials.

INK. The various kinds of ink include: (1) *writing inks*, the essential ingredients of which are hot-water extract of galls or some other vegetable material furnishing gallic acid, tannic acid, and other essentially phenolic compounds; (2) *copying and stamp-pad inks*, consisting of concentrated solutions of basic dyes in a hygroscopic medium; (3) *marking inks*, solutions of silver or copper compounds, with the possible addition of aniline; (4) *printing inks*, the chief ingredients of which are resin, soap, and a drying oil in which a colouring matter is mixed.

INKERMAN. A battle of the Crimean War, fought on 5 Nov. 1854, during which an attack by the Russians on I. ridge, occupied by the British army besieging Sebastopol, was repulsed.

INLAND REVENUE, Board of. British govt. dept. formed in 1849 and controlling the income tax, surtax, certain minor taxes, death duties, and stamp duties on documents. Its H.Q. are at Somerset House, London.

INNOCENT III (1161-1216). Pope. B. at Anagni, he was elected pope in 1198. He was successful in asserting the power of the papacy over secular princes, and played a decisive role in the struggles over the imperial succession. His greatest triumph was over King John, whom he compelled to accept Langton as archbishop of Canterbury, and to hold England as the Pope's vassal. I. promoted the 4th Crusade, and crusades against the pagan Livonians and Letts, and the Albigensian heretics.

INNOCENTS' DAY or Childermas. Festival of the Catholic Church, celebrated on 28 Dec. in memory of the children who were slaughtered by Herod following upon the birth of Jesus Christ.

INNS and INNKEEPERS. An I. may be defined as a house whose owner is according to law prepared to provide shelter and refreshment to all travellers able and willing to pay a reasonable price for the accommodation offered. An innkeeper is bound in law to receive and to provide this accommodation for every guest, so far as he is able, unless the guest be drunk, disorderly, or suffering from infectious disease. Is. differ from hotels in the U.S. only in being picturesque buildings set in attractive surroundings.

INNSBRUCK (-brook). Town on the r. Inn, cap. of Tirol, Austria. I. is a tourist centre, and important as a route junction, esp. as the junction for the Brenner Pass. I. is the seat of a univ. founded 1677. Ancient monuments incl. a 16th cent. Franciscan church. Pop. (1961) 100,699.

INNS OF COURT. Voluntary societies which have the power to call law students to the English Bar. There are now 4, viz. Lincoln's Inn, Gray's Inn, Inner Temple, and Middle Temple; each pursues its separate existence, though joint lectures are given, and a common examination board has been formed. Each is under the administration of a body of Benchers.

INOCULATION. The injection into the body of dead organisms, toxins, antitoxins, etc., with the object of producing immunity by provoking a mild attack of the disease.

İNÖNÜ, İsmet (1884-). Turkish statesman. B. in Smyrna, he was a close associate of Atatürk, and as C.-in-C. against the Greeks won the battle of I., from which he took his surname. Appointed For. Min. in 1922, he signed the Treaty of Lausanne, was P.M. 1923-37, and succeeded Atatürk as pres. (1938-50). He then led the opposition (Republican People's Party) until the 1960 military revolution and in 1961 became P.M. of a coalition govt.

INORGANIC CHEMISTRY. Science dealing with the preparation and properties of the elements and their compounds, except those carbon compounds considered in Organic Chemistry (q.v.). Many groups of analogous compounds exist, the oldest known being acids, bases, and salts. Acids usually have a sour taste, change blue vegetable colours (e.g. litmus) red, and react with alkalis to form salts. Alkalis restore the colours of indicators changed by acids, with which they react to form salts. All acids contain hydrogen. Acids containing oxygen are called oxyacids; those of the same element may contain different amounts of oxygen, the name then ending in -ous and -ic when less or more oxygen is present; the names of the corresponding salts end in -ite and -ate. Salts are formed by the replacement of the acidic hydrogen by a metal or radical. Oxides are classified into: (i) acidic oxides, forming acids with water; (ii) basic oxides, forming bases (containing the hydroxyl group OH) with water; (iii) neutral oxides; and (iv) peroxides

(containing more oxygen than the normal oxide). Acidic and basic oxides combine to form salts, whilst in the reaction between acids and bases water is formed as well. An acid containing in the molecule one, two, or three atoms of replaceable hydrogen is called mono-, di-, or tri-basic, respectively. If only part of the hydrogen is replaced, an acid salt is formed. A basic salt is usually a compound of a normal salt (in which all the acidic hydrogen is replaced) with excess of base. Other groups are the compounds of metals with halogens (fluorine, chlorine, bromine, and iodine), called halides (fluorides, chlorides, bromides, and iodides), and with sulphur (sulphides). It is usual in the chemistry of non-metallic elements to discuss their compounds with hydrogen, oxygen, and halogens; and in describing the metals to deal with their oxides, halides, and oxyacids (carbonates, nitrates, sulphates, etc.).

The basis of the modern description of the elements is the Periodic Table, given on p. 570. In this, the elements are arranged in the order of increasing atomic weight with one or two inversions (e.g. tellurium and iodine), or more correctly in the order of atomic number (nuclear charge). The continuous sequence of elements then breaks up into 7 periods and 8 groups, the members of a group and the sub-groups (a) and (b) into which each is divided showing related chemical properties. The Roman numeral at the top of each group is equal to some valency (sometimes the minimum, as in group I, sometimes the maximum, as in groups VI and VII, of the elements it contains). See also table on page 244.

The sequence of atomic numbers shows that there

New Orleans in 1815, and was elected Pres. in 1828. In 1832 he vetoed the renewal of the U.S. bank charter, and was re-elected, whereupon he continued his struggle against the power of finance.

JACKSON, Sir Barry Vincent (1879–1961). British theatre manager. B. in Birmingham, he founded the famous repertory theatre there in 1913 and became manager of the Court (1924) and Kingsway (1925) theatres in London. Knighted in 1925, he founded the Malvern Shaw Festival 1929–39, and reorganised the Stratford-on-Avon Memorial Theatre, laying the foundations for its present fame, while its director, 1946–8. He also translated many plays.

JACKSON, John (1769–1845). British pugilist; known as 'Gentleman Jackson', he was champion 1795–1803. He taught Byron boxing.

JACKSON, Mahalia (1911–). American contralto singer, noted as a gospel singer, some of her songs e.g. 'I Will Move on up a Little Higher', she wrote herself.

JACKSON, Thomas Jonathan, known as 'Stonewall' J. (1824–63). American Confederate general. After serving in the Mexican War of 1846–8, he became professor of military tactics at the Virginia military institute. In the Civil War he acquired his nickname and his reputation at Bull Run, from the firmness with which his brigade resisted the Northern attack. In 1862 he organized the Shenandoah valley campaign, and assisted Lee's invasion of Maryland. He helped to defeat Hooker's army at Chancellorsville, but was accidentally shot by his own men.

JACKSON, Cap. of Mississippi state, U.S.A., on the Pearl r. It dates from 1821 and was virtually destroyed by Sherman in 1863. The discovery of natural gasfields to the S. stimulated industry; products include lumber, furniture, cottonseed oil, iron and steel castings. Pop. (1960) 144,422.

JACKSONVILLE. City, port, and holiday resort of Florida, U.S.A., with some industry (cigars, furniture, boats, etc.). Founded in 1822, J. was named after Andrew Jackson (q.v.), then Gov. of Florida. To the N. the Cross-Florida Barge Canal links the Atlantic with the Gulf of Mexico, some 100 m. N. of Tampa. Pop. (1960) 201,030.

JACK THE RIPPER. Popular name for the unidentified murderer of 6 women prostitutes in the Whitechapel area of London in 1888: the mutilation of the bodies added to the sensation.

JACOB (jā'kob). Hebrew patriarch. The 2nd son of Isaac and Rebecca, he obtained the rights of seniority from Esau by trickery, and became a pastoral chief. He m. his 2 cousins Leah and Rachel, serving Laban 7 years for each. At the time of the famine in Canaan he joined his son Joseph in Egypt.

JACOBABAD (jāk'-). Town in W. Pakistan, 250 m. N.N.E. of Karachi, a railway junction and market centre. J. was laid out by (and named after) Gen. John Jacob as a frontier station when he was frontier commandant. 1847–58. It has a very small rainfall (c. 2 in. annually) and in May and June reaches the highest temperature in the Indian sub-continent – as much as 127°F. Pop. (1961) 90,049.

JACOBAN. Term applied to a style of architecture

JABLONEC. Costume jewellery is one of Czechoslovakia's more important minor industries. The workers are mainly women who collect the components from Jablonex, the great firm controlling the industry, and make them up in their own homes. Here, the decoration of ear-rings is being skillfully carried out. Courtesy of the Czechoslovak Travel Bureau.

and furniture in favour during the reign of James I (1603–25). Following the general lines of Elizabethan design, it used classical features more widely. A fine example is Hatfield House, Herts.

JACOBINS (jak'obinz). A democratic republican club of the French Revolution, which originated at Versailles in 1789, but later moved to Paris where it rented a Jacobin (Dominican) friary. The name 'Jacobin' passed into general use for any supporter of revolutionary or democratic opinions.

JACOBITES. Those who continued to support the House of Stuart after the dethronement of James II in 1688 (Lat. *Jacobus*, James). Jacobitism was strongest among the Scottish Highlanders, who rose unsuccessfully under Claverhouse in 1689. James, the 'Old Pretender', headed a rebellion in Scotland and N. England in 1715, and in 1745–6 his son Charles Edward led a Scottish invasion of England which reached Derby. After the defeat at Culloden, Jacobitism disappeared as a political force.

JACOBS, William Wymark (1863–1943). British author. A professional civil servant, he was b. at Wapping and acquired an intimate knowledge of the docks and their 'characters', such as the rascally 'Bob Pretty', which he exploited in amusing short stories, e.g. *Many Cargoes* (1896) and *Light Freights* (1901). He excelled in the macabre, e.g. *The Monkey's Paw*.

JACOBSEN, Arne (1902–). Danish architect. Noted for their simple elegance, his works incl. St. Catherine's Coll., Oxford, and the parliament building, Islamabad.

JACOPONE DA TODI (yahkopō'neh dah tō'dē) (c. 1230–1306). Italian religious poet. He was a Franciscan, and was imprisoned (1298–1303) for satirizing pope Boniface VIII. The authorship of the *Stabat Mater* has been ascribed to him.

JACQUARD (zhahkahr'), Joseph Marie (1752–1834). French inventor of the J. loom, enabling the most complex designs to be woven. He was bitterly attacked by his fellow weavers, but the basic principles of his invention are in universal use.

JACQUERIE (zhahkrē'). Name given to the French peasant rising of 1358. The word is derived from the nickname for the French peasant, *Jacques Bonhomme*.

JACQUES (jāks). Reginald (1894–). British musician. He founded and conducted the J. Orchestra and directed the Bach Choir 1932–60. He was the first Director Music to C.E.M.A. (now Arts Council) 1940–45, and has pub. vols. of carols and songs.

JADE (jäd). Name given to various mineral substances, most commonly jadeite and nephrite,

JACQUARD. The culmination of a long series of inventions, the complicated Jacquard loom demands an alert and highly skilled operator. Each of the 2,000 or more threads is controlled individually through the 'harness'.

Courtesy of David Whitehead and Sons.

very considerably from 0.007 in. to 13 in. in length. The skeleton is almost entirely external and is composed of chitin. It remains membranous at the

CLASSIFICATION OF INSECTS

Class - INSECTA

Sub-class Apterygota

Thysanura	Three-pronged bristle-tails
Diplura	Two-pronged bristle-tails
Protura	Proturans
Collembola	Springtails

Sub-class Pterygota

Division 1. Exopterygota

Orthoptera	Grasshoppers, locusts, crickets, etc.
Dictyoptera	Cockroaches, praying mantids
Phasmida	Stick and leaf insects
Grylloblattodea	Few primitive, secondarily wingless forms
Plecoptera	Stone-flies
Isoptera	Termites or white ants
Embioptera	Web-spinners
Dermaptera	Earwigs
Ephemeroptera	May-flies
Odonata	Dragon-flies
Psocoptera	Psocids or book-lice
Anoplura	Sucking or true-lice and bird-lice
Thysanoptera	Thrips
Hemiptera	Plant-bugs, cicadas, leaf-hoppers, aphids, etc.

Division 2. Endopterygota

Neuroptera	Lace-wings, alder-flies, etc.
Mecoptera	Scorpion flies
Trichoptera	Caddis-flies
Lepidoptera	Butterflies and moths
Coleoptera	Beetles
Strepsiptera	Stylops
Hymenoptera	Saw-flies, ants, bees, wasps, ichneumon flies, etc.
Diptera	Two-winged or true flies
Aphaniptera	Fleas

joints, but elsewhere is hard and gives attachment to the muscles and other internal organs.

The head is its feeding and sensory centre. It bears the antennae, eyes, and mouth-parts. By means of the antennae, the I. detects odours and experiences the sense of touch. The eyes comprise compound eyes and simple eyes or ocelli. The compound eyes are formed of a large number of individual facets or lenses. There are about 4,000 lenses to each compound eye in the house-fly. The mouth-parts include a *labrum* or upper lip; a pair of principal jaws or *mandibles*, used for seizing and crushing the food; a pair of accessory jaws or *maxillae*; and a *labium*, or lower lip. The mouth-parts are modified in Is. which feed upon a fluid diet.

The *thorax* is the locomotory centre, and is made up of 3 segments - the *pro-*, *meso-*, and *metathorax*. Each bears a pair of legs and, in flying insects, the 2nd and 3rd of these segments also bears a pair of wings. Legs vary greatly in form according to use.

Wings are outgrowths of the integument of the meso- and metathorax. A wing is composed of an upper and a lower membrane, and between these 2 layers it is strengthened by a framework of chitinous tubes known as *veins*. The venation or arrangement of this framework is of great importance in the classification of insects. The hind-body or abdomen is the metabolic and reproductive centre: it is here that digestion, excretion, and the sexual functions take place. Usually the abdomen consists of 10 segments. In the female there is very commonly an egg-laying instrument or *ovipositor*, and many insects have a pair of tail feelers or *cerci*. Most insects breathe by means of fine air-tubes called *tracheae* which open to the exterior by a pair of breathing pores or *spiracles*.

Growth and metamorphosis. When ready to issue from the egg the young I. forces its way through the *chorion*, or egg-shell, and growth takes place in cycles that are interrupted by successive moults. After moulting the new cuticle is soft and pliable and able to adapt itself to increase in size and change of form. Moulting is caused by a hormone discharged into the blood. The growth changes constitute metamorphosis.

Most of the lower orders of Is. pass through a direct or incomplete metamorphosis. The young closely resemble the parents and are known as nymphs. The transformation to adult stage is gradual and feeding goes on throughout life.

The higher groups of Is. undergo indirect or complete metamorphosis. They issue from the eggs at an earlier stage of growth than nymphs and are termed *larvae*. The life of the I. is interrupted by a resting *pupal* stage when no food is taken. During this stage the larval organs and tissues are transformed into those of the *imago* or adult. Before pupating the I. protects itself by selecting a suitable hiding place, or making a cocoon of some material which will merge in with its surroundings. When an I. is about to emerge from the pupa it undergoes its final moult, which consists in shedding the pupal cuticle. When in the adult stage the I. no longer grows or moults.

Reproduction is by gregarious means. In most Is. mating occurs once on a life and death soon follows. Many Is. are pests, which may be controlled by chemical pesticides (which may also kill useful Is.), importation of natural predators (which may themselves become pests), or more recently use of artificially reared sterile Is., either the males only or in 'population flushing' both sexes, so sharply reducing succeeding generations.

The classification of Is. (see accompanying Table) is largely based upon characters of the mouth-parts, wings and metamorphosis.

INSECTIVOROUS PLANTS. Plants which attract and trap small insects, and digest them. Unique for their ability to use animal protein as a source of nitrogen, they are common to marshy ground where there is a shortage of nitrogen. The sundews (*Drosera*) are of world-wide occurrence, and the largest species, *D. gigantea*, found in Australia, can reach a height of

INSECTIVOROUS PLANTS. Left to right: Venus' fly-trap; side-saddle flower; sundew.

3 feet. The butterwort (*Pinguicula*) found in Britain, produces a rosette of pale green leaves, each with turned-up edges, and a greasy surface covered with tiny points to trap insects. Bladderworts (*Utricularia*) tiny plants growing in quiet waters or q.v. are floating plants growing in muddy soils, and trap insects by small green bladders among the leaves. The Venus' fly trap (*Dionaea*) is common in S. America, and pitcher plants (*Nepenthes*) are native to the wet tropics of the Old World.

INSEMINATION. Artificial. The artificial introduction of semen to the reproductive tract of the female to effect fertilization. Largely used as:

estab. a strong central authority, and asserted the supremacy of the State over the Kirk. Succeeding Elizabeth as king of England in 1603, he alienated Puritan sentiment by his High Church views, and Parliament by his assertions of Divine Right. His unpopularity was increased by his fondness for favourites, and by his schemes for an alliance with Spain. He m. Anne of Denmark in 1589.

JAMES II and VII (1633–1701). King of England and of Scotland, the 2nd son of Charles I. In 1660 he m. Anne Hyde, by whom he had 2 daus., Mary and Anne. His 2nd wife was the *Catholic Mary of Modena*. Appointed Lord High Admiral at the Restoration, he was successful both as an administrator and as a commander in the Dutch Wars. His conversion to Roman Catholicism led to attempts to exclude him from the succession. After his accession in 1685 the failure of Monmouth's and Argyll's rebellions strengthened his position, but his attempts at arbitrary rule and his favour to Catholics produced a reaction against him, and in 1688 the Whig and Tory leaders united in an invitation to William of Orange to take the throne. J. fled to France. In 1689 he led a rising in Ireland, but was defeated at the battle of the Boyne (1690), and henceforward remained in exile in France.

JAMES. Name of 7 kings of Scotland. James I (1394–1437) was captured by the English on the way to France in 1406, and although he became king the same year was held a prisoner until 1424. Before returning to Scotland he m. Lady Jane Beaufort, and described his wooing in *The Kingis Quair*, a poem in the style of Chaucer. He was murdered by his nobles. James II (1430–60) succeeded his father James I, and took over the govt. in 1449. His reign was troubled and he was accidentally killed while besieging Roxburgh Castle. James III (1451–88) succeeded his father James II, assumed the royal power in 1469, and was murdered during a rebellion. James IV (1473–1513) succeeded his father James III. He m. Margaret, dau. of Henry VII, in 1503, but in 1513 he invaded England, and was defeated and killed at Flodden. James V (1512–42) succeeded his father James IV, and took power in 1528. The defeat of his army by the English at Solway Moss in 1542 hastened his end. For James VI and VII see JAMES I and II OF ENGLAND.

JAMES I (1208–76). King of Aragon, called 'the Conqueror'. Succeeding his father in 1213, he conquered the Balearic Is. and took Valencia from the Moors.

JAMES, Henry (1843–1916). Anglo-American novelist. B. in New York, the brother of the philosopher William J., he spent much of his youth in Europe. His first novel was *Roderick Hudson* (1876), which like

The American (1877) and *The Portrait of a Lady* (1881) shows the impact of European culture on the American mind. Other novels of the middle years are the exclusively American *Washington Square* (1881) and *The Bostonians* (1886); and *The Tragic Muse* (1890), *The Spoils of Poynton* (1897), and *The Awkward Age* (1899), all with English backgrounds. Greatest of his later works were *The Wings of a Dove* (1902), *The Ambassadors* (1903), and *The Golden Bowl* (1904).

Noteworthy are the short essay in the supernatural 'The Turn of the Screw' (1898), and his valuable literary *Notebooks*. After 1875 he resided permanently in Europe, becoming a naturalized British subject in 1915. His style became increasingly involved—the

HENRY JAMES. Lamb House at Rye, in Sussex, where the novelist made his home from 1896.

stages wittily summarized as 'James I, James II and James the Old Pretender'—and he is popularly best known by the successful posthumous stage adaptations of his books, the medium being one in which he had always wanted to excel.

JAMES, Jesse (1847–82). American folk hero, who has inspired many books. B. on a Missouri farm, J. became, with his brother Frank (1843–1915), leader of the notorious Quantrill gang. Carrying out many daring bank and railroad robberies in the midwestern states, they caused numerous deaths and a large reward was offered for their capture. A hero even during his lifetime, he was killed by an accomplice. Frank was unconvicted and became a respectable farmer.

JAMES, Montague Rhodes (1862–1936). British theologian. Provost of King's Coll., Cambridge, 1905–18, and of Eton 1918–36, he pub. numerous Biblical studies, including the *Apocryphal New Testament* (1924). He was also a master of the uncanny, and the malevolent apparitions of *Ghost Stories of an Antiquary* (1904) and other volumes are unrivalled.

JAMES, William (1842–1910). American psychologist and philosopher, brother of Henry J. He turned from medicine to psychology and taught at Harvard 1872–1907. In 1890 appeared his *Principles of Psychology*, followed by *Will to Believe* (1897), and *Varieties of Religious Experience* (1902), one of the most important works on the psychology of religion. He expounded his pragmatic approach to metaphysics in *Pragmatism* (1907) and *Meaning of Truth* (1909).

JAMES EDWARD (1688–1766). The 'Old Pretender', called by Jacobites James III. The son of James II, he was b. at St. James's Palace, and after the revolution of 1688 was taken to France. He landed in Scotland in 1715 to head a Jacobite rebellion, but withdrew owing to lack of support. In his later years he settled in Rome.

JAMESON, Sir Leander Starr (1853–1917). British colonial statesman. B. in Edinburgh, he practised medicine in London and then Kimberley, where he became a friend of Cecil Rhodes. Early in 1896 he led the J. raid from Mafeking into Transvaal in support of the dissatisfied 'Uitlanders'. Surrendering, he was handed over to the British for punishment, but owing to ill-health he served only part of his sentence of 15 months' imprisonment. Returning to S. Africa, he succeeded Rhodes as leader of the Progressive Party in Cape Colony, where he was P.M. 1904–8. He was created a baronet in 1911.

JAMESON, Margaret Storm (1897–). British

HENRY JAMES.

INTERNATIONAL COURT OF JUSTICE. International court at The Hague, the main judicial organ of the U.N. Its statute follows closely that of the *Permanent C of J.*, set up in 1921, which was associated with the League of Nations.

INTERNATIONAL DATE LINE. A modification of the 180th meridian which marks the difference in

The International date line, at which a day is lost or gained.

time between E. and W. The date is put forward a day when crossing the Line going W., and back a day when going E.

INTERNATIONALE. International Communist anthem with words by Eugène Pottier (1871) and music by Pierre Degeyter (c. 1891): it was the nat. anthem of the U.S.S.R. 1917–19 Dec. 1943.

INTERNATIONAL GEOPHYSICAL YEAR (I.G.Y.). Over 250 observatories in 60 countries co-operated during the sunspot maximum period of 1 July 1957–31 Dec. 1958 in studying the region of the earth's atmosphere extending upwards from about 70 km. (45 miles). Valuable scientific data collected incl. information about the various layers of ionization (q.v.) in the atmosphere, irregular patches of the ionosphere (q.v.), and extra levels associated with disturbances on the sun.

INTERNATIONAL LABOUR ORGANIZATION. An organization, with H.Q. at Geneva, which formulates standards for labour and social conditions, to be ratified by member-states. An independent body, first estab. in 1919, it was assoc. with the League of Nations, and in 1945 became affiliated to the U.N.

INTERNATIONAL LAW. That body of law or collection of rules regarded by civilized states as binding in their relations with each other. The chief framers of modern I.L. were classical jurists, e.g. Hugo Grotius (q.v.), who believed in the uncoded and continually evolving 'law of nature' of reasonable man as a member of society. Its most fundamental rules, covering not only political matters and the conduct of war but broad questions of human welfare, are elucidated in treaties and pacts between countries. The weakness of I.L. is that no body has yet proved strong enough to impose its rulings, although the L. of N. (q.v.) made several attempts and the U.N. (q.v.) has succeeded to some extent.

Space research has further enlarged the scope of I.L. On the analogy of the high seas outside territorial limits being regarded as the common property of all states, it has been accepted practice since the F.W.W. that each state has absolute sovereignty over air space (the upward limit being undefined in view of the newness of the problem), but that air space over unclaimed territory and the open sea is free for all. Outer space is being customarily treated as free for all, subject only to its use by rockets and satellites of one state having no harmful effect on any other state over which they pass—or which pass under them. Other planets—should these

prove available for appropriation—would preferably be internationally controlled. Britain, U.S.S.R., and U.S.A. signed a treaty 1967 banning nuclear weapons from outer space and in 1968 reached agreement on the rescue and return of astronauts, etc.

INTERNATIONAL SETTLEMENTS, Bank for. Although originated in 1930 to handle the reparation transactions arising from the Young Plan, the bank lost this business with Germany's default, but continued to operate by providing a foreign exchange reserve for central banks and by supplying funds to aid weakened currencies. In addition since the S.W.W., it has been financial agent for the Marshall Plan, O.E.E.C., etc. Its H.Q. are in Basle.

INTERPLANETARY MATTER. Material distributed in space, between the planets. It was formerly thought that space must be entirely empty, but this view is now known to be wrong; the material in the Solar System is very thinly spread, but it is still very appreciable. Studies of the interplanetary material have been carried out with the aid of lunar and planetary probes, but information is incomplete.

INTERPOL. Abbreviation of *International Criminal Police Commission*, founded following the Second International Judicial Police Conference (1923) with its H.Q. in Vienna, but reconstituted after the S.W.W. with its H.Q. in Paris: it has an international criminal register, fingerprint file and methods index.

INTERTYPE. A machine for composing printing type, similar to linotype (q.v.)

INTESTINES. The bowels; the digestive tract below the stomach. The small intestine (20 ft. in man), consists of the duodenum, jejunum, and ileum; the large intestine (5 ft.) of the caecum, colon, and rectum. Both ls. are muscular tubes comprising an inner lining which secretes alkaline digestive juice, a sub-mucous coat containing fine blood vessels and nerves,

INTESTINES. 1, stomach; 2 and 8, small intestine; 3, gall-bladder; 4, transverse colon; 5, ascending colon; 6, caecum; 7, appendix; 9, descending colon; 10, rectum.

a muscular coat with an inner layer of circular and an outer of longitudinal fibres, and a serous coat covering all. The muscle contracts in a series of waves (peristalsis) so as to pass the contents slowly along. The whole tract is supported by a strong band or sling of connective tissue (peritoneum) carrying the blood and lymph vessels and nerves (mesentery, omentum); this keeps the organs in place and isolates infection by pouring out lymph and sealing off the affected region.

INTOXICATION. Affection by a poison (toxin); in popular language usually by alcohol, but scientifically also by poisonous substances, including those generated within the body, e.g. in an abscess under a tooth, or in an inflamed appendix.

INVALIDES, Hôtel des (ôtel' dázahvahléd'). Large building in Paris, S. of the Seine. It was founded in 1670 as a home for disabled soldiers. The church *Dôme des Invalides* contains the tomb of Napoleon I. The military gov. of Paris has his H.Q. at the I.

INVERARAY (inver'arí). Co. town of Argyll, Scotland, on the W. shore of Loch Fyne at the mouth of the Aray. It is a herring-fishing centre. The town owes much to the dukes of Argyll, whose seat is I. castle, rebuilt in the 18th cent. Pop. (1961) 501.

INVERCARGILL. City at the extreme S. of South Island, New Zealand. I. is situated on a deep inlet, and is the centre of a great grazing area. It has saw-mills, meat-packing plants, and in 1968 a smelter was planned at nearby Bluff to process alumina from Queensland. Pop. (1967) 47,100.

JAPAN. The Kofukuji Temple at Nara was originally a Buddhist monastery and guardian temple of the Fujiwaras who ruled the state from the 9th to 11th cents. It was so prosperous that it had 175 buildings under its management: one of the chief remaining structures is the five-storeyed pagoda seen here, built in 1426. *Courtesy of Japanese Embassy.*

elected every 3 years, were given legislative power.

History. The Japanese nation probably arose from the fusion of 2 peoples, one coming from Malaya or Polynesia, the other from Asia, who conquered the original inhabitants, the Ainu. Japanese history remains legendary until the 5th cent. A.D., when the art of writing was introduced from Korea. After the introduction of Buddhism, also from Korea, in the 6th cent., Chinese culture became generally accepted, but although attempts were made in the 7th cent. to diminish the power of the nobles and set up a strong centralized monarchy on the Chinese model, real power remained in the hands of the great feudal families until modern times. In 1192 the ruling noble Yoritomo assumed the title of shogun (commander-in-chief), which until 1867 was usually borne by the real ruler of J. Interchange with Europe began in 1542, when Portuguese traders arrived; they were followed by the Spaniards, and in 1609 by the Dutch. Christianity was introduced by Francis Xavier in 1549. During the 15th and 16th cents. J. sank into a state of feudal anarchy, until order was restored between 1570 and 1615 by 3 great rulers, Nobunaga, Hideyoshi, and Iyeyasu; the family of the last, the Tokugawa, held power until the abolition of the shogunate. The fear that R.C. propaganda was intended as a preparation for Spanish conquest led to the expulsion of the Spaniards in 1624, and the Portuguese in 1639, and to the almost total extermination of Christianity by persecution; only the Dutch were allowed to trade with J. under irksome restrictions, while Japanese subjects were forbidden to leave the country. This complete isolation continued until 1853, when the U.S.A. insisted on opening trade relations; during the next few years this example was followed by the European powers. Consequently the isolationist party compelled the last shogun to

abdicate in 1867, and executive power was restored to the Emperor. During the next 30 years the privileges of the feudal nobility were abolished, a uniform code of law was introduced, and a constitution was established in 1889. The army was modernized, and a powerful navy founded. Industry developed steadily and a considerable export trade was built up.

J.'s career of aggression began in 1894 when a war with China secured her Formosa and S. Manchuria, as well as control of Korea, which was formally annexed in 1910. A victorious war with Russia in 1904-5 gave J. the S. half of Sakhalin, and compelled the Russians to evacuate Manchuria. J. formed an alliance with Britain in 1902, and joined the Allies during the F.W.W.; at the peace settlement she received the German islands in the N. Pacific as mandates. The 1920s saw an advance towards democracy and party govt., but after 1932 the govt. assumed a semi-Fascist form. As a result of successful aggression against China in 1931-2 a Japanese puppet monarchy under Pu Yi, last Emperor of China, was established in Manchuria (see MANCHUKUO); war with China was renewed in 1937. J. entered the S.W.W. with the attack on Pearl Harbor on 7 Dec. 1941, and at first won a succession of victories in the Philippines, Malaya, Burma, and the Netherlands Indies. She was finally compelled to surrender in Aug. 1945; an Allied control commission took charge, and J. was under military occupation by Allied (chiefly U.S.) troops until April 1952 when the Japanese Peace Treaty came into force. After J.'s defeat, Korea was made independent; Manchuria and Formosa were returned to China; the islands mandated to J. after the F.W.W. were placed by the U.N. under U.S. trusteeship. Under the peace treaty, the U.S.A. remained in occupation of the Ryukyu Islands, and the Bonin and Volcano Is. (qq.v.).

Following the S.W.W. Japan renounced nuclear weapons, but rapidly became Asia's leading economic power, extending aid to her neighbours. The Liberal Democrats (see SATO) are the leading party; the opposing Socialists are pro-Peking.

JAPAN, Sea of. The sea between Japan and the mainland of Asia.

JAPANESE. The language of Japan. Pure J. is usually considered a member of the Altaic group of languages, showing affinities with Korean. It is of simple, agglutinating structure. As the J. developed no script of their own, they adopted in the 3rd cent. the Chinese ideographs and adapted them, thus evolving an extremely complicated system. Later a simplified system (*Kana*) was introduced, but never ousted the old one. The language of today is a mixture of Japanese and Chinese, with borrowings from modern European languages.

JAPANESE ART. The main periods in the history of J.A. are: *Pre-Buddhist* (before 580): examples of Pre-Buddhist art and simplicity are the *haniwa*, clay grave figures, and *dōtaku*, bronze bells decorated with engravings. *Suiko* period (580-650): together with Buddhism, Korean temple builders, painters, etc., came to Japan. *Hakuohō* period (650-720): during this Japanese art was strongly influenced by Chinese. *Tempyō* period (720-810): in this 'blossom-time of Japanese civilization' there was still a strong Chinese influence, but native genius asserted itself, and a great amount of sculpture was produced. *Jōgan* period (810-980): a transitional period in which the chief influences were the religious sects of Shingon and Tendai. *Fujiwara* period (980-1170): in this period of elegance and refinement elaborate temples and mansions were built. *Kamakura* period (1170-1350): a more vigorous style of art was adopted. Sculpture was characterized by great strength and solidity. *Ashikaga* period (1350-1570): Zen Buddhism influenced the art. The rapid ink sketch in line and wash introduced by Zen priests from China became popular. Pottery gained in importance

decoration, e.g. the Savoy Theatre and Claridge's restaurant in London.

IONIZATION CHAMBER. Device for measuring the amount of ionizing radiation. The radiation ionizes gas in the chamber and the ions are collected and measured as an electric charge.

IONIZING RADIATION. Radiation which knocks electrons from atoms during its passage, thereby leaving ions in its path. Electrons and alpha-particles are much more ionizing than are neutrons or gamma-radiation (q.v.).

IONOSPHERE. The ionized layer of the earth's outer atmosphere, in which free electrons are normally present in sufficient quantities to modify the propagation of radio waves traversing it. There are 3 regions, approx. spherical and concentric, lying 30–100 m. from the earth's surface. Knowledge of the I. is important for radio communication and space travel. The lower regions (see **KENNELLY-HEAVISIDE LAYER**) are investigated by sending out radio waves and receiving them back at different places, after they have been reflected and refracted between the I. and earth. The upper boundaries of the I. are investigated with radio sounding from above, by satellites. A great deal of information is being collected in this way concerning daily and seasonal variations. The I. is assumed to be produced by absorption of the sun's ultra-violet radiation.

I O U. Short for 'I owe you'. A written acknowledgment of debt, signed by the debtor.

IOWA. North central state of the U.S.A. A prairie tableland, it is drained by tributaries of the bordering Mississippi and Missouri, and has great climatic extremes. I. is chiefly devoted to agriculture, esp.

IPECACUANHA

maize, and stock raising, with its accompanying industries of meat packing and the manufacture of dairy products. The chief mineral product is coal. First visited by Frenchmen in 1673, I. was admitted to the Union in 1846. The chief cities are Des Moines, the capital, Sioux City, Davenport, Cedar Rapids, and Waterloo. Area 56,280 sq. m.; pop. (1960) 2,757,537.

IPECACUANHA (ipikakū-a'na). A small shrubby plant (*Psychotria ipecacuanha*) found in Brazil and Colombia. The root, used in medicine, acts as an emetic and in lesser amounts as a digestive aid and expectorant.

IPHIGENIA (if ijēn'ā). In Gk. mythology, the dau. of Agamemnon and Clytemnestra.

IPPOLITOV-IVANOV Michael (1859–1935). Russian composer. B. in Gatchina, he studied under Rimsky-Korsakov, and became prof. at the Moscow Conservatoire. In 1894 appeared his most popular work, *Caucasian Sketches*.

IPSWICH. Co. town (co. bor.) of Suffolk, England, on the Gipping (Orwell), 16 m. N.E. of Colchester. I. is a market town with a civic coll. opened 1961, and has engineering works, and manufactures agricultural machinery, fertilizers, electrical apparatus, clothing, sacking, tobacco, etc. Pop. (1961) 117,325.

IQBAL. Sir Muhammad (1876–1938). Indian poet and thinker. B. in the Punjab, he became prof. of philosophy at Lahore, and was knighted in 1923. He was influenced by Nietzsche, and expressed his philosophy in *Reconstruction of Religious Thought in Islam*, etc. An I. Society was formed in 1948.

IQUIQUE (ēkē'kā). City and seaport of Chile, cap.

of the prov. of Tarapaca. It exports nitrate of soda, from the desert region. Pop. (1966) 48,000.

IQUITOS (ēkē'tōs). Peruvian river port on the upper Amazon, cap. of Loreto dept. The town is a general clearing house for most of eastern Peru. Pop. (1965) 66,000.

IRAN. Persian name for PERSIA.

IRANIAN. The I. language, formerly known as Persian, is the literary language of modern Iran or Persia. Its earliest remains are the Old Persian inscriptions and the Zoroastrian scriptures. Old Persian was a highly inflected language, akin to Sanskrit, but modern I. is as lacking in grammatical forms as English. Written in the Arabic alphabet, it has incorporated a high percentage of Arabic words.

See also PERSIAN.

IRAQ (ērakh'). Republic in the Middle East. Flowing across the country are the 2 great rivers Tigris and Euphrates. Rising on either side of the river-plain is plateau country. A great part of I. has a hot desert climate with a scanty rainfall. Natural vegetation of I. is greatly restricted, and cultivation is dependent in the main on artificial irrigation. The plain of I. is potentially highly fertile, much of its surface receiving a new covering of alluvium with each year's floods. In winter, wheat and barley are the main crops, while in summer rice, cotton, and maize are grown, and I. produces most of the world's dates. Sheep, goats, horses, donkeys, and camels are reared. There is a large construction industry and further industrial development is being encouraged by Soviet aid. There are rich oilfields; those at Kirkuk, found 1927, are connected by pipe-lines to the Mediterranean; other deposits have been found since. The cap. is Baghdad; Basra the chief port. Area 172,000 sq. m.; pop. (1965) 8,261,527.

History. Formerly a Turkish prov., I. became a British mandate after the F.W.W. In 1921 the Emir Faisal was elected king and in 1924 adopted a parliamentary constitution. The mandate ended in 1932, and Faisal was succeeded by his son Ghazi (reigned 1933–9) and grandson Faisal II, whose authority was exercised by his uncle Prince Abdul Illah during a regency which lasted till 1953. In 1958 both uncle and nephew were assassinated in a coup d'état, and I. was declared a rep. with General Kassem as P.M. A second coup organized by the military under Ahmed Bakr and the *Baath* Party (Socialist Party of the Arab Renaissance) led to the execution of Kassem 1963. Violent political disagreements ensued, and in 1968 Pres. Bakr also assumed the premiership, taking immediate steps to deal with the urgent problem of the Kurds. See KURDISTAN.

IRAWADI. Alternative form of IRRAWADDY.

IRELAND, John (1879–1962). British composer. B. at Bowden, Cheshire, he studied under Stanford at the R.C.M., returning as prof. of composition (1923–39), when his pupils incl. Britten, Searle and Arnell. Strongly self-critical, he destroyed much early work, but is revealed at his best in the mystic orchestral prelude *The Forgotten Rite* (1915) and piano solo *Sarnia* (1941), both inspired by his love for the Channel Islands where he lived for many years. Himself a brilliant pianist, he also wrote a fine Piano Concerto (1930) and other piano music (incl. London Pieces, 1919, and his Trio No. 3, 1938), as well as chamber music in which the piano takes the leading role. Notable, too, are his choral setting of John Addington Symonds 'These Things Shall Be' (1937), and song settings, e.g. Masfield's 'Sea Fever'. See MOERAN.

IRELAND, William Henry (1777–1835). British forger. The son of the engraver Samuel I., he forged deeds supposedly signed by Shakespeare, and the pseudo-Shakespearean drama *Vortigern*, unsuccessfully produced by Sheridan in 1796. He subsequently pub. a full account of his frauds.

JAVA. The sun makes even the airy interior of this typical village-house in central Java unbearable, and a woman prepares batik in the open under the trees.

Courtesy of Indonesian Embassy.

The people, of Mongol affinities, comprise Javanese, Sundanese, and Madurese, with differing languages. The majority are Moslems. Fossilized remains of an animal (*Pithecanthropus erectus*) intermediate between the higher apes and man were discovered in 1891-2.

In central J. there are ruins of magnificent Buddhist monuments and of the Sivaite temple in Prambanan. J.'s last Hindu kingdom, Majapahit, was destroyed c. 1520 and followed by a number of short-lived Javanese kingdoms. The Dutch E. India company founded a factory in 1610, named Batavia. The British occupied J. in 1811, during the Napoleonic period, returning it to the Dutch in 1816. J. was occupied by the Japanese 1942-5, and after their defeat became part of the rep. of Indonesia (q.v.).

JAW. One of the bony structures, upper and lower, which hold the teeth and form the framework of the mouth. The upper jaw (maxilla) consists of 2 bones united in the middle at an early stage of development. They join the bones of the forehead and cheek and each contains a hollow space, the maxillary sinus. The lower jawbone, the mandible, is hinged at each side to the bone of the temple by ligaments.

JAWLE'NSKY, Alexei von (1864-1942). Russian artist. Associated with Kandinsky and Klee, he was later influenced by Matisse and developed a use of large areas of flat, bright colour reminiscent of peasant art. His later work has a mystic quality.

JAY. Genus of birds (*Garulus*) of the crow family, confined to the Old World and common in Europe except in the far N. In the common J. (*G. glandarius*) the body is fawn with patches of white, blue and black on the wings and tail. Its own cry is a harsh screech, but it has considerable powers as a mimic. Allied is the common blue J. (*Perisoreus canadensis*), of N. America, rather drab-coloured and found in the pine forests.

JAZZ. A complete polyphonic, syncopated music originating in New Orleans between 1880-1900. The unusually favourable conditions were: the Spanish and later French domination of the city, with their musical traditions; the American brass band; and the still remembered 'Bamboula' chants from the Congo, whose mournful repetition and variations of short, insistent themes led easily to the blues. With no other entertainment available, music was an essential part of the bars, dance halls and bawdy houses of the red-

light district, Storyville; as well as of picnic parties, weddings and funerals, where the marching bands led the procession to the cemetery playing hymns and slow blues, and then returned, swinging with the zest and fire of final salutation that could be heard miles away.

'What's that I hear, 12 o/c in the daytime - church bells ringin'?'

'Yes, indeed, somebody must be dead.'

'Ain' nobody dead. Somebody must be dead drunk.'

'No, I think there's a funeral.'

'Why looky here, I see there is a funeral.'

'I b'lieve I hear that trambone moan.'

The prodigious technique of early brass players was due to their natural talent, lack of awareness that their instruments had any limitations, and the competitive spirit that existed among bands. The exodus from New Orleans started in 1917, after the U.S. Navy caused Storyville to be closed. Joe Oliver, Fred Keppard, Louis Armstrong, et al., moved to Chicago and St. Louis, later spreading their influence to New York, where the more refined Fletcher Henderson orchestra was in vogue, succeeded by Paul Whiteman. Small dynamic groups survived the swing era of the 1940s, with the big bands of Goodman, Ellington and Herman, to emerge with increased vigour after the S.W.W., when J. had reached across Europe as far as Russia. Under the impetus of Charlie Parker, Dizzy Gillespie, Miles Davis, et al., J. has proliferated in an immense diversity of styles through which it is difficult to see the mainstream. From the revival of traditional J. in the 1950s - a romantic, unimaginative version of the original - to modern J. there is to be found an increasingly wide range of rhythmic and harmonic content, embracing such diverse elements as the Bach fugue, the Brazilian bossa nova and the atonalities of Bartók.

JEANS, Sir James Hopwood (1877-1946). British mathematician and astronomer. His original contributions incl. work in physics, on the kinetic theory of gases, forms of energy radiation; and in astronomy, on giant and dwarf stars, the nature of spiral nebulae, and the origin of the cosmos. His popular books on cosmogony incl. *The Universe Around Us* (1929) and *The Mysterious Universe* (1930).

JEBEL. See BYBLOS.

JEDBURGH (jed'buro). Scottish royal burgh and co. town of Roxburghshire, standing on Jed Water, 40 m. S.E. of Edinburgh. It has a ruined abbey founded by David I, and associations with Mary, Queen of Scots, Charles (the Young Pretender), and Burns. Pop. (1961) 3,647.

JEDDA. See JIDDA.

JEEP. The popular name for the General Purpose (G.P.) vehicle of the American Army. It is a small open vehicle which can be driven over rough ground.

JEFFERIES, John Richard (1848-87). British naturalist and writer. After an unsuccessful start, he gained a reputation as a writer in 1872, following a remarkable letter to *The Times* on the Wiltshire labourer. His intimate books on the countryside incl. *Gamekeeper at Home* (1878), *Wood Magic* (1881), *Life of the Fields* (1884); and the autobiographical *Bevis* (1882) and *Story of My Heart* (1883).

JEFFERS, John Robinson (1887-1962). American poet. B. in Pittsburgh, he had a complete mastery of free verse, and demonstrated a lone antagonism to human society which was echoed by the isolation of his home at Carmel in N. California. His vols. incl. *Tamar and Other Poems* (1924), *The Double Axe* (1948), and *Hungerfield and Other Poems* (1954).

JEFFERSON, Thomas (1743-1826). Third Pres. of the U.S.A. B. in Virginia, he pub. *A Summary View of the Rights of America* (1774) and as a member of the Continental Congresses of 1775-6 he was largely responsible for the drafting of the Declaration of

to civil war between armed nationalist and N. Irish Unionist volunteers. Its outbreak was postponed by the F.W.W., but a rebellion took place in Dublin at Easter 1916, and during 1919–21 the Irish Republican Army waged war on the British govt. This was ended by the treaty of 1921, which divided I. into the Irish Free State and N. Ireland.

IRELAND, Republic of. A sovereign independent state, occupying the larger part of Ireland.

The Republic consists of 26 geographical counties. The pres. (Eamon de Valera 1959, re-elected 1966) is elected by direct vote for 7 years, and there is a House of Representatives (Dáil Éireann) and Senate (Seanad Éireann) elected on a system of proportional representation. The prime minister (Taoiseach) is John Lynch (q.v.) and Fianna Fáil (q.v.) has been the ruling party 1932–48, 1951–4, and from 1957. See also **FINE GAEL**. The official language is Irish (q.v.), but English is recognized as a second official language. Approx. 93 per cent of the inhabitants are Roman Catholics. Area 26,601 sq. m.; pop. (1966) 2,883,930.

The country came into existence in 1922 as the Irish Free State, with dominion status in the British Commonwealth. A govt. formed by Cosgrave (q.v.) met with a good deal of violent opposition from Irish republicans. De Valera (q.v.) came to office in 1932, and in 1937 introduced a new constitution in which the 'description' Free State was dropped and Éire (Ireland) was declared a sovereign independent state under a president. But the British govt., with the agreement of the other Commonwealth govts., continued to regard Éire as a member of the Commonwealth. Éire was neutral during the S.W.W. When an Irish govt. led by J. A. Costello (q.v.) passed legislation which took it, as the Republic of Ireland, outside the Commonwealth in 1949, the British govt. passed legislation maintaining for Irish citizens in the U.K. most of the advantages of British subjects, and a free trade area was estab. with the U.K. 1966. There is an increasing drift from the land, and growing industrial development by British, U.S. and Continental firms. The chief industries are food processing, brewing and distilling; engineering, vehicle assembly and tyres; mining and electronics, chemicals and tobacco. Tourism is important.

IRENÆUS (Irēnē'us), St. (c. 130–202). Bishop of Lyons. Probably a native of Smyrna, Asia Minor, he laboured in missionary work among the Gauls, and went to Rome to try to secure better treatment of the Montanists. He became B. of L. on his return, and wrote against Gnostics and Valentinians.

IRENE, Greek goddess of peace (Roman 'Pax').

IRENE (c. 752–803). Consort of the eastern Roman emperor Leo IV. A poor orphan girl of Athens, her beauty and gifts won the love of the Emperor, who m. her in 769. On his death in 780 she became regent until 802, when her many cruelties led to her banishment. The Greek Orthodox Church canonized her.

IRETON, Henry (1611–51). English general. In 1642 he joined the Parliamentary forces and fought at Edgehill (1642), Gainsborough (1643), and Naseby (1645). He m. Oliver Cromwell's dau. in 1646. After Naseby I., who was opposed to the extreme Republicans and Levellers, strove to reach a compromise with Charles I, but he subsequently played a leading part in the trial and execution of the latter. I. went to Ireland with Cromwell and in 1650 became lord-deputy there. He d. after the capture of Limerick.

IRIAN, Indonesian name for NEW GUINEA.

IRIDIUM. Chemical element. Symbol Ir, at. wt. 192.2, at. no. 77. Discovered by Tennant in 1803. I. is a metal of the platinum family; white, very hard and brittle, and usually alloyed with platinum or osmium. It is used for points of fountain-pen nibs, compass bearings, parts of scientific apparatus, and surgical tools. Under neutron bombardment I. becomes a most useful source of gamma rays for

industrial radiography, especially for steel up to 2 in. thick, the half-life being 74 days.

IRIS. Plants bearing large flowers of various colours. The plants belong to the monocotyledonous family Iridaceae, Iris genus. The leaves are long and narrow, tapering to a point, the flowers have coloured sepals and petals, and stigmas enlarged into petaloid form which hide the stamens. See **FLAG**.

IRIS. The coloured part of the eye surrounding the pupil. It contains radiating muscle fibres which dilate and circular ones which contract the pupil in response to the stimulus of light or accommodation to longer or shorter distance.

IRISH. Irish Gaelic is the chief representative of the Gaelic branch of the Celtic languages. Its history falls roughly into 3 periods: Old Irish, from about the 7th to the middle of the 9th cent. A.D.; Middle Irish, from the 9th to the 12th cent.; and Modern Irish from the 13th cent. onwards. In the last period it is usual to distinguish Early Modern Irish, up to the 17th cent. The language of the Ogam inscriptions is earlier than Old Irish.

In spite of efforts to restore I. as the language of Éire there is as yet no standard modern I. which must be studied in its dialects. These are the Southern, the Western, and the Northern, and represent groupings of the cos. of Waterford, Cork, Kerry, Clare; Galway, Mayo; Donegal—the cos. to which I. has been driven back during the course of cents.

I. has been taught in all govt.-subsidised schools since 1922, and is the first official language of the rep., but the number of Irish speakers in genuine Irish-speaking districts (the Gaeltacht) is small and by 1965 only 10,000 children spoke it at home.

Literature. Early Irish literature consists of the sagas which are mainly in prose and a considerable body of verse. The chief cycles are that of Ulster, which deals with the mythological Conchobar and his followers, and the Ossianic, which has influenced European literature through MacPherson's version.

Early Irish poetry has a unique lyric quality and consists mainly of religious verse and nature poetry, e.g. St. Patrick's hymn, Ultán's hymn to St. Brigit, etc. A large amount of pseudo-historical verse is also extant, ascribed to such poets as Mael Mura (9th cent.), Mac Liac (10th cent.), Flann Mainistrech (11th cent.), etc. Religious literature in prose incl. sermons, saints' lives, e.g. those in the *Book of Lismore* and in the writings of Mícheál Ó Cléirigh (17th cent.), and visions. History is represented by annals and by isolated texts like the *Cogad Gaedel re Gallaib*, an

IRISH. Poet and prose writer Pádraic Ó Conaire (1852–1928), who travelled the roads with his little donkey, is commemorated by this monument in Galway City.

Courtesy of the Irish Tourist Board.

baptized at Rome in 360, and subsequently travelled in Gaul, Asia Minor, and Syria. Summoned to Rome as adviser to pope Damasus, he revised the Latin translation of the N.T. and the Latin psalter. On the death of Damasus in 384 he travelled to the east, and settling at Bethlehem translated the O.T. into Latin from the Hebrew. His Lat. versions form the basis of the Vulgate.

JEROME, Jerome K(lapka) (1859–1927). British author. After being successively clerk, teacher, and actor, he turned to journalism; his *Idle Thoughts of an Idle Fellow* (1889), a collection of essays on such subjects as 'Babies', 'The Weather', etc., and his *Three Men in a Boat* (1889), made his reputation as a humorist. His dramatized story *The Passing of the Third Floor Back* (1907) is more sentimental.

JERROLD, Douglas William (1803–57). British playwright and journalist. B. in London, he scored his greatest success as a dramatist with *Black-eyed Susan* (1829). He contributed to *Punch* from 1841.

JERSEY. Largest of the Channel Islands. Government is by a lieutenant-governor and an assembly. St. Helier is the capital. Farming is the chief occupation. J. was occupied by the Germans 1940–5. Area 45 sq. m.; pop. (1961) 63,345.

JERSEY CITY. City of New Jersey, U.S.A. It faces Manhattan Island, to which it is connected by tunnels. Its many industries incl. foundries, electrical apparatus, chemicals, cigarettes. The large dockyards form part of the port of New York. The site was first settled c. 1629. Pop. (1960) 276,101.

JERUSALEM (jerōō'salem). Ancient city of Palestine, divided in 1948 between the new rep. of

was pillaged by the Persian Chosroës II in 615 while under Byzantine rule. J. was conquered by Islam in 637, and Turks and Egyptians held sway until the Crusaders took the city in 1099. Recaptured by Saladin in 1187, J. remained under almost unbroken Islamic rule, through the conquest by the Turks in 1517, until the British occupation in 1917.

There are 7 gates into the old city through the walls built by Selim I. From c. the 1920s, J. extended in modern suburbs, especially in the S. and W. Notable buildings incl. the Church of the Holy Sepulchre erected by Constantine in 335, and the Mosque of Omar, built in 691 and occupying the site of Solomon's temple. The Hebrew univ. of J. on Mount Scopus was opened in 1925. J. is a Holy City for 3 faiths: Christian, Hebrew and Moslem; it has R.C., Angli-

JERUSALEM. The old city seen from the Mount of Olives. Above its crenellated wall rises the Dome of the Rock, one of the most beautiful mosques in the world, built on the site of Abraham's Intended sacrifice and of Solomon's temple.

JERSEY. One of the sunniest places in the British Isles, Jersey has become a popular holiday resort. Here, overlooked by hotels, in St. Brelade's Bay, one of the series of large shallow sandy beaches in the south of the island, most water sports are enjoyed. Courtesy Jersey Tourism Committee.

Israel and Jordan. In 1950 the Israelis proclaimed the New City, the western part which they then held, cap. of Israel, and following their capture of the Old City from the Jordanians in 1967, they amalgamated the 2 as a single municipality. Pop. Israeli part (1967) 195,700; Jordanian part 70,000.

By 1400 B.C. J. was ruled by a king subject to Egypt. David made J. the cap. of a united Jewish kingdom c. 1000. Nebuchadnezzar captured J. in 586 B.C. and deported its population. Under Cyrus a new settlement was made, and c. 445 the walls were rebuilt. J. passed under Alexander the Great, and later was a pawn in the contest between the Syrian Seleucids and the Egyptian Ptolemies. In 63 B.C. Pompey captured J., and a Jewish revolt led to the city's utter destruction in A.D. 70 by Titus. On its site was founded in A.D. 130 the Roman city of Aelia Capitolina, which

can, and Greek bishops, and a Coptic Metropolitan. Freedom of access of all faiths to their Holy Places was guaranteed by Israel in 1967. See TEMPLE.

JERUSALEM ARTICHOKE. See ARTICHOKE.

JERVIS, John, earl of St. Vincent (1735–1823). British admiral. An efficient organizer and rigid disciplinarian with both officers and men, he secured the blockade of Toulon in 1795, and the famed defeat of the Spanish fleet off Cape St. Vincent (1797), in which Captain Nelson (q.v.) played a key part.

JERVIS BAY. Deep bay on the coast of New South Wales, Australia, 90 m. S.S.W. of Sydney. The Federal Govt. in 1915 acquired 28 sq. m. here to create a port for Canberra. J.B. forms part of Australian Capital Territory and is the site of the Royal Australian Naval College.

JESPERSEN (yes'-), Jens Otto Harry (1860–1943). Danish philologist. He wrote standard works on the English language and experimented with artificial languages, e.g. Novial.

JESUITS (jez'-u-its) or Society of Jesus. An R.C. religious order. Founded by Loyola (q.v.) in 1534, it received papal approval in 1540. Its main objects were defined as educational work, the suppression of heresy, and missionary work among the heathen. Its members are not confined to monasteries. Loyola infused into the order a spirit of military discipline; training is long and arduous. During the 16th and 17th cents. they achieved success as missionaries to Japan and China, in Paraguay, and among the Red Indians. From the beginning they aimed at political influence, and these activities resulted in their expulsion during 1759–68 from Portugal, France, and Spain, and in 1773 the Pope suppressed the order. It was revived in 1814, but has since been expelled from many of the countries of Europe and America.

IRRIGATION. The supplying of water, generally by artificial means, necessary to promote agriculture. The annual overflow of the Nile in Egypt and of the Tigris in Iraq are examples of natural I. Primitive methods of artificial I. have been used in China, India, Mesopotamia, and Egypt since very ancient times, but 19th and 20th cent. development of engineering techniques made possible construction of immense dams for the conservation of water for I. (many also serve other purposes, e.g. production of hydro-electric power, flood control, river regulation). The first constructed to promote I. was the Aswan dam in Egypt, opened 1902; another notable example was the Lloyd Barrage, opened with an accompanying system of canals in 1932 at Sukkur on the Indus (then in British India, after 1947 in Pakistan). A number of dams in the U.S.A. include irrigation among their uses, e.g. Hoover, Colorado r. (1936); Grand Coulee, Columbia r. (1942); Shasta, Sacramento r. (1945); Folsom, American r. (1955). The immense works started in Australia in 1955 for the diversion of the upper waters of the Snowy r. through the Snowy Mountains into the Murrumbidgee were undertaken to provide irrigation (and power) in Victoria and N.S.W. Rather more than a tenth of the land under cultivation in Israel is made usable by artificial I., and artificial I. schemes have been introduced in the Asiatic republics of the U.S.S.R., e.g. in the Syr Daria valley of Kazakh S.S.R.

IRVING, Edward (1792–1834). Scottish minister. Originally a schoolmaster at Haddington, where his pupils incl. Jane Welsh, the future wife of Carlyle, he moved to London in 1822 as a Presbyterian minister. Excommunicated in 1831 for heretical views regarding the humanity of Christ, he constituted in 1835 the Catholic Apostolic Church. Twelve 'apostles' were nominated, the last of whom d. in 1901, and the liturgy is characterized by elaborate ceremonial. The principal church of the body, also known as 'Irvingites', is in Gordon Square, London.

IRVING, Sir Henry. Stage-name of the British actor John Brodribb. (1838–1905). After acting in the provs., he went to London in 1866, and in 1871 began his long connection with the Lyceum Theatre, where he estab. his reputation in *The Bells*, and by his unconventional performance as Hamlet. In 1878 he became manager of the Lyceum, and engaged Ellen Terry as his leading lady, a partnership which lasted until I.'s death. The Lyceum became celebrated for superb and well-mounted productions, incl. *The Merchant of Venice*, with I.'s unusual and sympathetic portrayal of Shylock, *Henry VIII*, *Lear*, and Tennyson's *Becket*. I.'s acting, coloured by his strong personality, was noted for its versatility, spirit and originality; he was knighted in 1895, the first actor ever to be so honoured.

IRVING, Washington (1783–1859). American author. B. in New York City, of English parents, he pub. in 1809 a mock-heroic *History of New York*, supposedly written by the Dutchman 'Diedrich Knickerbocker'. In 1815 he went to England where his publications incl. the *Sketch Book of Geoffrey Crayon, Gent.* (1820), which contained such stories as 'Rip van Winkle' and 'Legend of Sleepy Hollow', and displayed the delicate humour and clear style which are characteristic of his work. He later visited Spain where he wrote amongst other books a *Life of Columbus* (1828), before returning to America in 1832. He was U.S. ambassador to Spain 1842–6. His last years were given mainly to his biographies of Goldsmith (1849) and George Washington (1855–9).

IRWIN (er'win). Margaret (d. 1967). Brit. historical novelist. She m. in 1929 the artist J. R. Monsell, and gives a skilled and well-documented interpretation of the Tudor and Stuart periods, e.g. *The Proud Servant* (1934), dealing with Montrose; *The Gay Galliard* (1941), the love story of Mary Queen of Scots; and a

trilogy *The Story of Elizabeth Tudor* (1944–53). *That Great Lucifer* (1960) is a biographical study of Raleigh.

ISAAC (i'zak). Hebrew patriarch, only son of Abraham and Sarah, and father of Jacob and Esau.

ISAACS, Jorge (1837–95). Colombian poet and novelist. B. at Cali, of Jewish extraction, he pub. *Poesías* (1864), and *Maria* (1867), a novel of life in his native valley in the Cordilleras.

ISABELLA (1451–1504). Queen of Castile, known as Isabella the Catholic. She m. Ferdinand of Aragon in 1469, and in 1474 became queen of Castile in her own right on the death of her brother Henry IV. Thus the crowns of the 2 Christian states in the Spanish peninsula were united. She was largely responsible for the establishment of the Inquisition in Castile and the persecution of the Jews, and gave financial encouragement to Columbus.

ISABELLA II (1830–1904). Queen of Spain. She succeeded her father Ferdinand VII in 1833. The Salic Law banning a female sovereign had been abrogated by the Cortes, but her succession was disputed by her uncle Don Carlos. After 7 years of civil war the Carlists were worsted. She abdicated in favour of her son Alfonso XII in 1870.

ISABEY (ēzahbā'), Jean Baptiste (1767–1855). French portrait painter. B. at Nancy, he studied under David, and became court painter to Napoleon, and later to the Bourbon sovereigns. His son EUGÈNE I. (1804–86), was a historical painter.

ISAIAH (izi'ya). O.T. prophet of the 8th cent. B.C. The son of Amoz, he was probably of high rank, and lived largely in Jerusalem. His call to prophecy is thought to have come c. 740, and he saw Assyria as the avenging weapon of Jahweh whom the Israelites had forsaken.

ISE (ēś'a). Prov. of Honshu Is., Japan, centre of the Shinto cult. The shrines, of which the most sacred is that of the sun-goddess at Yamada, are rebuilt every 20 yrs. in the strict early tradition of a thatched hut in perfected form.

ISÈRE. River of S.E. France rising near the Italian frontier and flowing 180 m. generally W., to enter the Rhône 7 m. above Valence. A dam was completed in 1952 to harness its rapid flow for electricity. It gives its name to the dept. of I.

ISFAHAN (ēsfah-hahn'). City of Persia, chief town of the prov. of I. and Yazd on the Zaindeh r. The city reached its greatest prosperity and splendour when Shah Abbas I (1586–1628) made it the Persian capital. After the onslaught of the Afghans in 1722 its political significance diminished, and the cap. was

ISFAHAN. Iran's principal industrial city, developing apace under the guidance of the Shah, still preserves the best of the past in the Great Square with its trees and fountains and beautiful buildings. Courtesy of Imperial Iranian Embassy.

such as Amos, Isaiah, and Micah predicted destruction. Retribution came at the hands of Tiglath-pileser and his successor Shalmaneser IV; the northern kingdom was organized as Assyrian provs. after the fall of Samaria in 721 B.C., although Judah was spared as an ally. When the Assyrian power waned, her place was taken by Babylonia, and in 586 B.C. Nebuchadnezzar took Jerusalem and carried off the major part of the population to Babylon.

Under Cyrus, the founder of the Persian Empire, they were allowed to return to Palestine; the Temple was restored in 520, and c. 444 Ezra promulgated the legal code which was to govern the future of the race. Alexander's conquest of the Persian Empire was followed by a struggle for Palestine between the Syrian Seleucids and Egyptian Ptolemies, and until the end of the 3rd cent. B.C. Palestine remained under the govt. of Egypt with a large measure of freedom. But with the advance of Syrian power Antiochus IV attempted intervention in Jewish internal quarrels, thus prompting the Maccabean revolt in 165 B.C. For a short time Judaea was practically an independent kingdom, but internal dissension led to Pompey's intervention in 63 B.C., and Roman suzerainty was estab. After the death of Herod in 4 B.C. one experiment in govt. followed another until the revolt of A.D. 66-70 led to the destruction of the Temple by Titus.

Further desperate revolts followed, but a new focus of Jewish national sentiment was found in the work of the Rabbi Johanan ben Zakkai (c. 20-90), and after his day the President of the Sanhedrin was recognized as the Patriarch of Palestinian Jewry. Greatest of these presidents was Rabbi Judah (c. 135-220), who codified the traditional law in the *Mishnah*. A decline followed the Christianization of the Roman Empire, and intellectual supremacy passed to the descendants of the 6th cent. exiles in Babylonia, who compiled the Babylonian Talmud.

European settlements also deteriorated under the Christianization of the Roman Empire, but Jewry enjoyed a golden era during the period of Islamic conquest, producing such men as the philosopher Saadia, the poet Jehudah Ha-levi, the codifier Moses Maimonides, etc. In medieval Europe the Jews were increasingly separated from the general life and trade by measures which culminated in the 16th cent. institution of the Ghetto. This persecution has been periodically revived since the period of comparative enlightenment beginning with the extension of the rights of man to the Js. by the French Revolution in 1790. Under the Nazi régime, 1939-45, some 5,000,000 Js. were put to death in Europe, leaving 1,500,000 (with a similar number in Russia) out of a former 6,500,000. Zionism (q.v.) was an attempt to solve the Jewish problem. Outside Israel, the main centres of Jewry today are the U.S.A. (5,510,000) and the U.K. (450,000). See ANTI-SEMITISM.

JEW'S HARP. Musical instrument. It is a small iron frame, attached to which is a steel strip, to be twanged by the fingers, while the frame is gripped by the teeth. Only one fundamental note is available, but by changing the shape of the mouth a complete harmonic scale can be produced.

JEX-BLAKE, Sophia (1840-1912). British woman doctor. She studied medicine in Boston, U.S.A., and Edinburgh, and founded medical schools for women in London (1874) and in Edinburgh (1886), where she practised from 1878.

JHANSI (jahn'sé). Indian city in Uttar Pradesh, 178 m. S.W. of Lucknow, a railway and road junction, and a market centre. It was founded in 1613, and was the scene of a massacre of British civilians in 1857. Pop. (1961) 170,209.

JHELUM (jäl'um). One of the five rivers which give its name to Punjab. It is the ancient Hydaspes, on the banks of which Alexander the Great won a

great victory in 326 B.C. The Mangla dam (1967), one of the world's largest earth-filled dams, stores flood waters for irrigation and hydro-electricity.

JIBUTI. See DJIBOUTI.

JIDDA (jed'a). Arabian seaport on the Red Sea, in Hejaz, a transit port for pilgrims to Mecca, 45 m. to the E.; it has an airport. The only 2 asphalted roads in Hejaz link Jidda with Mecca and Medina. Pop. (est.) 150,000, rising to 300,000 in the pilgrimage season.

JIHAD (jihahd'). Name given to the duty imposed by the Koran on all Mohammedans to wage war on those who reject Islam.

JIMENEZ (khēmān'eth), Juan Ramón (1881-1958). Spanish lyric poet. B. in Andalusia, he enriched his native inspiration by contact with the advanced circles of Paris and Madrid, and achieved in his diary of a newly married poet (*Diario de un poeta recién casado*, 1917) a break into new ground in Spanish literature. He left Spain during the civil war to live in exile in Puerto Rico: he has pub. more than 40 vols. mainly of verse. His poetry has great spirituality and artistic purity. Particularly famous are his odes to his donkey 'Platero'. He gained a Nobel prize in 1956.

JINGO. A noisy and bellicose patriot. The term originated in 1878, when Beaconsfield's pro-Turkish policy nearly involved Britain in war with Russia. His supporters adopted as their war-song a music-hall ditty containing the line, 'We don't want to fight, but by jingo if we do . . .' The word is possibly derived from Persian 'war' or Basque 'god'.

JINJA. Town in Eastern Province, Uganda, on the Victoria Nile. It has a large copper-smelting works, tobacco and textile factories, and a brewery; also an airfield. Nearby is the Owen Falls Dam, opened by Elizabeth II in 1954. Pop. (1965) 40,000 (8,000 Asians).

JINN (Djinn). In Mohammedan mythology, spirits which assume human or animal shapes.

JINNAH, Mohammed Ali (1876-1948). Indian statesman. He was ed. at Karachi and in England being called to the English Bar in 1896, and became

pres. of the Moslem League in 1916. From 1934 he was elected annually as pres., and popularized among Indian Moslems the idea of separate Moslem and Hindu states when British rule ended. His views on 'Pakistan' were recognized by the Cripps mission of 1942, and at the 1946 conferences in London he insisted that only partition could solve the Indian problem. J. became Gov.-Gen. of Pakistan on the transfer of power on 15 Aug. 1947.

JOACHIM (yō'akhim), Joseph (1831-1907). Hungarian violinist. He studied under Mendelssohn, first performed in England in 1844, and was the founder of the J. Quartet (1869-1907). His compositions incl. the 'Hungarian Concerto' and orchestral works.

JOAN. A mythical Englishwoman who was supposed to have become Pope in 855, as John VIII, and to have given birth to a child during a papal procession. The myth was exposed in the 17th cent.

JOANNINA. See JANINA.

JOAN OF ARC, St. (1412-31). French heroine. She was b. at Domrémy, on the Meuse, and was the daughter of a well-to-do farmer. In 1429 she went to Chinon, where she persuaded Charles VII she had received a divine mission to raise the siege of Orléans. At this time all France N. of the Loire was held by the English and their allies. Entrusted with a military command, J. raised the siege; defeated the English at Patay; and witnessed Charles's coronation at Reims.

ISLE OF MAN. The island's sailing centre is Port St. Mary, set among beautiful scenery on the south coast, overlooking the Calf of Man. To the south of the town, on Spanish Head, one of the Armada ships was wrecked.

Courtesy of Isle of Man Tourist Board.

island during the Celtic period. For c. 500 years Man and some of the Scottish islands were nominally under the Norwegian kings. Magnus, last king of Man and the Isles, d. in 1265 and c. 1266 M. passed to Scotland. From 1290 English and Scottish rule alternated; in 1406 the Stanley family were granted the territory by Henry IV, but were succeeded in 1736 by the dukes of Atholl, when the island became a great smuggling centre. In 1866 the I. of M. obtained home rule. The govt. is composed of a Crown-appointed Lieut.-Gov., the Legislative Council, and the representative House of Keys. Together these make up the Tynwald Court, which passes laws subject to the Royal Assent. Acts passed by parliament in London do not affect the I. of M. unless it is specifically named. Area 227 sq. m.; pop. (1965) 50,423.

ISLE OF WIGHT (wit). Island off the S. coast of England, geographically part of Hants, it is separate administratively. It is divided from the mainland by the Solent on the N.W. and Spithead on the N.E. The chalk cliffs of the S. coast end on the W. in the Needles. The island is composed of agricultural and sheep-grazing land, but there are many holiday resorts, e.g. Sandown, Ventnor, Ryde, Shanklin. Inland is Carisbrooke. The cap. is Newport: near Cowes, the chief port, is Osborne House. The Romans called the island Vectis, meaning 'separate division': it was conquered by Vespasian in A.D. 43. Area 147 sq. m.; pop. (1967) 98,040.

ISLINGTON. Inner bor. of Greater London, England, incl. the residential district of Canonbury, Pentonville and Holloway prisons, and the 'Angel' tavern. The 'Caledonian Market' held in the Metropolitan Cattle Market (1885-1939) sold everything from food to antiques: the site was acquired by the

ISLE OF WIGHT. The chalk downs which run across the island culminate in the west in the Needles. A lighthouse warns shipping to keep clear.

Photo: Aeroflms Ltd.

G.L.C. for housing, etc. 1964. Pop. (1967) 254,580.

ISMAIL (isma-él') (1830-95). Khedive of Egypt. A grandson of Mehemet Ali, he became viceroy of Egypt in 1863 and in 1866 received the title of Khedive from the Sultan. In 1875 Britain, at Disraeli's suggestion, bought the Khedive's Suez Canal shares for £3,976,582, and Anglo-French control of Egypt's finances was estab. In 1879 Britain and France persuaded the Sultan to appoint Tewfik, his son, Khedive in his place.

ISMAILIA (isma-él'ah). Town on the shore of Lake Timsah, Lower Egypt, near the entrance into the lake of the Suez Canal. I. came into existence in 1863 as H.Q. for the construction of the canal, and was named after Ismail (q.v.). Pop. (1960) 111,000.

ISOBAR. A line drawn on maps and weather charts linking all places with the same atmospheric pressure. When used in weather forecasting, the distance apart of the Is. is an indication of the barometric gradient. Where they are close together cyclonic weather is indicated, and where far apart anticyclonic. The pressures indicated on the met. charts have generally been corrected to sea-level.

ISO-CRATES (436-338 B.C.). Athenian orator. One of the pupils of Socrates, he started his celebrated school about 392 B.C. Hampered in public life by nervousness, he was unrivalled as a composer of literary speeches. Shortly after Philip's victory at Chaeronea, I. committed suicide.

ISOLATION. Segregation of persons exposed to or suffering from an infectious disease, to prevent its spread. Isolation or fever hospitals are kept by many local authorities for patients suffering from the notifiable infectious diseases.

ISOLATIONISTS. The section of opinion in the U.S.A. which up to 1941 opposed all American intervention in European politics. They were more numerous among the Republicans than among the Democrats, and drew their greatest support from the Republican stronghold of the Middle West.

ISOMERISM. The existence of more than one compound having the same molecular composition and weight, but with different properties, due to the changed arrangement of the atoms in the molecules. Some organic compounds and complex inorganic salts exhibit this phenomenon.

ISOMETRICS. System of muscular exercises without apparatus, e.g. by opposing one set of muscles to another.

ISOMORPHISM. Crystalline similarity in chemically related substances. In mathematics it means correspondence between the operations of groups.

ISOPODA. Order of marine, freshwater, and terrestrial crustaceans, having no exoskeleton.

ISOPRENE (C₅H₈). A volatile fluid which forms substances similar to rubber by polymerization.

ISOTHERM. On a map, a line linking all places having the same temperature either at a given time, or over a given period. Is. may show either actual temperature relations, or temperatures reduced to sea-level readings, 1.5°C or 2.7°F (moist air) to 3°C or 5.4°F (dry air), is subtracted for every 1,000 ft. of altitude.

ISOTOPES. Substances having different atomic weights, although chemically identical, with the same atomic number and occupying the same place in the periodic table of the elements, are said to be Is., i.e., the atoms which are Is. of a particular element have a varying number of neutrons in their nuclei, but the same number of protons and orbiting electrons. Is. were shown to exist at the beginning of this century from investigations of natural radioactivity, and their importance has grown enormously, many hundreds now being known. They may be stable or unstable, naturally occurring or man-made. When naturally occurring all the Is. of an element occur in a fixed proportion. Most of the man-made Is. in the U.K.

to France, in 1953 a cardinal and Patriarch of Venice, and in 1958 was elected Pope. Landmarks of his papacy were improved relations with the Soviet Union, establishment of R.C. hierarchies in newly emergent states, the encyclicals *Mater et Magistra* (Mother and Teacher: 1961) and *Pacem in Terris* (Peace on Earth: 1963) realistically outlining the role of the Church in modern conditions, and the summoning of the Second Vatican Council. Winner of the Balzan (q.v.) Peace Prize in 1963, J. used it to estab. the Pope John XXIII Peace Prize Foundation to make an award triennially.

JOHN (1167–1216). King of England. The youngest son of Henry II, he attempted to seize the kingdom during his brother Richard's absence at the Crusade. On Richard's death in 1199 J. was recognized as king by England and Normandy, while Anjou and Brittany supported the claim of his nephew Arthur. J. captured and murdered Arthur, but lost Normandy to the king of France. J.'s refusal to recognize Langton as archbishop of Canterbury led to the imposition of an interdict on England, and to his excommunication so that in 1213 he surrendered his kingdom to the Pope and became his vassal. His tyranny led to the barons enforcing his signature of Magna Carta (q.v.) in 1215. His repudiation of the charter provoked a civil war which was still in progress when J. d. at Newark.

JOHN II (1319–64), king of France from 1350, was defeated and captured by the Black Prince at Poitiers in 1356. He was released in 1360, but having failed to raise the money for his ransom returned in 1364 to England, where he d.

JOHN III (1624–96), called Sobieski. King of Poland. A brilliant soldier, he was elected king in 1674. In 1683 he saved Vienna from the Turks, who were besieging it.

JOHN. Name of 6 kings of Portugal. **JOHN I** (1357–1433), a natural son of Pedro I, was elected king by the Cortes in 1385. His claim was supported by an English army against his rival, the king of Castile, an event which marks the beginning of the Anglo-Portuguese alliance. **JOHN IV** (1603–56), originally duke of Braganza, was elected king when the Portuguese rebelled against Spanish rule in 1640. **JOHN VI** (1769–1826) acted as regent for his mother Maria I 1792–1816. He fled to Brazil when the French invaded Portugal in 1807, and did not return until 1822. On his return Brazil declared its independence, with J.'s elder son Pedro as emperor.

JOHN, Augustus Edwin (1878–1961). British painter. B. in Tenby, the son of a solicitor, he studied at the Slade, and in 1903 1st exhibited at the New English Art Club. Elected R.A. in 1928, he was awarded the O.M. in 1942. Typical of his portraits is 'The Smiling Woman' (his 2nd wife, Dorelia), and 'Galway', also in the Tate Gallery, exemplifies his gifted draughtsmanship as a mural artist. Himself an impressively picturesque figure, he was pres. of the Gypsy Lore Society, and in 1952 pub. a fragmentary autobiography *Chiaroscuro*.

His sister, Gwen J. (1876–1939), a Catholic convert, lived mainly in France, and was also a subtly talented artist. His son Sir Caspar J. (1903–) was First Sea Lord and Chief of Naval Staff 1960–3.

JOHN, Griffith (1831–1912). British Congregationalist missionary. He was ordained in 1855, and was the first missionary to visit central China.

JOHN, Sir William Goscombe (1860–1952). British sculptor. His principal works incl. statues of Edward VII, George V and Queen Mary at Liverpool; and David Lloyd George at Caernarvon.

JOHN BULL. An imaginary figure used as a personification of England. The name was popularized by Dr. Arbuthnot's *History of J.B.* (1712). He is represented as a prosperous farmer of the 18th cent.

JOHN CHRYSOSTOM (345–407). Christian saint and Father of the Eastern Orthodox Church. B. at

Antioch, he was a hermit of the desert before being appointed bishop of Constantinople in 398.

JOHN OF AUSTRIA, Don (1545–78). Spanish soldier, the natural son of Charles V. He won a great naval victory over the Turks at Lepanto in 1571.

JOHN OF DAMASCUS, St. (c. 676–c 754). Eastern Orthodox theologian. B. at Damascus, he ably defended image-worship against the Iconoclasts.

JOHN OF GAUNT (1340–99). English nobleman, duke of Lancaster from 1362. The 4th son of Edward III, he was b. at Ghent. During the last years of Edward and the minority of Richard II he acted as head of the government and provoked protests from parliament by the corruption of his rule.

JOHN OF THE CROSS, St. (1542–91). Spanish mystic. He became a Carmelite friar in 1564, and was several times imprisoned for attempting to impose the reforms laid down by St. Teresa. His *Obras espirituales* were pub. in 1618. His verse, full of spiritual ecstasy, is of great beauty.

JOHN O' GROAT'S HOUSE. Site in the N.E. of Caithness, Scotland, about 2 m. W. of Duncansby Head, proverbially regarded as the most northerly point of Britain.

JOHNSON, Amy (1904–41). British airwoman. B. at Hull, in 1930 she flew alone from Croydon to Australia in 19½ days, and in 1932 made a record-breaking flight to the Cape. She m. J. A. Mollison in 1932, with whom she flew the Atlantic in 1933. Her greatest achievement was her flight to the Cape and back in 1936. She was killed in an air crash while serving with the Air Transport Auxiliary.

JOHNSON, Andrew (1808–75). 17th President of the U.S.A. B. in N. Carolina, he was elected to Congress in 1843 as a Democrat, became Vice-President in 1864, and succeeded to the presidency on Lincoln's death, retiring in 1869. His conciliatory policy towards the seceded states involved him in a feud with the Radicals, culminating in his impeachment before the Senate in 1868, which failed by one vote.

JOHNSON, Cella (1908–). British actress. Making her début in 1928 as *Major Barbara*, she became known for the delicate subtlety of her performances, e.g. in *The Flowering Cherry* (1957) and the film *Brief Encounter* (1946). She m. in 1935 the author and traveller Peter Fleming (1907–).

JOHNSON, Hewlett (1874–1966). British churchman. Dean of Manchester 1924–31 and of Canterbury 1931–63, he gained the title 'Red Dean' by his support of Anglo-Soviet friendship. His works incl. *The Socialist Sixth of the World* (1939).

JOHNSON, Lyndon Baines (1908–). 36th Pres. of the U.S.A. B. in Stonewall, Texas, he had to support himself from the age of 15, and worked his way through college, graduating in 1930. After teaching in 1931, he went into politics as sec. to a Texas Congressman, and was himself elected to Congress (1937–49), and to the Senate (1949–60). A gifted and persuasive orator, his appreciation that politics was 'one long accommodation of contesting

forces' brought him to Democratic leadership of the Senate. He courageously assisted the passage of the first Civil Rights Bill in a hundred years, and cautiously restricted the right to filibuster. A Democratic nominee for Pres. in 1960, he agreed to stand as Vice-Pres., thus bringing crucial Southern votes for Kennedy and himself in the 1960 election. Following the assassination of Kennedy in 1963, he succeeded as president: re-elected 1964.

LYNDON JOHNSON

ITALIAN ART. Doge of Venice 1501–21, Leonardo Loredan ruled the great city-state at the turning point of its history. This portrait by Giovanni Bellini is one of the greatest of the age. Courtesy of the National Gallery.

Dino Campana, Giuseppe Ungaretti and among the modern school are Eugenio Montale and Salvatore Quasimodo. Novelists of the post-Fascist period, preoccupied with political and moral problems, incl. Alberto Moravia, Carlo Levi, Cesare Pavese (1908–50), Vasco Pratolini (1913–), Elsa Morante (1916–), Giuseppe Tomasi, Prince of Lampedusa, and the younger writer Italo Calvino (1923–).

ITALIAN ART. Italy is rich in examples of the Byzantine style of architecture which is a mixture of oriental and classical elements; such are the monuments of Justinian in Ravenna and the later church of St. Mark's in Venice. The Romanesque style was developed in Italy from the 10th to the 13th cents. Examples of this style are the churches of Lombardy; the baptistery, cathedral, and Leaning Tower of Pisa; and the cathedrals of Sicily. The Gothic period in Italy developed from the 13th to the 15th cents. It is based on Romanesque and differs a great deal from the Gothic style of northern Europe. Façades were elaborately decorated; mosaics and coloured marble were used, and sculpture—delicately carved—was placed around windows and doors.

The history of It. painting begins in the latter half of the 13th cent., or in Italian parlance the *Duecento*. Giotto is usually regarded as the first great Italian painter. He broke away from the traditional formal style, and created a world of beauty that is related to the world of everyday life. An earlier painter, Cimabue, may have been Giotto's master. Other great artists of the *Duecento* were the sculptors Nicola Pisano and his son, Giovanni, and the painter Duccio.

The most famous names of the 14th cent.—the *Trecento*—include the Florentines Bernardo Daddi (c. 1290–1348); Taddeo Gaddi and his son Agnolo; the Sienese Ambrogio and Pietro Lorenzetti; and the Veronese painter, Vittore Pisano.

The next period in I.A. is called the *Renaissance* (15th and 16th cents.), i.e. 'rebirth' of the classical spirit. The architectural style was developed by Brunelleschi and his contemporaries. The most famous achievement is the basilica of St. Peter's, Rome, with which Michelangelo's name is associated. The great artists of the Renaissance include Ghiberti, the sculptor of the 'Doors of Paradise' of the Florentine baptistery; Donatello, the greatest

sculptor of the period; Luca della Robbia; Masaccio, famous for his paintings in the Carmelite church, Florence; Fra Angelico; Uccello who achieved fame as a pioneer in scientific perspective; Pollaiuolo, another famous experimenter; the Bellini family; Mantegna; Andrea del Verrocchio, sculptor of the Colleoni memorial, the greatest equestrian statue of the Renaissance; Sandro Botticelli; Leonardo da Vinci, the great mind of the Renaissance; Michelangelo, the greatest artistic genius of the period; Raphael, painter of the 'Sistine Madonna'; Titian, who was supreme as a colourist; Tintoretto, who was Titian's pupil; Correggio; and Veronese.

The most famous names of the following *Baroque* period are those of the sculptor and architect Bernini, and in painting Caravaggio and the Caracci. The 18th and earlier 19th cents. were dominated by the Neo-Classical movement, seeking inspiration from the works of the past rather than life itself, and it was not until the rise of the Futurist (q.v.) school, e.g. Gino Severini (1883–), and the succeeding Metaphysical school, e.g. Carlo Carrà (1881–) that a revival came. Modigliani is an outstanding figure at the beginning of the 20th cent., but the Fascist régime was no breeding ground for great art. In more recent years there have been a no. of interesting sculptors incl. Giacomo Manzù (1908–), Marino Marini, and Emilio Greco; Annigoni is a popular portrait painter.

ITALICS. In printing, the letters sloping towards the right as used in this article. Nowadays they are usually employed, side by side with the erect Roman type, for purposes of emphasis and citation. Aldus Manutius (q.v.) of Venice first introduced italics of the lower case in 1501, and only later also replaced the Roman capitals by capitals of the I. type. Is. were soon in vogue in Italy and imitated in other countries.

ITALY. Republic of S. Europe bordering on France, Switzerland, Austria, and Yugoslavia on the W., N., and E., and stretching S.E. as a long peninsula into the Mediterranean. Area 116,365 sq. m.; pop. (1967) 53,649,000.

I. is bounded on the N. by the semi-circle of the Alps, from just E. of Monaco on the W. to the Adriatic on the E.; elsewhere by the sea. The coastline measures about 4,500 m. The Alps, among which lie the famous lakes Maggiore, Lugano, and Garda, slope down to the northern plain which is drained by the Po and its tributaries, the Adige and the Piave.

The peninsula of central and southern I. consists of the Apennines, which diverge from the maritime Alps round the Gulf of Genoa, and their valleys and foothills. These mountains rise into isolated limestone peaks, such as the Gran Sasso (9,580 ft.). Of the rivers, the Tiber and the Arno, on which stand Rome and Florence respectively, are important. The rep. of I. incl. the large islands of Sicily and Sardinia and a number of smaller ones, among them Elba, Capri, Ischia, the Lipari Islands. I. contains the only active volcanoes in Europe: Vesuvius, Stromboli, and Etna.

The climate is a good deal hotter in the S. than in the N. where some of the Alpine heights are covered with perpetual snow. The northern plain has a continental climate—hot in summer, cool in winter. In the peninsula the surrounding sea tempers summer heat; heavy snowfalls are common in winter in the mountainous backbone of the country. The chief rains, varying from 30 in. in the lowlands to upwards of 50 in. in the mountains, fall during Feb.–March.

The cap. is Rome; other large cities incl. Milan, Turin, Florence, Bologna, Verona, Padua, and Ferrara, and the ports of Genoa, La Spezia, Leghorn, Naples, Reggio di Calabria, and Palermo to the W.; Taranto on the S.E.; Brindisi, Bari, Ancona, Venice and Trieste on the E. coast.

The main rail lines are state-owned, and electrified and re-equipped since the S.W.W.; there is a motorway system, and Alitalia (chief airline) is state-run.

by the works of Palladio. He was employed by James I in designing the scenery for Ben Jonson's masques, and in 1619 he designed his masterpiece, the banqueting-room at Whitehall; and the church of St. Paul, Covent Garden, London.

JONES, James (1921–). American author. B. in Illinois, he was ed. at N.Y. univ., and was awarded the Purple Heart while serving with the U.S. Army 1939–44. *From Here to Eternity* (1951) attacked army-style conformity and *Some Came Running* (1958) the set attitudes of the Midwest.

JONES, John Paul (1747–92). American naval officer. B. in Kirkcudbright, he served at sea as a trader and slaver, but on his return to Scotland from the W. Indies, on a ship of which he had become master, he was accused of murdering one of the crew. Searching for evidence of his innocence, he returned to the W. Indies, but killed the leader of a mutiny and fled to his brother in Virginia, received a privateer's commission from Congress on the outbreak of the War of Independence in 1775. As head of a French naval expedition, he menaced British shipping 1779–81 and returned to America in 1781. He joined the Russian navy as a rear-admiral in 1788, fighting against Turkey, but lost Catherine's favour and d. in France.

JONGKIND (yong'kint), Johan (1819–91). Dutch artist. Settling in France in 1846, he was associated with the Barbizon group and developed in his landscapes in oil and water-colour delicate interpretation of light effects which influenced the Impressionists. His life was often wretched and he d. in an insane asylum.

JÖNKÖPING (yon'choping). Town at the S. end of Lake Vätter, Sweden, cap. of J. county. It is a great industrial centre, famed for matches. Pop. (1966) 53,765.

JON'QUIL. Name given to a species of the Amaryllidaceae family, *Narcissus jonquilla*, which has yellow flowers with an orange corona, and is found in S. Europe and Africa.

JONSON, Benjamin (1572–1637). English dramatist, poet, and critic. B. at Westminster, he entered the theatre as actor and dramatist in 1597. In 1598 he narrowly escaped the gallows for killing a fellow-player in a duel, and in the same year his *Everyman in His Humour* was produced, followed by *Everyman out of His Humour* (1599), *Cynthia's Revels* (1600) and *Poetaster* (1601). His first extant tragedy is *Sejanus* (1603), with Burbage and Shakespeare as members of the original cast. J. collaborated with Marston and Chapman in *Eastward Ho* (1605), and shared their imprisonment when official exception was taken to a derogatory reference to the Scots. There followed the great plays of his middle years *Volpone*, or *the Fox* (1606), *Epicoene*, or *The Silent Woman* (1609), *The Alchemist* (1610), *Catiline* (1611), *Bartholomew Fair* (1614). Meanwhile J. had made a great reputation in the presentation of masques, and produced some 30 such pieces before a quarrel with his associate Inigo Jones in 1630 lost him court favour. Failing health overshadowed his later plays, e.g. *The Staple of News* (1626). J. excelled in construction, and was the creator of the English comedy of humours. From 1630 he was virtually poet laureate; he is buried in Westminster Abbey.

JONSSON (yon'-), Einar (1874–1954). Icelandic sculptor. B. in Iceland, he developed a rugged austere style. His works incl. a statue of Thorfinnur Karlsefni (the 1st white settler in America, an Icelander) in Philadelphia.

JOOSS (yos), Kurt (1901–). German choreographer, director of the Ballets Jooss, which he founded in 1932. In his ballet *The Green Table* (1932) he depicted the League of Nations, and in 1959 he evoked Purcell's *The Fairy Queen*.

JOPPA. Ancient name of JAFFA.

JORDAENS (yor'dahns), Jakob (1593–1678). Flemish painter. B. at Antwerp, he is noted for his realistic pictures of Flemish life.

JORDAN, Dorothea (1762–1816). British actress. She made her début in 1777, and retired in 1815. She was a mistress of the duke of Clarence (later William IV) by whom she had 10 children who were given the name FitzClarence.

JORDAN. River in the Levant. It rises on Mount Hermon in Syria at c. 1,800 ft. above sea-level and flows S. for some 200 m. through the Sea of Galilee into the Dead Sea, 1,290 ft. below sea-level. It occupies the northern part of the Great Rift Valley; its upper course forms the boundary of Israel with Syria and the kingdom of Jordan; its lower course runs through Jordan—W. bank occupied by Israel 1967.

JORDAN, The Hashimite Kingdom of. Independent country of S.W. Asia, bordered W. by Israel (with which J. shares the Dead Sea), N. by Syria, E. by Iraq and Saudi Arabia, S. by Saudi Arabia. It has a 15 m. coastline at the head of the Gulf of Aqaba, an inlet of the Red Sea, with one port, Aqaba. The cap. is Amman; other towns are Bethlehem, Jericho, Petra, and the eastern part of Jerusalem. The constitution of 1951 estab. a cabinet responsible to a parliament, consisting of a senate nominated by the king and a lower house elected by manhood suffrage. Area 37,000 sq. m.; pop. (1966) 2,100,800, incl. 550,000 Arab refugees from Israel.

Much of J. is desert, though where there is water the soil is fertile; wheat, millet, sesame, olives and grapes are grown; cattle, sheep, camels, and goats are reared. About a quarter of the inhabitants continue to live nomadically. The potash of the Dead Sea and some phosphate deposits constitute the known mineral resources; prospecting for petroleum began in 1955. The general level of J. is 2,600 feet above sea-level, rising in the S. to over 5,000 ft. and sinking in the W. to the Dead Sea, 1,290 ft. below sea-level. The numerous *wadis* (river beds), most of which drain to the r. Jordan or the Dead Sea, are empty except for the brief period of the winter rains.

History. The area forming the kingdom of Jordan was occupied by the independent Nabataeans from the 4th cent. B.C., and perhaps earlier, until A.D. 106 when it became part of the Roman prov. of Arabia. It was included in the Crusaders' kingdom of Jerusalem, 1099–1187, and from the 16th cent. was ruled by the Ottoman Turks until the break-up of the Turkish Empire after the F.W.W. The League of Nations placed it in 1920 under British mandate as part of Palestine; but in 1923 Britain recognized the mandated territory E. of the Jordan r. as a separate country, Transjordan, under the Emir Abdullah. Transjordan was given full independence by a treaty of 1946, in which year Abdullah took the title king and changed the name of his country to the Hashimite Kingdom of Jordan (a name that came into general use only in 1949). Abdullah was a prime mover in the formation of the Arab League (q.v.), and in 1948 his forces invaded the newly proclaimed republic of Israel, occupying most of the area of Palestine (q.v.) which the United Nations had proposed to allocate to the Arabs. Abdullah made an armistice with Israel in 1949, but retained the part of Palestine (incl. eastern Jerusalem) which he had occupied, formally annexing it in 1950. Abdullah was assassinated in 1951; his grandson Hussein (q.v.) became king in 1952, his father Talal having been deposed owing to mental illness. J. fought in alliance with Egypt against Israel 5–10 June 1967, when all J. west of the r. Jordan as well as eastern Jerusalem (q.v.) was occupied by Israel.

JOSEPH. Hebrew patriarch, the elder of Jacob's sons by Rachel; he was sold by his envious brothers into slavery in Egypt. There he rose to high office under the Pharaoh, and succoured his father and

Economics. A quarter of the working population is engaged in agriculture. The continental plain, the area round Naples and Tuscany, is very fertile. Wheat is the most important cereal and maize is cultivated as an alternative crop. Rice is grown in Lombardy, Piedmont and elsewhere. The vine is cultivated throughout I. Olive oil and chestnuts are universal foods; the orange, lemon, fig, and almond are important in the S. I. produces more silk than any other European country. Hemp, flax, and cotton are grown. Cattle, sheep, goats, and pigs are reared. Emilia and Lombardy produce famous cheeses.

I. has few minerals. Volcanic products include sulphur (Sicily), borax (Tuscany), pumice and lava stone. Tuscany has rich mercury deposits. Sardinia is rich in lead, copper and zinc, and Elba in iron. Carrara and Siena produce marble. Petroleum and natural gas are worked in Sicily; there are small deposits of coal in Sardinia and of lignite in Arezzo, Pisa, and Grosseto; this scarcity of coal has encouraged the development of water power which provides three-quarters of the electricity available. Formerly industry was concentrated in the N., but the state steelworks at Taranto form the focus for large-scale development in the poorer S. Other industries are textiles (cotton, silk, woollen, and man-made fibres), chemicals, motor vehicles, leather goods, food-processing, etc.

Government. I., which had been a monarchy since its unification in 1870, became a rep. in 1946 (see

I., Greek colonies in the S. and Sicily, and Gauls in the N. – were united under Roman rule during the 4th–3rd cents. B.C. With the decline of the Roman Empire, and its final extinction in A.D. 476, I. became exposed to the attacks of the barbarians, and passed in turn under the rule of the Ostrogoths and the Lombards. The 8th cent. witnessed the rise of the papacy as a territorial power, the annexation of the Lombard kingdom by Charlemagne, and his coronation as emperor of the west in 800. Henceforward until 1250 Italian history turns in the main on the relations, at first friendly and later hostile, between the papacy and the Holy Roman Empire. During this

ITALY. The Italian architect of every period excels in the use of statuary and fountains to increase the effect of his work. Here is the Pretoria Fountain in Palermo, Sicily.

struggle the Italian cities seized the opportunity to convert themselves into self-governing republics. By 1300 five major powers existed in I.: the city-republics of Milan, Florence and Venice; the papal states; and the kingdom of Naples. Their mutual rivalries and constant wars laid I. open during 1494–1559 to invasions from France and Spain; as a result Naples and Milan passed under Spanish rule. After 1700 Austria secured Milan and replaced Spain as the dominating power, while Naples passed to a Spanish Bourbon dynasty, and Sardinia to the dukes of Savoy. The period of French rule (1796–1814) temporarily unified I., and introduced the principles of the French Revolution, but after Napoleon's fall I. was again divided between Austria, the Pope, the kingdoms of Sardinia and Naples, and 4 smaller duchies. Nationalist and democratic ideals nevertheless remained alive, and inspired attempts at revolution in 1820, 1831 and 1848–9. After this last failure the Sardinian monarchy assumed the leadership of the national movement. With the help of Napoleon III the Austrians were expelled from Lombardy in 1859; the duchies joined the Italian kingdom; Garibaldi overthrew the Neapolitan monarchy; and Victor Emmanuel II of Sardinia was proclaimed king of Italy at Turin in 1861. Venice and part of Venetia were secured by another war with Austria in 1866; in 1870 Italian forces occupied Rome, thus completing the unification of I., and the Pope ceased to be a temporal ruler until 1929 (see VATICAN CITY). In 1878 Victor Emmanuel II died, and was succeeded by Humbert (Umberto) I., his son, who was assassinated in 1900. The formation of a colonial empire began in 1869 with the purchase of land on the Bay of Assab, on the Red Sea, from the local sultan. In the next 20 years the Italians occupied all Eritrea which was made a colony.

History below). It has a parliament of 2 houses – a Chamber of Deputies elected by universal direct suffrage for 5 years and a Senate elected for 6 years. The head of state is a Pres. elected for 7 years by a joint session of the houses of parl.; he must secure a two-thirds majority. He is assisted by a cabinet led by a P.M., and may dissolve parl. except during the last 6 months of his term of office. The first elected pres. was Luigi Einaudi (q.v.).

I. is divided into 19 regions (see Table), of which Valle d'Aosta, Trentino-Alto Adige, Sicily, Sardinia, and Friuli-Venezia Giulia were granted a measure of autonomy by the 1948 constitution; and 91 provs., the majority bearing the same name as their cap. Under a treaty between the papacy and I. made in 1929, the Roman Catholic religion is the state religion; it is professed by more than 90 per cent of the people. Other faiths are allowed.

History. The varying peoples inhabiting I. – Etruscans in Tuscany, Latins and Sabines in middle

début at the Proms under Sir Henry Wood. An attractively brilliant executant, she made the piano sound-track for *The Seventh Veil*.

JOYCE, James Augustin Aloysius (1882–1941). Irish writer. B. in Dublin, he studied medicine in Paris, but later became a teacher of languages. In 1907 he pub. a vol. of verse, *Chamber Music*, and in 1914 the realistic stories *Dubliners*. His *Portrait of an Artist as a Young Man* (1916) is semi-autobiographical and anticipates the advanced technique of *Ulysses* (1922), which records the events of a Dublin day, and mingles direct narrative with the unspoken and even unconscious reactions of the characters. The book was banned for obscenity in England and the U.S.A. *Finnegan's Wake* (1939), long known as *Work in Progress*, attempts a synthesis of all existence, using a polyglot language containing impressionistic compounds, e.g. 'polyfizzzyboisterous'.

JOYCE, William (1906–46). Fascist. B. in New York, the son of a naturalized American of Irish birth, he was director of propaganda in the British Union of Fascists until 1937, when he formed the more openly pro-German National Socialist League. On the outbreak of the S.W.W. he went to Germany and regularly broadcast to Britain, being known as 'Lord Haw-haw'. Tried for treason at the Old Bailey in 1945, he was hanged.

JUAN FERNANDEZ ISLANDS (hoo-ahn' fern-ahndeth). A group of islands in the S. Pacific belonging to Chile. The most important are Santa Clara and Mas-a-Tierra (also sometimes called Juan Fernandez Island) where Alexander Selkirk (q.v.) was marooned 1704–9. The islands were named after the Spanish navigator who discovered them c. 1565.

JUAREZ (hoo-ah'reth), Benito Pablo (1806–72). Mexican politician, b. of Indian parents. He was governor of Oaxaca 1847–52, but was exiled by Santa Anna. He had a share in the successful revolt of 1855, and in 1858 was elected President of the republic. He declared war on France in 1862 when Napoleon III sent troops to Mexico and as constitutional President opposed the French-supported emperor Maximilian, who was executed in 1867. Juarez was re-elected President, and again in 1871.

JUBA (jööb'a). River in E. Africa formed at Dolo, Ethiopia, by the junction of the Ganale Dorya and Dawa rivers. It flows S. c. 550 m. in a meandering course through the Somali Rep. (of which its valley is the most productive area) into the Indian Ocean 10 m. N.E. of Kismayu. When in flood it is 1,150 ft. wide, at other times c. 250 ft. A strip of country some 100 m. wide, on the right bank of the J., formerly called Jubaland, was in Kenya until transferred to (Italian) Somaliland in 1925.

JUBA. Town in Sudan Rep., cap. of Equatoria prov., on the left bank of the White Nile, at the head of navigation above Khartoum 750 m. N., J. is an admin. and trade centre, with an airfield. Pop. (1964) 15,000.

JUBBULPORE. City and district of Madhya Pradesh, Rep. of India. The city, with cotton and flour mills and a univ. coll., is a railway centre. Pop. (1951) 256,998.

JUDAH (joo'dah). District of S. Palestine, which after the death of Solomon adhered to his son Rehoboam and the Davidic line, whereas the rest of Israel elected Jeroboam as ruler of the northern kingdom. In N.T. times, J. was the Roman prov. of Judaea.

JUDAISM (joo'da-izm). Term signifying the distinctive religious beliefs and observances of the Jews. It is founded on the Torah, 'direction for living', which combines the Mosaic code and its oral interpretation. During the Babylonian exile of 586 B.C. the Jews preserved their individual mode of life, and with the return under Cyrus J. was estab. by the code of Ezra. The effect of the destruction of the Temple on J.

was countered by the rising importance of the synagogue, of home religious life, and of the lay rabbis.

The creed of J. is based on the fundamental concepts of one God, the revelation of His will in the Torah, and the special relationship of God and the Jewish people: its orthodox formulation is that of Moses Maimonides (1135–1204). Among the distinctive observances of J. are circumcision, the daily services in Hebrew, and the observance of the Sabbath (7th day of the week) and the 3 principal festivals, Passover, Pentecost, and Tabernacles. Dissenting movements in J. include the Pharisees, Sadducees, and Essenes of N.T. times; the 8th cent. Karaites; the Chasidism of the 18th cent.; the Reform movement begun in Germany in 1810 which reached England in 1842; and the more radical Liberal J. which developed in America and founded its first London synagogue in 1911.

JUDAS ISCARIOT (joo'das iskar'i-ot). The one of the 12 Apostles who betrayed Jesus. He was the treasurer of the little band, and at the last Passover arranged with the chief priests to betray Jesus for 30 pieces of silver. The betrayal effected, he was smitten with remorse and committed suicide.

JUDGE. A person invested with power to hear and determine legal disputes. In the U.K., Js. are chosen from the Bar, and those of the Supreme Court (except the Lord Chief Justice) and County Courts are nominated by the Lord Chancellor, who is a political appointee. In the U.S.A., apart from the Federal judiciary which are executive appointments, Js. in most states are elected by popular vote.

JUDICIAL SEPARATION. A decree of J.S. puts an end to the obligation of a married couple to cohabit, but does not dissolve the marriage or leave the parties free to marry again. A decree of J.S. may be granted on (1) any grounds which would support a petition for divorce; (2) failure to comply with a decree for the restitution of conjugal rights. As in divorce, J.S. may carry with it orders by the court as to alimony, the care and custody of children, etc. A decree of J.S. is also obtainable in the U.S.

JUDO (jū'dō). Synthesis of the most valuable methods from the many forms of jujitsu (jūjitsu), the traditional Japanese skill of self-defence and offence without weapons, which was originally practised as a secret art by the feudal Samurai. In modern times J. has been adopted throughout the world as a compulsory subject in the armed forces, the police, and in many schools. When it is practised as a sport the 2 combatants wear special loose-fitting, belted-jackets and trousers to facilitate holds, and the falls are broken by a special square mat: when one

JUDO. Two experts – their black belts proclaiming their degree of efficiency – at the crucial moment in an inner thigh throw, called in Japanese *uchimata*. Photo: Philb G. Davis.

medium for carving from prehistoric times in Europe, the Near East, and esp. in China and India.

Vegetable I. is used for buttons, toys, and cheap I. goods. It consists of the hard albumen of the seeds of a tropical palm (*Phytelephas macrocarpa*), which is imported from Colombia. Black Ivory was a euphemism for African slaves.

IVORY COAST (*Côte d'Ivoire*). Rep. in W. Africa lying between Liberia and Ghana. France secured trading rights on the coast in 1842, and occupied the interior in 1882, making it first a colony, later a territory. Given independence in 1960, it left the French Community and joined the W. African Entente. Behind the coastal plain, 40 m. wide and heavily forested, the country rises steeply to a plateau in the centre and to mountainous country in the N. The inhabitants are Negro in the coastal areas, primitive Senoufos and Baulé inland. Cocoa, coffee, millet, and maize are grown; mahogany is extracted from the forests, gold dredged from the rivers. The cap. is Abidjan. Area 224,000 sq. m.; pop. (1965) 3,840,000 (incl. 15,000 Europeans).

IVY. Genus of trees and shrubs (*Hedera*) of the Araliaceae family. The European I. (*Hedera helix*) has shiny, evergreen, triangular- or oval-shaped leaves and its clusters of small, yellowish-green flowers are followed by poisonous black berries. It climbs by means of root-like suckers put out from its stem, and is injurious to trees. Ground I. (*Nepeta hederacea*) is a small, creeping plant of the Labiatae family found both in Britain and N. America; and the N. American poison I. (*Rhus toxicodendron*), also known as poison oak, belongs to the Anacardiaceae.

IVY, with flower and fruits.

IXION. In Greek mythology, son of a king in Thessaly and husband of Dia, who for his crimes was bound by Zeus to a fiery wheel which rolls endlessly through the underworld.

J Tenth letter of the modern Roman alphabet. The modern Eng. value of *j* is that of a compound consonant, *d* followed by the sound *zh* (as in pleasure, pron. plezh'ur).

JABIRU (ja'biroo). Species of stork (*Mycteria americana*) found in America. It is 4-5 ft. in height with white plumage. The head is black and red.

JABLONEC (yah'blonets). Town in Czechoslovakia on the Neisse, 60 m. N.E. of Prague. From the 14th cent. jewellery and glass have been made. See illus p. 588.

JABORANDI. The dried leaves of several S. American plants which yield pilocarpine, an alkaloid which strongly stimulates sweat and saliva flow.

JACAMAR. Small Brazilian birds of the family Galbulidae. They have long sharp-pointed bills and paired toes. The plumage is brilliantly coloured.

JACANA. Wading birds in the family Parridae, found in S. America, Africa, India, and Australasia.

JACARANDA. Tree of the family Bignoniaceae found in Brazil, and also several other flowering trees

IXTAPAN DE LA SAL (ist'ahpan). Health resort, 45 m. from Toluca, Mexico. The radioactive waters are used in the treatment of rheumatism and skin ailments, and are sometimes identified with the legendary Aztec fountain of youth.

IZMIR. The grapes of the area are famous and the bunches are seen here carefully spread out by hand to dry in the hot sun to produce fine-quality raisins. Courtesy of the Turkish Embassy.

I'ZARD. A wild goat known as the Pyrenean ibex. **IZHEVSK** (ezhefsk'). Russian town, cap. of Urdmurt A.S.S.R., on the Izha, 150 m. S.W. of Perm. A metallurgical centre dating from 1760, it makes steel, agricultural and other machinery, and machine tools. Pop. (1967) 376,000.

IZMIR (ëzmër'). Ancient port on the W. coast of Turkey-in-Asia, cap. of I. il. Originally a Greek colony founded c. 1000 B.C., it is mentioned as Smyrna in Revelation as the site of one of the Seven Churches of Christendom. After many vicissitudes (incl. destruction by Tamerlane in 1402), it was taken by the Turks in 1424. A rail terminus with modern harbour facilities, it exports wheat, dried fruit, textiles, etc., and has an oil refinery. Pop. (1965) 417,400.

with fragrant wood in the W. Indies and S. America. **JA'CINTH** or Hyacinth. A red or yellowish-red gem which is a variety of zircon.

JACKAL (jak'awl). Member of the dog family (*Canis aureus*), found in S. Asia, Africa and Dalmatia. About 1½ ft. high and 2 ft. long, it is greyish-yellow, the fur darkening on the back. Nocturnal, it preys on smaller mammals and poultry, though packs will attack larger animals. It has a reputation as a scavenger and will follow lions and tigers to finish off the carcasses of their kill.

JACKDAW. Species of crow in the genus *Corvus*, found in Europe and W. Asia. It is black, and nests in masonry.

JACKSON, Andrew (1767-1845). 7th Pres. of the U.S.A., b. in S. Carolina he defeated the British at

including dive bombers, night fighters, and troop carriers, were used by the Germans in the S.W.W.

JUNKERS. Name applied to a class of landed gentry in Prussia, given to reactionary views and policy. They constituted a large percentage of the officer corps of the Prussian army.

JUNO (jōō'nō). Roman goddess identified with the Greek Hera. The wife of Jupiter, the queen of heaven, she was especially the goddess of women.

JUNOT (zhūnōh'), Andoche, duke of Abrantès (1771–1813). French gen. He served with Napoleon at Toulon and in Egypt, and in 1807 commanded the army invading Portugal. He was defeated by Wellesley at Vimeiro in 1808. Later he fell into disgrace, and committed suicide. His wife Laure J. (1783–1834) wrote memoirs.

JUPITER (jōō'piter), or Jō've. Chief god of the ancient Romans, identified with the Greek Zeus. Originally he was god of the sky and associated with the lightning and thunderbolt. Later he came to be known as the protector in battle and the bestower of victory. He was the son of Saturn, m. his sister Juno, and reigned on Olympus as lord of heaven.

JUPITER. The largest planet in the Solar System. Its diameter as measured through the equator is 88,700 miles, and it could contain over 1,300 globes the size of the Earth; its mass, however, is only 318 times that of the Earth, since the planet is composed largely or entirely of gas. Its internal constitution is still a matter for debate, but there can be no doubt that J. contains a great deal of hydrogen, together with hydrogen compounds such as ammonia and methane.

Despite its great distance from the Sun (483,300,000 m. on the average), J. is a brilliant object in the night sky, and is well seen for several months in each year. Telescopically it is of extreme interest, and even a small instrument will show the famous streaks known as 'cloud belts'. Particularly noteworthy, too, is the Great Red Spot, which seems to be semi-permanent. Its precise nature is unknown, but it is thought to be a solid or semi-solid body floating in J.'s outer gas. Sometimes, as in 1962, it is extremely conspicuous when seen with a moderate telescope.

JUPITER. Taken with a 36 inch refractor, this photograph shows the planet's famous cloud belts. Courtesy of Lick Observatory, University of California.

J. takes 11.9 years to complete one journey round the Sun, but its axial rotation period is very short—less than 10 hours. The surface temperature never exceeds -200°F (-128.9°C), and J. is clearly unsuited for any form of life. Of the 12 satellites, 4 (Io, Europa, Ganymede and Callisto) are large, and are visible with any small telescope; they were discovered by Galileo in 1609–10. Radio signals emitted by J. are thought to depend on the position of Io and Europa.

JURA (joo'rah). Series of parallel mountain ranges running S.W.–N.E. along the French-Swiss frontier between the Rhône and the Rhine, a distance of 156 m. The highest peak is Crête de la Neige (5,654 ft.); several others exceed 5,000 ft. The J. mountains give their name to a dept. of France.

JURA (joo'rah) (Gaelic, meaning red deer). One of the Inner Hebrides, in Argyll co., Scotland, 143 sq. m. in area and mountainous, one of the twin peaks called the Paps of J. reaching 2,571 ft. J. is separated from the mainland by the Sound of J. Pop. (est.) 230.

JURINAC (yur'enats), Sena (1921–). Yugoslav soprano, well known for her interpretation of the composer in Strauss's *Ariadne*, and a member of the Viennese State Opera from 1944.

JURISPRUDENCE (jōōrisprōō'dens). The science of law in the abstract; that is, not the study of any particular laws or legal system, but of the principles upon which all mature legal systems are founded.

JURY. Body of laymen sworn to render a verdict in a court of justice. Of generally Germanic origin, the British J. probably derives most directly from the custom of the Franks, introduced into England by the Normans. Under the Plantagenets it developed from a body of neighbours, familiar with the people and background of the case – almost appearing in the character of witnesses – to an impartial panel rendering a verdict based solely on evidence heard in court. In England the most important type (others are coroners' Js. and the now largely obsolete special Js. for important civil cases) are the common Js. which take part in the more important criminal and certain civil cases. Jurors are selected at random from men and women between 21 and 60 (eligible according to rather 'dated' qualifications, e.g. certain categories of householders or property owners) with exemption for certain classes, e.g. peers, doctors, M.P.s, ministers of religion, etc. Either prosecution or defence may challenge any juror as unsuitable. The verdict reached is conclusive, i.e. there can be no retrial on the same charge, and in England had always been unanimous (though Scotland had allowed simple majority verdicts in a J. of 15), but evidence of corruption and intimidation led to the Criminal Justice Act 1967, by which a majority of 10 to 2 convicts, and people with criminal convictions are disqualified from serving. Members of Js. are allowed certain expenses, etc.

The basic principles of the British system have been adopted in the U.S., most Commonwealth countries, and in some European countries, e.g. France. In the U.S.A. the use of a grand J. (abolished in England in 1933) has been retained, both at federal and state level: consisting of 23 persons it hears only evidence for the prosecution to decide whether there is a case to be referred for trial.

JUS PRIMAE NOCTIS (yoos prēm'i nok'tis) (Lat., right of the first night). The custom of allowing the lord to enjoy the wife of any of his tenants on the wedding night. It existed in Scotland until Malcolm III, in the 11th cent., enacted that the bridegroom might pay a sum of money in lieu; and a similar right has been discovered among many savage races.

JUSTICE OF THE PEACE. In England an unpaid magistrate appointed by the Lord Chancellor. Two or more Js. of the P. sit to dispose of minor charges (formerly their jurisdiction was much wider), to commit for trial by a higher court more serious ones, to grant licences for the sale of intoxicating liquor, etc. In the U.S.A., where they are in receipt of fees and are usually elected, their courts are the lowest in the States, and Js. of the P. deal only with minor offences, such as traffic violations: they may also conduct marriages.

JUSTINIAN I (483–562). Byzantine emperor. B. in Illyricum, he was associated with his uncle Justin I in the govt. from 518. He m. the actress Theodora, and succeeded Justin in 527. He recovered N. Africa from the Vandals, S.E. Spain from the Visigoths, and Italy from the Ostrogoths, largely owing to his great gen. Belisarius. The greater part of his reign was also taken up by an indecisive struggle with the Persians. J.'s religious zeal led him to build St. Sophia at Constantinople, and to close the univ. at Athens in 529. He ordered the codification of Roman law which has exercised a great influence on European jurisprudence.

JU'STIN MARTYR (c. 100–c. 163). Christian apologist, and a Father of the Church. B. in Palestine, he was converted to Christianity at Ephesus, and spent the rest of his life as an itinerant Christian missionary-philosopher. He was martyred in Rome.

JUTE (joot). Fibre obtained from 2 plants of the genus *Corchorus* – *C. capsularis* and *C. olitorius*. E.

ranging from white to dark green according to the iron content. Long the hardest mineral known, its use by certain races is of ethnological interest and as a measure of their standard of civilization. The Chinese first discovered and used J., bringing it from E. Turkestan (so far as is known J. has never been found in China), and carried the art of J. carving to its peak: the Aztecs and Maoris have also used J. for ornaments, weapons and utensils since prehistoric times.

JAEN (hahen'). Capital of J. prov., S. Spain. The prov. is mountainous but fertile. Area 5,209 sq. m.; pop. (1960) 736,391. The city, an episcopal see, has remains of its Moorish walls and citadel, and makes textiles, leather, soap, alcohol. Pop. (1965) 70,300.

JA'FFA. Ancient port of Palestine dating at least from the 15th cent. B.C. It appears as Joppa in Egyptian records and in the Bible, and was captured by the Crusaders in the 12th cent. A.D., by Napoleon in 1799, and by Allenby in 1917. It was incl. in the rep. of Israel in 1948 and united with Tel Aviv in 1949 (see TEL AVIV-JAFFA).

JA'GAN, Cheddi (1918–). Guyanese politician. Descended from Indian immigrants, J. was ed. at Queen's Coll., British Guiana, and in the U.S.A. In 1950 he became leader of the People's Progressive Party, with strong leftist tendencies, and in 1961–4 was the 1st P.M. of British Guiana and Min. of Development and Planning. His American-born wife, Janet J., is sec. of the party and in 1963–4 was Min. of Home Affairs.

JÄGER (yā'ger), Gustav (1832–1917). German naturalist and hygienist. He opposed the use of vegetable fibre for clothes, and the all-wool material 'Jaeger' was named after him.

JA'GUAR. Largest species of cat in America (*Felis onca*). It measures c. 4 ft. long excluding the tail. The ground colour of the fur varies from creamy white to brown or black, and is covered with black spots in rosettes.

brown or black, and is covered with black spots in rosettes.

JAHANGIR (-gēr) ('Conqueror of the World'). Name adopted on his succession in 1605 by Salim (1569–1627), 3rd Mogul emperor of Delhi. Son of Akbar the Great, during his troubled and tyrannical reign he lost Kandahar to Persia in 1622; and as a result of his addiction to drink and opium he lost power also to his wife Nur Jahan ('Light of the World'). A literary and artistic connoisseur, he designed the beautiful Shalimar Gardens in Kashmir, and gardens and buildings in Lahore. See illus. p. 636.

JAHWEH. Another spelling of Jehovah (q.v.).
JAINISM (jā'nizm). A religion professed by about a million and a half Hindus, and sometimes regarded as an offshoot from Hinduism. Its sacred books record the teachings of Mahavira (599–527 B.C.), the latest of a long series of Tirthankaras, or omniscient saints and seers. B. in Vessali, now Bessahr, he became an ascetic at the age of 30, acquired omniscience at 42, and preached for 30 years.

Jains believe that non-injury to living beings is the highest religion and their code of ethics is based on sympathy and compassion. They also believe in 'karma' (q.v.). In J. there is no deity, and like Buddhism it is a monastic religion. There are 2 main sects: the Digambaras, who originally went about completely nude, and the Svetambaras.

JAIPUR (jī'poor). Indian city, cap. of Rajasthan state, noted for the colour of its stone buildings – pink for Siva, with touches of yellow for Kali. It is a railway junction with some industry. Pop. (1961) 402,760. J. was formerly the cap. of the princely state of J., area 15,610 sq. m., merged in Rajasthan 1949.

JAKARTA. See DJAKARTA.

JAMAICA (jamā'ka). Largest is. in the British W. Indies, lying about 90 m. S. of Cuba, in the Caribbean

JAMAICA. The Blue Mountains to the N.E. of Kingston rise to the highest peak in the West Indies (7,388 ft.). Today the dramatic views attract the tourist, but in the 17th century they gave refuge to the escaped slaves (the Maroons) of the Spaniards, driven out by the British in 1658.

Courtesy of the Jamaica Tourist Board.

Sea. Of great natural beauty, J. consists of an elevated well-watered plain, bisected by the Blue Mts. running E. to W. which rise to 7,400 ft. The cap. is Kingston, founded 1693; the ruins of the nearby 'pirate city' of Port Royal, destroyed and partly submerged by an earthquake in 1692, with a loss of 2,000 lives, were excavated from 1695 by Robert Marx. The chief products are bananas, sugar, coffee, rum, citrus fruits, coconuts, and tobacco. Bauxite is a principal export.

Columbus discovered J. in 1494 and it remained Spanish until conquered by Britain in 1655. From 1666 to 1866 it was ruled by a gov. and council, part nominated, part elected. Representative gov. was estab. in 1884; self-govt. in 1957. J. entered the W. Indies Federation in 1958, but withdrew in 1961, and in 1962 was given independence; it remained within the British Commonwealth.

The name J. is from the aboriginal Xaymaca (land of wood and water). The aboriginal inhabitants of the island died out under the hard life imposed on them by the Spaniards, who began to import Negroes to work for them. Some 78 per cent of present-day Jamaicans are of Negro descent, with 17.5 per cent of mixed blood, 1 per cent white, the remainder E. Indian, Chinese, etc. English is the language. Area 4,411 sq. m.; pop. (1966) 1,859,072.

The Cayman Is. (q.v.) and the Turks and Caicos Is. (q.v.) formerly dependencies of J., were given separate administrations in 1958.

JAMES, Apostle and saint. A son of Zebedee, he was, like his brother John, a fisherman of Galilee. Called as a disciple by Jesus, he became a leader of the Church in Jerusalem after the Crucifixion, and was put to death by Herod Agrippa in A.D. 44. He is the patron saint of Spain. Another James, the son of Alphaeus, and also a disciple of Christ, is distinguished as 'J. the Little'. A third James was the Lord's brother, and is known as 'J. the Just'. Paul says that Christ appeared to him after the Resurrection, and that he was a leader of the Church in Jerusalem.

JAMES I and VI (1566–1625). King of England and Scotland. The son of Mary, queen of Scots, and Lord Darnley, he was proclaimed King of Scotland as J. VI upon his mother's abdication in 1567. After a troubled minority he assumed power in 1583; he

Bantu-speaking peoples, incl. the Xhosa and Pondo tribes of Cape Province, living in much of S.E. Africa. They are primarily agriculturalists, raising cattle and grain. They should not be confused with the Kafirs (Arabic: 'infidels'), a mountain people living on the border between N.E. Afghanistan and Pakistan, so named because they refused to accept Islam until the 20th cent. They are now known as Nuri: 'people of light'. See *illus.* under **BEAUTY CULTURE**.

KAFKA, Franz (1883–1924). Czech novelist. B. at Prague, he worked for a time in an insurance office, but developed tuberculosis, and d. in a sanatorium nr. Vienna. He wrote in German and although short stories appeared during his lifetime he is chiefly remembered for his 3 long, but unfinished, allegorical novels *The Trial* (1925), *The Castle* (1926) and *America* (1927), which were pub. posthumously despite his instructions that they should be destroyed.

KAGAN. See under **BUKHARA**.

KAGANOVICH, Lazar Moiseyevich (1893–). Soviet politician. He launched an industrialization drive in the cap. in the 1930s, and directed the construction of the Moscow 'underground' (subway). In 1942 he was prominent in the defence of the Caucasus. He was a member of the presidium and central committee 1953–7, when he was expelled (with Molotov and Malenkov) for 'persistent opposition' to party policy.

KAGAWA (kagah'wa), Toyohiko (1888–1960). Japanese Christian leader. After his conversion he studied in the U.S.A., founding in 1918 the organized Labour Federation and in 1928 the National Anti-War League, but during the S.W.W. he identified himself with the ruling party. He agreed with the Emperor's surrender in 1945, and, winning the support of Gen. MacArthur, continued his work.

KAGOSHIMA. Port on K. Bay, Kyushu, Japan. The Satsumayaki porcelain is made there. Pop. (1965) 328,000.

KAIETEUR (kah-etoor') **FALL**. Waterfall on the r. Potaro, a tributary of the Essequibo, British Guiana. It is 822 ft. high – i.e. five times as high as Niagara.

KAI FENG (kifung'). Ancient Chinese city, close to the Hwang-ho, formerly cap. of Honan prov. It lost its importance owing to the silting up of the waterway. K. was cap. of China 907–1127. Pop. (1953) 130,000.

KAIRWAN (kirwahn'). Moslem holy city in Tunisia, N. Africa, 80 m. S. of Tunis. Said to have been founded A.D. 671. K. ranks after Mecca and Medina as a place of pilgrimage. Pop. (1966) 82,300.

KAISER (ki'zer), Georg (1878–1945). German dramatist. B. at Magdeburg, after 3 years in Argentina as an engineer he became the leader of the Expressionist school in drama. He wrote *Von Morgen bis Mitternacht* (1918) and *Die Bürger von Calais*.

KAISER, Henry J. (1882–1967). American industrialist. He built up steel and motor industries, and his shipbuilding firms became famous for the mass production of vessels, incl. the 'liberty ships' – cheap, quickly produced, transport ships – built for the U.K. in the S.W.W.

KAISER. A title formerly borne by the Holy Roman Emperors, Austrian Emperors 1806–1918, and German Emperors 1871–1918. The word, like Tsar, is derived from the Lat. *Caesar*.

KAISERSLAUTERN (ki'zerslowtern). W. German town in the Rhineland Palatinate, 30 m. W. of Mannheim. It dates from 882; the castle from which it got its name was built by Frederick Barbarossa in 1152, destroyed by the French in 1703. K. makes textiles and sewing machines. Pop. (1960) 90,000.

KALAHARI (kahlahhah'rē). Desert region in Bechuanaland, S. Africa. The S.W. is a National Park.

KALE. A variety of cabbage (*Brassica oleracea*, variety *acephala*) grown as a winter vegetable. The commonest forms are the Scotch K. or borecole and curly K.

KALEVALA (kahlehvah'lah). Finnish national epic first formed from scattered legends and ballads by Elias Lönnrot in 1835. The hero of the poem is Väinämöinen, god of music and poetry.

KAL'GAN. Historic town and trade centre in Hopei prov., China, 100 m. S.E. of Peking, with which it is linked by railway. K. is on the border of Inner Mongolia and is the S. terminus of a motor road to Ulan Bator. It grew under the Manchu dynasty, and was the centre for the long-established tea trade from China to Russia. Pop. (1957) 230,000.

KALGOORLIE. Town of W. Australia, 340 m. E.N.E. of Perth. Gold has been mined there since 1893. Pop. (1966) 19,892.

KALI (kah'lē). In Hindu mythology, the wife of Siva. She is the goddess of destruction and death.

KALIDASA (kahlēdah'sah). The most famed of the writers is the 2nd epoch of Sanskrit literature, believed to have flourished about A.D. 375 at the court of King Vikramaditya at Ujjain. *Sakuntalā* was his greatest play.

KALIMANTAN. Indonesian name of the S.E. part of Borneo, formerly Netherlands Borneo. It forms a prov. of the rep. of Indonesia and is for the most part low-lying, with mountains in the N.W. rising in Mt. Raya to 7,462 ft. The chief towns, both ports, are Banjarmasin at the mouth of the Negara r., and Balikpapan, which is an important petroleum-producing centre. Area c. 210,000 sq. m.; pop. (1961) 4,500,000.

KALININ (kahlē'nin), Mikhail Ivanovich (1875–1946). Soviet statesman. B. in Tver prov. (later renamed K. in his honour), he was the son of a peasant, and as an active revolutionary suffered imprisonment, and was twice exiled to Siberia. Founder of *Pravda*, he was prominent in the October Revolution, and in 1919 became pres. of the Central Executive Committee of the Soviet Govt., then in 1937 pres. of the Presidium of the Supreme Soviet until his retirement owing to ill-health in 1946 – both posts were equivalent to Pres. of the U.S.S.R.

KALININ. City of the R.S.F.S.R., cap. of K. region. On the Volga, 100 m. N.W. of Moscow, and called Tver until 1933, it was renamed in honour of President K. It is an important transport centre. Pop. (1967) 311,000.

KALININGRAD. City in the R.S.F.S.R., cap. of K. region, better known by its German name Königsberg. K. grew up round a castle dating from 1255, a seat of the Teutonic Knights. It was cap. of East Prussia until that area ceased to exist with its division between Russia and Poland in 1945, under the Potsdam agreement. It was renamed in honour of President Kalinin of the U.S.S.R. Pop. (1967) 261,000.

KALMAR (kahl'mahr). Port on the S.E. coast of Sweden. It has a match industry. Pop. (1966) 37,600.

KALMUCK. An A.S.S.R. of the R.S.F.S.R. Estab. on the Caspian Sea in 1935, it was abolished in 1943, and its inhabitants deported to Siberia for their alleged collaboration with the Germans during the battle of Stalingrad. It was restored in 1957. Pop. (1967) 248,000.

KAL'TENBRUNNER (-brooner), Ernst (1901–46). Austrian Nazi leader. After the annexation of Austria he joined Himmler's staff, and as head of the Security Police (S.D.) from 1943 was responsible for the murder of Allied soldiers, and of millions of Jews. He was tried at Nuremberg, and hanged.

KALUGA (kahloo'ga). Town in the R.S.F.S.R., on the Oka, 100 m. S.S.W. of Moscow, cap. of K. region. It has hydro-electric installations and engineering works, and makes telephone equipment, measuring devices, etc. Pop. (1967) 176,000.

KAMCHATKA. Mountainous peninsula of E. Asia; name also of a region of the R.S.F.S.R. covering the peninsula and the Chukchi and Koryak national

writer. Her concern with the basic moral problems of contemporary life shows itself in such books as *In The Second Year* (1936). Well known also is her trilogy about the shipbuilding family of Herveys and Russells, which incl. *A Richer Dust* (1931).

JAMESTOWN. Site in Virginia, U.S.A., 37 m. N.W. of Norfolk, of the first permanent British settlement in N. America, estab. by Captain John Smith in 1607, and cap. of the British colony of Virginia 1624-99. In the nearby J. Festival Park there is a replica of the original Fort James, and models of the ships (*Discovery*, *Godspeed* and *Constant*), which carried the 105 pioneers.

JAMI (jaw'mē) (1414-92). Persian poet. B. at Jam in Khurasan, he embraced Sufism, and expressed its mystically romantic philosophy in his lyrics.

JAMMES (zhahm), Francis (1868-1938). French writer. B. at Tournay, he became a lawyer's clerk and estab. his reputation as a poet with the pastoral *De l'angelus de l'aube à l'angelus du soir* (1897). His increasingly Catholic outlook from 1905 is clearly shown in the poems of *Les Géorgiques chrétiennes* (1911-12) and the novel *Le curé d'Ozeron* (1918).

JAMMU (jumoo'). Winter cap. of the state of Kashmir (q.v.). It stands on the Tavi and is a terminus of the railway from Sialkot in Pakistan. An important drug research laboratory is situated at J. Pop. (1961) 108,562.

JAMNAGAR. Indian city and port, in Gujarat state, on the Gulf of Kutch, 160 m. W.S.W. of Ahmedabad. It has textile mills, match factories, etc., and an airport. Pop. (1961) 147,420.

J., formerly cap. of the princely state of Nawanagar (of which the famous cricketer Ranjitsinhji, q.v., was maharajah), is sometimes called Nawanagar.

JAMSHEDPUR. City of Bihar, Republic of India. Begun in 1909, on land acquired in 1907, J. takes its name from the Parsee industrialist Jamsheedji Tata, founder of the great Bombay firm. The Tata iron and steel works at J. are based on the coal and iron of the neighbouring Chota Nagpur plateau. Pop. (1961) 332,134.

JANÁČEK (yah'nahchek), Leoš (1854-1928). Czech composer. He studied the organ at Prague before visiting Leipzig and Vienna in 1878; on his return he organized a series of popular concerts, presenting great masterpieces to his Moravian countrymen, and in 1881 founded and directed an organ school at Brno. He became director of the Conservatoire at Brno in 1919, and prof. at the Prague Conservatoire in 1920. His music, based on the rhythm and melody of the Moravian peasant speech and folk music, incl. arrangements of folk songs, many operas and choral works, e.g. *Jenůfa* (1904); *Taras Bulba* for orchestra; and chamber music.

JANE, Fred T. (1870-1916). British naval journalist and author. He founded the annual vols. of *Fighting Ships* (1898) and *All the World's Aircraft* (1910).

JANINA (yah'nēnah). Town in Epirus, Greece, near the Albanian frontier, cap. of J. Home and seat of an archbishopric; it makes silks. J. was famous as the stronghold of Ali Pasha, called the Lion of J., 1788-1818. Pop. (1961) 34,997.

JANISSARIES. Bodyguard of the sultan, the Turkish standing army 1330-1826. Until the 16th cent. it was recruited by taking Christian boys who received instruction in the Muslim faith. In 1826, when the sultan decided to raise a regular force, they revolted, whereupon they were suppressed.

JAN MAYEN (yahn mī-en). Norwegian island in the Arctic between Greenland and Norway, named after a Dutchman who visited it c. 1610. Area 144 sq. m.

JANNINGS (yahn'-), Emil (1886-1950). German actor. Best known for his playing of pathetic or tragic roles in the German films *The Last Laugh* (1924), *Variety* (1925), and *The Blue Angel* (1930).

JANSEN, Cornelius (1585-1638). Dutch theologian who became prof. at Louvain in 1630, and R.C. bishop of Ypres in 1636. J. gives his name to the R.C. religious movement known as Jansenism, which originated with his *Augustinus* (1640), in which he argued that the teaching of St. Augustine on grace, free will, and predestination was opposed to the doctrines of modern theologians, especially the Jesuits. During the middle years of the 17th cent. the Church in France was distracted by the theological war of Jansenists and Jesuits. Pascal was an ardent Jansenist, together with the Arnaulds of the Port Royal circle. In 1713 a Jansenist work by Quesnel, the leader of the party, was condemned by pope Clement XI as heretical, and after Quesnel's death in 1719 Jansenism as an organized movement in France disappeared. But it survived in Holland where in 1723 a regular Jansenist church was estab. under the bishop of Utrecht.

JANUARIUS, St. (d. A.D. 305). Patron saint of Naples; also called San Gennaro. Traditionally, he was bishop of Benevento towards the end of the 3rd cent. A.D. and suffered martyrdom under Diocletian.

JANUS. Roman god, the patron of the beginning of the day, month, and year. The first month of the year is named after him, and he is represented in art with 2 faces looking in opposite directions.

JAPAN. An independent sovereign state of eastern Asia in the N. Pacific Ocean. J. consists of a chain of more than 1,000 islands running N. to S.W. and separated from the continent by the Sea of Japan. The chief islands are Hokkaido, Honshu (the mainland), Shikoku, and Kyushu (qq.v.). Total area, 142,680 sq. m.; pop. (1965) 98,281,955. The chief towns are Tokyo, Osaka, Nagoya, Kyoto, Yokohama, and Kobe.

The coastline is deeply indented, particularly on the Pacific shore where the Tuscarora Deep is one of the deepest sea-beds in the world. A mountain range traverses J. from N. to S.W., the highest peak being Fujiyama in Honshu, 12,390 ft. J. has a large number of active volcanoes and is subject to earthquakes. Extensive, well-watered plains divide the mountains. The main rivers are the Ishikari, c. 400 miles and the longest, in Hokkaido; the Shinano, Tone, and Yoshino in Honshu. Lakes are numerous.

By the 1960s the traditional products - rice, silk, and fish - accounted for less than 10% of her national output, and she was among the leading industrial nations, producing ships, motor vehicles, cameras, sewing machines, watches and clocks, electronic equipment, steel, textiles, plastics, paper, chemicals and cement. Minerals incl. some coal, of poor quality; oil and natural gas discovered on Honshu after the S.W.W. but insufficient to meet demand; copper, lead, manganese, iron, gold and silver. Hydro-electric and thermo-electric power is well-developed.

The Japanese are shorter than the Chinese and Koreans, but of similar build. There exists a physical difference between social classes, the majority being descended from the Malay or Indonesian race while the upper minority may have been of Manchu-Korean origin. Earlier than these types are the Ainu. The national religion is Shinto (q.v.), but its profession does not exclude acceptance also of Buddhism (introduced in 6th cent.); there are some half-million Christians (from 16th cent.).

Government. Under the constitution which came into effect in 1947, the Emperor divested himself of his former divine attributes and became a constitutional sovereign with no executive powers. Women received the vote, conscription was abolished (as was also the peerage), and human rights on Western lines were laid down. A cabinet led by a P.M. was given executive power; a house of representatives elected for 4 years and a house of councillors, one-half to be

Nigeria, W. Africa. (1) The state consists of a vast undulating plain, much of which is under cultivation. Area 16,625 sq. m.; pop. (1963) 5,775,000. (2) The town, cap. of K. state, is linked by railway with Lagos, and is an important centre for the Sudan; it makes cotton, silk and leather goods. Pop. (1963) 130,000.

KANPUR (kahn'poor). Indian city, on the Ganges, 45 m. S.W. of Lucknow, in Uttar Pradesh, cap. of K. district. It is an important commercial and industrial centre with cotton, woollen, and jute mills, chemical and plastics factories, iron and steel works. During the Indian Mutiny in 1857 it was the scene of a massacre of British civilians who had surrendered to Nana Sahib. Pop. (1961) 947,793.

KANSAS. Central state of the U.S.A. It is the principal winter wheat-producing area in the U.S.A. The chief rivers are the Missouri, Kansas, and Arkansas; the chief towns Kansas City, Wichita, Topeka (the cap.), and Hutchinson; and cattle, coal, petroleum, and natural gas are important; Wichita is a leading producer of aircraft. Area 82,276 sq. m.; pop. (1960) 2,178,611.

KANSAS CITY. Largest city of Kansas State, and next to Chicago the chief livestock centre of the U.S.A., situated at the confluence of the Kansas and the Missouri. Pop. (1960) 121,901.

KANSAS CITY. City and port of Missouri, U.S.A., on the Missouri, adjoining K.C., Kansas. Its chief importance is in the distribution of agricultural implements, seeds and grain; in K.C., Mo., are most of the offices of the stockyards and packing factories in K.C., Kansas. Pop. (1960) 475,539.

KANSU (kahnsoo'). Prov. of N.W. China, mountainous in part and with an extreme climate. It is subject also to earthquakes – one in 1920 was said to have killed 120,000. K. incl. the chief Chinese petroleum field, production from which began in 1939; it also produces food crops and livestock, coal, salt, and soda. The ancient caravan route from China to central Asia through K. has been made into a motor road. The cap. is Lanchow. Area 141,500 sq. m.; pop. (1957) 12,800,000.

KANT, Immanuel (1724–1804). German philosopher. B. at Königsberg, he went to the univ. there, and in 1770 was appointed professor in logic and metaphysics. His first book, *Thoughts on the true estimates of living forces*, appeared in 1747, and the *Theory of the Heavens* in 1755. In the latter he combined physics and theology in an argument for the existence of God. Best-known of his works is the *Critique of Pure Reason* (1781), which was followed

KARAJAN. With sensitive hands the conductor emphasizes a point to Walter Legge in the discussion that arises on the playback of a recording.
Photo: Godfrey MacDonnic.

by the *Prolegomena* (1783), *Metaphysic of Ethics* (1785), *Metaphysic of Nature* (1786), *Of Practical Reason* (1788) and *Of Judgment* (1790). In 1797 ill-health led to his retirement. K. was a transcendental idealist, making a prime distinction between noumenon (object of purely intellectual intuition) and phenomenon (object of perception or experience); phenomena do not exist in themselves but only in relation to the mind. He identified practical reason with morality and the supreme cause is a moral cause. He gave the name of Categorical Imperative to the absolute unconditional command of the moral law, a law binding universally on every rational will.

KAOHSING. City and port on the W. coast of Formosa. Industrial products include aluminium ware, fertilizers, cement; there are also a petroleum refinery, iron foundry, shipyards, and food-processing factories. K. began to develop as a commercial port after 1858; its industrial development came about while it belonged to Japan, 1895–1945. Pop. (1966) 275,600.

KAOLAN. Name sometimes given to LANCHOW before 1946.

KĀ'OLIANG. Variety of millet grown in S. Manchuria and N. China as a foodcrop. The plants grow 10–12 ft. high. The stalks are used for thatch, matting, and fencing.

KĀ'OLIN or China Clay. A mineral named after the Kuling (Kaoling) range in China, where it was originally mined. It is hydrated aluminium silicate, and is also worked in England, the U.S.A., France, and other countries. K. is used for porcelain, in 'facing' paper, in making paint, and in cosmetics.

KĀPITZA, Peter (1894–). Russian scientist. B. in Kronstadt, he was asst. director of magnetic research at the Cavendish Laboratory, Cambridge, 1924–32, and was Messel research prof. of the Royal Society and director of their Mond Laboratory 1930–5. He then returned to Russia as director of the Inst. for Physical Problems, Academy of Sciences, 1935–46 and from 1955; edits their *Journal of Experimental and Theoretical Physics*; won state prizes in 1941 and 1943; and has written on magnetism and low temperature.

KAPOK (kah'pok). Silky hairs produced round the seeds of certain trees, particularly the K. tree (*Eriodendron anfractuosum*) of India, Java, and Malaya, and the silk-cotton tree (*Ceiba pentandra*), a native of tropical America. K. is used for stuffing cushions, mattresses, and life belts. Oil obtained

KANSAS. This unpretentious white-painted wooden house at Abilene is a typical Kansas home, and here President Eisenhower grew up. The town also has an Eisenhower Museum (1954) of trophies and a library (1962) of his records and memorabilia.
Courtesy of The Eisenhower Foundation.

from the introduction of the tea ceremony. *Momoyama* period (1570–1630): the brilliant Kano artists produced beautiful screens to decorate palaces and castles. *Tokugawa* period (1630–1867): colour prints were first produced. Famous artists were Matabei, Kōryūsai, Kiyonaga, Utamaro, and Hokusai. *Meiji* period (1868–1912): the influence of Western art, especially Impressionism, is clearly discernible: well-known artists were Gaho (1835–1908) and Kogyo (1866–1919). *Shōwa* period (1926–): attempts were made by, e.g. Seiho (1864–1942), to adapt the Western methods of objective realism to the traditional J. variety, and by painters such as Taikan (1868–1958) to revive the traditional subjective style; younger painters, e.g. Kokei (1883–1957) tried to combine traditional and foreign styles. *See also* IREBANA.

JAPANESE LITERATURE. Among its earliest survivals are the 8th cent. *Collection of a Myriad Leaves*, which incl. poems by Hitomaro and Akahito (the principal form being the *tanka*, a 5-line stanza of 5, 7, 5, 7, 7, syllables), and the prose *Record of Ancient Matters*. To the late 10th and early 11th cents. belong the women writers Sei Shōnagon and

Murasaki Shikibu. During the 14th cent. the Nō drama developed from ceremonial religious dances, combined with monologues and dialogues. The 17th cent. brought such scholars of Chinese studies as Fujiwara Seikwa (1560–1619) and Arai Hakuseki (1657–1725). To this period belongs the origin of *kabuki*, the popular drama of Japan, of which Chikamatsu Monzaemon (1653–1724) is the chief exponent; of *haiku* (the stanza of 3 lines of 5, 7, 5 syllables), popularized by Matsuo Bashō (1644–94); and of the modern novel, as represented by Ibara Saikaku (1642–93). Among those reacting against Chinese influence was the poet-historian Motoori Norinaga (1730–1801). The late 19th and early 20th cents. saw the replacement of the obsolete *Tokugawa* style as a literary medium by the modern colloquial language, and the influence of Western lit., esp. Russian, produced writers such as the 'Realist' Tsubouchi Shōyō (1859–1935), followed by the 'Naturalist' and 'Idealistic' novelists, whose romantic preoccupation with self-expression gave rise to the still popular 'I-novels' of e.g. Dazai Osamu (1909–48) and Ooka Shōhei (1909–). Reacting against the autobiographical school were Natsume Sōseki (1867–1916), Nagai Kafū (1879–1959), and Junichirō Tanizaki (1886–1965), who instead found inspiration in past traditions or in self-sublimation; later novelists incl. Kawabata Yasunari (1899–). Shimazaki Tōson (1872–1943) introd. Western-style poetry e.g. 'Symbolism', but the traditional forms of *haiku* and *tanka* are still widely used. Western-type, modern drama (Shingeki), inspired by Ibsen and Strindberg, has been growing since the turn of the century, and well-known dramatists incl. Junji Kinoshita (1914–).

JAQUES-DALCROZE, Émile (1865–1950). Swiss composer and founder of Dalcroze Eurhythmics. B. at Vienna, he was prof. of harmony at the Geneva Conservatoire from 1892 and in 1910 founded the J.-D. College in Hellerau-Dresden.

JARNACH (yahr'nak), Philipp (1892–). Franco-Spanish composer. He studied in Paris and under Busoni, whose opera *Doktor Faust* he completed, in Berlin: his own compositions incl. a string quartet and orchestral works.

JARNEFELT, Armas (1869–1958). Finnish composer. B. at Vyborg, he became court conductor at Stockholm, and is chiefly known for his 'Praeludium' and the lyrical 'Berceuse'.

JARRAH. Wood of the tree *Eucalyptus marginata* found in Australia; dark, close-grained, and durable.

JARROW. English industrial town (bor.) in co. Durham, on the S. bank of the Tyne, 6 m. E. of Newcastle and connected with the N. bank by the Tyne Tunnel (1967). It grew with the establishment in the 19th cent. of the Palmer shipbuilding yards, closed in 1933 during the great depression. J. was included in a 'special area', and steel rolling, ship repairing, tube manufacture, etc., were introduced. St. Paul's Church (686) was the home of Bede until his death. Pop. (1961) 28,752.

JASMINE or *Jessamine*. Genus of plants (*Jasminum*) of the Oleaceae family, found in many parts of the world, but mainly in the E. J. oil is used in perfumery. The common J. (*J. officinale*), a native of Persia and N. India, but naturalized in Europe, is a climber growing over 12 ft. high which bears clusters of white or yellow sweet-smelling flowers. The Chinese winter J. (*J. nudiflorum*) produces brilliant yellow flowers before its leaves appear.

JASON. In Greek mythology, the leader of the Argonauts who sailed to recover the Golden Fleece of the ram that had been carried away to Colchis. He escaped with the fleece and Medea, with whom he lived at Corinth; when he took a new bride she was slain by Medea's magic.

JASPER. Hard, compact variety of quartz, usually coloured red, brown or yellow. J. is opaque, and has been used as a gem.

JASPERS (yas'pers), Karl (1883–). German philosopher. B. at Oldenburg, he studied medicine and psychology, and in 1921 became prof. of philosophy at Heidelberg. Deprived by the Nazis in 1937, he was rescued in 1945 from the threat of death by the American occupation and 1948–61 taught at the univ. in Basle. His works incl. *General Psychopathology* (1913), *Man in the Modern Age* (1931), *The Great Philosophers* (1956) and *The Future of Mankind* (1958). As an interpreter of German existentialism, he is ranked next to Heidegger.

JASSY. Another form of *Iasi*.

JĀTAKA. Name given to a collection of Buddhist legends giving an account of 547 previous incarnations of Buddha.

JAUNDICE. Yellowing of the skin and eyes. The usual cause is the presence of bile in the deeper layers, due to obstruction of the common bile duct, e.g. by gallstones, pressure of a growth on the duct, or swelling of the duct walls through catarrh; or to some disturbance of liver function which prevents the bile from ever reaching the ducts.

JAURÈS (zhohrās'), Jean Léon (1859–1914). French Socialist politician. B. in Tarn, he was a lecturer in philosophy at Toulouse until his election in 1885 as a deputy. In 1893 he joined the Socialist Party, and in 1904 founded *L'Humanité* and became its editor. An advocate of international peace, he was assassinated by a half-witted youth.

JAVA (jah'vah). The most important island of Indonesia, situated between Sumatra and Bali. With the is. of Madura, J. has an area of 51,032 sq. m. and a pop. (1967) of 72,600,000. Along the centre of J. extends a chain of mountains, sometimes rising to 9,000 ft., which incl. volcanoes. The highest mountain, Semeru, over 12,000 ft., is in the E. About half the island is under cultivation, the rest being thickly forested. Mountains and sea breezes prevent extreme heat, but humidity is high, as is rainfall in Dec. to March. Products incl. rice, coffee, cocoa, tea, sugar, rubber, quinine, teak, and petroleum.

The cap. of J. is Djakarta also the cap. of Indonesia; important ports are Surabaya and Semarang.

KARLOVY VARY. Czechoslovakia is famous for its mineral springs, and those at Karlovy Vary have been famous for more than 600 years. The largest, the Sprudel, produces some 400 gallons a day, the temperature reaching more than 70°C, and the water is effective against liver complaints.

Courtesy of the Czechoslovak Travel Bureau.

and has large railway shops, breweries, etc. Pop. (1966) 253,500.

KARLSTAD. Town in Sweden, cap. of Värmland county or Lan. It makes matches, machinery, etc. The conference which ended the union between Norway and Sweden was held there in 1905. Pop. (1966) 52,000.

KARMA (Sanskrit, action or fate). In Indian religion and philosophy, the sum of a man's actions that is carried forward from one existence to the next, and in so doing determines its character for good or for ill. In Hinduism and Jainism there is belief in an individual soul which inherits and passes on the load of K., improved or worsened as the case may be; in Buddhism, however, there is no conception of a permanent personality, but the K. is attached in some way to the *khandas* or elements, both physical and mental, which are carried on from birth to birth until the power that holds them together is dispersed in the attainment of Nirvana.

KARNAK. Village of modern Egypt, on the E. bank of the Nile, which gives its name to the temple of Ammon (constructed by Seti I and Rameses II) round which the major part of ancient city of Thebes was built. An avenue of recumbent rams leads to Luxor (q.v.).

KAROLYI (kah'rōli), Mihály, count (1875-1955). Hungarian statesman. He was P.M. of Hungary 1918-19, and was first pres. of the republic Jan.-March 1919. Exiled under the Horthy régime, he joined the Free Hungarian Movement during the S.W.W., and was ambassador in Paris 1947-9, but was later denounced by the Communists and lived in retirement.

KARRI (ka'ri). Giant eucalyptus tree (*E. diversicolor*) which grows in the extreme S.W. of W. Australia. Its height varies between 200 and 400 ft. Exceptionally strong, the timber is used for girders.

KARROO (karōō). Two areas of semi-desert in Cape Province, S. Africa, divided into the Great K. and Little K. by the Swartberg. The two Ks. together have an area of over 100,000 sq. m.

KARS. Town in N.E. Turkey, cap. of K. il, bordering on Armenia S.S.R. It changed hands a number of times between Persia, Russia, and Turkey before being confirmed as Turkish in 1921. Pop. (est.) 32,000.

KARSAVINA (kahrshah'venah), Tamara (1885-). Russian dancer. She made her début at St. Petersburg in 1902, succeeding Pavlova as *première danseuse* in 1910; first appeared in London in 1909, and subsequently joined the Imperial Russian Ballet

Company. She was a great success in *Spectre de la Rose*, *Les Sylphides*, and *Scheherazade*.

KARSH. Yousuf (1908-). Canadian photographer. B. in Armenia, he makes use of strong highlights and shadows, and in 1933 opened his own studio in Ottawa. His 'bulldog' portrait of Churchill in the S.W.W. brought him world fame.

KARST. Name originally given to the barren limestone region along the N.E. shores of the Adriatic, and now applied to similar arid scenery throughout the world, e.g. the French Causses and Jura. Caves are a characteristic of K. lands.

KARTING. Miniature motor racing, originating in the U.S.A. c. 1955. More than 100,000 of these elemental racing cars, about 6 ft. long and 2½ ft. wide, were in use by 1959, when the sport was introduced into Britain. Powered by lawn-mower and motorcycle engines, karts reach speeds of 80 m.p.h.

KASHAN (kahshahn'). Town in Persia, where some of the finest carpets are made. Pop. (1964) 60,500.

KASHGAR (kahshgahr'). Oasis town in Sinkiang-Uighur autonomous region, China, on the Kizil Daria, cap. of K. district which touches Kirghiz and Tadzhik S.S.Rs. and Kashmir. It is a trade centre for cotton, silks, and sheepskins. Pop. c. 80,000, most of them Uighur.

KASHMIR (kashmēr'). State in the Himalayas, in the N. of the Indian sub-continent, bordering Afghanistan and China; sometimes called Jammu and K. It is drained by the upper waters of the Indus and its tributaries Jhelum and Chenab. There are extensive forests, and rice, barley, raw silk, fruit, and vegetables are produced. Textiles are manufactured Srinagar, the summer cap., has an airfield; at Jammu, the winter one, there are hydro-electric installations. There are no railways in K., but there is a road, via an 8,100 ft. tunnel opened in 1956, from Jammu to Pathankot on the Indian frontier, and Gilgit in Azad K. was linked with Skardu in Chinese Sinkiang 1968. Most of the people are Moslem, but until 1952, when hereditary rule was abolished, were ruled by a Hindu maharajah. In 1947 their ruler acceded to India, but fighting developed between pro-Indian and pro-Pakistan factions, helped by Pakistani troops in the W., by Indian troops in the E. India brought the dispute before the U.N. in 1948, but, failing a settlement, open war broke out in 1965. In Jan. 1966 Ayub Khan and Shastri signed the *Declaration of Tashkent* pledging restoration of peaceful relations, but difficulties continued. Area 84,470 sq. m., more than a third occupied by Pakistan (Azad K.), the rest by India. Pop. (1961) 3,583,585.

KARROO. The name Karroo is also generally applied to the northern plains of Cape Province, and this scene in Griqualand West, near Kimberley, is typical. Low-growing grey-green shrubs, thorn trees and wild asparagus bushes flourish in the stony soil, and pointed kopjes break the skyline.

Courtesy of the South African Information Service.

Independence. He was governor of Virginia 1779-81, ambassador to Paris 1785-9, and Secretary of State 1789-93. J. was the founder of the Democratic Party. He was elected Vice-President 1796-1801 and President 1801-9. See illus. under U.S. history.

JEFFREY, Francis, Lord (1773-1850). Scottish lawyer and literary critic. B. at Edinburgh, he was a founder and editor of the *Edinburgh Review* 1802-29. In 1830 he was made Lord Advocate, and in 1834 a Scottish law lord. He is chiefly remembered for his hostility to the romantic movement.

JEFFREYS, George, 1st baron (1648-89). British judge. B. in Denbighshire, he became Chief Justice of the King's Bench in 1683, and presided over many political trials, notably those of Sidney, Oates, and Baxter, becoming notorious for his brutality. In 1685 he was raised to the peerage, and conducted the 'bloody assizes' after Monmouth's rebellion, during which 320 rebels were executed and hundreds more flogged, imprisoned or transported. Created Lord Chancellor in 1685, he attempted to flee the country after the revolution of 1688, but was captured and d. in the Tower.

JEFFREYS, George (1889-1962). British evangelist and faith-healer. B. in S. Wales, he recovered from creeping paralysis by what he believed to be divine agency, and founded the Elim Foursquare Gospel Movement in 1914, resigning in 1939 to found the similar Bible Pattern Church Fellowship. Both movements are on revivalist lines, baptism is by total immersion, and many cures through prayer have been claimed.

JEHOL. Another name for CHENGTEH.

JEHOVAH. The principal name for God in the O.T., spelled JHVH or better YHWH in Hebrew; between these consonants were inserted the vowels of the word Adonai (Lord), but modern scholars incline to the pronunciation Jahveh or Yahweh.

JEHOVAH'S WITNESSES. Religious organization originated in the U.S.A. in 1872 by Charles Taze Russell (1852-1916). They attach great importance to Christ's second coming, said by Russell to have taken place invisibly in 1874, and by his successor 'Judge' Joseph Rutherford (d. 1942) in 1914. The ensuing Armageddon and Last Judgment, which entail the destruction of all except the faithful, is to give way to the Theocratic Kingdom. Their tenets, involving rejection of obligations such as military service, have often brought them into conflict with authority. The Watch Tower Bible and Tract Soc. and the Watch Tower Students' Assoc. form part of the movement. Membership c. 1,000,000.

JELGAVA (yel'gah-vah). City of the Latvian S.S.R., on the Aa, 25 m. S.W. of Riga. The centre of a fertile area, it has textile and timber mills and sugar refineries. J. was founded in 1265 by the Teutonic knights. Pop. (1967) 50,000.

JELlicoe, John Rushworth, 1st earl (1859-1935). British admiral. B. at Southampton, he entered the navy in 1872. As acting admiral, he commanded the Grand Fleet 1914-16, but the only action he fought was the battle of Jutland (q.v.). He was 1st Sea Lord 1916-17, organizing measures to combat the U-boat menace, and in 1918 was created visct. In 1919 he became admiral of the fleet and 1920-4 he was Gov.-Gen. of New Zealand, being made an earl in 1925.

JELLY-FISH. Class of marine animals in the group Coelenterata. The J. has an umbrella-shaped body composed of a semi-transparent gelatinous substance,

JELLY FISH

JERBOA

Hegel taught at the univ. which dates from 1558. The Zeiss firm of optical-instrument makers, founded 1846, is among its chief industries. Pop. (1966) 82,000.

JENKINS, Roy Harris (1920-). British Labour politician. Ed. at Balliol Coll., Oxford, he was a close friend of Gaitskell, and has pub. studies of Attlee, Asquith, etc. He was Min of Aviation 1964-5, Home Secretary 1965-7, and succeeded Callaghan as Chancellor of the Exchequer 1967.

JENNER, Edward (1749-1823). British physician. He studied in London under John Hunter and practised all his life in Gloucestershire. From 1775 he made a special study of the cowpox, and in 1796 successfully inoculated a boy with matter taken from cowpox vesicles. He pub. his discovery that vaccination produced immunity from smallpox in 1798.

JENNER, Henry ('Gwas Myhal') (1849-1934). Cornish poet. He revived Cornish as a literary vehicle, and in 1904 pub. a handbook of the Cornish language.

JENSEN (yen'sen), Johannes Vilhelm (1873-1950). Danish poet and novelist. He pub. stories set in his native Jutland and *The Long Journey* (1908-22), an epic novel of man's evolution through the ages.

JERABLUS. See CARCHFMISH.

JERBOA. Several genera of rodents, found chiefly in Africa and Asia, and mainly herbivorous and nocturnal. Most typical is the common Egyptian J. (*Jaculus aegyptius*) with a body c. 7 in. long and slightly longer tail. At speed it moves in a series of long jumps with its fore-feet held close to the body. See DESERT RATS.

JEREMI'AH. Hebrew prophet, b. near Jerusalem, whose ministry continued 626-586 B.C. During the siege of Jerusalem by Nebuchadnezzar, J. was imprisoned on suspicion of wishing to desert to the invader, but he was released on the city's fall, and retired to Egypt.

JEREZ DE LA FRONTERA (hereth' dā lah frontā'rah). Town in Cadiz prov., S.W. Spain, 14 m. N.E. of Cadiz, famed for sherry. Pop. (1965) 142,336.

JERICO (jer'ikō). Ancient city in the Jordan valley, Jordan, 5 m. N. of the Dead Sea. It was the first of the Canaanite strongholds to be captured

by the Israelites, the walls of the city falling down to the blast of trumpets. Excavations by successive archaeologists from 1907 at intervals onwards show that the walls of the city were destroyed many times; little is left of the Late Bronze Age city captured by Joshua. (See KENYON, K.) A short distance from the old site is a modern Arab village, in Arabic Eriha.

JEROME (jerōm') (c. 340-420). Christian saint and Father of the Church. B. at Strido, he was

with a fringe of stinging tentacles. Most of them move freely, but some are attached by a stalk to rocks or seaweed. They feed on small animals which are paralysed by the stinging threads.

JENA (yeh'nah). Old town, first mentioned in the 9th cent., in E. Germany, 12 m. S.E. of Weimar. Here in 1806 Napoleon defeated the Prussians. Schiller and

JERICO. One of the Neolithic skulls with delicately moulded plaster features discovered during Kathleen Kenyon's excavations; apparently these were retained as mementoes of loved relatives.

Courtesy of Miss Kathleen Kenyon.

in 1753 his house at Bury was wrecked by a mob, who feared the use of machinery would cause unemployment. He is said to have d. in poverty in France.

KAYAH STATE. See **KARENS**.

KAYAK (ki'ak). Long, and light, sealskin-covered boat used by Eskimo fishermen and sealers.

KAYE, Danny. Stage-name of American film and stage comedian Daniel Kominski (1913–). B. in Brooklyn, N.Y., of Russian extraction, he has made such films as *Wonder Man* (1944), *The Secret Life of Walter Mitty* (1946) and *Hans Christian Andersen* (1952). He excels in lunatic, apparently multi-lingual, monologue, etc.

KAYE-SMITH, Sheila (1888–1956). British novelist. B. in Sussex, she m. in 1924 T. Penrose Fry, an Anglican clergyman, and was converted with him to Roman Catholicism in 1929. Set against the background of her native co., her books deal with down-to-earth realities, notably *Joanna Godden* (1921), story of a successful sheep grazier; later are *The End of the House of Alard* (1923) and *The Treasures of the Snow* (1949). *Three Ways Home* is a spiritual autobiography.

KAZAKH S.S.R. (kəzhəkh'). Asiatic rep. of the U.S.S.R., bounded on the W. by the Caspian Sea. Predominantly low-lying, it rises in the E. and S.E. to the mountains of central Asia. Among its products are cotton, grain, and sugar beet; minerals incl. coal, petroleum, iron, copper, and lead. The cap. is Alma-Ata. Area 1,061,600 sq. m.; pop. (1968) 12,678,000 (of whom 30 per cent were Kazakhs and 51 per cent Russians and Ukrainians).

KAZAN, Elia (1909–). American stage and film director. B. in Constantinople of Greek extraction, he became an actor, and made his name by his stage direction of *Skin of Our Teeth* (1942), *A Streetcar Named Desire* (1947), *Death of a Salesman* (1949), and *Cat on a Hot Tin Roof* (1955). His films incl. *A Tree Grows in Brooklyn* (1945), *Gentleman's Agreement* (1948), *Streetcar* (1951), *On the Waterfront* (1954), *East of Eden* (1954), and *Splendour in the Grass* (1962).

KAZAN (kəzhahn'). Cap. of the Tatar A.S.S.R., R.S.F.S.R. Formerly a centre of Mohammedan culture, it is a busy marketing and transport centre with a univ.; its industries incl. tanning, motors, chemicals, and railway rolling stock. The 'Black Virgin of K.', housed in a specially built convent in the 16th cent., was removed to Moscow (1612–1917), where the great Kazan Cathedral was constructed to enshrine it in 1631. Pop. (1967) 821,000.

KAZVIN (kəzhvən'). Town at the S. foot of the Elburz range, Persia, with an airfield. It is said to date from the 4th cent. Industries incl. rug weaving, distilling, cotton textile manufacture. K. is subject to earthquakes.

KAZAN. Dating from the 14th cent. or earlier, the Virgin of Kazan, called 'black' because darkened with age, found a new home in 1963 in San Francisco. Besides numerous cures of the blind, the icon (q.v.) is credited with defeating by its presence both the Poles (1612) and Napoleon (1812) at Moscow. Courtesy of Miss A. Mitchell-Hedges.

KEAN, Edmund (1787–1833). British actor. B. in London, son of

a strolling actress, he made a sensationally successful London début as Shylock in 1814, and also excelled as Richard III and Othello. His son, Charles John K. (1811–68), made his stage début in 1827, and achieved fame as Hamlet in 1838. In 1842 he m. Ellen Tree (1805–80), who assisted his series of Shakespearian revivals as lessee of the Princess's Theatre, London, 1850–9.

KEARTON, Cherry (1871–1940). British naturalist, photographer, and author. B. in Yorks, he became well known for his films and photographs of wild life in Africa, Australia, etc.

KEATON, Buster. Stage-name of American comedian Joseph Frank K. (1896–1966). A sophisticated, deadpan actor, he began his screen career after the F.W.W. as stooge to 'Fattie' Arbuckle in the Keystone Kops comedies, and became one of the great silent-film comedians; his films incl. *Steamboat Bill Jr.* and *The General*, and later *Limelight* (1953) and *Round the World in 80 Days* (1957).

KEATS, John (1795–1821). British poet. B. in London on 29 or 31 Oct. 1795, the son of a livery-stable keeper, he attended an Enfield private school before being apprenticed to a surgeon and becoming a student at Guy's Hospital (1815–17). He then abandoned medicine for poetry, publishing his first vol. in 1817, and *Endymion* in 1818; the latter was harshly reviewed by the Tory *Blackwood's Magazine* and the *Quarterly*, largely owing to K.'s friendship with the Radical, Leigh Hunt. In 1818 he wrote *Isabella*, and the first version of *Hyperion*; took a walking tour in Scotland which increased his tubercular tendency; and nursed his brother Tom, who d. of the same disease. To 1819 belong 'The Eve of St. Agnes', 'The Eve of St. Mark', his 'Odes', 'Lamia', and the new version of *Hyperion*. In this year also he fell hopelessly in love with Fanny Brawne. In 1820 he pub. a 3rd vol. of poems, and in Sept. sailed for Italy in an effort to recover his health. He d. in Rome. Valuable insight into K.'s poetic development is provided by his *Letters*, pub. in 1848.

KEBLE (kēbl), John (1792–1866). Anglican divine and religious poet. B. in Glos, he was ordained in 1815, and in 1827 pub. the vol. of poems *The Christian Year*. K. was prof. of poetry at Oxford, 1831–41; and his sermon on national apostasy preached in 1833 is taken as the beginning of the Tractarian movement. K. wrote 4 of the *Tracts for the Times*, and from 1835 was vicar of Hursley, in Hants. K. College, Oxford, was founded in 1870.

KEDAH (ked'a). State ruled by a sultan in the Federation of Malaysia. It was transferred by Siam to Britain in 1909, and was one of the Unfederated Malay States till 1948. The chief products incl. rice, rubber, tapioca, tin, and tungsten. Alor Star is the cap. Area 3,660 sq. m.; pop. (1966) 913,995.

KEELE. Town in N. Staffs, England, nr. Newcastle-under-Lyme, seat of Keele univ. (1962), founded in 1949 and opened in 1951 as the Univ. Coll. of N. Staffs; noted for originality and enterprise.

KEELING. Another name for the Cocos Islands.

KEENE, Charles Samuel (1823–91). British black-and-white artist. A talented wood-engraver and etcher, he was also well known for his spare line drawings in *Punch* (from 1851), distinguished by their acute and realistic observation of such familiar characters as cabmen, Thames anglers, and street boys.

KEEPER OF THE GREAT SEAL. An officer who

JOHN KEATS. A life mask. Photo: N.P.G.

The order has c. 36,000 members, incl. c. 20,000 priests, the remainder being students and lay members.

JESUS CHRIST (jēz'us krist) (4 B.C.—A.D. 29 or 30). Jesus—called in Hebrew the Messiah, and in Greek the Christ—was the founder of Christianity (q.v.). The main sources of information on His life and work are the 4 Gospels. B. in Bethlehem, the son of the Virgin Mary of the tribe of Judah and the family of David. He was brought up as a carpenter by Joseph (q.v.) at Nazareth. In A.D. 26 or 27 His cousin John the Baptist began his preparatory mission, and after baptism at his hands Jesus became fully conscious of His own purpose. The Galilean Ministry incl. 2 missionary journeys through the district and the calling of the 12 Apostles, and culminated in the feeding of the 5,000. His teaching is summarized in the Sermon on the Mount, and was illustrated by homely parables. His apparent disloyalty to the traditional religion roused the opposition of the dominant religious party, the Pharisees, who joined the secular party of the Herodians against Him. Consequently He retired to the non-Jewish territory of Tyre and Sidon, where He probably devoted Himself to training the disciples, and made Himself known to them as the expected Messiah.

He then returned to Jerusalem (probably in A.D. 29), entering the city a week before the Passover, acclaimed by the populace as the Messiah. Fearing popular anger, the Jewish authorities arrested Jesus privately, aided by the betrayal of Judas, and after a hurried trial He was condemned to death by the Sanhedrin. Ultimate confirmation of this sentence was wrung from the Roman procurator Pontius Pilate by stressing the threat to imperial authority of His teaching. Three days after the Crucifixion, the long series of reported miracles culminated in Christ's Resurrection and His later Ascension.

JET. Mineral substance similar in composition to lignite and anthracite; it occurs in quantity near Whitby and along the Yorkshire coast. Ornaments made of J. have been found in Bronze Age tombs.

JET PROPULSION. For aircraft propulsion, air is taken into a forward-facing intake, is heated and ex-

simple to make, possesses low combustion efficiency and is uneconomical in fuel. The usual turbo-jet uses a turbine-driven compressor to raise the comp. ratio and therefore the temperature (and expansion) of the gases. Some of the exhaust gas energy is extracted by the turbine, to drive the compressor by a shaft, the remaining gas velocity providing the jet thrust. Centrifugal compressors were first used because these had been well developed as superchargers on piston engines, but their compression ratio was limited to about 4:1; these engines were also large in diameter. Modern gas turbines use axial compressors having many stages and thus high compression ratios (e.g. 20:1), which thus exceed piston engines in expansion ratio and are thus much more economical in fuel. Axial jets are of small diameter (suitable for slim modern aircraft), but are longer and heavier. Several modern examples produce over 10,000 lb. thrust and consume less than 0.5 lb. fuel per lb. thrust per hour (\equiv Diesel economy). Gas turbines driving propellers are incorrectly termed *prop-jets*. They do not propel by jet thrust, but most of the efflux energy is absorbed by the turbine to drive the propeller; these should be called *turbo-propeller* engines. J.P. is efficient only in fast, well-streamlined aeroplanes designed especially for these power plants.

Gas turbine engines are used in industry for generating electric power and as a stand-by source. They have been tried experimentally in motor-cars, the Rover B.R.M. gas turbine being the first to run at Le Mans (1963), when it covered 2,583 m. in 24 hours at an average of 107.84 m.p.h.

See FLIGHT, HISTORY OF.

JEVONS, William Stanley (1835–82). British economist. Prof. of logic and political economy at Manchester from 1866, and at London (1876–81). He introduced the concept of final or marginal utility into economic theory.

JEWEL, John (1522–71). English churchman. Going into exile under Mary, he was appointed bp. of Salisbury by Elizabeth in 1559, and by such works as his *Apologia Ecclesiae Anglicanae* (1562) estab. himself as a founder of English protestantism.

JEWETT, Sarah Orne (1849–1909). American writer. B. in Maine, she depicted the declining life of its small seaports, as in *Deephaven* (1877).

JEWISH AUTONOMOUS REGION. Part of Khabarovsk Territory, R.S.F.S.R., in the Far East, on the left bank of the r. Amur. The cap. is Birobidjan. Textiles, leather, and clothing are made; there is some non-ferrous metallurgy, light engineering, and agriculture, and timber is worked. The J.A.R. was estab. as a national district in 1928, made an autonomous region in 1934. Area 13,900 sq. m.; pop. (1967) 174,000 incl. c. 15,000 Jews.

JEWS. Name given to the Semitic people, otherwise Israelites or Hebrews, who claim descent from the patriarch Abraham. Led by him they emigrated from Mesopotamia to Canaan c. 2000 B.C. During the Hyksos period some settled on the borders of Egypt and were put to forced labour, from which they were rescued by Moses, founder of their religion, who aimed at their establishment in Palestine. The main invasion c. 1274 B.C. was led by Joshua and during the period of Judges ascendancy was estab. over the Canaanites. Complete conquest of Palestine and the union of all Israel was achieved under David c. 1000 B.C., and Jerusalem became the capital. Solomon, David's son, succeeded and enjoyed a reputation for great wealth and wisdom, but his lack of a constructive policy led after his death to the secession of the north (Israel) under Jeroboam, only Judah remaining under the house of David. A new factor was introduced with the rise of Assyria: Israel purchased safety by tribute, and under Jeroboam II c. 785 reached her highest pitch of luxury, but the basis of her society was corrupt, and prophets

JET PROPULSION. Developed by Rolls-Royce, this Spey by-pass turbojet engine with a 10,000 lb. thrust was specially designed, by virtue of its low operating cost, for short- and medium-range aircraft. Courtesy of Rolls-Royce Limited.

panded by burning a fuel in it and the gases are ejected rearwards at very high speed through a convergent duct. Propulsion is obtained not by pushing against the static air but by the reaction of accelerating the mass of gas rapidly rearwards. Thrust (see AEROPLANE) is proportional to the mass of gas ejected times the acceleration imparted to it. When the heating takes place simply in a divergent-convergent duct (i.e. an open-ended pipe having convex sides with ignition taking place at the widest section) the engine is known as a ram jet. This will not operate at low speeds due to insufficient dynamic head (ram) of air for compression, and although cheap, light, and

KEMPE. The tense moment in rehearsal when a difficult effect is exactly achieved. Photo: Godfrey MacDonnic.

KEMPE (kemp), Margery (fl. 15th cent.). English religious writer, who lived at Lynn. Her account of her religious experiences forms the first English autobiography.

KEMPE, Rudolf (1910–). German conductor. Specially noted for his appearances at the Salzburg and Edinburgh festivals and at Bayreuth, he is artistic director of the Royal Philharmonic, Tonhalle (Zürich), and Munich Philharmonic orchestras.

KE'MPENER, Peter de (c. 1503–80). Flemish painter. B. in Brussels, he worked in Seville 1537–62 and became known as Pedro Campaña. His masterpiece the 'Deposition from the Cross' (1548) is in Seville Cathedral.

KEMPIS. See THOMAS A KEMPIS.

KEMP-WELCH (-welsh), Lucy Elizabeth (1869–1958). British animal painter. B. at Bournemouth, she gained an international reputation with her pictures of horses, e.g. 'Colt Hunting in the New Forest' and 'Horses Bathing in the Sea', and became the first pres. of the Soc. of Animal Painters in 1914.

KEMSLEY, James Gomer Berry, 1st visct. K. (1883–1968). British newspaper proprietor. B. in Merthyr Tydfil, he built up with his brother Visct. Camrose (1879–1954), a large newspaper chain, and was from 1937 chairman of Kemsley Newspapers Ltd. and editor of the *Sunday Times*, until they were acquired by Roy Thomson (q.v.).

KEN, Thomas (1637–1711). English churchman and hymn-writer. He was bishop of Bath and Wells 1684–91, when he refused to take the oath of allegiance to William of Orange. His hymns incl. 'Awake my soul, and with the sun', and 'Glory to Thee, my God, this night'.

KENDAL. Town (bor.) on the r. Kent, Westmorland, England. Woollens (an industry introduced by Flemings in the 14th cent.), agricultural machinery, boots and 'hoes, etc., are made. Catherine Parr was born at K. castle. Pop. (1961) 18,595.

KENDAL, William Hunter (1843–1917). British actor. B. in London, the son of a painter named Grimston, he first appeared on the stage in 1862 and from 1866 appeared regularly in London. **MADGE K.,** née Margaret Shafto Robertson (1849–1935), whom he m. in 1869, was a sister of T. W. Robertson, the dramatist, and made her first London appearance as Ophelia in 1865. Mr. and Mrs. Kendal played together in many famous parts, particularly in Shakespearian and the old English comedies. Mrs. K. retired in 1908 and received the D.B.E. in 1926.

KENDALL, Henry Clarence (1841–82). Australian poet. B. in New South Wales, he had a gift for lyrical expression of feeling inspired by the Australian countryside and domestic life, e.g. *Poems and Songs*, and *Songs from the Mountains* (1880).

KENILWORTH. Town (U.D.) in Warwickshire,

England, famous for its Norman castle, which became a royal residence and was enlarged by John of Gaunt and later by the earl of Leicester. It was dismantled after the Civil War; the ruins were given to the nation by the 1st Lord Kenilworth in 1937. Pop. (1961) 14,427.

KENNAN, George Frost (1904–). American diplomat. For many years in the U.S. Foreign Service, he was ambassador to the U.S.S.R. 1952–3 and Yugoslavia 1961–3. He has taught at Princeton and Oxford, became prof. at Princeton in 1963, and is a world authority on the complexities of East-West politics, e.g. *Soviet American Relations 1917–20* (1956–8), *Russia and the West Under Lenin and Stalin* (1961) and *Memoirs 1925–50* (1967).

KENNEDY, David (1905–). American banker. A Republican, he became chairman of the Continental Illinois Nat. Bank in Chicago in 1959, and in 1969 Sec. of the Treasury. He is not related to the family of Pres. Kennedy.

KENNEDY, John Fitzgerald (1917–63). 35th Pres. of the U.S.A. The 2nd son of Joseph Patrick K. (1888–), a millionaire and ambassador to the U.K. 1938–40; he was b. at Brookline, Mass., and ed. at Harvard and the London School of Economics. A back injury received while playing football was worsened by service with the navy in the Pacific, when he was decorated for gallantry after a Japanese destroyer sank the torpedo-boat he commanded. Elected to the House of Representatives as a Democrat in 1947, he became a Senator in 1952, and in 1960 was elected to the presidency, defeating Nixon in one of the closest contests of U.S. history, the 1st R.C. and youngest man ever to hold the office. Supported by the academics and intellectuals of the 'New Frontier', he pursued liberal domestic policies in civil rights, medical care for the aged, etc., and in foreign affairs adopted a firm but negotiable attitude, notably in the Cuban crisis of 1962 and in the signature of the nuclear test-ban treaty of 1963. Riding in an open car through Dallas 22 Nov. 1963 he was assassinated in full view of a television audience, shot (allegedly) by Lee Harvey Oswald, an ex-Marine and Marxist sympathizer, who was in turn shot dead at Dallas police H.Q. by a night-club proprietor, Jack Ruby. He was the author of *Why England Slept* (1940) and *Profiles in Courage* (1956). His wife, Jacqueline Lee Bouvier (1929–), whom he had m. in 1953, was noted for her restoration of the White House to the decor of 1880. Their children, Caroline (1957–) and John Fitzgerald, Jun. (1960–), became trend-setters for juvenile America. His

KENNEDY. The Kennedy family are noted for their close links, whether at work or play. Here in 1959 are the three brothers Robert (left), Edward (centre) and John during a recess in a hearing of the U.S. Senate Investigations Subcommittee. Courtesy of the U.S. Information Service.

The French henceforward took the offensive and by 1453 had expelled the English from France. J. failed to capture Paris, and in May 1430 was captured. She was found guilty of witchcraft and heresy. On 30 May 1431 she was burned by the English in Rouen market-place, her ashes being thrown into the Seine. An official inquiry in 1456 annulled her sentence, and in 1920 she was canonized.

JOB. An ancient chieftain in the land of Uz, usually identified with Edom, whose name is given to a dramatic poem in the O.T. (probably 5th cent. B.C.). The book is one of the first attempts to explain the problem of human suffering in a world created and governed by God, who is all-powerful and all-good.

JOCKEY CLUB. See HORSE RACING.

JODHPUR (jōdpoor). Indian city in Rajasthan, formerly cap. of J. princely state, founded in 1459 by Rao Jodha. It is a market centre with notable buildings and is dominated by its red sandstone fort. The training college of the Indian Air Force is at J. Pop. (1961) 224,723.

JODL (yōdl), Alfred (1892–1946). German general. B. at Aachen, he drew up the Nazi government's plan for the attack on Yugoslavia, Greece, and the Soviet Union, and in Jan. 1945 became chief of staff. He headed the delegation which signed Germany's surrender at Reims on 7 May. He was tried at Nuremberg in 1945–6, and hanged.

JODRELL BANK. Site in Cheshire, England, of the giant radio-telescope belonging to Manchester Univ. Completed in 1957 in time to track the orbit of the first sputnik, its 250 ft. diam. paraboloid reflecting bowl weighs 750 tons, and has a range 1,000 times greater than the best optical telescopes. See LOVELL, SIR BERNARD.

JOFFRE (zhofr), Joseph Jacques Césaire (1852–1931). French soldier. B. in the Pyrenees, he was made chief of general staff in 1911. The invasion of Belgium by the Germans in 1914 took him by surprise, but his successful stand on the Marne made him a national hero, and he received the supreme command of all the French armies. His failure to make adequate preparations at Verdun in 1916, and the disasters on the Somme, caused increasing discontent. In Dec. 1916 J. was replaced by Nivelle, although he received the honorary title of marshal of France.

JOGJAKARTA. See JOKJAKARTA.

JOHANNESBURG (johan'-). Largest city of S. Africa, situated on the Witwatersrand in Transvaal and centre of the world's greatest gold-mining industry. Founded after the discovery of gold in 1886, the town was probably named after Jan (or Johannes) Meyer, first mining commissioner. Notable buildings incl. the law courts, Escrow House (Electricity Supply Commission), the S. African Railways Administration Building, the City Hall, Chamber of Mines and stock exchange, the Witwatersrand (1921) and Rand Afrikaans (1966) univs., and the Union Observatory. J. is the Republic's biggest centre for local and overseas trade in primary and industrial products and is the most important rail centre. The Jan Smuts international airport, 18 m. N.W., came into use in 1954. The mines and railways have given rise to

JOHANNESBURG. White mounds of refuse from the gold-mine crushing machines.
Courtesy of the Anglo-American Corpn.

engineering works and there are meat-chilling plants, clothing factories, etc. Pop. (1961) 1,220,500 of whom 414,900 were white.

JOHN. Apostle and saint. The son of Zebedee and Salome, a sister of the Virgin Mary, he was b. in Judaea, and with his brother James became a Galilean fisherman and one of the first disciples called by Jesus. J. was present at the Last Supper and at the Trial, and to him Jesus entrusted His mother at the foot of the cross. According to tradition J. was the author of the 4th Gospel, the Johannine Epistles, and also of the Apocalypse.

JOHN. Name of 23 popes. **JOHN XXII**, pope 1316–34, who spent his papacy at Avignon, engaged in a long conflict with the emperor, Louis of Bavaria, and with the Spiritual Franciscans, who preached the absolute poverty of the clergy. **JOHN XXIII**, pope 1410–15, was a pirate before entering the Church. In an attempt to end the Great Schism he was elected pope by a council of cardinals at Bologna, but was deposed by the Council of Constance in 1415, together with the popes of Avignon and Rome. He is not recognized by the Church, and the title **JOHN XXIII** was assumed by Angelo Giuseppe Roncalli (1881–1963). B. near Bergamo, one of a peasant family of 13, he was ordained in 1904 and pub. studies of the work of Carlo Borromeo (q.v.). At 40 he was called to Rome and then as apostolic delegate to Bulgaria, Greece and Turkey gained an unusual knowledge of the Eastern Church. In 1944 he became Papal Nuncio

JODRELL BANK. The world's largest radio-telescope, weighing 2,000 tons, is electrically powered, revolves on bogies (1) running in a circular track, and the bowl (2), with transmitting and receiving aerials (3) rotates on 2 massive trunnions (4). The control system - designed to counteract the earth's rotation - can follow a star or satellite continuously.

JOHN XXIII. In a special audience for the infirm the Pope gives his apostolic blessing to a crippled boy. His simple sincerity in such moments made him more especially the 'Pope of the People'.
Photo: Planet News

of river boundary, including the Ohio in the N. K. is famous for its caves. The chief products are tobacco, maize, livestock, coal, and petroleum. The chief towns incl. Frankfort (the cap.), Louisville, Covington, and Lexington. Area 40,395 sq. m.; pop. (1960) 3,038,156.

K. dam, 206 ft. high, 8,422 ft. wide, largest of those built by the Tennessee Valley Authority, is on the Tennessee r., 20 m. above its junction with the Ohio.

KEN WOOD. Estate and mansion in Camden, London, England, adjoining Hampstead Heath. The wood itself was bought for the public and opened in 1923; the mansion, built by Robert Adam, was bought by the Earl of Iveagh, who in 1927 left the house and 70 acres of land as public property. Total area 195 acres.

KENYA. Country in E. Africa with a coastline on the Indian Ocean; it rises from a coastal plain to a broad high plateau 3,000–10,000 ft. high, crossed by the Rift Valley. The chief r., the Tana, is navigable for about 150 m. from its mouth. The climate is tropical in the coastal plain, warm temperate in the highlands. Agricultural products incl. wheat, coffee, maize, sisal, cotton, coconuts, sugar cane; forests, some 3,000 sq. m. in extent, yield valuable timber. The cap. is Nairobi; Mombasa is the chief port. Area 224,960 sq. m.; pop. (1967) 9,370,000.

K. was made a British protectorate in 1895, a Crown colony in 1920. Following nationalist claims for independence from 1946 (see MAU-MAU), K. became independent 1963, and a rep. within the Brit. Commonwealth 1964. There is a pres. (see KENYATTA, JOMO), and from 1966 the House of Reps. and Senate were amalgamated in a single Nat. Assembly. Many Asians of Indian and Pakistani stock left K. 1967–8 as a result of the policy of Kenyanization in commerce and the professions, and went to Britain.

Part 2,00 m. by 10 m., of the K. coastal strip, which had belonged to the territories of the sultan of Zanzibar for c. 500 years, and was leased to the British govt. in 1895 for £16,000 a year, was presented to K. by Sultan Seyyid Janshid in 1963.

KENYA, Mt. Extinct volcano in E. Africa, from which K. is named. It is 17,040 ft. high, and was first climbed by Sir Halford Mackinder in 1899.

KENYA'TTA, Jomo. Name assumed by Kenya politician Kamau Ngengi (c. 1889–), *kenyatta* meaning 'beaded belt'. A member of the Kikuyu tribe, he was b. nr. Fort Hall, son of a poor farmer and grandson of a magician. Brought up at a Church

of Scotland mission, he joined the Kikuyu Central Assocn., devoted to recovery of Kikuyu lands from white settlers, of which he became pres. He spent some years in Britain, and while a farm labourer during the S.W.W. m. an Englishwoman: he has had 3 African wives. Returning to Kenya in 1946 as pres. of the Kenya African Union (successor to the banned K.C.A.), he was in 1953 sentenced to 7 yrs. for his management of Mau-Mau (q.v.), though some doubt has been cast on his complicity. Released to exile in N. Kenya in 1958, he was allowed to return to Kikuyu-land in 1961 and in 1963 became P.M. of independent Kenya. His policy is summarized by his slogans 'Uhuru na Moja' (Freedom and Unity) and 'Harambee' (Let's get going), and

entails collaboration with the whites to ensure the country's unbroken economic progress.

KENYON, Kathleen Mary (1906–). British archaeologist. Dau. of classical and biblical scholar Sir Frederic George K. (1863–1952), director and principal librarian at the British Museum 1909–30, she was ed. at Oxford, where she became principal of St. Hugh's Coll. in 1962, and lectured in Palestinian archaeology at the Inst. of Archaeology, Univ. of London, 1948–62. As director of the Brit. School of Archaeology in Jerusalem 1951–62, she showed that the double walls of Jericho, previously associated with Joshua, were of differing dates and belonged to an earlier period, and that a Neolithic settlement (the earliest known) had existed there c. 6800 B.C. Her books incl. *Digging Up Jericho* (1957).

KENYA. While staying at Treetops, a game look-out first established by Sherbrooke Walker in 1932, Queen Elizabeth II succeeded to the British throne in 1952. Built on the site of a 'salt lick' which attracts numbers of elephant, rhinoceros, baboons and deer from surrounding Aberdare Forest, it was destroyed by Mau-Mau in 1954 but rebuilt in 1957.

Courtesy of Treetops, Nyeri.

As the discoverer of the 3 laws of planetary motion that bear his name, K. ranks as one of the founders of modern astronomy. The laws are: (1) The orbit of each planet is an ellipse with the sun at one of the foci. (2) The radius vector of each planet describes equal areas in equal times. (3) The squares of the periods of the planets are proportional to the cubes of their mean distances from the sun.

KER (ker), William Paton (1855–1923). British scholar. B. at Glasgow, he was prof. of Eng. literature at Cardiff (1883–9), and London (1889–1922), and prof. of poetry at Oxford. His works incl. *Epic and Romance* (1897), *The Dark Ages* (1904), etc.

K'ERALA. State of the Rep. of India formed in 1956 from the former princely states of Travancore and Cochin (except for a small area in the E., transferred to Madras), plus a small area formerly in S. Madras. K. is noteworthy as the most literate state in India – more than 50 per cent of men, about a third of women. The name was that of an ancient kingdom in this area which came to an end in 1310 when it was conquered by Mohammedan invaders. Tea, spices, coconuts, oilseeds, and rice are grown; there are extensive mineral deposits (white clay, mica, graphite, lignite, etc.), and industry is developing under govt. encouragement. Political instability arises from strong religious and caste divisions. Area 15,000 sq. m.; pop. (1961) 16,903,715.

K'ERBELA. Holy city of the Shi'ite Moslems, 60 m. S.S.W. of Baghdad, Iraq. K. occupies the site of the

In 1968 he declined the pres. nomination, and attempted to promote negotiations for peace in Vietnam by halting the bombing of N. Vietnam.

He m. in 1934 Claudia (1912–), née Taylor and intimately known as 'Lady Bird' J., also a Texan.

JOHNSON, Pamela Hansford. See SNOW, LORD.

JOHNSON, Samuel (1709–84). English lexicographer, author, and critic. B. in Lichfield, he became first an usher and then a literary hack. In 1736 he m. the widow Elizabeth Porter and opened a private school. When this proved unsuccessful he went to London with his pupil David Garrick, becoming a regular contributor to the *Gentleman's Magazine* and publishing the successful poem *London* in 1738. However, he still remained in miserable poverty with companions such as Richard Savage, whose *Life* he wrote in 1744. In 1755 he pub. his *Dictionary*, still interesting for the vigour of its definitions. While engaged on this he had also pub. the satire *Vanity of Human Wishes* (1749), seen the failure of his tragedy *Irene* (1749), and conducted the periodical *The Rambler* (1750–2), succeeded by *The Idler* (1758–60). In 1759 he wrote the philosophical romance *Rasselas*. He was awarded a pension in 1762, and his first meeting with Boswell in 1763 was followed by the formation of the 'Literary Club' in 1764, to which Reynolds, Burke, Goldsmith, and Garrick belonged. His edition of Shakespeare appeared in 1765. A visit with Boswell to Scotland and the Hebrides in 1773 was recorded in *Journey to the Western Isles of Scotland* (1775), and in 1779–81 were pub. *Lives of the Poets*, which contain his finest critical comments. J. was buried in Westminster Abbey and his house in Gough Square, London, is preserved as a museum.

JOHNSTON, Edward (1872–1944). British calligrapher. B. in Uruguay, he was an instructor at the R.C.A. from 1901, and is famous for his block letters designed in 1913 for London Electric Railways.

JOHNSTON, Sir Harry Hamilton (1858–1927). British explorer. In 1888 he founded the British protectorate over the Nyasa region in Central Africa, was commissioner of British Central Africa 1891–6, and saw service in Tunis and Uganda.

JOHN THE BAPTIST. Christian saint and prophet. The son of Zacharias and Elizabeth, who was a cousin of Christ's mother, he was a Nazarene from his birth. After preparation in the wilderness, he proclaimed the coming of Christ, baptizing Him in the Jordan. He was executed by Herod Antipas at the instigation of Salome.

JOHORE (johor'). State of the Federation of Malaysia. J. came under British protection in 1885. The southernmost point of the Asiatic mainland, J. is joined to Singapore by a causeway. Its products are rubber, tin, pineapples, copra, etc. The cap. is Johore Bahru. Area 7,321 sq. m.; pop. (1966) 1,278,289.

JOINT. An articulation; a structure in which 2 bones meet. Some joints allow no motion (e.g. the sutures of the skull); some allow a very small motion (e.g. the sacro-iliac joints in the lower back); but some other joints allow a relatively free motion. Of this 3rd class (diarthrodial) some allow a gliding motion (e.g. one vertebra of the

JOINT. A section through the left elbow joint.

spine on another); some have a hinge action (e.g. those of the elbow and knee); and others allow motion in all directions (e.g. the hip and shoulder joints), by means of a ball-and-socket arrangement. The ends of the bones at a moving J. are covered with cartilage for greater elasticity and smoothness, and enclosed in an envelope (capsule) of tough white fibrous tissue lined with a membrane which secretes lubricating (synovial) fluid.

The J. is further strengthened by ligaments. Js. are easily injured, but heal readily unless infection is introduced.

JOINVILLE (zhwañvël'), Jean, Sire de (1224–1317). French chronicler. B. in Champagne, he accompanied Louis IX on the crusade of 1248–54, which he described in his *History of St. Louis*.

JOKAI (yoh'koi), Mór (1825–1904). Hungarian novelist. An active nationalist and partisan in the 1848 Revolution, he was later a Liberal member of parliament for 20 years and ed. several newspapers. His novels, e.g. *A Hungarian Nabob* (1854) and *Black Diamonds* (1870), reveal an exuberant imagination, and he often created in them an exotic, semi-scientific world of his own. He was also an essayist.

JOKJAKARTA (jokyökahrt'ah). Town in Java, Indonesia, 60 m. S. of Semarang. It has an airport and is the seat of a university. Pop. c. 300,000.

JOLSON, Al. Stage name of the American singer Asa Yoelson (1886–1950). B. in Russia, he became famous as a star of the early sound-films *The Jazz Singer* and *The Singing Fool*.

JONAH. Hebrew prophet, whose name is given to a book in the O.T. He was sent to prophesy destruction on Nineveh, was cast overboard, and is said to have spent 3 days and nights in the belly of a whale.

JONES, Daniel (1881–1967). British philologist. Prof. of phonetics at Univ. Coll., London, 1921–49, he produced many notable works incl. *Outline of English Phonetics*, *English Pronouncing Dictionary* and *Pronunciation of English* (1914). In 1950 he became Pres. of the International Phonetic Assoc.

JONES, Ernest (1879–1958). Welsh psychoanalyst. He wrote a monumental *Life of Freud* (1953–7), and from 1913 was engaged in introducing psychoanalysis into Britain and America.

JONES, Ernest Charles (1819–69). British Chartist. In 1848 he was sentenced to 2 years' solitary confinement for sedition. He was a friend of Marx, and the author of novels and poems.

JONES, (Frederick) Wood (1879–1954). British anatomist. Following anthropological studies in Nubia, he became prof. of anatomy at Manchester 1938–45, and at the Royal College of Surgeons, London, 1945–52. He wrote *Arboreal Man* (1916), *Man's Place among the Mammals* (1929), and the classic works on *The Hand* (1920), and *The Foot* (1944).

JONES, Henry (1831–99). British authority on card games, writing under the pen-name of 'Cavendish'. His 'Laws' of whist, piquet, and écarté appeared in 1862, 1873, and 1878 respectively.

JONES, Henry Arthur (1851–1929). British playwright. His first success was the melodrama *The Silver King* (1882); among his 60 other plays were *The Case of Rebellious Susan* (1894), *The Liars* (1897) and *Mrs. Dane's Defence* (1900), notable as an early realist-problem play.

JONES, Inigo (1573–c. 1652). English architect. B. in London, he studied in Italy, and was influenced

JOHN THE BAPTIST. By Rodin. Superbly interpreting the spirit of the apostle who sought to make men 'proselytes of righteousness', this bronze is in the Musée du Luxembourg.

in *The Economic Consequences of the Peace* (1919). His later economic works, e.g. *The General Theory of Employment, Interest, and Money* (1936), aroused much controversy by their proposals to prevent crises by control of credit and currency. During the S.W.W. he became a director of the Bank of England, and a member of the Chancellor of the Exchequer's consultative committee, and led the British delegation at the Bretton Woods (q.v.) Conference. In 1945 he negotiated the American loan agreement. He received a barony 1942. He m. dancer Lydia Lopokova in 1925.

KEY WEST. Town at the tip of the Florida peninsula, U.S.A. In 1967 it became the first in America to take all its fresh water from the sea. Pop. (1960) 33,956.

K.G.B. (Komitet Gosudarstvennoye Bezopaznosti). The Russian secret police, known before 1953 as the M.V.D. (q.v.). Under the control of the State Security Committee, they are in charge of frontier and general security and the forced labour system. Earlier names for the secret police were the Okhrana under the Tsars; Cheka (q.v.) 1918-23; G.P.U. or OGPU (*Obedinyonnoye Gosudarstvennoye Politicheskoye Upravleniye*) 1923-34; N.K.V.D. (*Narodny Komisariat Vnutrennykh Del*) 1932-6; and M.V.D. (q.v.).

KHABARO'VSK. Town on the r. Amur, cap. of K. Territory in the far E. of the R.S.F.S.R. It has refineries for petroleum from Sakhalin, saw mills and flour mills, meat packing, and other industries. Pop. (1967) 420,000.

KHACHATURIAN (kachatiyūrē'an), Aram Ilyich (1903-). Russian composer. B. in Tiflis, he studied under Myaskovsky in Moscow, and has used folk themes to striking effect in concertos for violin and for piano, and the exotic ballet *Gayaneh* (1942), which incl. the 'Sabre Dance'.

KHAKI (kah'ki). Originally the sand- or dust-coloured uniforms worn by British and native troops in India c. 1850; recognized particularly in the S. African War as useful neutral camouflage, and adopted as standard throughout the world.

KHA'LIFA, The, or Abdullah el Taaisha (1846-99). Sudanese dervish leader. Succeeding the Mahdi as ruler of the Sudan in 1885, he was defeated by Kitchener at Omdurman in 1898; the K. escaped, but was killed at Kordofan.

KHAMA (kah'mah), Sir Seretse (1921-). Botswana politician. Son of the Bamangwato chief Sekoma II (d. 1925), he studied law in Britain and m. an Englishwoman, Ruth Williams. This m. was strongly condemned by his uncle Tshekedi K., regent during his minority, as contrary to tribal custom, and Seretse K. was banished in 1950, returning in 1956 on his renunciation of any claim to the chieftaincy, but in 1965 he became P.M. of Bechuanaland, and in 1966 pres. of the new rep. of Botswana and K.B.E.

KHA'MSIN (Arabic 'fifty'). Hot, dry, southerly winds which originate in the Sahara and blow across N. Egypt during the spring and summer. The name is derived from the supposed average duration of the winds, i.e. 50 days.

KHAN, Ayub (1907-). Pakistani statesman. Ed. at Sandhurst, he became C.-in-C. of Pakistan's army in 1951, was Defence Min. 1954-5, and on the abrogation of the constitution by Pres. Mirza in 1958 became chief martial law administrator and himself Pres. on Mirza's resignation. Re-elected 1965, he met increasing opposition, announced 1969 that he would not be a candidate 1970 and resigned.

KHAN, Liaquat Ali (1895-1951). Indian statesman. Ed. at Allahabad and Oxford, he studied law, and in 1923 joined the Muslim League. He was deputy leader of the Muslim League Party 1941-7, and in 1947 became 1st P.M. of Pakistan. He was assassinated by a Muslim fanatic.

KHA'RGa. Oasis in the Western Desert of Egypt. Known to the Romans, it became in 1960 H.Q. of the

New Valley irrigation scheme. An area twice the size of Italy will be reclaimed for agriculture by use of newly located natural underground reservoirs.

KHA'RKOV. Industrial city of the Ukrainian S.S.R., cap. of K. Region, 250 m. E. of Kiev. It is an important railway junction, a great engineering centre, and has a large tractor-making plant. K., founded in 1654, has a univ. and an airport. Pop. (1967) 1,092,000.

KHARTOUM (-toom'). Cap. and trading centre of the Rep. of Sudan, at the junction of the Blue and White Nile, cap. of K. prov. K. was founded in 1830 by Mehemet Ali (q.v.). General Gordon (q.v.) was killed at K. by the Mahdist rebels in 1885. A new city was built after the site was recaptured by the British in 1898. Pop. (1961 est.) 117,685.

KHEDIVE (kedēv'). Title granted by the sultan of Turkey in 1867 to his viceroy in Egypt, and held by the latter's successors until 1914.

KHERSO'N. Town on the Dnieper r., Ukraine S.S.R., built by Potemkin as a naval harbour, cap. of K. region. Its industries incl. soap and tobacco manufacture and brewing. Pop. (1967) 222,000.

KHE SANH (kā san). U.S. Marine outpost 6 m. from the Laotian border and 14 m. S. of the demilitarized zone in N. Vietnam. Garrisoned by 4,000 Marines, it was under attack by 20,000 N. Vietnamese 21 Jan.-7 April 1968.

KHIVA (khē'vah). Town in Uzbek S.S.R., U.S.S.R., once the cap. of K. khanate, which submitted to Russian suzerainty in 1873. Carpets and textiles are made. Pop. (est.) 25,000.

KHORASAN (kooorahsahn'). Prov. No. 9 of Persia, adjoining Afghanistan. It is mountainous, with salt wastes and desert, but has fertile valleys. Meshed is the cap. Area c. 125,000 sq. m.; pop. (est.) 1,800,000.

KHRUSHCHEV (krooshchov'), Nikita Sergeyevich (1894-). Soviet statesman. B. nr. Kursk, the son of a miner, he worked on the Donbas coalfield, and having

NIKITA KHRUSHCHEV

Photo: Novosti Press Agency.

taken a minor part in the Revolution joined the Communist Party in 1918 and fought in the Civil War. Rising in the party to full membership of the Politburo by 1939, he was assigned to organize the guerrilla defence of his native Ukraine in the S.W.W., and was chairman of the Ukraine Council of Ministers 1947-9. He became a member of the Presidium of the Supreme Soviet in 1952 and Sec. Gen. of the C.C.C.P. in 1953, following the formation of the Malenkov cabinet, and in 1958 succeeded Bulganin as Chairman of the Council of Ministers (P.M.). An original supporter of Stalin against Trotsky and Bukharin, he denounced the personality cult of Stalin and the latter's repressive measures in a secret session of the Soviet Communist Party in 1956 - many victims of the purges of the 1930s being subsequently released and others posthumously rehabilitated - and publicly repeated the charges in 1961, launching a de-Stalinization campaign. He believed that Communism would conquer in peaceful competition with Capitalism. He was compelled to resign 1964 because of mishandled foreign policy (e.g. his personal feud with Mao Tse-tung, under-estimate of Chinese atomic progress, and hasty despatch of missiles to Cuba, later withdrawn), domestic failures (e.g. the agricultural crisis and his neglect of heavy industry), and personal failings (e.g. new personality cult and nepotism): by 1965 his reputation was to some extent officially restored.

brothers when they were driven by famine into Egypt.

JOSEPH. The husband of the Virgin Mary. He was a descendant of David, and a carpenter by trade. According to Catholic tradition, he had a family by a previous wife, and was an elderly man when he married Mary, who remained perpetually virgin.

JOSEPH, Sir Keith Sinjohn (1918–). British Cons. politician. A barrister and Fellow of All Souls, Oxon. (1946–60), he entered Parliament in 1956, becoming Min. of State at the Board of Trade (1961–2), and in 1962–4 Min. of Housing and Local Govt. and Min. for Welsh Affairs (1962).

JOSEPH II (1741–90). Holy Roman Emperor. The son of the emperor Francis I and Maria Theresa, he succeeded his father as emperor in 1765, but only attained real power after his mother's death in 1780. He introduced a series of sweeping reforms, but his disregard of traditional privileges, etc., provoked revolts in Belgium, Hungary, and elsewhere.

JOSEPHINE (jō'zefen) (1763–1814). Empress of France. A native of Martinique, née Marie Joséphe Rose Tascher de la Pagerie, she m. in 1779 the vicomte Beauharnais, who was guillotined during the Revolution. In 1796 she m. Napoleon Bonaparte, with whom she was crowned empress in 1804. As she bore him no child, he divorced her in 1809, and she spent the rest of her life in retirement near Paris.

JOSEPH OF ARIMATHAEA. A wealthy Jew and member of the Sanhedrin, who was a secret supporter of Jesus, and on the evening of the Crucifixion begged his body of Pilate and buried it in his own tomb. According to tradition he brought the Holy Grail to England about A.D. 63 and erected at Glastonbury the first Christian church to be built in Britain.

JOSEPHUS (jō'sēfus), Flavius (A.D. 37–c. 100). Jewish historian. B. in Jerusalem, he became a Pharisee. On the outbreak of the Jewish revolt in 66 he was given the command in Galilee, but was defeated and captured. He won the favour of the emperor Vespasian and settled in Rome. He wrote *Antiquities of the Jews* to A.D. 66; *The Jewish War*; and an autobiography.

JO'SHUA. Hebrew general who led the Israelites after the death of Moses in the conquest and settlement of the land of the Canaanites (Palestine).

JOS'IAH (b. 647 B.C.). King of Judah. Grandson of Manasseh and son of Amon, he succeeded to the throne when 8. The discovery of a Book of Instruction (probably Deuteronomy) during the repair of the Temple in 621 stimulated thorough reform, which included the removal of all sanctuaries except that of Jerusalem. J. was killed in a clash at Megiddo with Pharaoh-nechoh, king of Egypt.

JOSQUIN DES PRÉS (zhoskan' dā prā) (c. 1445–1521). Flemish composer of masses, a pupil of Okeghem; he also wrote secular songs.

JÖTUNHEIM (yō'toonhim). Mountainous region in S. Norway, containing the highest mountains in Scandinavia, Glittertind (8,048 ft.) and Galdhopiggen (8,097 ft.).

JOUBERT (zhoobār'), Joseph (1754–1824). French thinker, famed for the posthumous *Pensées, essais maximes, et correspondance* (1842).

JOUBERT, Petrus Jacobus (1834–1900). Boer general, who led the Boer commandos against the British 1880–1, and on the outbreak of war in 1899 was nominal commander of the Boer forces.

JOUBERT (DE LA FERTE), Sir Philip (1887–1965). British air chief marshal. B. in Calcutta, he joined the R.F.C. in 1913 and was A.O.C.-in-C. Coastal Command 1936–7 and 1941–3, and A.O.C.R.A.F. in India 1937–9, being knighted in 1938. He was a well-known broadcaster and writer on R.A.F. subjects, and his books incl. *The Fated Sky* (1952) and *Birds and Fishes* (1960).

JOUFFROY d'ABBIANS (zhoo'frwah' dahboh'), Claude (1751–1832). French marquess and soldier,

who in 1783 built a small paddlewheel steamboat. By the French he is claimed as the founder of steam navigation.

JOUHAUD (zhoo-oh'), Edmond (1905–). French gen. B. near Oran, he escaped from German captivity in 1940 to become a resistance leader, and commanded the air force in Indo-China in 1954 and in Algeria 1956–8. Following the abortive 1961 coup in Algeria, he was second in command to Salan in the O.A.S. and in 1962 was condemned to death after his arrest in Oran. This unpopular sentence was commuted to life imprisonment and he was released 1967.

JOUHAUX (zhoo-oh'), Léon (1879–1954). French trade union leader, sec. of the Confédération Générale du Travail 1909–40. Arrested by the Vichy govt. in 1941, he was imprisoned in Germany until 1945. He was then joint sec. of the C.G.T. until his secession in 1947. He was awarded the Nobel peace prize in 1951.

JOULE, James Prescott (1818–89). British physicist. He was a brewery owner, but dedicated to precise scientific research, and his work on the relations between electrical, mechanical and chemical effects, led to the discovery of the first law of thermodynamics. He determined the mechanical equivalent of heat (J.'s equivalent); and the work done in one sec. by a current of 1 amp across a potential difference of 1 volt is known as the *joule*.

JOURDAN (zhoordoñ'), Jean Baptiste, count (1762–1833). Marshal of France. B. at Limoges, he was made in 1793 C.-in-C. of the Army of the N., and defeated the Austrians at Wattignies and Fleurus. Napoleon created him a marshal of France.

JOURNALISM. The profession or occupation of writing for, and producing (as apart from printing), newspapers and other periodicals. The main divisions are editing, sub-editing, reporting and specialist writing.

In the U.K. student courses and courses for working journalists, e.g. at the Univ. of London, are arranged by the Nat. Council for Training of Journalists: the professional body is the Inst. of Journalists, and the Nat. Union of Journalists has c. 20,000 members. In the U.S.A. univ. training is the rule and prizes founded by Joseph Pulitzer (q.v.) and others maintain standards, so that journalists tend to stand in higher public repute. Television and radio newsmen were among the winners of awards given by the Newspaper Reporters of N.Y. City for the first time in 1967.

JOUVET (zhoo-veh'), Louis (1887–1951). French actor and director. Trained as a pharmacist, he turned to the stage, and was equally able to direct Molière or Giraudoux, whose genius he was early to recognize. Films he directed incl. *Carnet de bal* (1937) and *La Fin du jour* (1939).

JÖ'VIAN (331–64). Roman emperor. Captain of the imperial bodyguard, he was chosen emperor by the soldiers on Julian's death in battle with the Persians (363), and concluded a humiliating peace. He re-estab. Christianity as the state religion.

JOWETT (jō'et), Benjamin (1817–93). British scholar. Taking holy orders in 1842, he became in 1855 Regius prof. of Greek at Oxford, and in 1870 Master of Balliol. He was prominent in promoting univ. reform, incl. the abolition of the theological test for degrees, and trans. Plato, Aristotle and Thucydides.

JOWITT, William Allen, 1st earl (1885–1957). British Labour statesman. Called to the Bar in 1909, he was elected a Lib. M.P. in 1922 and a Lab. M.P. in 1929. He was Attorney General 1929–32, Solicitor General 1940–2, and then in turn Paymaster General, Min. without Portfolio, and Min. of National Insurance until 1945, when he was Lord Chancellor in the Labour Government until 1951.

JOYCE, Eileen. Australian pianist. B. in Tasmania, she incl. Schnabel among her tutors and made her

KILMARNOCK. Town (burgh) in Ayrshire, Scotland, 20 m. S.W. of Glasgow. Industries incl. coal mining and the making of locomotives, cranes, carpets, and hosiery. Pop. (1961) 47,509.

KILMUIR, David Patrick Maxwell Fyfe, 1st earl K. (1900–67). British lawyer and Cons. politician. Called to the Bar in 1922, he became an M.P. in 1935 and was Solicitor-Gen. 1942–5 and Attorney-Gen. in 1945 during the Churchill govts. At the Nuremberg trials he was deputy to Sir Hartley Shawcross and for most of the time conducted the British prosecution. He was Home Sec. 1951–4 and Lord Chancellor 1954–62. In 1954 he was created visct. and in 1962 earl.

KILO. Prefix denoting in the metric system 1,000 units. *Kilogram* is a unit of weight equal to 1,000 grams or 2.205 lb. *Kilometre* is a unit of length equal to 3,280.89 ft. (approx. $\frac{5}{8}$ m.). *Kiloton* is a unit of explosive force equivalent to 1,000 tons of T.N.T. used in describing atom bombs. *Kilowatt* is a unit of power equal to about $1\frac{1}{3}$ horsepower.

KILVERT, Francis (1840–79). British clergyman and diarist. Unpub. until 1938–9, his *Diary: 1870–79* is a useful record of social life.

KIMBERLEY. In the chambering method of diamond mining used here, a grid of tunnels (each half pillar and half chamber) is developed at various levels in the pipe area. The chambered area is mined out beneath the pillars of the level above, so that the latter are undercut and collapse into the chamber below. The blueground is then loaded into trucks and hauled to the shaft. Courtesy of the Anglo-American Corporation of South Africa.

KIMBERLEY. Diamond-mining town in Cape Prov., S. Africa, 95 m. N.W. of Bloemfontein. Apart from industries associated with diamonds, there are asbestos and manganese mines. The town was founded in 1871 and named after the 1st earl of K. who, as Sec. of State for the Colonies, placed the mines at that time under British protection; De Beers Consolidated Mines secured control of the mines in 1887. Pop. (1960) 77,180, of whom 23,987 were white.

KIMONO. Traditional costume of Japanese women, still retained for formal wear – the *homongi* or 'visiting dress'. For the finest Ks., which may cost several hundred pounds, a rectangular piece of pure silk (c. 36 ft. \times 1.3 ft.) is cut into 7 pieces for tailoring, the brilliant colouring of the design (which must match perfectly over the seams and for which flowers are the favourite motif) then being painted by hand and enhanced by embroidery or gilding. The accompanying *obi* or sash is also embroidered.

KINCARDINESHIRE. Co. of E. Scotland. It is chiefly an agricultural region, but a large fishing industry is centred on Stonehaven, the co. town. Area 382 sq. m.; pop. (1961) 48,800.

KINETICS. Branch of dynamics dealing with the action of forces producing or changing the motion of

a real body, as distinguished from kinematics, which deals with motion without reference to force or mass.

KING, Martin Luther (1929–68). American Negro leader. B. in Atlanta, Georgia, son of a Baptist minister, he also became a pastor. Preaching non-violence – he won the 1964 Nobel peace prize – he campaigned to end segregation. Riots across U.S.A. followed his being shot, and a white escaped convict, James Earl Ray, was arrested in England, extradited, and sentenced to 99 years' gaol in 1969.

KING, William Lyon Mackenzie (1874–1950). Canadian Lib. statesman. B. in Ontario, he was P.M. 1921–30 (excl. June–Sept. 1926) and 1935–48. He took part in the 1926 Imperial Conference which recognized the Dominion's equal status with Britain, and his proposals, that self-governing countries maintain close co-operation but be linked only by allegiance to the Crown, were incl. in the Statute of Westminster. He received the O.M. in 1947.

KING CRAB. Marine animal (*Limulus*) in the class Arachnida. The upper side of its body is entirely covered by a shell and it has a long spine-like tail. It is unable to swim and burrows in the sand, feeding on worms. K.Cs. measure up to 2 ft. long.

KINGCUP. Name given to several flowers of the Ranunculaceae family, particularly the buttercup and the marsh marigold.

KINGFISHER. European bird (*Alcedo ispida*), also found in parts of N. Africa and Asia. The plumage is brilliant blue-green on the back and chestnut beneath. Ks. feed upon fish and aquatic insects, etc. The nest is made of fishbones in a hole in a river bank.

KING-HALL, Stephen, baron (1893–1966). British publicist. He founded the K.-H. (later National) Newsletter (1936), and the Hansard Soc. (1944), and wrote on international politics: life peer 1966.

KINGLAKE, Alexander William (1809–91). British author. B. at Taunton, he wrote a delightful travel book of his Near East journeys, *Eothen* (1844), and an 8-vol. history of *The Invasion of the Crimea* (1863–87).

KING'S/QUEEN'S COUNSEL. In England, barristers appointed to senior rank by the Lord Chancellor and being 'called within the Bar'. They wear silk, as opposed to stuff gowns, and take precedence over the junior Bar.

KING'S COUNTY. Older name of OFFALY.

KING'S EVIL. The popular name in England for scrofula, which disease was supposed to be curable by the touch of the sovereign.

KIMONO.

estab. a painful hold that the other cannot break, the latter signifies his surrender by slapping the ground with a free hand. Degrees of proficiency are indicated by the colour of the belt: for novices white; after examination, brown (3 degrees); and finally, black (9 degrees). J. schools have been estab. in the U.S.A. and the U.K. since the beginning of this cent. and it is an increasingly popular sport. *Karate* (kahrah'te) is a purely offensive form of J. aimed at maiming or inflicting lethal blows. Resembling it, but even more deadly, is *Kung-fu*, developed in China c. 5,000 years ago.

JUGGERNAUT (jug'ernawt), or Jagannath. A name for Vishnu, the Hindu god, meaning 'Lord of the World'. His temple is at Puri, Orissa.

JUGOSLAVIA. See YUGOSLAVIA.

JUGULAR (jōō'gular). Belonging to the neck, especially of the external, anterior, and internal J. veins, through which the blood returns from the head and face towards the heart.

JUGURTHA (joo-) (d. 104 B.C.). King of Numidia in N. Africa, who, after a long resistance, was betrayed to the Romans in 107 B.C., and put to death by strangulation or starvation after being imprisoned in the underground prison beneath the Capitol.

JUIN (zhū-ān'), Alphonse Pierre (1888–1967). Marshal of France. Severely wounded in the F.W.W., he was a prisoner of the Germans (1940–1), but joined Giraud in N. Africa, and was C-in-C. French forces in Italy in 1943 and chief of general staff 1944–7.

JU JITSU. See JUDO.

JUJUBE (jōō'joob). Tree of the *Zizyphus* genus in the family Rhamnaceae, and also its berry-like fruits. The Mediterranean species is *Z. vulgaris*; the Chinese (*Z. jujuba*) has fruit the size of small plums, known when preserved in syrup as 'Chinese dates', but the Indian (*Z. mauritiana*) has a more mediocre fruit. The name is also given to a type of mucilaginous sweet.

JULIAN (jōō'lyan) (c. 331–63). Roman emperor, called the 'Apostate'. B. in Constantinople, the nephew of Constantine the Great, he was brought up as a Christian, but in early life became a convert to paganism. Sent by Constantius to govern Gaul in 355, he was proclaimed emperor by his troops in 360, and was marching on Constantinople when in 361 Constantius's death allowed him to succeed peacefully. He revived pagan worship, and infuriated the Christians by refusing to persecute heretics. He was slain in battle against the Persians.

JULIANA (jōōlyah'na) (1909–). Queen of the Netherlands. The dau. of Queen Wilhelmina (1880–1962) and Prince Henry of Mecklenburg-Schwerin, she m. in 1937 Prince Bernhard of Lippe-Biesterfeld and has 4 daus.; the eldest and heiress to the throne is Crown Princess Beatrix (q.v.). During the German occupation of Holland 1940–5, when her mother withdrew her govt. to England, J. lived mainly in Canada. She was princess regent in 1947 and 1948 when her mother was in ill-health, and succeeded to the throne in September 1948 on Wilhelmina's abdication. In 1964 a constitutional crisis was precipitated by the conversion to Roman Catholicism of her 2nd dau., Princess Irene (1940–), who m. Prince Carlos Hugo of Bourbon-Parma (1930–), son of the Carlist Pretender to the Spanish throne, Prince Xavier. The princess renounced her right of succession to the Dutch throne. See BOURBON table.

JULIUS (jōōl'yus) II. Pope 1503–13, was a politician who set himself to make the papal states the leading power in Italy, and formed international alliances first against Venice and then against France. He began the building of St. Peter's, Rome, in 1506, and was the patron of Michelangelo and Raphael.

JULY REVOLUTION. Name given to the Parisian revolution of 27–9 July 1830 which overthrew the restored Bourbon monarchy of Charles X, and substituted the constitutional monarchy of Louis

Philippe, whose rule (1830–48) is sometimes referred to as the July Monarchy.

JUMPING HARE. S. African rodent (*Pedetes caffer*), similar in appearance and habits to the jerboa, but the head is like that of a hare.

JUMPING MOUSE. N. American rodent (*Zapus hudsonius*) in the jerboa family.

JUNAGADH (junah'gad). Indian city in the Kathiawar peninsula, Gujarat state. It has interesting caves and an old citadel, and one of King Asoka's rock edicts. Pop. (1961) 63,000.

JUNCACEAE
Hairy woodrush.

J. was the cap. of the former princely state of J., area 3,337 sq. m., which after a show of force by India against its Muslim ruler, called the Nawab, and a plebiscite heavily in favour of accession to India, was merged in Saurashtra (q.v.) in 1948.

JUNCACEAE (jung-kā'sē-ē). Botanical name for the rush family, represented by 2 British genera, *Juncus* (rush) and *Luzula* (woodrush). See RUSH.

JUNEAU (joonō'). Cap. and port of Alaska, U.S.A., on Gastineau Channel. Pop. (1960) 6,797.

JUNG (yoong), Carl G. (1875–1961). Swiss

psychologist. Like Freud he stressed the importance of unconscious memories and early childhood experiences, but he rejected Freud's excessive emphasis upon the sexual instinct. J. developed his own theory of analytical psychology, and wrote *Modern Man in Search of a Soul* (1933), etc.

JUNG (yoong), Johann Heinrich (1740–1817), called Stilling. German mystic writer. B. in Westphalia, he studied medicine at Strasbourg, where Goethe encouraged him to write his autobiography (1777–1817). He made a name with operations for cataract; turned to political economy, and propounded the belief in miracles and ghosts (*Theorie der Geisterkunde*, 1808).

JUNGER (yüng'er), Ernst (1895–). German author. He used his experiences while serving during the F.W.W., in which he won the highest German military decoration, in such early books as *The Storm of Steel* (1920). Later he joined the ranks of Nazi thinkers, but *On the Marble Cliffs* (1939) renounces this creed: his diaries are impressive.

JUNIPER (jōōn'iper). Aromatic evergreen shrubs found throughout Britain, Europe, America, and temperate countries of the world. They are members of the Cupressaceae family, genus *Juniperus*.

JUNIUS (jōō'nyus), Letters of. A series of letters pub. in the *Public Advertiser* 1769–72, under the pseudonym J. Written in a pungent, epigrammatic style, they were intended to discredit the 'king's friends' in the interests of the opposition Whigs. The generally accepted theory attributes them to Sir Philip Francis.

JUNKERS (yoong'kers), Hugo (1859–1935). German aeroplane designer. In 1919 he founded in Dessau the aircraft works named after him. J. planes,

JUNIPER

and the autobiographical *Something of Myself* (1937). His ashes rest in Westminster Abbey. Enjoying in his heyday an enormous popularity, and subsequently almost equal denigration for 'jingoist imperialism', he was yet a superb craftsman, and the variety and range of his achievement can still astonish. His is the ultimate distinction of being quoted daily by people who never realize whom they quote, or even that they do quote at all, e.g. 'The Ballad of East and West', 'Boots', 'If', 'Gunga Din', and 'Mandalay'.

KIRCHNER (kĕrk'h'ner), Ernst Ludwig (1880-1938). German artist. With a number of other painters he formed the movement *Die Brücke* (The Bridge) in 1905, which was estab. in Berlin from 1911. Harsh, angular and distorted, his work changed from portraiture and city scenes to mountain landscapes when he settled in Switzerland on being invalided from the army in 1917. His work was attacked as degenerate under Hitler and he committed suicide.

KIRGHIZ S.S.R. A constituent rep. of the U.S.S.R., adjoining the frontier of Sinkiang-Uighur, China. Some two-thirds of the people are Kirghiz, belonging to the Mongolian Tartar family. The introduction of artificial irrigation and hydro-electric power, and of a number of Russian settlers, has modified their traditional nomadic way of living, but livestock breeding remains a principal industry. Wheat and other grains, fodder crops, tobacco, etc., are grown; there are sugar refineries, food, timber, and textile factories; and coal and petroleum are worked. The cap. is Frunze. Area 76,100 sq. m.; pop. (1968) 2,836,000.

KIRKCALDY (kirkaw'di). Royal burgh and seaport on the Firth of Forth, Fifeshire, Scotland. Manufactures incl. linoleum and paper. Pop. (1961) 52,371.

KIRKCUDBRIGHT (kirkoo'bri). (1) Co. in S. Scotland. Most of the county consists of rough pasture, or wasteland, but on certain reclaimed areas oats, root crops, and potatoes are grown. Area 900 sq. m.; pop. (1961) 28,877. (2) Co. town of K., on the Dee, at the head of K. bay. The name K. means 'chapel of Cuthbert'. Pop. (1961) 2,448.

KIRKUK (kirkook'). Town in N.E. Iraq, cap. of K. liwa, centre of a petroleum field connected with Tripoli (Lebanon) and Banias (Syria) by pipelines. Pop. (1967) 462,067.

KIRKWALL. Cap. and port of the Orkneys, Scotland, on the N. coast of Mainland. The cathedral of St. Magnus dates in part from 1137. Pop. (1961) 4,315.

KIROV, Sergei Mironovich (1886-1934). Russian Bolshevik leader. He joined the Bolsheviks in 1904, and took a prominent part in the 1918-20 civil wars. His assassination in 1934 led to the political trials held during the next 4 years.

KIROV. Chief town (formerly Vyatka) of K. region, R.S.F.S.R., annexed by Moscow 1489. A rail centre, it manufactures machine tools, etc. Pop. (1967) 302,000.

KIROVABAD (kĕrovahbat'). Important industrial town in Azerbaijan S.S.R., producing cottons and woollens and processed foods. Pop. (1967) 170,000.

KIROVOGRAD. Town on the r. Ingul in the Ukrainian S.S.R., U.S.S.R., cap. of K. region. On a lignite field, it processes food and makes agricultural machinery. Pop. (1967) 161,000.

KIRRIEMUIR (kirimū'er). Market town of Angus, Scotland, noted as 'Thrums' in Sir James Barrie's novels, and his birthplace. Pop. (1961) 3,485.

KIRTON. Another form of CREDITON.

KISFALUDY (kish'foloodi), Károly (1788-1830). Hungarian writer, the father of Hungarian drama, and founder of the periodical *Aurora* (1822). *Kisfaludy Társaság*, the leading literary society of the country, was founded in his memory.

KISHINEV. Cap. of the Moldavian S.S.R., U.S.S.R. Founded in 1436, it became Russian in 1812. It was taken by Rumania in 1918; by the Russians in

1940, by the Germans in 1941, when it was totally destroyed; the Russians recaptured the site in 1944, and rebuilding soon began. It has cement and food factories. Pop. (1967) 302,000.

KITAKYU'SHU. Japanese city and port, on the Hibiki Sea, N. Kyushu, formed 1963 by the amalgamation of Moji, Kokura, Tobata, Yawata, and Wakamatsu. It is a great coal port for nearby mines and an industrial centre with steel mills and factories making cotton thread, plate glass, alcohol, etc. A tunnel (1942) links it with Honshu. Moji was opened to foreign trade in 1887. All the ports making up K. were heavily bombed from the air in 1945. Pop. (1965) 1,042,000.

KITCHENER. Canadian city and port in Ontario, 60 m. W.S.W. of Toronto. It has foundries, furniture factories, and other works based on power from Niagara Falls. Founded in 1806 as Sand Hills, it was renamed Berlin c. 1830, Kitchener in 1916. Mackenzie King was born at K. Pop. (1966) 93,255.

KITCHENER, Horatio Herbert, earl K. of Khar-toum (1850-1916). British soldier. B. in Co. Kerry, he was commissioned in 1871, and transferred to the Egyptian Army in 1882. Promoted C.-in-C. in 1892, he crushed the Sudanese dervishes at Omdurman in 1898, re-occupied Khartoum, and also forced a French expedition to withdraw from Fashoda. During the S. African War he acted as Lord Roberts' chief of staff, and as C.-in-C. 1900-2 brought the war to a successful conclusion. He subsequently commanded the forces in India and acted as British agent in Egypt, and in 1914 received an earldom. Appointed War Minister on the outbreak of the F.W.W., he was drowned while on his way to Russia. He had been created field marshal in 1909.

KITE. Name of several birds of prey in the family Falconidae. The European species (*Milvus icinus*) is a typical example, and may be distinguished by its forked tail. It is about 2 ft. long. Kites are rare in Britain, but are found in Europe, America, and India.

KITIMAT. The economic production of aluminium requires enormous quantities of hydro-electric power, and British Columbia has both the necessary tremendous water storage and towering mountains. The Kenney Dam on the Nechako river impounds the waters of a chain of lakes, and the flow has been reversed from E. to W. and tapped by a 10 m. tunnel through the mountains. Eventual capacity of the generators at Kemano is 2,240,000 h.p. and the fall of water through the penstocks is 16 times the height of Niagara. Courtesy of Alcan.

KITIMAT. Canadian town and port (founded 1955) at the head of Douglas Channel, 70 m. E.S.E. of Prince Rupert, British Columbia, through which alumina ships from Jamaica supply the Alcan aluminium smelter (ultimate annual production 550,000 tons per annum). The garden city of K. is 5 m. from the smelter. Planned pop. 50,000; (1961) 8,217.

KITTIWAKE. A sea-gull, *Rissa tridactyla*, found in North Atlantic regions. Other species are found in

J. is used for sacks and sacking, upholstery, webbing, twine, stage canvas, etc., but in uses such as bulk packaging, and tufted carpet backing, tends to be replaced by synthetic polypropylene. The world's largest produce of J. is E. Pakistan.

JUTES. A Germanic people who originated in Jutland but had been settled for some time in Frankish territory before they occupied Kent c. 450, according to tradition under Hengist and Horsa, and conquered the Isle of Wight and the coasts of Hants opposite in the early 6th cent.

JUTLAND. A peninsula of N. Europe between the N. Sea and the Kattegat. The S. belongs to Germany, whilst the N. part constitutes continental Denmark.

JUTLAND. The greatest naval battle of the F.W.W. fought between the British under Admiral Jellicoe and the Germans under Admiral Scheer, on 31 May 1916, off the W. coast of Jutland. After a battle-cruiser action between Beatty and Hipper, the former retired northward and drew the whole enemy fleet on to Jellicoe's battleships. Scheer, however, escaped a perilous situation by retreating S. During the night, with several encounters with British destroyers, he passed astern of Jellicoe's fleet and escaped, aided by the latter's lack of information. Yet J. was a decided British victory since the Germans never again ventured out to battle.

JUVENAL (jōō'venal) (c. A.D. 60–140). Roman satirist and poet. B. probably at Aquinum, he received a good education. Late in life his genius for satire brought him to the unfavourable notice of the emperor Domitian. 16 of his satires are extant,

JUTE plant in flower

and they give a brutal and sometimes disgusting picture of the Roman society of his day.

JUVENILE DELINQUENCY. Offences against the law committed by young people. In 1969 the law in Britain was to be changed under a bill aimed at keeping delinquent children out of the courts as far as possible. Children under 14 would not be prosecuted, although they might be brought to court if, in addition, they were shown to be in need of care and control. Offenders between 14 and 17 would be prosecuted, but only in specified circumstances. A common code of supervision combining existing probation systems, etc., would be cover all young offenders. Segregation would be avoided in treatment and local authorities would be grouped to form planning committees which would develop a system of community homes and approved schools to make residential provision for children in care. The plan was strongly supported by police and child care officers, and there were plans to extend the police juvenile liaison scheme, operating in Birmingham, Liverpool, and certain London areas, under which officers visit parents and children to warn of possible offences or give an informal caution when an offence has been committed. It was hoped that the system would reduce the number of children appearing in court (just over 2 per cent) to approx. 0.5 per cent.

Contrary to earlier belief, D. is not solely the product of poverty. It is more probable that the largest factor is family disorganization which creates emotional and psychological difficulties for the growing child. There is a higher D. rate in affluent countries, overcrowded urban populations have a higher rate, and the last year at school is at risk.

JUXON (juk'son), William (1582–1663). Archbp. of Canterbury. He became bishop of London in 1633, and acted as Lord High Treasurer 1636–41. He attended Charles I during his trial and on the scaffold, and was created archbp. of Canterbury in 1660.

K Eleventh letter of the Roman alphabet, in Eng. representing the unvoiced velar stop. It is silent before another consonant at the beginning of a word (e.g. in *knee*), a change accomplished, probably, in the 17th cent.

KAABA (kah'bah). The oblong building in the quadrangle of the Great Mosque at Mecca (q.v.) into the N.E. corner of which is built the black stone declared by Mohammed to have been given to Abraham by Gabriel, and devoutly revered by Mohammedan pilgrims. The name means chamber.

KABALEVSKY, Dimitri Borisovich (1904–). Russian composer. A pupil of Myaskovsky, he became prof. of composition at the Moscow Conservatoire in 1939, and has produced a Ukrainian folk-tune ballet *The Golden Spikes*; operas such as *The Master of Clamecy* (based on *Colas Breugnot* by Romain Rolland) and *Before Moscow*; and the patriotic suite *The People's Avengers* inspired by the struggle against the Germans, as well as concertos and symphonies.

KABBALA (kab'ala) (Heb., 'tradition'). Body of esoteric Jewish doctrine containing strong elements of pantheism, and akin to Neoplatonism. Among its earliest documents are the *Sefir Jezirah* (The Book of Creation), attributed to Rabbi Akiba (d. A.D. 120). The *Zohar* or Book of Light was first written in

Aramaic about the 13th cent., and Kabbalistic writing reached its peak period between the 13th and 16th cents. The most notable writer was Moses ben Nachman (1195–1270).

KABUL (kah'bool). Cap. of Afghanistan and of K. prov., on the K. r. 6,900 ft. a.s.l. Originally a walled city of importance throughout central Asia, it is a great marketing town, with match, woollen, furniture, and other factories, a military academy, and a univ. (1932). K. is the focal point for the Khyber Pass route to Peshawar, W. Pakistan. Pop. (1965) 450,000.

KABWE. See BROKEN HILL.

KABYLES (kabilz'). Group of Berber tribes in N. Africa, chiefly Algeria. Moslems, they formerly served as soldiers in the French forces. See ZOUAVES.

KÁDÁR (kah'dahr), János (1912–). Hungarian politician. A member of the underground in the S.W.W., he afterwards was a leader of the Communist régime (though himself imprisoned for deviation from 'Stalinism' 1951–3), but on the outbreak of the Hungarian revolt of 1956 declared the party dissolved. He then headed a govt. under Russian supervision 1956–8 and 1961–5, remaining in 1965 as 1st sec. of the Communist Party.

KAFFIR or **KAFIR** (kah'fer). Name given to the

public services. During the Middle Ages such fraternities fell into 2 classes, religious and secular. The first class, e.g. the Templars (q.v.), and Knights of St. John, consisted of knights who had taken religious vows and devoted themselves to military service against the Saracens or other non-Christians. The secular Os. probably arose from bands of knights engaged in the service of a prince or great noble, who wore his badge or the emblem of his patron saint. The Order of the Garter, founded c. 1347, is the oldest now in existence: there are 8 other British Os., those of the Thistle (founded 1687), St. Patrick (1788), the Bath (1725), the Star of India (1861), St. Michael and St. George (1818), the Indian Empire (1878), the Royal Victorian O. (1896), and the O. of the British Empire (1917). Most of the ancient European Os., such as the O. of the Golden Fleece, have disappeared as a result of political changes. A knight bachelor belongs to the lowest stage of K., i.e. is not a member of any specially named order.

KNIPPER, Lev Constantinovich (1898–). Russian composer. His early work shows the influence of Stravinsky, but after 1932 he became a 'popular' composer, as in the symphony *Poem of Komsomol Fighters* (1933–4) with its mass battle songs, etc. Best known in the W. is his song 'Cavalry of the Steppes'.

KNITTING. Hand-knitting (using one flexible or several straight needles) and crochet (in which the needle is hooked) are age-old crafts still widely practised as a hobby. K. was mechanized to produce stockings in the late 16th cent., and later developed to produce other types of garment, but the standard was generally uninspired until the introduction of synthetic yarns after the S.W.W. Brilliant dyes, and methods of texturizing, elasticizing, and stabilizing, revolutionized the industry, which rises towards a 50% share in the women's clothing industry and an increasing share in that of men.

KNOSSUS. Site in Crete occupied from c. 2500 B.C., where Europe's earliest civilization flourished (see MINOAN). Excavation of the palace of the legendary king Minos by Sir Arthur Evans 1900–25 revealed that the story of Theseus and the Minotaur kept in a labyrinth had a basis of fact in ancient ritual dances of youths and girls which involved somersaulting over a live bull's horns, and the maze-like palace lay-out.

KNOT. Bird (*Tringa canutus*) of the plover family. A wader, about the size of a thrush, it is brick-red in summer, drab in winter, and feeds on insects and molluscs. Breeding in the Arctic, Ks. travel widely in winter, to be found as far afield as Java, S. Africa, New Zealand, and Britain.

KNOT. The unit by which a ship's speed is measured, corresponding to 1 nautical mile per hour. The nautical mile is one minute of latitude, and

although varying over the earth's surface, is in practice taken to be 6,080 ft. (1 kn. = approx. $1\frac{1}{2}$ m.).

KNOT. An intertwinement of parts of one or more ropes, cords, strings, etc., used to bind them together or to other objects. It is constructed so that the strain borne serves to draw it tighter. 'Bends' or 'hitches' are Ks. used to fasten ropes together or round spars, and splices are used to join 2 ropes together, end to end.

KNOWLES (nölz), James Sheridan (1784–1862). Irish dramatist. Related to R. B. Sheridan (q.v.), he wrote plays, which were acted by, amongst others, Kean and Macready, and included *William Tell* (1825) and *The Hunchback* (1832).

KNOX, John (c. 1505–72). Scottish Protestant reformer. B. probably at Haddington, he was ordained priest, but afterwards was converted to Protestantism, probably by the reformer, George Wishart. After Wishart's execution in 1546 he went into hiding, but later joined a group of reformers who had seized the castle of St. Andrews, and at their request began to preach the reformed doctrines. When the castle was taken by the French in 1547, K. was sent to the galleys, and only released in 1549 at the intercession of the English govt. In England he exercised his influence to

KOALA

strengthen the Protestant element in the Prayer Book, in the compilation of which he assisted. He was made a royal chaplain in 1551. On Mary's accession he escaped and settled first at Frankfurt, where he was a pastor to English refugees, and later at Geneva, where he was associated with Calvin. In 1559 he returned to Scotland, and was chiefly responsible for the establishment of the Church of Scotland. His *History of the Reformation in Scotland* (1586) is one of the masterpieces of Scottish prose.

KNOX, Ronald Arbuthnott (1888–1957). British R.C. scholar. Son of an Anglican bp. of Manchester, he became chaplain to the Univ. of Oxford following his ordination in 1912, but resigned in 1917 on his conversion to Rome and was Catholic chaplain 1926–39. His modern translation of the Bible (1945–9) had a masterly turn of phrase and was officially approved by the R.C. Church. He combined scholarship with a rare sense of humour, e.g. his dialogues *Let Dons Delight* (1939), and a reputation in detective fiction disapproved by his superiors.

KNOXVILLE. City of Tennessee, U.S.A., the centre of a mining and agricultural region of great beauty, seat of a univ. founded in 1794. Pop. (1960) 111,827.

KNUTSFORD. English town (U.D.) in Cheshire, 15 m. S.W. of Manchester, of which it is a residential district. Mrs. Gaskell, who lived at K. for 22 years and is buried there, wrote of it under the name Cranford. Pop. (1961) 9,389.

KOALA (kō-ahl'a). Marsupial (*Phascolarctos cinereus*) of the family Phalangeridae, found only in E. Australia and not easily kept in zoos because it feeds almost entirely on eucalyptus shoots. Resembling a small bear (2 ft. long), it has greyish fur which led to its almost complete extermination by hunters. Under protection from 1936 it has rapidly increased.

KOBE (kō'bi). Port on the S. coast of Honshu is., Japan, founded 1868. Industries include shipbuilding, iron and steel manufacture, sugar refining. Pop. (1965) 1,217,000.

KOBLENZ (kōb'lents). City of the Rhineland-Palatinate, W. Germany, at the junction of the Rhine and Mosel. It dates back to Roman times. It has shoe and cigar factories, paper mills, and other works, and is noted as a centre of the wine trade. K. was badly damaged in S.W.W. air raids. Pop. (1966) 102,792.

KOCH (kokh), Ludwig (1881–). German musician and naturalist, who settled in Britain in 1936. Originally a violinist and singer, he pioneered the recording and interpretation of bird-song.

KOCH, Robert (1843–1910). German bacteriologist. B. in Hanover, he isolated the tubercle bacillus in 1882, and invented the tuberculin test for cattle. In 1905 he received the Nobel prize for medicine.

KODÁLY, Zoltán (1882–1967). Hungarian com-

districts. Agriculture is possible only in the S., and the inhabitants are fishermen and hunters. Petropavlovsk, cap. of region, is the only town.

KAMENEV, Leo Borisovich (1883–1936). Russian Bolshevik leader. He was elected pres. of the Moscow Soviet in 1918, and visited England in 1920, but was deported on a charge of attempting to subsidize the *Daily Herald*. After Lenin's death he sided with Trotsky. In 1936 he pleaded guilty to conspiring with the Germans and was shot, but his guilt remains controversial.

KAMET. Himalayan mountain (25,447 ft.), the first of over 25,000 ft. to be scaled by man. F. S. Smythe and Eric Shipton were in the group which made the ascent in 1931.

KAMPALA (kahmpahl'a). African town, commercial centre and, from 1962, cap. of Uganda, cap. of Buganda region and former residence of the Kabaka; see **BUGANDA**. It is linked by rail with Mombasa, and is a market for cotton, coffee, livestock, etc. Cigarettes are made. The Parliament buildings were opened in 1960. At Makerere, just N.W. of K., is the Univ. Coll. of E. Africa, founded in 1938. Pop. c. 200,000.

KAMPERDUIN. Dutch name of a village anglicized as **CAMPERDOWN**.

KANA'KA. Hawaiian word for man; applied to the natives of the South Sea islands.

KANAZA'WA. City of Honshu island, Japan, 100 m. N.N.W. of Nagoya. It has large textile and porcelain industries. Pop. (1965) 336,000.

KANCHENJU'NGA. Himalayan mountain (28,146 ft.), 75 m. E.S.E. of Everest. The summit was reached for the first time by a British expedition in 1955. Its name means '5 treasure houses of the great snows'.

KANDAHAR. City of Afghanistan, c. 280 m. S.W. of Kabul, cap. of K. prov. and an important trading centre, with wool and cotton factories. It is surrounded by a 27 ft. high mud wall. On 1 Sept. 1880 the British under General (afterwards Lord) Roberts defeated the Afghans there. Pop. (1965) 115,000.

KANDITSKY, Vasily (1866–1944). Russian Ex-

KAMCHATKA. Volcanic springs have made Paratunka a favourite winter health resort, for swimming is possible all the year round despite ice and snow.

KANDY. Dancers.

Courtesy of Ceylon Tea Centre.

pressionist artist. B. in Moscow, he travelled widely abroad and by 1910 was producing completely non-representational work. In 1912 he pub. the influential *Concerning the Spiritual in Art* and was joint-originator with Franz Marc of the *Blauer Reiter* movement 1911–12. For some years he taught at the Bauhaus and, after its closure by the Nazis, settled in Paris. His use of colour, and ordered arrangement of spheres and rectangles, affected the work of many other artists.

KANDY (kahn'dē). Town of Ceylon, formerly cap. of the ancient kingdom of K. One of its temples contains an alleged tooth of Buddha and is one of the most sacred Buddhist shrines. At Peradenia, 3 m. away, are the Univ. of Ceylon and a botanical garden. Pop. (1963) 67,800.

KANGAROO. Family of marsupials (Macropodidae) found in Australia and Tasmania. All are herbivorous and range from the musk K., similar in size to a large rat, through the medium-size wallabies – which extend their range to New Guinea – to the familiar great grey K. (*Macropus giganteus*) which stands 8 ft. high: some extinct forms must have reached 10 ft. or larger. The single young of the great grey K., born usually in Jan. after a very brief gestation period, is c. 1 in. long at birth and remains in the mother's pouch, with excursions as it matures, until Oct. The developed hind legs and strong tail enable them to travel at speed in long leaps. Adaptable to rain forest, rocky zones, or open grassland, the varied species of K. have tended to dwindle in numbers since they are hunted for furs, for damage to crops, or as a 'sport'.

KANI'SHKA (fl. c. A.D. 200). Indian king whose kingdom extended over Kabul, Kashmir, Gandhara, and E. to Benares. He was converted to Buddhism and held a council which codified Buddhist writings.

KANO. State and town 705 m. N.E. of Lagos, N.

KANGAROO

German architect and archaeologist, whose excavation at Babylon 1899-1917 illustrated a technique of stratification, etc., which inspired later workers.

KOLCHUGINO. See **LENINSK-KUZNETSKY**.

KOLHAPUR (kolāpūr'). Indian town in Maharashtra state, a trade, educational, and film-production centre, cap. of K. district. K. was formerly cap. of K. princely state, incorporated in Bombay state in 1949. Pop. (1961) 187,306.

KOLKHOZ. Russian term for collective farm (q.v.).

KOLLWITZ, Kaethe (1867-1945). German artist, chiefly famous for her drawings, etchings, etc., of social subjects. Her principal works are 'The Weavers', 'Peasant War', 'War', and 'Death'.

KÖLN. German form of **COLOGNE**.

KOLOZSVÁR. Hungarian name of **CLUJ**.

KOMSOMOL. The Russian name for the All-Union Leninist Communist Youth League. Membership is open to all young people between the ages of 14 and 26, and numbers several millions. Founded in 1918, it acts as the youth section of the Communist Party, and its activities include all forms of national service, e.g. the rebuilding of Stalingrad in 1942.

KONIEH. See **KONYA**.

KONIEV, Ivan Stepanovich (1898-). Soviet marshal. In the S.W.W. he was celebrated for his brilliant victory in 1943 in the Dnieper bend, liberating the Ukraine, and advanced to link with Anglo-U.S. forces approaching from the W.

KÖNIGSBERG. See **KALININGRAD**.

KONSTANZ. German form of **CONSTANCE**.

KON-TIKI. Legendary Sun King who ruled the country later occupied by the Incas (q.v.), and was supposed to have migrated, with certain white-skinned and bearded followers, out into the Pacific. See **HEYERDAHL**.

KONYA (kon'yah). City in Turkey-in-Asia, on the site of ancient Iconium (q.v.), cap. of K. il, c. 300 m. E. of Izmir. A market for a fertile area, it makes carpets and silks. At K. is the monastery of the Dancing Dervishes. Pop. (1965) 1,099,460.

KORAN. More properly, **Quran**, though both are transliterations; the sacred book of Islam (q.v.). Written in the purest Arabic, it contains 114 suras or chapters, and is stated to have been divinely revealed to the prophet Mohammed; the original is supposed to be preserved beside the throne of Allah in heaven.

KORDA, Sir Alexander (1893-1956). British film producer and director. B. in Hungary, he came to England in 1931 (naturalized 1936); his films incl. *The Private Life of Henry VIII* (1933), *The Third Man* (1950), and *Richard III* (1955).

KORDOFAN. Prov. of the Rep. of Sudan, for the most part undulating plain with some higher ground. In the main pastoral, with cattle an important product, it incl. also extensive forests producing gum. Area 146,930 sq. m.; pop. (1964) 2,052,000.

KORE'A. Country in Asia occupying the peninsula projecting southwards from Manchuria, having the Yellow Sea on the W. and the Sea of Japan on the E. The N. border is mountainous, and a secondary range runs southward along the E. coast. There are large forest reserves in the N., while the streams provide hydro-electric power.

North K. has the country's chief deposits of iron and coal, and also has oil and barytes. First developed by the Japanese, its economy is increasingly industrial, iron and steel, textiles, cement, chemicals, etc., being produced. South K. is still chiefly agricultural (rice being the chief crop), but light industries, incl. consumer goods, fertilizers, electrical goods, etc., are developing; it also has the world's largest tungsten deposits. Cattle are reared on the W. lowlands, and fishing and whaling are important.

The principal religions are Confucianism and Buddhism. The chief towns of N. Korea are Pyongyang, the cap., and Wonsan; S. Korea has its cap. at

Seoul, where there is a nat. univ., other centres being Pusan, Taegu, and Incheon. Area: S.K., 38,452 sq. m.; N.K., 46,814 sq. m. Pop.: S.K. (1966) 29,207,856; N.K. (1966) 12,500,000.

History. The foundation of the Korean state traditionally dates back about 2000 years B.C., to the dynasty of Tangun, followed by that of the Chinese Kija, which ruled from c. 1122 until the 4th cent. B.C. K. was subsequently distracted by internal war and invasion until the 10th cent. A.D. when it was united within the boundaries it subsequently retained. In the 16th cent. Japan invaded K. for the first time, later withdrawing from a country it had devastated. In 1905 Japan began to treat K. as a protectorate, and in 1910 annexed it. Many Japanese colonists settled in K., introducing both industrial and agricultural development. The Japanese in K. surrendered in 1945, but although Russia withdrew from K. north of the 38th parallel in 1948, and the U.S.A. from the south in 1949, the country remained divided. In 1950 the N. Koreans invaded South K., but the U.N. sent troops (mainly American) to drive them back and fighting was almost over when China intervened on the side of North K. The 1953 armistice restored the status quo.

North K. (Democratic People's Rep. of K.) has a Soviet-type constitution; South K. (Rep. of K.) a Pres. and Nat. Assembly. After Syngman Rhee (q.v.) South K. became more democratic under Gen. Pak Chung Hi (1962; re-elected 1963, 1967).

In 1968 the capture of the U.S. intelligence ship *Pueblo* by N. Korean patrols caused an international incident. The crew were held prisoner 11 months before release, and the ship was still detained; no disciplinary action was taken following a U.S. naval court of inquiry.

KOREAN. The language of Korea, written in Chinese characters from the 5th cent. to 1443, when King Sejong developed a remarkably advanced phonetic alphabet, and a native literature sprang up. It was later discouraged as 'vulgar letters' - Onmun - and banned by the Japanese, but revived after the S.W.W. as 'top letters' - Hangul - so that modern Korea has 85% literacy.

KORINTHOS. Greek form of **CORINTH**.

KORO'LEV (karawl'yef), Sergei (1906-66). Russian designer of space-rockets. B. at Zhitomir, son of a teacher, he designed the first Sputnik, the moon-rockets, and the manned space ships.

KORTRIJK. Flemish form of **COURTRAI**.

FOS. See **Cos**.

KOSCIUSKO. Highest mt. in Australia, 7,328 ft., in New South Wales. (Sir) Paul Strzelecki, who was born in Prussian Poland, discovered K. in 1839 and named it after the Polish hero K. (q.v.).

KOSCIUSZKO (kosi-us'kō), Tadeusz (1746-1817). Polish leader of the revolutionary forces which fought against Russia in 1794. He was defeated by combined Russian and Prussian forces, and captured at Maciejowice, but was released in 1796.

KOSHER. Heb. for 'fit', as applied by Jews to meat slaughtered according to Mosaic law.

KOŠICE (kosh'itse). Town on the Hernád, Czechoslovakia, cap. of K. region. K., which makes textiles, is of strategic importance as a road centre; it has an airport. A large part of the pop. (1967) 112,000 is Magyar-speaking, and K. was in Hungary 1938-45.

KOSSUTH (kosh'oot), Lajos (1802-94). Hungarian patriot. He founded the paper *Pesti Hírlap*, in which he pleaded for social and national reforms, and in 1848 became pres. of the committee of national defence and virtual ruler of the country. In 1849 he proclaimed his country's independence of the Habsburgs. The Hungarians were later defeated by Austrian and Russian troops, and K. fled to Turkey. Later, he went to England.

KOSYGIN (kosëg'in), Alexei Nikolaevich (1904-). Russian politician. B. at Leningrad, he joined the

from the seeds is used in food and soap preparation.

KAPP, Edmond Xavier (1890–). British artist. He first exhibited in 1919, and has produced portrait drawings, lithographs, still-life and flower pieces.

KAPP, Wolfgang (1868–1922). German politician who organized an armed rising in 1920. The 'Kapp Putsch' was foiled by a general strike of the workers of Berlin. K. fled to Sweden, was arrested on his return, and d. before his trial.

KARIBA. Officially opened in 1960, the dam has 2 generating stations with a joint capacity of 1,500 megawatts, and its wall provides an important road link between Southern Rhodesia and Zambia. The project will promote industrial expansion, and tourist resorts are planned on the lake. As many wild animals as possible were rescued from the inundated area in 'Operation Noah'.

Courtesy of the High Commissioner for Southern Rhodesia.

KARACHI (karah'chi). Chief seaport and former cap. of Pakistan, N. of the Indus delta. It has a fine harbour, and an international airport. Natural gas is brought to K. by pipeline from Sui, 350 m. to the N., and there is an oil refinery at nearby Korangi. Pop. (1961) 1,223,598.

KARAFUTO (kahrahfootō). Japanese name for the southern part of the island of Sakhalin (q.v.), annexed by Japan in 1905, restored to Russia in 1945.

KARAGANDA. Industrial town in Kazakh S.S.R., U.S.S.R., cap. of K. region, which produces coal, copper, tungsten, manganese, etc. Pop. (1967) 489,000.

KARAJAN (karayahn'), Herbert von (1908–). Austrian conductor. Originally a student of the piano, he was artistic director of the Vienna State Opera 1956–64, and of the Salzburg Festival from 1964. Exercising supreme dominance over his instrumental forces, he excels in conducting opera.

KARA-KALPAK (kah'ra kahlpahk'). A.S.S.R. of Uzbek S.S.R., U.S.S.R., called after the Kara-Kalpak people whose name means black bonnet. They live S. of the Sea of Aral and were subdued by Russia in 1867. An autonomous K.-K. region formed in 1926 within Kazakh A.S.S.R., transferred to the R.S.F.S.R. in 1930, made an A.S.S.R. in 1932, was attached to Uzbekistan in 1936. The cap. is Nukus. With the aid of artificial irrigation cotton, rice, wheat and other crops are grown. Fish from the Aral Sea is canned at Muynak. Area 61,000 sq. m.; pop. (1967) 638,000 (c. 40 per cent Kara-Kalpaks).

KARAKÖRAM. Range of mountains in central Asia. The highest peak is K2 or Godwin Austen (28,278 ft.). K. was also the name of Genghis Khan's capital, now in ruins.

KARA-KUM (kah'rah-koom'; Black Sands). Sandy desert occupying most of Turkmen S.S.R., U.S.S.R. Area c. 110,000 sq. m.

KARAMZIN (-zën'), Nikolai Mikhailovich (1765–

1826). Russian writer, author of *Letters of a Russian Traveler* (1797–1801), and an incomplete *History of the Russian State*.

KARATE. See JUDO.

KARBALA. See KERBELA.

KAREL (kah'rel), Rudolf (1880–1945). Czech composer. B. at Pilsen, he became a pupil of Dvořák at Prague, and prof. at the conservatoire. He d. in a concentration camp. His works include operas, a 'Renaissance' symphony, chamber music, etc.

KARELIA. A.S.S.R. of the R.S.F.S.R., formed in 1956 from the Karelo-Finnish S.S.R. set up in 1940 and adjoining the Finnish frontier. K. is rich in sources of water power and forest reserves and fisheries. The cap. is Petrozavodsk. Area 66,500 sq. m.; pop. (1967) 707,000.

KARENS (kahrenz'). People of the Far East, numbering perhaps 1½ million in all. Most of them live in E. Burma near the Thailand border, across which some of them are found, as also are some in the Irrawaddy delta. Their language belongs to the Sino-Thai family, and it is believed that they are descended from the Chinese driven S. by the Shan people. The K. strongly resisted integration in Burma about that country became independent in 1948, and Kantarawaddy, Bawlake, and Kyeboyyi, three divisions of Burma formerly called the Karenni states, were in 1954 formed into the Kayah state (area c. 4,600 sq. m.; pop. c. 85,000), while parts of the districts of Toungoo, Thaton, and Amherst became the Karen state (area c. 11,600 sq. m.; pop. c. 400,000), both states having a measure of autonomy.

KARG-ELERT (ā'kert), Siegfried (1877–1933). German composer. Originally a pianist, he turned to composition under the advice of Grieg and produced much organ music.

KARIBA (karēb'a) DAM. Concrete dam in Northern Rhodesia on the Zambezi c. 220 m. W.N.W. of Livingstone, constructed 1955–60 for hydro-electric power. It is 420 ft. high and 1,900 ft. wide and created Lake K., 175 m. long and up to 40 m. broad with a volume of 130 million acre-feet, largest man-made lake at the time of its creation. Displaced African agriculturalists now fish the lake which has been specially stocked. K.D. was designed by the French engineer André Coyne (1891–1960).

KARIKAL. Small port in India, 155 m. S. of Madras, at the mouth of the right distributary of the Cauvery delta. On a tract of land acquired by the French in 1739, it was transferred to India *de facto* in 1954, by treaty in 1956. See PONDICHERY.

KARLFELDT, Erik Axel (1864–1931). Swedish poet. He estab. his reputation with *Fridolins visor*, and was awarded a Nobel prize in 1931.

KARL-MARX-STADT. Town in E. Germany, cap. of K. district, on the Chemnitz r., 40 m. S.S.E. of Leipzig. It is an industrial centre with engineering works, textile and chemical factories. Formerly called Chemnitz, it came within the Russian zone of occupation after the S.W.W. and was renamed in 1953. Pop. (1966) 294,900.

KARLOFF, Boris. Pseudonym of British actor, William Henry Pratt (1887–1969). He was best known for his success as the Monster in the Hollywood film *Frankenstein* (1931).

KARLOVY VARY. Spa in the Bohemian Forest, Czechoslovakia, famous from the 14th cent. for its alkaline thermal springs. Pop. (1967) 46,000. See p. 612.

KARLSBAD. German name of KARLOVY VARY.

KARLSBURG. German name of ALBA JULIA.

KARLSKRÖNA. Seaport and naval base on the S. coast of Sweden, the H.Q. of the Swedish navy since 1680. Pop. (1966) 37,800.

KARLSRUHE (-rōō-e). Town of Baden-Württemberg, W. Germany, 35 m. S. of Mannheim. K. founded 1715, is an important communication centre,

in 1924, where he studied political science at the univ. and was later called to the Bar. He was sec. 1929-47 of the India League, the cultural organization of the Indian Nat. Congress Party, which he developed into its chief mouthpiece in Europe. First High Commissioner for India in London, 1947-52, he was then deputy head, and later head, of the Indian delegation to the U.N., where he was active in arbitration during the Korean War and Suez Canal crises. In 1957 he became Defence Min., but resigned from the Cabinet in 1962 through pressure of public opinion over the Chinese advances on the Sino-Indian border. He is the leader of the extreme left wing of the Congress Party.

KRIVOI ROG. Town in the Ukrainian S.S.R., U.S.S.R., 80 m. S.W. of Dnepropetrovsk. The surrounding district is rich in iron ore, and there is a metallurgical industry. The name means 'crooked horn'. Pop. (1967) 498,000.

KRONSTADT. Russian naval base on the is. of Kotlin in the Gulf of Finland, opposite Leningrad, founded by Peter the Great in 1703.

KROPOTKIN, Peter Alexeivich, Prince (1842-1921). Russian anarchist. B. in Moscow, he served in the army, did important survey work in Asia, joined the revolutionary party in St. Petersburg, and in 1874 was imprisoned. He escaped to England in 1876, and later moved to Switzerland. Expelled from Switzerland, he went to France, where he was imprisoned 1883-6. He then lived in England until 1917, when he returned to Moscow. Among his principal works are *Modern Science and Anarchism* and *Mutual Aid*.

KRUG (kröög), Julius Albert (1907-). American engineer and administrator. He was chief power engineer of the Tennessee Valley Authority 1939-40 and Sec. of the Interior 1946-9.

KRUGER, Stephanus Johannes Paulus (1825-1904). President of the Transvaal Rep. B. at Colesberg, Cape Colony, he accompanied his family on the 'great trek' across the Vaal r., and soon became prominent in Transvaal politics. In 1863 he was appointed Cdr.-Gen. of the forces, in 1883 he was elected Pres., and re-elected in 1888, 1893, and 1898. His refusal to remedy the grievances of the Uitlanders (English and other non-Boer white inhabitants of the rep.) led to war with Britain in 1899. When Pretoria was occupied by British troops K. fled to Europe, where he pleaded vainly for European intervention. He d. in Switzerland.

KRUGER NATIONAL PARK. Game reserve in N.E. Transvaal, S. Africa, between the Limpopo and Crocodile rivers. It has an area of 8,000 sq. m.

KRUGERSDORP. Mining town in the Witwatersrand dist., Transvaal, S. Africa. Manganese and uranium are worked as well as gold. Pop. (1960) 89,493 (30,241 white).

KRUPP (kroop). German family of industrialists and armaments manufacturers. The Essen foundries were estab. by Friedrich K. (1787-1826), developed by Alfred K. (1812-57), the 'Cannon King', and the business further expanded by Friedrich Alfred K. (1854-1902), who took over the Germania shipbuilding yard at Kiel. His only child Bertha (1886-1957) m. in 1906 Gustav von Bohlen und Halbach (1870-1950), who became head of the firm. During the F.W.W. it advanced the construction of long-distance artillery, e.g. 'Big Bertha', and in the post-war years continued secretly to manufacture armaments - von Bohlen was a Hitler supporter. The K. works came under allied control in 1945, the Borbeck steel plant being given as reparation to the U.S.S.R. Gustav's son, Alfred K. (1907-67) who had controlled the firm from 1943, was imprisoned 1948-51, but attempted deconcentration of the K. assets failed. Just before Alfred's death in 1967, financial difficulties compelled his agreement to conversion of the firm to a public co. as the Friedrich K. Foundation.

KRYLOV (krëlof'), Ivan Andrei (1768-1844). Russian fabulist. He translated many of La Fontaine's

fables, besides publishing his own original work, written in a colloquial style with familiar images, and satirizing bureaucracy and such everyday vices as greed, etc.

KRYPTON (Gk., hidden). A colourless, odourless, inert gas, at. wt. 83.8, at. no. 36, symbol Kr. It was discovered in 1898 by Ramsay and Travers in the residue from liquid air. Occurring in the atmosphere (c. 1 to 1,000,000), K. is used to enhance brilliance in miners' electric lamps, and in some gas-filled electronic valves.

KUALA LUMPUR (kwah'lah loom'poor). Cap. of Selangor, of the Fed. of Malaya and of Malaysia. It

KUALA LUMPUR. A ceremonial parade of Malay Regiment troops passes the Federal Secretariat, one of the city's distinctive landmarks, completed in 1897. The Regiment, which took an important part in jungle warfare against Communist terrorists, was started as an experiment and initially commanded by British officers. Courtesy of Malaya House.

does a large trade in tin and has an airport and is the seat of the Univ. of Malaya (1962). Pop. (1968) 500,000.

KUANYIN. The 'goddess of mercy' of the Chinese Buddhists; the Japanese worship her as Kwannon.

KUBAN (koobahn'). A river of the U.S.S.R., rising in Georgia and flowing about 500 m. N. and W. through the R.S.F.S.R. to the Black Sea. The name is also applied to the low-lying agricultural dist. of Krasnodar Terr. immediately N. of the Caucasus.

KUBELIK (koob'elëk), Jan (1880-1940). Czech violinist. He performed in Prague at the age of 8, and was one of the world's greatest virtuosos; he also wrote 6 violin concertos, etc. His son, Rafael K. (1914-), was musical dir. at Covent Garden 1955-8, and became in 1961 chief conductor Bayerischer Rundfunk, Munich.

KUBLAI (koobli) KHAN (1216-94). Mongol emperor of China, grandson of Ghengis Khan. He succeeded his brother Mangu in 1259, estab. himself as emperor of the whole of China, and with little success attempted to extend his rule still further.

KUCHUK (kooch'ook), Fazil (1906-). Cypriot politician. B. in Nicosia, where he became a doctor, he was ed. at Istanbul and Lausanne univs., and in 1941-60 was ed. of the daily paper *Halkın Sesi* (Voice of the People), supporting the Turkish minority position. In 1960, as leader of the Nat. Turkish Party, he became vice-pres. of Cyprus.

KUFRA (koo'frah). Group of oases in the Libyan Desert, Libya, N. Africa, c. 740 m. S.E. of Tripoli. It was visited in 1921 by Rosita Forbes, and captured from the Italians by General Leclerc in 1941.

KUIBYSHEV (koo'bishef, but anglicized kwë-bishef). Cap. of K. Reg., R.S.F.S.R., U.S.S.R., an excellent river port, at the junction of the Samara with

KARTING. A sport for Everyman — and a sport of King Hussein of Jordan — shown racing at Biggin Hill, England. Courtesy of Lambretta Concessionaires Ltd.

KA'SSEL. City in Hessen, W. Germany, dating from the 10th cent. It has engineering and locomotive works, etc. Pop. (1966) 213,000.

KASSE'N, Abdul Karim (1914–63). Iraqi politician. He became P.M. of the rep. in 1958, adopting a pro-Soviet policy. He pardoned the leaders of the pro-Egyptian party who tried to assassinate him in 1959, but was executed after the 1963 coup.

KASTAMONU (kahstahmōnoo'). Town by the Gök r., Turkey, cap. of K. il, with textile manufactures. Pop. (1960 est.) 15,000.

KASTNER (kest'ner), Erich (1899–). German writer. He has pub. satirical verse; *Fabian* (1931) a novel of post-war Germany; the widely trans. children's book *Emil and the Detectives* (1928); and *When I was a Little Boy* (1957) telling of his childhood in his native Dresden.

KATAEV (kahtah'yev), Valentin Petrovich (1897–). Soviet novelist and dramatist whose works incl. the novels, *The Island of Ehrenhof* (1924), *The Embezzlers* (1927) and *Lonely White Sail* (1937); and the play *Squaring the Circle*.

KATANGA. Dist. in the Rep. of Congo (q.v.), containing Elizabethville, with some of the world's richest copper workings, and uranium and other minerals. Pop. (1967) 1,853,000.

KATHIAWAR (kahtia'wah'). Peninsula on the W. coast of India. Within it were a number of princely states which formed the Western K. agency of British India, 1927–47, and, except for Ahmedabad and Aureli, the Saurashtra Union, 1948–56. The whole of K. (23,445 sq. m.) was added to Bombay state in 1956, and became part of Gujarat in 1960. Gandhi was b. in K. at Porbandar.

KATMANDU (kahtmahndōō). Cap. of the Himalayan state of Nepal, founded in the 8th cent. It has an airfield. Pop. (1961) 224,900.

KATOWICE (katovit'sa). City and chief town of K. voivodship (county), Poland. Anthracite and iron are mined and there are iron foundries, smelting works, and machine shops. Pop. (1966) 287,000.

KATRINE (kat'rin). Freshwater loch in the S.W. of Perth, Scotland, from which Glasgow draws most of its water supply. Area 5 sq. m.; length 8 m.

KATSURA (kahtsoo'rah), Taro, Prince (1847–1913). Japanese statesman. He received a military education in Prussia, reformed the Japanese army on modern lines, and was War Minister 1898–1901 and P.M. 1901–5 and 1908–11. The Anglo-Japanese alliance of 1902 was largely his work.

KATTIEGAT. Sea passage between Jutland and Sweden. It is about 150 m. long, 85 m. at its broadest.

KATTOWITZ. German form of Katowice.

KAUFFER. Edward McKnight (1890–1954). Ameri-

can artist. He lived in England 1914–41, and was particularly famous for his posters.

KAUFFMANN (kowf'mahn). Angelica (1741–1807). Swiss artist. B. in Grisons, she lived in Italy until 1765 and in England 1765–81, where her neo-classical paintings became popular. She became one of the first R.As. in 1769 and returned to Rome in 1781.

KAUFMAN, George S. (1889–1961). American playwright. B. in Pittsburgh, he wrote, or collaborated in, many popular plays, incl. *Dinner at Eight* (1932), *You Can't Take It With You* (1936), and *The Man Who Came to Dinner* (1939).

KAUNAS. Town of the Lithuanian S.S.R., on the r. Nieman. It has a univ., opened 1922. Pop. (1967) 276,000.

KAUNDA (kah-oon'dah), Kenneth David (1924–). Zambian politician. Son of an African missionary, he was ed. at Lubwa Training School where he became a teacher (headmaster 1944–7), and was in 1950 founder-sec. of the Lubwa branch of the African Nat. Congress. In 1958 he founded the breakaway Zambia African Nat. Congress, but this organization was banned as subversive and K. imprisoned. On his release he founded in 1960 the United National Independence Party, became in 1963 Min. of Local Govt., and in 1964 first P.M. of N. Rhodesia, then first pres. of Zambia, re-elected 1968.

KAURI PINE (kow'ri). A New Zealand conifer (*Agathis australis*), it often reaches a height of 150 ft., and yields valuable softwood timber. *Kauri Gum*, the resinous deposit dug up in areas where K. forest existed previously, is used in varnishes.

KAUTSKY (kowts'ki), Karl (1854–1938). German Social-Democrat. B. in Prague, he became a follower and personal friend of Marx. In 1919 he was appointed Sec. of State. His report on the causes of the F.W.W. blamed the German and Austrian govts. He fled when Hitler came to power, and d. in Amsterdam.

KAVA (kah'vah). Non-alcoholic, intoxicating beverage prepared from the roots or leaves of a variety of pepper plant, *Piper methysticum*, in the S. Pacific islands.

KAVALA (kahvah lah). Seaport of Macedonia, Greece, cap. of K. nome, the centre of rich tobacco-growing country. Pop. (1961) 44,406.

KAVA'NAGH, Patrick (1905–67). Irish poet. Son of a farmer in co. Monaghan, he lived in Dublin from 1939. His poetry incl. *The Great Hunger* (1942) and *A Soul for Sale* (1947); *The Green Fool* (1938) is an autobiography, and *Tarry Flynn* (1948) an autobiographical novel.

KAWABATA, Yasunari (1899–). Japanese novelist. Influenced by the *Tale of Genji*, which he rendered into modern Japanese, his novels are delicate in technique, e.g. *Snow Country* (1947) and *A Thousand Cranes* (1952). He was awarded a Nobel prize 1968.

KAWASAKI (kahwahs-ahkē). Japanese city between Tokyo and Yokohama with a Buddhist temple to which pilgrimages are made on the 21st of Jan., March, May, and Sept. Pop. (1966) 855,000.

KAY, John (1704–after 1764). British inventor. In 1733 he patented his flying-shuttle, intended to speed up the work of the handloom-weaver, but was ruined by the litigation necessary to defend his patent, and

KATMANDU. On the tower of Bodnath pagoda, the eyes of Buddha symbolize supreme knowledge and divine benevolence. Courtesy of W.H.O.

commanded the armies on the N. front until 1916, when he was appointed gov. of Turkestan.

KURSK (koorsk). Town dating from the 9th cent., cap. of K. reg. of the R.S.F.S.R., U.S.S.R. Industries incl. chemicals, machinery, alcohol, and tobacco. Pop. (1967) 249,000.

KURTEN, Peter (1883–1931). German criminal sadist, known as the 'Düsseldorf murderer'. From Feb. 1929 to May 1930 he terrorized Düsseldorf as a mass-murderer; arrested at last, he was found guilty of 9 murders and condemned to death.

KUSEVITZKY, Sergei (1874–1951). Russian conductor. Originally a virtuoso of the double bass, he was noted for his interpretations of Russian works.

KUT-AL-IMARA (koot'-al-imah'ra). Town on the Tigris, Iraq, a grain market and carpet-manufacturing centre, cap. of Kut liwa. It was besieged Dec. 1915–April 1916, when Gen. Townshend with his force was compelled to surrender. Pop. (1967) 60,000. *Kut Barrage*, a dam across the Tigris, was opened 1939.

KUTCH (kooch), Rann of. Salt, marshy area in Gujarat state, India, which forms 2 shallow lakes, the Great Rann and the Little Rann, in the wet season, and is a salt-covered desert in the dry. It takes its name from the former princely state of K., area 16,724 sq. m., centrally admin. from 1950, which was absorbed in Bombay state in 1956 and became part of Gujarat state in 1960. An internat. tribunal awarded 90% of the R. of K. to India and 10% (c. 300 sq. m.) to Pakistan, the latter comprising almost all the elevated area above water the year round, in 1968.

KUTUSOV (kootoo'zof), Mikhail Larionovich, Prince of Smolensk (1745–1813). Russian field marshal. He commanded an army corps at Austerlitz, and the retreating army in 1812. After the burning of Moscow he harried the French throughout their retreat, and later took command of the united Prussian and Russian armies.

KUWAIT (koo'wāt). Sheikdom on the N.W. shores of the Persian Gulf. It is mainly low-lying desert

KUWAIT. The University of Kuwait (1966) at Shuwaikh on Kuwait Bay, a suburb of the capital; there is also a Kuwaiti Institute of Economic and Social Planning in the Middle East
Courtesy of Kuwait Oil Co., Ltd.

country inhabited by nomadic Bedouin. The sheik of K., to prevent possible pressure by the Turks (of whose empire K. was nominally a part), asked Britain for protection in 1897, and in 1899 a treaty was made giving Britain exclusive rights in K. K.'s independence under British protection was recognized in 1914, and in 1961 the treaty of 1899 was formally abrogated, K. becoming a member of the Arab League and of the U.N. General Kassem of Iraq refused to recognize K.'s independence, claiming it as part of Iraq. The

Iraqi threat was countered by the despatch of a British force for a few months, and by the non-recognition of the claim in the Arab world.

Formerly dependent on dhow building, pearling and maritime trading, this small, barren state assumed international importance following the discovery of a

KYOTO. The original Rokuonji Temple (popularly called the Gold Pavilion), surrounded by a beautiful garden, was built in 1394 at the foot of Kinugasayama Hill in thick forest, to the north of Kyoto. The present building, completed in 1955 on the same site, is an exact replica of the original, destroyed by fire in 1950.
Courtesy of Japanese Embassy.

rich petroleum field at Burgan in 1938 (production started in 1946) and subsequently also in the Kuwait-Saudi Arabian Neutral Zone. Since most of the royalties paid to the sheik (estimated at £50 million a year) are used for social developments, K. is one of the best-equipped of the world's states in public works, medical and educational services. The giant tankers are accommodated at a man-made floating island terminal 555 yds long 10 m. offshore, opened 1969. Area c. 5,800 sq. m.; pop. (1966) 491,000.

The cap., also called K., is a flourishing port and is being developed as an outstanding example of town planning. Its seawater distillation plant is the biggest in the world, and there are power stations supplying light industries. An impressive survival of the past is the 'Sif' palace on the seafront. Pop. (1966) 99,700.

KUZBAS. Industrial area in Kemerovo region, R.S.F.S.R., U.S.S.R., lying on the Tom r. to the N. of the Altai mountains. Development began in the 1930s. It takes its name from the old town of Kuznetsk: see **LENINSK-KUZNETSKY**; **NOVO KUZNETSKY**.

KUZNETSOV (kooosnyetsof'), Vasili Vasilievich (1901–). Soviet politician. Once a steelworks engineer, he was chairman of the All-Union Central Council of Trade Unions 1944–54, and in 1958 became deputy For. Min. He was prominent in 1963 in the negotiations leading to the solution of the Cuban crisis and the nuclear test-ban agreement.

KWANGCHOW. Chinese name for **CANTON**.
KWANGSI-CHUANG (kwahngsē' chōō-ang'). Autonomous region of S. China bordering Vietnam. K.-C. covers the upper part of the basin of the Sikiang; it produces sugar cane, fruits, sandalwood, tung oil, tin, antimony, etc. The cap. is Nanning. Area 85,900 sq. m.; pop. (1957) 19,390,000.

KWANGTUNG (kwahntoong'). Prov. of S. China. In the S. it incl. the Luichow peninsula, and the island of Hainan. The prov. is drained by the Han and also by the Sikiang and its affluents converging on the Canton delta and estuary, where are Hong Kong and

had charge of the Great Seal of England. During the Middle Ages the great seal was entrusted to the Chancellor. Later a special Lord Keeper was appointed to take charge of it, but since 1761 the posts of Chancellor and Keeper have been combined.

KEEWATIN (kēwah'tin). Eastern dist. of Northwest Territories, Canada, incl. the islands in Hudson and James Bays. The N. is an upland plateau, the S. low and level, covering the greater part of the Barren Grounds (Arctic prairies) of Canada. There are a number of lakes; trapping for furs is the main occupation. Trading posts incl. Chesterfield Inlet, Eskimo Point, and Coral Harbour, the last with an air base set up during the S.W.W. K. District was formed in 1876, under the administration of Manitoba; it was transferred to Northwest Territories in 1905, and in 1912 lost land S. of 60 deg. N. to Manitoba and Ontario. Area 228,160 sq. m.; pop. (1961) 2,345.

KEFALINIA. Italian form of CEPHALONIA.

KEFAUVER (kē'fawva), Estes (1903–63). American Democratic politician, known as the 'homespun Tennessean'. Son of a Tennessee dairy-farmer, he became a successful corporation lawyer and campaigned in a coonskin cap to enter Congress in 1939. Senator for his native state from 1949, he failed to gain acceptance as presidential candidate in 1952 and 1956, but made his mark in campaigning against organized crime, price-fixing and monopolies.

KEFLAVIK. Fishing port in Iceland, 22 m. W.S.W. of Reykjavik. It has a large international airport, built during the S.W.W. by U.S. forces (who called it Meeks Field). K. became a N.A.T.O. base in 1951, and a U.S. (N.A.T.O.) force was again estab. there. Pop. (1966) 5,422.

KEIGHLEY (kēth'li). English industrial town (bor.) in the W. Riding of Yorks. Manufactures incl. woolen and worsted goods, and machinery. Haworth, home of the Brontës, is part of K. bor. Pop. (1961) 55,852.

KEITEL (kit'el), Wilhelm (1882–1946). German field marshal. He was chief of the supreme command from 1938, and signed the unconditional surrender of the German forces at Berlin on 8 May 1945. He was tried at Nuremberg as a war criminal and hanged.

KEKULE (kek'ooole), Friedrich August (1829–96). German chemist. B. at Darmstadt, he became prof. at Ghent in 1858, and at Bonn in 1865. His theory of molecular structure revolutionized organic chemistry (1858). In 1865 he conceived the novel idea of the ring structure of benzene from, it is said, a dream he had of a serpent catching its tail.

KELANTAN. State, ruled by a sultan, in the Federation of Malaysia. It was transferred by Siam to Britain in 1909, and until 1948 was one of the Unfederated Malay States. The cap. is Kota Bharu. The chief products incl. rice, rubber, copra, tin, manganese and gold. Area, 5,746 sq. m.; pop. (1966) 665,711.

KELLER, Gottfried (1819–1900). Swiss poet and novelist. B. at Zürich, he pub. his first vol. of *Gedichte* in 1846, another vol. of lyrics in 1851, and the outstanding educational and autobiographical novel, *Der grüne Heinrich*, in 1854–5. The first series of short stories, *Die Leute von Seldwyla* (1856), appeared at Zürich, where in 1861 he was made first sec. to the cantonal govt. After his retirement in 1876 there followed *Zürcher Novellen* (1877), a story cycle, *Das Sinnedicht* (1881), the novel *Martin Salander*, etc.

KELLER, Helen Adams (1880–1968). American author. B. in Alabama, she lost the senses of sight and hearing through an illness when 19 months old, and of necessity remained dumb. Under the tuition of Anne Sullivan Macy, she became able to speak and graduated with honours at Radcliffe College in 1904. Her meeting with her teacher is described in William Gibson's play *The Miracle Worker* (1959), filmed in 1962. She pub. several books.

KELLERMANN, François Christophe de, duke of Valmy (1735–1820). French soldier, who in 1792

saved Paris by his victory at Valmy, and became one of Napoleon's marshals.

KELLOGG, Frank Billings (1856–1937). American Republican statesman. Ambassador to Great Britain in 1924, he was Sec. of State 1925–9, and was the author of the *Kellogg Pact* for the outlawry of war by the Great Powers, signed in Paris in 1928.

KELLS. Market town (U.D.) on the r. Blackwater, Meath, Rep. of Ireland. It was an ancient residence of the Irish kings. In the library of Trinity College, Dublin, is preserved the *Book of Kells*, an 8th cent. illuminated copy of the Gospels in Latin, written at a monastery of K. founded by St. Columba. Pop. (1961) 2,162.

KELLY, Edward (1854–80). Australian bushranger. The son of an Irish convict, he wounded a constable in 1878 while resisting the arrest of his brother Daniel for horse-stealing. The 2 brothers escaped and with two confederates carried out bank-robberies on the Victoria–New South Wales border. In 1880 K. was captured and hanged.

KELLY, Sir Gerald (1879–). British portrait painter. He was elected R.A. in 1930, and in 1945 completed State portraits of George VI and Queen Elizabeth, the Queen Mother. He succeeded Sir Alfred Munnings as President of the Royal Academy (1949–54).

KELLY, Grace Patricia (1928–). American film actress. B. in Philadelphia, she made her film début in 1951 in *Fourteen Hours*, and later starred in *High Noon* (1952), *The Country Girl* (1954) for which she received an Academy Award, and *High Society* (1955). In 1956 she m. Prince Rainier of Monaco (q.v.).

KELP. The powdery ash of burned seaweeds, a lesser source of iodine, also collectively the large seaweeds, particularly the *Fucaeae* and *Laminariaceae*.

KELSO. Market town on the Tweed, Roxburgh, Scotland. David I founded an abbey at K., 1120. Pop. (1961) 3,964.

KELVIN, William Thomson, 1st baron K. (1824–1907). British physicist. As prof. at Glasgow 1846–99, he was an inspiring teacher, and prodigious researcher in all aspects of physical sciences. Pioneer of the absolute scale of temperature, his work on the conservation of energy (1851) led to the 2nd law of thermodynamics. Popularly known for his contributions to telegraphy, he developed stranded cables and sensitive receivers, greatly improving transatlantic communications. Maritime endeavours led to a tide gauge and predictor, an improved compass, and simpler methods for fixing a ship's position at sea. He was pres. of the Royal Soc. 1890–5.

KEMAL, Yasher (1922–). Turkish author. Once a field-labourer, then public letter-writer and shoemaker, he has pub. poetry and folklore collected during his wanderings in his native Anatolia. His first novel, trans. as *Memed, my Hawk* (1963), dealt with peasant life.

KEMBLE. British family of actors. Roger K. (1721–1802), a strolling player and travelling manager, had 12 children, one of whom was Mrs. Siddons (q.v.). John Philip K. (1757–1823), the 2nd child, made his début in 1776. In 1788 he became manager of Drury Lane, London, and in 1803 of Covent Garden. He retired in 1817 and lived at Lausanne. Strikingly handsome and intelligent, he was among the greatest English tragedians. Charles K. (1775–1854), a younger brother of the above, appeared with success in supporting roles 1792–1840. Frances Anne (Fanny) K. (1809–93), the elder dau. of Charles K., first appeared as Juliet at Covent Garden in 1829. After 1848 she made a great reputation by her Shakespeare readings.

KEMEROVO. Coal-mining town in the R.S.F.S.R., cap. of K. region in W. Siberia and centre of Kuznetsk coal basin; it has chemical and metallurgical factories. Pop. (1967) 358,000.

LACE. Weighing 2 tons and with many thousands of moving parts, precision-made of metal, this modern Leavers machine can make all types of lace from narrowest edging to the widest flouncing of a bridal gown. It copes with all types of thread, natural or synthetic, produces a cobweb texture or rich, heavy styles, and colour is varied at will.

Courtesy of British Leavers Lace Publicity.

the E., and the Strait of Belle Isle on the S.E. Part of it is in the prov. of Quebec, part forms a division of the prov. of Newfoundland, from which it is separated by the Strait of Belle Isle. L. consists for the most part of a plateau sloping gently from the mountains which fringe the irregular coastline. Fishing, especially of cod, is the chief industry. Iron ore from deposits near the headwaters of Hamilton r., proved in 1950, is taken for shipment to the port of Seven Islands on the St. Lawrence by a railway completed in 1954. A considerable stand of virgin timber lies in S. L. and Churchill River (560 m.) is being developed for electric power. L. division of Newfoundland is c. 110,000 sq. m. in area; pop. (1966) 21,157.

LA BRUYÈRE (brüyär), Jean de (1645–96). French essayist. B. in Paris, he studied law, took a post in the revenue office, and in 1684 entered the service of the house of Condé. His *Caractères* (1688), satirical portraits of contemporaries, made him many enemies.

LABUAN (lahboo-ahn'). A flat, wooded island off N.W. Borneo, ceded to Gt. Britain in 1846; made a Crown Colony in 1848; included in British North Borneo 1890–1906; a dependency of Singapore 1907–12; a separate colony again 1912 until occupied by the Japanese 1942–5; again part of British N. Borneo from 1946, and of Sabah, Fed. of Malaysia, from 1963. The chief town is Victoria, with a good harbour (pop. 1960 c. 3,200). Sago is produced; cattle and goats are raised. Area 35 sq. m.; pop. c. 10,000.

LABURNUM. Flowering tree (*Cytisus l.* or *L. vulgaris*) a member of the Leguminosae family, native to the mountainous parts of central Europe. The flowers, in long drooping clusters, are bright yellow and appear in early spring; some varieties have purple or reddish flowers. The seeds are poisonous.

LAC. Resinous incrustation exuded by the female lac-insects (*Coccus lacca*), which eventually covers the twigs of trees in India and the Far East. The gathered twigs are known as stick-lac, which yields a useful crimson dye and the commercial shellac formed by melting the separated resin, and spreading it into thin layers or flakes.

LACCADIVE (lak'adv), **MINICOY** and **AMINDIVI ISLANDS.** Group of 14 coral islands, 10 inhabited, in the Indian Ocean, 200 m. off the Malabar coast. Acquired by the British in 1877, they were attached administratively to Madras prov., later state, until 1956, when they were made a Union Terr. (admin. H.Q. Kavaratti Is.) of India. Coir and copra

from coconut plantations and fish are the chief products. Vasco da Gama discovered the islands in 1499. Laccadive is from Sanskrit Laksha 'divi' and means a hundred thousand islands. Area 11 sq. m.; pop. (1961) 24,108, most of them Moslems.

LACE. A plain or decorative textile fabric of an openwork or network type. Needle-point or point laces (which are a development of embroidery) were first evolved in Italy in the late 15th or early 16th cents., whence the craft spread to France and Germany, probably being brought to England by the Flemings. The other chief variety of L. is bobbin or pillow L., which is made by twisting threads together in pairs or groups, according to a pattern marked out by pins set in a cushion, and is said to have been invented by Barbara Uttmann (b. 1514) of Saxony: elaborate patterns may require 1,000 bobbins. From 1589 various attempts were made at producing machine-made L., and in 1809 John Heathcoat achieved success with a bobbin net machine: the principles of this system are kept in modern machines making plain net. The earliest machine for making true L., reproducing the movements of the fingers of the pillow-lace workers in twisting the threads together, was the invention of another Englishman, John Leavers, in 1813. It had a wooden frame and many of the moving parts were of wood (see illus.), but the principle involved is the same as in the modern machines at Nottingham, the great centre of machine-made L. Early Ls. were principally made from linen thread, enriched with gold, silver, or silk; later materials incl. cotton, wool, rayon, nylon, etc. Among the great centres of L.-making have been Venice, Alençon, and Argentan for point L., and Mechlin, Valenciennes, and Honiton for bobbin L.: both types are made at Brussels.

An early Leavers machine.
Courtesy of British
Leavers Lace Publicity.

LACEWING FLY. Insect of the families Hemero-biidae (incl. the brown lacewings) and Chrysopidae (incl. the green lacewings or golden-eye flies), found throughout the world. So named because of the veining of their 2 pairs of semi-transparent wings, they have narrow bodies and long thin antennae. The eggs of the green lacewing are stalked.

LACHISH (lä'kish). Biblical city identified by Albright in 1929 as having occupied the mound of Tell ed-Duweir c. 25 m. S.W. of Jerusalem. Most notable find during excavations by J. K. Starkey 1932–8 was a no. of ostraca inscribed in Hebrew which antedate the final destruction of the city in 589 B.C. and are valuable for comparison with Hebrew MSS.

LACEWING. 1, eggs; 2, larva; 3, cocoon; 4, fly.

LACHMANN (lahkh'mahn), Karl (1793–1851). German philologist. From 1818 he lectured on philology at Königsberg and Berlin univs. He edited many Gk., Lat., and early German texts, among them the *Nibelungenlied*, the New Testament, and Lucretius, applying strict principles of textual criticism that set a standard for critical editions.

LACORDAIRE (lahkordär'), Jean Baptiste Henri (1802–61). French ecclesiastic. Formerly a lawyer, he

younger brother Robert Francis K. (1925–68) was ed. at Harvard and Virginia univs., and was admitted to the Mass. State Bar in 1951 and the U.S. Supreme Court in 1955. He was campaign manager for his brother in 1961, and as Attorney-General 1961–4 pursued a 'racket-busting' policy and promoted the Civil Rights Act of 1964. When Johnson preferred Hubert H. Humphrey for the 1964 Vice-Pres. nomination, K. resigned and became Senator for N.Y. In 1968 he campaigned for the Presidential nomination, but was assassinated by Sirhan Bissara Sirhan, a Jordanian Arab resident in the U.S.A. from 1957. In 1968 John F. Kennedy's widow m. Aristotle Onassis (q.v.).

His youngest brother Edward Moore K. (1932–) went into legal practice in Boston, joined with 'Bobby' K. in the management of J.F.K.'s pres. campaign, and in 1963 became the youngest U.S. Senator.

The eldest of the 4 brothers, Joseph Patrick K., Jun. (1915–44), a naval airman, was killed in action in the S.W.W.

KENNEDY, Margaret (1896–1967). British writer, who made her name in 1924 with the novel *The Constant Nymph*. Her later works incl. the play *Escape Me Never* (1933) and the novel *Lucy Carmichael* (1951).

KENNEDY, Cape. U.S. promontory on the Atlantic coast of Florida, 228 m. N. of Miami. It is separated from the mainland by Banana r., Merritt is., and Indian r., and is marked by a lighthouse. Here also is the Atlantic Missile Range (1956), a proving ground for guided missiles, and a site of space-flight experiments from 1962 onwards. Formerly known as Cape Canaveral, it was re-named in 1963 by Pres. Johnson in honour of Pres. Kennedy.

KENNELLY, A. E. (1861–1939). American engineer. An assistant of Edison and later prof. at Harvard, he verified the existence of an ionized layer in the upper atmosphere in 1902, shortly before it had been predicted by Heaviside (q.v.) See **IONOSPHERE**.

KENNELLY-HEAVISIDE LAYER. The lower regions of the inosphere (q.v.) which absorb short radio waves, and reflect long radio waves, allowing their reception round the surface of the earth. The K.-H.L. approaches the earth by day, and recedes from it at night.

KENNET, Lady. See **SCOTT, ROBERT FALCON**.

KENNINGTON, Eric Henri (1888–1960). British painter, pastel artist and sculptor. An official war artist 1916–19 and 1940–3, he executed the British memorial at Soissons, the memorial to Thomas Hardy in Dorchester and various T. E. Lawrence memorials, incl. a bronze head in St. Paul's Cathedral and a recumbent effigy (1954) in the Tate Gallery.

KENNINGTON. Dist. in the bor. of Lambeth, Greater London, in which are K. Oval, headquarters of the Surrey Cricket Club, and K. Park, opened 1852, part of the former common on which the 1848 Chartist gathering took place.

KENSAL GREEN. Dist. in the bor. of Brent, Greater London, in which a large cemetery was opened in 1832. Among the graves are those of Thackeray, Wilkie Collins, and Anthony Trollope.

KENSINGTON and CHELSEA, Royal Bor. of. Bor. of Greater London which contains K. palace, and the dists. of Notting Hill, Earl's Court, Brompton, and South K. (the chief museum centre of London, also having several learned institutions). West K. is in Hammersmith. K. gardens, 264 acres, are, except for the western strip containing K. palace, which is in K., in Westminster. See **CHELSEA**.

K. palace became a royal residence in the time of William III. Queen Victoria was b. there. Holland House, last of the great country mansions which once surrounded London, was destroyed during a German air raid in 1940: a youth hostel was opened on the site 1959 and the grounds are a public park.

KENT, Edward George Alexander Edmund 2nd, duke of (1935–). British prince, son of George

(1902–42), 4th son of George V, who was cr. duke of K. just before his m. in 1934 to Princess Marina of Denmark and Greece (1906–68). The second duke, who succeeded when his father was killed in an air crash on active service with the R.A.F., was ed. at Eton and Sandhurst, and then commissioned in the Royal Scots Greys. He represented the Queen at the Sierra Leone independence celebrations. In 1961 he m. Katharine Worsley (1933–) and his heir is George (1962–), earl of St. Andrews.

His brother, Prince Michael (1942–) became an officer with the Hussars in 1962. His sister, Princess Alexandra (1936–), who represented the Queen at the Nigerian independence celebrations, m. in 1963 Angus Ogilvy.

KENT, Rockwell (1882–). American artist, noted for his boldly grand landscapes and fine wood engravings.

KENT, William (1685–1748). British landscape gardener, influential in freeing the art from formalism. B. in Herts, he followed the landscapes of Claude and Poussin, with a fondness for classic temples. As an architect and sculptor (Shakespeare in Westminster Abbey) he was indifferent.

KENT and STRATHEARN, Edward Augustus, duke of (1767–1820). British general. The 4th son of George III, he m. Victoria Mary Louisa (1786–1861), widow of the Prince of Leiningen, in 1818, by whom he had one child, the future Queen Victoria.

KENT. Co. of S.E. England. Running N.W. to S.E. across the county are the N. Downs. S. of them is the Weald, agricultural land with orchards, hop fields, market gardens, etc. N.E. Kent produces fruit and wheat. K. is often called the 'Garden of England'. Romney Marsh in the S. is celebrated for its sheep. Industrial K. in the N.W. has large cement and paper-making industries. The principal rivers are the Darent, Medway, and Stour. Inland from Deal is an extensive coalfield.

The co. town is Maidstone; other important towns are Canterbury, Rochester, Chatham, Gravesend, Sheerness, and four of the Cinque Ports (Dover, Sandwich, New Romney, and Hythe). Coastal holiday resorts are numerous. In popular speech, a 'man of K.' hails from E. of the Medway, and a 'Kentish man' from the western part of the co. The Univ. of Kent at Canterbury was founded in 1965. Area 1,440 sq. m.; pop. (1967) 1,345,520.

KENT. Penshurst Place, of which the south front is here seen from the garden, is one of the county's loveliest houses. The birthplace of Sir Philip Sidney, it is now the seat of his descendant Visct. De L'Isle who in 1944 won the V.C. on the Anzio beachhead. Courtesy of Lord De L'Isle.

KENTIGERN, St. (c. A.D. 518–603), also called 'Mungo', a nickname meaning 'dear friend'. First bishop of Glasgow, he was b. at Culross. The papans forced him to flee to Wales, where he founded the monastery of St. Asaph. In 573 he returned to Glasgow, whose cathedral he founded.

KENTUCKY. South-central state of the U.S.A., called the 'Blue Grass State' because of the richness of the grass in the 'blue grass' area. There are c. £00 m.

LAGER (lah'ger; Ger. *lager*, store). A light beer. After fermentation L. is stored at a low temperature for periods ranging from a few weeks to several months, and acquires its characteristic flavour. L. is particularly popular in Germany and the U.S.A.

LAGERKVIST, Pär (1891–). Swedish author. Recognition of his lyric poetry, dramas (*The Hangman*, 1935), and novels (*Barabbas*, 1950) has been hindered by their obscurity of expression, but in 1951 he was awarded a Nobel prize.

LAGERLÖF (lah'gerlöf), Selma (1858–1940). Swedish novelist. Originally a schoolteacher, she won fame in 1891 with a collection of stories of peasant life, *Gösta Berling's Saga*. Her later novels incl. *The Miracles of Antichrist* (1897) and *Jerusalem* (1901–2); she received a Nobel prize in 1909.

LA'GOS. Port and cap. of Nigeria, W. Africa, situated on an island in a lagoon. There is an excellent harbour, an aerodrome, and railway connection with the interior. There is a univ. (1962) with a large medical school. Pop. (1968) 700,000.

LAGRANGE (lah'gronzh'), Joseph Louis (1736–1813). French mathematician. B. and ed. at Turin, where he received a professorship in 1754, he was appointed director of the Academy of Berlin in 1766. He settled in Paris as Louis XVI's guest in 1787, and received further honours from the revolutionaries and Napoleon. He presided over the commission which reformed the weights and measures in 1793. His chief writings are *Mécanique analytique* (1788) and *Théorie des fonctions analytiques* (1797).

LA GUARDIA (gwahr'di-a), Fiorello Henrico (1882–1947). American politician. B. in New York of Italian parents, he practised law, served in the Air Force during the F.W.W., and sat in Congress as a Republican. Elected mayor of New York in 1933 against the opposition of the powerful Tammany Hall machine, he cleaned up the administration, suppressed racketeering, and organized unemployment relief, slum-clearance schemes, and social services. Although

LAGOS. Receiving a guest in style in the capital involves a strenuous dance display, enjoyed by the performers as much as by the audience. Courtesy of the Federation of Nigeria.

nominally a Republican, he strongly supported the New Deal. In 1945 he refused to run for another term.

LA GUARDIA FIELD, a municipal airport of New York City in Queens Borough, opened 1939, was named in his honour.

LA HARPE (ahrp), Jean-François de (1739–1803). French dramatist and critic. B. at Paris; best remembered for his course of lectures at the Paris Lycée in 1786, pub. as *Cours de littérature ancienne et moderne*.

LA HOGUE (hög). A naval battle fought off the Normandy coast in 1692 in which the combined English and Dutch fleets defeated the French.

LAHO'RE. City and cap. of W. Pakistan, seat of a univ. (1882). L. is divided into an old town enclosed by walls, and a modern quarter built on European lines. Industries incl. silk, cotton spinning and weaving, and metal-working. L. has many associations with the Mogul rulers Akbar, Jahangir, and Aurangzeb. Under British rule 1849–1947, L. was cap. of Punjab prov. Pop. (1961) 1,296,477.

LAHORE. One of the loveliest of oriental formal gardens, the Shalimar Gardens laid out in the late 17th century by Shah Jehan.

Courtesy of the Office of the High Commission for Pakistan.

LAIBACH. German name of LJUBLJANA.

LAIRD, John (1805–74). British shipbuilder. B. at Greenock, he became a partner in his father's ship-building firm at Birkenhead, and was a pioneer in the building of iron ships. He was a Conservative M.P. 1861–74. His brother Macgregor L. (1808–61), a merchant of Greenock, became a pioneer of British trade with the Niger region of W. Africa.

LAISSEZ-FAIRE (la'shefair'). The theory that the State should refrain from all intervention in economic affairs. The phrase originated with the 18th cent. French economists, the Physiocrats, whose maxim was *laissez-faire et laissez-passer* (literally 'let go and let pass', i.e. 'leave the individual alone, and let commodities circulate freely'). Before the 17th cent. control by the guild, local authorities, or the State, of wages, prices, employment, the training of workmen, etc., was taken for granted. As capitalist enterprises developed in the 16th and 17th cents., entrepreneurs shook off the control of the guilds and local authorities, and the revolution of 1640–60 weakened the hold of the State on economic life. By the 18th cent. this process was complete.

The reaction against L.-F. began in the mid-19th cent., and found expression in the factory acts, etc. This reaction was inspired partly by humanitarian protests against the social conditions created by the Industrial Revolution, partly by the wish to counter the popular unrest of the 1830s and '40s by removing some of its causes. The last cent. has shown an ever-increasing degree of State intervention to promote social amelioration, which since 1945 has been extended into the field of nationalization of leading industries and services.

LAKE, Gerard, visct. (1744–1808). British general. After serving in America and the Low Countries, he defeated the Irish rebels at Vinegar Hill in 1798, and then had a distinguished career in India, defeating the Mahrattas in 1803 and capturing Delhi.

LAKE. Sheet of still water lying in depressed ground without direct communication with the sea. Lakes are common in glaciated mountain regions, along the course of gently declining rivers, and in low land near

battlefield where Husain, son of Ali and Fatima, was killed in A.D. 680 while defending his succession to the Kh. lifate. His tomb in the city is visited every year by many pilgrims. Pop. (est.) 120,000.

KERCH (kärch). Port in the Crimea, Ukraine S.S.R., at the E. end of K. peninsula, an important iron-producing area. Built on the site of an ancient Greek settlement, K. became Russian in 1783. Pop. (1967) 115,000.

KEREN. Small town and trade centre in Eritrea, Ethiopia, key point of the Italian defence line during the Italian occupation of E. Africa in the S.W.W. It fell to the British in March 1941. Pop. (est.) 10,000.

KERENSKY, Alexander Feodorovich (1881–). Russian politician. After holding several ministerial posts, he was premier of the 2nd provisional govt., before its collapse in Nov. 1917, during the Bolshevik revolution. He has lived in the U.S.A. since 1918 where he has written, lectured and done research on the provisional govt. era.

KERKYRA. Greek form of CORFU.

KERMAN (kärman). Town in S.E. Persia, cap. of K. (no. 8) prov. It is a road centre and manufactures shawls, carpets, etc. Pop. (1964) 75,230.

KERMANSHAH. Town of Persia, cap. of prov. no. 5 (covering Hamadan, K., and S. Kurdistan), which is on the borders of Iraq. The prov. is very fertile and inhabited mainly by Kurds. K. is noted for its carpets and weaving, there is also a large petroleum refinery. Pop. (1964) 130,000.

KERN, Jerome (1885–1945). American song-writer. He composed the popular operetta, *Show Boat* (1927), from which comes the song 'Ol' Man River'.

KEROSENE. Mineral oil, a mixture of liquid hydrocarbons of sp. gr. about 0.78 to 0.83 and flash point below 67° C., prepared by distillation from petroleum. It is used for illumination and heating, and in the U.K. is known as 'paraffin oil'.

KEROUAC, Jack (1923–). American novelist. Of French-Canadian extraction, he was b. in Lowell, Mass., and by his football prowess was set for a univ. career. Instead he became a merchant seaman, then wandered the U.S.

and Mexico making a living by a miscellany of jobs. His books are the continuing *Odyssey* of Jack Duluoz, king of the Beatniks, and incl. *On the Road* (1958), *The Dharma Bums* (1959), and *Big Sur* (1963), which shows the crack-up of his hero against a background of modern America, with its neonlit superhighways.

KERR (ker), Deborah (1921–). British actress. B. in Helensburgh, she made her stage début in London in 1938 and entered films in 1940. Her successes incl. *Black Narcissus*, *From Here to Eternity* (1953) and *The King and I* (1956). She is noted for the depth and restraint of her characterization.

KERRY. Co. in the prov. of Munster, Rep. of Ireland. Its W. coastline is deeply indented. The N. part is low-lying, but in the S. occur the highest mts. in Ireland; Macgillycuddy's Reeks rise to 3,414 ft. There are many rivers and lakes, incl. the famous lakes of Killarney. Tralee is the co. town. Area 1,815 sq. m.; pop. (1966) 112,785.

KERSH, Gerald (1911–68). British author. Of Russo-Polish origin, he was b. in England and had travelled widely, incl. service as a war correspondent

among his varied activities. His books incl. *Night and the City* (1937), *They Die With Their Boots Clean* (1941), and *Fowler's End* (1958), rough humour in a N. London suburb.

KESSELRING, Albert (1885–1960). German field marshal. He commanded the Luftwaffe during the invasions of Poland and the Low Countries, 1939–40, and in the early stages of the Battle of Britain. Later he served under Rommel in N. Africa, took command in Italy in 1943, and was appointed C.-in-C. on the western front in March 1945. His death sentence for war crimes (1947) was commuted to imprisonment; he was released 1952.

KESTEVEN, Parts of. S.W. area of Lincs, England, formed in 1888 into an administrative unit with county offices at Sleaford. Area 720 sq. m.; pop. (1967) 230,310.

KESTREL. Bird (*Falco tinnunculus*) in the family Falconidae, which breeds in the British Is. Its head and tail are bluish-grey, and its back is a light chestnut-brown with black spots.

KESWICK (kez'ik). Market town (U.D.) and tourist resort of Cumberland, England, in the Lake District near the N.E. shore of Derwentwater. Pop. (1961) 4,752. *Keswick Convention* is a meeting, held annually since 1875, of Evangelical Christians of all denominations.

KETCH, Jack (d. 1686). English executioner. He took over the post c. 1663, and carried out the executions of Lord Russell in 1683 and Monmouth in 1685. His name became a common nickname for an executioner.

KETELBEY (ketel'bi), Albert William (1885–1959). British composer, remembered for the orchestral pieces 'In a Monastery Garden' and 'In a Persian Market'.

KETONES. Organic compounds containing the carbonyl group CO, differentiated from aldehydes by uniting to 2 atoms of carbon instead of one of carbon and one of hydrogen. They are liquids or low-melting-point solids, slightly soluble in water, and form derivatives in acid solutions.

KETERING. English industrial town (bor.) near the Isc, Northants, 13 m. N.E. of Northampton with boot and shoe manufactures. Pop. (1961) 38,631.

KEW. Part of the bor. of Richmond-upon-Thames, in Greater London, containing Kew Palace, once a royal residence, and the Royal Botanic Gardens, which were opened to the public in 1841. In 1964 additional grounds were acquired at Wakehurst Place, Ardingly, Sussex. Kew Observatory is in the Old Deer Park.

KEY, Francis Scott (1779–1843). American author of 'The Star-Spangled Banner'. A lawyer by profession, he wrote the song while Fort McHenry was being defended against the British in 1814. It is (since 1931) the national anthem of the U.S.A.

KEYES (kiz), Frances Parkinson (1885–). American writer. B. in Virginia, she is the author of many romances, often set in the deep South, and including *River Road* (1946), and *Joy Street* (1951).

KEYNES (känz), John Maynard, 1st baron (1883–1946). British economist. B. at Cambridge, he was ed. at King's Coll., Cambridge, of which he became a Fellow. He held a Treasury appointment during the F.W.W., and took part in the peace conference as chief Treasury representative, but resigned in protest at the financial terms of the treaty. He justified

KESTREL

KEROUAC. The prophet of the beat generation, he has rejected form in his life as in his work, and has mystic naïveté of approach. Courtesy of André Deutsch Limited.

is a book on contemporary music. His brother Maurice L. (1901-64) was a well-known sculptor.

LAMBERT, John (1619-83). English gen. B. in Yorks, he joined the parliamentary army in 1642, and distinguished himself as a cavalry commander at Marston Moor, Preston, Dunbar, and Worcester. He co-operated closely with Cromwell until 1657, when his opposition to Cromwell's proposed assumption of the title of king led to a breach. After the Restoration he was imprisoned for life.

LAMBETH. Borough of Greater London, England, opposite Westminster on the S. bank of the Thames. Notable buildings incl. L. Palace, with its 15th cent. Lollard's Tower, on a site which has been occupied by the chief residence of the archbishops of Canterbury from 1197; and County Hall, H.Q. of the G.L.C., opened in 1922. Pop. (1967) 338,130.

LAMBETH CONFERENCE. See **ANGLICAN COMMUNION**.

LAMBETH CROSS. Award instituted in 1942 by Lord Lang, the then archbishop of Canterbury, for bestowal upon distinguished prelates and laymen who have furthered the cause of Christian unity.

LAMBETH WALK. Name of a street in Lambeth, London, England, running between Black Prince Rd. and China Walk, Lambeth Rd., with an animated street market. It gave its name to a popular song and dance in the musical comedy *Me and My Girl* (1937).

LAMBURN, Richmal Crompton. See **CROMPTON**.

LAMELLIBRANCHIA (lamelibrang'kia). Class of molluscs, also known as bivalves, from the shell which consists of 2 valves joined by a hinge. There are many varieties, the best-known being cockles, mussels and oysters, usually found in shallow seawater.

LAMENNAIS (lahmenä'), Hugues Félicité Robert de (1782-1854). French philosopher. B. at St. Malo, he

LAMBETH. Seen from the Thames, Lambeth Palace; the hall to the left of the Tudor gatehouse houses a valuable library. Photo: E. P. Olney.

took orders in 1815-16, and in 1817 pub. *Essai sur l'indifférence*, advocating extreme theocratic views. Later, however, he adopted strongly democratic opinions, and on their condemnation by the Pope in 1832 left the Church. His Christian Socialist views are expressed in *Paroles d'un croyant* (1834).

LAMMAS ('loaf-mass'). Medieval festival of harvest, celebrated on 1 Aug. At one time it was an English quarter day, and is still a quarter day in Scotland.

LAMMERMUIR HILLS (lammermür'). A range of hills dividing East Lothian and Berwickshire, Scotland, from Gala Water to St. Abb's Head.

LA MOUREUX (lahmoorö'), Charles (1834-99). French violinist and conductor. B. at Bordeaux, he founded the *Société de l'Harmonie Sacrée*, and the

Concerts Lamoureux (founded 1881) bear his name.

LAMPETER. Welsh market town (bor.) on the Teifi r., Cardiganshire. It has woollen mills and tanneries. St. David's Coll., for students of the Welsh Church, was founded there in 1822. Pop. (1961) 1,853.

LAMPREY

LAMPREY (lamp'pri). An eel-like fish belonging to the family Petromyzontidae. They feed on other fish by a type of parasitism, fixing themselves by the round mouth to their host and boring the flesh by their toothed tongue. The sea-L. is a food fish.

LANARK. Royal burgh, the co. town of Lanarkshire, Scotland, 22 m. S.E. of Glasgow. The church of St. Kentigern is 12th cent. New L., nearby to the S., founded 1785, is known in connection with the Socialist experiments of Robert Owen. Pop. (1961) 8,436.

LANARKSHIRE. A southern inland county of Scotland drained by the Clyde. Mainly low-lying, it is the most densely populated of Scottish counties. Market gardening, fruit growing, stock raising, and dairy farming are carried on and the extensive industries incl. coal, iron and lead mining, shipbuilding, textile manufacture. The chief towns are Glasgow, Lanark, the co. town, Rutherglen, Motherwell, Hamilton, Coatbridge, and Airdrie. Area 879 sq. m.; pop. (1961) 1,626,317.

LANCASHIRE. A heavily populated county of England, situated between Yorks on the E. and the Irish Sea on the W. The coast is flat, with many estuaries and inlets. The chief rivers are the Mersey and Ribble. The many seaside resorts incl. Blackpool, Southport, and Morecambe. In the N. is Furness, which is separated from the rest of the county by Morecambe Bay; it is hilly and incl. the southern part of the Lake District. The great shipping centre is Liverpool; other ports incl. Manchester (via the Manchester Ship Canal), Barrow, Fleetwood, and Heysham. Formerly L. was the world centre of cotton manufacture, with heavy dependence also on iron and steel, shipbuilding, heavy engineering, and railway works. All have declined very sharply, but other existing industries, incl. chemicals, glass, and paper, have been expanded, and new ones introduced, i.e. Merseyside is now a leading car-manufacturing area. As a focus for further economic revival a new town, 'Ribbleton', is planned in the Preston, Chorley, Leyland area. The traditional co. town is Lancaster, but the admin. H.Q. is Preston. Area of county 1,878 sq. m.; pop. (1967) 5,198,060.

LANCASTER, House and Duchy of. A family descended from Henry III's son, Edmund, earl of L., which ruled England 1399-1461. The family estates passed by marriage to John of Gaunt (q.v.), who was created duke of L. in 1362. His son Henry IV obtained the throne in 1399. The 3rd Lancastrian king, Henry VI, was deposed in 1461 and murdered in 1471, and the Lancastrian claim passed to Henry of Richmond, a descendant of John of Gaunt, who became king as Henry VII in 1485.

The **DUCHY OF L.** became a county palatine, with its own courts outside the royal jurisdiction, in 1351; these rights have been attached to the Crown since 1399. The office of Chancellor of the Duchy of L. is generally held by a member of the cabinet.

LANCASTER, Joseph (1778-1838). British educationist. B. in Southwark, he founded a school there in 1801. His method, of teaching a group of monitors

KHUFU (koo'foo) (fl. c. 3000 B.C.). Egyptian king of Memphis, who built the largest of the Pyramids (see EGYPT illus.). The Gk. form of K. is CHEOPS

KHYBER (kiber) **PASS**. A defile 33 m. long through the mountain range which separates Pakistan from Afghanistan. The K.P. was used by Mahmud of Ghazni, Baber, Nadir Shah, and other invaders of India. The present road was constructed by the British during the Afghan Wars.

KIANGSI (kyangse'). Prov. of S.E. China to the S. of the Yangtze-Kiang. Rice is the chief crop, coal and tungsten the chief minerals. The cap. is Nanchang. Area 63,600 sq. m.; pop. (1957) 18,610,000.

KIANGSU (kyangsoo'). One of the coastal provs. of China, on either side of the mouth of the Yangtze-Kiang. Much of the area is swampy, but in the S. is some very fertile land. Products incl. winter wheat, millet, soya beans; coal, iron, limestone; cement, ceramics, textiles. The cap. is Nanking; Shanghai is a special municipality within K. Area 39,500 sq. m.; pop. (1957) 45,230,000.

KIANGSU. Industrial China - a high-pressure compressor, key equipment of a 25,000 ton chemical fertilizer installation, being assembled by workers of the Chingyeh Machinery Works at Shanghai. Such large-scale production is being increasingly undertaken as the industrialization programme advances. Photo: Camera Press.

KIBBUTZ. Israeli communal collective settlement, with collective ownership of all property and earnings and collective organization of work; a modified version, the *Moshav Shitufi*, is similar to the Collective Farms (q.v.) of Soviet Russia. Other Israeli co-operative rural settlements incl. the *Moshav Ovdim* which has equal opportunity, and the similar but less strict *Moshav* settlement.

KIDD, William (c. 1645-1701). British pirate. B. in Greenock, he settled in New York. In 1696 he was commissioned by the Governor of New York to suppress pirates, but he became a pirate himself. Arrested in 1699, he was taken to England and hanged.

KIDDERMINSTER. Market town (bor.) on the Stour, Worcs, England, famous for carpets since c. 1735. Pop. (1961) 40,822.

KIDNEYS. A pair of reddish-brown organs about 4½ in. by 1½ in., situated on the rear wall of the abdomen, which are responsible for water regulation, excretion of waste products and maintaining the homeostasis of the blood. Each K. consists of a number of long tubules; the outer parts filter the aqueous components of blood, and the inner parts selectively reabsorb vital elements, leaving waste products in the remaining fluid (urine) which is collected at the ends of the ducts and passed through the ureter to the bladder.

KIEL (kël). Port of W. Germany on the Baltic 55 m. N. of Hamburg; cap. of Schleswig-Holstein prov. K. was heavily bombed during the S.W.W.

and the *K. Canal*, c. 60 m. long, connecting the North Sea to the Baltic, opened 1895, was repeatedly mined. Pop. (1966) 270,000.

KIELCE (kê-'elt'se). Cap. of K. voivodship (co.), Poland, 70 m. N.E. of Krakow, an important railway junction. Pop. (1966) 109,000.

KIELLAND (chel'and), Alexander (1849-1906). Norwegian novelist. B. at Stavanger, where he became burgomaster, he shows in his novels, incl. *Garman og Worme* (1880), a fine psychological insight.

KIERKEGAARD (kye-'rkegawr), Søren Aabye (1813-55). Danish philosopher. B. in Copenhagen, where he spent most of his life, he was the son of a Jewish merchant, but was converted to Christianity in 1838, although he became hostile to the estab. Church, and his beliefs caused much controversy. His concept of man as an isolated individual before God is largely the basis of Existentialism (q.v.). Here regarded as self-alienation, the cause of which is 'dread', and discarded the Bible and Reason as proof of God's existence, which he saw only in man's personal relationship with God. Very prolific, he pub. his first important work *Either-Or* in 1843, and notable later are *Concept of Dread* (1844) and *Post-script* (1846), which summed up much of his earlier writings. His many pseudonyms were sometimes used to argue with himself.

KIESINGER (kēs'-), Kurt Georg (1904-). West German statesman. A lawyer - member of the Nazi Party 1933-4, but later opposing Nat. Socialism - he joined the Christian Democratic Union after the S.W.W., became premier of Baden-Württemberg 1958 and succeeded Erhard as Federal Chancellor 1966.

KIEV (kê-ef'). Cap. of the Ukrainian S.S.R., the 3rd largest city of the U.S.S.R. Situated at the junction of the Dnieper with the Desna, K. is a great route focus and marketing centre. It has a univ., an airfield, and a wide range of industries. The Slav domination of Russia began with the rise of K., the 'mother of Russian cities', founded in the 5th cent. and many times conquered and re-conquered. It was also the original seat of Christianity in Russia (988). Pop. (1967) 1,371,000.

KILDARE (kildār'). Co. of Leinster prov., Rep. of Ireland, S. of Meath. The north is wet and boggy, but in the E. and W. oats, barley, and potatoes, etc., are grown and cattle are reared. Area 654 sq. m.; pop. (1966) 66,404. The co. town, also K., has a 13th cent. cathedral. Pop. 3,800.

KILIMA-NJARO (kilimanjah'rō). Mountain mass in N. Tanganyika, Africa, with two extinct volcanic craters, Kibo, the higher, rising to 19,300 ft., loftiest point in Africa. K. was first sighted by two German missionaries, Rebmann and Krapf, in 1847. Though less than 250 m. from the equator, it is crowned by glaciers and perpetual snow.

KILKENNY. Co. in Leinster prov., Rep. of Ireland, E. of Tipperary. K. is mainly devoted to agriculture, but in the N. coal is worked. Area 796 sq. m.; pop. (1966) 60,463. The co. town is K., situated on the r. Nore, with a cathedral. Pop. (1966) 10,000.

KILLARNEY. Market town of co. Kerry, Rep. of Ireland, the most famous beauty spot in Ireland. To the S.W. lie Macgillicuddy's Reeks, which incl. Carruntuohill, 3,414 ft., highest point in Ireland, and the K. lakes. Pop. (1966) 7,000. See illus. p. 576.

LAND'S END. Granite cliffs thrust into the Atlantic and dangerous reefs lie close in, as well as the outer group marked by the lighthouse. *British Travel and Holidays Association*

sentimental studies of animals, e.g. 'Dignity and Impudence'. A masterly draughtsman, he was elected R.A. in 1831 and knighted in 1850. Best known of his sculptures are the Trafalgar Square lions.

LAND'S END. A promontory of W. Cornwall, 9 m. W.S.W. of Penzance, the most westerly point of England. Its extension is a group of dangerous rocks, the Longships, a mile out, marked by a lighthouse with a light visible for 16 m.

LANDSKRONA. Seaport of Sweden, on the Sound, 20 m. N. of Malmo. L. makes machinery, chemicals, etc., and has shipbuilding yards and sugar refineries. Charles XI defeated the Danes off L. in 1677. Pop. (1966) 31,960.

LANE, Edward William (1801–76). British orientalist. He visited Egypt 1825–8, 1833–5, and 1842–9, and pub. *Manners and Customs of the Modern Egyptians* (1836), a translation of the *Arabian Nights* (1838–40), and a monumental *Arabic-English Lexicon* (1863–92).

LANE-POOLE, Stanley (1854–1931). British numismatist, great-nephew of E. W. Lane (q.v.). B. in London, he held a post in the British Museum 1874–92, carried on archaeological research in Egypt and was prof. of Arabic at Dublin, 1897–1904. His works incl. *Egypt in the Middle Ages* (1901) and *Medieval India* (1902).

LANFRANC (lan'frang) (c. 1005–89). Archbishop of Canterbury. B. at Pavia, he entered the monastery of Bec, Normandy, in 1042, and there opened a school which achieved international fame. His skill in theological controversy did much to secure the Church's adoption of the doctrine of transubstantiation. Appointed archbp. of Canterbury in 1070, he rebuilt the cathedral, replaced English clergy by Normans, enforced clerical celibacy, and separated the ecclesiastical from the secular courts.

LANG, Andrew (1844–1912). British author. B. at Selkirk, he went to London as a journalist in 1875. His writings include historical works, e.g. *History of Scotland* (1900–7) and *The Maid of France* (1908), a reply to Anatole France's life of Joan of Arc; anthropological essays, e.g. *Myth, Ritual and Religion* (1887) and *The Making of Religion* (1898), which involved him in controversy with Frazer; translations of Homer: verse and novels; and a series of children's books, beginning with the *Blue Fairy Tale Book* (1889).

LANG. Cosmo Gordon, 1st baron (1864–1945). British churchman. B. at Aberdeen, he was ordained in 1890. He was appointed suffragan bp. of Stepney in 1901 archbp. of York in 1908, and of Canterbury in 1928. He resigned in 1942, and was created a baron.

LANG, Fritz (1890–). American film producer and director, b. in Vienna. His early expressionist films, e.g. *The Niebelung Saga* (1923–4) and *Metropolis*

(1925) were made in Germany, whence he fled after his anti-dictatorial *Dr. Mabuse* (1933). In Hollywood he made *Fury* (1936), *You Only Live Once* (1937), and others with a strong sense of social realism, and after the S.W.W. worked again in Europe.

LANGE (lahn'ge), Friedrich Albert (1828–75). German writer on philosophy and sociology. B. at Wald, he was a schoolmaster and journalist, and in 1870 became a professor at Zürich. His best-known work is his *History of Materialism* (1866).

LANGÉVIN (lonzhvañ'), Paul (1872–1946). French physicist. A pioneer in the field of magnetic theory and the molecular structure of gases, he was prof. of general physics at the Collège de France. Arrested by the Germans as a anti-Fascist in 1940, on his release he escaped to Switzerland, returning after the liberation. See GRENOBLE.

LANGLAND, William (c. 1332–c. 1400) British poet. B. in the W. Midlands, possibly near Malvern, he took minor orders, and in later life settled in London. His alliterative *Vision concerning Piers Plowman* appeared in 3 versions c. 1362–c. 1398, but certain critics believe he was responsible only for the first of these. The poem forms a series of allegorical visions, in which Piers develops from the typical poor peasant to a symbol of Christ, and condemns the social and moral evils of 14th cent. England.

LANGLEY, Samuel Pierpont (1834–1906). American inventor. B. in Mass. he became professor of physics and astronomy at the Western Univ. of Pennsylvania in 1867, and sec. of the Smithsonian Institution in 1887. He carried on valuable research on the infra-red portions of the solar spectrum. In 1896 he launched a steam-driven aeroplane which flew for 90 seconds – the first flight made by an engine-equipped aircraft.

LANGMUIR, Irving (1881–1957). American scientist. Working for the General Electric Co. 1909–50, he invented the mercury vapour pump for producing high vacua and the atomic hydrogen welding process and was a pioneer of the thermionic valve. In 1932 he was awarded a Nobel prize for his work on surface chemistry.

LANGTON, Stephen (d. 1228). English churchman. B. in Lincs, he studied at Paris where he became chancellor of the univ., and in 1206 was created a cardinal. When in 1207 Innocent III secured his election as archbp. of Canterbury King John refused to recognize him, and L. was not allowed to enter England until 1213. He supported the barons in their struggle against John, and was mainly responsible for Magna Carta.

LANGTRY, Lillie (1853–1929). British actress. Greatly admired by Edward VII, she was known as 'the Jersey lily', having been born in the island.

LANGUAGES OF THE WORLD. They have been arranged, in a large number of cases, into language families on the basis of their genetic relationship, but many groupings are only tentative. Further information on the chief Ls. and L. families is to be found under their names.

Most practically important and thoroughly investigated is the Indo-European family, which comprises in the *centum* division Greek; the Italo-Celtic group (Latin, whence the Romance languages; Celtic, Gaelic, Manx, etc.); Germanic (Gothic, the North-Germanic or Scandinavian languages, and the West Germanic, including English, German, Flemish, Dutch, Afrikaans, etc.); and also Tocharian; and in the *satem* division Balto-Slavonic (Lithuanian, Russian, Polish, Slovene, Serbo-Croat, Bulgarian, etc.); Armenian, Albanian; and the Indo-Iranian languages – Zend, Persian, Sanskrit, Pali, and the modern Indian languages. The Caucasian family includes Georgian and perhaps Basque. The Hamito-Semitic contains the Ethiopian tongues, Aramaic, Hebrew, Arabic with Maltese, and also Berber, Egyptian, Somali, etc.

KINGSFORD SMITH, Sir Charles Edward (1897–1935). Australian airman. He made many record flights: across the Pacific in 1928, Australia to England 1929, and a transatlantic flight in 1930. He was the first airman to circumnavigate the world, and was knighted in 1932. His plane was lost between Baghdad and Singapore in 1935.

KINGSLEY, Charles (1819–75). British Anglican churchman and author. B. at Holne, Devon. he became curate and then rector of Eversley, Hants (1842–75). His press articles and his campaigning novels *Yeast* (1848), and *Alton Locke* (1850), earned him the title of the 'Chartist clergyman'. His later books incl. *Hypatia* (1851), *Westward Ho!* (1855), a tale of Elizabethan seamen, and *Hereward the Wake* (1866); and for children *The Heroes* (1856) and *The Water-Babies* (1863). He was prof. of modern history at Cambridge 1860–9, and subsequently canon of Chester, and from 1873 of Westminster. In 1864 his controversy with J. H. Newman prompted the latter's *Apologia* (1864). His brother Henry K. (1830–76), novelist, b. in Northants, was involved in an escapee which led to his emigrating to the Australian gold-fields (1853–8). His novels incl. *Geoffrey Hamlyn* (1859), based on his Australian experiences, and *Ravenhoe* (1862), dealing with the Crimea.

His younger dau. Mary St. Leger K. (1852–1931) m. a clergyman William Harrison and pub. under the pseudonym Lucas Malet novels such as *The Wages of Sin* (1891).

KINGSLEY, Mary Henrietta (1862–1900). British author and traveller. B. in Islington, the niece of Charles K., she recorded her experiences in *Travels in W. Africa* (1897), *West African Studies* (1899), etc.

She d. of enteric fever while tending Boer prisoners in the Simon's Town hospital.

KING'S LYNN. English seaport (bor.) at the mouth of the Great Ouse, Norfolk. Its industries incl. fishing, shipbuilding, rope and boot and shoe making. Fanny Burney was b. at K.L. Plans gradually to move 3,500 families from London to K.L. were agreed between K.L. and the L.C.C. in 1962. Pop. (1961) 27,554.

KINGFISHER

KING'S MEDAL. Two awards initiated in 1945: K.M. for courage in the cause of freedom, and K.M. for service in the cause of freedom, designed for Allied or other foreign civilians who assisted Britain in the S.W.W.

KING'S/QUEEN'S PROCTOR. In England the official representing the Crown in matrimonial cases. His chief function is to intervene in divorce proceedings to stop a decree *nisi* being made absolute if he discovers that material facts have been concealed from the court or that there has been collusion, or adultery by the petitioner since the decree, or any other cause against the dissolution of the marriage.

KINGSTON. (1) Cap. of Jamaica, W. Indies. It has an excellent harbour on the S. coast and is the cultural and commercial centre of the is. K. was rebuilt after an earthquake in 1907. It was founded 1693–1703, and made cap. of Jamaica in 1872. Pop. (1967) 525,290. (2) City of Ontario, Canada, on Lake Ontario, seat of Queen's Univ., with shipbuilding yards, engineering works, and grain elevators. It grew from 1782 round the French Fort Frontenac, captured by the English in 1758, and was named in honour of George III. Pop. (1966) 59,004.

KINGSTON-UPON-HULL. Official name of HULL.

KINGSTON UPON THAMES, Royal Bor. of.

English market town, bor. of Greater London, on the S. bank of the Thames, 10 m. S.W. of London; here the Saxon kings were crowned. The industries of K. incl. metalworking, and the making of plastics and paint. Pop. (1967) 145,240.

KINGSTOWN. See DUN LAOGHAIRE.

KING-TE-CHEN. Chinese town (now Fowliang) in Kiangsi, 80 m. N.E. of Nanchang, near Kao Ling (high hill), a world-famous centre for porcelain. The imperial porcelain factories were set up at K. in 1004. The local kaolin has been worked out, but supplies are obtained from Kimen, S. Anhwei. Pop. (1957) 92,000.

KINRO'SS. Smallest but one of the counties of Scotland, situated between Perth and Fife, and containing Loch Leven. K. is chiefly an agricultural region; the cap., also K., makes linens and woollens. Area 82 sq. m.; pop. (1961) co., 6,704; town, 2,365.

KINSALE. Seaport of Co. Cork, Rep. of Ireland, 14 m. S. of Cork. The *Lusitania* was sunk off K., 7 May 1915. Pop. (1961) 1,587.

KINSHASA. See LÉOPOLDVILLE.

KIPLING, Joseph Rudyard (1865–1936). British poet and author. B. in Bombay, the son of John Lockwood K. (1837–1911), curator of the Central Museum at Lahore (1875–93), he was ed. at the United Services College at Westward Ho, which provided the

By his cousin, Sir Philip Burne-Jones.

Photo: N.P.G.

background for *Stalky and Co.* (1899). His *Schoolboy Lyrics* were privately pub. in 1881, and he was engaged as a journalist in India 1882–9; during these years he wrote *Departmental Ditties*, *Plain Tales from the Hills*, *Soldiers Three*, *Under the Deodars*, *Wee Willie Winkie*, etc. Returning to London he pub. *The Light that Failed* (1890) and *Barrack Room Ballads* (1892), and m. in 1892 Caroline, the sister of the American Wolcott Balestier who collaborated with him in *Naulahka* (1891). He lived largely in the U.S.A. 1892–6, where he produced the short stories *Many Inventions* (1893), the *2 Jungle Books* (1894–5), and *Captains Courageous* (1897). Prior to the F.W.W. he pub. *Kim* (1901), the *Just So Stories* (1902), *Puck of Pook's Hill* (1906), and *Rewards and Fairies* (1910); and in 1907 was awarded a Nobel prize. Later works incl. war books, *Letters of Travel 1892–1913* (1920), *Thy Servant a Dog* (1930)

successive invasions, and although now settled in special villages, form only a small proportion of the population, numbering c. 20,000. They live by hunting, fishing, reindeer herding, and handicrafts.

LA PLATA (plah'tah). Capital of Buenos Aires prov., Argentina, founded in 1882, 5½ m. from its port Ensenada. Industries incl. meat packing and petroleum refining. It has a univ. (1897). Pop. (1968) 400,000.

LA PLATA, Rio de. See **PLATE**, R.

LAPWING. Bird (*Vanellus vanellus*) of the plover family, so named from its slow flight. It is also known as the green plover and – from its call – as the peewit. Bottle-green above and white below, it inhabits moorland in Europe (incl. Britain) and Asia, making a nest scratched out of the ground.

LARCENY. Under the Theft Act (1968: effective 1969) the offence of L. was replaced by a wider definition of theft as the dishonest appropriation of another's property with the intention of depriving him of it permanently: maximum penalty 10 yrs. imprisonment. Until 1827 L. was divided into 'Grand L. punishable by death or transportation for life, and 'Petty L., when the articles stolen were valued under a shilling, and in the U.S.A. the distinction survives.

LARCH. Genus of trees (*Larix*) of the Coniferae family. The common L. (*L. europaea*) was introduced to Britain in the 17th cent. and grows 80–140 ft. The small needle-like leaves are replaced every year by new bright green foliage which later darkens. Closely resembling it is the tamarack (*L. americana*), and both are timber trees. The golden L. (*Pseudolarix amabilis*), a native of China, turns golden in autumn but it is not hardy.

LARD. An edible fat prepared from the abdomen of pigs, but nowadays the term covers the whole body-fat of the pig. It is used in the manufacture of margarine, soap and ointment. Lard-oil, a clear, colourless liquid, is used for lubrication.

LARDNER, Ring (1885–1933). American short-story writer. A sporting correspondent, he based his characters on the people he met professionally and his collected vols. of short stories incl. his first *You Know Me*, *Al* (1916), *Round Up* (1929) and *Ring Lardner's Best Short Stories* (1938), all in a lively argot.

LA'RES. Roman household gods peculiar to each family, and whose shrine was the centre of family worship.

LARGS. Small Scottish burgh and resort on the Firth of Clyde, Ayrshire, 24 m. W. of Glasgow. The Scots defeated Haakon IV of Norway at L. in 1263. Pop. (1961) 9,100.

LARISA (lahrēs'ah). Greek town, cap. of L. dept., Thessaly. In ancient Greece it was the seat of the Council of Thessaly. Pop. (1961) 55,733.

LARK. Song bird (*Alauda arvensis*) found in the northern hemisphere, and migrating south in winter. It is about 7 in. long, with light brown plumage, and nests on the ground. It mounts in the air almost vertically and sings as it rises.

LARKIN, Philip (1922–). British poet. Ed. at St. John's Coll., Oxford, he gained success in 1955 with his vol. of poems, *The Less Deceived*, remarkable for their clarity and sensitivity. His other works incl. his first book of verse *The North Ship* (1945), and the novels, *Jill* (1946) and *A Girl in Winter* (1947).

LARKSPUR. See **DELPHINIUM**.

LARNE. Seaport (bor.) of Co. Antrim, N. Ireland, on Lough L., terminus of sea routes to Stranraer, Liverpool Dublin. etc. Pop. (1961) 16,313.

LA ROCHEFOUCAULD (rōshfookō), François, duc de (1613–80). French writer. B. in Paris, he became a soldier, and took part in the *Fronde*. His later years were divided between the court and literary society. His best-known work is his *Réflexions, ou Sentences et Maximes Morales* (1665), a collection of brief, epigrammatic and cynical observations on life and society.

LA ROCHELLE. See **ROCHELLE**, LA.

LAROUSSE (lahroos'), Pierre (1817–75). French grammarian and lexicographer. His *Grand Dictionnaire universel du XIX^e siècle* (1865–76) was an epoch-making achievement and continues in subsequent revisions.

LARVA. The first form of an insect as it emerges from the egg, as a grub, maggot, or caterpillar. It differs considerably from the adult insect which appears after metamorphosis.

LARYNGITIS (larinj'i'tis). Inflammation of the lining membrane of the larynx (q.v.). The acute form is due to a cold, excessive use of the voice, inhalation of irritating smoke, etc. The voice may be completely lost. With rest the inflammation usually subsides in a few days.

LARYNX. A cavity at the upper end of the windpipe containing the vocal cords, by which sounds are produced. It is stiffened with cartilage and lined with mucous membrane.

LA SALLE (sahl'), René Robert Cavalier, Sieur de (1643–87). French explorer. B. at Rouen, he undertook 1670–83 a number of journeys which led to the discovery of Lakes Ontario and Erie and of the Ohio and the Mississippi. He annexed Louisiana and Illinois to the Crown of France, but during a final expedition was killed by his own men in Texas.

LASCAR. An E. Indian seaman. The word derives from the Persian *lashkar*, 'army', 'camp', and Ls. were originally an inferior class of sepoys.

LAS CASAS (lahs-kah'sahs). Bartolomé de (1474–1566). Spanish priest, the 'apostle of the Indians'. B. in Seville, he took R.C. orders in 1510, and sailed for the Spanish colonies in America, where he opposed the ill-treatment and enslavement of the native Indians, and in 1530 persuaded the government to forbid slavery in Peru. He also laboured as a missionary, his *Historia de las Indias* (1875–6) was never completed.

LAS CASES (lahs-kahz'), Emmanuel Augustin Dieudonné Marin Joseph, count of (1766–1842). French historian. B. in Languedoc, he was driven from France by the Revolution, but later held office under Napoleon, and accompanied him to St. Helena: expelled by the English governor in 1816, he pub. the controversial *Mémoires de Ste. Hélène* (1821–3).

LASCAUX (lahskō) **CAVES**. Series of caverns near Montignac, in S.W. France, discovered by chance by 4 boys in 1940. They contain many paintings of the Aurignacian period, especially of animals and hunting scenes; the oldest, which are the oldest paintings known, date probably 20,000 years back.

LA'SDUN, Denys (1914–). British architect. Ed. at Rugby, he has a versatile distinction in his work which incl. the Peter Robinson store in the Strand, the Royal Coll. of Physicians in Regent's Park, science buildings for Cambridge, part of the Univ. of Leicester and the complete development of the new Univ. of E. Anglia. In 1963 he was appointed architect for the National Theatre and Opera House on the South Bank.

LA'SER. Acronym for Light Amplification by Stimulated Emission of Radiation. Device for producing a narrow highly parallel beam of light, capable of travelling over vast distances without dispersion, and of being focused to give enormous power densities (10⁴ watts per cm² for high-energy Ls.) and operating on a principle similar to that of the maser, q.v.

Many solid liquid and gaseous substances have been

the North Pacific and Bering Sea.

KIUKIANG (kūkyang'). River port in Kiangsi prov., China, on the Yangtze, c. 440 m. from its mouth. It deals in tea, tobacco, rice, etc., and was a treaty port from 1862 until the 1940s. Pop. (est.) 60,000.

KIUNGSHAN (kyoong-shan'). Port of Hainan, Kwantung prov., China, near the mouth of the Nantur, a treaty port from 1876 until the 1940s. It is a trade centre with cotton, sugar, and vegetable-oil mills. Pop. (est.) 50,000.

KIUSHIU. See KYUSHYU.

KIUSTENDIL. See KYUSTENDIL.

KIWI (kē'wi). Native name for a genus of nocturnal flightless birds (*Apteryx*) confined to New Zealand. It has long and hair-like plumage, a very long beak, and the egg is larger, in relation to the size of the body, than that of any other bird.

KLAIPEDA (klī'peda). Seaport in the Lithuanian S.S.R., on the Baltic coast at the mouth of the Dange r., with iron foundries, shipbuilding yards, and other industrial works. It was founded in 1252 as the castle of Memelburg by the Teutonic Knights, joined the Hanseatic League soon after, and has changed hands between Sweden, Russia, and Germany. Lithuania annexed K. in 1923, and after German occupation 1939-45, it was restored to Lithuania. Pop. (1967) 125,000.

KLAPROTH (klahp'rōt), Martin Heinrich (1743-1817). German chemist. 1st prof. of chemistry in Berlin from 1810, he is famous for his discovery of the elements uranium, zirconium, cerium, and titanium.

KLAUSENBURG. German name of CLUJ.

KLEBER (klehbār), Jean Baptiste (1753-1800). French general. B. at Strasbourg, he served in the Austrian Army, returned to France in 1783, and distinguished himself in the Revolutionary Wars. He succeeded Napoleon as commander in Egypt in 1799, and was assassinated by a Turkish fanatic.

KLEBS, Edwin (1834-1913). German physician. B. at Königsberg, he was prof. of pathological anatomy at Zürich (1882), and discovered the diphtheria bacillus.

KLEE, Paul (1879-1940). Swiss artist. B. near Berne, he studied at Munich, Paris, and Rome. In 1920 he went to the Bauhaus in Weimar, and in 1922 he became a prof. at the Düsseldorf academy. When Hitler rose to power in 1933 he returned to Berne. K. dwelt in a dream world, and has been attacked for plagiarizing infant formulas, but many find his work full of profound sensibility.

KLEIST (klīst), (Bernd) Heinrich Wilhelm von (1777-1811). German dramatist. B. at Frankfurt-an-der-Oder, he wrote tragedies and a comedy *Der zerbrochene Krug* (1811) as well as stories and poems, but achieved only a posthumous reputation. In a suicide pact, he killed first a girl-friend, and then himself.

KLEIST, Ewald von (1881-1954). German field marshal. He planned the

attack on Poland in 1939, and took part in the invasions of Belgium, France, Yugoslavia, and Russia. In 1945 he was captured by the Allies, and d. in Russia.

KLEMPERER, Otto (1885-). American conductor. B. in Germany, where he became noted for his interpretation of contemporary and classical (especially Beethoven) music, he was director of the Los Angeles Symphony Orchestra 1933-46.

KLEPTOMANIA. A symptom of insanity revealed by an overpowering desire to steal, and associated with many forms of mental aberration.

KLERKSDORP. Town of S. Africa, 100 m. S.W. of Johannesburg. Founded in 1837, it was the first Boer settlement in Transvaal; it is a cattle market and the centre of a gold-mining district. Pop. (1960) 43,067, including 19,017 white.

KLEVE (kleh've). Town in North Rhine-Westphalia, W. Germany, 35 m. N.W. of Duisburg, formerly cap. of the ancient duchy of Cleves (or K.), from which came Henry VIII's 4th wife, Anne of Cleves. It was completely destroyed during the S.W.W. but subsequently rebuilt. Pop. (est.) 25,000.

KLONDIKE. District of Yukon, Canada, E. and S. of K. river. It was the scene of a gold rush in 1896, which brought some 30,000 people to the area, but by 1910 most of the gold had been removed and the pop. dwindled. Latterly, silver-ore has been found.

KLOPSTOCK, Friedrich Gottlieb (1724-1803). German poet. His religious epic *Der Messias* (1745-73) and his lyric odes, with their flexible, subtle metres, and impressionistic, subjective vocabulary, prepared the way for the great age of 18th cent. German literature.

KLUCK (klook), Alexander von (1846-1934). German general. He commanded the 1st army which in 1914 invaded Belgium, expelled the British from Mons, and advanced to within 30 m. of Paris. He was driven back by the Allies on the Marne.

KNAPWEED. Wild flower common in Britain, Europe, and W. Asia, known also as hardheads. A member of the Compositae family (*Centaurea nigra*), it produces hard, bract-covered buds which break into composite heads of purple flowers.

KNARESBOROUGH. English market town (U.D.) in the W. Riding of Yorks, 4 m. N.E. of Harrogate. Linen and textiles are made. The castle dates from c. 1070. Eugene Aram (q.v.) hid the body of his victim in St. Robert's cave at K. Pop. (1961) 9,311.

KNEE. The hinge joint between the thigh bone and the shin bone. It consists, roughly, of two smooth, shallow cups (condyles of the tibia) within which fit two smooth rounded protrusions (condyles of the femur); in front, protecting it, is the kneecap.

KNELLER, Sir Godfrey (1646-1723). British portrait painter of German descent. Court painter to Charles II, William III and George I, he showed in his best works a strong grasp of character, e.g. the members of the Whig 'Kit-Cat Club'.

KNIGHT, Dame Laura (1877-). British artist. She excels in detailed, narrative painting of gypsies, of fairground and circus life, and of the ballet. See illus. p. 326. She m. in 1903 Harold K. (d. 1961), a portrait painter, and was created D.B.E. in 1929.

KNIGHTHOOD, Orders of. Fraternities carrying with them the rank of knight, admission to which is granted as a mark of royal favour or as a reward for

French, Spanish, and Portuguese. As Lat. literature had an influence on all subsequent European civilization, L., even beyond the Middle Ages, remained for long as the vehicle for learned works; it is still the official language of the R.C. Church. The striking merits of L. are its clarity and conciseness. Like Greek it is a highly inflected language, i.e. the grammatical functions of nouns, verbs, pronouns, and adjectives in a sentence is indicated by terminations which vary according to the meaning.

L. was not native to Italy. It was brought there about 1000 B.C. by wandering tribes from the N. who settled in Latium near the mouth of the Tiber. With the growing power of Rome it spread throughout Italy, and other competing languages gradually disappeared (e.g. Oscan, Umbrian, Etruscan). The conquest of Spain and Gaul extended the use and influence of L. outside Italy, but the Roman hold on Britain (A.D. 43–A.D. 410) was not firm enough to submerge completely the Celtic speech of the islanders.

From the 3rd cent. A.D. there has to be distinction between the literary or standard Latin used in speaking and writing by educated people, and the forms, generally known as Low or Vulgar L., spoken by ordinary people in the different parts of the western half of the Empire. A number of *patois* grew from the latter, and slowly became stabilized as the Romance languages.

LATIN AMERICA. The countries of S. and Central America (incl. Mexico) in which Spanish, Portuguese, and French are spoken. The L.A. Free Trade Association (1961: H.Q. Montevideo) links Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Paraguay, Peru, Uruguay, and Venezuela.

LATIN LITERATURE. Only a few hymns and inscriptions survive from the primitive period of L.L., before the 3rd cent. B.C. Greek influence began with the work of Livius Andronicus (c. 284–204 B.C.) who translated the *Odyssey* and Greek plays into Latin. Naevius and Ennius both attempted epics on patriotic themes; the former used the native 'Saturnian' metre, but the latter introduced the Greek hexameter. Plautus and Terence successfully adapted Greek comedy to the Latin stage. Lucilius (180–103 B.C.) founded Latin verse satire, while the writings of Catō were the first important works in Latin prose.

In the *De Rerum Natura* of Lucretius, the world's greatest philosophical poem, and the passionate lyrics of Catullus, Latin verse reached maturity. Cicero set a standard for Latin prose, in his orations, his philosophical essays, and his letters. To the same period belong the histories of Caesar.

The Augustan Age (43 B.C.–A.D. 17) is usually regarded as the golden age of L.L. There is a strong patriotic feeling in the work of the poets Virgil and Horace, and the historian Livy, who belonged to Augustus's immediate circle. Virgil produced the one great Latin epic in the *Aeneid*, while Horace brought a distinctive charm and polish to both the lyric and satire. Younger poets of the period were Ovid and the elegiac poets Tibullus and Propertius.

The 'Silver Age' of the Empire begins with the writers of Nero's reign: the Stoic philosopher Seneca, Lucan, author of the epic *Pharsalia*, the satirist Persius (A.D. 34–62), and, by far the greatest, the realistic novelist Petronius. At the end of the 1st and beginning of the 2nd cent. came 2 major writers, the historian Tacitus and the satirist Juvenal; other writers of the period were the epigrammatist Martial, the scientist Pliny the Elder, the letter-writer Pliny the Younger, the critic Quintilian, the historian Suetonius, and the epic poet Statius (c. 61–96).

The 2nd and 3rd cents. produced only one pagan writer of importance, the romancer Apuleius, but there were several able Christian writers, such as Tertullian, Cyprian, Arnobius (d. 327), and Lactantius (d. 325). In the 4th cent. there was something of a

poetic revival, with Ausonius (c. 310–90) and Claudian, and the Christian poets Prudentius (c. 348–410) and St. Ambrose. The classical period ends, and the Middle Ages begin, with St. Jerome's translation of the Bible, and St. Augustine's *City of God*.

Throughout the Middle Ages Latin remained the language of the Church, and was normally employed for theology, philosophy, histories, and other learned works. Latin verse, adapted to rhyme and non-classical metres, was used both for hymns and the secular songs of the wandering scholars. Even after the Reformation Latin retained its prestige as the international language of scholars, and was used as such, e.g. by More, Bacon, and Milton.

LATITUDE and LONGITUDE. Latitude is the angular distance of any point from the equator, measured N. or S. along the earth's curved surface, equalling the angle between the respective horizontal planes. It is measured in degrees, minutes, and seconds, each minute equalling one sea-mile in length. For map-making latitude is based on the supposition that the earth is an oblate spheroid. The difference between this (the geographical) and astronomical latitude is the correction necessary for local deviation of plumb-line.

Longitude is the angle between the terrestrial meridian drawn from the pole, through a place, and a standard meridian now taken at Greenwich. All determinations of longitude are based on the earth turning through 360° in 24 hours, or the sun reaching 15° W. each hour.

LATITUDINARIANS. Name applied to those Anglican divines, e.g. Tillotson and Stillingfleet, who after 1660 regarded episcopal govt. and forms of worship as things indifferent, and favoured modifications to reconcile Dissenters to the Church.

LATIUM. Ancient division of central Italy, originally the territory of the Latini. The modern Italian region of L. covers the provs. of Viterbo, Rieti, Rome, Frosinone, and Latina. Area 6,630 sq. m.; pop. (1961) 3,922,783; cap. Rome.

LATOUR (lahtoor), Georges de (1593–1652). French artist. His name was unknown until discovered by an art historian in 1863 and in the 20th cent. nos. of pictures attributed to others were identified as his. He served as court painter to the king and to the duke of Lorraine, and is especially noted for his 'night' style using the light of shielded candles, etc.

LATTAKIA. Port in Syria, c. 70 m. E. of Cape Andreas, Cyprus, cap. of L. district. It trades in olive oil, sponges, and locally grown tobacco. A Phoenician city, it was the Roman Laodicea ad Mare. The Crusaders took it from the Byzantine Empire in 1103, and Saladin captured it in 1188. Pop. (1960) 67,600.

LATTER-DAY SAINTS. See MORMONS.

LATVIA. An S.S.R. of the U.S.S.R. It lies on the Baltic between Lithuania to the S., and Estonia to the N. L. is low-lying and watered by many rivers, e.g. the Daugava, and there are numerous lakes. Formerly dependent on agriculture and forestry, L. has become predominantly industrial since the S.W.W. and produces electric railway rolling stock, telephone equipment and radios, steel and rolled metal, fertilizers, paper, textiles, and cement. Riga is the cap.

Before the F.W.W. L. formed part of the Russian Empire, but in Nov. 1918 it was proclaimed an independent rep., recognized by Russia in 1920. In 1939 Russia demanded military bases, granted in a pact of mutual assistance; 1940 brought demands for free passage of Russian troops and the formation of a govt. friendly to the Soviet Union, in which 2 months later L. was incorporated as a constituent rep. It was in German occupation 1941–4, the last Germans in the country not surrendering until May 1945. Area 25,000 sq. m.; pop. (1968) 2,298,000.

LATVIAN or Lettic. One of the 2 surviving members of the Baltic branch of the Indo-European

KODÁLY. Conducting a rehearsal of his own works at the Royal Festival Hall, the composer shows that eighty years put no limit to his finesse. To his right, the singer Dietrich Fischer-Dieskau studies a score. Photo: Godfrey MacDonnic.

poser. B. at Kecskemet, he studied at the Budapest Academy, where 1907–42 he was prof. of composition. With Bartók he collected Magyar folk music, and has written much chamber and instrumental music, the comic opera, *Háry János* (1926), 'Dances of Galanta', etc.

KO'DIAK. Island off the S. coast of Alaska, U.S.A., of which it forms part, site of the first white settlement in Alaska, 1784, and of a U.S. naval base. Area 5,363 sq. m. K. is the home of the world's largest bear.

KOESTLER (kerst'ler) Arthur (1905–). Anglo-Hungarian author. B. in Budapest and ed. as a scientist in Vienna, he became a foreign correspondent

KOBLENZ. In the 13th century the citizens built themselves new city walls and their overlords – Archbishop Hillin of Trier and his successors – strengthened their own defences at Ehrenbreitstein in retaliation. The castle, seen here on the farther (right) bank of the Rhine, is built on a cliff 400 ft. high, once the site of a Roman fort, and has since been much modified and reconstructed.

Courtesy of the German Tourist Information Bureau.

in the Middle East, and elsewhere, and later science editor for a German newspaper chain. He joined the Communist Party in 1931 and travelled in Russia and other Soviet countries, but was disillusioned a few years later and left, as described in *The God That Failed* (1950). His experiences while under sentence of death in Spain during the Civil War are told in *Spanish Testament* (1938: revised as *Dialogue with Death*) and inspired *Darkness at Noon* (1940). In 1940 he was imprisoned by the Nazis in France, the subject of *Scum of the Earth* (1941), but escaped to England and after the S.W.W. became a British subject. His later works incl. *Arrival and Departure* (1943), *The Yogi and the Commissar* (1945), both attacks on Communism; *The Sleepwalkers* (1959), a history of cosmology; *The Lotus and the Robot* (1960), exploring eastern philosophy; *The Act of Creation* (1964) analysing creativity; and *The Ghost in the Machine* (1967).

KOH-I-NOOR ('Mountain of Light'). A famous diamond, now one of the British Crown jewels. In 1849 it was presented to Queen Victoria by the East India Company.

KOHL-RABI (kōlrah'bi). A variety of kale (*Brassica oleracea*). The leaves shoot from a swelling on the main stem. The globular portion is used for food, and resembles a turnip.

KOKAND. Town of the Uzbek S.S.R., 330 m. E.N.E. of Bukhara, the centre of a fertile oasis. Industrial developments incl. a fertilizer factory, cotton and silk mills, and machine shops. K. was the cap. of K. khanate, annexed by Russia in 1876. Pop. (1967) 128,000.

KOKO'SCHKA, Oskar (1886–). Austrian painter. He studied in Vienna, and shocked public opinion by his first exhibition in 1907 and also by expressionist plays. Badly wounded as a cavalry officer in 1915, he taught at the Dresden Academy 1919–24, and subsequently wandered the world, living in London during the S.W.W. His impressions of cities are brilliant with colour, and give the same impression of psychological penetration as his human portraits: he also makes skilled use of myth and allegory.

KOKSTAD. Chief town of Griqualand East, 110 m. S.W. of Durban, South Africa, a centre for wool, cattle, cheese, and grain. It was named after the last Griqua chief, Adam Kok III. Pop. (1961) 8,803, incl. 3,000 white.

KOKURA. See under KITAKYUSHO.

KOLA. Peninsula in N. Russia, bounded by the White Sea on the S. and E., and by the Barents Sea on the N. It is coterminous with Murmansk region of the R.S.F.S.R. See MURMANSK.

KOLA NUT. The fruit of a W. African tree (*Cola acuminata*) cultivated in the S. and Central American tropics. The nut contains caffeine and is exported for use in refreshing beverages.

KO'LBENHEYER (-hī-er), Erwin Guido (1878–1962). German writer. B. at Budapest, in historical novels he interpreted life and thought of philosophers and mystics, e.g. Spinoza and Paracelsus. He also wrote the historical dramas *Giordano Bruno* (1893) and *Gregor und Heinrich* (1934).

KOLCHAK, Alexander Vasilievich (1875–1920). Russian admiral. He commanded the White forces in Siberia, and in 1918 proclaimed himself Supreme Ruler of Russia, setting up a provisional govt. at Omsk, and later at Irkutsk. He resigned in Denikin's favour, and was shot by the Bolsheviks.

KOLDEWEY (kōl'devä), Robert (1855–1925).

KOESTLER

he was reinstated by Hitler's orders as head of the govt. and For. Min. in 1942. His share in the deportation of French labour to Germany made him universally hated. On the Allied invasion he fled the country, but was arrested in Austria, tried for treason, and shot after trying to poison himself.

LA VALLIÈRE (lah vahlyär'), Louise de La Baume Le Blanc, duchesse de (1644–1710). Mistress of Louis XIV from 1661, to whom she bore 4 children. Created a duchess in 1664, she retired to a convent in 1674 when superseded by Mme de Montespan: she was slightly lame and had a sweetly winning personality.

LAVATER (lah'vater), Johann Kaspar (1741–1801). Swiss writer. B. in Zürich, where he became a pastor, he is remembered mainly for his work on physiognomy, *Physiognomische Fragmente* (1775–8).

LA VENDEE. See **VENDÉE**, LA.

LAVENDER. Sweet-smelling herb of the Labiate family, genus *Lavandula*, a native of the western Mediterranean countries. The bush (*L. vera*) is low-growing with long, narrow, erect leaves of a silver-green colour. The flowers (borne on a terminal spike) vary in colour from lilac to deep purple, and are covered with small fragrant oil glands. The oil is extensively used in pharmacy and perfumes.

LÄVER, James (1899–). British art expert, noted for his studies of fashion and costume, and keeper of the depts. of engraving, illustration, design and paintings at the Victoria and Albert Museum 1938–59.

LAVOISIER (lahvwhazyä'), Antoine Laurent (1743–94). French chemist. B. in Paris, he was appointed a farmer-general of taxes in 1769, and director of the govt. gunpowder factory in 1775, and received other important appointments. During the Revolution he was arrested with the other farmers-general, who were hated for their extortions, and guillotined. Although he carried on useful research on meteorology and agriculture, his greatest contribution was the overthrow of the phlogiston theory (a weightless 'fire element' liberated during combustion), which had stifled the development of chemistry for over a century. He showed in 1772 that burned sulphur and phosphorus increased in wt. because they absorbed 'air', and later, in burning metals, that only a part of 'common air' was consumed, which he called oxygen (Priestley's dephlogisticated air); the non-vital air, or nitrogen, being left behind. With Laplace he showed that water was a compound of oxygen and hydrogen, and founded on his oxygen theory the basic rules of chemical combination which survive to this day.

LAW, Andrew Bonar (1858–1923). British Cons. statesman. B. in New Brunswick, he made a fortune in Scotland as a banker and iron-merchant, and entered parliament in 1900. Elected leader of the Opposition in 1911, he became Colonial Secretary in Asquith's coalition govt. 1915–16, and was Chancellor of the Exchequer 1916–19, and Lord Privy Seal 1919–21, in the Lloyd George coalition. He formed a Conservative cabinet in 1922, but resigned on health grounds in 1923. His youngest son Richard Kidston L. (1901–), a Cons. M.P. from 1931, was Min. of State, 1943–5, and was created Baron Coleraine in 1954.

LAW, John (1671–1729). Scottish financier. B. in Edinburgh, he founded in 1716 the *Banque générale*, the first bank in France, and in 1717 estab. the Louisiana Co., which received a monopoly of American trade; this extended its operations to Asia in 1719, becoming the *Compagnie des Indes*. The bank and co. were amalgamated in 1720, but the scheme collapsed soon after. L. d. in Venice.

LAW, William (1686–1761). English churchman. His Jacobite opinions caused him to lose his fellowship at Emmanuel Coll., Cambridge, in 1714, and later he became tutor in the household of Edward Gibbon, the grandfather of the historian, at Putney.

After 1740 he lived in retirement at his birthplace, King's Cliff, Northants. His most famous work is *A Serious Call to a Devout and Holy Life* (1728), which influenced the Wesleys.

LAW. The body of rules and principles by which justice is administered in a state. The 2 main systems of European L. are Roman L. and English L. (qq.v.). English L. is (1) Common L., (2) Statute L. Common L. is unwritten and might be described as the basic code of justice necessary to any community. Statute L. consists of the specific Acts of Parliament enacted from time to time to regulate particular matters. See **INTERNATIONAL LAW**.

LAW COURTS. At the head of the English legal system stands the House of Lords, which hears appeals in both civil and criminal cases. Below it, on the civil side, comes the Supreme Court of Judicature; this is divided into the Court of Appeal and the High Court of Justice. The latter has 3 divisions, the Chancery Division, the Queen's Bench Division, and the Probate, Divorce, and Admiralty Division. The highest criminal court is the Court of Criminal Appeal. The criminal court for Greater London is the Central Criminal Court (the Old Bailey).

Minor civil cases are heard by the County Courts. The vast majority of criminal cases are heard by lay justices of the peace, exercising summary jurisdiction in petty sessions, or in London and certain larger provincial towns by stipendiary and metropolitan stipendiary magistrates. Graver offences are tried at Quarter Sessions or Assizes.

At the head of the federal judiciary in the U.S.A. is the Supreme Court which also hears appeals from the inferior federal courts and from the decisions of the highest courts of the states. The U.S. Courts of Appeals – organized in circuits – deal with appeals from the U.S. District Courts in which civil and criminal cases are heard. State Courts deal with civil and criminal cases involving state laws, the lowest being those of the justices of the peace, etc.

LAWES, Henry (1596–1662). English composer. B. in Wilts, he became a gentleman of the Chapel Royal, pub. 3 collections of *Ayres and Dialogues* (1653–8), and wrote the music for Milton's *Comus* (1634).

LAWES, Sir John Bennet (1814–1900). British agriculturalist. B. at Rothamsted, where he inherited the Rothamsted estates in 1822, he experimented with phosphates, and in 1842 produced 'superphosphate', the earliest patent manure. Aided by Sir J. H. Gilbert, he carried out further experiments in agriculture and stock raising, and in 1899 estab. the Lawes Agricultural Trust to supervise the work of the Rothamsted experimental station.

LAWLER, Ray (1911–). Australian playwright. B. in Melbourne, he became a factory hand at 13, then an actor. His play *The Summer of the 17th Doll* (1957) dealt with sugar cane-cutters on leave after the season's work and the passing of one man's physical supremacy: it was successful also abroad.

LAWLESS, Emily (1845–1913). Irish writer. B. in Ireland, the dau. of Lord Cloncurry, she wrote the novels *Hurricane* (1886) and *Grania* (1892), historical stories, and poems, *With the Wild Geese*.

LAW LORDS. The 9 Lords of Appeal in Ordinary, who, in England, together with the Lord Chancellor and other peers, make up the House of Lords in its judicial capacity. The L. L., who must have held judicial office or practised at the Bar for 15 years, hold the rank of baron, but their titles are not hereditary. They may now be 10 in number, and are never fewer than 7.

LAWN TENNIS. A racket-and-ball game invented in 1874 in England, and played on a level court. See diagram. The lively inflated rubber ball is about 2½ in. diam. and 2 oz. weight, and the racket about 27 in. long, with an oval head tightly strung with gut or nylon. The object of the game, which is called

Red Army at 15, later becoming a textile engineering specialist and Min. for Light Industry 1948–53. Also an economic expert, he became a first deputy premier in 1960 and in 1964 succeeded Khrushchev as P.M. (chairman of the Council of Ministers).

KOTOR. Yugoslav port at the head of the Gulf of K., with one of the most sheltered harbours on the Adriatic, on the site of the Roman Ascrivium. It is the seat of Greek Orthodox and R.C. bishoprics. Pop. (est.) 8,000.

KOTTBUS (kot'boos). Town on the Spree, cap. of K. dist., E. Germany. A centre of rail and road communication, with an airport, K. makes cloth, carpets, hats, etc. Pop. (est.) 75,000.

KOTZEBUE, August Friedrich Ferdinand von (1761–1819). German dramatist. B. at Weimar, he served the tsar of Russia and was murdered at Mannheim while on a secret mission. He is chiefly remembered for his comedies *Der Wildfang* (1800), and *Die deutschen Kleinstädter* (1803).

KOVNO. Russian form of KAUNAS.

KOWEIT. See KUWAIT.

KOWLOON. Peninsula on the Chinese coast forming part of the British Crown Colony of Hong Kong (q.v.). The town of K. is a residential area.

KRAGUJEVAC (krahgooyä'vats). Garrison town of Serbia, Yugoslavia. Pop. (1961) 52,491.

KRAKATOA. Is. volcano in Sunda Strait, Indonesia, between Java and Sumatra, whose eruption in 1883 caused widespread destruction and atmospheric phenomena. A tidal wave hit Java and Sumatra, where some 36,000 people were drowned.

KRAKOW (krak'ö). City of Poland, the cap. from c. 1300 to 1595, on the Vistula. K. is commercially important; railway wagons, paper, chemicals, etc., are made and there are tobacco and food factories. It has the

KRAKOW. In 1241 a bugler sounded the alarm from the tower of St. Mary's Church as the Tartars attacked the city and was killed before he finished the call. Today the same call is sounded every hour and is always suddenly broken off and left unfinished.

Courtesy of the Polish Travel Office 'Orbis'.

second-oldest univ. in central Europe (1364), at which Copernicus was a student, and a fine 14th cent. Gothic cathedral. It forms the voivodship (co.) of K. City, pop. (1966) 525,000, and is cap. of K. voivodship, area 5,925 sq. m., pop. (1966) 2,143,000.

KRAMATORSK (krahmahtorsk'). Town in the Ukrainian S.S.R., in the Donbas, 52 m. N. of Donetsk. It produces coal-mining machinery, steel, and ceramics, and has railway repair shops. Pop. (1967) 136,000.

KRASNODAR. Cap. of K. territory of the R.S.F.S.R., U.S.S.R. Situated to the N. of the Caucasus, at the head of navigation of the r. Kuban, it is an important industrial town, connected by petroleum pipeline with the Caspian oilfields. Pop. (1967) 395,000. The territory produces hemp, maize, etc.

KRASNOYARSK. Cap. of K. territory of the R.S.F.S.R., U.S.S.R., on the r. Yenisei. The territory is an agricultural area of modern development. Gold was discovered near the town, founded in 1628, and besides locomotive works, paper and saw mills, cement factories, etc., K. has a gold refinery and hydro-electric installations. Pop. (1967) 557,000.

KREBS, Sir Hans (1900–). British biochemist. B. in Germany, he was prof. at Sheffield 1945–54, and Whitley prof. at Oxford 1954–67. In 1953 he shared a Nobel prize in medicine for discovering the citric acid or 'K' cycle – the route by which food is converted into energy by living tissues.

KREFELD (kreh'felt). Town near the Rhine, 32 m. N.W. of Cologne, W. Germany. An important industrial and textile centre and rail junction, it is on the Westphalian coalfield. K. was nearly destroyed during the S.W.W. Pop. (1966) 223,479.

KRIPS. Noted for the uninhibited vigour of his interpretations, Krips is caught in an expressive moment in the recording studio. Photo: Godfrey MacDonnic.

KREISLER (kriz'-), Fritz (1875–1962). Austrian violinist. The son of a Jewish doctor, and the youngest student ever admitted to the Vienna Conservatoire, he also studied in Paris under Massart and Delibes. He was specially noted for his interpretation of the concertos of Brahms and Beethoven, and Elgar's violin concerto is dedicated to him. His own compositions incl. the music for the operetta *Apple Blossoms* and the 'Caprice Viennois'.

KREMENCHUG (krämenchoog'). Town on the Dnieper, Ukrainian S.S.R., U.S.S.R. Industries incl. production of road-building machines, railway wagons, and processed food; lumber and grain are items in its trade; and it has hydro-electric installations. Pop. (1967) 129,000.

KRENEK (shren'ek), Ernst (1900–). Austrian composer of Czech descent. B. in Vienna, he became internationally known through his jazz opera *Johnny Strikes Up* (1927), which was followed by *The Leap Over the Shadow*, *The Life of Orestes*, *Charles V*, etc. In 1938 he settled in U.S.A.

KREUTZER (krötsär'), Rodolphe (1766–1831). French violinist and composer of German descent, to whom Beethoven dedicated his violin sonata Op. 47, known as the K. Sonata.

KREUZNACH (kroits'nakh). W. German town in Rhineland Palatinate on the Nahe, 9 m. S. of Bingen, a spa and health resort. Pop. (1960) 35,000.

KRILIUM. Synthetic chemical, a powder developed by the Monsanto Chemical Co., U.S.A., and demonstrated in 1951, said to be a substitute for natural humus components. It is hoped to use it to increase the water-holding capacity of the soil, and its aeration, so reconditioning eroded desert areas.

KRIPS, Josef (1902–). Austrian conductor. B. in Vienna, he was conductor of the State Opera there 1933–8, returning to reorganize it in 1945, and conducted the London Symphony Orchestra 1950–4.

KRISHNA. A Hindu deity, the 8th incarnation of Vishnu, and hero of the Indian epic, *Mahabharata*.

KRISHNA MENON, Vengalil Krishnan (1897–). Indian politician. B. in Calicut, he went to London

1927. In 1935 he was killed in a motor-cycling accident. His account of the Arab revolt, *Seven Pillars of Wisdom*, was pub. privately in 1926, was abridged as *Revolt in the Desert* (1927), and appeared in a public edition after his death in 1935. Richard Aldington's *Lawrence of Arabia: A Fictional Inquiry* (1955) only temporarily endangered L.'s reputation, but Lawrence's *The Mint* (pub. in a limited edition in 1936 and publicly in 1955) was a crude account of life in the ranks which caused much disappointment.

LAWRENCE. City of Kansas, U.S.A., seat of Kansas Univ., opened 1866, and of Haskell Institute, largest Indian school in the U.S.A., opened 1884. L. has flour and paper mills, foundries, etc., and an army ordnance works. It was founded in 1854 by the New England Emigrant Aid Society, identified with the anti-slavery party. Pop. (1960) 32,858.

LAWRENCE. Town in Mass., U.S.A., established in 1845 to utilize power from the Merrimack Rapids on a site first settled in 1655. It makes woollens and other textiles, clothing, paper, radio equipment, etc. Pop. (1960) 70,933.

LAXNESS, Halldor Kiljan (1902–). Icelandic author. B. in Reykjavik, the son of a roadmender, he deals in such books as *The Great Weaver of Cashmere* (1927) and *Happy Warriors* (1956) with Icelandic life in the epic narrative manner of the early sagas, and in 1955 was awarded a Nobel prize.

LAYAMON (fl. 1200). English poet. A priest of Arley Regis, Worcs. he wrote the *Brut*, a chronicle of c. 30,000 alliterative lines on the history of Britain from the legendary Brutus onwards, which gives the earliest version of the Arthurian story in English.

LAYARD, Sir Austen Henry (1817–94). British diplomatist and archaeologist. B. in Paris, he travelled to the Middle East in 1839, conducted 2 expeditions to Nineveh and Babylon, 1845–51, and sent to England the specimens forming the greater part of the collection of Assyrian antiquities in the British Museum.

LAYE, Evelyn (1900–). British musical-comedy star. B. in London, she played in *Bitter Sweet* (London and N.Y., 1929–30), and has also appeared in such plays as *The Amorous Prawn* (1959). She m. the actor Frank Lawton in 1934.

LAY-READER. In the Church of England a layman permitted to read the lessons, or under licence from the bishop of the diocese to conduct morning or evening prayer.

LAZARISTS. Popular name for the Congregation of Priests of the Mission, an R.C. order founded by St. Vincent de Paul in 1626 in order to carry on religious teaching among the poor, and missionary work. The name is derived from the priory of St. Lazarus, their first house in Paris.

LAZIO. Italian form of LATIUM.

LEA. English river rising in Bedfordshire, flowing past Luton, Hertford and Ware, and bounding Herts and Essex, before it flows through Greater London to join the Thames at Blackwall. It is navigable for 28 m. The L. Valley Authority was estab. 1967 to make it a 'playground' for London.

LEACH, Bernard (1887–). British potter. His beautifully simple designs, influenced by a period of study in Japan, pioneered the modern revival of the art. He estab. the L. Pottery at St. Ives in 1920.

LEACOCK, Stephen Butler (1869–1944). British humorous writer. B. in Hants, he lived in Canada from 1876, and was head of the dept. of economics at McGill Univ., Montreal, 1908–36. He pub. works on politics and economics, studies of Mark Twain and Dickens, but is best known for his humorous writings, such as *Literary Lapses* (1910), *Nonsense Novels* (1911), and *Frenzied Fiction* (1918).

LEAD. One of the 4 most used and produced metals, the end product of the uranium-radium and thorium series, symbol Pb (Lat. *plumbum*), at. wt. 207.21 and at. no. 82. Known since prehistoric times

(mentioned in Exodus), it is a bluish-grey, and the heaviest, softest and weakest of common metals; it lacks elasticity and is a poor conductor of electricity. It is one of the cheapest shields for radio-active sources, and is widely used in plumbing (some Roman pipe drains are still in use), for containing corrosive liquids, for biological shielding, for cable coverings, storage batteries, ammunition and low-melting alloys. It is also used in the manufacture of lead tetraethyl, an anti-knock additive to petrol, and in paints, especially white L. (basic lead carbonate PbCO₃), sublimed white L. (lead sulphate PbSO₄), red L. (lead oxide Pb₂O₃), and chrome yellow (lead chromate PbCrO₄). Galena (PbS) is the principal mineral ore from which L. is obtained by a roasting process. Some L. salts are used in medicine as antiseptics and astringents. L. is a cumulative poison.

LEAF. Term applied to any lateral outgrowth on the stems of plants, but chiefly referring to those which constitute the foliage. Foliage leaves are composed of 3 parts: the *sheath* or leaf-base, the *petiole* or stalk, and the *lamina* or blade, the last named being traversed by a network of veins. The chief leaf structures are: cotyledon (seed leaves); scale-leaf (on underground stems); foliage leaf (having the distinctive functions of assimilating carbon and other nutrient substances, the absorption of light, and constituting the respiring and transpiring organ of the plant); and bract (in the axil of which a flower is produced). A *simple* leaf is undivided, e.g. as in the aspen tree; a *compound* leaf is composed of several leaflets, e.g. the blackberry. Leaves that fall in the autumn are termed *deciduous*, and evergreens are *persistant*.

LEAF INSECTS. Family of insects (Phyllidae) of the order Phasmoda, with a depressed and leaf-like body, remarkable for closely resembling the foliage on which they live. They are most common on islands from the Indian Ocean to the Pacific.

LEAGUE OF NATIONS. International organization for the prevention of war estab. in 1920 with H.Q. at Geneva, but superseded by the U.N. in 1945. Its Covenant, drawn up by a special commission of the Paris Peace Conference, presided over by Pres. Wilson, was incorporated in the Versailles and other peace treaties. Members undertook to preserve the territorial integrity of all, and to submit disputes to the L. of N. or to arbitration.

Although successful in the humanitarian field (aid to refugees; international action against epidemics, drug traffic and slave trading; and improvement of working conditions through I.L.O., q.v.), it was hampered by internal rivalries and the necessity of unanimity on major political issues. No action was taken against Japan's aggression in Manchuria (1932); attempts to apply sanctions against Italy for her attack on Ethiopia collapsed (1935–6); no move was made against Germany for aggression in Austria, Czechoslovakia and Poland; and expulsion of Russia in 1939 had no effect on the Russo-Finnish War–Japan (1932) and Germany (1933) simply withdrew.

LEAKEY, Louis Seymour Bazett (1903–). British archaeologist. B. at Kabete, Kenya, he was ed. at St. John's Coll., Cambridge, and in 1958 made discoveries of gigantic fossils in the Olduvai Gorge (q.v.). He was curator of Coryndon Museum, Nairobi, 1945–61, and worked as a handwriting expert for Nairobi, C.I.D. 1943–51. Among his books are *Stone Age Africa* (1936) and *The Pleistocene Fossil Suidae of East Africa* (1958). His wife Mary L., also an archaeologist, found the skull of an ape of the Miocene period on Rusinga Island, Lake Victoria: known as Proconsul, it is some 25,000,000 years old.

The discoveries in Kenya by L. and his wife in the field of human ancestry from 1959 incl. the oldest member of the stock which gave rise to true man *Kenyanthropus Africanus*, a pre-man 20,000,000 yrs.

the Volga. K. is the centre of the fertile middle Volga plain; industries incl. making of aircraft, locomotives, cables, synthetic rubber, textiles; petroleum refining, quarrying; K. hydro-electric installation reached its projected capacity of 2.3 million kilowatts in 1957. Founded as Samara in 1586, it was renamed K. in 1935. K. was the provisional cap. of the U.S.S.R. 1941–3. Pop. (1967) 969,000. K. region produces oil, shale, limestone, gypsum, etc., wheat sunflower seed, fruit, and livestock.

KUBYSHEV SEA is an artificial lake in K. reg. created in the 1950s by damming the Volga r.; it is 300 m. long by 20–5 m. wide.

KU KLUX KLAN. American secret society. Two have existed; the first, estab. as a social club in Tennessee in 1865, later adopting hooded white robes, etc., developed into an organization for maintaining white supremacy in the S. and opposing the U.S. Congress reconstruction programme. It declined after the withdrawal of occupation forces from the S. in 1877. The 2nd K.K.K., formed in 1915 on an anti-Jewish-Catholic-Negro basis, also declined from 1928, till racial violence flared in the 1950s and 1960s.

KULAK (kōō'lak; literally 'fist'). Russian term for a rich peasant who could afford to hire labour, and often acted as village usurer. They resisted the Soviet govt.'s policy of collectivization, and in 1930 they were 'liquidated as a class', about a million families being banished to eastern Russia.

KUANYIN. This massive statue completed in 1961 towers 170 ft. above the top of Otsubo-Yama hill S.E. of Tokyo; and is meant to console the souls of those who died in the Second World War. Sightseers can climb to the head of the statue and look over Tokyo Bay. Photo: Planet News

KUMASI (koomah'sē). Town in Ghana, W. Africa, cap. of Ashanti reg. It trades in cattle, cocoa, and rubber, and has an aerodrome. In the 4th Ashanti War, 1900, Sir Frederic Hodgson, the Gov. of the Gold Coast Colony, his wife, his staff, and a small garrison were besieged in K. from March to July. K. is the seat of Kwame Nkrumah Univ. of Science and Technology (1961), founded as the K. College of Technology (1951). Pop. (1960) 190,323.

KUNG-FU. See JUDO.

KUNIYOSHI (kōōniyōsh'i), Yasuo (1893–1953). Japanese-born American artist. Going to the U.S.A. in 1906, he had a gift for fantasy and an exactly

humorous precision, later approaching Surrealism.

KUN-LUN (kun-loon'). Name applied to mountain ranges on the N. edge of the great Tibetan plateau, stretching for 2,500 m. E. to W. Some of the summits exceed 20,000 ft.

KUNMING (koonming'). Cap. of Yunnan prov., China, seat of Yunnan Univ., an ancient city and an

KU KLUX KLAN. The fiery cross associated with the society is raised during a Klan meeting at Maryville, Tennessee.

Photo: United Press International.

important road, water, and railway centre, Chinese terminus of the Burma Road. K. stands on Lake Tien Chih. Chief industry is copper smelting with power from hydro-electric works built nearby in 1912. Pop. (1957) 880,000.

KUOMINTANG (National People's Party). Chinese nationalist party, founded by Sun Yat-sen (q.v.) in 1894, and responsible for the overthrow of the Manchu Empire 1912. In alliance with the Com-

munists, the power of the warlords was broken and China unified during 1924–7, when Chiang Kai-Shek's right wing launched a reign of terror against the Communists, only interrupted to resist the Japanese invasion of 1937–45, and breaking out again 1945–9, when the K. were driven from the mainland to Formosa, which is maintained by American aid as an island fortress.

KUPKA (koop'kah), František (1871–1957). Czech artist. A pioneer of abstract art, he experimented with geometric forms and colour masses.

KUPRIN (koopryen'), Alexander Ivanovich (1870–1938). Russian novelist. His most important book is the realist story of army life *The Duel* (1905). After 1917 he settled in Paris.

KURDISTAN (koordistahn'). Hilly region in S.W. Asia, S. of the mountains of Ararat, divided between Persia, Iraq, and Turkey. The area inhabited by Kurds in Persia was formerly the prov. of Ardelan, incl. in 1938 in the 5th prov., sometimes called Kermanshah; its chief town is Sanandaj or Sinneh. After indecisive military operations 1961–5, the Kurds of Iraq gained representation in the govt. 1967, and in 1968 a Kurdish Academy and Univ. were estab. The Kurds, a nomadic people, number 3,000,000.

KURE (koo're). Naval base and port 20 m. S.E. of Hiroshima, on the S. coast of Honshu, Japan. K. has shipyards and engineering works. The Japanese fleet surrendered in K. Bay to the Allies 14 Aug. 1945. Pop. (1965) 225,000.

KURILES (koor'ilz). Chain of c. 50 small islands stretching from the N.E. of Hokkaido, Japan, to the S. of Kamchatka. Some of them are of volcanic origin. They were discovered in 1634 by a Russian navigator and were settled by Russians. Japan seized them in 1875 and held them until 1945, when under the Yalta agreement they were returned to Russia. Area 5,700 sq. m.; pop. (est.) 15,000.

KUROPATKIN (kooropah'tkin), Alexei Nikolaievich (1848–1921). Russian general. He won a high reputation during the Russo-Turkish War of 1877–8, was C.-in-C. in Manchuria in 1903, and resigned after his defeat at Mukden. During the F.W.W. he

them the popular *La Fille de Madame Angot* (1873).

LECONTE DE LISLE (lekont-de-lël), Charles Marie René (1818-94). French poet. B. on Réunion, he settled in Paris in 1846 and headed Les Parnassiens (q.v.) 1866-76. Distinguished by perfection of versification and form, his work drew inspiration from the ancient world, e.g. *Poèmes antiques* (1852), *Poèmes barbares* (1862) and *Poèmes tragiques* (1884).

LE CORBUSIER (korbüsya'). Pseudonym of the French architect Charles Edouard Jeanneret (1887-1965). B. in Switzerland, he was originally a painter and engraver, but turned his attention to the problems of modern industrial society. For L.C. the house is a habitable machine which should be designed according to functional criteria. He won the contest for the Palace of the Nations at Geneva, devised town-planning schemes for Algiers, Barcelona, Buenos Aires, and Nemours (Algeria), and planned Cité Radieuse, Marseilles and Chandigarh, India. *Le Modulor* (1948) explains his mathematical system for proportioning and relating the parts of buildings.

LECOUVREUR (lekoovörör), Adrienne (1692-1730). French actress. She gained fame at the Comédie Française, where she made her début in 1717, and had many admirers, incl. Voltaire. The duchesse de Bouillon, a rival mistress of Maurice de Saxe, is thought to have poisoned her.

LE'DA. In Greek mythology the wife of Tyndareus and mother of Clytemnestra. She was loved by Zeus in the form of a swan, and by him became the mother of Helen of Troy, Castor and Pollux.

LEDBURY. Market town (U.D.) in Herefordshire, England, 13 m. E. of Hereford, and famous for its old timbered buildings, especially the market house. L. trades in cider. Pop. (1961) 3,632.

LEDERBERG (läd'er-), Joshua (1925-). American geneticist. Prof. at Wisconsin 1954-8, and at Stanford from 1959, he shared a Nobel prize in 1958 with G. W. Beadle (q.v.) and E. L. Tatum, for his work on bacterial genetics.

LLEDWIDGE, Francis (1891-1917). Irish poet. B. in co. Meath, the son of a peasant, he began writing poetry while working as a roadmender. He was killed in the F.W.W. His vols. of verse, incl. *Songs of the Fields* (1916), and *Last Songs* (1918), show an intimate lyrical quality.

LEE of Fareham (fahr'am), Arthur Hamilton Lee, 1st visct. (1868-1947). British statesman. B. at Bridport, Dorset, he became a Conservative M.P. in 1900, was civil lord of the Admiralty 1903-5, Min. of Agriculture and Fisheries 1919-21, and 1st Lord of the Admiralty 1921-2. He was well known as an art connoisseur and philanthropist. See **CHEQUERS**.

LEE, Jennie (1904-). British Labour politician. The dau. of a Fifehire miner, she m. Aneurin Bevan (q.v.) in 1934. She was an M.P. 1929-31 and from 1945, and in 1964 was made specially responsible for the arts (from 1967 as Minister of State, Dept. of Education and Science).

LEE, Nathaniel (c. 1653-92). English dramatist. B. at Hatfield, he was ed. at Westminster and Cambridge. After an unsuccessful attempt to become an actor,

he wrote from 1675 a number of bombastic tragedies, the best of which was *The Rival Queens* (1677). His dissipated life led to temporary insanity, and he d. in a fit of intoxication.

LEE, Robert Edward (1807-70). American gen. B. in Virginia, he was commissioned in 1829, served in the Mexican War, and in 1859 suppressed John Brown's raid on Harper's Ferry. On the outbreak of

the Civil War he joined the Confederates, and became military adviser to Pres. Davis. In 1862 he received the command of the army of N. Virginia and won the Seven Days' Battle against McClellan. During 1862-3 he made several raids into Northern territory, winning victories at Fredericksburg and Chancellorsville, but after his defeat at Gettysburg was compelled to take the defensive. He surrendered in 1865 at Appomattox Court House. He is recognized as one of the world's greatest strategists.

LEE, Sir Sidney (1859-1926). British man of letters. He joined the staff of the *Dictionary of National Biography* in 1883, and was joint editor with Sir Leslie Stephen in 1890, and editor from 1891. He pub. lives of Shakespeare (1898) and Queen Victoria (1902).

LEECH, John (1817-64). British caricaturist. B. in London, he studied medicine before turning to art. He illustrated many books, incl. Dickens' *Christmas Carol*, and during 1841-64 contributed c. 3,000 humorous drawings and political cartoons to *Punch*.

LEECHES. Worms in the class Hirudinea. They inhabit fresh water, and in tropical countries infest damp forests. As blood-sucking animals they are injurious to man and beast, to whom they attach themselves by means of a strong suckorial mouth. Formerly the medicinal leech (*Hirudo medicinalis*) was used for blood-letting. Some Ls. live in the sea, e.g. the rock L. which infests sharks, etc.

LEEDS. English city (co. bor.) in the W. Riding of Yorks on the Aire, principal seat of woollen manufacture, and market and rail centre with canal communication to Liverpool and Goole. L. has been connected with the woollen manufacture since the 14th cent. Engineering assumed primary importance

with the Industrial Revolution, but cloth and clothing manufacture remain the leading industries. Others incl. printing and the making of locomotives, machinery, aeroplane parts, chemicals, pottery, and glass. L. univ. was estab. in 1904. Pop. (1961) 510,597.

LEEK. Plant of the Liliaceae family. The cultivated L. (*Allium porrum*) is a variety of the wild *A. ampeloprasum* of Europe and Asia, and the lower leaf-parts are eaten as a vegetable. When fighting the Anglo-Saxons the Welsh, under St. David's instructions,

wore Ls. in their hats and it remains their national emblem.

LEE KUAN YEW (1923-). Singapore statesman. A third generation Straits Chinese, he studied law at Cambridge, became a founder-member of the left-wing People's Action Party (P.A.P.), and P.M. of Singapore 1959.

LEEUWARDEN (lä'wahrden). City of the Netherlands, cap. of Friesland prov. Noteworthy buildings incl. the palace of the stadholders of Friesland, and the church of St. Jacob. L. is a marketing centre, and makes gold and silver ware. Pop. (1961) 83,161.

LEEUWENHOEK (lä'wenhook'), Anthony van (1632-1723). Dutch anatomist and pioneer microscopist. B. at Delft, he turned from business to microscopic research, investigated the structure of the red blood corpuscles, spermatozoa in animals, yeast, etc.

LEEWARD (loo'ahrd) ISLANDS. A general term for the N. half of the Lesser Antilles in the West Indies. The British L.I. comprise (i) Montserrat, area 32½ sq. m., pop. (1966) 14,464; (ii) Anguilla, area 50 sq. m., pop. 5,800; Nevis, area 50 sq. m., pop. 13,000; St. Kitts, area 68 sq. m., pop. 39,000; (iii) Antigua,

ROBERT E. LEE

Macao (qq.v.). Long ranges of hills run parallel with the coast. Rice, fruit, vegetables, silk, and manganese are produced. The coastal fishing industry is centred on Canton, cap. of the prov. Area 89,300 sq. m.; pop. (1957) 37,960,000.

KWANGTUNG was also the name of a Moslem enclave in Kansu prov., 45 m. S.S.W. of Lanchow, set up in 1953; and of a coal-mining district in Yunnan, 50 m. W. of Kunming. See also LAOTUNG PENINSULA.

KWEICHOW. Province of S. China, lying N.W. of Kwangtung. Drained by the Wu Kiang in the N., the Peipan Kiang in the S., it is noted for mercury; other products incl. rice, wheat, maize, tung oil, and silk. The cap. is Kweiyang. Area 67,100 sq. m.; pop. (1957) 16,890,000.

KWEISUL. Chinese name of HUBEHOT.

KYD, Thomas (c. 1557–95). English dramatist. He followed his father's profession as a scrivener, and c. 1588 wrote *The Spanish Tragedy*, which anticipated elements present in *Hamlet*.

KYŌ TO. Japanese city of Honshu situated near Biwa Lake, with which it is linked by canal. Among its industries are silk weaving and manufacture, embroidery, porcelain, and bronze and lacquer ware. K. was founded, as Uda, in the 8th cent. and was the Japanese cap. 794–1868. Pop. (1965) 1,365,000.

KYUSHU (kū'shoo). Most southerly of the main islands of Japan, separated from Shikoku and Honshu by Bungo Channel and Suo Bay, but connected to Honshu by a railway tunnel. The coast is very broken. The island is very mountainous, though the peaks are not very high. The active volcano Naka-dake (4,340 ft.) has the world's largest crater. There are coalfields, and gold, silver, iron and tin are mined. Agricultural products incl. rice, tea, and tobacco. The principal towns are Nagasaki, the cap. (q.v.), Kagoshima, Kumamoto, and Fukuoka. Area, incl. about 370 small islands, 16,247 sq. m.; pop. (est.) 12,937,000.

KYUSTENDIL. Town in S.W. Bulgaria, 43 m. S.W. of Sofia, notable for its hot springs. Pop. (est.) 20,000

L Twelfth letter of the Roman alphabet. The sound represented is one of the most stable in all languages; in some languages it tends to be lost between a back vowel and a consonant, as in Eng. 'half', 'should', etc.

LABELLED COMPOUND. A compound in which an isotope (usually radioactive) is substituted for a normal atom. Thus labelled, the path taken by the compound can be readily followed, and its quantity measured, by geiger counters, etc. This powerful and sensitive technique is used in science and industry.

LABIATAE. Family of dicotyledonous plants comprising some 200 genera with 3,000 species. Among their outstanding characteristics are the square stem, the hairy leaves, the arrangement of the flowers in small groups on the stem, and the hooded form of the petals. The family includes lavender, rosemary, thyme, sage and mint.

LABOUCHERE (la'bōōshār), Henry Du Pré (1831–1912). British journalist. A Liberal M.P. 1880–1905, he in 1877 estab. the weekly *Truth*, in which he exposed political, social and business scandals.

LABOUR DAY. The annual festival of the Labour movement, celebrated since 1890 on 1 May, or the first Sunday in May. In the U.S.A. and Canada L.D. is observed on the first Monday in Sept., and is a legal holiday.

LABOUR PARTY. British working-class and Socialist party. Although Keir Hardie and John Burns entered Parliament independently as Labour M.P.s. in 1892, it was not till 1900 that a conference representing the trade unions, the Independent Labour Party and the Fabian Society (qq.v.) founded the L.P., known until 1906, when 29 seats were gained, as the Labour Representation Committee. All but a pacifist minority of the L.P. supported the F.W.W., and in 1918 a Socialist programme was first adopted, with local branches of the party being set up to which individual members were now admitted. By 1922 the L.P. was recognized as the official Opposition, and in 1924 formed a minority govt. (with Liberal support) for a few months under J. R. MacDonald (q.v.). A second minority govt. in 1929 followed a conservative policy, completely failing to deal with unemployment, and in 1931 MacDonald and other leaders, faced with a financial crisis, left the party to support the National government. The I.L.P. (q.v.) seceded in 1932. In

1936–9 there was internal dissension on foreign policy, the leadership's support of non-intervention in Spain being strongly criticized, and Sir Stafford Cripps, Aneurin Bevan and others being expelled for advocating an alliance of all left-wing parties against the Chamberlain govt.

The L.P. supported the Churchill war-time coalition from 1940, in which most of its leaders held office, but in 1945 withdrew to win 393 seats and take office for the first time as a majority govt. with Attlee as P.M. It pursued a policy of developing the Welfare State by nationalization (q.v.) of essential services and industries, and establishment of a fully comprehensive system of national insurance (1946) and of the National Health Service (1948). Returned with a reduced majority in 1950, the L.P. was further weakened by the emergence of a dissident group under Aneurin Bevan, which incl. Harold Wilson, and was defeated in 1951. Disagreement over further nationalization, and multilateral or unilateral disarmament continued, but Gaitskell created a more united front and under Wilson, leader from 1963, Labour returned to power in 1964, pledged to national economic planning; greatly increased majority 1966.

Policy is decided by the annual conference of delegates from constituency organizations and the trade unions, who form a large part of the L.P.'s membership and by paying their union's political levy contribute a considerable proportion of its funds. In 1968 following clashes between policy decisions at the annual conference and those of the Labour govt., govt. mins. were to be asked by the L.P. nat. executive to explain such decisions as did not comply with those of the conference. The chairman and leader of the party is elected by the Parliamentary L.P. by ballot, and during periods in opposition there is an annual ballot to elect members of the Parliamentary Committee – popularly known as the Shadow Cabinet – who each take responsibility in opposition for one particular aspect of govt. The L.P., the T.U.C. and the Co-operative movement together form the National Council of Labour, in order to co-ordinate political activities and take joint action on specific issues. The Fabian Society is the most important affiliated political body.

LABRADOR. Peninsula in N.E. Canada, lying between Ungava Bay on the N.W., the Atlantic on

LEHMANN (lä'man), Rosamond Nina (c. 1904–). British novelist, author of *Dusty Answer* (1927), *Invitation to the Waltz* (1932), *The Ballad and the Source* (1944), and *The Echoing Grove* (1953). Her sister, Beatrix L. (1903–), is a distinguished actress in such roles as Lavinia in *Mourning becomes Electra* and Miss Bordereau in *The Aspern Papers*. Her brother, John Frederick L. (1907–), a publisher, was founder-editor of *New Writing* in 1963 and ed. *London Magazine* 1954–61.

LEIBNIZ (lib'nits), Gottfried Wilhelm (1646–1716). German philosopher and mathematician. B. at Leipzig, he soon showed a versatile genius, and at the age of 20 was offered a professorship at the univ. of Altdorf. He dedicated his *Nova methodus docendi discendique Juris* (1667) to the elector of Mainz, who employed him on political missions. The French king invited L. to Paris, where he met Christian Huygens, who revived his interest in mathematical problems. About this time L. invented a calculating machine, and in 1673, while engaged on a political mission to London, was elected a fellow of the Royal Society. After his return to Paris, he resumed his mathematical investigations, and devised a new form of differential and integral calculus. He also left the service of the elector for that of the dukes of Brunswick-Lüneburg. In his *Systema Theologicum* (1686), he sought to promote a reunion of the Protestant and Catholic Churches. *Essais de Théodicée sur la bonté de Dieu, la liberté de l'homme, et l'origine du mal* (1710), *La Monadologie* (1714), and *Principes de la nature et de la grâce* (1714), are his main philosophical works. In his view the universe consists of a number of monads in harmony with each other and with God; therefore this is the best of all possible worlds, and faith and reason are not in conflict.

LEICESTER (les'ter), Robert Dudley, earl of (c. 1532–88). English courtier. Son of the duke of Northumberland, he was created E. of L. in 1564. His good looks won him the favour of Queen Elizabeth, who might have married him if he had not been previously married to Amy Robsart. When his wife d. in 1560, Dudley was suspected of murdering her. Elizabeth gave him command of the army sent to the Netherlands in 1585–7, and of that prepared to resist the threatened Spanish invasion of 1588.

LEICESTER. English city (co. bor.) and co. town of Leics, on the Soar, 97 m. N.W. of London. As the Roman *Ratae Coritanorum*, estab. A.D. 50, it is one of the oldest towns in England. Its twice-weekly market dates from the 13th cent., and the guildhall (used as a town hall 1563–1876) from the 14th. Industries incl. the making of hosiery, boots and shoes, and elastic fabrics, and light engineering. The univ. (1557) was founded in 1918 as a univ. coll. The first excursion arranged by Thomas Cook was by rail from Leicester to Loughborough in 1841, fare 1s. Pop. (1961) 273,298.

LEICESTER OF HOLKHAM, earl of. See COKE.
LEICESTERSHIRE. A midland county of England. It is mainly low-lying. The Soar valley runs S. to N., dividing Charnwood forest from the E. uplands; other rivers are the Avon and Welland. The Angles reached L. in the 6th cent., and it was later subjugated by the Danes. Hosiery making, centred on Leicester and Loughborough, is the principal manufacture. The loamy soil affords rich pasture for cattle, and in the W. wheat and other cereals flourish. Hunting and

horse breeding are popular, while the mineral resources incl. coal, limestone, and granite. The principal towns are Leicester, the co. town, Loughborough, Hinckley, and Coalville. Area 834 sq. m.; pop. (1967) 723,730.

LEIDEN, LEIJDEN. Variant spellings of LEYDEN.
LEIF ERICSSON (lēf er'ikson) (fl. 1000). Viking explorer, the son of Eric the Red, who colonized Greenland. He is said to have discovered 'Vinland', generally identified with Nova Scotia.

LEIGH (lē), Vivien (1913–67). British actress, née Hartley. A student at R.A.D.A., she rapidly achieved success in roles which demanded a combination of fragile beauty and vivacious fire, such as Sabina in *The Skin of Our Teeth*; *A Streetcar Named Desire* and *Caesar and Cleopatra* (both filmed), and the films *Lady Hamilton*, *Anna Karenina* and *The Roman Spring of Mrs. Stone*. She m. in 1932 Leigh Holman (div. 1940), and was the wife of Sir Laurence Olivier, with whom she played in *Antony and Cleopatra*, etc., from 1940 to 1960.

LEIGH. English industrial town (bor.) in Lancs, 13 m. W. of Manchester. Its industries incl. textiles and coal mining. Pop. (1961) 46,153.

LEIGH-MALLORY, Sir Trafford (1892–1944). British air chief marshal. He served in the F.W.W., and subsequently held staff appointments. As A.O.C. Fighter Command 1937–41, he organized the defence during the Battle of Britain. He was C-in-C. of Allied air forces during the invasion of France, and was killed in an air crash.

LEIGHTON (lē'ton), Clare (1899–). British artist, noted for the wood engravings with which she illustrates her own books, e.g. *Country Matters* (1937) and classics such as Hardy, and Emily Brontë.

LEIGHTON, Frederick, baron (1830–96). British artist and sculptor. B. at Scarborough, he spent most of his early life on the Continent, and achieved fame in 1855 with his 'Cimabue's Madonna Carried in Procession'. Most of his works represented historical, especially classical, subjects, e.g. 'Captive Andromache' (1888), 'The Bath of Psyche' (1890), and 'The Return of Persephone' (1891). He was elected R.A. in 1868, P.R.A. in 1878, and was raised to the peerage in 1896.

LEIGHTON (lē'ton), Margaret (1922–). British actress. Beginning in Birmingham's repertory co., she was soon a member of the Old Vic. Her controlled intensity of style suited such plays as Eliot's *The Cocktail Party*, Rattigan's *Separate Tables* and Tennessee Williams' *The Night of the Iguana*. Both her marriages, to Max Reinhardt and Laurence Harvey, were dissolved: she m. 1964 Michael Wilding.

LEINSDORF (linz'-), Erich (1912–). Viennese-born American conductor. Greatly influenced by Toscanini, and noted for the superb precision of his renderings, he was with the Boston Symphony Orchestra from 1962.

LEINSTER (lin'ster). S.E. prov. of Rep. of Ireland, incl. the cos. of Longford, Westmeath, Meath, Louth, Offaly, Laoighis, Kildare, Dublin, Carlow, Wicklow, Kilkenny, and Wexford (qq.v.). Area 7,581 sq. m.; pop. (1966) 1,414,361.

LEIPZIG (līp'tsig). Cap. of L. dist., E. Germany, 90 m. S.W. of Berlin, lying in a fertile plain. The old town has narrow streets with 16th and 17th cent. houses. Near the Gothic Rathaus (1558) is Auerbach's Hof, built about 1530. L. has musical associations with J. S. Bach and Mendelssohn. The 'Gewandhaus' concert hall was completed 1884, and the univ. founded in 1409. Before the S.W.W. L. was the centre of the German book trade. The famous L. fairs have been responsible for the growth of its varied manufactures, which incl. furs, leather goods, cloth, glass, motor-cars, and musical instruments. L. was the scene of Napoleon's defeat in the Battle of the Nations, 1813. Pop. (1966) 595,000.

was ordained priest in 1828, and became famous as a preacher. With Lamennais and Montalembert, he founded the journal *L'Avenir*, which in 1832 was condemned by the Pope on account of its radicalism.

LACQ. Small French town in Basses-Pyrénées dept., 15 m. N.W. of Pau. A small oilfield was struck at L., a village of 400 pop., in 1949; the discovery in 1951 of a natural gas deposit 11,500 ft. below the surface proved of much greater importance. The gas was extremely toxic, and it was 1957 before this could be overcome and the gas put into use. Pipelines laid or projected carry it to Nantes, Paris, Dôle, Grenoble, and intervening towns. Pop. (1962) 700.

LACQUER (la'ker). A varnish made from the sap of the lacquer-tree (*Rhus vernicifera*), and used for producing a highly polished surface on furniture and other articles. L. is often coloured red, blue, brown, etc., and successive coatings of the varnish are applied to the objects treated. The earliest specimens are Korean, whence the art spread to China and Japan. Many months are needed to produce the finest work.

LACROSSE. Canadian ball game. The name comes from the Fr. *la croix*, a bishop's crozier, which a L. stick somewhat resembles. The game was played by the Red Indians, both men and women, from whom the Canadians adopted it. Introduced into England in 1867, it became particularly popular as a women's game after 1900.

The stick or 'crosse' is a light staff of hickory wood, with the top bent in the form of a hook, from the tip of which a thong is drawn down and fastened to the shaft. Across the frame a loose network of hide is drawn. The ball, made of indiarubber sponge, weighs 5–5½ oz., and is 7½–8 in. in circumference. The goals, 6 ft. by 6 ft., are placed 80 yds. apart, in a field 110 yds. long.

The team consists of 10 or 12 players, incl. the goalkeeper. To open play, the 2 centres 'face' the ball, and each tries to get it. The ball may be kicked, but not handled, except by the goalkeeper. A player may not be held, tripped, pushed, charged, or shouldered; a 'free position' may be awarded for a foul, or a player may be suspended. The game is controlled by a referee, and there is also an umpire at each goal. The playing time is 4 periods of 15 min. each.

LACTATION. The secretion of milk. In late pregnancy the cells lining the lobules inside the breasts undergo a change which makes them convert the blood into milk. The supply of milk starts shortly after birth with the production of colostrum, a clear fluid consisting largely of serum, which has a certain purgative effect needed by the infant. The milk becomes established in a few days, and will then continue practically as long as the child continues to suck.

LACTIC ACID. Three acids of the same composition. The ordinary acid is a colourless, almost odourless syrup, soluble in water, alcohol, and ether. It occurs in sour milk, wine, and certain plant extracts, and is always present in the stomach.

LACTOSE, or Milk Sugar. A disaccharide found in the milk of all animals. Cow's milk contains 4.5–5 per cent of the sugar. It is usually prepared from the whey obtained in cheese making.

LADAHK (ladakh'). Subsidiary range of the Karakoram and district of N.E. Kashmir on the border of Tibet. After the Chinese occupation of Tibet in 1951, China made claims on the area.

LADINOS. See GUATEMALA.

LADIN'S. Ethnic community in the Dolomites, descended from Etruscans and proto-Italic tribes of the Po valley, and speaking a language directly derived from Latin. Numbering c. 16,000, they have links with the Romansch-speakers of Switzerland.

LADOGA (lah'-), Lake. Largest lake in Europe, in the R.S.F.S.R., just N.E. of Leningrad. It receives the waters of the Svir, which drains L. Onega, and other rivers, and drains to the Gulf of Finland by the

r. Neva. Lake L. forms a link in the White Sea–Baltic Canal. Area 7,100 sq. m.

LADRONES. Spanish name (meaning thieves) of the MARIANAS.

LADY. Feminine title of honour, correlative to that of Lord, and Sir. It is the correct title of the dau. of an earl, marquess or duke, and of any woman whose husband is above the rank of baronet or knight, and is also accorded by courtesy to the wives of these two latter ranks.

LADYBIRD. A migratory beetle of the family Coccinellidae, red or yellow in colour, with black spots. There are several species which, with their larvae, feed upon aphides and scale-insect pests.

LADY DAY. 25 March, the festival of the Annunciation of the Virgin Mary. Until 1752 (when 1 Jan. was substituted) it was the beginning of the legal year in England, and it is still a quarter day.

LADYSMITH. Town in Natal, S. Africa, 115 m. N.W. of Durban, nr. the Klip. It was besieged by the Boers, 2 Nov. 1899–28 Feb. 1900, during the S. African War. L. was named in honour of the wife of Sir Harry Smith (q.v.). Pop. (1960) 22,997 (7,260 white).

LADY'S SLIPPER. Wild flower (*Cypripedium calceolus*) of the orchid family, found in Europe and N. Asia. It has purplish upper petals, with the lower part of the flower modified into a slipper-like sac, coloured yellow and flecked with purple.

LA FARGE (fahrzh'), Oliver (1901–63). American ethnologist and writer. He dealt in his best-known novel, *Laughing Boy* (1929), with the Navajo Indians.

LA FAYETTE (fayet'), Marie Joseph Gilbert du Motier, marquis de (1757–1834). French soldier and statesman. He fought against Britain in the American War of Independence. During the French Revolution he sat in the National Assembly as a constitutional royalist, and in 1789 was given command of the National Guard. In 1792 he fled the country after attempting to restore the monarchy, and was imprisoned by the Austrians until 1797. He supported Napoleon during the Hundred Days, sat in the Chamber of Deputies as a Liberal from 1818, and assisted the revolution of 1830.

LA FOLLETTE (fol'et), Robert Marion (1855–1925). American politician. Governor (1901–5) and republican senator (1905–25) for Wisconsin, he was a pacifist during the F.W.W. An advocate of public ownership of water power and railways, and public control of all national resources, he was rejected as presidential candidate by the Republican Party in 1924, and stood as a Progressive, receiving 5 million of the 29 million votes cast.

LA FONTAINE (fontän'), Jean de (1621–95). French poet. B. at Château-Thierry, from 1656 he lived largely in Paris, enjoying the friendship of Molière, Racine, and Boileau. His outstanding works are his *Fables* (1668–94), and his *Contes* (1665–74), a series of witty and improper tales in verse.

LA FORGUE (lahforg'), Jules (1860–87). French poet, whose technical innovations greatly influenced T. S. Eliot and also later French writers.

LA'GASH. Sumerian city 10 m. N. of Shatra, Iraq. Discovered (1877) and excavated by Ernest de Sarzec, then French consul in Basra, it was of great importance under independent and semi-independent rulers c. 3000–2700 B.C. Besides objects of high artistic value, it has provided c. 30,000 clay tablets giving detailed information on temple administration.

LADYBIRD. 1, larva; 2, pupa; 3, beetle; 4, eggs.

concluded with Germany, but during 1918–21 the new régime was threatened by foreign intervention and 'White' uprisings. Even during the civil war many important reforms were achieved, including the division of large estates among the peasantry and the recognition of the equal rights of all the peoples of Russia, while L. was already planning large-scale electrification schemes. He also took the lead in founding the 3rd (Communist) International in 1919. His health was undermined by overwork and the effects of an attempt to assassinate him in 1918, and after 1922 he became an invalid. He d. on 21 Jan. 1924; his embalmed body was laid in a mausoleum in Red Square, Moscow.

His wife Nadezhda Konstantinova Krupskaya (1869–1939) worked with L. at St. Petersburg in the illegal Union for the Liberation of the Working Class, m. him in 1898, and shared actively in his work. Her *Memories of Lenin* throws much light on him, both as a political leader and as an individual.

LENINAKAN (lyenyinakahn'). Industrial town in Armenia S.S.R., U.S.S.R., 25 m. N.W. of Yerevan, a railway junction with textile factories and an electric power station. Founded in 1837 as a fortress called Alexandropol, it was virtually destroyed by an earthquake in 1926. Pop. (1967) 130,000.

LENINGRAD. Side by side along the Neva are Rastrelli's baroque Winter Palace (1754–62) with 700 rooms, and the Hermitage. The occupation of the Palace by the Bolsheviks on 25 October 1917 marked the victory of the Revolutionaries. Photo: Novosti Press Agency.

LENINGRAD. Cap. of L. region of the R.S.F.S.R., 2nd city of the U.S.S.R. Cap. of the Russian Empire 1709–1918. It was founded as an outlet to the Baltic in 1703 by Peter the Great, who took up residence there in 1712. Originally called St. Petersburg, it was renamed Petrograd in 1914, and L. in 1924. It stands at the head of the Gulf of Finland, and is split up by the mouths of the Neva, which connects it with Lake Ladoga. The site is low and swampy, and the climate very severe.

L. was the centre of all the main revolutionary movements from the Decembrist revolt of 1825 up to the 1917 revolution. During the German invasion in the S.W.W. the city heroically withstood siege and bombardment from Sept. 1941 to Jan. 1944.

L. is famous for its wide boulevards; most of its fine baroque and classical buildings of the 18th and early 19th cents. survived the S.W.W. siege. L. has a univ. (1819) and is the seat of a Metropolitan of the Orthodox Church. Museums incl. the Winter Palace, occupied by the Tsars until 1917, the Hermitage, the Russian Museum (formerly Michael Palace), and St. Isaac's Cathedral. The oldest building in L. is the fortress of St. Peter and St. Paul, on an island in

the Neva, a dreaded political prison. L. became a seaport when it was linked with the Baltic by a ship canal built 1875–93, but for part of the year it is ice-blocked. It also has an airport. Its industries incl. shipbuilding and the manufacture of machinery and machine tools, chemicals, textiles, and textile machinery, diesel motors, tyres, and rubber boots. Pop. (1967) 3,665,000.

LENINSK-KUZNETSKY (lyen'yinskē kōōznyet'skē). Town in Kemerovo region, R.S.F.S.R., on the Inya r., 200 m. S.S.E. of Tomsk. It is a mining centre in the Kuzbas, with a large iron and steel works; coal, iron, manganese, and other metals, and precious stones occur in the neighbourhood. Formerly Kolchugino, the town was renamed L.-K. in 1925. Pop. (1967) 140,000.

LEÑO, Dan (1861–1904). British comedian. Beginning as an acrobat, he became the idol of the music-halls, and the greatest of pantomime 'dames'.

LENS (lōns). Coal-mining town in Pas-de-Calais dept., France. It was in German occupation and close to the front line from Oct. 1914 to Oct. 1918 in the F.W.W. when the town and its mines were severely damaged. In the S.W.W. it was occupied by the Germans May 1940 to Sept. 1944, but suffered less physical damage. Pop. (1962) 42,733.

LENS. A piece of a transparent medium such as glass with 2 polished surfaces – one of which may be concave or convex, and the other may be either plane, concave or convex – to modify the rays of light, which become more convergent or more divergent according to the type of L. they traverse. Convex Ls. converge the light and concave Ls. diverge it. They are essential parts of spectacles, microscopes, telescopes, cameras and almost all optical instruments. Compound Ls. for special purposes are built up from 2 or more Ls. made of glass (or other suitable medium) of different refractive index.

The image formed by a single L. suffers from several defects or aberrations, notably spherical aberration in which a straight line becomes a curved image, and chromatic aberration in which an image in white light tends to have coloured edges. Aberrations are corrected by the use of compound Ls. See FOCAL LENGTH of a lens, and (for electron L.) ELECTRON MICROSCOPE. In zoology a L. is the part of the eye which focuses the rays of light on to the cornea. See Eye.

LENT. In the Christian Church, the 40 days' period of fasting which precedes Easter, beginning on Ash Wednesday, but omitting Sundays.

LENTHALL (len'tawl), William (1591–1662). British lawyer. Speaker of the House of Commons in the Long Parliament of 1640–60, he took an active part in the Restoration.

LENTIL. Annual plant of the Leguminosae family (*Lens esculenta*) of which the small seeds are widely used for food. The plant, which resembles the vetch, is probably native to the shores of the Mediterranean. It grows 6–18 in. in height, and has white, blue, or purplish flowers. The pods are about 1½ in. long, containing 2 seeds. The commonest varieties are the greyish French L. and the red Egyptian L.

LENYA (lān'ya), Lotte. Stage-name of Austrian actress and singer Karoline Blamauer (1905–). M. to Kurt Weill (q.v.) in 1925, she was a soprano singer, and successfully appeared in several of the Brecht-Weill operas, notably *The Threepenny Opera* (1928) and *The Rise and Fall of the City of Mahagonny* (1930). In 1962 she appeared in the dramatic anthology *Brecht on Brecht* in N.Y. and London.

LEŌ III, the Isaurian (c. 680–740). Byzantine emperor. A soldier who seized the throne in 717, he successfully defended Constantinople against the Saracens in 717–18, and attempted to suppress the use of images in church worship.

LEOMINSTER (lem'ster). English market town

the sea. The main classifications are by origin as follows: glacial Ls., such as in the Alps; barrier Ls., formed by landslides, valley glaciers, etc.; crater Ls.; tectonic Ls., occurring in natural features. Most Ls. are fresh, e.g. the group incl. Superior, Michigan and Huron, but in hot regions where evaporation is excessive they may be salt, e.g. the Dead Sea. The 20th cent. has seen the creation of large artificial Ls. in connection with hydro-electric and other works, and also the eutrophication (a state of over-nourishment) of Ls. Agricultural fertilisers leach into them, causing an explosion of life, and the Ls. choke and die.

LAKE DISTRICT. The 700 sq. m. area in Cumberland, Westmorland, and N. Lancashire, embracing the principal English lakes separated by wild uplands rising to many peaks, incl. Scafell Pike (3,210 ft.).

Windermere, in the S.E., is connected with Rydal Water and Grasmere. The westerly Scafell range extends S. to the Old Man of Conistone overlooking Conistone Water, and N. to Wastwater. Ullswater lies in the N.E. of the district, with Hawes Water and Thirlmere nearby. The river Derwent flows N. through Borrowdale forming Derwentwater and Bassenthwaite. W. of Borrowdale lie Buttermere, Crummock Water, and, beyond, Ennerdale Water.

The contrasting scenery of lakes, rivers, and waterfalls in the dales, towered over by the proximate mountains, has many literary associations and in 1951 the L.D. was made a National Park.

LAKE DWELLINGS. Habitations built on piles driven into the bottom of a lake. Such villages are found in W. Africa, S. America, Borneo and New Guinea. Remains of Stone Age lake villages have been found in Switzerland, N. Italy, S. Germany, Austria and Hungary. A lake village of the 1st cents. B.C. and A.D. has been excavated near Glastonbury.

LAKE SUCCESS. Village in Long Island, New York, U.S.A., site 1946–51 of the secretariat of the United Nations. It makes aerial and naval instruments. Pop. (1960) 2,954.

LAKH, Lac, or Lak. Indian term for 100,000.

LAKSHMI (laksh'mē). Hindu goddess of good fortune, love and beauty, and the wife of Vishnu.

LALANDE (lahlond'), Joseph Jérôme de (1732–1807). French astronomer. From 1762 he was professor of astronomy in the Collège de France, Paris. His popular writings, such as his *Traité d'astronomie* (1764), achieved a wide circulation. His planetary tables were long in use, and in his *Histoire céleste française* he catalogued over 47,000 stars.

LALLY (lahlē'), Thomas Arthur, comte de (1702–66). French general. The son of an Irish Jacobite, he accompanied Prince Charles Edward during the 1745 rebellion. Appointed commander of an expedition to India in 1756, he was compelled to surrender to the English in 1761. Hearing he was accused of treachery he returned to France to stand his trial, and was beheaded.

LALO (lahlō'), Édouard (1823–92). French composer. Of Spanish descent, he was originally a viola player. Best known of his works are: *Le Roi d'Ys* (1888), an opera, and his *Symphonie Espagnole*.

LAMAISM (Tibetan, *lama*, a superior priest). The religion of Tibet and Mongolia; a form of Buddhism belonging to the Mahayana school. Buddhism was introduced into Tibet in A.D. 640, but the real founder of L. was the Indian missionary Padma Sambhava who began his activity about A.D. 750. In the 15th cent. was founded the sect of Geluk-Pa (virtuous) by Tsongkhapa, which has remained the most powerful organization in the country. The Dalai Lama (q.v.), residing at the palace of the Potala at Lhasa, exercised both spiritual and temporal authority as head of the Tibetan State until 1959, and is considered an incarnation of Bodhisattva Avalokitesvara. See also PANCHEN LAMA. On the death of the Dalai Lama

great care is taken in finding the infant in whom he has been reincarnated.

L. formerly numbered 1 in 4 of the male population as a monk, but Chinese Communist rule is swiftly modifying this situation. Formerly frequent in the Tibetan countryside were the prayer-wheels (see *illus.*) and prayer-flags on which were inscribed prayers; when these were turned by hand or moved by the wind, great spiritual benefit was supposed to accrue.

LAMARCK (lahmahrk'), Jean Baptiste (1744–1829). French naturalist.

B. at Bazentin, he was forced by ill-health to abandon a military career, and studied medicine and meteorology before turning to botany. His *Flore française* (1773) won him admission to the Academy of Sciences. In 1781–2 he toured Europe, writing the *Dictionnaire de Botanique* and the *Illustrations de Genres* on his return. In 1792 he was appointed to a zoological chair at the Jardin des Plantes. His greatest works were his *Philosophie Zoologique* (1809) and the *Histoire naturelle des animaux sans vertèbres* (1815–22).

LAMARTINE (lahmahrtēn'), Alphonse de (1790–1869). French poet. B. at Mâcon, he achieved immediate success with his first vol. of musically romantic poems, *Méditations* (1820), which was followed by *Nouvelles Méditations* (1823), *Harmonies* (1830), *Recueils* (1839), etc. He entered the Chamber of Deputies in 1833, and by his *Histoire des Girondins* (1847) influenced the revolution of 1848.

LAMAS, Carlos (1879–1959). Argentine lawyer. Prof. of international law and sociology at Buenos Aires univ., he was awarded the Nobel peace prize in 1936 for his arbitration in the Gran Chaco war between Bolivia and Paraguay.

LAMB, Charles (1775–1834). British essayist and critic. B. in London, he was ed. at Christ's Hospital, where he was a contemporary of Coleridge, and in 1792 became a clerk at India House. In 1796 he pub. some poems together with Coleridge, but in the same year his sister Mary (1764–1847) stabbed their mother to death in a fit of madness, and L. devoted his life to caring for her, since periodic recurrence of the attacks meant that she must at times be placed in an asylum. In 1807 he collaborated with Mary in the *Tales from Shakespeare*, and in 1808 pub. *Specimens of English Dramatic Poets* which assisted the revival of interest in Elizabethan playwrights. In 1820 he began contributing to the *London Magazine* the series of appealingly individual essays under the pseudonym of 'Elia', borrowed from an early office acquaintance, which were collected in 1823 and 1833. In 1825 L. retired from India House, and moved first to Enfield then to Edmonton, where both he and his sister are buried.

LAMB, Henry (1885–1960). Australian-born British artist. A student of medicine – he eventually qualified on service during the F.W.W. – he was an original member of the Camden Town Group in 1912. He was a sensitive portraitist, e.g. 'Lytton Strachey' and 'Lord David Cecil', and local genre artist, and his studies of soldiers in the S.W.W. (as official artist) are notable.

LAMBERT, Constant (1905–51). British composer and conductor. B. in London, he studied at the R.C.M. Often conductor for the Vic-Wells co., he wrote much ballet music – *Romeo and Juliet* (1926), commissioned by Diaghileff; *Pomona* (1927); *Horoscope* (1937); and *Tiresias* (1950). Other works incl. a setting of Sacheverell Sitwell's poem *The Rio Grande* (1929); the cantata *Summer's Last Will and Testament* (1936), songs and chamber music. *Music Hol* (1936),

LEOPOLD II (1835–1909). King of the Belgians. He succeeded his father Leopold I in 1865. He financed Stanley's explorations in Africa, which resulted in the foundation of the Congo Free State. This was ruled autocratically by L., who derived a huge fortune from it. The scandal caused by his maladministration resulted in its annexation as a Belgian colony in 1908.

LEOPOLD III (1901–). King of the Belgians. The son of Albert I, he succeeded his father in 1934. In 1926 he m. Princess Astrid of Sweden, who was killed in a motoring accident in 1935. When the Germans invaded Belgium in 1940, L. took command of the army, until the enemy compelled him to surrender. He was held a prisoner until 1945. In 1941 he made a morganatic marriage with Mlle. Baels, subsequently created the Princesse de Réthy. After his liberation a constitutional crisis arose, as the left-wing parties demanded his abdication in view of charges brought against his conduct in 1940; as a result, his brother Prince Charles was appointed regent. In 1950 L. was recalled, but national unrest led him to resign his powers to his son Baudouin.

LEOPOLDVILLE. Cap. of the Rep. of Congo (q.v.), W. Africa, on the Congo; an inland port, linked by 2 petroleum pipelines with Matadi near the coast. It also has an international airport. Textiles, furniture, chemicals, palm oil are produced, and tugs and barges built. It was the base of a large U.S. force during the S.W.W. In 1966 it was renamed Kinshasa. Pop. (1967) 1,225,720.

LEPANTO. Italian name of the Greek port of Naupaktos, on the N. of the Gulf of Corinth. A famous sea battle was fought in the Gulf of Corinth off L., then in Turkish possession, on 7 Oct. 1571, between the Turks and Christian League forces from Spain, Venice, Genoa, and the Papal States which were commanded by Don John of Austria (q.v.). Instigated by pope Pius V, the League delivered a crushing blow to Moslem sea power. Cervantes was wounded in the battle, which is the subject of a stirring poem by G. K. Chesterton.

LEPIDOPTERA. See INSECT.

LE PLAY (plī'), Pierre Guillaume Frédéric (1806–82). French engineer and sociologist. He became prof. of metallurgy at the Paris School of Mines in 1840, and in 1855 pub. *Les Ouvriers Européens*. Le P. and his followers stress the importance of a strong family organization, of religion, and of private property.

LEPROSY. A disease due to infection by the lepra bacillus. It is most common in hot, damp countries, especially Africa, but is found all over the world. In the nodular type the skin thickens, lumps appear all over it and break down into ulcers: the patient eventually dies of exhaustion, tuberculosis, or kidney disease. In the smooth type the microbe chiefly attacks the nerves of the skin, producing discoloured patches, loss

of feeling, paralysis, and the death and shedding of fingers and toes. The bacillus may be transmitted by contact, or enter through stomach and lungs.

LEPTIS MAGNA. Ruined city in Libya, near Homs and 75 m. E. of Tripoli. It was founded by the Phoenicians, then came under Carthage, and in 47 B.C. under Rome. Excavation in the 20th cent. brought to light remains of fine Roman buildings.

LE PUY. See PUY, LE.

LÉRIDA (ler'ethah). Capital of L. prov. in N. Spain, on the Segre, 82 m. W. of Barcelona. The chief manufactures are leather, paper, glass, and cloth, L. was captured by Caesar in 49 B.C. It has a palace of the kings of Aragon. Pop. (1960) 63,850.

LERMONTOV, Mikhail Yurevich (1814–41). Russian poet and novelist. B. in Moscow, he received a commission in the Guards, but in 1837 was exiled to the Caucasus for a revolutionary poem on the death of Pushkin. The romantic scenery of the Caucasus deeply influenced his poetry. After returning to St. Petersburg in 1838 he pub. his psychological novel *A Hero of Our Times* and a vol. of poems. He was killed in a duel.

LERNER, Alan Jay. See LOEWE, Frederick.

LE SAGE (sahzh), Alain René (1668–1747). French novelist and dramatist. B. in Brittany, he early abandoned law for literature. His novels incl. *Le Diable boiteux* (1707) and his masterpiece *Gil Blas* (1715–35), much indebted to Spanish originals.

LESBOS. Greek island in the Aegean Sea, near the coast of Turkey, conquered by the Turks from Genoa in 1462, annexed to Greece in 1913. L. was an ancient Aeolian settlement, the home of Alcaeus, Sappho, and other literary celebrities. Mytilene is the cap. L. produces olives, wine, and grain. Area 675 sq. m. Pop. (1961) 140,144.

LESLIE, Sir John Randolph Shane (1885–). Irish author. B. in London, he became an R.C. convert in 1908, and strongly supported the nationalist and Celtic revivalist movements. He has pub. *Cantab* (1926), a satirical novel of Cambridge life; biographies, notably *The Skull of Swift* (1928); and vols. of verse. His dau. Anita Leslie is also an author: *Mrs Fitzherbert, Mr Frewen of England*.

LESOTHO (les'ō'tō). Country, formerly known as Basutoland, bounded by the Orange Free State, Natal and Cape Prov., but not part of the Rep. of S. Africa. A Brit. prot. from 1868, it achieved self-govt. in 1965 under the Paramount Chief Moeshoeshoe II (1939–), and independence within the Commonwealth as the Kingdom of L. in 1966. There was political unrest in 1966 when the King sought wider powers, but he submitted to the demand of P.M. Chief Leabua Jonathan that he remain a constitutional ruler.

The land is mountainous, but maize and wheat are grown and erosion is being combated; sheep and goats supply wool and mohair for export; and diamonds are mined. Many of the men work in the Kimberley mines. The cap. is Maseru.

Area 11,716 sq. m.; pop. (1966) 967,760.

LESPINASSE (läpinahs'), Julie de (1732–76). French authoress. B. at Lyons, an illegitimate dau. of the comtesse d'Albon, she was a friend of d'Alembert and other celebrities of the time, and is remembered for her correspondence, pub. in 1809.

LE'SSEPS, Ferdinand, viscomte de (1805–94). French diplomat and engineer. After serving as ambassador to Madrid 1848–9, he entered the service of the viceroy of Egypt, Said Pasha, and in 1854 obtained a concession for the construction of a canal across the isthmus of Suez. Work began in April 1859, completed Nov. 1869. See also PANAMA CANAL.

LE'SSING, Gotthold Ephraim (1729–81). German dramatist and critic. B. at Kamenitz in Saxony, he studied at Leipzig, and subsequently lived in Berlin, Leipzig, and Hamburg. His dramatic masterpieces incl. *Miss Sara Sampson* 1755, the first German

LEPROSY. Eight-year-old Ma Boko Sone on arrival (left) at the Roman Catholic Leprosy Institute in Rangoon, and three years later after sulphone drug treatment. Courtesy of W.H.O.

who then taught the rest, was used by the Royal Lancastrian Institution (re-named the British and Foreign Schools Society in 1812), founded in 1808.

LANCASTER, Osbert (1908-). British artist. Ed. at Charterhouse and Lincoln Coll., Oxford, he went on to study at the Slade, and has produced imaginative stage settings for Old Vic and Covent Garden productions. He is popularly best known for his 'pocket' cartoons in the *Daily Express* from 1939, which introduce a series of satirically amusing characters from the Establishment, e.g. Maudie Littlehampton and Canon Fontwater.

LANCASTER. Co. town (bor.) and city of Lancs, England, on the Lune. The castle and St. Mary's church are of interest, and there is also an R.C. cathedral, completed 1859, and L. univ. (opened 1964). Cotton and rayon spinning and the manufacture of linoleum, furniture, and plastics are carried on. Pop. (1961) 48,887.

LANCELET. Animal (*Amphioxus*), sole representative of the class Cephalochordata or Leptocardia, one of the most primitive groups of the Chordata. Skull, vertebral column, centralized brain, and paired limbs are absent, but there is a notochord which runs from end to end of the body, a tail, and a number of gill-slits. L. is found in all seas; it burrows in the sand, but when disturbed swims freely. In its feeding habits it resembles the sea-squirts (*Tunicata*).

LANCELOT OF THE LAKE. The most celebrated of Arthur's knights, and the lover of Queen Guinevere. He was originally a folk-hero, and was introduced into the Arthurian cycle in the 12th cent.

LANCHESTER, Frederick (1868-1946). British aircraft and automobile engineer. In 1895-6 he built the first British petrol car and pub. works contributing to the development of aviation.

LANCHOW. Chinese city, cap. of Kansu prov., on the Hwang-ho, c. 120 m. S. of the Great Wall. An ancient walled town, it makes woollens, leather goods, cement, and chemicals, and has a large petroleum refinery started in 1956 to process oil brought by railway from the Yumen fields 500 m. N. L. is an important river, railway, and road junction, with a bridge across the river built in 1910; it has a univ. Pop. (1957 est.) 800,000.

LANCING, South. Resort in Sussex, England, on the English Channel, 3 m. E.N.E. of Worthing. To the N. is a well-known public school, St. Nicholas Coll. (often referred to as L. Coll.), founded 1848. Pop. (est.) 5,000.

LANCRET (lɔ̃kreh'), Nicolas (1690-1743). French artist. B. in Paris, he was a follower of Watteau, painting graceful *fêtes galantes* and illustrating the amorous *Contes de la Fontaine*.

LANDAU (lan'dow), Lev Davidovich (1908-68). Russian theoretical physicist. B. in Baku, he was ed. at Leningrad univ., and in 1943 became prof. at Moscow. For his researches in the quantum theory, etc., he was awarded the Order of Lenin, and received a Nobel prize in 1962 for his theories on condensed matter, especially liquid helium.

LANDAU, Rom (1899-). British author. Originally a sculptor and art critic, he later wrote on religious subjects, subsequently becoming an expert on Islam and N. African studies and prof. at the Univ. of the Pacific 1956-67.

LANDES (lɔ̃nd), The. Sandy low-lying area in S.W.

France, along the Bay of Biscay, c. 5,000 sq. m. in extent. Formerly a furze- and heath-covered waste, it has in many parts been reclaimed by planting with pine and oak forests. It gives its name to a dept., and extends into the depts. of Gironde and Lot-et-Garonne. Arcachon is a well-known bathing resort. There is a testing range for rockets and missiles at Biscarosse, 45 m. S.W. of Bordeaux. For the oilfield in L. dept., see PARENTIS-EN-BORN.

LAND LEAGUE. Irish peasant organization, formed by Michael Davitt in 1879 to fight against evictions. It forced Gladstone's govt., by its skilful use of the boycott against any man who took a farm from which another had been evicted, to introduce a law in 1881 restricting rents and granting tenants security of tenure.

LANDLORD AND TENANT. The relationship which exists when an owner of land or buildings (the landlord) gives to another (the tenant) the exclusive right of occupation for a definite limited period, e.g. a year, a term of years, a week or a month. When the terms of the contract are embodied in a deed they are said to be covenants, and the whole agreement is termed a *lease*.

There was formerly freedom of contract between L. and T. in Britain, but wartime shortage of rented accommodation for lower income groups led to abuse by unscrupulous Ls. and from 1914 acts were passed affording protection for Ts. against eviction and rent increases. The shortage was aggravated by the S.W.W. and from 1939 Rent Acts were passed greatly increasing the range of dwellings so protected, but often bearing unfairly on good Ls. who were faced with increased maintenance costs, etc., and, because of inflation, a decreasing 'real' return on their investment. Extensive decontrol under the 1957 Rent Act led to hardship, and in 1965 a further act provided for security of tenure and rent control of furnished and unfurnished premises of a rateable value up to £400 per annum in London (£200 elsewhere). Later legislation tried to remedy defects and loopholes.

LANDOR, Walter Savage (1775-1864). British poet and author. B. in Warwick, he was expelled from Rugby and rusticated from Oxford owing to his uncertain temper. In 1795 he pub. his first *Poems*, followed by the epic *Gebir* (1798), and the verse drama *Count Julian* (1812). In 1808 he raised a force of volunteers to free Spain from Napoleon, and settled at Llanthony, S. Wales, in 1809-14. In 1811 he m. unhappily, and lived mainly in Italy 1814-35, when he settled in Bath until 1859. To this period belong the *Imaginary Conversations* (1824-46), *Pericles and Aspasia* (1836), *The Pentameron*, *The Hellenics* (1846-7), etc. Drawn into a libel action in 1858, he took refuge in Florence, where he d.

LANDOWSKA (landof'ska), Wanda (1877-1959). Polish-born harpsichordist, who settled first in France and from the S.W.W. in the U.S.A. Falla and Ravel wrote specially for her, and she estab. the reputation of the harpsichord as a contemporary instrument.

LANDRAIL. See RAIL.

LAND REGISTRY, H.M. State register of land-owners voluntarily submitting titles to their land for examination and approval by the registrar on behalf of the State estab. in 1862. By the L.R. Act of 1897 the principle of compulsory registration was introduced, and any co. council or council of a co. bor. may apply for registration of title to be made compulsory on sale. Such registration makes the future buying or selling of land much easier and cheaper, since absolute titles granted by the L.R. (administered under the Lord Chancellor by the Chief Land Registrar) are guaranteed and lengthy examinations of title are unnecessary.

LANDSEER, Sir Edwin Henry (1802-73). British painter and sculptor. B. in London, he exhibited at the R.A. in 1815, and achieved great popularity with

to house his factory workers. L. sat in Parl. as a Lib. 1906–9, and received a viscountcy in 1922.

LEVI, Carlo (1902–). Italian novelist. Originally a doctor, his books incl. *Christ Stopped at Eboli* (1946), *The Watch* (1951), and *Words are Stones* (1958).

LEVITES. One of the 12 tribes of Israel, traditionally descended from Levi, one of the sons of Jacob. They were charged with the lesser services of the Temple, and the priesthood was confined to one Levite family, the descendants of Aaron.

LEVSINA. Another form of ELEUSIS.

LEWES (lū'es), George Henry (1817–78). British philosopher and critic. From acting he turned to literature and philosophy, his works incl. a *Biographical History of Philosophy* (1845–6), *Comte's Philosophy of the Sciences* (1853), *Aristotle* (1864), *Problems of Life and Mind* (1874–9), and *Life and Works of Goethe* (1855). He m. unhappily in 1840, and after meeting Mary Ann Evans (George Eliot) in 1851, left his wife in 1854 to form a life-long union with her.

LEWES. Ancient co. town (bor.) of Sussex and admin. H.Q. of E. Sussex, England, on the Ouse, 45 m. S. of London. Barbican House, near the castle, has a large collection of Sussex antiquities. Here Henry III was defeated by Simon de Montfort in 1264. Pop. (1961) 13,637.

LEWIS, Cecil Day-. See DAY-LEWIS, CECIL.

LEWIS, Meriwether (1774–1809). American explorer. Private sec. to Pres. Jefferson, he was commissioned with William Clark (1770–1838) to find a land route to the Pacific. He followed the Missouri River to its source, crossed the Rocky Mountains, and followed the Columbia River to the Pacific, then returned overland to St. Louis: 1804–6. He was rewarded with the governorship of the Louisiana Territory. His death, nr. Nashville, Tennessee, has been ascribed to suicide, but was more probably murder.

LEWIS, Clive Staples (1898–1963). British scholar. In 1954–63 he was prof. of Medieval and Renaissance English at Cambridge, and his books incl. the remarkable medieval study *The Allegory of Love* (1936); space fiction *Out of the Silent Planet* (1938); such individual essays in popular theology as *The Screwtape Letters* (1942) and *Mere Christianity* (1952); the autobiographical *Surprised by Joy* (1955) and books for children.

LEWIS, D(ominic) B(evan) Wyndham. British writer. B. in Wales, he made his name as the humorous columnist Timothy Shy of the *News Chronicle*, and as the biographer of Villon, Boswell and Molière.

LEWIS, John L(ewellyn) (1880–1969). American labour leader. B. in Iowa, son of a Welsh miner, he worked in the pits, and 1920–60 was pres. of the United Mineworkers of America. He was founder-pres. of the C.I.O. (see A.F.L./C.I.O.) in 1935, and was expelled from the A.F.L. Later he re-affiliated the U.M.W.A. to the A.F.L. until 1947, when it became independent.

LEWIS, Matthew Gregory (1775–1818). British author, known as 'Monk' L. from his terror romance *The Monk* (1795), which enjoyed a vogue.

LEWIS, Percy Wyndham (1884–1957). British author and artist. B. off Maine, in his father's yacht, he was ed. at the Slade and in Paris and pioneered on returning to England the new spirit of art which his friend Ezra Pound called Vorticism: he also ed. *Blast*, a literary and artistic magazine proclaiming its principles. His paintings were as boldly hard and aggressive as his literary style, his portraits being especially memorable, e.g. of Edith Sitwell and T. S. Eliot. Among his novels the best are *Tarr* (1918) and *The Childermass* (1928), but he also wrote a number of theoretical books, e.g. *Time and Western Man* (1927), and the autobiographical *Blasting and Bombardiering* (1937) and *Rude Assignment* (1950). He has a controversial reputation, being assessed by some as a leading spirit

Courtesy of Sir Edward
Beddington Behrens.

of the early 20th cent.: the argument is generally sharpened by his support in the 1930s of Fascist principles. Our self-portrait, painted in 1920, is called 'Mr. Wyndham Lewis as a Tyro' – tyros being defined by the artist as 'immense novices [who] brandish their appetites in their faces, lay bare teeth in valedictory, inviting, or merely substantial laugh'.

LEWIS, Sinclair (1885–1951). American novelist. B. in Minnesota, he stayed for a time at Upton Sinclair's socialist colony in New Jersey, then became a freelance journalist. He made a reputation with *Main Street* (1920), depicting American small-town

life; *Babbitt* (1922), story of a typical business executive, a real-estate man of the midwest caught in the conventions of his milieu which gave a new word to the American language; and *Arrowsmith* (1925), study of a scientist. His later books incl. *It Can't Happen Here* (1935), *Cass Timberlane* (1945), and *The God-Seeker* (1949). He received a Nobel prize 1930.

LEWIS. N. part of Lewis-with-Harris, the largest is. of the Outer Hebrides, off the W. coast of Scotland and to the N. of Uist. Lewis, incl. in Ross and Cromarty, is separated from Harris (q.v.) by a line joining Lochs Resort and Seaforth. Fishing is a main economic activity. Stornoway is the only centre of importance. Area 683 sq. m.; pop. (1961) 16,700.

LEXINGTON. (1) Town, centre of the Bluegrass Country, Kentucky, U.S.A. Bloodstock is bred in the area, and races and shows are held. There is a tobacco market and the Univ. of Kentucky and Transylvania (1780). Pop. (1960) 62,810. (2) Town of Mass., U.S.A. Paul Revere (1735–1818), a Boston silversmith and member of the Sons of Liberty, was one of the official couriers who carried the news of the approach of British troops to Lexington and Concord on the night of 18 April 1775. Longfellow commemorated the event in 'Paul Revere's Ride'. The first shots of the American War of Independence were fired at L. next day. Pop. (1960) 27,691.

LEYDEN (lā'den). City of the Netherlands, in S. Holland prov., famed for its univ. founded by William the Silent in 1575. L. lies on the Old Rhine, 6 m. from its mouth, and is joined by canal to Haarlem, Amsterdam, and Rotterdam. L. manufactures linen and woollen goods, has many fine buildings, and has been a printing centre since the Elzevir works were set up in 1580. Rembrandt and Jan Steen were b. at L. Pop. (1967) 102,425.

LHASA (lah'sa). Cap. of Tibet, on a lofty plateau 11,830 ft. above sea-level and surrounded by mountains. Weaving, and the manufacture of pottery and gold and silver ware are carried on. It became in the 17th cent. the seat of the Dalai Lama, head of Lamaism; his palace, the 17th cent. Potala, standing 400 ft. above the town, is the most striking of a number of remarkable buildings; the

SINCLAIR LEWIS

The Finno-Ugrian family includes Finnish, Lapp, Estonian, Magyar or Hungarian. The Altaic family contains Turkish, Mongol, Manchu, etc. Eskimo and Aleut form one family, and Korean and Japanese another. In the Sinitic or Indo-Chinese family are placed Tibetan, Burmese, Chinese, Siamese, Annamese, etc. The Malayo-Polynesian family includes the languages of Malaya and the South Seas excluding New Guinea. Tamil is one of the languages in the Dravidian family. The languages of New Guinea and Papua, the Australian aborigines, the Bushmen and Hottentots, are placed in separate families. Yet other families comprise Bantu (Swahili, Zulu, etc.), Sudanian (Nuba, Ewe, Hausa, etc.), and the American (the 'Red Indian' tribes, the Maya, the Inca, etc.).

The most important languages numerically—in tens of millions of speakers—are: Chinese 70 (inclusive of Mandarin, Cantonese, etc.); English 30; Russian 18 (Great Russian only); Hindi 18; Spanish 18; German 12; Japanese 10; Bengali 10; Arabic 10; Portuguese 9; French 8; Malay 8; Italian 6.

LANIER (lan'ēr), Sidney (1842–81). American poet. B. in Georgia, he served in the Civil War, and subsequently studied law, which he abandoned for music. His *Poems* (1877) contain some interesting metrical experiments, in accordance with his theories expounded in his *Science of English Verse* (1880), on the relation of verse to music.

LANSBURY, George (1859–1940). British Labour leader. B. in Suffolk, he worked for a time as a labourer, was a Labour M.P. 1910–12, and edited the *Daily Herald* 1912–22. He sat on Poplar borough council from 1903, and went to prison with most of the councillors in 1921 rather than modify the council's policy of more generous unemployed relief. Re-elected to parliament in 1922, he became Commissioner for Works 1929–31, and led the Labour Party in the House 1931–5. A pacifist, he resigned from the party leadership in opposition to the party's policy during the Ethiopian War.

LANSLOWNE, Henry Charles Keith Petty Fitzmaurice, 5th marquis of (1845–1927). British Cons. statesman. He was Gov.-Gen. of Canada 1883–8, Viceroy of India 1888–93, War Minister 1895–1900, and For. Sec. 1900–6; while at the Foreign Office he abandoned Britain's isolationist policy, by forming alliances with Japan and France. His publication in 1917 of proposals for a compromise peace led to a violent controversy.

LANSING. Capital of Michigan, U.S.A., at the confluence of the Grand and Red Cedar rivers. L. makes motor-vehicles, diesel engines, pumps, furniture, textiles, etc. Pop. (1960) 107,807.

LAN'THANUM (Gk. *lanthano* to lie hidden). One of the cerium sub-group of the rare earths, it is a white metal: symbol La., at. wt. 138.92 and at. no. 57. Separated from ceria by Mosander in 1839, it occurs in nature in the cerite earths and resembles iron in its physical properties.

LAOIGHIS (lā-ish). Co. in Leinster prov., Rep. of Ireland. It is flat except for the Slieve Bloom mountains in the N.W. Sugar beet is grown and dairy farming practised. Woollens and agricultural implements are manufactured. Portlaoighise is the co. town. Area 664 sq. m.; pop. (1966) 44,595.

LAON (lon). Capital of Aisne dept., N. France, 75 m. N.E. of Paris. There is a fine 12th cent. cathedral. Pop. (1962) 27,268.

LAOS (lah'ōs). A mountainous kingdom in N.W. Indo-China, a protectorate of France 1893–1946, an associated state of the French Union from 1950 to 1954 when L. was accorded full independence. King Savang Vatthana (1908–) succeeded his father in 1959. The cap. is Vientiane.

Following the Geneva Conference agreement of 1954 establishing independence, civil war went on sporadically. The neutralist govt., headed by Prince

Souvanna Phouma, negotiated the Vientiane Agreement 1957 with the Pathet Lao or Communist forces, re-named 1965 the Laotian People's Army, headed by Prince Souphanouvong, but a right-wing force, then headed by Prince Boun Oum, emerged. Further negotiations among the 'Three Princes' led to another agreement in 1962 (also not implemented), and there was increasing intervention in the continuing intermittent warfare by the Communists of N. Vietnam and support for their opponents from U.S.A. The 1967 elections confirmed Prince Souvanna Phouma in power.

Area 91,400 sq. m.; pop. (1966) 2,300,000.

LĀO TZE (lah'ō-tsā'). Chinese philosopher, commonly regarded as the founder of Taoism (q.v.). Many legends gathered round him, but nothing certain is known of his life, and he is variously said to have lived in the 6th and the 4th cent. B.C. The *Tao Tē Ching*, the Taoist scripture, is attributed to him, but apparently dates from the 3rd cent. B.C.

LA PAMPA. See under PAMPAS.

LA PAZ (pah's). City of Bolivia, the seat of government since c. 1900, although Sucre remains the official cap. Founded in 1548, La P. is 12,400 ft. above sea-level. It has a univ. and an airfield. Pop. (1965) 460,950.

LAPIS LAZULI (laz'ūli) or *Lazurite*. Deep blue mineral used in inlaying and ornamental work, and in the manufacture of pigment. Chemically it consists of a sodium aluminium silicate with sodium sulphide. L.L. occurs in metamorphic limestones, and is found in Afghanistan, Siberia, Chile, and Persia.

LAPLACE (lahplah's), Pierre Simon, marquis de (1749–1827). French mathematician and astronomer. B. in Normandy, he was appointed prof. of mathematics at the Paris École Militaire in 1767. He observed the motion of the moon, Jupiter, Saturn, etc., and won universal fame with his *Traité de Mécanique Céleste* (1799–1825).

LAPLAND. Region of N. Europe in Norway, Sweden, Finland and Russia without political definition. Within the Arctic Circle, L. has low temperatures, with 3 months' continuous daylight in summer and 3 months' continuous darkness in winter. There is summer agriculture, incl. wheat, but the chief resources of L. are minerals (chromium, copper, iron, etc.), timber, hydroelectric power, and tourism. Of Mongolian stock, the true Lapps declined under

LAPLAND. For Lapps reindeer are the basis of a way of life, supplying skins for the traditional costume, still always worn on festive occasions, milk, meat, and bones and antlers to be turned into tools or tourist souvenirs. In winter they draw the pulkka, a boat-shaped snow sled on one runner. The man's hat, with its 4 points, is known as the Cap of the Four Winds.

Courtesy of the Finnish Travel Information Centre.

Grimond resulted in an increased L. vote. In 1967 Grimond was succeeded in the leadership by Jeremy Thorpe (1929-).

LIBERIA. Rep. on the W. coast of Africa, between Sierra Leone and the Ivory Coast. The interior consists of a densely wooded plateau. The only navigable rivers are the St. Paul and the Cavalla. The main settlements are along the coast; here coffee, cacao, palm nuts, indigo, yams, maize, sugar cane, sorghum, and rice are cultivated. Rubber produced from plantations worked under a concession granted in 1926, expiring 2025, by the Firestone Plantation Co. of Ohio, provides c. 10 per cent of U.S. rubber imports. Apart from Monrovia, the cap., the main ports are Robertsport, Marshall, Greenville, and Harper. There are some 1,200 m. of surfaced roads, and a freight railway, built in 1951, links the Bomi Hills iron-ore mines with Monrovia 40 miles distant. The political organization is modelled on that of the U.S.A., and English is the official language. Area c. 43,000 sq. m.; pop. (1966) 1,090,000 of whom c. 20,000 are Liberians proper, the remainder being indigenous peoples belonging to various tribes, some Moslem, some pagan; there are c. 6,000 white inhabitants.

L. began with a settlement made in 1822 near the present Monrovia by the American Colonization Society as a home for Negro freed slaves. The next years were occupied by a bitter struggle against the hostile natives. L. declared its independence in 1847. Large loans have been made by the U.S.A. There is a Pres. (see TUBMAN) and Cabinet on the U.S. model, Senate and House of Representatives.

LIBERTY, EQUALITY, FRATERNITY. The official motto of the French Republic, adopted in 1793 as a summary of the ideals of the revolution. The Vichy régime of 1940-4 substituted the phrase 'Work, family, fatherland'.

LIBREVILLE (lèbrvèl'). Cap. of Gabon, on the estuary of the r. Gabon. Founded in 1848 as a refuge for freed slaves, L. developed into a port. It has an airfield. Pop. (1965) 31,000.

LIBYA. A sovereign independent state in N. Africa, bounded on the N. by the Mediterranean, on the W. by Tunisia and Algeria, on the S. by the reps. of Niger and Chad, and on the E. by the rep. of Sudan and Egypt. Until 1963 it comprised the federal provs. of Cyrenaica, Fezzan, and Tripolitania (q.v.), but in the interest of overall unity was then divided into 10 admin. divisions. L. includes, from N. to S., a fertile undulating Mediterranean zone where fruits, particularly dates, and cereals thrive and many Italians settled; a sub-desert area where alfalfa is cultivated; the greater part of the Libyan desert, which is broken by fertile oases and the Fezzan mountains. L. is devoid of rivers. Oil, first discovered 1959, has provided unprecedented income growth; traditional industries incl. sponge and tunny fishing. The chief towns are Beida, the newly-built cap. near the coast of Cyrenaica, pop. 50,000; Tripoli and Benghazi, the former dual cap.; Misurata, Homs, Derna, Tobruk and Barce. There are magnificent archaeological sites, e.g. Leptis Magna (q.v.). Area 680,000 sq. m.; pop. (1967) 1,738,000.

L. has been held by the Romans, Vandals, Arabs, and in the 16th cent. by the Turks, who were ousted in 1911-12 by the Italians. L. was occupied in 1943 by British troops and in 1949 Cyrenaica (q.v.) achieved a measure of independence under British supervision. On 24 Dec. 1951 the U.N. declared all Libya an independent kingdom with Idris I (1890-)

LICE. 1, head louse; 2, pig louse; 3, peacock louse.

as its first king; proclaimed in 1951, sworn in 1952.

LICE. Parasitic insects (Anoplura or Pediculidae). They have flat, segmented bodies without wings, and a sucking tube attached to the head, with which they suck the blood of mammals on whom they live. Several species occur on man including the hair-louse (*Pediculus capitis*), and the body-louse (*P. vestimenti*) which may be a typhus carrier. Most mammals have their own varieties of L. Bird-lice, or biting-lice, are a different insect (Mallophaga).

LICENCE. Document issued by some govt. or other recognized authority conveying permission to the holder to do something otherwise prohibited, and designed to facilitate accurate records, the maintenance of order, and collection of revenue. In Britain examples are those required for marriage, for keeping a dog or gun, operating television or radio receivers, and sale of intoxicating liquor.

LICHENS (lî'kenz). Group of plants, which consist of a fungus and an alga existing in a mutually beneficial relationship. They are found on trees, rocks, etc., and flourish under very adverse conditions. Some Ls. have food value (e.g. Reindeer moss and Iceland moss), others give dyes such as litmus, or are used in medicine, especially for lung diseases.

LICHFIELD. English city (bor.) in the Trent valley, Staffs, 15 m. S.E. of Stafford. The cathedral was started in the 13th cent., and the grammar school dates from the 15th. Dr. Johnson was b. at L., which was founded in the 7th cent. by St. Chad. Pop. (1961) 14,077.

LICHINE (lichên'), David (1910-). Russian dancer and choreographer. B. at Rostov, he studied under Nijinska and danced with the cos. of Ida Rubinstein, Pavlova, de Basil, for whom he created such early ballets as *Nocturne* (1933), and *de Cuevas*. Later works incl. *Graduation Ball* (1940) and *Harlequinade* (1950).

LIDDELL HART, Sir Basil Henry (1895-). Brit. military scientist. He retired as an army captain in 1927, and continued as military correspondent of the *Daily Telegraph* 1925-35, and *The Times* 1935-9. He was an early advocate of air power and a famed exponent of mechanized warfare. His books incl. biographies of *Scipio*, *Foch*, *T. E. Lawrence*; and *A History of the Second World War* (1961).

LIDICE (lî'dětseh). Czech mining village, completely destroyed by the Nazis on 10 June 1942 as a reprisal for the assassination of Heydrich. The 192 men of the village were all shot, the 196 women sent to concentration camps where 50 died, and the 105 children to Germany. After the liberation a model mining village was built near the site, which is marked by a monument. Karl Frank, a Sudeten German, was later tried, found responsible for the crime, and hanged at Prague in 1946. The name of L. was taken by many places abroad.

LIE (lî), Jonas (1833-1908). Norwegian author. B. at Eker, he gave up his legal practice in 1868, and achieved his most typical successes with his seafaring and folklore stories such as *Trolls* (1891-2), *Malsas Jons* and *When the Iron Curtain Falls* (1901).

LIE (lî), Trygve Halvdan (1896-68). Norwegian statesman. He became sec. of the Lab. Party in 1926, was For. Min. in the exiled govt. 1941-6, when he helped keep the Norwegian fleet for the Allies, and 1st Sec.-Gen. of U.N. 1946-53.

LIEBERMANN (lîb'ermahn), Max (1847-1935). German impressionist painter. B. in Berlin, he is

LICHEN. Top, *Cetraria pyxidata*; below, *Evernia prunastri*.

used for L. materials incl. synthetic ruby crystal (used for the first extraction of L. light in 1960 and giving a high-power pulsed output) and a helium-neon gas mixture, capable of continuous operation, but at a lower power. In 1962 a L. was used to throw light at the moon's surface, a reflection being detected 2½ sec. later (Massachusetts Inst. of Tech.).

Some potential uses of Ls. are as flash bulbs in high-speed photography, for communications (a L. beam can carry much more information than present radio waves), for cutting, drilling, welding, more accurate radar, satellite tracking, and in medical and biological research. In espionage, sound wave vibrations from the window glass of a room can be picked up by reflected laser beam, extracted by a receiver within horizon distance, and amplified. Believed to be in the experimental stage, are X-ray Ls. which would be incredibly destructive and render all types of conventional weapon and defence obsolete.

LASHIO. Town in the Shan State, Burma, c. 125 m. N.E. of Mandalay, with which it is linked by rail. L. is linked by the Burma Road, constructed in 1938, with Kunming in China.

LA'SKI, Harold (1893–1950). British political theorist. Prof. of political science at the London School of Economics from 1926, he taught a modified Marxism, and pub. *A Grammar of Politics* (1925), *Liberty in the Modern State* (1930) and *The American Presidency* (1940). He was chairman of the Labour Party 1945–6.

LASKI, Marghanita (1915–). British writer. She was ed. in Manchester and at Oxford (reading English); her first book was *Love on the Supertax* (1944); later work incl. *Little Boy Lost* (1949), *The Victorian Chaise Longue* (1953) and the play *The Offshore Island* (1957). She is the niece of Harold L. (q.v.).

LA SPEZIA. See SPEZIA, LA.

LASSALLE (lahsahl), Ferdinand (1825–64). German Socialist. He took part in the 1848 revolution, during which he met Marx, and in 1863 founded the General Association of German Workers (later the Social-Democratic Party). Besides carrying on a tireless propaganda of speeches and pamphlets, he secretly intrigued with Bismarck. He was killed in a duel arising from a love-affair.

LASSUS, Orlande de (c. 1530–94). Flemish composer. B. at Mons, he pub. his first book of motets in 1556. Soon after he settled permanently in Munich. His compositions include many songs and madrigals, among them settings of poems by his friend Ronsard.

DENYS LASDUN. In a television interview Denys Lasdun explains his approach. In the background is the plan for the Royal College of Physicians, Regent's Park.

Courtesy of Granada Television.

LAS VEGAS. Night falls on the city of gamblers where pin tables and fruit machines invade even the shops and railway station. In the luxurious clubs roulette, baccarat, poker and dice are the main forms of gambling. The name of the city, ironically, means 'The Meadows'. Photo: Paul Popper Ltd.

LAS VEGAS (lahs vāg'ahs). City of Nevada, U.S.A., which has mushroomed since the S.W.W. from a pop. (1941) 16,000 to (1960) 64,405, with est. 2,000,000 tourist visitors annually. It is the centre of a vast recreation area, but is better known for its nightclubs where performers are paid fabulous sums, and for its gambling casinos in Fremont Street and the 'Strip' outside the city.

LASZLO (lahs'lō) (de Lombos), Sir Philip (1869–1937). British artist. B. in Budapest, he settled in England in 1907, and was naturalized in 1914. He was noted for his portraits, e.g. Edward VII and Theodore Roosevelt.

LATAKIA. See LATTAKIA.

LATENT HEAT. Term first used by Joseph Black (c. 1760) for the heat which changes the state of a substance (e.g. in melting or vaporization) without changing the temperature.

LATERAN CHURCH OF ST. JOHN. The Pope's cathedral as bishop of Rome. Little remains of the ancient basilica built by Constantine, c. 324.

LATERAN TREATY. The treaty between the Italian govt. under Mussolini and the Pope signed in the L. Palace in 1929. Under it the Pope resigned all claims to the former papal territories; the Vatican City was recognized as an independent sovereign state; and a concordat between Church and State recognized Catholicism as the state religion of Italy and made R.C. teaching compulsory in Italian schools. This treaty was incorporated in the constitution of the Italian rep. in 1947.

LATERITE (Lat. *later*, brick). A residual weathering product of basalts, granites and shales, forming a clay-like rock impregnated with ferric hydroxide. It is usually soft and friable, occurring in the tropics.

LATEX. A lactiferous fluid of angiospermous plants, an emulsion of various substances. It circulates longitudinally in branched tubes conducting plastic substances and acting as reservoir. L. is exuded from the Para rubber tree and worked into rubber. Coagulation is prevented by ammonia or formaldehyde.

LATIMER, Hugh (c. 1490–1555). English Protestant reformer. After his conversion to Protestantism in 1524 he was several times imprisoned, but was protected by Wolsey and Henry VIII. He was appointed bp. of Worcester in 1535, but resigned in 1539. Under Edward VI his sermons denouncing social injustice won him great influence. He was arrested for heresy in 1553, and burned at Oxford.

LATIN. The language spoken by the Romans, and the parent of the Romance languages, e.g. Italian,

his time it was supposed that refraction of L. actually produced colour instead of separating colours already existing. See also LFNS.

LIGHTHILL, Michael James (1924–). British mathematician. After a brilliant academic career – he was in 1950 appointed prof. of applied mathematics in Manchester at 26 – he was elected F.R.S. in 1953, was director at Farnborough 1959–64, and Royal Soc. research prof. at Imperial Coll. from 1964.

LIGHTHOUSE. Structure carrying a powerful light to aid marine or aerial navigation. Among early Ls. were the Pharos of Alexandria (c. 280 B.C.) and those built by the Romans at Ostia, Ravenna, Boulogne and Dover. In England beacons burning in church towers served as Ls. until the 17th cent., and in the earliest Ls. such as the Eddystone, first built 1698, open fires or candles were used. Today dissolved acetylene or electricity is used, and the light of the burner or lamp is magnified and directed out to the horizon (or up to the zenith for aircraft) by a series of mirrors or prisms. For identification lights are individually varied, usually either flashing (the dark period exceeding the light) or occulting (the dark being equal or less): fixed lights are liable to confusion. Manned lightships replace Ls. where reefs, sandbanks, etc., make erection of a L. impossible; and, where it is impossible to maintain keepers, unmanned light-buoys equipped for up to a year's service. In fog sound signals are made (horns, sirens, explosives), and in the case of light-buoys, fogbells and whistles operated by the movement of the waves. In the U.K. there are 3 general L. authorities – Trinity House, Commissioners of Northern

LIGHTHOUSE. Ten years' electricity without refuelling is supplied by this two-ton 'SNAP Seven-B' 60-watt nuclear generator (2 ft. 10 in. high) installed in a 50 ft. concrete-tower Coast Guard lighthouse at Baltimore in 1964. The 14 tubes in the centre contain strontium titanate fuel, and the 120 pairs of thermocouples surrounding them convert heat to electricity.

Courtesy of U.S.I.S.

Ls., and Commissioners of Irish Lights: in the U.S.A. the supervisory authority is the Coast Guard.

LIGHTNING. A discharge of electricity, accompanied by a visible flash, between 2 clouds or a cloud and the earth, caused by a difference in potential. In dry weather the atmosphere has a positive potential with respect to the earth, increasing with distance. When the usual balance cannot be maintained, water particles coalesce to form drops, concentrating their charge, which under stress results in a flash of L. Forked L. gives the impression of sharp angles but is usually sinuous; sheet L. is usually a distant indefinite illumination. Thunder is augmented by echoing. C. is most likely through its conductors, lesser conducting suffering most damage.

LIGNITE. See COAL.

LILAC. A flowering shrub (*Syringa vulgaris*) of the family Oleaceae. The panicles of small white or purplish flowers are sweetly scented. The smaller Persian L. is also popular in gardens.

LILBURNE, John (c. 1614–57). English politician. He was imprisoned 1638–40 for circulating Puritan pamphlets, fought in the parliamentary army, and by his advocacy of a democratic republic won the leadership of the Levellers (q.v.). Under the Common-

LIMA. Dominating the main square, the Plaza de Armas, is the cathedral, consecrated in 1625. It contains the remains of Francisco Pizarro who laid its cornerstone on the same day that he founded the city. Photo: Bell, Howarth Ltd.

wealth he was twice tried for sedition and acquitted, and after his acquittal he was imprisoned 1653–5.

LILIACEAE (līlī-ā'sē-ē). Family of bulbous plants, including a few shrubs. The genus *Lilium* is typical of the family, and incl. more than 50 varieties. They are monocotyledons, and the leaves may be alternate or in whorls. The stems are erect, the flowers usually appearing at the top. The flowers are regular and frequently bell-shaped. Many varieties are cultivated in gardens, including hyacinth, tulip, Madonna lily, autumn crocus, etc.

Certain fibre-producing plants and the medicinal *Aloe* and *Colchicum* belong to this family, as do the food plants onion, garlic, leek and asparagus.

LILIENCRON (līl'yenkrōn), Detlev, Freiherr von (1844–1909). German lyric poet. B. at Kiel, he served in the Prussian Army, and then sought his fortune in America. Returning to Holstein, he pub. his first vol. of verse. *Adjutantenritte* in 1883. It was followed by many others. He also wrote short stories, a humorous epic, a novel, and dramas.

LILIENTHAL (līl'yentahl), Otto (1848–96). German aeronaut. He studied the flight of birds, and invented one of the earliest gliders, in which he made over 2,000 flights. He was killed when it crashed.

LILITH (Heb. *lilān*, night). An Assyrian female demon; according to the Talmud she was the wife of Adam before Eve's creation. She was said to entice children to destruction.

LILLE (līl). Cap. of Nord dept., N. France, on the Deûle, 154 m. N.N.E. of Paris. Lying in a rich agricultural and industrial plain, L. was long a fortress city, and became the seat of a bishopric in 1913. Its citadel, built by Vauban, and Palais des Beaux Arts, with its collection of pictures, are the most noted historical buildings, while public buildings incl. univs. and a Pasteur institute. There are many important industries and manufactures incl. locomotives, heavy machinery, coal mining, textiles, and sugar. Pop. (1962) 199,033.

LILLIE, Beatrice (1898–). British comedienne. B. in Toronto, she became celebrated in cabaret and for her one-woman theatre shows, in which she sings and displays a satiric talent of high order.

LILONGWE (līlong'wa). Town in Malawi, 150 m. N.W. of Blantyre and 50 m. W. of Lake Malawi, named 1964 as site of the new cap. (replacing Zomba) to be built 10 m. from the existing township. Pop. (1967) 20,000.

LILY OF THE VALLEY. Plant (*Convallaria majalis*) in the family Liliaceae, growing in woods in Europe, N. Asia, and N. America, and a common garden plant. The white flowers are scented.

LIMA (lī'mah). The cap. of the rep. of Peru, and

family, the other being Lithuanian. L. is known from 1585.

LAUD (lawd), William (1573–1645). English churchman. As archbp. of Canterbury from 1633, his High Church policy, his support for Charles I's unparliamentary rule, his censorship of the press, and his persecution of the Puritans all aroused bitter opposition, while his strict enforcement of the statutes against enclosures and of laws regulating wages and prices alienated the propertied classes. His attempt to impose the use of the Prayer Book on the Scots provoked a revolt which precipitated the English Revolution. Impeached by parliament in 1640 he was imprisoned in the Tower, condemned to death by a bill of attainder, and beheaded.

LAUDANUM (lawd'num). A solution of opium in alcohol (tincture).

LAUDER (law'der), Sir Henry (Harry) (1870–1950). Scots comedian. At first a mill worker and miner, he made his reputation with comic songs of his own composition such as 'Stop Yer Ticklin' Jock', and 'I Love a Lassie'.

LAUDER. Royal burgh in Berwickshire, Scotland, 23 m. S.E. of Edinburgh. It was at L. that Archibald Douglas, 5th earl of Angus, in 1482 seized and hanged the earl of Mar and other favourites of James III, thus earning his nickname of Archibald Bell-the-Cat. Pop. (1961) 597.

LAUDERDALE, John Maitland, duke of (1616–82). Scottish statesman. Formerly a zealous Covenanter, he joined the Royalists in 1647, and as High Commissioner for Scotland 1667–79 persecuted the Covenanters. He was created duke of L. in 1672.

LAUE (low-e), Max Theodor Felix von (1879–1960). German physicist. He was a pioneer in measuring the wavelength of X-rays by their diffraction through the closely spaced atoms in a crystal, leading to the powerful technique now used to elucidate the structure of complex biological materials, e.g. DNA (q.v.). Awarded Nobel prize 1914. See **GRENOBLE**.

LAUGHING JACKASS. Australian bird (*Dacelo-gas*), similar to a kingfisher, but feeding on insects and reptiles. The name is derived from its cry, but in Australia it is generally known as the Kookaburra.

LAUGHTON (law'ton), Charles (1899–1962). Anglo-American character actor. B. in Scarborough, he made his début in 1926, but devoted himself largely to film work from 1932. His most famous films were *The Sign of the Cross*, *The Private Life of Henry VIII*, *Mutiny on the Bounty* and *Rembrandt*. He m. the actress Elsa Lanchester (1902–) and both became U.S. citizens in 1950.

LAUNCESTON (lahn'ston). (1) English town (bor.) in Cornwall, 21 m. N.W. of Plymouth. There

LAVA. Striking lava formations at Höfði in the south-east corner of Lake Myvatn, Iceland, nearly 1,000 ft. above sea-level. Elsewhere in the lake there are red and yellow sulphur springs. Courtesy of Iceland Tourist Information Bureau.

are ruins of a Norman castle, besieged in the Civil War. Pop. (1961) 4,518. (2) Port in N.E. Tasmania, Australia, on the Tamar, founded 1805. Its industries incl. saw milling, engineering, furniture and pottery making; Tasmania's railway workshops are at L. Pop. (1966) 60,450.

LAURACEAE. A family of dicotyledonous plants containing over 1,000 species. They are evergreen and mostly aromatic. Two of the chief genera are *Cinnamomum* and *Laurus*.

LAURASIA. See **WEGENER**.

LAUREL. Name given to the bay (q.v.) and to evergreen species of the genus *Prunus* in the family Rosaceae, notably the common cherry L. (*P. lauro-cerasus*), introduced to Europe from Asiatic Turkey in the 16th cent., and a popular ornamental shrub in N. America and Britain. The leaves are either dark green or variegated with yellow, and the small flowers are followed by red berries: the whole plant is poisonous, containing hydrocyanic acid.

LAURENCIN (lorənsi'n), Marie (1885–1956). French artist. Working in her native Paris, she produced sensitively delicate portraits and theatrical decors, e.g. for Diaghilev's Russian Ballet in 1924.

LAURIER (lō'riā), Sir Wilfrid (1841–1919). Canadian statesman. B. near Montreal, he entered the Quebec legislature in 1871, and the Ottawa parliament in 1874, and became leader of the Liberal Party in 1887. As. P.M. 1896–1911 – the first French-Canadian to hold the office – he supported imperial preference and the building of Canadian warships to co-operate with the British Navy, and sent Canadian troops to serve in the S. African War. He received the G.C.B. in 1897.

LAUSANNE (lōzahn'). Cap. of Vaud canton, Switzerland, above the N. shore of Lake Geneva. The opening of the Simplon railway tunnel in 1906 made L. an important point on the Paris-to-Milan main line. The cathedral church was consecrated in 1275, and L. univ. originated with an academy estab. 1537. At L. was signed in 1923 the peace treaty between Turkey and the Allies. Pop. (1960) 126,328.

LAVA. The molten substance emitted from a volcanic crater. Basic L. containing less silica than acid L., it flows greater distances, taking longer to solidify.

LAVAL, Pierre (1883–1945). French politician. B. near Vichy, he entered the Chamber of Deputies in 1914 as a Socialist, but after the F.W.W. moved towards the right. He was P.M. and For. Sec. in 1931–2, and again in 1935–6, his second period of office being marked by the Hoare-L. agreement for concessions to Italy in Abyssinia. He joined Pétain's govt. as Vice-Premier in June 1940; dismissed in Dec.,

L. (*Patella vulgata*) remains in the inter-tidal area. They leave their fixed position only to obtain vegetable food, always returning to the same spot.

LINACRE (lin'aker), Thomas (c. 1460–1524). English humanist scholar and physician. In 1509 he became physician to Henry VIII, and in 1518 obtained from the king a charter constituting the Royal College of Physicians, of which he was the first president. He was one of the leading figures of the New Learning.

LINCOLN (ling'kon), Abraham (1809–65). 16th Pres. of the U.S.A. B. in a Kentucky log cabin, he was almost entirely self-educated, but having qualified as a lawyer practised from 1837 at Springfield, Illinois. He sat, as a Whig, in the state legislature 1834–41 and in Congress 1847–9, and joined the new Republican Party in 1856. As a candidate for the Senate in 1858, he held a series of public debates with his opponent, Stephen Douglas, which won him the Republican candidature for the presidency in 1860. He was elected on a minority vote.

Between his election and his inauguration in March 1861, 7 slave states seceded from the Union, and were followed by 4 more. L.'s refusal to evacuate Fort Sumter gave the signal for civil war, which until 1863 went badly, and L. became extremely unpopular. His cabinet and generals were often insubordinate, and even disloyal, yet L. finally imposed his will on them so firmly that he was accused of aiming at dictatorship. The British govt. was hostile, and it took all L.'s tact to avert war. The abolitionists considered him lukewarm on the slavery question, for though he hated slavery he considered the fundamental issue to be the preservation of the Union.

Although his proclamation of 1863 freed slaves only in Confederate territory, he nevertheless advocated the constitutional amendment totally abolishing slavery. His view of the war is summarized in his speech at the dedication of the war cemetery at Gettysburg in 1863, in which he said it was being fought to preserve a 'nation, conceived in liberty, and dedicated to the proposition that all men are created equal', and to ensure that 'government of the people, by the people, for the people, shall not perish from the earth'. In 1864 he was re-elected by a 400,000 majority, and as victory approached he advocated a conciliatory reconstruction policy, 'with malice towards none, with charity for all'. Five days after Lee's surrender, L. was assassinated in a theatre at Washington by a Confederate fanatic, John Wilkes Booth. The L. Memorial

LIMPETS

(1922) consists of a large marble hall containing a 19 ft. seated statue of the pres. For the L. Center, see NEW YORK.

LINCOLN. City (co. bor.) co. tn. of Lincs, England, on the Witham, 130 m. N.N.W. of London. Remains exist of the Roman Lindum, and the cathedral, high above the town, built in the 11th–15th cents., contains the earliest Gothic work in Britain. Its bell, Great Tom of L., weighs 5½ tons. Agricultural machinery and implements are produced. Pop. (1961) 77,065.

LINCOLN. Cap. of Nebraska, U.S.A., seat of the state univ. The chief industry is flour milling. Lindbergh learned to fly at L. Pop. (1960) 128,521.

LINCOLNSHIRE. The 2nd-largest co. in England, stretching along 110 m. of its E. coast. The main rivers are the Humber, Trent, Witham, and Welland; the co. town is Lincoln. The fens cover a considerable area of L., which is divided into 3 administrative divisions: the Parts of Lindsey, Kesteven, and Holland (qq.v.). Area 2,663 sq. m.; pop. (1967) 791,500.

LIND, Jenny (1820–87). Swedish soprano singer. B. in Stockholm, she gained the name 'Swedish Nightingale' on account of her voice's remarkable range. Originally famous in opera, she appeared only in concerts after 1849 and m. her accompanist, Otto Goldschmidt, in 1852 while touring America. She finally settled in England and taught at the Royal Coll. of Music 1883–6.

LINDBERGH, Charles Augustus (1902–). American aviator. In 1927 he made the first solo non-stop flight across the Atlantic, and was created a colonel in the U.S. Army. Before America's entry into the S.W.W. he was prominent as an Isolationist. L.'s first-born son was kidnapped and killed in 1932; a case which led to the passing of the 'Lindbergh Law', making kidnapping a federal instead of a state offence, in the same year. The kidnapper, B. R. Hauptmann, was executed in 1936.

LINDEN TREE. See LIME.

LINDISFARNE. Another name of HOLY ISLAND, Northumberland.

LINDSAY, Nicholas Vachel (1879–1931). American poet. B. at Springfield, he adopted a wandering life, supporting himself by lectures and recitations of his own poetry. He gained recognition with *Congo and other Poems* (1914); later books incl. *Chinese Nightingale* (1917), *Johnny Appleseed* (1928), and the autobiographical *Handy Guide for Beggars*.

LINDSEY, Parts of. One of the 3 administrative cos. forming Lincs. Its administrative centre is Lincoln. Area 1,524 sq. m.; pop. (1967) 456,070.

LINEAR ACCELERATOR. A machine in which charged particles are accelerated to high speed in passing down a straight evacuated tube or waveguide. Acceleration of the particles is produced by electromagnetic waves in the tube or by electric fields.

LINE ISLAND. See GILBERT AND ELLICE ISLANDS.

LINEN. The yarn spun and the textile – one of the oldest known – woven from flax (q.v.). To get the longest possible fibres, F. is pulled (not cut) by hand or machine, just as the seed bolls are beginning to set. After preliminary drying, it is steeped in water so that the fibre can be more easily separated from the wood of the stem, then 'hackled' (combed), classified, drawn into continuous fibres, and spun. Bleaching, weaving, and finishing processes vary according to the final product, which ranges from sailcloth, canvas and sacking to cambric and lawn. Because of its length of fibre, L. yarn has twice the strength of cotton, and is superior in delicacy, so that it is especially suitable for lace making. It mixes well with synthetics.

LINGAM. A phallus, worshipped by the Hindus as the symbol of Siva, the god of destruction yet of generative power. Often it is combined with the Yoni, the female emblem.

LINGUA FRANCA. A simplified language or jargon used in intercourse between peoples of different

ABRAHAM LINCOLN. The president assassinated by John Wilkes Booth at Ford's Theatre in Washington D.C. on 14 April 1865, from a contemporary drawing. Courtesy of U.S.I.S.

L.T. on whatever surface it is played, is to hit the ball into the opponent's area in such a way that he cannot return it to the player's area. The court is divided along its length, and each point is started by one player (standing behind the base line, alternately on the left and right of his own area) serving the ball with a powerful overhead shot into a restricted part of the opponent's court diagonally opposite. The server is allowed 1 failure. The opponent must return the ball, after the first bounce, to any part of the server's area of the court, when play continues on both entire areas until the point is decided, the ball being played after

LAWN TENNIS COURT

the first bounce or volleyed in the air. The game is won by the first player to win 4 points (called 15, 30, 40, game) unless both players reach 40 (*deuce*) when a player needs 2 consecutive points to win. A set goes to the player who wins 6 games, but with a *deuce* provision at 5 all; and a match is 2 out of 3, or 3 out of 5 sets. A highly specialized sport, fostered by national and international bodies, in which Australian and American players predominate, its competition events incl. the Davis Cup (donated 1900) for international competition among men and the Wightman Cup (1923) for U.S. and U.K. women's teams. Formerly amateur, but professional from 1968, are The All England Championships at Wimbledon whose winners have incl., in the men's singles, F. J. Perry (1934-6), L. A. Hoad (1956-7), R. A. Laver (1961-2, 1968-9) and Roy Emerson (1964-5); and in the women's singles, Mrs. Wills Moody (1927-30, 1932-3, 1935, 1938), Miss Louise Brough (1948-50, 1955), Miss Maureen Connolly (1952-5), Miss M. E. Bueno (1959-60, 1964), Miss M. Smith (1963, 1965), Mrs. Billie-Jean King (1966-7, 1968), and Ann Jones (1969). See LENGLEN, SUZANNE.

LAWRENCE, St. (d. 258). Christian martyr. B. probably in Spain he became a deacon of Rome under Sixtus II, and when summoned to deliver the treasures of the Church displayed the beggars in his charge, for which he was broiled on a grid-iron.

LAWRENCE, David Herbert (1885-1930). British novelist and poet. B. in Notts, the son of a miner, he studied at Nottingham univ., and became a teacher. His earliest novel, *The White Peacock*, appeared in 1911, but he first attracted attention with the semi-autobiographical *Sons and Lovers* (1913). In 1914 he m. Frieda von Richthofen, who is the model for Ursula Brangwen in *The Rainbow* (1915), which was suppressed for obscenity, and in its sequel *Women in Love* (1921). His later years were largely spent in travel in Italy, Australia and Mexico, partly in search of health, partly in the hope of finding peace in a less

D. H. LAWRENCE

complex and materialistic society. His travels inspired the novels *Aaron's Rod* (1922), *Kangaroo* (1923), and *The Plumed Serpent* (1926), as well as *Etruscan Places* (1927-8), and other travel books. *Lady Chatterley's Lover* (1928) gave rise to a long controversy, and the unexpurgated edition was banned as obscene in the U.K. until 1960. It expresses rather crudely L.'s dominating conviction that emotion and the sexual impulse are creative and true to human nature, and therefore of paramount importance in our increasingly sterile and cerebral society. His philosophy and writing, often irrational and of uneven quality, are shown at their best in his poems, and short stories, e.g. 'The Woman Who Rode Away' (1926). L. d. of consumption near Nice.

LAWRENCE, Ernest O(rlando) (1901-58). American physicist. During his long period in California, he was prof. of physics from 1930 and director of the Radiation Laboratory from 1936, which he built up into a large, brilliant school for research in nuclear physics. His invention of the cyclotron pioneered the production of artificial radio-isotopes, and led to many new fields of investigation. He was awarded the Nobel prize in 1939.

LAWRENCE, Gertrude (1898-1952). English actress. B. in London, of Danish extraction, she estab. her reputation in the 1920s as a sophisticated stylist in revue and musical comedy. In later years she played mainly in New York. Her greatest success was *Private Lives* (1930-1) written specially for her by Noël Coward.

LAWRENCE, Sir Henry Montgomery (1806-57). British soldier. B. in Ceylon, the brother of John L., he entered the Bengal Artillery in 1823, and served in the Burmese War 1824-6 and the Afghan War, 1842. On the outbreak of the Mutiny he took charge at Lucknow and organized the defence of the residency, but was killed early in the siege.

LAWRENCE, John Laird Mair, 1st baron (1811-79). Viceroy of India. B. in Yorks, he began his Indian career in 1830, and in 1853 became chief commissioner for the Punjab. During the Mutiny he disarmed the mutinous troops in his area, and was largely responsible for the recapture of Delhi. He was viceroy of India 1864-9.

LAWRENCE, Sir Thomas (1769-1830). British painter. B. at Bristol, the son of an innkeeper, he entered the R.A. schools in 1787, and was elected R.A. in 1794, and P.R.A. in 1820. He succeeded Reynolds as principal painter to the king in 1792, and was knighted in 1815. He painted portraits of many of his famous contemporaries, incl. the series of pictures of Allied sovereigns and statesmen in Windsor Castle.

LAWRENCE, Thomas Edward (1888-1935). British soldier, known as 'Lawrence of Arabia'. B. in Wales, he studied at Oxford, and during 1910-14 took part in archaeological expeditions to Syria and Mesopotamia. Appointed to the military intelligence department in Cairo, he took part in negotiations for an Arab revolt against the Turks, and in 1916 attached himself to the Emir Faisal. He showed himself a guerrilla leader of genius, combining raids on Turkish communications with the stirring up of revolt among the Arabs. He joined the R.A.F. in 1922 as an aircraftman under the name Ross, transferring to the tank corps under the name T. E. Shaw in 1923 when his identity became known, then returning to the R.A.F. in 1925. He adopted the name Shaw by deed poll in

works range from the Cubist 'Femme Assise' (1916) to later more baroque studies of the human figure, his bronzes being especially fine.

LIPPE, German r., rising in the Teutoburg Forest and flowing generally W. for 150 m. to join the Rhine at Wesel. It gave its name to a small state, area 470 sq. m., which was a sovereign principality from the 12th cent. until 1918, then a free state of the German rep.; united with Schaumburg under the Nazis to form a Gauleiter's district, it came under British occupation in 1945 and in 1946 was absorbed in the Land of North Rhine-Westphalia. Its cap. was Detmold. Prince Bernhard of the Netherlands belonged to the former ruling family of L.

LIPPERSHEY (lɪp'ershi), Hans, Dutch spectacle-maker who is said to have invented the telescope by chance, c. 1608.

LIPPI, Fra Filippo (1406-69). Italian painter, b. at Florence. His most important works are the frescoes in the choir of the cathedral at Prato, representing the lives of John the Baptist and of St. Stephen. L.'s 'Vision of St. Bernard', formerly attributed to Masaccio, is in the National Gallery, London. His son, **Filippino L.** (1457-1504), was also a painter, studied under Botticelli, and executed frescoes in the Carmine, Florence, and the 'Virgin and Saints' (Uffizi, Florence).

LIP READING. Interpretation of speech by observation of the lips, tongue, and facial expression, enabling a deaf person, when proficient in the art and when the other person fully co-operates, to carry on to some extent a normal conversation without the use of electrical or other hearing aids.

LIQUORICE (lik'ōris). Plant (*Glycyrrhiza glabra*) in the family Leguminosae, and the black, hard, sticks of paste prepared from boiled extracts of the crushed root, which are made into confectionery or, in pharmacy, for masking the bad taste of medicine.

LIRA (lēr'ah) (Lat. *libra*, pound). The standard unit of Italian currency, divided into 100 centesimi.

LISBOA. Portuguese form of LISBON.

LISBON (liz'bon). Cap. of Portugal from 1260, and of Estremadura prov. It lies in a beautiful position on the Tagus, which here forms a tidal lake and an estuary. Most of L. is built on low hills. Alfama dist. is the old town, with narrow streets, picturesque but poor. The centre of city life is the Cidade Baixa (lower city): an earthquake in 1755 destroyed this part of the city, with great loss of life; it was rebuilt rapidly at the expense of the marquis of Pombal. Points of interest incl. the Castelo de São Jorge, the cathedral, a Moorish citadel founded 1150, the monastery of São Vicente de Fóra and the church of Nossa Senhora do Monte, the palace of the National Assembly (formerly a Benedic-

LISBON. Built on the right bank of the river Tagus, Lisbon is an important fishing port. The catches are both valuable and varied and the fishmarket flourishes.

Courtesy of the Portuguese State Office.

tine monastery), the Palacio das Necessidades (formerly the royal palace, from which Manuel II, king of Portugal, went into exile in 1910), museums of ancient and of contemporary art, botanical garden and Edward VII park, and English cemetery, where Henry Fielding is buried. The city is the seat of an archbishopric and of a univ. (1911). It has a fine harbour and is the centre of important fishing industry. Among industries shipbuilding, sugar refining, and the manufacture of textiles, chemicals, paper, and pottery. Exports include wine, olive oil, and cork. The first section of an underground railway was opened in 1959; an electric railway links L. with the seaside resort of Estoril. The international airport of Portela lies 4 m. N.N.E. of L.

L., an important centre in Roman times, achieved its greatest prosperity in the 16th cent. In 1967 flood drowned c. 500 people in the worst disaster since earthquake. Pop. (1960) 818,382.

LISBURN. Cathedral city and market town (U.I.) of co. Antrim, N. Ireland, seat of the bishopric of Down, Connor, and Dromore. L. is noted for linens. Jeremy Taylor died there. Pop. (1961) 17,600.

LISIEUX (lēsyo). Town in Calvados dept., France. 28 m. E.S.E. of Caen. Thérèse Martin (1873-9) popularly called the 'little flower', spent all but the first 5 years of her short life in the Carmelite convent of L., and was in 1925 canonized as St. Teresa of Lisieux. Her tomb attracts pilgrims. Pop. (1962) 22,472.

LIST, Friedrich (1789-1846). German economist. B. in Württemberg, he became a prof. at Tübingen univ. and a deputy in the Württemberg chamber, but was imprisoned in 1822 for his liberal views, and in 1825 emigrated to the U.S.A. He returned to Germany in 1832 as U.S. consul at Leipzig. He committed suicide. His *National System of Political Economy* (1841) greatly influenced German economic thought and practice.

LISTER, Joseph, 1st baron (1827-1912). British surgeon. He was prof. of surgery at Glasgow 1860-61 at Edinburgh 1869-77, and at King's Coll., London 1877-92. The first to use antiseptic treatment for wounds, he introduced antiseptic surgery and the prevention of infection by the utmost cleanliness in the operating-room. He was pres. of the Royal Society 1895-1900, and was created baron L. of Lyme Regis in 1897. In 1902 he received the O.M.

LISZT (list), Franz (1811-86). Hungarian pianist and composer. B. at Raiding, he was originally taught by his father, but after his first public performance when only 9 he went to Vienna to study under Czerny and Salieri and at 11 claimed even Beethoven among his many admirers. Becoming possibly the greatest virtuoso pianist of all time, he travelled widely in Europe, producing an opera *Don Sancho* in Paris at 18. In 1833 began his 10-year affair with the comtesse d'Agout, by whom he had 3 children and with whom he lived mainly in Switzerland (see WAGNER). A musical director and conductor at Weimar (1849-59) where he lived with the Princess Caroline Sayn-Wittgenstein, he was a propagandist of the music of Berlioz and Wagner. Retiring to Rome, he turned again to his early love of religion and in 1865 became a secular priest (hence his adoption of the title Abbé) but continued to teach, give concert tours and indulge in several love-affairs. He d. at Bayreuth.

L. greatly influenced many younger musicians, including Brahms, Bülow, and Grieg, and originated the symphonic poem. His most notable compositions are his lyrical, but often technically very difficult, piano works, incl. the popular *Liebesträume* and the *Hungarian Rhapsodies*, based on gipsy music. He also wrote *Faust* and a *Dante* symphony; masses and oratorios; songs and piano arrangements of works by Beethoven, Schubert, Wagner, etc.

LI T'AI-PO (lê-ti-pō), or **LI PO** (705-62). Chinese poet. B. in Szechwan, he deals mostly with wine and

old (Lower Miocene), pygmy-sized, omnivorous and without weapons or tools; and the earliest true man *Homo habilis*, 1,820,000 yrs. old, small-brained and upright, 3–4 ft. high, who used tools and talked.

LEAMINGTON (lem'-): officially Royal L. Spa. English spa and health resort (bor.) in Warwickshire on the Leam, adjoining Warwick. It caters extensively for visitors and also manufactures iron and bricks. Pop. (1961) 43,236.

LEAN, David (1908–). British film director. Beginning as a camera assistant in 1928, he was asst. director of *Pygmalion* (1938), and director of *Blithe Spirit* (1945), *Brief Encounter* (1946), *The Bridge on the River Kwai* (1957) and *Lawrence of Arabia* (1962). He was m. (1949–57) to the actress Ann Todd.

LEAR, Edward (1812–88). British artist and humorist. B. in Holloway, he first attracted attention by his paintings of birds, and later turned to landscapes. He travelled in Italy, Greece, Egypt and India, pub. books on his travels with his own illustrations, and spent most of his later life in Italy. A vein of fantastic humour appears in his *Book of Nonsense* (1846) which popularized the limerick.

LEASEHOLD. Called in law a 'chattel real', a L. is a tenancy of land from year to year, or for a term of years.

LEASE-LEND. Programme of mutual aid between Britain, the U.S.A., and the other Allies, carried out during the S.W.W. and begun under the Lease-and-Lend Act (1941–5), empowering the President to sell, exchange, transfer, lease, or lend war materials to any country whose defence he considered essential to the defence of the U.S.A. War supplies could thus be sent to Britain on a credit basis instead of the cash-and-carry system introduced by the Neutrality Act of 1939.

In Feb. 1942, after the U.S.'s entry into the war, an agreement between Britain and the U.S. provided for mutual L.-L. assistance, and for collaboration to deal with post-war economic problems.

LEATHER. A material prepared from the skins of animals, birds, and fish. L. articles at least 7,000 years old still exist. Methods of preparation vary according to the type of hide or skin and the kind of L. required. 'Hides' are the coverings of larger animals, such as cattle, horse and buffalo; 'skins' those of the smaller, such as calf, pig, goat, and sheep.

Tanning, the 'oldest manufacturing process in the world', prevents a skin from putrefying and turns it into L. Skins from the slaughterhouse are salted for temporary preservation and on arrival at the tannery the surplus flesh, hairs and salt are removed, and the skins dipped in tanning solutions of gradually increasing strength – a process which may take many weeks. Vegetable tanning solutions are generally blends of bark, leaf or nut infusions from various trees, and chrome tanning (basic chromium sulphate) is used for shoe uppers. After drying L. may be dyed or sprayed to any colour; and mechanical treatments provide various physical properties and types of surface texture. In the U.K. 80 per cent of the L. industry's production is used for footwear, the remaining 20 per cent covers an ever-widening range of products incl. harness and saddlery, travel goods, handbags, clothing, upholstery for furniture and cars and industrial goods such as oil seals and drive belting.

LEATHERHEAD. English town (U.D.) in Surrey, 18 m. S.W. of London, on the Mole, at the foot of the N. Downs. Several industrial research stations are estab. there, and the Thorndike Theatre was opened 1968. See THORNDIKE, SYBIL. Pop. (1961) 35,554.

LEAVEN (lev'n). Element inducing fermentation; especially applied to the yeast added to dough in bread making. Hence it is used figuratively of any pervasive influence, usually in a good sense, although to the Hebrews it symbolized corruption, and unleavened bread was used in sacrifice.

LEAVIS, Frank Raymond (1895–). British scholar. A Fellow 1936–64, and Univ. Reader in English (1959–62) at Cambridge, he is well known for his editorship (1932–53) of the review *Scrutiny*, which he helped found, and for his books of literary criticism, e.g. *New Bearings in English Poetry* (1932), *The Great Tradition* (1948), and *The Common Pursuit* (1952).

LEBANON. A rep. in S.W. Asia, situated between the Mediterranean on the W., Israel on the S., and Syria on the E. and N. L. is a narrow strip of land, c. 130 m. long and 30 m. wide, lying between the ranges of the Anti-Lebanon and Mt. Hermon and the Mediterranean. The L. is also the name of a range running parallel to the sea and to the Anti-Lebanon down the centre of the country, and rising to 10,000 ft.; it was formerly famed for its cedars. Most of the rep. is hilly, except for the central valley of Bekaa. The main rivers are the Orontes and the Litani. Fruit, tobacco, silk, and cotton are the main products and the chief minerals are iron and lignite. Principal towns incl. Beirut, the capital and seat of 4 univs., Zahle, Tripoli, and Sidon (the last 2 towns being the terminals of oil pipelines). There are remarkable archaeological remains at Baalbek, Byblos and Tyre (qq.v.). Arabic is the official language, but French and English are widely used. Area c. 3,400 sq. m.; pop. (1963) 1,750,000, incl. 800,000 Christians of various denominations and 550,000 Moslems. About 88,000 Druses remained.

Before the F.W.W., Lebanon was part of the Ottoman Empire; it was placed under French mandate by the League of Nations in 1922 and was given a constitution in 1926. In 1941 Allied troops under General Catroux ousted the Vichy French administration and in 1944 the independence of L. was recognized. Under the constitution of 1947 there is a pres. who appoints the P.M. and Cabinet; the single chamber parliament is elected by universal adult suffrage. Divergent views on the Palestinian situation dominate the unstable political scene, but a Nat. Coalition was estab. 1969.

LEBDA. Older name of HOMs.

LEBEDEV (lebād'yef), Peter Nikolaievich (1866–1912). Russian physicist. While prof. at Moscow univ. 1892–1911 he succeeded in proving experimentally, and then measuring, the minute pressure which light exerts upon a physical body; confirming Clerk Maxwell's theoretical determination.

LEBENSRAUM (lehbenezrowm') (Ger., living space). A slogan used by the Nazis to justify their annexation of neighbouring states and their demand for the return of the former German colonies, on the ground that Germany was over-populated.

LEBLANC (lebloñ), Nicolas (1742–1806). French chemist. B. at Issoudun, he became surgeon to the duke of Orleans. Having discovered a process (now superseded) whereby soda could be manufactured from common salt, he opened a factory near Paris, but his business was ruined by the Revolution, and he committed suicide.

LEBRUN (lebrun'), Albert (1871–1950). French statesman. He became Pres. of the Senate in 1931 and in 1932 was chosen as Pres. of the rep. In 1940 he handed his powers over to Marshal Pétain.

LE BRUN, Charles (1619–90). French painter. B. in Paris, he helped to found the Academy of Painting and Sculpture in 1648, and also the Gobelins tapestry works, of which he became a director. He excelled in elaborate historical paintings.

LE CARRÉ (le ka'rā), John. Pseudonym of British author David John Cornwell (1931–). After teaching at Eton, he was a member of the Foreign Service 1960–4. His books incl. *The Spy Who Came in from the Cold* (1963) and *A Small Town in Germany* (1968).

LECOCQ, Charles (1832–1918). Fr. composer, b. in Paris. He wrote some 40 comic operas, among

LITTLEHAMPTON. English seaside resort and port (U.D.) in Sussex, at the mouth of the Arun, 10 m. E.S.E. of Chichester. Pop. (1961) 15,647.

LITTLE ROCK. Cap. of Arkansas, U.S.A., and co. seat of Pulaski co. on the r. Arkansas, a centre for bauxite, lumber, and cotton; there are foundries, machine shops, furniture and cotton factories, etc. Natural gas is used in home and industry, which gives the town clear air. Douglas MacArthur was b. at L.R. In 1958 considerable disorder arose when state and federal authority conflicted on school racial integration. Pop. (1960) 107,813.

LITTLEWOOD, Joan. British theatrical director. After early experience with the Manchester Repertory Theatre, she founded Theatre Workshop in 1945. With her professionally 'earthy' and vigorous productions at the Theatre Royal, Stratford (London), 1953-61 and from 1963, she broke through to fame, e.g. *A Taste of Honey* (1959), *The Hostage* (1959-60), *Fings ain't Wot They Used T'Be* (1960-1), and *Oh What a Lovely War* (1963).

LITRE (lêtrêh), Maximilian Paul Émile (1801-81). French philologist and philosopher. His *magnum opus* is the comprehensive *Dictionnaire de la langue française* (1863-72). A friend and admirer of Comte, he did much to disseminate the positivist philosophy.

LITURGY. In the Christian Church, a term originally limited to the celebration of the Eucharist, but now used of any or all services for public worship.

LIU SHAO-CHI (lê-shô show-chê) (1898-). Chinese statesman. B. in Hunan, of peasant stock, he was ed. at the same school as Mao Tse-tung. In 1921 he joined the Communist Party, and later spent some years in Russia. In 1959 (re-elected 1965) he became Chairman (i.e. President) of the Republic in succession to Mao Tse-tung. Formerly a major party theoretician, he came under attack in the Cultural Revolution, and was removed 1968 from all govt. and party posts.

LIVER. The largest gland in man, wt. 3-4 lb. occupying the upper right-hand portion of the abdomen, below the diaphragm. A prodigious factory and storehouse, it makes the blood proteins (albumen, etc.) and antibodies; stores vitamins and food as glycogen, which is broken down to sugar and passed into the blood, to supply energy on demand to any part of the body. In addition to filtering and purifying the blood, the L. disposes of some waste products (e.g. urea) directly into the gut, to which it also supplies bile, an emulsifying agent which breaks fat down into minute droplets to aid its digestion.

LIVERPOOL, Robert Banks Jenkinson, 2nd earl of (1770-1828). British Tory statesman. He entered parliament in 1790, and was For. Sec. 1801-3, Home Sec. 1804-6 and 1807-9, War Min. 1809-12, and P.M. 1812-27. His govt. conducted the Napoleonic Wars to a successful conclusion, but its ruthless repression of freedom of speech and of the press aroused such opposition that during 1815-20 revolution frequently seemed imminent.

LIVERPOOL. City (1880) and seaport (co. bor.) in Lancs, England, on the right bank of the Mersey, 3 m. from the Irish Sea. Probably founded by the Norsemen, it became a bor. in 1207 and replaced Chester as a port for Ireland, but attained importance only under Charles II with the growth of trade with the American colonies and W. Indies. The first dock was opened in 1715 and during the 18th cent. L. became the main centre of the slave trade, and in the 19th and first half of the 20th cent. was notable as the exporting centre for the textiles of Lancs. and Yorks. Today, shortened lines of communication by motorway and freightliner train mean that more British exports of all kinds flow out through L. than by any other route and modernisation by the Mersey Docks and Harbour Board (1858) makes it Europe's major Atlantic port. There are some 38 m. of quayage with specialized berths for 'packaged' softwood timber,

LIVERPOOL. A fine example of the half-timbered English house of the 17th century is Speke Hall, with lavish interior decoration in plaster and wood panelling and - a comment on the troubled times in which it was built - a roomy, well-concealed priest's hole. Courtesy of Liverpool Corporation.

petroleum, bananas and other fruit, and the expanding 'container' trade with N. America, notably in the Seaforth dock 1967-71 which gives a 48-hr. turnaround. There are also modernized facilities for bulk cargoes and commodities which cannot be containerized, and for the conventional carrier to less developed areas as yet unable to handle container traffic, as in Africa, the Far East, and S. America, e.g. in the Birkenhead dock across the Mersey. Other imports incl. vegetable oils, grain, iron ore and other metals, sugar and cotton. Industries incl. flour milling, sugar refining, engineering, ship repairing, chemicals, tobacco, and extraction of vegetable oil, with modern factories on the industrial estates at Aintree, Kirkby and Speke. The 3 m. Mersey Tunnel (1925-34) links L. and Birkenhead, and a tunnel to Wallasey is under construction: there is an airport at Speke.

Outstanding buildings incl. Speke Hall, the 18th cent. Town Hall, St. George's Hall (1854) in the Greek style, the Walker Art Gallery (1877) with a fine collection, and the Dock Offices, Liver Buildings and Cunard Building on Pier Head. The Anglican Cathedral, designed by Sir Giles Gilbert Scott in the Gothic style and begun 1904, will be the largest church in England when complete; the R.C. Metropolitan Cathedral of Christ the King (see illus. p. 473) 1967, is circular and has a lantern-tower carrying 50-ft. glass panels designed by John Piper. The univ. (1881) received its charter 1903. Municipal area 43 sq. m.; pop. (1961) 747,490.

LIVERWORTS. Class of plants (Hepaticae) resembling mosses. They are

DAVID LIVINGSTONE
Photo: N.P.G.

in moist situations, and many are found in Britain.

LIVERY COMPANIES.

The guilds of the City of London, whose members formerly wore a distinctive dress on special occasions. The companies have lost almost all their original industrial functions, but they still maintain their social activities. Most of them administer valuable charities often educational.

LIVINGSTONE, David (1813-73). Scottish missionary and explorer. B. at Blantyre, Lanarkshire, he

area 108 sq. m., pop. 61,660; Barbuda, area 62 sq. m., pop. 1,000; Redonda, 1 sq. m., uninhabited. Products of the islands incl. sugar, molasses, cotton, citrus fruits, tomatoes, coconuts, and salt. The L.I., together with the British VIRGIN ISLANDS (q.v.), were until 1960 a single colony under a Governor appointed by the crown. Attempts at a general West Indies federation (1958–62) having failed, in 1967 the status of Associated State (q.v.) was granted to Antigua, and also to St. Kitts-Nevis-Anguilla. Anguilla then alleged domination by the St. Kitts federal admin. and in 1969 declared itself a rep., breaking all ties with Britain. A small British force was despatched to restore order and negotiations were opened.

LE FANU (lef'anoo), Joseph Sheridan (1814–73). Irish writer. B. in Dublin, he wrote novels and short stories, such as *The House by the Churchyard* (1863), *Uncle Silas* (1864), and *In a Glass Darkly* (1872), which rank high among stories of the mysterious.

LEFT WING. Term in politics used for the more radical parties. It originated in the French National Assembly in 1789, where the nobles sat in the place of honour on the president's right, and the third estate on his left; this arrangement has become customary in European parliaments, where the radicals sit on the left and the conservatives on the right. It is also usual to speak of the right, left, and centre, when referring to the different elements composing a single party.

LEGACY. A bequest of personal property made

LEEDS. The impressive Civic Hall opened by George V in 1933. Courtesy of the City of Leeds.

by a testator in his will and passing on his death to the legatee. Specific Ls. are definite named objects, e.g. a piece of jewellery. General Ls. are sums of money or items not specially identified, e.g. 'one of my clocks'. A residuary L. is all the remainder of the deceased's personal estate after the other Ls. have been distributed.

LEGEND (Lat. *legenda*, things to be read). Term originally applied to the books of readings designed for use in Divine Service, and afterwards extended to the stories of saints read at matins and at meal-times in monasteries. The best-known collection of such stories was the 13th cent. *Legenda Aurea* by Jacobus de Voragine. The term has since extended its meaning to traditional stories about famous people.

LEGER (lehzh'eh'), Fernand (1881–1955). French artist. By 1911 he was exhibiting Cubist works, favouring espec. cylindrical and machine forms, and reducing his human beings to puppets. He designed settings for a no. of ballets, and was a decorative mural painter.

LEGHORN. Seaport of Tuscany, W. Italy, and the cap. of L. prov., 12 m. S.S.W. of Pisa. The modern town contrasts with the picturesque old fortress, dating back to before the 12th cent., and the new

fortress (16th cent.). L.'s prosperity developed under the Medici who built the first harbour. It has a naval academy, shipyards, iron and steel works, distilleries, and makes motor-cars, macaroni, glass, and copper goods. L. is also a popular resort. Pop. (1961) 159,973.

LEGION OF HONOUR (*Légion d'Honneur*). French military and civil order, founded by Napoleon in 1802. The pres. of the rep. is grand master, but administration is in the charge of the grand chancellor. Women are eligible and the 5 ascending grades are: chevalier, officer, commander, grand officer and grand cross. In 1963, owing to overcrowding of the lower grades, it was decided to limit award of the L. of H. to 'eminent' services, 'distinguished' and 'honourable' services to be rewarded by the newly created Order of Merit (*Ordre de Mérite*), which also replaced a number of other decorations awarded by the various ministries. Still retained was the *Palme Académiques* awarded by the Min. of Education.

LEGITIMACY. Any child born anywhere in lawful wedlock is legitimate, unless the husband successfully repudiates paternity, a proceeding, in the interests of the child, which is not encouraged by the law. In England and Wales an illegitimate child was legitimated on the subsequent marriage of its parents, provided there was no impediment to such marriage at the time of the birth of the child, by an act of 1926 effective 1927; an act of 1959 legitimated an illegitimate child on the marriage of its parents even though at the time of the birth the father or mother was married to a third person. A legitimated person has all the rights and duties of one born in wedlock except that such a person cannot succeed to, or transmit, any dignity or title. The law relating to legitimation is not uniform in the U.S.A., but in general follows the line of the law in England.

LEGITIMISTS. The party in France which continued to support the claims of the house of Bourbon after the revolution of 1830. When the direct line became extinct in 1883 the majority of the party transferred their allegiance to the house of Orléans.

LEGOUVÉ (legoo'veh'), Gabriel Jean Baptiste Ernest Wilfrid (1807–1903). French dramatist. B. at Paris, author of *Adrienne Lecouvreur* (1849) and *Médée* (1855).

LEGROS (legrō'), Alphonse (1837–1911). Anglo-French artist. B. in Dijon, he began exhibiting in Paris in 1857, settled in England in 1863, was naturalized, and was Slade prof. at Univ. Coll., London, 1875–92. He painted portraits, landscapes, and figures, and was a distinguished etcher and sculptor.

LEGUMINOSAE. Family of dicotyledonous plants, containing 600 genera and 12,000 species. It includes trees, e.g. laburnum and acacia; bushes, e.g. gorse; garden flowers, e.g. lupin, sweet pea; vegetables, e.g. peas and beans; and wild plants, e.g. clover. In some species of L. leaves may be modified into tendrils which twine round other stems, affording support to the plant. Many species have characteristic flowers in which a large petal is flanked by 2 smaller ones, while in front 2 small petals form a boat-shaped shelter in which the 10 stamens are hidden. The seeds are carried in a pod. The roots of L. plants, e.g. clover, frequently bear small nitrogenous nodules, which restore nitrates to the soil.

LEHÁR (la'hahr), Franz (1870–1948). Hungarian composer. B. at Komárom, he studied at Prague conservatoire, intending to become a violinist, but abandoned this for conducting. He wrote many popular operettas, among them *The Merry Widow* (1905), *The Count of Luxembourg* (1909), *Gypsy Love* (1910) and *The Land of Smiles* (1923) and has also composed songs, marches, and a violin concerto.

LE HAVRE. See HAVRE, LE.

LEHMANN, Lotte (1888–). German-born American soprano. She excelled in Wagner and was the original Marschallin in *Rosenkavalier*.

singing at the Grecian music-hall in London's East End in 1885, she embodied the Cockney comedy of the 1890s.

LLOYD, (John) Selwyn Brooke (1904–). British Cons. politician. Ed. at Magdalene Coll., Cambridge, he became a barrister and in 1945 entered parliament. He was Min. of Supply 1954–5, of Defence 1955, and For. Sec. 1955–60, when he dealt with the Suez crisis. Appointed Chancellor of the Exchequer in 1960, he was responsible for the creation of the National Economic Development Council and combated inflation by an unpopular policy of wage restraint, and in 1962 was asked by Macmillan to resign. He returned under Home in 1963–4 as Lord Privy Seal and Leader of the Commons.

LLOYD GEORGE, David, 1st earl L.-G. (1863–1945). Welsh Liberal statesman. B. in Manchester, son of a teacher, he became a solicitor, and in 1890 was elected M.P. for Caernarvon Boroughs, which he represented for 54 years. In parliament he made his reputation as a fiery Radical and Welsh Nationalist, and during the S. African War was prominent as a pro-Boer. In the Liberal cabinet of 1905 he became Pres. of the Board of Trade, and in 1908 Chancellor of the Exchequer; the most notable measures associated with his term of office were the introduction of old age pensions in 1908, and of health and employment insurance in 1911. His budget of 1909 provoked the Lords to reject it, and thereby led to the Parliament Act of 1911.

The F.W.W. brought him to the fore as the dominating figure in the cabinet. As Min. of Munitions 1915–16 he thoroughly reorganized the supply of arms and ammunition, shortage of which had created a national scandal. Succeeding Kitchener as War Min. in June 1916, he advocated a policy of diverting manpower to the eastern front which resulted in the Salonika expedition. By this time he had lost all faith in Asquith as a war leader; in Dec. the breach became an open one, and a new coalition was formed, with L. G. as P.M. His aim now became to secure a unified Allied command; this was achieved in May 1918, and enabled the Allies to withstand the last German offensive and conduct the war to a victorious conclusion. As one of the 'Big Three', L. G. was among those primarily responsible for the Versailles peace settlement. See illus. under **FIRST WORLD WAR**.

The 1918 elections gave the coalition a huge majority over the Labour Party and Asquith's Liberal followers, but it soon lost its prestige. The growth of unemployment, its interventionist policy in Russia, the use of the 'black and tans' in Ireland, and the failure of L. G.'s pro-Greek policy in the Near East, all lost it support, and in 1922 the Conservatives withdrew. The reunion of Asquith's and L. G.'s supporters failed to stimulate a Liberal revival, and within the party L. G. was widely distrusted. During 1931–5 he withdrew to lead a tiny opposition Liberal group within the Commons. He ceased to be an important figure thereafter, although he occasionally came to the fore, as when in 1940 he helped to overthrow the Chamberlain govt. He was raised to the peerage shortly before his death in 1945. His highly controversial war memoirs appeared in 1933–6. Dame Margaret L. G. (1864–1941), *née* Owen, whom he m. 1888, was created D.B.E. in 1919 for her social work for women and children.

His younger son **Gwilym L. G.**, visct. Tenby (1894–1967), entered parliament as a Liberal (Liberal-Cons. from 1951) in 1922, and was Parliamentary Secretary Min. of Food 1941–2, of Fuel 1942–5, and as Min. of Food 1951–4 was responsible for the abolition of food rationing. Home Sec. and Min. for Welsh Affairs 1954–7, he was created visct. in 1957.

L. G.'s younger dau. **Lady Megan L. G.** (1902–66) became a Liberal M.P. in 1929 and was deputy leader of the party from 1949 until her defeat in 1951.

Joining the Labour Party in 1955, she re-entered the House in 1957.

LLOYD'S. Insurance market and centre of the world's shipping intelligence in London, England. A corporation, the members of which, known as underwriters, issue insurance policies for their own account and risk. Business is only transacted through brokers who have been authorized by the committee to carry on business with Lloyd's underwriters. Underwriters must satisfy the committee annually that they are in every way fitted to undertake the financial responsibility which membership involves. Although originally predominantly marine, today there are few risks, life

LLOYD'S. The Underwriting Room: marine, motor and aviation business being transacted on the ground floor and fire, compensation, public liability and other non-marine business in the gallery. Underwriters sit at 'boxes'—so named from the days when customers sat at similarly shaped tables and benches in Edward Lloyd's 17th century coffee house. To the right is the rostrum at which the 'caller' sits to announce the names of brokers wanted by colleagues and above him is the Lutine Bell, rung when important announcements are to be made. Courtesy of Lloyd's.

assurance and financial guarantee apart, that cannot be effected. For two and a half cents. Lloyd's has been the centre for the diffusion of shipping information now collected by 1,500 agencies throughout the world.

In 1688 Edward Lloyd kept a coffee house in Tower Street, moving in 1691 to Lombard Street. Frequented by business men willing to insure against sea-risks, this became the acknowledged centre where insurers might be found. *Lloyd's News* incl. marine information in its single sheet which was 1st pub. in 1696, and *Lloyd's List and Shipping Gazette* started 1734 is still pub. The association, reorganized in 1811, became incorporated by Act of Parliament in 1871, and Lloyd's Act 1911 extended its powers, formerly confined to marine insurance. In 1928 L. moved to Leadenhall Street and still larger premises were opened in Lime Street in 1957.

LLOYD'S REGISTER OF SHIPPING. Founded in 1760, this international society for the survey and classification of merchant shipping provides rules for the construction and maintenance of ships and their machinery. It is governed by a large committee representing ship-owners, shipbuilders, marine engineers, and underwriters, and employs 850 surveyors. The register book, published annually, contains particulars of all known sea-going ships of 100 tons gross and over.

LOANDA. See **LUANDA**.

LOBACHEVSKI, Nikolai Ivanovich (1793–1856). Russian mathematician. B. at Makariev, he was prof. of mathematics at Kazan univ. 1823–46, and is usually regarded as the founder of non-Euclidean geometry

LEITH (lēth). Scottish port, incorporated in Edinburgh in 1920, having been granted to Edinburgh as its port by Robert Bruce in 1329. L. stands on the S. of the Firth of Forth in Midlothian. Harbour accommodation is excellent, allowing much trade in the distilling industry centred here. Shipbuilding and engineering are other occupations.

LEITRIM (lē'trim). Co. in Connacht prov., Rep. of Ireland, bounded on the N.W. by Donegal Bay. The N. is tableland. The main rivers are the Shannon, Bonet, Drowes and Duff; Lough Allen divides it into two. The main products are potatoes, linen, woollens, and pottery, while coal, iron, and lead are mined and fish caught. The co. town is Carrick-on-Shannon. Area 589 sq. m.; pop. (1966) 30,572.

LEIX. Spelling used 1922–35 of LAOIGHIS.

LE'LAND, John (c. 1506–52). English antiquary. B. in London, he became chaplain and librarian to

LEMPRIÈRE (lemp'rēr), John (c. 1765–1824). British scholar. B. in Jersey, he became headmaster of Abingdon and Exeter grammar schools, and afterwards held livings in Devonshire. His *Classical Dictionary* (1788) was long a standard work.

L'EMUR. Sub-orders of Primates, Lemuroidea and Tarsioida. The true Ls. inhabit Madagascar and the Comoro Islands, and certain allied species, e.g. the galagos and lorises, are found in E. Africa and E. Asia. They are arboreal animals, valued for their long soft fur, and many species are nocturnal. They feed upon fruit, insects, birds, etc. The Ring-tailed lemur (*L. catta*) is often kept as a pet.

LEMON

LENA. Longest river in Asiatic Russia, flowing generally N.E., then N.W. from the W. slopes of the Baikal mts. for nearly 3,000 m., during which it is joined by innumerable tributaries to enter the Arctic Ocean by several mouths. It is ice-covered for 6 months of the year.

LE NAIN (nān), Antoine (1588–1648), Louis (1593–1648), and Mathieu (1607–77). French painters. The 3 brothers were b. at Laon, settled in Paris, and were among the original members of the French Academy. They painted portraits, but mainly devoted themselves to pictures of peasant life.

LENCLOS (lōnklō), Ninon de (1615–1705). French lady of fashion. As the recognized leader of Parisian society, she was the mistress in turn of many highly placed men, including Condé and La Rochefoucauld.

LENGLEN (lōnglōn), Suzanne (1899–1938). French woman lawn-tennis player, largely responsible for the rapid advance of the quality of women's tennis after the F.W.W. She won the Wimbledon championships 1919–23, and in 1925.

LENIN (lā'nin), Vladimir Ilyich. Pseudonym of Russian statesman V. I. Ulyanov (1870–1924). B. at Simbirsk (re-named Ulyanovsk in his honour), he was the son of a school-inspector. He practised law for a time, but after 1893 devoted himself entirely to revolutionary propaganda, and was banished to Siberia 1895–1900. After his release he ed. the Social-Democratic Party's paper *Iskra* (*The Spark*) from abroad, visiting London several times after 1902. In *What is to be done?* (1902) he maintained the revolution must be led by a disciplined party of professional revolutionaries; at the 1903 party congress in London this theory was accepted by the majority of delegates, who hence became known as Bolsheviks ('majority'). L. took an active part in the 1905 revolution, but after its defeat again had to leave Russia. In 1914 he settled in Switzerland, whence he attacked those Socialists who supported the F.W.W. on the grounds that it was a purely 'imperialist' struggle; this view he expounded in his most important book, *Imperialism* (1917). On the outbreak of the revolution in March 1917 he returned to Russia, and put forward a programme of immediate peace and transfer of power to the Soviets. As a result, he had to go into hiding until 7 Nov., when the prov. govt. was overthrown and a Soviet govt. set up under L.'s presidency. Peace was

LEITH. The port has large flour mills and a few of the granary workers take a moment of their lunch hour to look over the harbour. To right of centre a ship is supported in dry dock. Photo: George Outram & Co. Ltd.

Henry VIII, and during 1534–43 toured England collecting materials for a history of English antiquities. His MSS. have formed a valuable source for scholars.

LE'LY, Sir Peter (1618–80). Anglo-German portraitist. B. in Westphalia, he came to England in 1641, and was employed both by Charles I and Cromwell. Charles II made him his court painter, and knighted him in 1679. His most famous paintings are those of the beauties of Charles II's court at Hampton Court.

LE MANS. See MANS, LE.

LEMBERG. German name of Lvov.

LEMMING. Small rodent found in America, N. Europe and Asia. The European lemming (*Lemmus lemmus*), common in Norway, is c. 5 in. long and yellowish brown. Periodically Ls. migrate towards the sea and are drowned in large numbers.

LE'MNOS. Greek island of volcanic origin, rising to 1,411 ft., in the N. of the Aegean Sea. Mulberries and other fruits and tobacco are grown, and sheep are reared. The main towns are Kastro and Mudros. Area 180 sq. m.; pop. (est.) 24,000.

LEMON, Mark (1809–70). British journalist, founder-editor of *Punch*, 1841–70.

LEMON. Fruit of the L. tree (*Citrus limone*). It may have originated in N.W. India, and was introduced into Europe by the Spanish Moors in the 12th or 13th cent. It is now grown largely in Italy, Spain, California, Florida, S. Africa, and Australia. The L. plant is low and straggling, growing to 10–12 ft. high. One tree may produce up to 3,000 fruit in a year. Imperfect fruit are used for the manufacture of citric acid and oil of lemon.

V. I. LENIN

Photo: Novosti Press Agency

LOCKHART, John Gibson (1794–1854). Scottish biographer and editor. He joined the staff of *Blackwood's Magazine*, to which he contributed his translations of 'Ancient Spanish Ballads'. In 1820 he m. Sophia, eldest dau. of Sir Walter Scott, whom he first met in 1818, and whose biography he pub. 1837–8. He edited the *Quarterly Review* (1825–53).

LOCKHART, Sir Robert Hamilton Bruce (1887–). British diplomat. Entering the consular service in 1911, he was consul-general in Moscow 1915–17. He headed a mission to the Soviet govt. in 1918, and was arrested for a time until exchanged for Litvinov. He engaged in banking and journalism after the war, but returned to the Foreign Office in 1939, and was Deputy Under-Sec. of State 1941–5. His writings incl. *Memoirs of a British Agent* (1932).

LOCKJAW. See TETANUS.

LOCKSPEISER, Sir Ben (1891–). British engineer and administrator. After heading the air defence dept. at the Royal Aeronautical Establishment, Farnborough, 1937–9, he held successive research posts in the Air Ministry, and Min. of Aircraft Production, during the S.W.W., and was chief scientist to the Min. of Supply 1946–9, and sec. to Privy Council Commission for scientific and industrial research 1949–56. He possesses the rare capacity for combining administrative ability with scientific insight.

LOCKYER, Sir Norman (1836–1920). British astronomer. He was director of the observatory attached to the Royal Coll. of Science and prof. of astronomical physics 1885–1913, and director of the observatory at Salcombe Regis, Devon (now the N.L. observatory), from 1913. A pioneer of solar spectroscopy, he discovered helium in the sun's atmosphere (with Frankland) during the 1868 eclipse; was founder of the journal *Nature* (1869), and was knighted 1897.

LOCUST. Swarming grasshopper, with short antennae and auditory organs on the abdomen, in the family Acrididae. When the larvae ('hoppers') emerge from the eggs, which are laid in the ground, they form into bands. As winged adults, flying in swarms, they may be carried by the wind hundreds of

miles from their breeding grounds, and on alighting devour all vegetation. Ls. occur in nearly every continent, the migratory *L. (Locusta migratoria)* ranging from Europe across Russia to China, and even small swarms may cover several sq. m. and weigh thousands of tons. Control by spreading poisoned food amongst the bands is very effective, but it is cheapest to spray concentrated insecticide solutions from aircraft over the insects or the vegetation on which they feed. In dealing with the swarms shown in the illustration 7,000 galls. of insecticide (γ-BHC and dieldrin) was sprayed during 6 days, killing c. 13,000 million Ls. weighing 52,000 tons, and the swarms decreased in size to 30 sq. m.

LODGE, Henry Cabot (1850–1924). American statesman. B. in Boston, he was a Republican senator from 1893 until his death. It was largely due to him that the U.S.A. refused to join the League of Nations. His grandson Henry Cabot L. (1902–) entered journalism, then became Republican senator for Mass. in 1936. Campaign manager for Eisenhower's nomination, he was a member of his cabinet and U.S. representative to the U.N. 1953–60, escorting Khrushchev on his visit to the U.S.A. He was American ambassador to S. Vietnam 1963–4 and 1965–7, and in Bonn from 1968. In 1969 he took over from Harriman as Nixon's chief negotiator in the Vietnam peace talks.

LODGE, Sir Oliver Joseph (1851–1940). British physicist. B. in Staffs, he was prof. of physics at Liverpool 1881–1900, and principal of Birmingham univ. 1900–19. His place in physics rests chiefly on his

LOCUST. One of the Beaver aircraft used for spraying gets ready for take-off from Hargelsa airport in the Somali Republic. researches on radiation, and the relation between matter and ether. His investigations on the Hertzian waves led him to invent a coherer, which he used to accomplish wireless telegraphy. He pub. *Pioneers of Science* (1893); *Atoms and Rays* (1924); *Relativity* (1925), and many other scientific works. L. was a prominent psychical research worker, and wrote *Raymond* (1916); *The Reality of a Spiritual World* (1930), etc. His brother, Sir Richard L. (1855–1936), was prof. of history at Glasgow 1894–9 and Edinburgh 1899–1925.

LODGE, Thomas (c. 1558–1625). English author and dramatist. His romance *Rosalynde* (1590) was the basis of Shakespeare's *As You Like It*.

LODI (lō'dē). Town and episcopal see of Italy, 18 m. S.E. of Milan, a market for agricultural produce; fertilizers, agricultural machinery and textiles are made. Pop. (1960) 37,800. Napoleon's defeat of the Austrians at the battle of L. in 1796 gave him control of Lombardy. Napoleon was first called Le Petit Caporal at L.

LODZ. Town in Poland, cap. of L. voivodship, 75 m. S.W. of Warsaw. The centre of a group of industrial towns, it produces textiles and textile machinery, dyes, etc., and is the seat of a univ. (1945). A monument to Kosciuszko (q.v.), erected 1931, destroyed by the Germans 1939, was rebuilt 1958–60 under the direction of the same artist, Mieczyslaw Lubelski. Pop. (1966) 745,000.

LOEB (lōb), James (1867–1933). American philanthropist. B. in New York, he became a member of a New York banking firm. A patron of art and science, he financed the L. Classical Library of texts and translations of Greek and Latin writers.

LOESS (lō'es). A yellow loam, accumulated by wind in periglacial regions during the ice ages. It usually attains considerable depths, and is very fertile. There are large deposits in central Europe, especially Hungary; in China and N. America.

LOEWE (lō), Frederick (1904–). American composer. B. in Austria, son of an operatic tenor, he studied music incl. the piano under Busoni, and in 1924 went with his father to the U.S.A. In 1942 he joined forces with Alan Jay Lerner (1918–), and their joint successes incl. *Brigadoon* (1947), *Paint Your Wagon* (1951), *My Fair Lady* (1956), and music for the film *Gigi* (1958).

LOFOTENS. Group of islands belonging to Norway with which are often included the Vesterålen group, off the N.W. coast of Norway. Hinnøy, in the Vesterålen, is the largest island of Norway. The seas surrounding the islands are an important fishing ground for cod and herring. Area 1,750 sq. m.

(bor.) in Herefordshire 12 m. N. of Hereford on the Lugg. It has a fine church representing many styles, and trades in agricultural produce. Pop. (1961) 6,403.

LEÓN (lā-on'). (1) Cap. of L. prov., Spain, 2,700 ft. above sea-level. It is the see of a bishopric and has a Gothic cathedral (1199) and other fine ecclesiastical buildings. Pop. (1965) 83,770. (2) Prov. of N.W. Spain. Agriculture is the main occupation. Area 5,432 sq. m.; pop. (1960) 584,594.

The ancient kingdom of LEÓN, dating from the 10th century, incl. not only modern L. prov., but also modern Palencia, Valladolid, Zamora and Salamanca; in 1230 it was united with Castille.

LEÓN. City of Guanajuato state, Mexico, 230 m. N.W. of Mexico City. It dates from 1576 and has a fine cathedral. Pop. (1967) 306,700.

LEÓN. Cultural centre and univ. city of Nicaragua, founded in 1523. Pop. (1963) 61,650.

LEONARDO DA VINCI (vin'chē) (1452–1519). Italian painter, sculptor, architect, musician, engineer, and scientist. B. in Vinci, in the Val d'Arno, the natural son of a lawyer, he studied under Verrochio, and began to work as an independent artist c. 1477 under the patronage of Lorenzo the Magnificent. In 1482 he was employed at Milan by Lodovico Sforza as state engineer, court painter, and director of court festivities. He painted the 'Last Supper' on the wall of the refectory of Santa Maria delle Grazie, and devised an irrigation system for the plains of Lombardy. In 1500 L. returned to Florence, and in 1502 was employed by Cesare Borgia as architect and chief engineer. Commissioned to decorate one of the walls of the council hall in the Signoria, Florence, he chose the 'Battle of Anghiari' as his subject, but abandoned this work after spending 2 years on the cartoon. About 1504 L. completed his portrait of the wife of Zanoki del Giocondo, known as 'Mona Lisa', now in the

LEONARDO DA VINCI. A full-scale study (1499–1500) in charcoal on brown paper of 'The Virgin and Child with St. John the Baptist and St. Anne', a cartoon for a painting of the same subject in the Louvre, was acquired by the National Gallery in 1962. Courtesy of the National Gallery.

Louvre. In 1513–15 he was in Rome. At the invitation of Francis I he went to France, and lived at the Château Cloux near Amboise, where he d. There is no other man in history who distinguished himself in so many different fields. See RENAISSANCE.

LEONCAVALLO (lāonkahvah'lō), Ruggiero (1858–1919). Italian operatic composer. B. at Naples, he played at restaurants, composing in his spare time, until in 1892 *I Pagliacci* was performed and immediately became popular. Of his other operas, only *La Bohème* and *Zaza* enjoyed some success.

LEONIDAS (d. 480 B.C.). King of Sparta. He was killed while defending the pass of Thermopylae with 300 Spartans, 700 Thespians, and 400 Thebans against a huge Persian army.

LEONOV (lā-ōnov'), Leonid Maximovich (1899–). Soviet writer. Although Communist in outlook, his works show the influence of Dostoevsky and have deep psychological insight, e.g. the novels *The Badgers* (1924), *The Thief* (1925), and *Skutarevsky* (1933), and the play *The Invasion*.

LEOPARD. Third largest of the cat family (*Felis pardus*), also known as the panther, found over almost

all Africa and Asia. The ground colour of the coat is golden and the spots form rosettes which differ according to the variety: black Ls. are simply mutants and retain the patterning as a 'watered-silk' effect, and white specimens have been known. The L. varies in size from 5 to 8 ft., incl. the tail, which may measure 3 ft.

Closely allied is the snow L. or ounce (*Felis uncia*) which has irregular rosettes of much larger black spots, and is a native of central Asia. The clouded L. or clouded tiger (*Felis nebulosa*) is rather smaller than the ordinary L., with large blotchy markings rather than rosettes, found in S.E. Asia.

LEOPARDI (lā-ōpah'r'dē), Giacomo, count (1798–1837). Italian poet. B. at Recanati, of a noble family, he wrote many of his finest poems, incl. his great patriotic odes, before he was 21. His first collection, *Versi*, appeared in 1824, and was followed by his philosophical *Operette Morali* (1827), in prose, and *Canti* (1831). After 1830 his life was divided between Florence, Rome, and Naples, where he d. Throughout life he was tormented by ill-health, by the consciousness of his deformity (he was hunch-backed), by loneliness and a succession of unhappy love-affairs, and by his failure to find consolation in any philosophy. He has nevertheless been called the greatest lyric poet since Dante.

LEOPOLD. Name of 2 Holy Roman Emperors. Leopold I (1640–1705) succeeded his father Ferdinand III in 1657. The greater part of his reign was occupied by wars with Louis XIV of France and with the Turks. Leopold II (1747–92), son of Maria Theresa, succeeded his brother Joseph II in 1790. He adopted a hostile attitude towards the French Revolution which led to the outbreak of war a few weeks after his death.

LEOPOLD I (1790–1865). King of the Belgians. The son of the duke of Saxe-Coburg, he served against the French with the Russian Army 1813–14. He m. Charlotte, the dau. of George IV of the U.K., in 1816, but she d. in the following year. Elected to the throne when Belgium became independent in 1831, he proved a wise and liberal ruler. He exercised a great influence over his niece Queen Victoria.

LEOPARD. Seldom a man-eater, he takes a heavy toll of cattle and dogs: black specimens are reputedly the more ferocious.

LOCH LOMOND. In the 13th century Vikings rowed across this 'queen of Scottish lakes' after dragging their ships across the narrow isthmus of Tarbet. Snow-capped in the background is 3,192 ft.-high Ben Lomond. Photo: George Outram & Co. Ltd.

contains 30 islands and is overlooked by Ben Lomond.

LONDON, Jack (1876-1916). American author. B. in San Francisco, he used his own adventurous life as the background of his most popular books, e.g. *The Call of the Wild* (1903), *White Fang* (1906) - the story of a dog - and *Martin Eden* (1909). Less familiar are the socialist ideas, influenced by Marx and Nietzsche, of *The People of the Abyss* (1903) and *The Iron Heel* (1907).

LONDON. The cap. of England, on the r. Thames, c. 50 m. W. of the sea at the Nore.

The City of London occupies the site of a nucleus dating from pre-Roman times. Area 677 acres; resident pop. (1967) 4,530 (daytime working pop. est. at 500,000). The City is the commercial and business centre of the U.K. Within its 'square mile' lie the Bank of England; the Royal Exchange, the Stock Exchange, the Baltic Exchange, etc.; Lloyd's; the head offices of the principal banks and insurance companies; the Bankers' Clearing House; the Central Criminal Court (popularly called the Old Bailey, from the street in which it stands) and the Inner and Middle

Temples; 3 food markets - Leadenhall (poultry), Billingsgate (fish), Smithfield (meat); and the H.Q. of the Port of London Authority. The Mermaid, first theatre within the City for 3 cents., was opened in 1959.

The City is governed by a corporation dating from the 12th cent. and unique in local govt.; it consists of 3 courts: (i) the Court of Aldermen, one for each of the 25 wards, elected for life; (ii) the Court of Common Hall, composed of freemen of the City Livery Companies, which chooses annually 2 Sheriffs and other officers, and nominates 2 Aldermen from among former Sheriffs for choice by the Court of Aldermen to fill the office of Lord Mayor; (iii) the Court of Common Council, composed of the twenty-five Aldermen, and 159 Common Councilmen elected annually on St. Thomas's Day (21 Dec.) by citizens who qualify as electors by paying rates on property in the City. This last is the local govt. authority for the City and sits at the Guildhall. The Lord Mayor (so called since the 16th cent. without specific grant of the title, which was formerly Mayor) presides over all 3 Courts, and he is also the chief magistrate. He takes office on 8 Nov. and his presentation to the Lord Chief Justice and swearing in at the Royal Courts of Justice (just beyond the City boundary, in Westminster) are the occasion of the annual Lord Mayor's procession, held on the next Saturday. The annual Lord Mayor's banquet at the Guildhall follows. The Lord Mayor's official residence is the Mansion House.

Greater London was redefined in 1965, following the recommendation of a Royal Commission, and enlarged to comprise the former co. of London, the major part of Middlesex, which also disappeared administratively, and parts of Essex, Herts, Kent, and Surrey. The overall authority is the G.L. Council, with 100 councillors (elected every third year) and 16 aldermen (chosen by the councillors for 6 years, half retiring every third year). Many of its responsibilities are shared with the 32 London Borough Councils, created by mergers which often aroused much opposition, e.g. the merging of Fulham, with admin. traditions going back to the 7th cent., in Hammersmith; and of Bethnal Green, Poplar, and Stepney as Tower Hamlets. The bors. each have 60 councillors, elected for three years, and up to 10 aldermen. See map. p. 675.

History. L. first appears in history as 'Londinium' in A.D. 61, when it was sacked by Boadicea. The

LONDON. The Household Cavalry ride out into the Mall, their helmets glinting softly in the light of a November fog. Alongside in no less strict uniform of pin-stripe suit, bowler hat and neatly furled umbrella, a City business man steps briskly out. This is London.

tragedy of common life; *Philotas* (1759) a one-act prose tragedy; the comedy *Minna von Barnhelm* (1767) with a Seven Years War background; the domestic tragedy *Emilia Galotti* (1772); and the verse play *Nathan der Weise* (1779) which treats the theme of religious tolerance. As a critic he decisively influ-

enced the course of German literature with *Briefe, die neueste Literatur betreffend* (1759), in which Shakespeare is ranked above the French dramatists; with his masterpiece *Laokoon* (1766) in which he analyses the functions of poetry and the plastic arts; and with the *Hamburgische Dramaturgie* (1767–8) in which he re-interpreted Aristotle and again championed Shakespeare. His many theological and philosophical writings include *Ernst und Falk* (1777–80) in which he pleaded for tolerance and understanding in human affairs.

L'ESTRANGE (lestranj'), Sir Roger (1616–1704). English journalist. B. in Norfolk, he was active as a royalist during the Civil War, and was imprisoned 1644–8. He was appointed licenser of the press by Charles II, edited high Tory newspapers, and in 1685 was knighted. He lost his post as licenser in 1688, and was several times imprisoned for Jacobitism.

LETCHEWORTH. English town (U.D.) in Herts, 35 m. N.N.W. of London, founded in 1903 as the first British garden city. The principal industrial products are clothing, furniture, scientific instruments, and light metal goods, and it is a printing centre. Pop. (1961) 25,515.

LE'THÉ. In Greek mythology a river of the underworld whose waters, when drunk, brought forgetfulness of the past.

LE TOUQUET. See **TOUQUET-PARIS-PLAGE, LE**.

LETTERS. The art of L.-writing was perfected by the Romans with Cicero, Pliny the Younger, and Seneca. Christianity introduced the pastoral L., of which the exponents include Basil, Chrysostom, and Gregory Nazienzen in the Eastern Church, and Ambrose, Augustine, Jerome, and Gregory in the West. Outside the Church the Middle Ages tended to produce mainly letters of state, apart from exceptions such as the correspondence of Héloïse and Abelard (12th cent.), and the Paston Ls. (15th cent.). To the Reformation period belong the notable correspondences of Erasmus, Luther, and Melancthon. There was a steady development of English Ls. during the 16th and 17th cents. with Donne, Spenser, Sidney, Milton, Cromwell, Wotton, etc., while in France there were Pascal and Mme de Sévigné. The art reached its highest polish in the 18th cent. in the Ls. of Pope, Walpole, Swift, Mary W. Montagu, Chesterfield, Cowper, Gray, and the 'Ls. of Junius': Richardson adapted the form to the use of the novel. French L.-writers of the period incl. Bossuet, Voltaire, and Rousseau. Familiar names of the 19th cent. are those of Lamb, Byron, Keats, Fitzgerald, Stevenson; the American Emerson, and J. R. Lowell; the French George Sand, Saint-Beuve, and the Goncourt brothers; the German Schiller and Goethe; and the Swiss Gottfried Keller. In the 20th cent. we have T. E. Lawrence, G. B. Shaw and E. Terry, K. Mansfield, Rilke, etc. There are several collections of famous letters, e.g. E. V. Lucas's 'The Gentlest Art.'

LETTRES DE CACHET (let'r-de-kasheh'). French term for orders signed by the king and closed with his seal (*cachet*); especially orders under which persons might be imprisoned or banished without trial. They were used as a means of disposing of politically

dangerous persons or criminals of high birth without the embarrassment of a trial. The system was abolished during the French Revolution.

LETTUCE (le'tis). Annual plant (*Lactuca sativa*) belonging to the Compositae family, and believed to have been derived from a wild variety, *L. serriola*. There are 4 common forms, the cabbage L., with round or loose heads, the Cos L., with long, upright heads, the asparagus L., with narrow leaves, and the cut-leaved L., with deeply serrated leaves.

LEUCITE (lū'sit). Mineral occurring frequently in volcanic rocks of recent origin, and others low in silica content and rich in potash. It is dull white to grey, and usually opaque.

LEUCOCYTE (lū'kosit). A white blood cell. The blood contains about 11,000 leucocytes to the cubic millimetre – about one to every 500 red cells. Generally speaking, the function of the white cells is to eat up invading bacteria and to repair the results of injury. The resistance of the body to injury and disease, therefore, depends on them. Their number may be reduced (leucopenia) by starvation, pernicious anaemia, and certain infections – e.g. typhoid and malaria. An increase in the numbers (leucocytosis) is a reaction to normal events such as digestion, exertion and pregnancy, and to abnormal ones such as loss of blood, cancer and most infections.

LEUKEMIA (lūké'mia). A cancer-like disease of the blood, marked by an increase in the white blood cells. Though incurable it may be relieved and possibly controlled by X-rays and drugs. There may be an inherited proneness to L. which can be augmented by external factors such as high fever, and nuclear radiation.

LEVANT. Name applied to the E. Mediterranean region, or more specifically, to the coastal regions of Turkey-in-Asia, Syria, Lebanon, and Israel.

LEVELLERS. The democratic party in the English Revolution. They found wide support among the New Model Army, and the yeoman farmers, artisans, and small traders, and during 1647–9 proved a powerful political force. Their programme included the establishment of a republic, gov't. by a parl. of one house elected by manhood suffrage, religious toleration, and sweeping social reforms. Mutinies by the Ls. in the army were suppressed by Cromwell in 1649, and the movement lost its importance, although it continued to exist until 1688.

LE'VEN, Alexander Leslie, 1st earl of (c. 1580–1661). Scottish general. After a distinguished career in the Swedish service, he led the Covenanters' army which invaded England in 1640. He also commanded the Scottish army sent to aid the English Puritans in 1643–6, and shared in the victory of Marston Moor. In 1641 he was created earl of L.

LEVEN, Burgh in Fifeshire, Scotland, at the mouth of the r. Leven. L. is a holiday resort, and manufactures ropes and linen. Pop. (1961) 8,872.

LEVEN, Loch. Lake in Kinross-shire, Scotland, area 6 sq. m. and 11 m. in circuit, with 7 islands, drained by the r. L. It is famous for trout. Mary Queen of Scots was imprisoned 1567–8 on Castle Island.

LÉVER, Charles James (1806–72). Irish novelist. B. in Dublin, he was ed. at Trinity Coll., and became a doctor. His rollicking novels of Irish and army life, such as *Harry Lorrequer* (1837), *Charles O'Malley* (1840), and *Tom Burke of Ours* (1844), achieved a remarkable popularity. His extravagance made it necessary for him to live on the Continent and support himself by incessant writing. In 1867 he became consul at Trieste.

LEVERHULME (lē'verhūm), William Hesketh Lever, 1st visct. L. (1851–1925). British manufacturer. B. in Bolton, he founded Lever Bros. Ltd. 1886 which became the leading soap business in the U.K. He founded the garden village of Port Sunlight, Cheshire,

famous buildings, fell into 3 main stages: day raids Aug.–Sept. 1940; night raids Aug. 1940–May 1941, incl. the fire raid on the City on 29–30 Dec.; and flying and rocket bombs June 1944–March 1945.

Architecture. L. contains specimens of all styles of English architecture since the 11th cent. Examples incl.: Norman: The White Tower, Tower of London; St. Bartholomew's, Smithfield; the Temple Church. Gothic: Westminster Abbey; Westminster Hall; Lambeth Palace; Southwark Cathedral. Tudor: St. James's Palace; Staple Inn, Holborn. 17th cent.: Banqueting Hall, Whitehall (Inigo Jones); St. Paul's, Kensington Palace, and many City churches (Wren). 18th cent.: Somerset House (Chambers); St. Martin-in-the-Fields; Buckingham Palace. 19th cent.: British Museum (classical); Houses of Parliament; Law Courts (Gothic); Westminster Cathedral (Byzantine). 20th cent.: County Hall; Bush House; Waterloo Bridge; Royal Festival Hall; Commonwealth Inst.

Commerce and Industry. Important from Saxon times, the Port of L. now extends 25 m. along the Thames from Tower Bridge to Tilbury, the docks having a water area of 688 acres. Notable modernisation incl. the extension of Tilbury in 1969 to cope with container traffic, and a plan to combine a new deep-water dock on the reclaimed Maplin Sands off Foulness Island with a 3rd London airport. The prime economic importance of L. is as an internat. banking, commercial, and financial centre, with high rents and decentralization thrusting larger-scale industry to the outskirts and beyond, e.g. printing, clothing, food processing, paper, chemicals, furniture, electrical and mechanical engineering, plastics, etc. Small-scale specialized products incl. finished diamonds (industrial and gem), jewellery, gold and silver work, furs, and haute couture and tailoring. There are also recording, broadcasting, television, and film studios; publishing offices, and the works and offices of the national press.

L. has long occupied a unique position in the nation's life as a centre of politics, administration, the law, fashion, pleasure, learning, and the arts. Its great public occasions range from Coronations to Cup finals, the Lord Mayor's show to the Royal Academy exhibition. It contains the headquarters of many learned and artistic societies; among its educational organizations are the British, Victoria and Albert, Natural History, and Science Museums, the National and Tate Galleries, and the Zoological Gardens. L. Univ. is the largest in Britain, while the Inns of Court have been the training-school for lawyers since the 13th cent. L. has been the main centre of English drama ever since its first theatre was built by Burbage in 1576.

LONDON. Canadian city in S. Ontario, on the r. Thames, 100 m. S.W. of Toronto. The centre of a good farming district, it has tanneries, breweries, and factories making hosiery, radio and electrical equipment, leather, shoes, etc. It dates from 1826 and is the seat of the Univ. of Western Ontario and of Anglican and R.C. bishoprics. It has an airport. Pop. (1966) 207,400.

LONDONDERRY. City, co. tn. (co. bor.) of co. L., N. Ireland, 63 m. N.W. of Belfast, on the Foyle. Developing from the monastery founded by Columba in the 6th cent., L. was defended by the Irish Protestants, who resisted the besieging army of James II from April to July 1689. During the S.W.W. L. was a base for U.S. ships on merchant convoy duty. Industries incl. textiles, food processing, light engineering, and chemicals. Civil rights disturbances 1968–9 led to a special Development Commission to 'transform economic and social conditions'.

The county of L. borders the Atlantic; its main river is the Roe. Cultivation is limited by the excessive rainfall. The capital is L. Area 804 sq. m.; pop. (1966) 118,664.

The town of L. was originally called Derry (Irish Dhoire, place of oaks); both town and county took the name L. when land belonging to the O'Neill was given to the City of London Corporation in 1609.

'LONDON GAZETTE.' Twice-weekly publication (which 1st appeared in 1666) of official announcements, service appointments, decorations, etc.

LONDON, Museum of. Formed by the amalgamation of the former Guildhall (Roman and medieval) and London (Tudor and later) Museums, announced in 1962: the exhibits of both, which complement each other, are being housed in a new building at the junction of London Wall and Aldersgate, nr. the Barbican.

LONDON UNIVERSITY. L.U. originated with the foundation in 1826 of University Coll., to provide university education free from religious tests. In 1836 a charter set up an examining body with power to grant degrees. L.U. threw open all degrees to women in 1878, being the first British univ. to do so. It ceased to be a purely examining body in 1900, when it took over the existing colleges. It also includes 20 medical schools. Among the chief colleges are University, King's, the Imperial College of Science and Technology, the London School of Economics, the School of Oriental and African Studies, Queen Mary, Birkbeck, and the 3 colleges founded for women: Royal Holloway, Bedford, and Westfield. There are c. 34,500 internal and c. 32,000 external students. The univ. headquarters are in Bloomsbury.

LONG, Huey Pierce (1893–1935). American 'Share the Wealth' demagogue, gov. of Louisiana 1928–31, when his rule was marked by reforms side by side with corruption and semi-Fascist tendencies. Elected to the senate in 1931 he was celebrated for his filibusters. He was assassinated. His son Russell B. Long (1918–), senator for Louisiana from 1948, was ousted as Democratic 'whip' by Edward Kennedy 1969.

LONG, Margaret Gabrielle (1888–1952). British author, née Campbell, who m. in 1917 as her 2nd husband Arthur L. Her first great success was the romantic historical novel *The Viper of Milan* (1917), pub. with many successors under the pseudonym Marjorie Bowen.

LONG BEACH. Coastal city of California, S. of Los Angeles, U.S.A. It is important both as an industrial centre and pleasure resort; Signal Hill oilfield, discovered in 1921, is within the city boundary. L.B. is subject to earthquakes, one in 1933 killing 130 and doing damage estimated at £10,000,000. Pop. (1960) 344,168.

LONGCHAMP (lonshoŋ). Pleasure resort and racecourse of Paris, France, in the Bois de Boulogne. It is on the site of a former nunnery founded in 1260, suppressed 1790.

LONGFELLOW, Henry Wadsworth (1807–82). American poet. B. in Portland, Maine, he was ed. at Bowdoin Coll., where he became prof. of modern languages (1829–35), and subsequently held a similar position at Harvard (1836–54). His first vol. of poems, *Voices in the Night*, appeared in 1839, and was followed by *Ballads and Other Poems* (1842), containing 'Excelsior' and 'The Wreck of the Hesperus'; *Evangeline* (1847); *The Golden Legend* (1851), based on the 12th cent. German work; *Hiawatha* (1855), a Red Indian epic; *The Courtship of Miles Standish* (1858); and *Tales of a Wayside Inn* (1863–74). His popularity in England is witnessed by the erection of a monument to him in Westminster Abbey.

LONGFORD, Frank (Francis) Aungier Pakenham, 7th earl of L. (1905–). Anglo-Irish Labour politician. Ed. at Eton and Oxford, he was brought up in High Tory Protestant circles but is a leading Catholic layman, worked in the Cons. Party Economic Research Dept. 1930–2, yet became a prominent member of the Labour Party (being personal assistant

Jokang temple of Buddha, which attracts many pilgrims, dates from A.D. 652. When the Chinese invaded Tibet in 1722 they destroyed the walls of L. which were not rebuilt. In 1950-1 the Chinese carried out a more determined conquest of Tibet; following an unsuccessful rebellion in 1959 the Dalai Lama fled to India. The monks who had formed the bulk of the pop. (est. at 50,000) were compelled to take up secular occupations.

LHOTE (lôt), André (1885-). French artist. B. at Bordeaux, he has been very influential through his treatises on art in which he explored questions of technique and ultimate artistic aims. His 'Rugby' in the Musée d'Art Moderne, Paris, is an excellent example of his use of colour and geometric style.

LHOTE, Henri. See SAHARA.

LIAO (lyow). River of N.E. China, The main headstream rises in the mts. of Inner Mongolia and flows E., then S. to the Gulf of Liaotung. It is c. 900 m. long and is frozen from Dec. to March.

LIAONING. Chinese prov. in the N.E. lying about the Gulf of Liaotung; it incl. Liaotung peninsula. The cap. is Shenyang; other large towns are Antung, Anshan, Port Arthur, Dairen. Agriculture is important, chief crops being millet, wheat, soya beans; heavy industry based on local coal and iron deposits is found at Anshan. The name means peace of the Liao. Area 58,300 sq. m. Pop. (1957) 24,090,000.

LIAOTUNG PENINSULA. Promontory in N.E. China, lying between the Gulf of Liaotung on the N.W., Po Hai Strait on the S.W., and the Korea Sea on the S.E. A range of mts., rising to 4,490 ft., occupies the interior. The S.W. extension, which incl. Dairen and Port Arthur, leased by China to Russia in 1898, was taken over by Japan 1905-45; the Japanese called this area the Kwantung Peninsula. Liaotung means E. of the Liao.

LIAO-YANG (lyow-yahng'). City in Liaoning prov. (formerly Manchuria), China, on the Taitzu. Here in 1904 the Russians were defeated by the Japanese. Pop. c. 100,000.

LIBAU. German form of LIEPAJA.

LIBEL. One of the two types of defamation. In L. the defamatory statement is reproduced in a permanent form, the most common being by writing, in a newspaper, or by broadcasting. Libel is both a crime and a civil wrong, or tort (unlike slander (q.v.), which is a tort only). The more usual remedy is by civil proceedings, a criminal prosecution being resorted to only where the publication of the libel is likely to bring about a breach of the peace, as where it is so gross that there is a danger that the defamed person will assault the person responsible for publishing it. In civil proceedings, if the person publishing the libel proves its substantial truth, he escapes liability; but in criminal proceedings it is necessary to prove not only that the words used were true, but also that it was in the public interest that they should be known by the public.

The civil remedy for libel is extremely comprehensive, for proceedings may be brought not only against the person who was first responsible for the statement, but also against everyone who has subsequently repeated or published it. Moreover, a person may defame another of whose existence he is unaware, for the test is whether the words used could be regarded as applying to the plaintiff by reasonable men who knew him, but a defendant who can show he pub. the words innocently and without negligence may avoid liability if willing to pub. a reasonable correction and apology, and pay the plaintiff's costs.

Certain transactions and statements are 'privileged', either absolute or qualified. If a proceeding or statement is absolutely privileged, e.g. all proceedings in Courts of Justice, in Parliament, or in reports of Parliamentary proceedings, no action can be brought

for libel in respect of it, no matter how inaccurate or malicious the words were. Where a statement enjoys 'qualified privilege', a person who has been defamed by it must prove not only that the words used were untrue, but that the person uttering them had a malicious (i.e. an improper) motive. Another common defence to an action is 'fair comment on a matter of public interest'. Considerable latitude is allowed by the law to criticism of matters of general interest (including new books, plays and films, and all public sports and pastimes), but if facts are quoted they must be quoted with substantial accuracy, and the criticism must be reasonably temperate. In 1960s the stringency of English L. Law was widely attacked as limiting freedom of the press: in the U.S.A. the position is much more elastic.

LIBERALISM. The political and social theory associated with the Liberal Party in Britain, and similar parties elsewhere. L. developed during the 17th-19th cents. as the distinctive theory of the industrial and commercial classes in their struggle against the power of the monarchy, the Church, and the feudal landowners. In politics it stood for parliamentary govt., freedom of the press, speech and worship, and the abolition of class privileges; economically it was associated with laissez-faire, a minimum of state interference in economic life, and international free trade. In the late 19th and early 20th cents. these ideas were modified by the acceptance on the one hand of universal suffrage, hitherto opposed by most Liberals, and on the other of a certain amount of state intervention, in order to ensure a minimum standard of living and to remove extremes of poverty and wealth. The classical statement of Liberal principles is found in *On Liberty* and other works of J. S. Mill.

LIBERAL PARTY. One of Britain's 2 historic parties, the successor to the Whig Party (q.v.). The term 'L.', used officially from c. 1840 and unofficially from c. 1815, marked the transfer of control from the aristocrats to the more radical industrialists, backed by the Benthamites, Nonconformists and the middle classes. During the Ls.' first period of power (1830-41), they promoted parl. and municipal govt. reform and the abolition of slavery, but their utilitarian and laissez-faire theories led to the harsh Poor Law of 1834. Lib. pressure forced Peel to repeal the Corn Laws in 1846, thereby splitting the Tory Party, and except for 2 short periods the Ls. were in power 1846-66, but the only outstanding figure of the period, Palmerston, was very conservative and the only major change was the general adoption of free trade.

Extended franchise in 1867 and Gladstone's emergence as leader began a new phase, dominated by the 'Manchester school' with a programme of 'peace, retrenchment, and reform'. Gladstone's 1868-74 govt. introduced many important reforms, incl. elementary education and vote by ballot. The party's left, mainly composed of working-class Radicals led by Bradlaugh and Chamberlain, repudiated the laissez-faire ideology and inclined towards republicanism, but the Ls. were split over Home Rule in 1886 and many joined the Conservatives. Except for 1892-5, the Ls. remained out of power until 1906, when reinforced by Labour and Irish support they returned with a huge majority: Old-Age Pensions, National Insurance, limitation of the powers of the Lords, and the Irish Home Rule Bill followed.

From 1914 the L. Party declined, Lloyd George's alliance with the Conservatives 1916-22 dividing them between himself and Asquith, and although reunited in 1923 they continued to lose votes. In 1931 they joined the Nat. Govt., but broke away in 1932 in protest against a protectionist policy. The handful of L. members returned in 1950 and 1951 were only influential because of the narrow majority of the parties in power, but a L. 'revival' led by

painters, and his works incl. the 'Nativity of the Virgin' at Siena, and the altar-piece 'Madonna with Angels' in Florence. His younger brother, Ambrogio L. (c. 1300-48), is known for his allegorical pictures representing 'Good and Bad Government' at Siena.

LORETO. Place of pilgrimage in Ancona prov., Italy, containing the *Santa Casa*, or Holy House, of the Virgin, said to have been carried from Nazareth by angels in 1294, first to Dalmatia, and from there to L. Hence, Our Lady of L. is patron saint of aviators. Pop. (1960) 9,000.

LORIENT (lōryōn'). Seaport of W. France, 30 m. W.N.W. of Vannes. It is a naval station with state dockyards and a varied trade is conducted via its separate commercial port. Pop. (1962) 63,924.

LORRAIN, Claude. See **CLAUDE LORRAIN**.

LORRAINE. See **ALSACE-LORRAINE**.

LORRAINE. Cross of. A red cross with 2 horizontal crosspieces, on a blue ground. It was the emblem carried by Joan of Arc, and was adopted by the Free French forces in 1940. See illus. p. 447.

LORY. Group of Australasian, honey-eating parrots (family Loriidae) which are brilliantly coloured.

LOS ALAMOS. Military township in New Mexico, U.S.A., 25 m. N.W. of Santa Fé, where research and designing of the atom bomb were carried out (working on data provided by other research stations) 1943-5. It continued to be a centre of atomic and later of space research. Pop. (1960) 12,584.

LOS ANGELES (loss an-ja-les). City on the coast of S. California, in 1960 with the 3rd-largest pop. in the U.S.A. It has a pleasant climate, and with its suburb Hollywood (q.v.), 8 m. to the N.W., attracts many visitors. It is an important commercial port and a naval base; its industries incl. film making, petroleum refining and meat packing. Pop. (1960) 2,479,015.

L.A., founded in 1781, was then in Mexico; it was taken by a U.S. naval force in 1846 and annexed 1850. Its full name is El Pueblo de Nuestra Señora La Reina de los Angeles de Porciuncula (the village of Our Lady Queen of the Angels of Porciuncula).

LOS ANGELES, Victoria de (1923-). Spanish soprano. In opera her roles incl. Manon and Madame Butterfly, and she is celebrated for her concert renderings of Spanish songs.

LOSEY, Joseph (1909-). American stage and film director. After studying medicine, literature and theatre, he produced several short films and plays, incl. *Payment Deferred* (1931) and *Galileo* (1947) - both with C. Laughton, on Broadway. In 1951 he settled in England, where some of his notable films incl. *Time Without Pity* (1956), *Blind Date* (1959), and *The Criminal* (1960).

LOSSIEMOUTH. Town in Morayshire, Scotland, on the Moray Firth, 5 m. N. of Elgin. Ramsay MacDonald was b. and buried at L. With Branderburgh, L. forms a burgh. Pop. (1961) 5,855.

LOSTWITHIEL. English market town (bor.) and fishing port with a 13th cent. church, in Cornwall, on the Fowey, 5 m. S.E. of Bodmin. Pop. (1961) 1,954.

LOT (loh). French river, rising in the Cévennes in Lozère dept., and flowing for c. 300 m. in a westerly direction to join the Garonne at Aiguillon. It gives its name to the depts. of Lot and Lot-et-Garonne.

LOTHAIR I (795-855). Holy Roman Emperor. He was the son of Louis I, who in 817 associated him with himself in the govt. of the Empire. After Louis's death in 840 the Empire was divided between L. and his brothers, L. taking N. Italy and the Rhône and Rhine valleys.

LOTHAIR (825-69). King of Lotharingia. He inherited from his father, the emperor Lothair I, in 855 a district W. of the Rhine, between the Jura Mts. and the N. Sea. This became known after him as Lotharingia, later corrupted into Lorraine.

LOTHIAN (lōdh'ian), Philip Henry Kerr, 11th marquis of (1882-1940), British Lib. politician. He

served in the S. African Civil Service 1905-10, and as Lloyd George's sec. 1916-21. He was ambassador to Washington 1939-40.

LOTHIAN. The. A name formerly applied to the S. Scotland cos. of Haddington, Edinburgh, and Linlithgow (E.L., Mid-L., and W.L.), also incl. Roxburghshire and Berwickshire. This area, part of the kingdom of Northumbria from 547, was annexed by the Scots in 1018.

LOTI (lohtē'), Pierre. Pseudonym of the French author Louis Marie Julien Viaud (1850-1923). B. at Rochefort, he was in the navy 1867-1910, becoming a captain in 1906. His novels reflect his knowledge of the sea, his masterpiece being *Le Pêcheur d'Islande*.

LOTTERY. Arrangement in which persons buying tickets are eligible to win prizes in a draw. In England, both govt. and private Ls. were held from the 17th cent. onwards, but cheating became so much of a scandal that an act of 1802 made illegal any L. not authorized by parliament; the last state L. was held in 1826. An act of 1934 permitted small Ls. or raffles at e.g. bazaars, and Ls. promoted for a society not connected with gaming, or among people working or living in the same premises; both types were subject to certain conditions, incl. the exclusion of money prizes. The Small Ls. and Gaming Act, 1956, gave a little more freedom, allowing money prizes up to £100, but again with stringent conditions. Premium Savings Bonds, introduced in 1956 (see under **SAVING**), were in the nature of a L.

Ls. are illegal in the U.S.A. and any lottery ticket found in the post is destroyed. But many countries still conduct state Ls., e.g. Italy and Malta. One of the most famous was the Calcutta Sweepstake on the Derby, run by the Royal Calcutta Turf Club; its last pub. figures relate to 1929 when prize money totalled £135,000. The most successful of Ls. is undoubtedly the Irish Sweepstake, run under govt. auspices in aid of the nursing services in the Rep. of Ireland on 3 races in the course of the year; 25 per cent of the receipts, after deduction of expenses, go to the Hospitals Trust Board, the remaining 75 per cent being distributed in prizes which amount in total to £1,000,000 or more on each race. Sale of tickets in the U.K. is illegal.

LOTTO, Lorenzo (c. 1480-1556). Italian artist. B. in Venice, he was influenced by Raphael and Correggio; he produced many fine altar-pieces, and also remarkable portraits, e.g. 'Lucrezia' and 'The Protonotary' in the National Gallery. He ended his life among the monks of Loreto.

LOTUS. Genus of plants in the family Leguminosae, e.g. bird's foot trefoil (*L. corniculatus*); also the shrub

Nymphaea Lotus

Zizyphus lotus known to the ancient Greeks who used its fruit to make a type of bread and also a wine supposed to induce happy oblivion - hence L.-eaters; and the water-lilies *Nymphaea lotus*, frequent in Egyptian art, and *Nelumbium speciosum*, the sacred L. of the Hindus which (unlike the Egyptian) does not float but stands erect above the water.

LOUGHBOROUGH (luf'boro). English market town (bor.) in Leics, 10 m. N.W. of Leicester. Industries incl. engineering, bell founding, and the making of electrical apparatus and hosiery. L. Coll. of Technology (residential) was founded in 1918, expanded in 1959, became in 1966 L. Univ. of Technology. Pop. (1961) 38,621.

LOUIS I (778-840). Holy Roman Emperor, called the Pious. He succeeded his father Charlemagne in 814, and counts as Louis I of France.

famed for his pictures of peasants at work in the fields, scenes in beer gardens, in factories, etc.

LIEBIG (lē'-), Justus, Baron von (1803-73). German chemist. After his discovery of the chemical composition of fulminates in 1824 he was appointed prof. at Giessen, and in 1852 at Munich. L. became a baron in 1845.

LIEBKNECHT (lēb'knekht), Wilhelm (1826-1900). German Socialist. He took part in the 1848 revolution, and subsequently lived in London until 1861, forming a close friendship with Marx. He was imprisoned for opposing the Franco-Prussian War. From 1874 he led the Social-Democrats in the Reichstag. His son, Karl L. (1871-1919), b. in Leipzig, entered the Reichstag as a Social-Democrat in 1912 and during the F.W.W. was imprisoned for organizing an anti-war demonstration. A founder of the German Communist Party, originally known as the Spartacus League, he led an unsuccessful Communist revolt in Berlin in 1919, and was murdered by army officers.

LIECHTENSTEIN (lēkh'tenstin). Small European principality, situated between Austria and Switzerland. Vaduz is the cap. L. was formed in 1719 from the two counties of Schellenberg and Vaduz. L., which was in a customs union with Austria-Hungary 1876-1918, in 1924 joined the Swiss Customs Union. It is mountainous; the chief occupations are agriculture and cattle rearing. Francis Joseph II (1906-) succeeded to the principedom in 1938. Area 62 sq. m.; pop. (1967) 20,443.

LIE DETECTOR. Registering device for blood pressure, rate of breathing, etc., which tend to alter under stress of telling an untruth.

LIEGE (lyāzh'). Cap. of L. prov., Belgium, 54 m. S.E. of Brussels, on the Meuse, a centre of iron and

LIÈGE. Today lawyers pace the cloistered courtyard of the magnificent Palace of the Prince-Bishops (built 1508-40), for the building now houses the law courts.

Courtesy of Belgian National Tourist Office.

armament manufacture, and of a coal-mining district; textiles, paper, and chemicals are other products. There is a univ. (1817) and a number of ancient churches, the oldest, St. Martin's, dating from 692. L., occupied by the Germans in both world wars, suffered severely economically, but was not badly damaged physically. Pop. (1966) 153,000.

LIEPAJA (lyā'pahyah). Port of the Latvian S.S.R., situated on a narrow peninsula between Lake L. and the Baltic. Shipbuilding, engineering, and the manufacture of steel, textiles, and chemicals are among its industries. The Knights of Livonia founded L. in the 13th cent. Pop. (1961) 76,000.

LIFAR (lē-), Serge (1905-). Russian dancer and choreographer. B. at Kiev, he studied under Nijinska, joined the Diaghilev co. in 1923 and was *premier maître de ballet* at the Paris Opéra 1947-58 and

LIFEBOAT. Modern lifeboats are unsinkable, but most are useless once capsized. Since the mid-19th century there have been self-righting boats, but their specialized shape lessened their seaworthiness. In the Oakley type (named after their designer, surveyor to the R.N.L.I.) reliance is placed instead on a water ballast tank over the keel which tips its contents into a side tank when the boat tilts beyond a certain angle. The 48 ft. 6 in. Yarmouth (I.O.W.), prototype of her class, rights herself in a few seconds and is the 1st lifeboat to carry radar - hitherto ineffective at sea-level in bad weather.

Courtesy of the Royal National Lifeboat Institution.

1962-63. A noted experimenter, he developed the importance of the male dancer in *Prometheus* (1929), produced his 1st ballet without music, *Icare*, in 1935, and pub. the same year the controversial *Le Manifeste du choréographe*.

LIFEBOAT. The first boat designed expressly for life-saving was built in 1789 and stationed at the mouth of the Tyne. In 1824 the Royal National L. Institution was estab. at the instance of Sir William Hillary: this service, manned by volunteers, is still, as it has always been, financed wholly by voluntary contributions. There are several types of L., ranging from 25 ft. to 52 ft., nearly all self-bailing. The U.S. Coast Guard, operating mainly inshore, tend to use self-righting boats, while U.K. vessels, having to travel farther out to sea, sacrifice self-righting ability for broader beam and greater stability. All boats now built have diesel engines. Equipment includes pistols or guns for firing life-lines, radio, searchlights, and oil sprays for smoothing the water; most Ls. carry a crew of 8 and can take on board 30-100 people.

LIFE INSURANCE. See **INSURANCE** and **SAVING**.

LIGAMENTS. Short bands of tough fibrous tissue connecting two bones at a joint, or holding an organ, such as the liver or uterus, in position.

LIGATURE. Suture (nylon, wire, etc.) binding a blood vessel, a limb, the base of a tumour, etc., chiefly so as to stop the movement through it of blood or other fluid.

LIGHT. Electromagnetic radiation in the visible range, i.e. from about 4,000 Å in the extreme violet to about 7,700 Å in the extreme red. See diagram of frequency spectrum of electromagnetic waves p. 380. L. is considered to exhibit both particle and wave properties and the fundamental particle or quantum of light is called the *photon*. The speed of L. in vacuo is approximately 186,000 miles/sec. or 3×10^{10} cm./sec. and is a universal constant denoted by *c*.

The L. year is the normal method of expressing astronomical distances and is the distance travelled by L. in one year, a distance of nearly 6 million million miles.

Newton was the first to discover, in 1666, that sunlight is composed of a mixture of L. of all different colours in certain proportions and that it could be separated into its components by refraction. Before

and it became part of the U.S.A. in 1783; the part west of the Mississippi, 828,000 sq. m. in extent, passed to Spain in 1762, but by a secret treaty of 1800 was restored to France. In 1803 Napoleon sold this area to the U.S.A. for £3,000,000; it was divided into the Territory of New Orleans, which became the state of L. in 1812, and the Territory of L., later to become the states of Arkansas, Missouri, Nebraska, Iowa, and S. Dakota, and part of N. Dakota, Minnesota, Kansas, Oklahoma, Colorado, and Wyoming.

LOUIS PHILIPPE (1773–1850). King of the French. The son of the duke of Orléans, he was known after 1785 as the duke of Chartres. He supported the French Revolution during its earlier stages, but fled the country in 1793, and until 1814 lived in exile. He identified himself with the Liberal opposition, and after the 1830 revolution became king. He relied for support on the rich bourgeoisie, and corruption discredited the régime. Overthrown in 1848, he escaped to England, where he d.

LOUISVILLE. City of Kentucky, U.S.A., on the Ohio, 95 m. S.W. of Cincinnati. It is an important industrial centre. The Kentucky Derby is held at L. in May each year. Pop. (1960) 390,639.

LOURDES (loord). Place of pilgrimage in Hautes-Pyrénées dept., S.W. France. In 1858 a peasant girl, Bernadette Soubirous (1844–79), claimed to have experienced visions of the Virgin Mary beside the spring, which became credited with miraculous healing powers. An underground church, to hold 20,000 and dedicated to St. Pius X, was consecrated at L. in 1958. Pop. (1962) 16,376. See illus. under **BERNADETTE**.

LOURENÇO MARQUES (lōrāñ'so mahr'kes). Cap. of Mozambique, E. Africa, lying on Delagoa Bay. A well-planned city, it has many fine buildings. The starting point of a railway to Johannesburg, it handles a vast entrepôt trade; L.M. also has an international airport. Pop. (1960) 441,360.

LOUTH (loth). English market town (bor.) in the Parts of Lindsey, Lincs, 15 m. S. of Grimsby. The Cistercian abbey was founded c. 1140; Tennyson and his brothers attended the 16th cent. grammar school (rebuilt). Pop. (1961) 11,556.

LOUTH. Maritime co. of Leinster prov., Rep. of Ireland. For the most part undulating lowland, the co. is fertile. The chief industries are agriculture, linen manufacture and fishing. The co. town is Dundalk; 5½ m. to the S.W. is the village of L. Area 317 sq. m.; pop. (1966) 69,519.

LOUVAIN (loo'vāñ). Town in Brabant prov. of Belgium, 15 m. E.N.E. of Brussels. The 15th cent. town hall is an excellent example of the late Pointed Flemish style.

The chief industry is brewing. L. (Flemish Leuven) dates from 891, and had a pop. of more than 100,000 in medieval times when it was a cloth-making centre. The univ. (1426) is just within the Flemish linguistic zone, with 11,000 Flemish and 9,000 French-speaking students: the Flemish faculties demanded 1968 that the latter establish themselves at another site in the Walloon area. Pop. (1966) 32,125.

LOUVRE (loovr). Art gallery in Paris, containing

one of the finest collections of paintings, sculptures, and art objects in the world: formerly a palace of French kings. Built on the site of a 13th cent. château, the L. is first mentioned in records of 1204. Napoleon converted the L. into a national art gallery. Two world-famous exhibits are the Venus de Milo and Leonardo da Vinci's 'Mona Lisa'.

LOVAT, Simon Fraser, 12th baron L. (c. 1667–1747). Scottish Jacobite. Throughout a political career lasting 50 years he constantly intrigued with both Jacobites and Whigs, and was beheaded for supporting the 1745 rebellion.

LOVELACE (luv'lās), Richard (1618–58). English poet. Owing to his responsibility for the Kentish Petition pleading for the re-establishment of the King's rule in 1642, he was committed to the Westminster gatehouse, where he wrote 'To Althea from Prison' etc. During a second imprisonment in 1648 he revised his *Lucasta: Epodes, Odes, Sonnets, Songs, etc.* (1649). He d. in poverty.

LOVELL, Sir Bernard (1913–). British astronomer. During the S.W.W. he worked at the Telecommunications Research establishment (1939–45), and in 1951 became prof. of radio astronomy at the Univ. of Manchester and director of Jodrell Bank Experimental Station. His books incl. *Radio Astronomy* (1951) and *The Exploration of Outer Space* (1961). He was knighted in 1961.

LOVER, Samuel (1797–1868). Irish author. B. in Dublin, he became a miniature painter, and in 1835 settled in London where he conquered society by his singing of his own compositions, which he pub. in *Songs and Ballads* (1839), etc. He is also remembered for his humorous novels, *Rory O'More* (1837) and *Handy Andy* (1842).

LOVETT, William (1800–77). English Chartist. A cabinet-maker by trade, he drew up the People's Charter in 1838, led the 'moral force' Chartists, and was imprisoned 1839–40. His autobiography was pub. in 1876.

LOW, Sir David (1891–1963). New Zealand cartoonist. B. in Dunedin, he joined the *Sydney Bulletin* in 1911, and *London Star* (1919), the *Evening Standard* (1927–50), the *Daily Herald* (1950–3), and was with the *Guardian* from 1953 until his death. He was noted for his independence and radical views, and the bold, simple lines of his drawings and the gallery of characters he evolved, e.g. Colonel Blimp, Hit and Muss, and the T.U.C. horse, became world-famous. He was knighted in 1962.

LOW COUNTRIES. European region comprising the Netherlands and Belgium, sometimes extended to incl. Luxembourg.

LOWE (lō), Sir Hudson (1769–1844). British gov. of St. Helena, 1815–21. Charged with Napoleon's safe keeping, he was accused of unnecessary harshness. He served as gov. of Antigua in 1823 and commander of the forces in Ceylon 1825–30.

LOWELL (lō-el), Amy (1874–1925). American poet. B. in Massachusetts, in 1913 she became attached to the Imagist group, succeeding Ezra Pound in its leadership. A distinguished experimenter in free verse, she pub. *Sword Blades and Poppy Seeds* (1914), and *What's o'Clock?* (1925); and *Tendencies in Modern American Poetry* (1917).

LOWELL, James Russell (1819–91). American author. B. in Massachusetts he was admitted to the

SIR BERNARD LOVELL, behind him the Jodrell Bank telescope.

THE LOUVRE

Courtesy of the French National Tourist Office.

of L. dept., on the r. Rimac, 6 m. E. of the Pacific coast. Founded by Francisco Pizarro in 1535, it was rebuilt after destruction by earthquake in 1746, and has a univ. dating from 1551. Manufactures incl. chemicals, textiles, glass, cement, etc. Of interest are the cathedral, the govt. palace (the rebuilt Palace of the Viceroy) and the ancient Inquisition building, now the senate house. Pop. (1960) 1,262,107. Lima-tambo airport lies to the S.E.

LIMASSO'L. Seaport of S. Cyprus, 38 m. S.S.W. of Nicosia, with a wine trade. Richard I m. Berengaria of Navarre at L., 1191. Pop. (1966) 48,100.

LIMBO (Lat. 'border' or 'edge'). In medieval theology, a region for the souls of those who were not admitted to the divine vision; the word was first used in this sense by Thomas Aquinas. *Limbus infantum* was a place where unbaptized infants enjoyed inferior blessedness; and *limbus patrum* was the place where the prophets and fathers of the O.T. dwelt. Also a West Indian dance in which the performer passes under a pole, the body being bent over backwards, and skilled exponents managing the feat when the pole is only a few inches from the ground.

LIMBURG. An ancient feudal duchy of Lower Lorraine, divided between the Netherlands and Belgium in 1839. The modern provs. are (1) Limbourg, a

LIME (Linden). Tree, flowers and fruit.

N.E. prov. of Belgium in part bounded by the Meuse, cap. Hasselt. Area 930 sq. m.; pop. (1966) 631,300. (2) Limburg, a S.E. prov. of the Netherlands, drained by the Maas and Roer, cap. Maastricht; it incl. the only Dutch coalfield. Area 857 sq. m.; pop. (1966) 980,300.

LIME. Citrus fruit (*Citrus aurantifolia*) regarded by some as a variety of the citron, *C. medica*, and a sub-variety of the sweet lime, *C. limetta*. It is a native of India and grows on small thorny bushes. The white flowers are succeeded by light green or yellow fruits resembling lemons but more globular in shape.

LIME. Calcium oxide (CaO), an alkaline earth, derived from the metal calcium. It is a white, powdery substance, sometimes known as quicklime. Slaked lime or hydrate of lime is calcium oxide combined with water (Ca_2OH). Carbonate of lime (CaCO_3) in the form of limestone or chalk is generally heated in kilns for the production of calcium oxide.

LILY OF THE VALLEY

LIME or **Linden.** Genus of deciduous trees (*Tilia*) found in Europe, N. Asia, and N. America. They are distinguished by the light green leaves and yellowish sweet-smelling flowers, which hang in cymes from the leaf axil, accompanied

by an oblong leaf or wing joined to the flower stalk at the base.

LIMEHOUSE. District of the Greater London bor. of Tower Hamlets. It borders on the Thames and the West India dock, and the population incl. many Chinese.

LIMERICK. Five-line nonsense verse, which first appeared in England c. 1820, and was popularized by Edward Lear. An example is:

There was a young lady of Riga
Who rode with a smile on a tiger;
They returned from the ride
With the lady inside
And the smile on the face of the tiger.

LIMERICK. Chief tn. and co. bor. in co. L., Rep. of Ireland, on the Shannon, 110 m. S.W. of Dublin. An ancient town, it was occupied by the Danes from c. 820 to c. 1100. The cathedral of St. Mary was built in the 12th cent., restored 1860. L. is the most important port on the W. coast. Pop. (1966) 58,082. The co. of Limerick, in Munster prov., is mainly level but rises in the S.E. to the Galty mts. The chief river is the Shannon. The Golden Vale is a fertile district, and the main occupation is farming. Area 1,037 sq. m.; pop. (1966) 137,357.

LIMESTONE. Name for sedimentary rocks composed chiefly of carbonate of lime (CaCO_3). They may be deposited under sea or fresh water, being the calcareous remains of many aquatic animals, such as crustacea, mollusca, foraminifera, etc. Corals build up into solid masses of limestone rock.

LIMITATION, Statutes of. Under English law Acts of Parliament limiting the time within which certain classes of action may be inaugurated, e.g. in simple contracts and most civil wrongs an action must be started by the aggrieved party within 6 yrs. In principle U.S. law is similar, but varies from state to state.

LIMITS, Territorial and Fishing. Traditionally T.L., over which a country has absolute jurisdiction, were set at 3 m. from the shore – the distance a gun could then reach – and under the Geneva Convention of 1882 T. and F.L. coincided at 3 m. However, modern warfare and also fishing methods have led to increasing international dispute, e.g. British trawlers in Icelandic waters, and Soviet and French off Britain's shores. Two U.N. conferences at Geneva (1958, 1960) failed to reach agreement, and the Geneva formula (T.L. 6 m. and F.L. 12 m.) is often extended to 12 m. for both, as by India 1968.

LIMNOS. See **LEMNOS**.

LIMOGES (lēmōzh'). Cap. of Haute-Vienne dept., France, 112 m. N.W. of Bordeaux on the Vienne. Its cathedral was begun in 1273. The Black Prince sacked L. in 1370. L. is the seat of a bishopric, and is famous for porcelain. Pop. (1962) 120,596.

L'IMONITE. Hydrated iron oxide. The mineral, also known as brown iron ore, is found in bog deposits.

LIMOUSIN (lēmōozañ'), Leonard (c. 1505–c. 1577). French artist, the most famous enamel painter of Limoges. He was court painter to Francis I and Henry II, and produced portraits in enamel, vases, etc.

LIMPET. Species of gasteropod mollusc. It has a conical shell, and adheres firmly to rocks by the disc-like foot. They are marine animals, and the Common

LIMERICK. The Treaty Stone, a rough block of limestone on which the Treaty of Limerick was signed in 1691, was mounted on a pedestal at the west end of Thomond Bridge in 1865. The liberties the treaty granted to Roman Catholics were never actually given. Courtesy of the Irish Tourist Board.

LŪ'CAN or Marcus Annaeus Lucanus (A.D. 39–65). Latin poet. B. at Cordova, he was a nephew of the philosopher Seneca, and became a favourite of Nero's, until that emperor's jealousy of his poetic powers ended their friendship. He then joined in a republican conspiracy, and on its failure committed suicide. His unfinished epic *Pharsalia* deals with the civil wars between Caesar and Pompey.

LUCAS, Edward Verrall (1868–1938). British author. B. at Eltham, he joined the staff of *Punch* in 1902, later becoming assistant editor, and contributed to the *Sunday Times*. He produced over 100 books, incl. studies of Charles Lamb; vols. of essays such as *Old Lamps for New* (1911), and *Mixed Vintages* (1919); the novels *Over Bemerton's* (1908), and *Landmarks* (1914); and anthologies such as *The Open Road* (1899).

LUCAS VAN LEYDEN (lŭ'd'en) (c. 1494–1533). Dutch artist. B. at Leiden, he executed his first engravings when a boy, and was later influenced by Dürer, whom he met at Antwerp. His principal paintings incl. 'The Chess Players' (Berlin) and 'Virgin and Child' (Munich).

LUCCA (look'kah). City, of pre-Roman origin, in Tuscany, Italy, cap. of L. prov., a rep. 1369–1797. The city has many fine churches, with richly decorated exteriors, and its cathedral was begun in the 12th cent. Pop. (1961) 85,940.

LUCE, Henry Robinson (1898–1967). American journalist. The son of a missionary, he was b. at Tengchow, China. He went to the U.S.A. in 1912, and founded the magazines *Time* (1923), *Fortune* (1930), and *Life* (1936), retiring from their management in 1964. He m. Clare Boothe (q.v.).

LUCERNE. See ALFALFA.

LUCERNE (lŭ'sern'). (1) Cap. and tourist centre of L. canton, Switzerland, standing on the Reuss, where it flows out of Lake L. Growing up round the Benedictine monastery, estab. c. 750, it owes its prosperity to its position on the St. Gotthard road and railway. There is a 17th cent. cathedral. Pop. (1960) 67,433.

LUCERNE. In spring the city has a particular charm. Mount Pilatus, at 6,995 ft. the 2nd-highest peak of the canton, looks down on the river Reuss, one of whose ancient wooden bridges can just be seen to the right.

Courtesy of Swiss National Tourist Office.

(2) Lake in central Switzerland, of great scenic beauty. Most famous of the surrounding mts. are the Pilatus and Rigi. It is 24 m. long with an area of 44 sq. m.

LUCIAN (loo'shian) (c. 125–c. 190). Greek writer. B. at Samosata in Syria, for a time he was an advocate at Antioch, but later travelled before settling in Athens c. 165. He d. in Egypt, where he occupied an official post. L. is chiefly remembered for his satirical dialogues, in which he pours scorn on all religions.

LUCK. Polish form of LUTSK.

LUCKNOW. Cap. city of Uttar Pradesh, Rep. of India, once cap. of the nawabs of Oudh. It lies on the Gumti, 43 m. N.E. of Kanpur. When the Indian Mutiny of 1857 broke out, the residency at L., already fortified and provided with stores by Sir Henry Lawrence, was besieged from 2 July (on which day Lawrence was wounded by a shell, dying 2 days later) until its relief by Sir Colin Campbell on 16 Nov. Notable buildings incl. the great mausoleum of Nawab Asaf-ud-Dowla (1784), and a univ. founded in 1921, which incl. a medical college. Besides being an important rly. junction, L. has engineering, chemical, cotton, and leather industries, and vegetable oil works and railway workshops, and is noted for handicrafts in leather, embroidery, gold, silks, shawls, etc. Pop. (1961) 662,196.

LUCRETIA (lŭkrē'shia). A Roman matron, the wife of Collatinus, said to have committed suicide after being ravished by Sextus, son of Tarquinius Superbus. According to tradition, this incident led to the dethronement of Tarquinius and the establishment of the Roman rep. in 509 B.C.

LUCRETIUS or Titus Lucretius Carus (99–55 B.C.). Roman poet and Epicurean philosopher. He is remembered for his splendidly sombre didactic poem *De Rerum Natura*, expounding his materialistic philosophy based on the notion that the whole universe is the result of combinations of atoms.

LUCULLUS, Lucius Licinius (c. 110–56 B.C.). Roman general. As commander against Mithridates of Pontus 74–66 he showed himself one of Rome's ablest generals and administrators, until superseded by Pompey. He then retired from politics.

LUDDITES (lud'its). Name given to those taking part in the machine-wrecking riots of 1811–16. Their main organizer, possibly an imaginary person, was referred to as General Ludd. The movement, which began in Notts and spread to Lancs, Cheshire, and Yorks, was primarily a revolt against the unemployment caused by the introduction of the new machines. Many Ls. were hanged or transported.

LUENDORFFE (lŭd'en-), Erich (1865–1937). German general. B. in Prussian Poland, he entered the army in 1883, and joined the general staff in 1894. As Chief of Staff to Hindenburg on the eastern front during the F.W.W. he was largely responsible for the German victory at Tannenberg in 1914. After Hindenburg's appointment as Chief of General Staff in 1916, and L.'s as Quartermaster-General, the two together largely decided German policy. After the war L. organized the Kapp putsch of 1920, took part in the Nazi rising at Munich in 1923, and sat in the Reichstag as a Nazi.

LÜDERITZ. Town and port on L. Bay, S.W. Africa, named after Adolf Lüderitz of Bremen, who settled here in 1883 and was drowned off the coast 3 years later. L. developed through the discovery of diamonds nearby; a fish-canning industry was started later. On the coast, 12 m. S. of L., Díaz placed a cross in 1488 on his return from rounding the Cape of Good Hope. Pop. (1960) 3,604 (1,117 white).

LUDLOW. English market town (bor.) in Shropshire, on the Teme, 26 m. S. of Shrewsbury. L. castle was founded c. 1085 by Roger de Lacy. Pop. (1961) 6,774.

LUDWIG (lood'vig). Name of 3 kings of Bavaria. Ludwig I (1786–1868) succeeded his father Maximilian Joseph I in 1825. His patronage of learning and the arts made Munich an international centre of culture. Although a liberal ruler, his association with the dancer Lola Montez destroyed his popularity and in 1848 he was compelled to abdicate. Ludwig II (1845–86) succeeded his father Maximilian II in 1864. He supported Austria during the Austro-Prussian War of 1866, but brought Bavaria into the Franco-Prussian War as Prussia's ally, and in 1871 offered the German crown to the king of Prussia. He became

language who are unable to acquire each other's languages correctly. The term, literally 'Frank language' (Frank being the general Arabic term for Europeans), was originally applied to the hybrid Italian which came to be used in trade in the eastern Mediterranean from Renaissance times onwards.

LINGUISTICS. The science of the phenomena of language in general. Language may be defined as the transmission of ideas by means of articulate sounds, but L. also includes written language, inasmuch as it begins by being dependent on the spoken words.

L. in its widest sense embraces a number of special studies, such as phonetics, etymology, semantics, and comparative grammar.

LINKLATER, Eric (1899–). Scottish writer. B. in Orkney, he set many of his stories in Scotland. A student of medicine at Aberdeen, he worked in Bombay as asst. ed. on the *Times of India*, and then returned to his old univ. to teach English for a year before going to the U.S. (1928–30), where he wrote the first of a series of light, sardonic novels which incl. *Juan in America* (1931), *Ripeness is All* (1935), and *Private Angelo* (1946). Among other works are the autobiographical *The Man on my Back* (1941) and the short stories *Sealskin Trousers* (1947).

LINKÖPING (lin'chöping). Town in Sweden, 107 m. S.W. of Stockholm. It is the seat of a Lutheran bishopric, and has a 12th cent. cathedral. Tobacco, hosiery, aircraft and engines are manufactured. Pop. (1966) 77,365.

LINLITHGOW, John Adrian Louis Hope, 1st marquess of (1860–1908). British administrator. The eldest son of the 6th earl of Hopetoun, he was first Gov.-Gen. of the Australian Commonwealth 1900–2. His son, Victor A. J. Hope, 2nd marquess (1887–1952), was viceroy and Gov.-Gen. of India 1936–43.

LINLITHGOW. Cap. of W. Lothian, Scotland, and royal burgh, 17 m. W. of Edinburgh. L. is a tourist centre and has distilleries. The ruined L. palace was at one time a residence of kings of Scotland; Mary Queen of Scots was born there. Pop. (1961) 4,327.

LINLITHGOWSHIRE. Former name of WEST LOTHIAN.

LINNAEUS (linē'us), Carolus (1707–78). Swedish botanist, ennobled in 1762 as Carl von Linné, Swedish form of his Lat. name. Son of a Lutheran pastor, he

studied at Lund and at Uppsala, where he became asst. prof. of botany in 1730. An adventurous journey to Lapland in 1732 was followed by his *Flora Lapponica* (1737), and after spells in Holland and England he became in 1741 prof. of medicine (later botany) at Uppsala. In his *Species Plantarum* (1753) he achieved the concise method of naming plants and animals by genus, species, etc., which forms the basis of modern classification. His books, MSS. and specimens were bought by Sir J. E. Smith, founder of the Linnean Society (1788), and are preserved in the Linnean Rooms, Burlington House, London.

LINNET. Bird of the finch family (*Linota cannabina*) common in Europe. Its colour changes with the seasons to brown, grey, or pink. It nests in bushes and feeds on fruits and insects.

LINOTYPE. A machine for composing printing types in solid lines or 'slugs'. The first composing machine to achieve enduring success, it is widely used for newspaper work and to a lesser extent for books. See also INTERTYPE.

LIN PIAO (lin piow), Marshal (1908–). Chinese soldier and politician. Vice-chairman of the Communist Party, and Vice-Premier and Min. of Defence from 1959, he was named as successor to Mao Tse-tung in 1969.

LINSEED. Seeds of the flax plant (*Linum usitatissimum*), from which linseed oil is expressed, the residue being used as feeding cake for cattle. The oil is used in paint and varnishes, and in the manufacture of linoleum.

LINTON, William James (1812–97). British wood-engraver, one of the finest of his day, he illus. numerous books, and some of his best work was printed in the *Illustrated London News*; he pub. *Wood engraving: a manual of instruction* in 1884. In 1867 he went to the U.S.A. and founded a printing press in Connecticut.

LINZ (lints). Cap. of Upper Austria, on the Danube. A river port, it grew up around the Roman fort Lentia. It is a tourist centre. Iron and steel, textiles, chemicals, etc., are manufactured. Pop. (1961) 196,206.

LION. Largest of the cat family (*Felis leo*), found in Africa and N.W. India and formerly more widely distributed. The coat is tawny, the young having darker stripe and spot markings which usually disappear in the adult, and the male has a heavy mane and a tuft at the end of the tail. Head and body measure c. 6 ft. with an additional 3 ft. of tail, the lioness being slightly smaller. Ls. commonly mate for life and produce litters of 2–6 cubs, and in the African interior often live in parties of several adult males and females with half a dozen young ones. Capable of short bursts of speed, they skilfully collaborate in stalking their prey which consists of the large herbivorous animals. Man-eating is usually the resort of old lions whose teeth and strength are failing.

LIPARI ISLANDS (lē'pahre). Group of volcanic islands off the N.E. of Sicily, named Lipari, Vulcano, Stromboli, Salina, Panaria, Filicudi, and Alicudi. They were known to the ancients as the home of Aeolus, god of the winds. L., the largest island, contains the chief town of the same name (pop. 11,854). Area 44 sq. m.; pop. c. 18,000.

LIPCHITZ, Jacques (1891–). Lithuanian sculptor. He worked in Paris from 1909, becoming a member of the *Esprit Nouveau* Group, and from 1941 in the U.S.A., where he became a citizen in 1957. His

LION. An adept tree-climber in the Kruger National Park. Courtesy of Satour.

LINEN. The characteristic permanent natural sheen is achieved by 'beetling'. The cloth is wound on rollers and slowly rotated while being beaten with wooden blocks, a process which continues for up to 72 hours.

Courtesy of the Irish Linen Guild.

Italian balloonist. He came to London as sec. to the Neapolitan ambassador, and made the first balloon flight in England from Chelsea in 1784.

LUNAR PROBE. Vehicle intended to pass close to, orbit, or land on the Moon (q.v.). *Lunik I* (U.S.S.R.) passed by the Moon at less than 4,000 m. in Jan. 1959, sending back information about conditions in that region of space; *Lunik II* crash-landed on the surface Sept. 1959; *Lunik III* sent back in Oct. 1959 photos of that part of the Moon which is always turned away from Earth; *Ranger VII* (U.S.A.) crash-landed in the Sea of Clouds area July 1964 radioing back useful photographs; *Luna IX* (U.S.S.R.) made the first soft landing Feb. 1966, with an unmanned probe weighing 1½ tons, and *Surveyor* (U.S.A.) followed in June 1966; *Zond V* (U.S.S.R.) was the first unmanned craft to go round the moon and back; and *Apollo VIII* (U.S.A.), carrying Frank Borman, James Lovell and William Anders, made the first manned lunar orbits 21–7 Dec. 1968. A manned landing followed in 1969.

LUND (loond). City in Sweden, 10 m. N.E. of Malmö. It has an 11th cent. Romanesque cathedral, and a univ. founded in 1666. The treaty of L. was signed in 1676 after Charles XI had defeated the Danes. Pop. (1966) 49,580.

LUNDY. Rocky island at the entrance to the Bristol Channel, 12 m. N.W. of Hartland Point, Devon, England, with an area of 1,047 acres. Formerly noted as a stronghold of privateers and pirates, L. also has prehistoric remains and the ruins of Marisco castle (11th–14th cent.). Pop. c. 40.

LÜNEBURG. Town of Lower Saxony, W. Germany, 30 m. S.E. of Hamburg. Formerly prominent in the Hanseatic League, it is an industrial centre making ironware, chemicals, etc., and gypsum and lime are mined. On L. Heath, S. of the town, all German forces in the Netherlands, N.W. Germany, Schleswig-Holstein, and Denmark (more than a million men) surrendered to Field Marshal Montgomery on 4 May 1945. Pop. (1960) 59,000.

LUNGS. The organs of respiration. They are 2, and occupy the thorax, the upper part of the trunk. They fit exactly into this conical space, but do not meet in the middle. The heart is placed between them. Their function is to remove the carbon dioxide from the blood and replace it with oxygen. At every beat the heart pumps blood into their veins, which divide into very small branches, where the blood is brought into contact with the air in the air cells at the ends of the smallest divisions of the air tubes (bronchi).

The lung tissue, consisting of multitudes of air cells and blood vessels, is very light and spongy. Air is drawn into the Ls. through the wind-pipe and the bronchi by the expansion of the ribs and the contraction of the diaphragm; it is pressed out of the Ls. when the ribs contract and the diaphragm relaxes. The Ls. expand with the thorax because there is normally no air space (see PNEUMOTHORAX) between the 2 surfaces. These are formed by the pleura, a smooth membrane lubricated by serous fluid.

The principal diseases of the Ls. are tuberculosis, pneumonia, bronchitis, and cancer (qq.v.).

LUNN, Sir Arnold (1888–). British author. Son of Sir Henry L. (1859–1939), founder of the L. travel agency in 1892, he has written on mountaineering and skiing, and works of Catholic apologetics.

LUNT, Alfred (1893–). American actor. B. in Wisconsin, he went straight from school into the theatre, and in 1922 m. Lynn Fontanne with whom he subsequently co-starred in more than 30 brilliant

successes incl. *Design for Living* (1933), *There Shall Be No Night* (1940–1) and *The Visit* (1960).

LUPERCALIA. A Roman festival celebrated on 15 Feb. Goats and a dog were sacrificed, and the priests ran round the city carrying goatskin thongs, a blow from which was believed to cure sterility in women. The ritual probably combined fertility magic with charms conveying protection against wolves.

LUPESCU (loopes'koo), Magda (1900–). Wife of King Carol II (q.v.) of Rumania. Her long association with him was among the causes of his exile in 1926–30 and his abdication in 1940. They were m. in 1947.

LUPIN. Plants of the genus *Lupinus*, comprising about 200 species. They are native to Mediterranean regions and parts of N. and S. America, and have been naturalized in Britain. The spikes of pea-like flowers may be white, yellow, blue or pink. *L. albus* is cultivated in some places for cattle fodder, and for green manuring.

LŪPUS (L. vulgaris). Tuberculosis of the skin. The organism produces ulcers which spread and eat away the underlying tissues. Treatment by ultraviolet light is often effective. Lupus erythematosus is a chronic inflammation of the skin of the face, with red patches, usually on the cheeks and across the nose, with or without scales. The cause is unknown.

LURISTAN (looristahn'). Mountainous district in S.W. Persia, formerly a prov., inhabited by Lur tribes (est. at 500,000) who live by their sheep and cattle. Area 15,000 sq. m. In 1938 it became part of Province No. 6.

LUSA'KA. City (1960) and cap. of Zambia from 1964 (of N. Rhodesia 1935–64), 230 m. N.E. of Livingstone. A thriving commercial and agricultural centre, it has flour mills, tobacco factories, vehicle assembly, plastics and printing works. There are links by rail with Livingstone and the Congo, and in addition to the new road connection with Dar-es-Salaam, a railway is planned: L. has an internat. airport (1967). The Univ. of Zambia was estab. here 1966. At Kafue, 50 m. S., there is a vast hydroelectric and irrigation project, and textile, fertiliser, and steel industries. Pop. (1966) 151,400.

LUSHUN. Chinese name of PORT ARTHUR, China.

LUSITANIA. Cunard liner, built in 1906, and sunk by a German submarine on 7 May 1915. About 1,200 lives were lost. This crime strengthened anti-German feeling in the U.S.A.

LŪ-TA. Name for the combined cities of PORT ARTHUR and DAIKIN (qq.v.).

LUTE. Name given to a family of stringed musical instruments which was very popular in the 16–17th cents., and includes the mandore, theorbo, and chittarone. Ls. are pear-shaped and the strings are plucked with the fingers.

LUTHER (looð'er), Martin (1483–1546). German reformer, usually regarded as the founder of Protestantism. B. at Eisleben, the son of a miner, he studied at the univ. of Erfurt, spent 3 years as a monk in the Augustinian convent there, and in 1507 was ordained priest. Shortly afterwards he attracted attention as a teacher and preacher in the univ. of Wittenberg; and in 1517, after returning from a visit to Rome, he attained nationwide celebrity for his denunciation of the Dominican monk Tetzel, who was one of those sent out by the Pope to sell 'indulgences' as a means of raising funds for the rebuilding of St. Peter's at Rome. On 31 Oct. 1517, he nailed on the church door at Wittenberg a statement of 95 theses on indulgences, and in the next year he was summoned to Rome to defend his action. His reply was to attack the papal system even more strongly, and in 1520 he publicly burnt in Wittenberg the papal bull that had been launched against him. Charles V summoned him to the Imperial Diet at Worms in 1521, where he refused to retract anything. On his way home he was taken into 'protective custody' by the elector of

other material joys of life, interspersing beautiful natural descriptions. His poems rarely exceed 12 lines. Li is said to have been drowned by falling from a pleasure-boat while drunk.

LITANY. In the Christian Church, a set form of responsive prayer or supplication.

LITERARY CRITICISM. The determination of the principles governing literary composition and their application. The earliest systematic L.C. was the work of Aristotle; among subsequent Greek writers is the anonymous author of the treatise *On the Sublime*, usually attributed to Longinus. The most important of the Latin critics were Horace and Quintilian. Medieval L.C. shows few original writers apart from Dante, but the Italian Renaissance produced a new type of Humanist C., beginning with Boccaccio, and the revival of classical scholarship exalted the authority of Aristotle and Horace. The spread of Renaissance ideas stimulated critics such as du Bellay in France and Sidney in England, and the increasing influence of classical writers illustrated in Jonson's work reached its apex in the neo-classicism of Boileau and Rapin, which affected Dryden. The neo-classic tradition was continued in the 18th cent. by Pope, Addison, and Johnson, and in France by la Harpe, Marmontel, and Voltaire. The Romantic reaction at the end of the 18th cent. was represented by Diderot in France, Lessing in Germany, and Wordsworth and Coleridge in England; other Romantic critics include Shelley, Hazlitt, Lamb, and de Quincey. A more scientific spirit was introduced by Sainte-Beuve, who was followed in France by Brunetière and Taine. To the later Victorian Age belong Carlyle, Arnold, and Pater, with Poe and Lowell in the U.S.A., and Tolstoy in Russia. Also influential in European thought were Georg Brandes and Benedetto Croce. English L.C. in the 20th cent. is represented by A. C. Bradley, Saintsbury, C. S. Lewis, T. S. Eliot, I. A. Richards, W. Empson, F. R. Leavis; and in the U.S.A. Edmund Wilson, Cleanth Brooks, and Lionel Trilling. Of other European literatures representative names are Emil Staiger (German), Emilio Cecchi and Umberto Eco (Italian), Raymond Picard and Roland Barthes (French), Roman Jakobson (Russian), and Jan Kott (Polish).

LITHGOW, Sir James (1883–1952). Scottish shipbuilder. Succeeding his father in the family firm at 25, he was director of merchant shipbuilding in the F.W.W., was bitterly attacked by Ellen Wilkinson and others for his share in rationalizing the industry between the wars, and in the S.W.W. was a most successful controller of merchant shipbuilding. He was succeeded by his son Sir William L. (1934–).

LITHIUM (Gk. *lithos*, stone). The lightest metal known, symbol Li, at. wt. 6.940 and at. no. 3, it was discovered by Arfvedson in 1817. It has a silvery lustre, tarnishing rapidly in air so that it is kept under naphtha, is soft and ductile, and burns in air at 200° C. Never occurring free in nature, it is nevertheless widely distributed, traces being found in nearly all igneous rocks and many mineral springs. It is used to a limited extent in industry and in the production of tritium.

LITHOGRAPHY. In printing, a process of graphic reproduction discovered by Aloys Senefelder in Munich towards the end of the 18th cent. It is a method of surface printing based on the principle that grease and water repel one another. The drawing is made with greasy ink on an absorbent stone; this is washed with water, and then inked, the watered parts repelling the ink, and the drawing (or greasy parts) attracting it. The drawing is then printed. It has enjoyed a revival in modern times, since it enables the collector to possess an artist's 'original' at a modest price. See FREEDMAN, BARNETT.

LITHUÂNIA. A Soviet Socialist Republic of the U.S.S.R. It is situated between Latvia on the N., White Russia on the E., Poland on the S., Kaliningrad region of the R.S.F.S.R. on the S.W., and the Baltic on the W. L. is flat and low-lying, with a few hills and numerous small lakes. It is watered by the Niemen and its tributaries. Forestry and agriculture are both of importance. Rye and oats are the chief grain crops; potatoes, vegetables and fodder crops are produced; poultry and eggs are exported. Industrial products incl. ships, textiles, sugar, bicycles, boots and shoes, and bricks. The cap. is Vilnius. Other towns incl. Kaunas, the seat of a univ.; and Klaipėda Area 25,300 sq. m.; pop. (1967) 3,064,000.

A grand duchy from the 13th cent., Christianized in the 14th, L. was united with Poland 1569–1776, when it passed to Russia. L. proclaimed its independence in 1918, recognized by Russia in 1920. L., like Estonia and Latvia, received demands in 1939 for military bases, in 1940 for the passage of Russian troops, and in 1940 was incorporated in the U.S.S.R. as a S.S.R.

LITHUANIAN. The language of the Lithuanians, an Indo-European tongue, retaining many very ancient features: the free accent, the full complement of cases in the noun, etc. It does not seem to have been reduced to writing before the 16th cent., and it is spoken by about 3 millions.

LITMUS. A colouring matter obtained from various lichens. The aqueous extract of L. is used as an indicator to test the acidic or alkaline nature of aqueous solutions; with acid it turns red, with alkali (hydroxyl) it turns blue.

LISZT. In Danhauser's portrait group the master, his piano ornamented by a bust of Beethoven, plays to his friends, the comtesse d'Agoult watching adoringly at his feet. Behind him sit Dumas and George Sand, and in the background (left to right) are Victor Hugo, Paganini and Rossini.

Photo: Bildarchiv der Österreichischen Nationalbibliothek

LYCEUM (lĭs'um). An ancient Athenian gymnasium and garden, with covered walks, where Aristotle taught. It was S.E. of the city, and named after the nearby temple of Apollo Lyceus.

LYCEUM. London theatre, situated in Wellington Street, near the Strand. It was opened in 1809 (rebuilt 1834) and under the management of Henry Irving, (1878–1902), saw many of Ellen Terry's triumphs. After the S.W.W. it became a dance hall.

LYCURGUS (lĭk'gus). Spartan lawgiver. He is said to have been a member of the royal house, who, while acting as regent, gave the Spartans their constitution and system of education (9th cent. B.C.). Many scholars believe him to be purely mythical.

LYDGATE, John (c. 1373–c. 1450). English poet. B. probably at Lydgate, Suffolk, he entered the Benedictine abbey of Bury St. Edmunds, was ordained in 1397, and was prior of Hatfield Broadoak (1423–34). The friend of Chaucer, he produced numerous pedestrian works, often translations or adaptations, e.g. his *Troy Book*, and *Falls of Princes*.

LYELL, Sir Charles (1797–1875). Scottish geologist, whose *The Principles of Geology* (1830–3) estab. the conception of the earth's crust having been gradually brought to its present condition through millennia of change without sudden 'catastrophes'.

LYLY (lĭl'i), John (c. 1553–1606). English dramatist and author. B. probably in Canterbury, in his romance *Euphues, or the Anatomy of Wit* (1578), he popularized elaborate stylistic devices, and originated the word 'euphuism'.

LYME REGIS (lĭm rē'jis). English seaport and holiday resort (bor.) of Dorset. The duke of Monmouth landed at L.R. in 1685. Pop. (1961) 3,533.

LYMINGTON (lĭm-). Seaport (bor.) of Hants, England, 12 m. S.W. of Southampton. It is a yachting centre. Pop. (1961) 28,642.

LYMPH. A clear saline fluid which carries nutrient to the tissues and waste matter away from them. It exudes from the finest blood vessels into the tissue spaces between the cells all over the body, and bathes the cells, which take up from it the nourishment they require and excrete the waste. This is carried through lymph capillaries into larger lymph vessels (lymphatics). These lead to lymph glands, small round bodies chiefly situated in the neck, armpit, groin, thorax and abdomen. Their function is to generate lymphocytes – white blood corpuscles with a protective or repairing capacity – and to filter out harmful substances and bacteria. From the lymph glands, vessels carry the lymph to the thoracic duct and the right lymphatic duct, which lead into the large veins.

LYNCH, John ('Jack') (1917–). Irish republican statesman. Formerly Min. for Education 1957–9, Commerce 1959–65, and Finance, he succeeded Sean Lemass as P.M. and leader of Fianna Fail 1966.

LYNCHING. The execution of an alleged offender by a summary court having no legal authority. The origin of the term remains controversial. In the U.S.A. the custom originated on the frontiers, where no regular courts existed and outlaws and cattle thieves abounded. Recent examples have mostly occurred in the southern states, where it has been used ever since the Civil War as a means of keeping the Negroes in subjection. During 1882–1900 the annual figure for the U.S.A. varied between 96 and 231: the total 1900–61 was 1,992 (1,796 Negro and 196 white), and the recent average is 1 per annum.

LYND, Robert (1879–1949). British essayist, who often signed his work with the initials 'Y.Y.'. B. in Belfast, he became a London journalist, and is seen at his urbane best in the critical *The Art of Letters* (1921) and *Dr. Johnson and Company* (1928), and essay collections, e.g. *The Pleasure of Ignorance* (1921) and *Things One Hears* (1945).

LYNN. Industrial city of Massachusetts, U.S.A., situated on Massachusetts Bay. Mary Baker Eddy,

LYONS. A glimpse of the old quarter of the city where the inhabitants have a steep climb to reach their homes.
Courtesy of the French Government Tourist Office

founder of Christian Science, lived at L. Founded in 1629, it was called Saugus until 1673 when it was re-named after King's Lynn, England. Pop. (1960) 94,478.

LYNSKEY (lĭn-), Sir George Justin (1888–1957). British judge. A judge of the High Court from 1944, he was chairman of the *L. tribunal* of 1948, appointed to inquire into irregularities in govt. depts. A chief witness was Sidney Stanley and a no. of resignations followed.

LYNTON and **LYNMOUTH**. Twin villages on the N. Devon coast, England, 14 m. E. of Ilfracombe. Lynton, at the top of a 400 ft. cliff, overlooks Lynmouth, at the base. Both are beauty spots. Severe floods in 1952 caused much damage in Lynmouth; 31 were killed, 42 houses and 2 bridges were destroyed, besides other damage. Lynton is a U.D., pop. (1961) 1,918.

LYNX. Genus of carnivorous mammals in the cat family. They do not occur in large numbers, but are widespread in N. temperate regions, where they are found in forests and rocky districts. The L. is larger than a wild cat, has a short tail and tufted ears. The fur is long and silky, usually reddish-brown or grey, with dark spots. The European L. (*Lynx borealis*), the Canadian L. (*L. canadensis*) and the Bobcat (*L. rufus*) of the U.S. are the usual sources of commercial furs.

LYON. French form of LYONS.

LYONS, Sir Joseph (1848–1917). British business man, the founder of the catering firm of J. Lyons and Co., Ltd., in 1894. B. in London, of Jewish extraction, he was at first an artist. L. was knighted in 1911.

LYONS, Joseph Aloysius (1879–1939). Australian statesman. After serving in the parliament of his native Tasmania as a Labour member from 1909, he was elected to the Federal Parliament in 1929, and became Postmaster-General and Minister for Works. In 1931 he resigned from the cabinet and formed the United Australia Party. After the general election in the following Dec., L. formed a coalition

worked in a cotton mill before studying medicine, Greek, and theology at Anderson's College, Glasgow. In 1838 he was accepted by the London Missionary Society, and in 1840 took his medical degree at Glasgow. L. was first sent to Bechuanaland. In 1844 he m. Mary Moffat, the daughter of the missionary Robert Moffat, and in 1849 discovered Lake Ngami. After a journey with him to the Upper Zambezi his wife and children fell ill and had to return to England. L.'s next journey took him to Loanda, where he arrived in 1854. In 1856 he followed the Zambezi to its mouth, and discovered the Victoria Falls before reaching Tete and Quilimane. During a visit to London he left the service of the London Missionary Society, and was appointed consul at Quilimane, being also chosen to lead an expedition to E. and Central Africa, which resulted in the discovery of lakes Shirwa and Nyasa and in the exposure of the slave trade. This journey was saddened by the death of his wife in 1862. In an attempt to find the sources of the Nile he ranged between lakes Nyasa and Tanganyika from 1866, reaching Ujiji in 1871. Here Stanley joined him, and together they explored N. Tanganyika. L. d. in May 1873 at Old Chitambo, Zambia. He was buried in Westminster Abbey in 1874.

LIVINGSTONE. Town, cap. until 1935, in Zambia, on the Zambezi, near Victoria Falls, founded 1905. L. (named after the explorer) is a tourist centre with an internat. airport (1950), game park, museum of arts and crafts, and a David Livingstone collection. Pop. (1963) 32,000.

LIVORNO. Italian form of LEGHORN.

LIVY (Titus Livius) (59 B.C.—A.D. 17). Roman historian, famous for his *History of Rome*, from the foundation to 9 B.C. It was composed of 142 books, of which 35 survive, viz., 1–10 and 21–45, covering the periods from the arrival of Aeneas in Italy to 293 B.C., and 218–167 B.C.

LIZARD. Order of reptiles, Lacertilia. The order contains 21 families and over 1,500 species. They are distributed throughout the temperate and tropical regions of the world, being most numerous in warmer climates. Most Ls. have scaly bodies, movable eyelids, and well-developed limbs. Some varieties, e.g. the British blindworm, are legless. The tail is often fragile, but a new tail grows if the old one is shed.

Ls. are generally terrestrial, and usually arboreal, but some are semi-aquatic and one is marine. Their diet varies, some being vegetarian, others feeding on insects, worms, or eggs, etc. They are usually oviparous, but in some varieties the young are completely developed before birth.

LIZARD POINT. The most southerly point of Cornwall and England. Lizard Town is the nearest village. The coast is broken into small bays, overlooked by 2 cliff lighthouses.

LJUBLJANA (lublyah'nah). Industrial city and cap. of Slovenia, Yugoslavia, with an 18th cent. cathedral and a medieval fortress. Cotton spinning and bell founding are among its industries; leather goods, beer, tobacco, machinery, chemicals are made. L. has a univ., founded 1919, and an airfield. Pop. (1961) 133,386.

LLAMA (lah'ma). S. American animal (*Lama huanacus glama*), used in Peru as a beast of burden. Ls. are white, with brown or black spots, very hardy, and require little food or water. They spit profusely when annoyed. The alpaca (q.v.), is an allied species.

LLANBERIS (lanber'is). Village in Caernarvon shire, Wales, point of departure for ascents of Snowdon. Pop. c. 2,300.

LLANDAFF (lan'daf). Part of the city of Cardiff, Glamorganshire, Wales, until 1922 a separate town, the seat of a bishopric from the 6th cent. The cathedral, restored 1844–69, badly damaged by a German land mine delivered in an air assault in 1941, was again restored 1948–60. A large figure, 'Christ in Majesty', by Epstein (q.v.), was placed within it.

LLANDUDNO (landid'no). Seaside resort (U.D.) in Caernarvonshire, Wales, near the mouth of the Conway. It incl. Great Orme's Head. The church of St. Tudno occupies the site of an oratory built by St. Tudno in the 7th cent. 'Lewis Carroll' frequently stayed at L. A garden city for the elderly was opened in 1960. Pop. (1961) 17,852.

LLANELLI (lane'lihi). Welsh seaport (bor.) in Carmarthenshire, by the Burry estuary, formerly Llanelly. Industries incl. tinplate and copper smelting, and L. is a colliery centre. Pop. (1961) 29,994.

LLANES (lyah'nes). Seaport in Oviedo prov., N. Spain, on the Bay of Biscay. Pop. (1960) 25,000.

LLANFAIR P.G. (lan'vîr-). Village in the S.E. of the Welsh island of Anglesey, 1 m. W. of Britannia railway bridge, and famous for its very small church. The first Women's Institute in Britain was founded at L. in 1915 by Mrs. Alfred Watt (1868–1948) of Canada, where women's institutes had been started in 1897. The full name is Llanfairpwllgwyngyllgogerychwyrndrobwllllandysillioogogoch (St. Mary's church in the hollow of the white hazel near to the rapid whirlpool of St. Tysilio's church, by the red cave).

LLANTWIT MAJOR (lan'twit). Welsh market town in Glamorganshire, 5 m. S.S.W. of Cowbridge. It was the site of a missionary centre and school established in the 5th cent. by St. Illtyd which became famous. On the coast, 2½ m. W.S.W., is the 12th cent. St. Donat's Castle, bought by William Randolph Hearst in 1925, sold by his heirs in 1960 to the Atlantic College Foundation for use as an international school.

LLEWELYN (loo-el'in) I (d. 1240). Prince who became king of N. Wales in 1194, and extended his rule over all Wales not in Norman hands. His grandson, Llewelyn II (d. 1282), succeeded in 1246, and was compelled by Edward I in 1277 to acknowledge him as overlord and to surrender S. Wales. His death while leading a national uprising marked the end of Welsh independence.

LLEWELLYN, Richard. Pseudonym of the Welsh author and dramatist Richard Vivian Llewellyn Lloyd (1907–). He sprang to fame in 1939 with *How Green Was My Valley*, a novel about a S. Wales mining family; later came the plays *Poison Pen* (1937) and *Noose* (1947) and his novels *A Few Flowers for Shiner* (1950) and *Up, Into the Singing Mountain* (1960).

LLEWELYN-DAVIES, Richard, baron (1912–). British architect. Prof. at Univ. Coll., London, from 1960, he was consultant for the new offices of *The Times* in Printing House Square and the rebuilding of the London Stock Exchange. He was created a life peer in 1964.

LLOYD, Harold (1893–). American film comedian, noted for his 'trademark' of spectacles with thick horn rims, who appeared from 1913 in silent and talking films.

LLOYD, Marie. Stage-name of British music-hall artist Matilda Alice Victoria Wood (1870–1922). First

LLAMA

MAAZEL. When dealing with foreign orchestras and artists a highly developed linguistic gift helps to put his interpretation across.

Photo: Godfrey MacDonnic.

Flemish artist Jan Gossaert (c. 1472–c. 1534), derived from his birthplace, Maubeuge. His journey to Italy in 1508 with Philip of Burgundy started a vogue for Italian journeys and the Italian style. His works incl. 'The Adoration of the Magi' (National Gallery) and a no. of portraits, in which the hands are used to convey character. His colours are brilliant.

McADAM, John Loudon (1756–1836). Scottish engineer. B. at Ayr, he was appointed general surveyor of roads in 1827. The word 'macadamizing' was coined for his system of constructing roads of broken granite.

MACAO (mahkah'-ō). Portuguese overseas prov. on S. coast of China, c. 40 m. W. of Hong Kong, from which it is separated by the estuary of the Canton r.

It consists of the town of M., occupying an island peninsula, and 2 small islands. M. was leased by the Portuguese in 1557, annexed by them in 1849, and recognized as Portuguese by treaty in 1887. Communist China occasionally exerts pressure (as in 1967), espec. as M. has many Chinese Nat. refugees, but encourages the transit trade carried on by Chinese merchants. Area 6 sq. m.; pop. (1965) 200,000.

MacARTHUR, Douglas (1880–1964). American gen. B. in Arkansas, the son of an army officer, he became Chief of Staff 1930–5. As commander of U.S. forces in the Far East he defended the Philippines against the Japanese 1941–2, escaped to Australia, and in March 1942 assumed command of the Allied forces in the S.W. Pacific. He was responsible for the reconquest of New Guinea in 1942–5 and of the Philippines in 1944–5, being appointed Gen. of the Army in 1944. After the surrender of Japan he commanded the Allied occupation forces there. During 1950 he also commanded the U.N. forces in Korea, but in April 1951, following his expression of views contrary to U.S. and U.N. policy, he was relieved of all his commands by Pres. Truman.

MACARTHUR, John (1767–1834). Founder of the Australian wool and wine trade. B. in England, he went to Sydney in 1790. In 1803 he introduced the breeding of fine wool sheep, and in 1817 planted the first vineyard of the colony.

MACASSAR. Town and seaport, cap. of the prov. of Celebes, on the is. of that name, Indonesia. It trades in coffee, copra, rice, pearls, rubber, spices, etc. The univ. was estab. 1956. Pop. (1967) 450,000.

MACAULAY, Dame Rose (1881–1958). British novelist. B. in Cambridge, she changed from the serious vein of her early novels to lightly touched satire of a muddled world, as in *Potterism* (1920) and *Keeping up Appearances* (1928). Her later books, very few being novels, incl. *The Writings of E. M. Forster* (1938), and *The Towers of Trebizond* (1956). Brought up in the Church of England, she returned to her lapsed faith through the influence of Father Hamilton Johnson: her letters to him were pub. in 2 vols. (1961–2). She was created D.B.E. in 1958.

MACAULAY, Thomas Babington, baron (1800–59). British historian, essayist, poet, and politician. B. in Leics, he was ed. at Cambridge, and in 1826 was called to the Bar. In 1825 he pub. in the *Edinburgh Review* his essay on Milton, which was followed during the next 20 years by numerous historical and

critical essays. He entered parl. as a Whig or Lib. in 1830, and advocated parl. reform and the abolition of slavery. He spent 1834–8 in India as a member of the Supreme Council, and was mainly responsible for the Indian penal code. He again sat in parl. 1839–47 and 1852–6, and in 1857 accepted a peerage. His only vol. of verse, *Lays of Ancient Rome*, appeared in 1842. The 4 vols. of his *History of England* (1848–61) were only completed to 1702. Although charged with showing dogmatism and Whig prejudices, it ranks as a literary masterpiece.

MACBETH (d. 1058). King of Scotland. The son of Findlaech, hereditary ruler of Moray, he was commander of the forces of Duncan, king of Scotia, whom he murdered in 1040. His reign was prosperous until Duncan's son Malcolm led an invasion and killed M. at Lumphanan. Shakespeare's tragedy (c. 1606) was based on Holinshed's *Chronicle*.

MacBRIDE, Seán (1904–). Irish politician. He was the son of Maud Gonne (1866–1953), a famous beauty who inspired poems and plays by Yeats, and Major John M., who was executed in 1916 for his part in the Easter Rebellion. M. served in the I.R.A., was called to the Irish Bar in 1937, and became a senior counsel in 1943. He founded the republican party *Clann na Poblachta* in 1946 (dissolved 1965), was elected to the Dáil the following year, and was For. Min. 1948–51 in the coalition govt.

MACCABEES (mak'abēz). Jewish family, sometimes known as the Hasmonaeans, founded by the priest Mattathias (d. 166 B.C.). He and his sons led the struggle for Jewish independence against the Syrians in the 2nd cent. B.C. Judas (d. 161) reconquered Jerusalem in 165 B.C., and Simon (d. 135) estab. Jewish independence in 142 B.C.

McCARRAN, Patrick (1876–1954). American Democrat politician, A lawyer, he became senator for Nevada in 1932, and as an isolationist strongly opposed Lend-Lease and sponsored in 1950 the McCarran-Walter Immigration Act, forbidding foreign seamen to land in the U.S. unless willing to submit to interrogation by immigration officers. See COMMUNISM.

McCARTHY, Eugene Joseph (1916–). American politician. A Democrat and R.C., he became senator, Minnesota 1959, and in 1968 was a candidate for the presidential nomination, advocating peace in Vietnam and a tackling of the 'deepening moral crisis in America'. He is not related to Joseph M. (q.v.).

McCARTHY, Joseph (1909–57). American Republican politician. A lawyer, he became senator for his native Wisconsin in 1946, and in 1950 caused a sensation by claiming to hold a list of c. 200 Communists working in the State Dept. He continued a not-uninfluential witch-hunting campaign – 'McCarthyism' – until censured by the senate in 1954.

MACCLESFIELD. English market town (bor.) in Cheshire, on the Bollin, about 18 m. N.E. of Crewe. It is an important manufacturing centre, the principal industry being the production of silk and other fibres. Pop. (1961) 37,578.

McCORMICK, Cyrus Hall (1809–84). American inventor. The son of a Virginian farmer, he invented a mechanical reaper in 1831.

McCORMICK, Robert Rutherford (1880–1955). American journalist. B. in Chicago, son of a former U.S. ambassador to Russia, he was admitted to the Bar in 1907. During the F.W.W. he served with distinction, rising to the rank of colonel, but his *Chicago Tribune* (of which he became pres. in 1911) was a vehicle for isolationist and anti-British sentiments, and '100 per cent Americanism'.

McCRACKEN, Esther Helen (1902–). British dramatist, née Armstrong, who won fame with her 2 middle-class domestic comedies *Quiet Wedding* (1938) and *Quiet Week-end* (1941).

McCULLERS, Carson (1917–67). American novelist. B. at Columbus, Georgia, she wrote often through

LOBELIA. Genus of plants in the family Lobeliaceae, named after the botanist Matthias de Lobel. About 250 species are known, native of temperate and tropical regions. Some forms, especially those found in Africa, grow to the size of small trees.

LOBENGULA (lō-bengoo'la) (c. 1833-94). Matabele king. Succeeding his father in 1870, he accepted British protection in 1888, but in 1893 rebelled. He was defeated near Bulawayo.

LOBITO. Seaport of Angola, terminus of the Benguela railway, completed by the Belgians in 1931, which is linked through the copper-mining districts of Congo (Katanga prov.) and Zambia with Beira, Mozambique. The first harbour works at L. were completed in 1905. Pop. (1960) 32,000.

LOB-NOR. See LOP-NOR.

LOBSTER. A family of crustacea, Homaridae, found on the coasts of the N. Atlantic and Mediterranean, and used for food. They are distinguished by the pincers on the end of the first 3 pairs of legs, the front pair being very large.

When living the outer cuticle is bluish black in colour, but turns red on boiling. They live in shallow water in rocky places, and are caught in wicker lobster-pots. *Homarus gammarus* is the common European lobster, which is usually sent to the market fresh.

LOCAL GOVERNMENT. That part of government dealing mainly with matters concerning the inhabitants of a particular district or place, together with those the administration of which parliament has delegated to local authorities.

HISTORY. The system of L.G. in England developed haphazard; in the 18th cent. it varied in the towns between democratic survivals of the guild system, and the narrow rule of small oligarchies. The Municipal Reform Act (1835) estab. the rule of elected councils, although their actual powers remained small. In the country L.G. remained in the hands of the J.P.s assembled in Quarter Sessions, until the L.G. Act (1888) set up county councils. These were given a measure of control over the internal local authorities, except the major bodies, which were constituted county boroughs. The L.G. Act (1894) set up urban and rural district councils, and, in the rural districts only, parish councils. Following the S.W.W. local govt. elections were increasingly fought on party lines, and there was a tendency for committees to proliferate.

In 1969 the Royal Commission headed by Lord Redcliffe-Maud recommended reduction of c. 1,100 major councils (controlling education, housing and town-planning, welfare, rubbish and sewerage disposal and water supply) to 60-70, and the introduction of 8-10 elected provincial councils to take over some central govt. responsibilities.

On the Continent, L.G. tends to be much more centrally directed and controlled, rather than the 'partnership' prevailing in England, e.g. France, Germany and the Soviet Union, although German cities have a tradition of independent action, as exemplified in Berlin, and France in 1969 was adopting a policy of regional decentralisation. In the U.S.A. a good deal of the English spirit of freedom survives, and the system shows evidence of the early type of settlement, e.g. in New England the town is the unit of L.G., in the South the co., and in the N. Central states the combined co. and township. A complication is the tendency to delegate power to special authorities in such fields as education.

LOCAL OPTION. The right granted by a government to the electors of each particular area to decide whether the sale of intoxicants shall be permitted.

Such a system has been tried in certain states of the U.S.A., in certain Canadian provs., and in Norway and Sweden.

LOCARNO. Health resort in the Ticino canton of Switzerland on the N. of Lago Maggiore, 12 m. W. of Bellinzona. Formerly in the duchy of Milan, it was captured by the Swiss in 1803. Pop. (1960) 10,155.

LOCARNO, Pact of. A series of diplomatic documents initialled at Locarno on 16 Oct. 1925, and formally signed in London on 1 Dec. 1925. The Pact settled the question of the Rhineland, and the powers—Britain, France, Belgium, Italy, and Germany—guaranteed the existing frontiers between Germany and France, and Germany and Belgium. The prime mover in the Pact was Austen Chamberlain. Following the signing of the Pact Germany was admitted to the League of Nations, but in 1936 the Nazis formally denounced the pact.

LOCHABER (lokhah'ber). Wild mountainous dist. of S. Inverness-shire, Scotland, including Ben Nevis. It is the site of hydro-electric installations, constructed 1926-41 at a cost of about £6,000,000.

LOCHNER (lokh'ner), Stephan (fl. 1400-51). German painter. He was b. on the Upper Rhine, and all his principal works are in the cathedral and museums of Cologne, incl. the 'Madonna in the Rose Garden', 'Adoration of the Kings', and 'Presentation in the Temple'. L.'s death marked the end of idealism in Rhenish painting, and the realism coming from the Netherlands took its place.

LOCKE, John (1632-1704). English philosopher. B. in Somerset, he studied at Oxford, practised medicine, and in 1667 became sec. to the earl of Shaftesbury. He consequently fell under suspicion as a Whig

LOCHABER. Beyond Corran Ferry the sun breaks through the rain clouds sweeping over the Ardgour Hills and touches Loch Linnhe to quicksilver. Photo: George Outram & Co. Ltd.

and in 1683 fled to Holland, where he lived until the 1688 revolution. In later life he pub. many works on philosophy, politics, theology, and economics; these incl. *Letters on Toleration* (1689-92), *Two Treatises on Government* (1690), *Essay concerning Human Understanding* (1690), and *Some Thoughts concerning Education* (1693).

His *Treatises on Government* supply the classical statement of Whig theory, and enjoyed great influence in America and France. He maintains that governments derive their authority from the people's consent, and that they may overthrow any government threatening their fundamental rights. Among these rights he incl. religious freedom, although he would deny toleration to Catholicism and atheism as dangerous to society. His *Essay concerning Human Understanding*, which deals with the nature, origin, and limits of human knowledge, raised problems which dominated 18th cent. philosophy down to Kant.

MACHEN, Arthur (1863–1947). Welsh author. Characterized by mystic symbolism and the supernatural, his writings incl. *House of Souls* (1906), *Angels of Mons* (1915; source of the famous legend), and *Green Round* (1933).

MACHIAVELLI (mak'e'ahvel'li), Niccolò (1469–1527). Italian statesman and author. B. in Florence, he became second chancellor to the Republic (1498–1512). With the accession to power of the Medici in 1512, he was arrested and imprisoned on a charge of conspiracy, but in 1513 released to exile in the country. He completed his *Il Principe* in 1513; this advocated a unified Italian state under a powerful ruler without reference to moral standards; in *L'Arte della guerra* (1520) he outlined the provision of an army for such a prince; and in *Historie fiorentine* analysed the historical development of Florence till 1492. Among his later works are the comedies *La Mandragola* (1524), and *Clizia*. The theories expressed in *Il Principe* and in his *Discorsi* (1531) influenced political science.

MACHINE GUN. Type of small arm (q.v.) perfected in the U.S. by Gatling in 1860. A number of barrels were arranged about a central axis, and the breech containing the reloading, ejection and firing mechanism was rotated by hand: shots being fired through each barrel in turn. The Maxim of 1883 was recoil operated, but some later types have been gas-operated (Bren) or recoil assisted by gas (some versions of the Browning). The sub-M.G., first exploited by Chicago gunmen in the 1920s, was widely used in the S.W.W., e.g. the recoil-operated Sten. See ROCKET.

MACHU PICCHU (mah'chōō pēk'chōō). Inca city, N.W. of Cuzco, Peru. It was discovered in 1911 by Hiram Bingham at the top of 1,000 ft. high cliffs, and contains well-preserved remains of houses, temples, etc.

McINDOE, Sir Archibald (1900–60). New Zealand plastic surgeon. B. at Dunedin, N.Z., he worked at the Mayo Foundation before joining St. Bartholomew's in 1930, and was subsequently surgeon-in-charge of the Queen Victoria Plastic and Jaw Injury Centre in Sussex. During the S.W.W. he became famous for his remodelling of the faces of badly burned pilots, forming for them the Guinea Pig Club. He was knighted in 1947.

MACINTOSH, Charles (1766–1843). Scottish manufacturing chemist, inventor of a waterproof fabric lined with a rubber solution, who gave his name (but spelt 'mackintosh') to raincoats made of it: other processes have largely superseded this method.

MACKAIL, John William (1859–1945). Scottish classical scholar, prof. of poetry at Oxford from 1906 and awarded the O.M. in 1935. His books incl. *Latin Literature* (1895) and studies of Virgil and William Morris. He m. in 1888 the only dau. of Burne-Jones, and novelist Denis M. (1892–) and Angela Thirkell (1890–1961), reviver of Trollope's Barsetshire as the setting of her novels, are their children.

McKAY, Claude (1890–1948). American Negro writer. B. in Jamaica, he pub. his first book of verse, *Songs of Jamaica*, in 1912, the year of his emigration to the U.S.A. Later books are the novels *Home to Harlem* (1928) and *Banana Bottom* (1933); the autobiographical *A Long Way from Home* (1937), and the social study *Harlem* (1940).

MACKAY, Jessie (1864–1938). New Zealand poet. A journalist, she was at her best in 'Maori War Song' and 'Carol of Kosovo' (1915). An annual poetry prize is awarded in her memory by P.E.N. in N.Z.

MACKE (mahk'e), August (1887–1914). German artist, a member of the Blue Rider group. His poetized canvases represent women, girls and children with French fluidity. He was killed in the F.W.W.

MACKENSEN (mahk'ensen), August von (1849–1945). German field marshal. B. in Saxony, in the F.W.W. he accomplished the break-through at

Gorlice and the conquest of Serbia (1915), and in 1916 had a big share in the overthrow of Rumania. After the war M. retained his popularity to become a symbolical figure of the German Army.

MACKENZIE, Alexander (1822–92). British Lib. statesman. B. in Perthshire, he emigrated to Canada in 1842, entered parl. in 1861, and became Lib. leader in the Dominion parl. after 1867. He was P.M. 1873–8.

MACKENZIE, Sir Compton (1883–). Scottish author. From Magdalen Coll., Oxford, where he read history, he entered the army and, although invalided in 1915, returned to serve in Intelligence. By turns urbane and romantic, he pub. his first novel, *The Passionate Elopement*, in 1911; later successes incl. *Carnival* (1912), *Sinister Street* (1913–14), *Sylvia Scarlett* (1918), *The Four Winds of Love* (1937–45), and the richly comic *Whisky Galore* (1947). His memory is phenomenal, and his autobiography, planned as 10 'octaves' of *My Life and Times*, began in 1963. His sister is the actress Fay Compton (q.v.).

MACKENZIE, Henry (1745–1831). Scottish novelist. B. in Edinburgh, in 1771 he pub. *The Man of Feeling*, a novel with a sensitive, virtuous hero which popularized the cult of sensibility.

MACKENZIE, William Lyon (1795–1861). Canadian politician; grandfather of W. L. Mackenzie King. B. near Dundee, he emigrated to Canada in 1820, and in 1837 led a rising at Toronto. After its failure he lived in the U.S.A. until 1849, and 1851–8 sat in the Canadian legislature as a Radical.

MACKENZIE. River of the N.W. Territories, Canada, discovered by the British explorer, Sir Alexander Mackenzie (c. 1755–1820), in 1789; it flows from the Great Slave Lake to the Arctic Ocean, and is about 1,000 m. long. It gives its name to one of the 3 districts of N.W. Territories; area 527,490 sq. m.; pop. (1961) 14,895.

MACKEREL. Food fish (*Scomber scombrus*), found in N. temperate and tropical seas. It is blue with irregular black bands down its sides, the latter and the undersurface showing a pink metallic sheen. The chief M. fisheries of Britain are off the S.W. coast.

McKINLEY, William (1843–1901). Twenty-fifth pres. of the U.S.A. B. in Ohio, he was elected to Congress in 1876 as a Republican, and was Pres. in 1896 and again in 1900. His period of office was marked by America's adoption of an imperialist policy, as exemplified in the Spanish War of 1898, the annexation of the Philippines, etc. M. was assassinated by an anarchist at Buffalo in 1901.

McKINLEY, Mt. Highest peak (20,300 ft.) in N. America, situated in Alaska, U.S.A., named after Pres. William McKinley.

McLAREN, Jack (1887–1954). Australian writer of adventure tales, e.g. *Devil of the Depths* and the autobiographical *My Crowded Solitude*, describing his 8 yrs. living among the aboriginals of the Gulf of Carpentaria.

MACLEISH, Archibald (1892–). American poet. B. in Illinois, he was Asst. Sec. of State in 1944–5 and

LORD MACLEOD

Photo: W. Pintall.

helped to draft the constitution of UNESCO. He made his name with a poem 'Conquistador' (1932), descriptive of Cortes' march to the Aztec capital, but his later plays in verse, *Panic* (1935) and *Air Raid* (1938), deal with contemporary problems. In 1949–62 he was Boylston Prof. of Rhetoric at Harvard, and his essays *Poetry and Opinion* (1950) reflect his feeling that a poet should be 'committed', expressing his outlook in his verse.

LOG. An apparatus for measuring the speed of a ship through water. For the original 'common L.', a piece of weighted wood (log-chip) attached to a line, knotted at intervals, was thrown off the rear of the ship, and its progress measured by timing the passage of the knots with a sand-glass. Modern Ls. use a propeller rotating a line attached to an indicator carried on board.

LOGANBERRY. Fruit first raised from seed by the American Judge J. H. Logan in 1881, a hybrid between a wild blackberry and a raspberry.

LOGARITHMS. The exponents of powers to which an invariable number called the base has to be raised to produce the number of which it is the L. To multiply common numbers, their Ls. are added; to divide, they are subtracted; involution is done by multiplication, and evolution by division.

LOGIC (Gk. *logos*, reason). The science of accurate thought. The founder of L. as a separate branch of philosophy was Aristotle, whose treatises, known collectively as the *Organon*, provided the basis for a complete system. The medieval Church, concentrating on Aristotle's method of deduction from certain given premises, produced the modified system known as Scholasticism. This prevailed until the scientific spirit of the Renaissance produced the inductive method of Bacon, which works backward from the accumulated facts to the principle which accounts for them. Hobbes, Locke, and especially J. S. Mill, developed this form. To the school of rationalist philosophers inspired by Descartes belong Spinoza and Leibniz. Exponents of formal L. include Kant, Hamilton, Mansel, Lotze, and Herbart. Among later logicians are Bosanquet, Bradley, Johnson, Russell, and Whitehead.

LOGOS (Gk. 'word' or 'reason'). A term in Greek, Hebrew and Christian philosophy and theology. It was used by Greek philosophers for the divine reason pervading the universe. Under Greek influence the Jews came to conceive of Wisdom as an aspect of God's activity. The Jewish philosopher Philo (1st cent. A.D.) attempted to reconcile Platonic, Stoic, and Hebrew philosophy by identifying the L. with the Jewish idea of 'Wisdom'. Several of the New Testament writers took over Philo's conception of the L., which they identified with Christ.

LOHENGRIN (lō'engrin). Name of Parsival's son, legendary Knight of the Swan and hero of a German epic of the late 13th cent., on which Wagner based his opera (1848).

LOIR (lwahr). French river, rising N. of Illiers in the dept. of Eure-et-Loir and flowing for 190 m. S.E., then S.W. to join the Sarthe near Angers. It gives its name to the depts. of Loir-et-Cher and Eure-et-Loir.

LOIRE (lwahr). The longest river in France, rising in the Cévennes at 4,430 ft., and flowing for 625 m. first N. then W. till it reaches the Bay of Biscay at St. Nazaire, passing Nevers, Orléans, Tours, and Nantes. It gives its name to the depts. of Loire, Haute-Loire, Loire-Atlantique, Indre-et-Loire, Maine-et-Loire, and Saône-et-Loire.

LOIRET (lwahreh'). River of France, 7 m. long. It rises near Olivet and joins the Loire 5 m. below Orléans. It gives its name to L. dept.

LOISY (lwahse'), Alfred Firmin (1857–1940). French theologian. B. in French Lorraine, he entered the R.C. priesthood in 1879, and became a prof. at the Institut Catholique in Paris. His modernist views led to his dismissal in 1893, and eventually to his excommunication. He was prof. of Church history at the Collège de France 1909–32.

LÓKI. In Scandinavian mythology, one of the Aesir, but the cause of dissension among the gods, and the slayer of Balder. His children are the Midgard serpent Jörmungander which girdles the earth, the wolf Fenris, and Hela.

LOLLARDS. Name, probably meaning 'mutterers'

given to the followers of Wycliffe (q.v.). They condemned transubstantiation, advocated the diversion of ecclesiastical property to charitable uses, and denounced war and capital punishment. Propaganda began c. 1377; after the passing of the statute *De Heretico Comburendo* (1401) many Ls. were burned, and in 1414 they raised an unsuccessful revolt in London. Lollardy lingered on in London and E. Anglia, and in the 16th cent. became absorbed into the Protestant movement.

LOMBARDS or **Langobards.** A Germanic people, originating on the Elbe, who invaded Italy in 568, and occupied Lombardy, which is named after them, and central Italy. Their kingdom was conquered by Charlemagne in 774.

LOMBARDY. Region of N. Italy, divided into the provs. of Bergamo, Brescia, Como, Cremona, Mantua, Milan, Pavia, Sondrio, and Varese. It incl. Lakes Como and Iseo, part of Maggiore on the W., part of Garda on the E., and is drained by the Po and several of its left-bank tributaries, incl. the Ticino. It has extremes of climate; vines, cereals, and the mulberry tree are cultivated, and silk is produced. Milan, the cap., is the centre of a highly industrialized area. In the N. the region is a much favoured holiday resort. The area was taken from the Roman Empire in 568 by the Langobardi or Lombards, from whom it took its name. In the Middle Ages it belonged to the dukes of Milan; later, in succession, to Spain, Austria, and Sardinia. Area 9,191 sq. m.; pop. (1961) 7,390,492.

LOMBO'K. Island of Indonesia. Mataram is the chief town, and Ampanam the chief port. It rises in Mt. L., a volcano, to 12,379 ft. Area 1,825 sq. m.; pop. 650,000.

Through L. Strait, between L. and Bali, runs Wallace's Line, discovered by the naturalist A. R. Wallace (1823–1913), to the W. of which the fauna and flora are predominantly Asian, to the E. predominantly Australasian.

LOMBRO'SO, Cesare (1836–1909). Italian criminologist. He became a prof. of mental diseases at Pavia in 1862. Subsequently he held chairs in forensic medicine, psychiatry, and criminal anthropology at Turin. His principal work is *Luomo delinquente* (1889). He held that there was a physically distinguishable criminal 'type'.

LÓMOND. The largest freshwater Scottish loch, partly in Stirlingshire, partly in Dunbartonshire, 23 m. long and 5 m. at its widest point; area 27 sq. m. It

LOIRE. Most famous of the châteaux of the Loire, Chambord is a Renaissance miracle owing much of its design to the ideas of Francis I himself. For fifteen years 1,800 workmen toiled on its construction. Courtesy of the French National Tourist Office.

MADEIRA. Funchal rests at the foot of an amphitheatre of mountains, which rise to 4,000 ft. The cathedral is pleasantly unpretentious. Courtesy of the Portuguese State Office.

liberal opponent of Franco. His books incl. *Anarchy or Hierarchy* (1937), *The Rise and Fall of the Spanish American Empire* (2 vols., 1947), and *Latin America between the Eagle and the Bear* (1962).

MADEIRA (mad'e-ra). Group of 5 Portuguese is., off the N.W. coast of Africa, 260 m. N. of Santa Cruz, Canary Is. Madeira, the largest, and Porto Santo are the only inhabited is. Their mild climate makes them popular winter resorts. Madeira wine is famous. The cap. is Funchal. Total area 308 sq. m.; pop. (1967) 269,770.

MADHYA BHA'RAT. State of the Rep. of India 1950-6. It was a union of 19 states of which Gwalior and Indore (qq.v.) were the most important; 5 other small states subsequently joined. M.B. had an area of 46,710 sq. m. and in 1956 was absorbed in Madhya Pradesh.

MADHYA PRADESH. State of the Rep. of India, so named in 1950 when it consisted of the former British prov. of Central Provs. and Berar and the princely states of Makrai and Chattisgarh. In 1956 it lost some S.W. districts, including Nagpur (q.v.), and absorbed Bhopal, Madhya Bharat, and Vindhya Pradesh. The cap. is Bhopal; other large towns are Indore, Jabalpur, Ujjain and Gwalior. Area 171,210 sq. m.; pop. (1961) 32,372,408.

MADINET AL-SHAAB. See AL ITTIHAD.

MADISON, James (1751-1836). Fourth pres. of the U.S.A. In 1787 he became a member of the Philadelphia Convention and took a leading part in drawing up the U.S. constitution and the Bill of Rights. He became Sec. of State in Jefferson's govt. 1801-9, the main achievement of his ministry being the Louisiana Purchase; became Pres. in 1809; and was re-elected in 1812. During his period of office the U.S. became involved in the war with Britain of 1812-15.

MADISON. The cap. of Wisconsin, U.S.A., c. 120 m. N.W. of Chicago, situated between lakes Mendota and Monona, seat of the state univ. Pop. (1960) 126,706.

MADONNA (Italian, my lady). Italian name for the Virgin Mary.

MADRAS (mahd'rahs). City and port in the Rep. of India, the cap. of M. state. It lies on the Bay of Bengal, and is the 3rd city of the Rep. Cotton, cement, chemicals, and iron and steel goods are manufactured, and there is a brisk export trade. Fort St. George, nucleus of the city, and Government House, the governor's residence until 1947, then the seat of the legislature, are among the chief buildings. The univ. was constituted in 1857. Fort St. George was founded by the E. India Co. in 1639. Occupied by the French 1746-8, M. was shelled by the German ship *Emden* in 1914, the only place in India attacked in the F.W.W. Pop. (1961) 1,725,216.

MADRAS. State of the Rep. of India. It is bounded on the N. by Mysore and Andhra Pradesh, W. by Kerala, E. by the Bay of Bengal, S.E. by the Gulf of Manaar. The cap., also M., lies in the N.E., on the Coromandel Coast; Madurai, Tiruchirappalli, and Salem are other large towns. Area 50,331 sq. m.; pop. (1961) 33,686,953.

Agriculture is the chief occupation, rice, other grains, ground-nuts, sugar, and cotton the principal products. Cotton textiles and quinine are made. Some 10,000 sq. m. are forested. M. state is part of the former British presidency, later prov., formed from areas conquered in the 18th cent. from the French and from Tippoo Sahib (q.v.), area 126,000 sq. m. M. prov. became a state of the Rep. of India in 1950. The N.E. was detached to form Andhra Pradesh (1953); Kerala and Mysore were enlarged 1956 at the expense of M. and the Laccadives (q.v.) became a Union Terr.; and in 1968 M. was renamed Tamil Nadu.

MADRID. Cap. of Spain and of M. prov., on the Manzanares. It is built on an elevated plateau in the centre of the country, and has excesses of heat and cold. It first became important in the times of Charles V and Philip II; the original town was almost square, with rounded corners. The Puerta del Sol is the chief of many plazas, and in the Calle de Alcalá stands the Real Academia de Bellas Artes, founded in 1752. The famous Prado Museum (1785) is near the botanical garden. Some churches are historically interesting, and the royal palace, finished in 1764, contains a celebrated library and tapestry collection. M. has several schools of industry and art, and a univ. transferred from Alcalá de Henares 1836-7. Its suburbs have grown extensively, as have its industries, which incl. leather, chemicals, furniture, tobacco, and paper. During the civil war M. was besieged by the Nationalists 7 Nov. 1936 to 28 March 1939. Pop. (1965) 2,793,000.

The prov. of M. lies on slopes of the Guadarrama mts., with the Tagus as part of its S. boundary. Area 3,089 sq. m.; pop. (1960) 2,259,931.

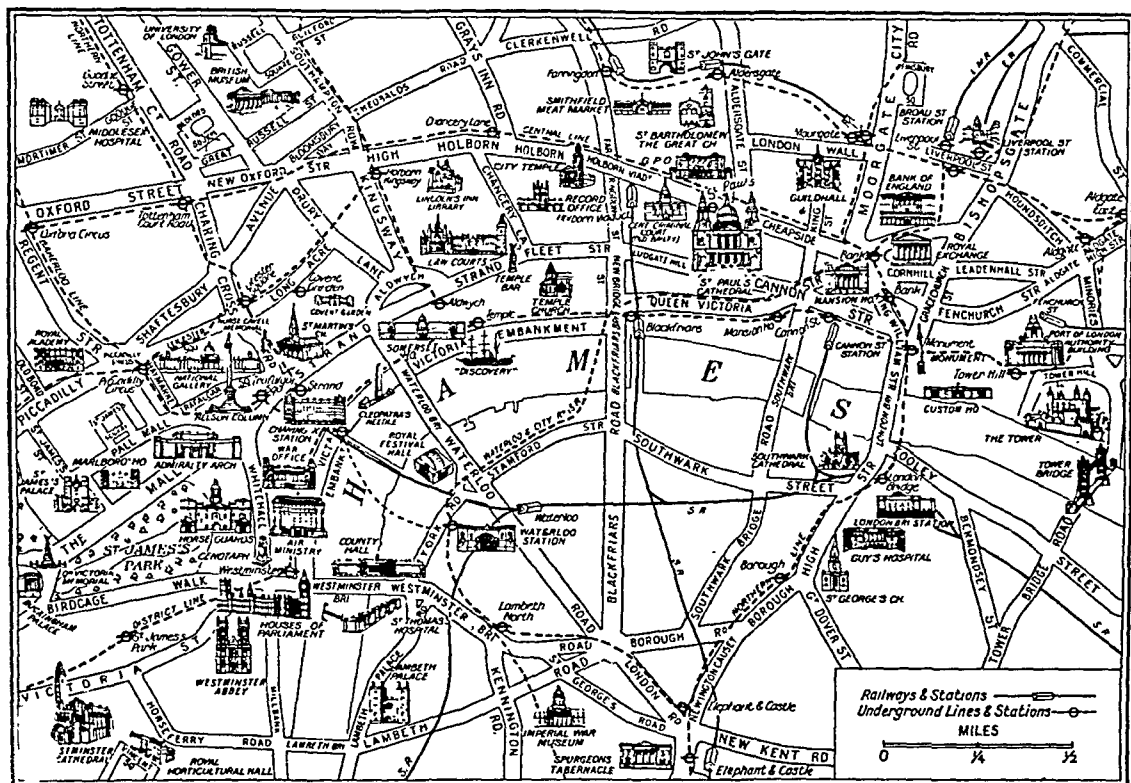

MADRIGAL. In music, a form of composition for three or more voices without musical accompaniment. It originated in the Netherlands before the middle of the 15th cent., later becoming popular in Italy and in Elizabethan England. The chief English composers incl. Byrd, Weelkes, Kirbye, and Orlando Gibbons. The M. Society was founded in 1741.

MADURA. Island of the Rep. of Indonesia, off Surabaya, rising in the central hills to 1,545 ft. It produces rice, tobacco, salt, etc.; cattle breeding and fishing are carried on. Area 1,762 sq. m.; with off-

MADRAS. First constituted in 1857 as an examining body, Madras University now has some 60,000 students and includes a college of technology. Its buildings incl. the library and senate hall shown here.

LONDON. The City and West End.

origin of the name remains uncertain. Roman L. was a walled city, and an important trading centre from which all roads radiated. It was the seat of a bishopric before 314. After an obscure period in the 5th-6th cents., L. reappears as the cap. of Essex. During the 9th-11th cents. it suffered greatly from Viking raids. The City secured rights of self-government in the 12th cent. and elected its first mayor in 1191, or perhaps earlier. Meanwhile Westminster, which grew up round the 7th cent. abbey, became the seat of govt. in the 12th cent., and of parliament in the 13th. The outstanding event of the 16th cent. was the dissolution of L.'s many monasteries. In the struggle against the Stuarts L. played a decisive part, and its trained bands distinguished themselves in the Civil War. The Great Plague of 1665 was followed by the Fire in 1666; rebuilding was entrusted to Wren and Robert Hooke, though the revolutionary plan made by Wren was not followed. The nobility in the 17th cent. abandoned the City as a residential district for Lincoln's Inn and Covent Garden, while in Hanoverian times they moved still farther W. In the 19th cent. the City lost its residential character altogether, and rail transport encouraged spreading suburbs. In the 20th cent. Mayfair and other central areas ceased to be mainly residential and were overtaken by offices, and commuter problems and road congestion correspondingly increased. Remedial measures after the S.W.W. incl. decentralisation of industry, offices and population to more than 30 other towns by special agreement; new residential projects within the area, e.g. the Barbican Scheme (*illus.* p. 1042), bringing residential population back to the City, and the creation of Thamesmead on reclaimed marshland near Woolwich for an eventual pop. of 80,000; improved bus and train services, and extension of tube facilities, e.g. the new Victoria Line opened 1969; and the G.L. Develop-

ment Plan (1969) envisaging three concentric rings of motorways. There are 2 airports (see GATWICK, HEATHROW) and a third (after rejection of the Stansted site 1969) was projected at Cublington, Foulness, Nuthampstead or Thurley.

L. suffered slightly from air raids during the F.W.W. Raids during the S.W.W., which killed 29,890 people, injured 50,497, and destroyed or damaged many

The Boroughs of Greater London: figures indicate the number of councillors elected to the Greater London Council by each borough. Within the dotted line are the twelve Inner London Boroughs, and the City, an area which constituted the administrative County of London 1889-1965.

Reproduced, by permission, from *The Times*

were persecuted as witches. Traces of M. still survive in folk-custom and in superstitions.

MAGINOT LINE (mahzhēnō'). French system of fortifications along the German frontier from Switzerland to Luxembourg. Built 1929-36 under the direction of the War Minister, André Maginot, it consisted of semi-underground forts armed with heavy guns, joined by underground passages, and protected by anti-tank defences. Lighter fortifications continued the line to the sea. In 1940 the Germans pierced the Belgian frontier line and outflanked the M.L.

MAGNA CARTA. The charter granted by King John in 1215. As a reply to his demands for excessive feudal dues and attacks on the privileges of the Church, Archbp. Langton in 1213 proposed to the barons the drawing up of a charter, and this John was forced to accept at Runnymede on 15 June 1215.

M.C. begins by reaffirming the rights of the Church. Certain clauses guard against infringements of feudal custom, e.g. the king shall not demand any grant beyond those customary, without the consent of his tenants-in-chief. Others are designed to check extortions by officials or maladministration of justice, e.g. no freeman to be arrested, imprisoned or punished except by the judgment of his peers or the law of the land, while others guaranteed the privileges of London and the cities.

As feudalism declined M.C. lost its significance, and under the Tudors was almost forgotten. During the 17th cent. it was re-discovered and re-interpreted by the parliamentary party. Four original copies exist, one each in Salisbury and Lincoln Cathedrals, and 2 in the British Museum.

MAGNANI (manyah'nē), Anna (1908-). Italian actress. B. in Alexandria of Italian immigrant parentage, she became famous for strongly emotional roles in e.g. *The Rose Tattoo* (filmed 1955), said to have been specially written for her by Tennessee Williams, and the film *The Fugitive Kind* (1960).

MAGNE'SIA. Magnesium oxide (MgO), obtained from the mineral periclase. It is formed when magnesium is burnt in air or oxygen, appears as a white powder or colourless crystals, and is used medicinally.

MAGNE'SIUM. A light, white, fairly tough metal, which tarnishes in air: symbol Mg, at. wt. 24.32 and at. no. 12. First found in Magnesia, a district in Thessaly, and widely distributed as the silicate, carbonate and chloride. It was recognized as an element by Black in 1755, isolated by Davy in 1808, and prepared in coherent form by Bussy in 1831. It is used in alloy, to strengthen aluminium for aircraft construction, and with uranium as a canning material in nuclear reactors. Its incendiary properties are used in flashlight photography, flares and fireworks.

MAGNETIC FLUX. A phenomenon produced in the neighbourhood of electric currents and magnets. The amount of M.F. through an area (measured in Maxwells) equals the product of the area and of the magnetic field strength at a point within that area.

MAGNETISM. Branch of science dealing with the properties of magnets and the magnetic fields. The lodestone acting as a compass, in that one pole seeks N., is thought to have been known to the Chinese, before (but not accepted in Europe until) the 12th cent. P. Peregrinus (fl. 13th cent.), an early experimentalist, inspired the work of William Gilbert (1546-1603) who described in *De Magnete* many fundamental properties of magnets and conceived of the earth itself as a magnet. Significant experiments were made in the 19th cent. by Coulomb, Gauss and Oersted (see **ELECTRICITY**). The general properties of magnets are that they align themselves on a N.-S. axis, the N. seeking pole facing N., but varying from the true geographic meridian (magnetic variation), like poles repel, and unlike poles attract. The force of attraction or repulsion between 2 poles varies inversely as the square of the distance between them.

Substances differ in degree and kind in their ability to be magnetized (permeability). Those substances, like iron, which have very high permeabilities, are said to be ferromagnetic. Apart from its universal application to dynamos, electric motors, switch-gear, and so forth, M. has become of considerable importance in modern science, incl. particle accelerators for nuclear research, memory stores for computers, tape recorders, cryogenics (q.v.) and investigations of matter and space.

MA'GNETITE. An important iron ore, magnetic iron oxide (Fe₃O₄). It is a black metallic mineral, strongly magnetic and sometimes possessing polarity (lodestone). It is widely distributed in igneous rocks.

MAGNI'TOGORSK. Town in Chelyabinsk region, R.S.F.S.R., 200 m. S. of Chelyabinsk town, on the r. Ural and the eastern slopes of the Ural Mountains. It was founded in 1931 to work the iron, manganese, bauxite, etc., in the district, and has blast furnaces and other metallurgical works producing steel, motor-cars, tractors, railway waggons, etc. Pop. (1967) 352,000.

MAGNŌLIA. Genus of trees in the family Magnoliaceae, native to China, Japan, N. America, and the Himalayas. They vary in height from 2 ft. to 150 ft. The large single flowers are white, rose, or purple in colour.

MAGPIE. Genus of birds (*Pica*) in the Crow family. The Common M. (*Pica pica*) has black and white plumage, the long tail having a metallic gloss. It feeds on insects, snails, mice, etc., and is found in Europe, Asia, and N. Africa.

MAGRITTE (mahgrēt'), René (1898-1967), Belgian artist. A Surrealist, he used a visionary representationalism in such paintings as 'The Eye' (Museum of Modern Art, N.Y.) or the late 'Scheherazade'.

MAGYARS (mod'yars). The largest racial group of Hungary. See HUNGARY; HUNGARIAN.

MAHABHARATA (Great poem of the Bharatas). Sanskrit epic of 18 books probably composed in its present form c. 300 B.C. Forming with the *Ramayana* the 2 great epics of the Hindus, it deals with the fortunes of the rival families of the Kauravas and the Pandavas, and contains the Bhagavad-Gita (q.v.).

MAHABODHI. Another name for BUDDH GAYA.

MAHAN (mahan'), Alfred Thayer (1840-1914). American naval historian. His writings on naval strategy, notably *The Influence of Sea Power upon History, 1660-1783* (1890), and a *Life of Nelson* (1897), exercised great influence on the naval policies of several powers.

MAHARASHTRA. State of the Republic of India formed in 1960 from the southern (predominantly Marathi-speaking) part of the former Bombay state. Bombay city is the cap.; other large towns are Poona, Nagpur, and Sholapur. It also includes the famous caves of Ajanta. Agriculture supports the majority of the people, cotton, rice, and ground-nuts being important crops. Cotton textiles are made extensively in Bombay and its environs. Area 118,717 sq. m.; pop. (1961) 39,553,718. See BELGAUM.

MAHAYANA. See BUDDHISM.

MAHDI (Arab.), he who is guided aright). The title of a coming messiah who will establish the reign of justice on earth. It has been assumed by many Moslem leaders, notably by the Sudanese sheik Mohammed Ahmed (1848-85), who headed a revolt in 1881 against Egypt and in 1885 captured Khartoum.

MAHLER, Gustav (1860-1911). Austrian composer. B. in Bohemia, of Jewish extraction, he studied at Vienna conservatoire, conducted in Prague, Leipzig,

to Sir William Beveridge during the S.W.W.), was Min. of Civil Aviation 1948-51, Lord Privy Seal 1964-5, 1966-8; Colonial Sec. 1965-6 and Leader of the House of Lords 1964-8. His books incl. *Born to Believe* (1953) and *Five Lives* (1964), both autobiographical, and he is a keen advocate of penal reform. He m. 1931 Elizabeth Harman (1906-) who, as 'Elizabeth Longford' pub. such historical studies as *Victoria R.I.* (1964), and their eldest dau. Lady Antonia Fraser (1932-) pub. *Mary Queen of Scots* (1969).

LONGFORD. Co. of Leinster prov., Rep. of Ireland, whose rivers are the Camlin and Inny; the Shannon marks its W. boundary. There are several lakes. Area 403 sq. m.; pop. (1966) 28,989. The co. tn. is Longford, on the Camlin, seat of the bishopric of Ardagh. Pop. (1966) 3,500.

LONGINUS (lonji'nus), Cassius (c. A.D. 213-73). Greek philosopher and critic. B. probably in Syria, he taught in Athens for many years. While journeying in the East, he became the teacher and adviser of Zenobia of Palmyra. On his instigation she rebelled against Roman rule, and when she was captured L. was put to death. The critical treatise *On the Sublime* is usually attributed to him.

LONG ISLAND. Is. forming part of the State of New York, U.S.A., separated from the mainland by Long Island Sound. There are many pleasure resorts, e.g. Jones Beach and Coney Island. In the W. are Brooklyn and Queen's, bors. of Greater New York City. Area 1,723 sq. m. Long Is. City, in Queen's, founded 1640 and a city in its own right 1870-98, is an industrial dist.

LONGITUDE. See LATITUDE AND LONGITUDE.

LONG PARLIAMENT. Name commonly applied to the parl. of 1640-60, which carried through the English Revolution. Its Royalist members withdrew in 1642, and the 'Presbyterian' right wing was excluded in 1648. The remaining members, known as the Rump, ruled England until they were expelled by Cromwell in 1653. The L.P. reassembled in 1659-60, and began the negotiations which led to the Restoration.

LONGWY (lonwē). Fortified town in Meurthe-et-Moselle dept., N.E. France, on the Belgian frontier, and commanding the valley of the Chiers. It is among iron mines and has metallurgical works. Pop. (1962) 22,214.

LÖNNROT, Elias (1802-84). Finnish scholar. B. at Nyland, he travelled widely in Finland and Russia in search of Finnish folk-lore, and for the first time collected and pub. the national epic *Kalevala* (q.v.) in 1835. In 1854 L. became prof. at Helsingfors.

LONSDALE, Hugh Cecil Lowther, 5th earl of (1857-1944). British sportsman. He was an expert huntsman, steeplechaser, boxer, and yachtsman, and as president of the National Sporting Club laid down the rules of boxing and presented the 'L. belts'.

LOOFAH. Fruit of the herbaceous plant *Luffa cylindrica* in the gourd (q.v.) family. Its 'skeleton' is familiar in the bathroom.

LOOS, Anita (1893-). American author. B. in California, she scored her greatest success with the fictitious diary of a girl on the make, *Gentlemen Prefer Blondes* (1925).

LOOSESTRIFE. Plants of the Primulaceae family, e.g. the common L. (*Lysimachia vulgaris*) c. 3 ft. high on river banks in Britain with spikes of yellow flowers; wood L. or yellow pimpernel and creeping jenny: also the striking purple L. (*Lythrum salicaria*) in the family Lythraceae.

LOPE DE VEGA. See VEGA.

LÓPEZ (lō'pes), Carlos Antonio (1790-1862). Paraguayan statesman. He succeeded his uncle J. G. R. Francia as virtual dictator in 1840, and held supreme power until his death. He was succeeded by his son Francisco Solano L. (1827-70), who involved the country in a war with Brazil, Uruguay and Argentina

during which five-sixths of the pop. perished. He was himself killed in battle.

LOP-NOR. Series of shallow lakes with shifting boundaries in the Takla-Makan (desert) in Sinkiang-Uighur region, China. Marco Polo visited L.-N., then a single lake of considerable extent, c. 1273.

LOQUAT (lō'kwat). Evergreen tree of the Rosaceae family (*Eriobotrya japonica*) native to China and Japan, and known also as the Japanese 'plum'. The golden fruit is of delicate sweet-sour taste.

LORCA, Federico García (1899-1936). Spanish poet. B. at Fuentevaqueros, he followed his first *Libro de Poemas* (1921) by *Canciones* (1926) and *Romancero Gitano* (1927). He visited New York in 1930, but returned to Spain in 1931 to found *La Barraca*, a touring theatrical company. Among his plays are *El Maleficio de la Mariposa* (1920), *Bodas de Sangre* (1933), *Yerma*, *Doña Rosita la Soltera*, and *La Casa de Bernada*. His finest poem is his 'Lament' for the bullfighter Sánchez Mejías. He was shot by the Falangists.

LORD. The prefix L. is used informally as an alternative to the full title of a marquess, earl, or viscount, and is normally so used in speaking of a baron, and as a courtesy title before the Christian and surname of the younger sons of dukes and marquesses. A bishop is formally addressed as the L. Bishop of A.

LORD-LIEUTENANT. The head of the magistracy of a county. This office, first instituted by Henry VIII, is usually held by a large landowner. Its duties included until 1871 responsibility for the co. militia. The L.-L. appoints the co. magistrates.

LORD MAYOR. See MAYOR.

LORD'S. Headquarters of the Marylebone Cricket Club, regulating body of English cricket since 1788, and also the county ground of Middx. Thomas Lord (1757-1832) first opened the ground in Dorset Square in 1787 and in 1814 it was removed to its present site in St. John's Wood.

LORDS, House of. See PARLIAMENT.

LORD'S SUPPER. See EUCHARIST.

LORELEI (-li). A rock in the Rhine near St. Goar, W. Germany, which possesses a remarkable echo.

LORELEI. The dangerous cliff which rises 430 ft. above the river has found a permanent place in German song and story. Heine's lyric 'Die Lorelei' being most famous of all.

Courtesy of the German Tourist Information Bureau.

According to a poem written by Brentano (q.v.) in 1802, a maiden who drowned herself because of an inconstant lover became a siren luring fishermen to destruction by her song, a story which developed into a legend used by several subsequent writers.

LORENZ, Konrad (1903-). Austrian ethnologist. Director of the Max Planck Institute for the Physiology of Behaviour in Bavaria from 1961, he is known for his attractive studies of animal behaviour *King Solomon's Ring* (1952) and *On Aggression* (1966).

LORENZETTI (lōrentset'e), Pietro (c. 1280-1348). Italian painter. He was one of the earliest of Sienese

assistant commissar for Foreign Affairs 1943-6 and has been a member of the Academy of Sciences since 1946. Among later vols. of reminiscences is *Who helped Hitler?*

MAIZE. Plant (*Zea mays*) of the grass family, cultivated by Amerindians - hence its alternative name of Indian corn or in U.S. usage 'corn' - and introduced to Europe by Columbus. It is now grown extensively in all subtropical and warm temperate regions, and is widely used as animal feed. Sweet corn, a variety in which sugar is not converted to starch, is a familiar vegetable (fresh, tinned or frozen): other varieties are made into hominy, polenta, popcorn, and corn bread. In the 1960s new hardy strains were being grown in S. England. Industrial uses incl. industrial alcohol, corn oil, and (from the stalks) paper and hardboard.

MAJO'LICA. A kind of enamelled pottery (q.v.), so-named from the Italian form of Majorca. The term is especially applied to the richly decorated enamel pottery produced in Italy 15th to 18th cents.

MAJO'RCA. Largest island of the Balearics, off the E. coast of Spain, of which they form a prov. M. rises in Puig Mayor to c. 5,000 ft. The soil is productive; olives, grapes, figs, oranges, etc., are grown; wine is made. Minerals incl. coal, iron, slate. Palma is the cap. Area 1,405 sq. m.; pop. (1960) 270,000.

MAKARIOS III (1913-). Cypriot Orthodox churchman. B. in Panayia, Paphos, he was ed. at Athens univ. and in 1950 became abp. and ethnarch in Cyprus. Active in support of the armed struggle for union with Greece, he was exiled to the Seychelles by the British govt. (1956-7). In 1960 he became pres. of the Rep. of Cyprus: re-elected 1968.

MAKHACH'KALA. City, cap. of Daghestan A.S.S.R., R.S.F.S.R., on the Caspian Sea, 90 m. E.S.E. of Grozny, from which pipelines bring petroleum to M.'s refineries; shipbuilding, meat packing, and the making of chemicals, matches, cotton textiles are other industries. M. was founded in 1844 on the site of a former camp called Petrovsk. Pop. (1967) 165,000.

MALABAR COAST. Name of the coastal area of

IVAN MAISKY

Mysore and Kerala states, India, lying between the Arabian Sea and the Western Ghats. About 40 m. W. to E., 450 m. N. to S., it has fertile soil and heavy rains (80-120 in. a year) and produces food grains, coconuts, rubber, spices. Teak, ebony, and other woods are extracted from the mountain-side forests. Lagoons fringe the shore. A district of Madras transferred in 1956 to Kerala was called M.C.

MALACCA. State of W. Malaysia, Fed. of Malaysia. Portuguese from 1511, then Dutch from 1641, it was ceded to Britain in 1824, becoming part of the Straits Settlements. It produces rubber. Area 640 sq. m.; pop. (1966) 404,275 (about 70 per cent Chinese). The cap., also M., originated in the 13th cent. as a fishing village frequented by pirates, and developed into a trading port before Europeans reached the area. Pop. (1960) 72,000.

MALAGA. Spanish seaport, cap. of M. prov., on the Mediterranean, 65 m. N.E. of Gibraltar; its mild and sunny climate makes it a popular health resort; other industries incl. sugar refining, distilling, brewing, olive oil pressing, shipbuilding. It has an airport. Founded by the Phoenicians and taken by the Moors in 711, M. was cap. of the Moorish kingdom of M. from the 13th cent. until captured in 1487 by Ferdinand and Isabella who founded the parish church in 1490. Pop. (1960) 301,048.

MALAGASY REPUBLIC. Country occupying the island of Madagascar (q.v.). The cap. is Antananarivo; other towns are Majunga, Tamatave (chief port), Diégo-Suarez, Tuléas. Agriculture and cattle raising are the chief occupations, products incl. manioc, rice, coffee, ground-nuts, sugar cane. There is some mining (graphite, mica, phosphates, etc.); the forests have valuable timber, and industries such as textiles, cement, food-processing (espec. meat), machinery, etc., are being developed. Area 228,500 sq. m.; pop. (1966) 6,335,810.

The largest of a number of ethnic groups are the Hova (c. 1½ million), the lightest-skinned and probably most recent immigrants, who supplied the dynasty which ruled Madagascar from the late 18th cent. until it became a French colony in 1896, having been under French protection from 1890. During the S.W.W., the British, fearing a Japanese invasion, occupied the is. in 1942, the Free French taking over in 1943. It became an overseas terr. 1946, and in 1960 independent within the French Community as the M.R. There is a pres., nat. assembly and senate; and the official languages are French and Malagasy (Malayo-Polynesian).

MALAMUD, Bernard (1914-). American novelist. A teacher of English, he first attracted attention with *The Natural* (1952), taking a professional baseball player as his hero, but is more typically represented by *The Assistant* (1957), with its Yiddish-speaking immigrant characters, and *A New Life* (1962).

MALAN, Daniel François (1874-1959). S. African statesman. Originally a pastor of the Dutch Reformed Church, he was Min. of the Interior 1924-33. In 1933 he became leader of the Nationalist Party, which in 1940 combined with Hertzog's followers as the Reunited (*Herengde*) National Party, and opposed participation in the S.W.W. M. was P.M. from 1948, until his retirement in 1954, and in 1951 his party united with the Afrikaner party as the new National Party, pledged to republicanism and *apartheid* (the territorial and political segregation of the non-white population).

MALÁRIA. Marsh ague; a recurring fever due to invasion of the blood stream by the minute parasite plasmodium. This develops in the stomach of the anopheles mosquito and passes into the blood when the insect pierces the skin to feed, enters the red corpuscles of the blood, completes its growth, and is then liberated into the blood stream, where its toxins cause the fever. In 1955 the W.H.O. began an

MAIZE. Among the world's major cereal crops, maize is continually extending its range of cultivation. Here it has been experimentally planted at Kpong in Ghana, and an agricultural assistant examines the cobs of the new crop.

Courtesy of Ghana Information Services.

LOUIS XIV. The King and his heirs by Nicolas Largillière (1656–1746), a portrait group that reflects no credit on 18th century health standards. The son, grandson and great-grandson depicted all died before Louis, and yet another great-grandson succeeded as Louis XV.

Reproduced by permission of the Trustees of the Wallace Collection.

LOUIS. The name of 18 kings of France. The emperor Louis I (q.v.) counts as Louis I of France. Louis V (967–87), who reigned 986–7, was the last of the Carolingian dynasty. Louis VII (c. 1111–80), who reigned 1137–80, led the 2nd Crusade in 1147–9. Louis VIII (1187–1226) was invited to become king in place of John by the English barons, and unsuccessfully invaded England 1215–17. He succeeded to the French throne in 1223. St. Louis IX (1214–70), who succeeded him, was the ideal medieval king. He led a crusade to Egypt in 1248–50, but was defeated and captured by the Saracens, spending 4 years in captivity. He d. at Tunis while leading another crusade. Louis XI (1423–83), who succeeded to the throne in 1461, broke the power of the great nobles headed by Charles the Bold, duke of Burgundy, by a combination of force and unscrupulous intrigue. Louis XII (1462–1515) was known as duke of Orléans until he succeeded his cousin Charles VIII in 1499. Throughout his reign he was engaged in Italian wars. Louis XIII (1601–43) succeeded his father Henry IV in 1610, and assumed the royal power in 1617. During 1624–42 the control of his policy was entirely in the hands of Richelieu (q.v.).

LOUIS XIV (1638–1715). King of France. He succeeded his father Louis XIII in 1643, but until 1661 France was ruled by Mazarin (q.v.). After his death L. never appointed another prime minister, but planned and supervised the execution of his own policy, which was summed up in his saying *L'État c'est moi* (I am the State). His ministers were drawn from the middle classes, the greatest of them being Colbert, whose work was undone by L.'s policy of military aggrandizement. Louis attempted in 1667–8 to annex the Spanish Netherlands, but was frustrated by an alliance of Holland, England, and Sweden. Having detached England from the alliance, in 1672 he invaded Holland. Led by William of Orange, the Dutch stood firm, and a European alliance was formed against L.; the Peace of Nijmegen (1678) nevertheless brought considerable territorial gains.

War was renewed 1688–97 between L. and the Grand Alliance, including England, formed by William of Orange. On land the French were everywhere victorious, but in 1692 L.'s fleet was almost destroyed at La Hogue. L.'s acceptance in 1700 of the Spanish throne for his grandson led to the War of the Spanish

Succession (1701–13). The Peace of Utrecht ended French supremacy in Europe. In 1660 L. m. the Infanta Maria Theresa of Spain, but he was greatly influenced by his mistresses, including Louise de la Vallière, Mme de Montespan, and Mme de Maintenon, whom he m. after his wife's death in 1683.

LOUIS XV (1710–74). King of France. A great-grandson of Louis XIV, he was only 5 when he came to the throne, and until 1723 the duke of Orléans was regent. L. was indolent and frivolous, and left the government in the hands of his ministers, the duke of Bourbon and Cardinal Fleury. On Fleury's death in 1743 he attempted to rule alone, but he fell entirely under the domination of his mistresses, Mme de Pompadour and Mme du Barry. His foreign policy

proved humiliating for France, Canada and India being lost.

LOUIS XVI (1754–93). King of France. He succeeded his grandfather Louis XV in 1774. He was dominated by his queen, Marie Antoinette, and the finances fell into such confusion that in 1789 the States General were summoned, and revolution began. L. remained personally popular until in 1791 he attempted to flee the country; thereafter republicanism grew, and in Aug. 1792 the Parisians stormed the Tuileries and made the royal family prisoners. Deposed in Sept., L. was tried for treason and guillotined.

LOUIS XVII (1785–95). Nominal king of France. The son of Louis XVI, he was imprisoned with his parents in 1792, and probably d. in prison.

LOUIS XVIII (1755–1824). King of France. The younger brother of Louis XVI, he was known before 1795 as the count of Provence. He fled from France in 1791, and assumed the title of king in 1795. He lived in exile until he obtained the throne in 1814. Driven out again during the 100 Days, he returned after Waterloo. He pursued a liberal and conciliatory policy, attempting to restrain the violence of the ultra-royalists, until the assassination of the heir to the throne in 1820 led to a royalist reaction.

LOUIS (lōō'is), Joe. Professional name of American boxer Joseph Louis Barrow (1914–). B. n.r. Lexington, Alabama, he was world heavyweight champion 1937–49: the power of his blows earned him the nickname 'the brown bomber'.

LOUISIANA. South-central state of the U.S.A. bordering the Gulf of Mexico. Much of L. is occupied by the delta of the Mississippi. Mineral products incl. petroleum, sulphur, natural gas, salt; industries incl. petroleum refining, food processing, lumbering, paper making; agricultural products incl. rice, cotton, sugar, and maize. The cap. is Baton Rouge, and the largest city New Orleans. Area 48,523 sq. m.; pop. (1960) 3,257,022.

L. takes its name from the old French prov. of LOUISIANA, explored by La Salle and claimed for Louis XIV, in whose honour he named it, in 1682. The prov. extended from the British colonies in the E. to the Spanish colonies on the W. and from what is now Manitoba to the Gulf of Mexico. France lost to Britain the part of L. east of the Mississippi in 1763,

cap. of Selangor. Area 128,000 sq. m.; pop. (1967) 10,000,000 (c. 1½ million in East M.), incl. 50% Malays, 35% Chinese, 10% Indians and Pakistanis, and some 5% indigenous peoples of East M. A first 5-year plan (1966–70) gave priority to the development of E. Malaysia: financial crisis made overseas support essential. In 1969 racial tension between Malays and Chinese led to disturbances.

MALCOLM (mal'kom) III, called Canmore (d. 1093). King of Scotland. The son of Duncan I, he became king in 1054. He was killed at Alnwick while invading Northumberland.

MAL'DIVE ISLANDS. Group of coral atolls in the Indian Ocean, 450 m. S.W. of Ceylon, forming a sultanate, with a People's Assembly set up in 1932. The Mohammedan inhabitants are famous as navigators and fishermen. Malé, on King's Island, is the cap. (pop. 8,000). The islands, which were a dependency of Ceylon 1645–1948, came under British protection in 1887; Britain remained responsible for defence and foreign affairs 1960–5. An R.A.F. staging post estab. on Gan Island, in the S. of the group, in the S.W.W. was re-estab. 1956 and its use guaranteed till 1986. Area 115 sq. m.; pop. (1963) 96,430.

MALDON. English market town (bor.) in Essex, at the mouth of the Chelmer, the scene of a battle with the Norsemen in 991. The town has a grammar school founded in the 16th cent. Laurence Washington, great-great-grandfather of George Washington, was rector of Parleigh nearby 1632–43; he is buried at M. Pop. (1961) 10,507.

MALEBRANCHE (mahlbrónsh'), Nicolas (1638–1715). French philosopher. B. in Paris, he joined the Congregation of the Oratory in 1660. His *De la Recherche de la Vérité* (1674–8), was inspired by Descartes: he maintained that exact ideas of external objects are obtainable only through God.

MALENKOV (mahl'yenkov), Georgi Maximilianovich (1901–). Soviet statesman. B. at Orenburg, he became chairman of the Council of Ministers (P.M.) in 1953, but resigned in 1955 following agricultural difficulties for which he confessed guilt. Since 1957 he has been manager of the Ust-Kamenno-Gorsk power station. His second marriage was to Elena Khrushcheva, sister of Nikita Khrushchev.

MALET, Lucas. See KINGSLEY, CHARLES.

MALHERBE (mahlärb), François de (1555–1628). French poet and grammarian. B. in Caen, he became court poet in c. 1605 under Henry IV and Louis XIII. He advocated reform of language and versification and estab. the 12-syllable Alexandrine as the standard form of French verse.

MALI, Republic of. Inland country of W. Africa, the former French Sudan (see SUDAN), which became independent in 1960, outside the French Community. The name derives from the cap. of a medieval Negro kingdom on the Niger which fell before the attacks of other Negro tribes in 1500. M. covers the upper basins of the Senegal and Niger rivers, but is for the most part desert. Bamako, on the Niger, is the cap.; other towns are Mopti and Timbuktu. Cattle, sheep and camels are reared, but since independence rice and sugar-cane cultivation, and also some light industry, have been developed. A rail link Bamako-Conakry is planned to give M. access to the sea. In 1968 there was a military coup. Area 450,000 sq. m.; pop. (1967) 4,700,000.

MALIC ACID. A laevorotatory compound $C_4H_4O_6$, widely distributed in apples, plums, cherries, grapes, and other fruits. It is usually prepared from the unripe berries of the mountain ash, and has the appearance of colourless needle-like crystals.

MA'LIK, Yakob Alexandrovich (1906–). Soviet diplomat. B. in the Ukraine, he was permanent rep. U.N. 1948–53, and from 1968, and succeeded Gromyko as ambassador to London 1953–60. He was Deputy Foreign Min. 1946–53 and 1960–8.

MALINES (-lên'), City in the prov. of Ant. Belgium, on the Dyle, 12 m. N.N.E. of Brussels. On famous for its lace, called Mechlin (from Mechel, the Flemish form of Malines), it makes furnit carpets, textiles, etc., and is the seat of the archbishop of Belgium. There is a famous carillon school and the cathedral contains Van Dyck's 'Crucifixion' Pop. (1960 est.) 64,720.

MALINO'VSKY, Rodion Yakolevich (1898–1967). B. in Odessa, he became a farm labourer at 12 and after fighting in France during the F.W.W. served with the Foreign Legion until he joined the Red Army during the Civil War. Rising from the ranks to become major-gen. by 1940, he fought at Stalingrad, and, promoted marshal in 1944, commanded the advance through the Balkans to Budapest, and the Far Eastern army occupying Manchuria 1944–5. From 1957–67 he was Min. of Defence.

MALPIERO mahlepé-ä'ró), Gian Francesco (1882–). Italian composer. Prof. of the history of music at Padua from 1936, he has ed. Monteverdi and Vivaldi, and experimented with operatic treatment of Shakespeare's *Julius Caesar* and *Antony and Cleopatra*, etc.

MALLARMÉ (mahlahrmä'), Stéphane (1842–98). French poet. B. in Paris, he taught English there until 1892, and with Verlaine founded the Symbolist school. His belief that poetry should be evocative and suggestive was reflected in *L'Après-Midi d'un faune* (1876), which inspired Debussy. Later publications are *Poésies complètes* (1887), *Vers et prose* (1893), and the prose *Divagations* (1897).

MALLIA. Archaeological site 25 m. E. of Knossos on the N. coast of Crete. Excavated by the French since 1920, it has a palace, but the most striking feature is the *agora* or assembly place discovered in 1962. It provided the 1st evidence of civic institutions in Minoan Crete.

MALLORCA. Spanish form of MAJORCA.

MALLOW. Family of plants (Malvaceae) found in the N. hemisphere. The common M. (*Malva sylvestris*), native to Europe and naturalized in N. America, has 5-petalled, purple flowers and ivy-shaped leaves.

MALLOW

MALMEDY (mahlmeh-dē). Town in Belgium, situated in the deep valley of the Warche, 25 m. S.E. of Liège and 25 m. S. of Aachen. Given to Prussia in 1814, it became Belgian in 1920 after a plebiscite. It was a centre of fierce fighting during the German offensive in the Ardennes in Dec. 1944. Pop. (est.) 6,000.

MALORY, Sir Thomas (d. 1471). English author, most usually thought to have been the Warwickshire landowner of that name who was M.P. for Warwick in 1445, and in 1451 and 1452 was charged with theft, rape and attempted murder. He would have compiled his prose romance *Morte d'Arthur* during his 20 years in Newgate. It is a translation from the French modified by material from other sources, and deals with the exploits of Arthur's knights of the Round Table, the quest for the Grail, etc.

MALPIGHI (mahlpē'gē), Marcello (1628–94). Italian physiologist. B. near Bologna, he held professorships at Bologna, Pisa, and Messina, and made many discoveries in his study of animal and vegetable tissues by means of the microscope.

MALPLAQUET (mahplahkâ'). Village in Nord dept., France, about 6 m. N.W. of Maubeuge, where on

Bar 1840, and ed. *The National Anti-Slavery Standard* (1848–52). In 1848 he estab. his reputation with the satirical *Fable for Critics*, *The Vision of Sir Launfal*, and the first series of *Biglow Papers*. He succeeded Longfellow as prof. of modern languages at Harvard (1855–76), and was ambassador to Spain (1877–80), and to England (1880–5). Among his later works are the essays *My Study Windows* (1871).

LOWELL, Percival (1855–1916). American astronomer. In 1894 he founded the L. observatory at Flagstaff, Arizona.

LOWELL, Robert (1917–). American poet. A Bostonian, he broke the usual New England links to become a Roman Catholic in 1940 and a conscientious objector in the S.W.W. His vols. incl. *Land of Unlikeness* (1944), *Lord Weary's Castle* (1946): tension in his verse derives from his quarrel with his Puritan cultural inheritance. *Life Studies* (1958) incl. an autobiographical prose study.

LOWELL. City of Massachusetts, U.S.A., at the junction of the Merrimac and Concord rivers. It manufactures cotton fabrics. Pop. (1960) 92,107.

LOWER CALIFORNIA. Long narrow peninsula, part of the rep. of Mexico. A mountain range, rising in places to 8,000 ft., runs down it. The climate is arid, but the soil is fertile where artificial irrigation is available, and citrus fruits, maize, grapes are grown. There are pearl fisheries and fishing grounds; and rich mineral deposits, little worked. The peninsula is divided into the state of Baja California (Lower California), cap. Mexicali; area 27,650 sq. m.; pop. (1967) 896,000; and the territory of Baja California Sur (S. Lower California), cap. La Paz; area 27,970 sq. m.; pop. (1967) 100,000.

LOWER SAXONY. Land of N.W. Germany, formed in 1946. Hanover is the cap. Area 18,290 sq. m.; pop. (1966) 6,967,200.

LOWESTOFT. Seaport and resort (bor.) in Suffolk, England, 118 m. N.E. of London, on Oulton Broad and the N. Sea. It is an important fishing and boat-building centre. Pop. (1961) 45,687.

L. Ness is the point farthest E. in England. In a naval battle fought off L. in 1665 the English under James, duke of York (afterwards James II), drove off the Dutch.

LOWRY, Laurence Stephen (1887–). British artist. B. in Manchester, he is most typical in his multi-figure industrial city scenes, simple and moving. He became R.A. 1962.

LOYALISTS or Tories. The colonists who opposed the break with Britain during the American War of Independence. Altogether they numbered about a third of the pop. After the war many of them removed to Canada, where they became known as 'United Empire Ls.'.

LOYOLA, Ignatius de (Inigo Lopez de Ricalde) (1491–1556). Founder of the Society of Jesus, b. at the castle of Loyola in Guipuzcoa prov., Spain. He became a soldier and was wounded at Pampeluna. While he was recovering he read the Bible. The effect on him was so profound that he abandoned the army and retired to a mountain cave in order to meditate. He went on a pilgrimage to Jerusalem (1523), and later studied at Salamanca and Paris. He founded the Society of Jesus in 1534, and in 1541 became its first general. His *Spiritual Exercises* was pub. in 1548.

LOYSON, Charles. See HYACINTHE, PÈRE.

LOZÈRE (lôzâr'). Section of the Cévennes Mts., S. France. It rises in Finiels to 5,584 ft., and gives its name to a dept.

LP (liquid petroleum) GAS, a by-product of oil refining, provides gas to 250 times its liquid volume. Butane, for domestic purposes, is increasingly used in remote areas, and propane has many specialized industrial uses, e.g. as an alternative to acetylene in metal cutting.

LSD (lysergic acid diethylamide). Hallucinatory

drug, producing illusions of supernatural power, and other symptoms of insanity. Colourless, odourless, and non-addictive, it is easily synthesized and very dangerous in amateur experiment.

LUANDA, São Paulo de. Port and cap. of Angola, W. Africa. Founded in 1575, it exports coffee, sugar, palm oil, and diamonds, and petroleum is refined. Pop. (1967) 345,000.

LUANG PRABA'NG. Royal cap. of Laos (see VIENTIANE), on the upper Mekong. Pop. 30,000.

LUBECK. One of the two surviving gates which once formed part of the fortifications surrounding the city, the beautiful 15th cent. Holsten Gate is built of brickwork in Gothic style.

Courtesy of the German Tourist Information Bureau.

LUBBOCK, Percy (1879–1965). Brit. author. His books incl. the reminiscent *Earlham* (1922) and the influential *Craft of Fiction* (1921).

LUBECK. Seaport of Schleswig-Holstein, W. Germany, on the Baltic Sea, on the Trave, 37 m. N.E. of Hamburg; founded in 1143. Its 5 main churches are fine Gothic examples, and its cathedral dates from 1173. Once head of the powerful Hanseatic League, it later lost much of its trade to Hamburg and Bremen, but improved canal and port facilities helped it to retain its position as a centre of Baltic trade. The name L. is of Wendish origin, and means lovely one. L. was a free state of both the Empire and the Weimar Rep. Pop. (1966) 242,600.

LUBIS (lôô'), Mochtar (1922–). Indonesian author. B. in Padang, Sumatra, he became editor-in-chief of the daily *Indonesia Raya*, and was imprisoned almost continuously without trial 1956–66 for criticism of the govt. and army. His novels incl. *Twilight in Djakarta* (1962) and *Road with No End* (1968).

LUBITSCH, Ernst (1892–1947). American actor and film director. He made his début as an actor in Berlin (1911), and in 1922 went to the U.S.A., where he directed films incl. *Ninotchka* and *Design for Living*.

LUBLIN (loob'lin). Polish town, cap. of L. voivodship, 95 m. S.E. of Warsaw. It existed in the 10th cent., and has an old castle and a 16th cent. cathedral. It is an agricultural trading centre, and bricks, aircraft, electrical goods, glass, etc., are manufactured. A council of workers and peasants proclaimed Poland's independence at L. in 1918; and a Russian-sponsored committee of national liberation, which proclaimed itself the prov. govt. of Poland at L. on 31 Dec. 1944, was recognized by Russia 5 days later. L. univ. was founded in 1918. Pop. (1966) 206,000.

L. voivodship is drained by the Vistula and the W. Bug; it incl. extensive forests. Area 9,602 sq. m.; pop. (1966) 1,911,000.

LUBRICANTS. Substances insinuated between moving surfaces to reduce friction. A solid L. is graphite (plumbago), either flaked or emulsified (colloidal) in water (aquadag) or oil (oilad). Semi-solid and liquid L. are more important, consisting of animal, vegetable, and mineral oils. The L. most used are recovered from petroleum distillation.

Extensive research has been carried out on chemical additives to reduce corrosive wear, prevent the accumulation of 'cold sludge' (often the result of stop-start driving in city traffic jams), keep pace with the higher working temperatures of aviation gas turbines, and provide radiation-resistant greases for nuclear power plants.

LUBUMBASHI. See ELISABETHVILLE.

MANCHESTER. A great cultural as well as industrial centre, Manchester has a central library, opened in 1934, with more than half a million books (the circular building to the right). To the left is the high clock tower of the town hall, the new corporation administration block showing white at the rear, and the fine city art gallery is just a little farther beyond. Top centre is the modern skyscraper of the new G.P.O. building. Crown Copyright.

which has encouraged M.'s growth as a financial, banking, and insurance centre. It is linked with the Mersey and the sea by the 35½ m. M. Ship Canal (1894), and also served by the Bridgewater and other canals. Road and rail connections are highly developed, and M. Airport is of internat. standard.

M. has long been distinguished as a centre of radical thought (see PETERLOO), and in the *Guardian* (1821) has the one 'provincial' English newspaper of national standing. Culturally flourishing, it has the internat. Hallé Orchestra (1857); the City (1829) and Whitworth (1889) art galleries; the Central (1934) and John Rylands (1899) libraries; and Manchester Univ. (Owens Coll. 1851: univ. 1903) and Univ. Inst. of Science and Technology (1824: univ. 1966). Other buildings incl. the 15th cent. cathedral, Royal Exchange (1869), Town Hall (designed by Alfred Waterhouse), and the Free Trade Hall. Pop. (1961) 661,041.

MANCHUKUO (manchookwō). Name of a puppet state set up in Manchuria by the Japanese in 1932 with Changchun (Hsinking) as its cap. and the last Chinese emperor, Henry Pu Yi, as ruler. It disappeared with Japan's defeat in 1945.

MANCHURIA (manchōō'ēa). Region some 400,000 sq. m. in extent (formerly an administrative unit) in N.E. China, bounded by the R.S.F.S.R. to the N. and E., by Inner Mongolia autonomous region to the W., by Korea to the S. For the most part undulating plain, M. incl. 2 mountain ranges, the Khingan and the Changkwangsa Mountains, running N. and S. and rising to 8,000 ft. The climate is severe in winter, mild in summer; rainfall is scant, snowfall heavy. The chief rivers are the Amur and its tributaries the Sungari and Ussuri: the Amur and Ussuri (qq.v.) mark the N. and E. boundaries with the R.S.F.S.R. The mountains are forested, and lumbering is important; agriculture is well developed in the plains; crops incl. soya beans, sugar beet, millet, maize, wheat, barley, kaoliang, rice, and oats. Extensive deposits of coal and iron ores have given rise to a thriving iron and steel industry, concentrated in or near the Liao-tung peninsula (*liao* means iron). The main centres of pop. incl. Shenyang, the cap.; Dairen

and Port Arthur, both ice free ports; Changchun; Yungki; and Harbin, an important railway junction and centre for inland navigation on the Sungari.

Manchuria was originally inhabited by the nomadic Tungus, but in the 17th cent. the Manchus obtained control, and from 1644–1912 a Manchu dynasty occupied the imperial throne of China. Chinese colonization of M. began in the 18th cent. and gradually spread northwards, until by 1900 they formed 80 per cent of the pop. The few remaining Manchus are restricted to the Aigun area in the Amur valley; their language belongs to the Tungusic branch of the Altaic family.

Japan secured a part of S. Manchuria in 1895, and in 1898 Russia obtained the lease of the Kwantung peninsula for 25 years, which concession passed to Japan after her victory over Russia in the war of 1904–5. Both powers sponsored extensive railway construction in M. In 1931 the Japanese occupied M. and set up the puppet state of Manchukuo (q.v.), 1932. After the collapse of Japan in 1945, M. was returned to China, and the many Japanese who had settled there were expelled.

MANDAEANS (mandē'anz). The only surviving Gnostic sect; they live near the Euphrates, S. Iraq, and their sacred book is the *Ginza*.

MANDALAY. Chief town of Upper Burma, cap. of M. division, on the Irrawaddy, c. 370 m. N. of Rangoon. Founded by King Mindon Min in 1857, it was cap. of Burma 1857–85. It was severely damaged by fire in 1892, and devastated during the S.W.W. M. has many pagodas, temples, and monasteries. Pop. (1966) 316,796.

MANDARIN. Chinese official. The word was adopted in the 16th cent. from the Portuguese, its ultimate origin being Sanskrit *mantrin*, 'counsellor'. In China the Ms. were chosen from the 7th cent. by examination. The term M. was also applied to the group of dialects, of which the standard form is that of Peking; they have been since the Ming dynasty the standard language of Chinese officialdom.

MANDATE. Under the Treaty of Versailles the system whereby the administration of former German and Turkish possessions was entrusted to Allied States by the League of Nations, the latter being replaced as the responsible authority in 1945 by the U.N., when Ms. which had not achieved independence or self-govt. became known as Trust Territories (q.v.). S.W. Africa (q.v.) is an exception in that the Rep. of S. Africa does not recognize U.N. authority in this.

M. & B. The initials of May and Baker, a British firm of fine chemical manufacturers; the designation of a series of sulphonamide compounds invented by the firm. M. & B. 137 is soluseptacine, M. & B. 693 is sulphapyridine, and M. & B. 760 sulphathiazole.

MANDEL (mondel'), Georges (1885–1944). French politician, closely associated with Clemenceau, whose *directeur de cabinet* he was during the F.W.W. He became Colonial Min. in 1937 and Min. of the Interior in May 1940. Having opposed surrender to Germany, he was arrested by the Vichy govt. and shot by his German guards in Paris.

MANDELSHTAM, Osip Emilovich (1891–?). Russian poet. The son of a Jewish merchant, he was sent to a concentration camp by the Communist authorities in the 'thirties and the date and the manner of his death are unknown. His collected poems were pub. in 1928 and have a classic brevity that evades translation.

MANDEVILLE (man'devil), Sir John. Supposed author of a 14th cent. travel manual for pilgrims to the Holy Land, originally written in French and probably the work of Jean d'Outremeuse of Liège. As well as references to real marvels such as the pyramids, there are tales of headless men with eyes in their shoulders, etc.

MANDOLINE. A musical instrument descended

the patron of Wagner and built the Bayreuth theatre for him. Declared insane in 1886, he drowned himself soon after. Ludwig III (1845–1921) was proclaimed king in 1913, and abdicated in 1918.

LUDWIG, Emil (1881–1948). German biographer. B. in Breslau, of Jewish parents whose original name was Cohn, he became famous for his psycho-analytical studies of Goethe, Bismarck, Wilhelm II, Hindenburg, and Roosevelt. In 1932 he took Swiss nationality.

LUDWIGSHAFEN. Town in Rhineland Palatinate, Germany, on the Rhine opposite Mannheim. Through its harbour passes a large trade in iron, timber, coal, etc. Dyes, soda, chemicals, etc., are manufactured. Pop. (1966) 175,770.

LUFTWAFFE. The German air force reorganized in 1933 under Goering. The anti-aircraft defences and forces concerned with launching the V1 and V2 robots were also later included. Its first-line strength in 1938 was estimated at 3,000 planes, doubled by 1940. The total figures, however, were considerably higher. The 3 factors in the decline of the L. were the switch from airfield to city bombing of 1940, the fighter resistance and bomber retaliation of the R.A.F., and the increased British production figures.

LUGANO (loo-gah'nō). Lake, partly in Switzerland, partly in Italy, lying between Lakes Maggiore and Como, with an area of 19 sq. m. The town of L. stands on the lake in the Ticino canton, Switzerland, 39 m. N.W. of Milan. Both the town and lake are renowned for their beauty. Pop. (1960) 19,758.

LUGANSK. City in the Ukrainian S.S.R., cap. of L. region, on the r. Lugan, a centre of heavy industry making locomotives, mining machinery, etc. Its industrial importance started with the foundation of ironworks here in 1795 by an Englishman on behalf of the Czarist govt. L. was called Voroshilovgrad 1935–58. Pop. (1967) 339,000.

LUGARD, Frederick John Dealtry, 1st baron (1858–1945). British colonial administrator. He served in the army 1878–89, and then entered the service of the British E. Africa Co., for whom he took possession of Uganda in 1890. He later became High Commissioner for N. Nigeria (1900–7); Gov. of Hong Kong (1907–12); and Gov.-Gen. of Nigeria (1914–19). He received a barony in 1928. His *Dual Mandate* (1922) was an influential plea for development through the existing African system of chieftainship, rather than western democracy.

LUGWORM. Genus (*Arenicola*) of marine worms (also known as lobworms) common between tide-marks where their whereabouts are known by their castings. They are used by anglers as bait, but are useful—as are earthworms on land—for their cleansing and powdering of the sand, of which they may annually bring to the surface c. 1,900 tons per acre.

LU HSÜN. Pseudonym of the Chinese short-story writer Chon Shu-jêu (1881–1936). Grandson of a blameless official at the Manchu court who was executed by the empress dowager, he knew poverty in his youth. In 1926 he fled the long arm of the Peking govt. to become dean of the Coll. of Arts at Sun Yat Sen Univ. His 3 vols. of stories, *Call to Arms*, *Wandering*, and *Old Tales Retold*, reveal the influence of Gogol. His supreme mastery of the form is recognized by the Communist régime and he is widely read.

LUIK. Flemish name of Liège.

LUINI (loo-é'ne), Bernardino (c. 1475–c. 1532). Italian painter. B. at Luino on Lake Maggiore. His principal works incl. 'Presentation in the Temple', and

'Christ Teaching' (National Gallery).

LUKE, St. Traditionally the compiler of the third Gospel and of the Acts of the Apostles. He appears to have been a physician and to have accompanied Paul after the ascension of Christ. Of his life little is known, although it is surmised that he was a non-Jewish native of Antioch and that he d. in Bithynia at the age of 74.

LULEÅ (loo'lå-aw). Seaport of Sweden, on the Gulf of Bothnia at the mouth of the r. L. It ships iron ore and timber during the summer when it is free of ice. Pop. (1966) 35,450.

LULL, Raimon or Raymond Lully (Raimundus Lullus) (c. 1235–1315). Catalan mystic. B. in Majorca, he was a debauchee during his youth, but later turned to religion and travelled on missions among the Moslems. His Utopian novel *Blanquerna* (1283) and several poems ensure him a high place among Catalan writers.

LULLY (lülë), Jean Baptiste (1639–87). Italian-born French composer, né Giovanni Battista Lulli, who became a French citizen in 1661. B. in Florence, he went to France, and in 1653 became court composer to Louis XIV. He supplied music for Molière's plays, and also composed the first notable French opera *Les Fêtes de l'Amour et de Bacchus*.

LUMBAGO. Aching and pain in the lower back. It may be due to spasm of the muscles protecting inflamed spinal joints, or the muscles may be made painful by rheumatism, chill, or the poison of a diseased appendix or other abdominal organ. One of the soft discs which form cushions between the vertebrae may be nipped by the bones. The cause should be treated, but physical remedies such as massage, heat, baths, and exercise are often effective.

LUMIÈRE (lūmyār'), Auguste (1862–1954) and Louis (1864–1948). French cinema pioneers and brothers. With their father they developed autochrome plates, the stereoscope, colour photography, and in 1894–5 improved the cinematograph sufficiently to herald their invention of the cinema; the production and exhibition of films for public entertainment.

LUMINAL. A proprietary name for phenobarbitone, a white colourless synthetic drug of the barbiturate group, used as a sleeping draught in some nervous disorders and given regularly to control epilepsy, or in the withdrawal treatment of drug addiction.

LUMINOUS PAINT. A preparation containing a mixture of pigment, oil, and a phosphorescent sulphide, usually of calcium or barium. After exposure to light it appears luminous in the dark. The L.P. used on watch faces is radioactive and does not require exposure to light.

LUMPA (loom'pah) **CHURCH**. Pseudo-Christian nationalist sect founded in Zambia in 1955 by Alice Lenshina (1919–), an African woman, née Lubishi, who m. a political organiser, Peter Mulenga: her assumed name Lenshina, is a corruption of Lat. *regina* queen. A 'holy war' in 1964 by the Lumpas resulted in c. 500 members being killed: the prophetess was confined to a remote district, but broke out and was recaptured in 1967 with c. 50 followers.

LUMUMBA (lōōmōōm'bah), Patrice (1926–61). Congolese nationalist 'martyr'. B. in Kasai prov., a member of the Mutetela tribe, L. became a post-office clerk. He was imprisoned by the Belgians, but released in time to attend the conference which gave the Congo independence. In the subsequent general election in 1960 he led the National Congolese Movement to victory, but was murdered by the troops of Gen. Mobutu. Mobutu declared him a 'national hero' 1966.

LUNACHARSKY, Anatoly Vasilievich (1875–1933). Russian revolutionary and writer. Imprisoned during the 1905 revolt, he lived in exile until the 1917 revolution. As Commissar for Education 1917–29, he did much for the arts. He wrote 14 plays.

LUNARDI (loonarh'r'dë), Vincenzo (1759–1806).

Hudson Bay coastline, and incl. 3 large lakes, Winnipeg, Winnipegosis, and Manitoba. The main rivers are the Assiniboine, Red, Nelson, and Churchill. The climate is continental. The provincial govt. at Winnipeg, the cap., is under a lieutenant-governor and a legislative assembly, while 6 senators and 14 M.P.s represent M. in the Dom. parliament. Wheat, flaxseed, etc. are grown; poultry reared; and almost half the land area being under timber, lumbering is important. Furs (wild and ranch-bred) and fisheries are also valuable. Minerals incl. nickel, copper, zinc, gold and silver. Industries incl. food processing, iron and steel, clothing, chemicals, electronic equipment, and space probes. After the cap. the chief towns are St. Boniface, St. James, Brandon, and St. Vital. Area 251,000 sq. m.; pop. (1966) 963,066.

MANKOWITZ (man'kōvits), Wolf (1924–). British author. His novels incl. *Make Me An Offer* (1952) and *A Kid for Two Farthings* (1953)—both filmed; the musical plays *Expresso Bongo* and *Belle* (1961), based on the Crippen case; and studies of pottery and porcelain, espec. Wedgwood.

MANLEY, Gordon (1902–). British geographer. Appointed to the chair of environmental studies at the Univ. of Lancaster 1964, he is noted for his meteorological studies in N.W. England.

MANN, Thomas (1875–1955). German novelist and critic. Son of a Lübeck grain merchant, he worked in an insurance office in Munich and on the staff of the periodical *Simplicissimus*, then returned in imagination to his native Lübeck to portray in his first novel *Buddenbrooks* (1900) the decline of one of the great Hanseatic families. *Der Zauberberg* (1924: *The Magic Mountain*), set in a Swiss sanatorium and concerned with problems of life and death, prepared the way for the award to him in 1929 of a Nobel prize, but his opposition to the Nazi régime forced him to live abroad and in 1940 he became a U.S. citizen. Among his other most impressive works are the biblical tetralogy on the theme of Joseph and his brethren (1933–44), the political novel on the fate of modern Germany *Dr. Faustus* (1947), the comic masterpiece *Confessions of Felix Krull* (1954) and a number of short stories incl. 'Tonio Kröger' (1903) and 'Death in Venice' (1913).

His brother, **Henrich M.** (1871–1950) was also a novelist, his books incl. *Im Schlaraffenland* (1901), *Professor Unrat* (1904: *The Blue Angel*), depicting the sensual downfall of a schoolmaster; the happier *Die kleine Stadt* (1909); a scathing trilogy dealing with the Kaiser's Germany *Das Kaiserreich* (1918–25); and 2 vols. on the career of Henry IV of France (1935–8). He left Germany with his brother and d. in the U.S.A.

MANN, Tom (1856–1941). British Labour leader. In 1889 he achieved fame during the London dock strike. He was secretary of the I.L.P. 1894–6, and active in the Australian Labour movement 1902–10. He led the Syndicalist movement 1910–12, and in 1920 became a Communist.

MANNA. A sweetish exudation obtained from many trees such as the ash and larch, and used in medicine. The M. of the Bible is thought to have been from the tamarisk tree.

MANNERHEIM (mahn'ērhm), Carl Gustav Emil von (1867–1951). Finnish soldier-statesman. He served in the Russian Army during the F.W.W. After the establishment of a Finnish Socialist rep. in 1917 he formed a 'white' army, crushed the Socialists with German assistance, and during 1918–19 acted as regent. He commanded the Finnish armies during the Russian wars of 1939–40 and in 1941–4, and as president of Finland 1944–6 negotiated the peace settlement with Russia.

MANNHEIM. Town of Baden-Württemberg, W. Germany, at the confluence of the Neckar and Rhine. Heavy machinery, glass, earthenware, chemicals, etc.,

are manufactured. A fishing village from the 8th cent., M. was made a town in 1606. Pop. (1966) 329,301.

MANNIN, Ethel (1900–). British author. A Londoner of Irish stock, she became a journalist and pub. her first novel at 22. Her later prolific output, marked by the sincerity and independence which make her a self-styled anarchist, incl. travel books (Burma, India, Russia, Japan, the Middle East), vols. of autobiography, and many novels, e.g. *The Road to Beersheba* (1963), telling of the exodus before the Israeli advance.

MANNING, Frederic (1887–1935). Australian author, best known for his realistic novel of the F.W.W. *Her Privates We* (1930).

MANNING, Henry Edward (1808–92). British cardinal. Ed. at Harrow and Balliol, he left the Colonial Office for the Anglican Church, becoming in 1840 archdeacon of Chichester. In 1851 he was converted to Rome, founded in 1857 the congregation of the Oblates of St. Charles Borromeo, and in 1865 succeeded Wiseman as abp. of Westminster. An ardent defender of papal infallibility, he was created a cardinal in 1875, and crossed a polemical sword with Gladstone in *The Vatican Decrees* (1875).

MANOEL I (1469–1521). King of Portugal. He succeeded his uncle John II in 1495, and was known as 'the Fortunate', because his reign was distinguished by the discoveries by Portuguese navigators and the expansion of the Portuguese Empire.

MANOEL II (1889–1932). King of Portugal. He ascended the throne on the assassination of his father, Carlos I, in 1908; was driven out by a revolution in 1910, and lived in England.

MANOR. A type of estate which formed the basic economic unit under the feudal system in England. The M. lands consisted of the lord's demesne, the lands held by the free tenants and villeins, and the meadow and waste lands. Tenure of a M. carried with it the right to hold a manorial court, which dealt with petty offences and disputes.

MANRIQUE (mahn'rē'ke), Sebastião (c. 1595–1669). Portuguese monk, who travelled throughout the East, pub. his *Travels* in 1649, and was murdered on a mission to London.

MANS (mon), Le. Car-racing circuit on which is held an annual 24 hr. endurance race (estab. 1923) for G.T. (grand touring) and sports cars, and their prototypes. Pop. (1962) 136,083.

MANSARD or Mansart (moñsahr'), François (1598–1666). French architect. B. at Paris, he gave his name to the 'Mansard Roof', designed to give additional space to the upper storey of a building.

MANSBRIDGE, Albert (1876–1952). British educationalist. B. at Gloucester, he founded the Workers' Educational Assn. in 1903.

MANSFIELD, Katherine. Pseudonym of New Zealand writer Kathleen Beauchamp (1890–1923). B. nr. Wellington, New Zealand, she was ed. in London, to which she returned after a 2 year visit home, where she pub. her earliest stories. Her first marriage to George Bowden in 1909 was immediately disastrous, but a second to John Middleton Murry in 1913 endured. Her delicate artistry emerges not only in her vols. of short stories, e.g. *In a German Pension* (1911), *Bliss* (1920) and *The Garden Party* (1923), but in her *Letters and Journal*. She d. of tuberculosis.

MANSFIELD. English market town (bor.) in Notts, on the Maun, nr. a coalfield. The chief industries are the manufacture of textiles, boots, machinery, etc. Pop. (1961) 53,222.

MANSLAUGHTER. In both English and U.S. law the killing of a human being either (1) in a sudden affray, or (2) as an outcome of culpable negligence. Charges under the first head are closely allied to murder, and will only be M. if there is no evidence of premeditation.

MANSURA (mahnsōō'rah). Town in Lower Egypt,

Saxony in the castle of the Wartburg. Later he became estranged from Erasmus, and engaged in violent controversies with political and religious opponents. In 1525 he m. Catherina von Bora (1499–1552), an ex-nun. After the drawing up of the Augsburg Confession in 1530, he gradually retired from the Protestant leadership. His literary output was very great. His *Table Talk*, letters, sermons, and commentaries are still read, and his hymns sung, and his translation of the Scriptures into German may be said to mark the emergence of German as a modern tongue.

LUTHERANISM. That form of Protestantism that is derived from the life and teaching of Martin Luther (q.v.); it is sometimes called Evangelical to distinguish it from the other main branch of continental Protestantism, the Reformed. It is the principal form of Protestantism in Germany, and is the national faith of Denmark, Norway, Sweden, Finland, and Iceland. The organisation may be episcopal (Germany, Sweden) or synodal (Holland and U.S.A.): the Lutheran World Federation has its H.Q. in Geneva. The most generally accepted statement of Lutheranism is that of the Augsburg Confession (1530) but Luther's Shorter Catechism also carries great weight. L. is also very strong in the Middle West of U.S.A. where several churches were originally founded by German and Scandinavian immigrants. It is the largest Protestant body, incl. some 80 million persons, of whom 40 million are in Germany, 19 million in Scandinavia, 8½ million in U.S.A. and Canada and most of the remainder in central Europe.

LUTHULI (lōōtōō'li). Albert (1899–1967). S. African Negro leader. Ed. in an American missionary school, where he later taught, he was chosen as chief by his Zulu tribe, the Amkholwos, in 1936. In 1952 he was deposed by the Govt. when the African National Congress of which he was a member launched its defiance campaign. Elected pres. of the Congress a month later, he preached non-violence and multi-racialism, and this led to the formation of the rival and militant Pan-Africanist Congress in 1958. He had been arrested in 1956, although never actually tried for treason, and from 1959 suffered certain restrictions. He was under suspended sentence for burning his pass when awarded the Nobel peace prize for 1960.

LUTINE. British bullion vessel lost off Holland 1799. Its bell, salvaged 1859, is at Lloyd's (q.v.).

LUTON. English industrial town (C.B.) in Beds, 33 m. S.W. of Cambridge. Hats, motor-cars, ball-bearings, chemicals are made, and there is an airport. L. Hoo, a mansion built by Robert Adam 1762, was opened to the public by its owner, Sir Harold Wernher, in 1950. Pop. (1961) 131,505.

LUTYENS, Sir Edwin Landseer (1869–1944). British architect, whose works incl. country houses, the Whitehall Cenotaph, the govt. buildings of New Delhi, Liverpool R.C. cathedral and the British Embassy, Washington. Knighted 1918, he was P.R.A. 1938–44. His dau. Elisabeth L. (1906–), who m. Edward Clark (d. 1962) in 1942, is a composer.

LÜTZEN. Town in E. Germany, 12 m. S.W. of Leipzig, famous for the victory of 1632 of Gustavus Adolphus (q.v.), king of Sweden, over Wallenstein; Gustavus was killed in the battle. Here also Napoleon overcame the Russians and Prussians in 1813.

LUXEMBOURG. A prov. in the S.E. of Belgium. Its chief products are iron, slate, and manganese. The cap. is Arlon. Area 1,705 sq. m.; pop. (1966) 220,315.

LUXEMBOURG. Independent grand-duchy of Europe, situated between France, Germany, and Belgium. About a quarter of the pop. are engaged in agriculture, the chief crops being oats and potatoes. In the Esch-Alzette area mining of iron and steel production are important. The cap. is the city of L. on the Alzette; pop. (1967) 77,000. Most of the rivers flow into the Moselle which forms part of the eastern border of L. The people are of Low German

stock, with a language based on old Teutonic roots. The country is governed by a constitutional monarchy. Grand Duke Jean (1921–) succeeded to the throne in 1964 on the abdication of his mother Grand Duchess Charlotte (q.v.), dau. of Grand Duke William (d. 1912). Legislative power is vested in a Chamber of Deputies consisting of 56 members who are elected for 5 years. At the head of the govt. is the Min. of State. For the Customs Union between Belgium, the Netherlands and Luxembourg, see BENELUX. Area 999 sq. m.; pop. (1967) 335,000.

LUXEMBOURG, Palais du. Palace in Paris, France, in which the Senate sits. Built 1615 for Marie de' Medici by Salomon de Brosse, it was later enlarged: Watteau used the gardens in his backgrounds.

LUXEMBURG (looks'emboorg), Rosa (1870–1919). German Communist. B. in Poland, she settled in Germany c. 1895, and acquired German nationality by marriage. During the F.W.W. she co-operated with Liebknecht in anti-war propaganda and in founding the Spartacus League. She was imprisoned and wrote a series of prison letters. Released in Nov. 1918, she was murdered together with Liebknecht.

LUXOR. Town of Upper Egypt, more correctly El-Aksur (The Castles), on the E. bank of the Nile, c. 450 m. S. of Cairo. Its ancient temple, to the S.W.,

LUXOR. Built by Amenhotep III and its decoration completed by Tutankhamen and Horemhab, the Temple of Luxor was dedicated to Amen, Mut and Khonsu. An avenue of recumbent rams leads from its façade to the temples at Karnak.

Courtesy of the Egyptian State Tourist Administration.

is c. 300 yds. long and one of the greatest monuments of Thebes. The modern town has up-to-date hotels, bazaars, fine parks and an internal airport.

LUZERN. German form of LUCERNE.

LUZON (loo'zon). The largest and most northerly island of the Philippine Republic. It is mountainous, with a volcanic peak, Mayon (7,900 ft.). There are many rivers and lakes. Spanish settlers arrived in L. in the 16th cent. and the island belonged to Spain until it was ceded to the U.S.A. in 1898. Manila, with its suburb Quezon City, cap. of the republic, is on L., which was the scene of fierce fighting in 1942 and 1945 during the S.W.W.: see BATAAN and CORREGIDOR. Gold is produced and there is uranium at Larap in southern L. Area 40,420 sq. m.; pop. (est.) 8,000,000.

LVOV (lvof). City in the Ukrainian S.S.R., cap. of L. region. Founded in the 13th cent. by a Galician prince (the name means city of Leo or Lev), its German name is Lemberg. It was Polish until taken by Austria 1772; Polish again 1919–39, and then became part of the U.S.S.R. after the S.W.W. There are 3 cathedrals (Armenian, Greek and R.C.), and the univ. dates from 1661. It is a rail junction with an airport, and has textile, engineering and metallurgical industries. Pop. (1967) 502,000.

LVOW. Polish form of Lvov.

LYCANTHROPY (likan'trōpy). Human transformation to a werewolf; form of insanity involving this belief.

MARATHON. A plain in Greece on the E. coast of Attica, 25 m. N.E. of Athens, where in 490 B.C. the Greeks defeated the Persian invaders in one of the decisive battles of the world. The news of the victory was conveyed to Athens by a runner, sometimes called Pheidippides, who fell dead as he entered the city. His performance is commemorated by a *Marathon Race* of 26 m. 385 yds., first included in the Olympic Games at Athens in 1896.

MARBLE. A limestone of pleasant colour and pattern, which takes and retains a good polish. Most marbles were originally limestones of ordinary character which have undergone recrystallization under the action of metamorphism, e.g. the Carrara marbles. An exception is Purbeck M., which is clayey limestone containing abundant remains of the freshwater gastropod *Paludina*.

MARBURG. W. German town in Hessen, on the Lahn, 50 m. N. of Frankfurt-am-Main, seat of a univ. founded in 1527 as a centre of Protestant teaching; Luther and Zwingli disputed on religion at M. in 1529. Manufactures incl. chemicals, machinery, pottery. Pop. (1960) 45,000.

MARC, Franz (1880–1916). German artist. Closely associated with Kandinsky in preparing the *Blue Rider Album* in 1911, he repeatedly used the symbolism of animals, e.g. 'The Tower of the Blue Horses'. He was killed at Verdun.

MARCANTONIO (Marcantonio Raimondi) (c. 1480–c. 1530). Italian engraver. B. at Bologna, he was celebrated for his engravings of the works of Raphael, Michelangelo, Dürer, etc.

MARCEAU (mahrsoh'), Marcel (1923–). French mime. B. at Strasbourg, he is the creator of the clown-harlequin 'Bip', and of mime sequences such as 'Youth, Maturity, Old Age and Death'. See Pantomime.

MARCH. English market town (U.D.) in the fen country of the Isle of Ely, 24 m. N. of Cambridge. Pop. (1961) 13,119.

MARCHAND (mahrshon'), Jean Baptiste (1863–1934). French general and explorer. In 1898 he headed an expedition from the French Congo which occupied Fashoda on the White Nile. The subsequent arrival of British troops under Kitchener resulted in a crisis which nearly led to war between Britain and France.

MARCHES. The boundary areas of England with Wales, and England with Scotland. In the Middle Ages these troubled frontier regions were held by lords of the marches, sometimes called *marchiones* and later earls of March. The first earl of March of the Welsh M. was Roger de Mortimer (c. 1286–1330); of the Scottish M., Patrick Dunbar (d. 1285).

M. is also the name in English of a region of N.E. Italy covering the provinces of Ancona, Ascoli Piceno, Macerata, and Pesaro e Urbino (in Italian, Marche pron. mahr'kä). Area 9,691 sq. m.; pop. (1961) 1,347,234.

MARCONI, Guglielmo (1874–1937). Italian pioneer in the invention and development of wireless telegraphy. B. at Bologna, in 1895 he estab. wireless

communication over more than a mile near Bologna. In 1896 he came to England, and conducted successful experiments on the roof of the Post Office building in London, on Salisbury Plain, and across Bristol Channel, and in 1897 the company that is now Marconi's Wireless Telegraph Co. Ltd. was formed. In 1898 M. successfully transmitted signals across the English Channel, and in 1901 estab. communication with St. John's, Newfoundland, from Poldhu in Cornwall, and in 1918 with Australia. M. was an Italian delegate to the Peace Conference in 1919, received the Nobel prize for physics in 1909, and was made a senator and in 1929 a marchese.

MARCUS AURELIUS ANTONINUS (A.D. 121–180). Roman emperor and Stoic philosopher. B. in Rome, he was adopted, at the same time as Lucius Aurelius Verus, by his uncle, the emperor Antoninus Pius, whom he succeeded in 161. He conceded an equal share in the rule to Lucius Verus (d. 169). M. A. spent much of his reign warring against the Germanic tribes, and d. in Pannonia, where he had gone to drive back the invading Marcomanni. Although one of the best of the Roman emperors, he persecuted the Christians for political reasons. M. A. is famous for his philosophic 'Meditations'.

MARDIN (mahrden'). Turkish town, cap. of M. il, 50 m. S.E. of Diyarbakir. Overlooked by the ruins of a fortified castle, it is a market for the produce of the il. — onions, cereals, tobacco, mohair, etc. Pop. (1965) 392,875.

MARDUK. Chief god of Babylonia. Originally an inferior spirit connected with water magic, he became associated with Babylon, and on the rise of that city to greatness the priesthood gave him the qualities of a sun-god, recognizing him as creator of the earth and man.

MARENCO. Italian village in Piedmont, where on 14 June 1800 Napoleon inflicted a crushing defeat on the Austrians.

MARGAI (mahr'gi), Sir Albert Michael (1911–). Sierra Leone statesman. Son of a merchant and descendant of a Mende warrior chief, he qualified as a chemist, and also as his country's first barrister. In 1964 he succeeded his brother Sir Milton M. (1896–1964) who had founded the People's Party in 1951 and been first P.M. of independent Sierra Leone from 1961. In 1967 Sir Albert's govt. was not decisively returned at the elections, following an attempt to introduce a one-party state, and in 1968 he went to the U.S.A.

MARGARET, St. (c. 1045–93). Queen of Scotland. The grand-dau. of Edmund Ironside, she went to Scotland after the Norman Conquest, and soon after m. Malcolm III. Through her influence the Lowlands, hitherto purely Celtic, became largely Anglicized. The marriage of her dau. Matilda to Henry I united the Norman and English royal houses. She was canonized in 1251 in recognition of her benefactions to the Church.

MARGARET (1283–90). Known as the 'Maid of Norway', she was the dau. of Eric II, king of Norway, and Princess Margaret of Scotland. On the death of her grandfather, Alexander III, she became queen of Scotland, but d. in the Orkneys on the voyage to her kingdom.

MARGARET OF ANJOU (onzhōō) (1430–82). Queen of England. The dau. of René of Anjou, she was m. to Henry VI in 1445. After the outbreak of the Wars of the Roses in 1455, she acted as the leader of the Lancastrians, her one object being to secure the succession of her son, Edward (b. 1453). She withdrew to France in 1463, but returned during the Lancastrian reaction of 1471, only to be defeated and captured at Tewkesbury, where her son was killed. After 5 years' imprisonment she was allowed in 1476 to return to France, where she d. in poverty.

MARGARET (ROSE) (1930–). Princess of the

MARBURG. Originally the seat of a landgrave, the Gothic castle dominates the hill on which the old town is built and now houses the archives of Hesse. In its Knights Hall (1277–1312) the famous conference between Luther and Zwingli on Transubstantiation took place in 1529. On the left is the Church of St. Mary.

Courtesy of the German Tourist Information Bureau

govt. with the Country Party, which was confirmed in office by the 1934 and 1937 general elections. He d. in office in April 1939. His wife Dame Enid L. (1897–) was first woman member of the House of Representatives and of the federal cabinet, and was created G.B.E. in 1937.

LYONS. Cap. of Rhône dept., and third city of France, at the confluence of the Rhône and Saône, 170 m. N.N.W. of Marseilles. The most notable buildings are the 19th cent. Notre Dame de Fourvière, the Gothic cathedral of St. Jean, and the church of St. Martin d'Ainay originating in the 6th cent. L. is the seat of an archbishopric, and a law and univ. centre. Formerly a chief fortress of France, L. is a road and rail centre, and is second only to Paris in commercial importance. L. is famous for silk and other fine textiles; it also makes chemicals, dye-stuffs, machinery, etc., and has printing works. It was the ancient Lugdunum, taken by the Romans 43 B.C. Pop. (1962) 535, 784.

LYRE. Stringed instrument of great antiquity. It originated in Asia, and was used in Greece and Egypt. It consisted of a soundbox with 2 curved arms joined by a crosspiece. There were 4 to 10 strings which were stretched from the crosspiece to a bridge near the bottom of the soundbox. It was played with a plectrum held with the right hand.

LYRE-BIRD. Genus of Australian birds (*Menura*), similar to a pheasant. The male has a large lyre-shaped tail, brilliantly coloured. They nest on the ground, and feed on insects, worms, and snails.

LYSANDER (lisan'der) (d. 395 B.C.). Spartan general. He brought the Peloponnesian War to a successful conclusion by capturing the Athenian fleet at Aegospotami in 405, and by starving Athens into surrender in the following year. He now aspired to make Sparta supreme in Greece, and himself in

LYRE-BIRD

Sparta; he set up puppet governments in Athens and her former allies, and intrigued to secure himself the Spartan kingship, but was killed in battle with the Thebans.

LYSENKO, Trofim (1898–). Soviet biologist. As director of the Institute of Genetics 1940–65, he enjoyed the support of Stalin for his neo-Lamarckian theory that plants and animals transmit to later generations characteristics acquired as a result of environmental changes – strongly opposed by orthodox scientists. In the new atmosphere under Khrushchev he lost ground, and was denounced under Kosygin in 1965.

LYTE, Henry Francis (1793–1847). British hymn writer. B. at Kelso, he was ordained in 1815, and in 1823 moved to the parish of Brixham. He d. in Nice. His best-known hymns are 'Abide With Me' and 'Praise, my soul, the King of Heaven'.

LYTHAM ST. ANNES (lith'am). English resort (bor.) in Lancashire, on the Ribble, 6 m. S.E. of Blackpool. The Premium Savings Bond head office is at L.St.A. Pop. (1961) 36,222.

LYTTON, Edward George Earle Lytton Bulwer-Lytton, 1st baron (1803–73). British author. B. in London, he pub. his first poems in 1820, and in 1827 m. Rosina Wheeler, from whom he separated in 1836. His novels successfully followed every turn of the public taste and incl. *Falkland* (1827), the Byronic *Pelham* (1828), *Paul Clifford* (1830), *Eugene Aram* (1832), *The Last Days of Pompeii* (1834), *Rienzi* (1835), *The Last of the Barons* (1843), *Harold* (1848), and *The Caxtons* (1850). He also achieved success as a playwright with *The Lady of Lyons* (1838), *Richelieu* (1838), etc. He sat in Parl. as a Lib. 1831–41, and as a Cons. 1852–66, and was Colonial Sec. 1858–9. He was created a baron in 1866.

His only son Edward Robert Bulwer-L., 1st earl of Lytton (1831–91), entered the diplomatic service and was Viceroy of India (1876–80), where he was noted for his controversial 'Forward' policy. He pub. verse under the pseudonym Owen Meredith, notably the lyric *Wanderer* (1857), and the epic *King Poppy* (1892). The 1st earl's son Victor L., 2nd earl of L. (1876–1947), was Under-Sec. of State for India (1920–2) and Gov. of Bengal (1922–7). In 1932 he was responsible for the L. Report condemning Japanese aggression in Manchuria.

M The 13th letter of the Roman alphabet. It corresponds to the Gk. *mu* and the Semitic *mem*, and is almost always sounded as a voiced labial nasal. Finally, or before consonants, it disappears in French, Portuguese, and other languages, leaving a trace in nasalization of the preceding vowel. In Roman numerals M equals 1,000.

MAARTENS, Maarten. Pseudonym of the Dutch author Joost Marius van der Poorten Schwartz (1858–1915). He was b. in Amsterdam, and his works incl. *Sin of Joost Avelingh* (1890), a novel describing Dutch middle-class life, *God's Fool* (1892), and *Greater Glory* (1894), all written in English.

MAAS (mahs). River of the Netherlands, the lower course of the Meuse (q.v.).

MAASTRICHT (mahs'trikht). Capital of the prov. of Limburg, the Netherlands, on the Maas, near the Dutch-Belgian frontier. It dates from Roman times.

The manufactures incl. beer, paper, and earthenware. Pop. (1961) 91,157.

MAAZEL (mah'zel), Lorin (1930–). American conductor. B. in France, the son of an American singer, he studied the violin and was conducting symphony orchestras at 8. While studying at Pittsburgh univ., he also acted as associate conductor of the Pittsburgh Symphony Orchestra, and now tours the world: he is fond of Mozart opera. See illus. p. 688.

MABILLON (mahb'eyon'), Jean (1632–1707). French scholar, the greatest of the Maurists. B. nr. Reims, the son of a peasant, he became a Benedictine monk, and from 1664 worked at the literary centre of the Congregation of St. Maur. St. Germain-des-Prés in Paris. He was the founder of the science of Latin palaeography, his *De re diplomatca* (1681) establishing the rules governing the authentication of medieval charters and MSS.

MABUSE (mahbüs'), Jan. Name adopted by

finest works are his water-colour landscapes incl. studies of the Maine coast.

MARINES. Fighting men equally at home on land or sea, and because of their dual role of top calibre and esprit de corps. The Corps of Royal Marines (instituted 1664) is primarily a military force trained also for fighting at sea, providing commando units, landing craft, crews, frogmen, etc. The United States Marine Corps (estab. 1775) is primarily a naval force trained for fighting on land.

MARINETTI, Filippo Tommaso (1876–1944). Italian author. B. at Alexandria, in 1909 he pub. the first manifesto of 'Futurism'; he illustrated his theories in *Mafarka le futuriste* (1910), plays, and a vol. on theatrical practice (1916). He recorded his F.W.W. experiences in *Otto anime n una bomba* (1919), and welcomed Mussolini with *Futurismo e ascismo* (1924).

MARINI, Marino (1901–). Italian sculptor. He studied in Florence and Paris, and became prof. of sculpture at Monza (1929–40) and at the Brera Academy, Milan, from 1940. Influenced by primitive sculpture, he works in an elongated, elegant style, and is particularly well known for his bronze horses and riders and dancers.

MARIO (mah'rē-ō), Giuseppe (1810–83). Italian tenor. He made his debut in Paris in 1838, appearing in London in 1839. He toured widely, and in 1844 m. the soprano, Giulia Grisi (c. 1811–69).

MARIONETTE. Type of puppet (q.v.), a jointed figure controlled from above by wires or strings. They early reached a high artistic level in Burma and Ceylon and at the courts of Italian princes in the 16th–18th cents., and Haydn wrote an operetta such as *Dido* for the Esterhazy M. theatre. In the 20th cent. there has been a revival, especially in television, and Ms. have reverted to being a popular rather than aristocratic entertainment.

MARIS. A family of Dutch painters of the 19th cent. **JACOB M.** (1837–99), was a genre and figure painter, b. at The Hague. His brother, **MATTHEW M.** (1839–1917), was a genre and landscape painter who worked in London, and another brother, **WILLIAM M.** (1844–1910), was a landscape painter.

MARISTS. Members of the R.C. congregation of Mary founded in France in 1816. The priests and lay members of the congregation conduct educational work, nurse the sick, and engage in missionary activities, particularly in N.Z. and the Pacific Is.

MARITAIN (mah'retān'), Jacques (1882–). French philosopher. Originally an exponent of Bergson, e.g. *La Philosophie bergsonienne* (1914), he later became the best-known of the Neo-Thomists applying to contemporary problems the creative techniques of medieval times, e.g. *Introduction à la Philosophie* (1920). Best of his later works is *Distinguer pour unir ou Les degrés du Savoir* (1932). He was prof. of philosophy at Princeton Univ. 1948–52.

MARIUPOL. See ZHDANOV.

MARIUS, Gaius (155–86 B.C.). Roman military commander and statesman. B. near Arpinum, he served in Spain in 134, and in the Jugurthine War 109–106. He was elected consul 7 times, the first time in 107. He defeated the Cimbri and the Teutones 102–101. M. tried to deprive Sulla of the command in the East against Mithradates, and as a result civil war broke out in 88. Sulla marched on Rome, and M. fled to Africa, but later Cinna held Rome for M. Cinna and M. created a reign of terror in Rome until the death of the latter.

MARIVAUX (mah'rēvō), Pierre Carlet de Chamblain de (1688–1763). French novelist and dramatist. He was b. in Paris, and his polished, sophisticated comedies, such as *Le Jeu de l'amour et du hasard*, *Les fausses confidences*, and *L'Épreuve*, gave the word *marivaudage* to the French language.

MARJORAM. Aromatic herbs of the Labiatae

family. Wild M. (*Origanum vulgare*) is found both in Europe and Asia and has become naturalized in America: the culinary sweet M. is *Majorana hortensis*.

MARK. Christian apostle and evangelist, whose name is given to the 2nd Gospel. His first name was John, and his mother, Mary, was one of the first Christians in Jerusalem. He was a cousin of Barnabas, and accompanied Barnabas and Paul on their first missionary journey. Later, he was a fellow worker with Paul in Rome, and he seems to have attached himself to Peter as his interpreter after Paul's death. According to tradition he was the founder of the Christian Church in Alexandria, and Jerome says that he d. and was buried there.

The Gospel according to St. Mark is held to have been written A.D. 65–70, and used by the authors of the 1st and 3rd Gospels.

MARK ANTONY (Marcus Antonius) (83–30 B.C.). Roman statesman and soldier. He served under Julius Caesar in the later campaign in Gaul. As tribune he defended Caesar's interests at Rome during the civil war, and when consul (44 B.C.), tried to secure for Caesar the title of king. After Caesar's assassination, A. with Octavius and Lepidus formed a triumvirate, and in 42 B.C. A. assisted in the defeat of Brutus and Cassius at Philippi. During 41 B.C. A. toured the eastern provinces, where he met Cleopatra, with whom he fell in love. When the 3 triumvirs divided the empire between them, A. secured Egypt for his share. In 32 B.C. the Senate declared war on Cleopatra. Defeated by Octavius at the naval battle of Actium (31), A. committed suicide.

MARKET HARBOROUGH. English market town (U.D.) in Leics. on r. Welland, 14 m. S.E. of Leicester. Corsetry and foodstuffs are among its industries, and the town is a fox-hunting centre. Pop. (1961) 11,556.

MARKHAM, Edwin Charles (1852–1940). American poet. B. in Oregon City, he became a school-teacher. His vol. of poems, the democratic *Man with a Hoe* (1899), was followed by *Lincoln* (1901), etc.

MARKHOR (mahr'kor). Large wild goat (*Capra alconeri*), with spirally twisted horns and long shaggy coat. It is found in the Himalayas.

MARKIEVICZ, Constance Georgina, countess (d. 1927). Irish nationalist, née Gore Booth, who m. the Polish count M. in 1900. A prominent figure in the Irish national movement, she was a member both of the Irish Volunteers and Connolly's Citizen Army. She fought in the Easter Rebellion of 1916, and was sentenced to death; the sentence was commuted, and she was released in 1917. She was elected to parliament at Westminster as a Sinn Féin candidate in 1918, so becoming the first British woman M.P., but did not take her seat. From 1923 she was a member of the Dáil.

MARKOVA (markō'fa), Dame Alicia. Name assumed by British dancer, Lilian Alicia Marks (1910–). At 14 she was chosen by Diaghilev (q.v.) as ballerina in the D. Ballet Co., with which she danced until D.'s death in 1929, just before she was to dance her first major role. On returning to England, she devoted herself to the development of English ballet, joining in 1930 Marie Rambert's Ballet Club, and becoming in 1932 the first resident ballerina of the Vic-Wells Ballet. In 1935 she and Anton Dolin (q.v.), with whom she had a long partnership, formed their own company, and 1938–41 she danced with the new Ballet Russe de Monte Carlo, and until 1944 with Ballet Theatre U.S.A. On her return to Britain in 1949, she helped launch the Festival Ballet, to which she gave its name, and was its prima ballerina until 1952. She subsequently danced as guest artist with companies all over the world. The first English Prima Ballerina Assoluta in history, she was created D.B.E. in 1963, and in the same year became Director of the Metropolitan Opera Ballet of N.Y. Possessing

the eye of the abnormally simple or the child, as in *The Member of the Wedding* (1946) – a little girl wants to join her brother on his honeymoon – and *The Ballad of the Sad Café* (1951).

HUGH McDIARMID

Photo: George Outram & Co. Ltd.

McDIARMID (makdur' mid), Hugh. Pseudonym of the Scottish nationalist poet Christopher Murray Grieve (1892–). B. in Dumfriesshire, he worked for a time as a labourer: his nationalism emerges in 'A Drunk Man Looks at the Thistle' and his strongly Marxist views in his two 'Hymns to Lenin'. He is a forcefully gifted poet and his prose has the same idiosyncratic power: *At the Sign of the Thistle* (1934) and the autobiographical *Lucky Poet* (1943).

MACDONALD (mahk-donah'), Alexandre (1765–1840). French soldier. He served in the Revolutionary Wars, and in 1809 was created a Marshal of France and duke of Taranto for his share in the victory of Wagram. He later fought in the Peninsular and Russian campaigns, and after the Restoration became a peer.

MACDONALD, Flora (1722–90). Scottish heroine who rescued Prince Charles Edward after the Battle of Culloden (1746), and, disguising him as her maid, escorted him from her home in the Hebrides to the mainland. She was arrested, but released in 1747.

MACDONALD, George (1824–1905). Scottish poet and novelist. B. in Aberdeenshire, he was the author of the poetic works, *Within and Without* (1855), *Phantastes* (1858), and the novels *David Elginbrod*, *Robert Falconer*, and *Donal Grant* (1883). He also wrote fairy tales, such as *At the Back of the North Wind* (1871).

MACDONALD, James Ramsay (1866–1937). British Lab. statesman. B. at Lossiemouth, the son of a labourer, he joined the I.L.P. in 1894 and became first sec. of the Lab. Party in 1900. He was elected to parl. in 1906, and led the party until 1914, when his opposition to the F.W.W. lost him his leadership. He recovered it in 1922, and in Jan. 1924 formed a govt. dependent on Lib. support, the withdrawal of which in Oct. forced him to resign. He returned to office in 1929, again as leader of a minority govt.; this collapsed as a result of the economic crisis in 1931, and M. left the Lab. Party to form a National govt. with Cons. and Lib. backing. He resigned the Premiership in 1935, remaining Lord President of the Council. His son, Malcolm M. (1901–), was a Labour M.P. (Nat. Lab. after 1931) 1929–35 and 1936–45. As Dominions Sec. 1935–9, he negotiated the Anglo-Irish agreement with de Valera; was the first senior min. to go out into the Commonwealth, as High Com. in Canada 1941–6; was Com.-Gen. for S.E. Asia 1948–55, High Com. in India 1955–60, Gov.-Gen. of Kenya 1963–4, returning as High Com. 1964–5, and Spec. Rep. in E. and Central Africa 1965–9. Awarded O.M. 1969.

MACDONALD, Sir John Alexander (1815–91). Canadian Cons. statesman. B. in Glasgow, he was taken to Ontario as a child. In 1857 he became P.M. of Upper Canada. He took the leading part in the movement for federation, and in 1867 became first P.M. of Canada. Defeated in 1873, he returned to office in 1878, and retained it until his death.

MacDOWELL, Edward Alexander (1861–1908). American composer. Encouraged by Liszt while in Germany, he showed much romantic feeling in his works which incl. the *Indian Suite* (1896), and piano concertos and sonatas. Prof. of music at Columbia

univ., N.Y., 1896–1904, he had a mental breakdown in 1905.

MACEDONIA (masedon'ea). Name of an ancient country of S.E. Europe which lay between Illyria, Thrace, and the Aegean Sea. It is used for much the same area in modern geography: one of the fed. reps. of Yugoslavia and a prov. of Greece are both called Macedonia. The area is wild and mountainous; chief rivers are the Struma and the Vardar. Yugoslav M., area 9,925 sq. m.; pop. (1961) 1,406,000; cap. Skopje, is an under-developed region; chrome is the chief mineral worked, and tobacco is grown. Greek M., area 13,260 sq. m.; pop. (1961) 1,887,630; cap. Thessaloniki, is chiefly agricultural and grows rice.

MACEIO (mahsãyo'). Port of Brazil, cap. of the state of Alagoas. Cotton goods and machinery are exported, also cotton, sugar, and rum. Pop. (1960) 170,134.

McEVOY (mak'evoy), Ambrose (1878–1927). British artist, especially noted as a water-colourist and as a painter of delicately refined portraits of women.

McGILL, James (1744–1813). Scottish philanthropist. B. in Glasgow, he emigrated to Canada, where he engaged in fur trading. He bequeathed large sums to the college of Montreal, which was established as McGill univ. in 1821.

MACGILLICUDDY'S REEKS (makgilikud'iz-). A group of mts. lying W. of Killarney, in Co. Kerry, Ireland, which incl. Carruntuohill (3,414 ft.), the highest peak in Ireland.

McGINLEY, Phyllis (1905–). American writer of light verse. Canadian-born, she became a contributor to the *New Yorker* and has pub. many equally masterly collections of social satire: *One More Manhattan* (1937) and *The Love Letters of Phyllis McGinley* (1954).

McGO'NAGALL, William (1830–1902). Scottish poet, celebrated for the badness of his verse as the 'Great M.' Among his best-known works, a vogue of the 1960s, was an account of the Tay Bridge disaster of 1879. Quite humourless, he was often hoaxed, e.g. his journey to Balmoral in 1878 at the supposed request of Victoria.

MACH (mahkh), Ernst (1838–1916). Austrian philosopher. Originally a prof. of mathematics at Graz, he was prof. of philosophy at Prague 1867–95 and Vienna 1895–1901. An empiricist, he laid down that science was a record of facts perceived by the senses, and that acceptance of a scientific law depended solely on its standing the practical test of use: he opposed concepts such as Newton's 'absolute motion'.

MACH (mahk) **NUMBER**. System of speed measurement devised by Ernst Mach (see above), Austrian physicist and mathematician. The ratio of the speed of a body to that of sound in the undisturbed medium through which the body travels is its M.N. In an aircraft, when the M.N. passes through 1, i.e. when its velocity is greater than that of sound, it is said to have passed through the sound barrier.

MACHADO, Antonio (1875–1939). Spanish poet and dramatist. B. in Seville, he was inspired in his finest lyric verse, contained in *Campos de Castilla* (1912), by the Castilian countryside. His brother, Manuel M. (1874–1947), also b. in Seville, wrote verse on historic Spanish themes. The brothers collaborated in several plays, incl. *Desdichas de la Fortuna* (1926) and *La Lola se va a los Puertos* (1930).

MACHAR (mahk'ar), Jan Svatopluk (1864–1942). Czech poet. B. in Bohemia, he achieved his masterpiece in the epic series 'Conscience of the Ages' incl. *Golgotha* (1901) and *In the Glow of the Hellenic Sun* (1906).

MACHAULT (mahshô'), Guillaume de (c. 1300–77). French poet and musician. B. in Champagne, he was in the service of John of Bohemia for 30 years, and later of King John the Good of France. He gave the forms of the *ballade* and *rondeau* a new individuality, and ensured their lasting vogue.

in 1385, but the lords of the Scottish and Welsh 'marches' were known as *marciorines* before this date. See **MARCHES**. The premier English marquessate is that of Winchester, and the wife of a M. is a marchioness.

MARQUET (mahrkâ), Albert (1875–1947). French landscape painter. A friend of Matisse, he was associated with *Les Fauves*, but has his own individualistic style. His best-known paintings are of the quaysides and the river banks of the Seine.

MARQUETTE (mahrket'), Jacques (1637–75). French Jesuit missionary and explorer. Going to Canada in 1666, he explored the upper lakes of the St. Lawrence, and in 1673 made a remarkable voyage down the Mississippi.

MARQUIS, Donald Robert Perry (1878–1937). American author. B. in Illinois, he is chiefly known for his humorous creations, *Old Soak* (1921), portraying a hard-drinking comic, and *Archy and Mehitabel* (1927), the typewritten verse adventures of the cockroach, Archie.

MARQUISES. French form of **MARQUESAS**.

MARRAKESH. City in Morocco, c. 130 m. S. of Casablanca, with which it is connected by railway. An important trade centre, it is the southern capital. It dates from 1062, but has a large modern quarter built since the French occupied M. in 1912. Pop. (1960) 242,000.

MARRAM-GRASS. A coarse perennial grass (*Ammophila arundinacea*) which flourishes on sandy patches and, because of its tough and creeping rootstocks, is largely employed to hold coast dunes in place, particularly in Holland.

MARRANOS. The descendants of the Span. Jews converted by force to Christianity in the 14th and 15th cents., who secretly preserved their adherence to Judaism and carried out Jewish rites. Under the Spanish Inquisition thousands were burned at the stake. M. refugees in the 17th cent. founded the Jewish communities in Amsterdam, London, etc.

MARRIAGE. For the community primarily the means of ensuring its own continuation under stable conditions for the care of the young, and because of its importance hedged round by conventions, customs, and religious and civil laws both in 'civilized' and 'primitive' communities. The modern tendency is to freedom of choice in a partner, but modified by age-limits, below which no M. is valid, e.g. in the U.K. for both sexes 16 and in the U.S.A. varying according to state, for example Georgia and Iowa allow girls to marry at 14; by degrees of consanguinity or other special relationships within which M. is either forbidden or enjoined; by economic factors such as ability to pay a father-in-law the required bride price, as in Africa; by rank, caste or religious differences; by medical requirements such as the blood tests of some states of the U.S.A.; by the necessity of obtaining parental, family or tribal consent; by the negotiations of a marriage broker in property-conscious and conventional societies, e.g. in Japan or formerly among Jewish communities; or colour, e.g. M. is illegal between European and non-European in S. Africa, and until 1967 between white and coloured in some Southern, and white and Mongolian in some Western, states of the U.S.A.

M. may be polyandrous or polygynous (qq.v.), but in modern times the emancipation of women in the W. has led to greater emphasis on M. as a personal relationship with monogamy increasingly the rule, e.g. even in Moslem countries such as Pakistan where the right of a man to have 4 wives has been much restricted. Women also approach equality in M. in other ways, e.g. married women were enabled to hold property in their own name in England by 1882; in California community property laws entail the equal division of all assets between the partners on divorce; and in England a woman may be required to

support a husband unable to support himself, and may be awarded custody of children. Stress on the personal aspect, however, leads to easier divorce (q.v.) notably in the U.S.A. and increasingly in the U.K. so that re-marriage is more and more frequent for both sexes within the lifetime of the original partner. At the same time the community reacts towards maintaining the stability of the family unit, e.g. the Soviet Union has gradually modified (1926, 1936, and 1944) the original extreme freedom of divorce granted in 1917 at the Revolution, and the continuing reluctance to legalize divorce by consent in England.

In England Ms. can be effected according to the rites of the C. of E. or those of other faiths, or in a superintendent registrar's office, but in most European countries civil registration of M., as well as (or instead of) a religious ceremony is obligatory, but common-law Ms. (i.e. an agreement to marry followed by cohabitation as man and wife) are still recognized in e.g. Scotland, some states of the U.S.A. and the U.S.S.R. As a step to international agreement on M. law the U.N. in 1962 adopted a convention on consent to M., minimum age for M., and registration.

MARROW. In zoology, the soft vascular tissue in the central cavities of bones, composed largely of fat and white corpuscles. Another name for it is medulla.

In botany, Ms. are twining plants of the family Cucurbitaceae, producing large pulpy fruits used as a vegetable, and for making jams and preserves. There are bush Ms. and creeping or climbing Ms.

MARRYAT, Frederick (1792–1848). British naval officer and novelist. B. in London, he entered the R.N. in 1806 and rose to the rank of captain, but resigned in 1830 after the success of his 1st novel, *Frank Mildmay*. He wrote a number of popular adventure stories, incl. *Peter Simple* (1834), *Mr. Midshipman Easy*, and a series of boys' books, such as *Masterman Ready*, *Settlers in Canada*, and *Children of the New Forest* (1847).

MARS. The Roman god of war. The month of March is named after him.

MARS. The fourth planet in order of distance from the Sun. It has an average distance from the Sun of

141,500,000 m., and may approach the Earth to within 34,000,000 m., so that it is then closer than any planet apart from Venus; at such times it is extremely brilliant, and is always easy to recognize because of its strong red colour. It is, however, much smaller than Venus or the Earth; its diameter is 4,200 m., and its mass only 0.11 of that of the Earth.

In many ways M. resembles the Earth. It has a rotation period of 24 hours 37 minutes, though its revolution period or 'year' amounts to 687 days; it

has a considerable atmosphere, though the chief constituent seems to be nitrogen, and the atmospheric density is rather low. The poles are covered with whitish 'caps' which have been found to be due to a snowy or frosty deposit, so that a little water must exist there, though there are no large seas or lakes. Much of the surface is reddish, and is regarded as dust-desert, but the famous dark patches, visible with a small telescope when M. is well placed, are thought to be due to primitive vegetation.

M. has often been regarded as a world capable of supporting advanced life-forms, and there has been

MARS. Taken with a 36 inch refractor, this photograph shows the dark areas clearly, together with the southern polar cap. Courtesy of Lick Observatory, Univ. of California.

MacLEOD (maklowd'), George Fielden, baron M. of Fuinary (1895-). Scottish clergyman. Min. of Govan, Glasgow 1930-8, when he became leader of the Iona (q.v.) community, he was moderator of the General Assembly 1957. He succeeded to a baronetcy 1944 (title not used), and was created life peer 1967.

MACLEOD (maklowd'), Iain Norman (1913-). British Cons. politician. Entering parl. in 1951, he was Min. of Health 1952-5, of Labour 1955-9, and Colonial Sec. 1959-61. He became Leader of the House of Commons and Chairman of the Cons. Party in 1961, but, refusing to serve under Douglas-Home, resigned in 1963 and edited the *Spectator* 1963-5. He covered economic affairs in the Heath Shadow Cabinet from 1965.

MACLISE (-lēs'), Daniel (1806-70). Irish artist. B. at Cork, he moved to London in 1827 and painted portraits of famous people, and historical pictures, incl. 'The Meeting of Wellington and Blücher after Waterloo', and 'Death of Nelson' for the Westminster Palace. He was elected R.A. in 1840.

MacMAHON (-on), Marie Edmé Patrice Maurice de (1808-93). French soldier and statesman. His share in the victory of Magenta in the Franco-Austrian War of 1859 won him the titles of duke of Magenta and marshal of France. In the war of 1870 he was captured at Sedan, and after his release suppressed the Paris Commune. Elected Pres. of the Rep. in 1873, he worked for a royalist restoration, but was forced to resign in 1879.

McMILLAN, Edwin Mattison (1907-). American physicist. Prof. at the Univ. of California from 1946, he shared a Nobel prize in chemistry with Seaborg (q.v.) in 1951, and in 1963 shared with I. Veksler, director of the Russian Joint Institute for Nuclear Research, an Atoms for Peace award for their independent arrival 20 years before at a method of overcoming the limitations of the cyclotron.

MACMILLAN, (Maurice) Harold (1894-). British Cons. statesman. Member of a family of publishers, he was ed. at Eton and Oxford and served with the Grenadier Guards in the F.W.W. Entering parliament as a Unionist (Stockton-on-Tees 1924-9 and 1931-45, and Bromley 1945-64), he held his first important post as Min. of Housing 1951-4, and was then Min. of Defence until he succeeded Eden as For. Sec. in 1955, and as Chancellor of the Exchequer 1955-7 introduced Premium Bonds. Taking over as P.M. in 1957, following Eden's resignation after Suez, he led his party to victory in the 1959 elections on the slogan 'You have never had it so good'. The Cyprus dispute had already been temporarily settled in 1959, but his realization of 'the wind of change' in Africa led to rapid recognition of the independence of new states, and though Britain's entry to the Common Market failed, the securing of the nuclear test-ban treaty just before his resignation through ill-health in 1963 counteracted to some extent the unfortunate effect at home of the Vassall spy case and the Profumo scandal.

His only son, Maurice Victor M. (1921-), entered parl. in 1955 and in 1963-4 was Economic Sec. to the Treasury in the Douglas-Home administration. See illus. under EISENHOWER.

MACMILLAN, Kirkpatrick (d. 1878). Scottish blacksmith who invented the bicycle in 1839. His invention consisted of a hobby-horse fitted with treadles, and propelled by pedalling.

McNAMA RA, Robert Strange (1916-). American politician. Asst. prof. in business administration at Harvard 1940-3, he served with the Army Air Force 1943-6, and was with the Ford Motor Co. 1946-61 (pres. 1960-1). A Democrat, he was Sec. of Defense 1961-8, then Pres. of the World Bank.

MacNEICE, Louis (1907-63). Anglo-Irish poet. B. in Belfast, he was ed. at Oxford, and lectured in classics at Birmingham 1930-6 and London 1936-40.

Free of the rigid political alignments of his contemporaries, he made his début with *Blind Fireworks* (1929) and developed a polished ease of expression, reflecting his classical training, in dealing with man in society, as in *Autumn Journal* (1939). Later vols. are the highly original *The Dark Tower* (1946), written for the B.B.C., for whom he wrote features 1941-9 'like

a poet, but with a journalist's instinct for essence'; a verse translation of Goethe's *Faust*, and the radio play *The Administrator* (1961).

MACON (mahkon'). Cap. of the French dept. of Saône-et-Loire, on the Saône, 45 m. N. of Lyons. A town dating from ancient Gaul, it is famous for wine. Pop. (1962) 27,669.

McPHERSON, Mrs. Aimée Semple (1882-1944). American evangelist and 'hot-gospeller'. She built the Angelus Temple in Los Angeles as the centre of the 'Four-Square Gospel', and visited London, New York, and Paris for 'revivalist' gatherings.

MACPHERSON, James (1736-96). Scottish author. B. at Ruthven, in 1760 he pub. *Fragments of Ancient Poetry collected in the Highlands of Scotland*, which was followed by the epics *Fingal* (1761) and *Temora* (1763), which he claimed as the work of the 3rd cent. bard Ossian. Challenged by Dr. Johnson, M. failed to produce his originals and a committee decided in 1797 that M. had combined fragmentary materials with oral tradition. Nevertheless, the works of 'Ossian' exercised a considerable influence on the development of the Romantic movement in Britain and abroad.

McQUAID, Charles (1895-). Irish R.C. churchman. A classical scholar, he was appointed abp. of Dublin and primate of Ireland in 1940, and exerts strong guiding influence on his flock.

MACQUARIE (makwor'e), Lachlan (1761-1824). Scottish administrator who succeeded Bligh as governor of N.S.W. in 1808, and raised the demoralized settlement to prosperity. In 1821 he returned to Britain in poor health, exhausted by struggles with his opponents. Lachlan r. and M. r. and is. are named after him. M. Island is a Tasmanian dependency. Some 20 m. long by 2 wide, it is c. 850 m. S.E. of Hobart, and uninhabited save for an Australian govt. research station.

MACREADY, William Charles (1793-1873). British actor. In 1816 he made his début at Covent Garden, and rose to become England's leading actor. He was very successful as Macbeth, Lear, John, and Henry IV.

MacSWINEY, Terence (1883-1920). Irish patriot. Mayor of Cork, he was imprisoned by the English and starved to death after hunger-striking for 74 days, the longest fast in medical history.

M'TAGGART, John M'Taggart Ellis (1866-1925). British philosopher. Lecturer at Trinity Coll., Cambridge 1897-1923, he was influential as leader of the Hegelian school in England, e.g. *The Nature of Existence* (1921-7). Although an atheist, he believed in the immortality of the soul.

MADAGA'SCAR. Island off the S.E. coast of Africa, separated from the mainland by the Mozambique Channel. It was discovered by the Portuguese, Diego Diaz, in 1500. The interior is mountainous, the highest peak being Ankaratra (nearly 9,000 ft.). The lower regions are fertile, and there are dense forests round the coast. The only r. of any size is the Mangoka. The climate is tropical. Area 228,500 sq. m. For M.'s history, industry, etc., see MALAGASY REPUBLIC.

MADARIAGA (mahdahre-ah'gah), Don Salvador da (1886-). Spanish author. Formerly active as a diplomat, he has been in exile since the Civil War as a

MARTEN

and is about 2-2½ ft. long. It is found in Britain. The stone or beech M. (*M. foinea*) is lighter in colour. The sable (*M. zibellina*) lives in E. Siberia, and provides the most valued fur. The largest is the pekan (*M. pennanti*), with black fur and reaching a length of 4 ft., of N. America.

MARTHA'S VINEYARD. Island (20 m. long by 10 m. wide) off the coast of Cape Cod, Mass., where

once lived the whaling captains whose houses are now owned by the wealthy as summer homes. Edward Kennedy and a girl companion, Mary Jo Kopechne, were involved in a car crash off nearby Chappaquiddick Is. in July 1969; the girl was drowned.

MARTIAL (mahr'shial) (Marcus Valerius Martialis) (c. A.D. 41-c. 104). Latin epigrammatist. B. in Bilbilis, Spain, he came to Rome in 64, where he lived by his literary and social gifts, retiring to his native place in 98. His poetry reflects contemporary Roman life, and although licentious, is unrivalled in correctness of diction, versification, and form.

MARTIAL LAW. As distinguished from military law, i.e. the law governing the conduct of the armed forces, whether within the realm or elsewhere, in peace or in war, the legal position as regards M.L. is difficult of definition in England. In effect, when war, rebellion, etc., are in progress in an area the military authorities are recognized as having powers to maintain order by summary means. In the United States M.L. is usually proclaimed by the pres. or the gov. of a state in areas of the country where the civil authorities have been rendered unable to act, or to act with safety. M.L., though neither in the constitution nor laid down in statutes, has frequently been used in the U.S., e.g. in Hawaii 1941-4 after the bombing of Pearl Harbor.

MARTIN DU GARD (mahr'tiñ' dü gahr), Roger (1881-1958). French novelist. B. at Neuilly, of bourgeois stock, he realistically recorded the way of life of his class in the 8 vol. *Les Thibault* (1922-40). He was awarded a Nobel prize in 1937.

MARTIN, St. (c. 316-400). Bishop of Tours. B. in Pannonia, a soldier by profession, he was converted to Christianity, left the army, and lived for 10 years as a recluse. After being elected bishop of Tours c. 371, he worked for the extinction of idolatry and the extension of monasticism in France. He is usually represented as dividing his cloak with a beggar.

MARTIN V. Pope, 1417-31. A member of the Roman family of Colonna, he was elected during the Council of Constance, and ended the Great Schism.

MARTIN, Archer John Porter (1910-). British biochemist. He was staff member 1948-52, and head of the physical chem. div. at the Nat. Inst. of Med. Research, London, 1952-9, when he became director of Abbotsbury Laboratories Ltd. A specialist in a refined method of chemical analysis - chromatography (q.v.) - he shared a Nobel prize in 1952 with his colleague R. Synge.

MARTIN, (Basil) Kingsley (1897-1969). British author. Son of a Unitarian minister, he was ed. at Magdalene Coll., Cambridge, lectured in political science at the

KINGSLEY MARTIN
Caricature by David Low.

L.S.E. 1923-7 and after 4 years with the *Guardian*, ed. the *New Statesman* 1931-60, making it the voice of the Left. A hard-hitting controversialist, respected as much by opponents as supporters, he published such lively books as *The Triumph of Lord Palmerston* (1924, rev. 1963), a study of public opinion in England before the Crimean War, *The Press the Public Wants* (1947), *The Crown and the Establishment* (1962), and *Father Figures* (1966), and *Editor* (1968), vols. of autobiography.

MARTIN, John (1789-1854). British painter of landscapes and religious subjects. B. in Northumberland, he settled in London in 1806, and first exhibited at the R.A. in 1812. His pictures, such as 'Belshazzar's Feast' and 'The Deluge', show an exaggerated sense of drama. His brother, Jonathan M. (1782-1838), became a convert to Methodism, and followed up his warnings to the established clergy of judgment to come by setting fire to York Minster in 1829. He was condemned to an asylum.

MARTIN, Paul (1903-). Canadian Liberal statesman and lawyer. Entering parl. in 1938, he was Sec. of State 1945-6, Min. of Health 1946-7, Sec. of State for External Affairs 1963-8, and Min. without Portfolio from 1968.

MARTIN, Richard (1754-1834). Irish landowner, lawyer and humanitarian, known as 'Humanity Martin'. He founded the Royal Society for Prevention of Cruelty to Animals in 1824.

MARTIN, Sir Theodore (1816-1909). British man-of-letters. Under the pseudonym of 'Bon Gaultier', he collaborated with W. E. Aytoun in a collection of contemporary parodies, *Bon Gaultier Ballads*, in 1845.

MARTIN, Violet Florence (1862-1915). Irish novelist known under the pseudonym 'Martin Ross'. B. in Galway, she collaborated with her cousin, Edith C. Somerville, in novels of Anglo-Irish provincial life, e.g. *Some Experiences of an Irish R.M.* (1899), and *In Mr. Knox's Country*.

MARTIN. Several genera of birds, allied to the swallow, in the family Hirundinidae. The European house M. (*Delichon urbica*), a summer migrant from Africa, is blue-black above and white below, distinguished from the swallow by its shorter, less forked tail. The cup-like mud nest is usually constructed under the eaves of buildings. Best-known of other species are the brownish European sand M. (*Riparia riparia*), which tunnels 2-3 ft. to make a nest in sandy banks, also a migrant from Africa, and the common purple M. of N. America (*Progne subis*), a handsome steely-blue bird which often nests in hollow trees.

MARTINEAU (mahr'tinö), Harriet (1802-76). British author. B. at Norwich, she is mainly remembered for her children's stories, e.g. 'The Settlers at Home' and 'Feats on the Fiord', which appeared under the title of *The Playfellow* (1841).

MARTINET (mahr'tineh'), Jean (d. 1762). French inspector-gen. of infantry under Louis XIV, whose constant drilling brought the army to a high degree of efficiency - hence the use of his name to mean a strict disciplinarian.

MARTINEZ RUIZ, José. See AZORÍN.

MARTÍNEZ SIERRA (marté'neth sē-er'rah), Gregorio (1881-1947). Spanish novelist and dramatist. B. in Madrid, he wrote more than 40 plays, in many of which he collaborated with his wife, María M. S.; they include *Canción de Cuña* (1911), and the ecclesiastical *El Reino de Dios* (1915).

MARTINI, Simone (c. 1284-1344). Italian painter.

shore islands, more than 2,000 sq. m.; pop. (est.) 2,000,000.

MADURAI (mudoor'i). Town on the r. Vaigai in Madras state, India, cap. of M. dist., site of the great Hindu temple of Sundareswara, and of M. Univ. (1966). Cotton textiles and brassware are made; rice, tobacco, spices exported. Pop. (1961) 424,975.

MAEANDER (mē-an'der). Anglicized form of the ancient Greek name of a river in Turkey-in-Asia (Turkish, Buyuk Menderes, great Menderes). It rises near Afhonkarahisar (in anc. Phrygia) and flows for c. 250 m. by a very winding course into the Aegean: hence the word 'meander'.

MAESTRICHT. See **MAASTRICHT**.

MAETERLINCK (maht'erlingk), Maurice, count (1862–1949). Belgian dramatist and philosopher. B. at Ghent, he went to Paris in 1887, and in 1889 produced

waged periodic campaigns of suppression, notably in 1927 and 1963–4. The M. has spread abroad, its biggest offshoot being in the U.S.A., where it is known as *Cosa Nostra* (It. 'our thing'), and is estimated to comprise 1 million citizens, with an annual income of over \$40 billion. None but those of Italian descent is eligible for membership, organization is in 'families', each with its own boss or *capo*, and a committee of 12 bosses from N.Y., Chicago and other leading cities rules nationally. Activities range from 'protection' and illicit gambling to drug peddling and murder. In 1962–3 sensational revelations were made by Joe Valachi, who, while in Atlanta's Federal goal killed a fellow-prisoner, whom he thought had been detailed by the M. to kill him. Intimidation of witnesses prevents elimination of the M. and *Cosa Nostra*: Nixon initiated a new campaign 1969.

MA'GADHA. A kingdom of ancient India, roughly corresponding to the middle and southern parts of modern Bihar; it witnessed many incidents in the life of the Buddha, and was the seat of the Maurya dynasty, founded by Chandragupta (q.v.).

MAGALLANES. Another name for **PUNTA ARENAS**.

MAGDEBURG (mahg'deboorg). Cap. of M. district, E. Germany, on the Elbe, 81 m. S.W. of Berlin. It has a Gothic cathedral, one of the few buildings to survive the Thirty Years War. Motor-cars, paper, textiles, machinery, etc., are produced, and there are sugar refineries. It dates from the 9th cent. and suffered heavy damage in the S.W.W. from Allied air attack and when captured by the U.S. 9th Army, 18 April 1945. Pop. (1966) 267,817.

MAGELLAN (majel'an), Ferdinand (c. 1480–1521). Portuguese navigator. He was brought up at court and entered the royal service, but later transferred his services to Spain. His proposal to sail to the E. Indies by the W. was accepted, and in 1519 he started from Seville. He discovered and sailed through *M. Strait*, crossed the Pacific, to which he gave its name, and in 1521 reached the Philippines. Here he was killed in battle: 18 of his companions reached Seville in 1522, completing the first voyage round the world. In 1964 the wreck of his flagship *Concepcion* was thought to have been located off Leyte in the Philippines where she was abandoned.

MAGENTA (mahjen'tah). Town in Milan prov., Lombardy, Italy, 15 m. W. of Milan, the scene of a victory by the French and Sardinians over the Austrians in 1859. Pop. (1960) 17,450.

MAGGIORE (mahjō're), Lago. Lake in Piedmont and Lombardy, Italy, and the Swiss canton of Ticino. Locarno is on its N. shore. It is 39 m. long, and $\frac{1}{2}$ m. to $5\frac{1}{2}$ m. wide, and is famous for the beauty of its scenery.

MAGGOT. Name of the footless larvae of insects, especially those of flies, a typical example being the larva of the blow-fly which is deposited on flesh.

MAGHREB (mah'greb). Name for N.W. Africa (Arabic 'west', 'sunset'): the M. powers – Algeria, Libya, Morocco, and Tunisia – agreed on economic co-ordination 1964–5.

MAGI (mā'ji). The name of the priesthood of the Persian (Zoroastrian) region, used in the Vulgate – where the authorized version gives 'wise men'. The three M. who came to visit the infant Christ with gifts of gold, frankincense, and myrrh were in later tradition described as 'kings'. The 'Adoration of the Magi' has inspired many artists.

MAGIC. The art of controlling the forces of nature by means of charms and ritual. It originated in the idea that like produces like, e.g. the ceremonial sprinkling of water will produce rain, a dance imitating a successful hunt will ensure success in hunting, to destroy the image of an enemy will cause his death. It is now generally accepted that most primitive religious practices are of magical origin. Under Christianity those still practising the ancient rites

MADRID. Of the 16 original gates 3 survive. Here is the Alcázar Gate in the fashionable Plaza de la Independencia. Courtesy of the Spanish Tourist Office.

the vol. of symbolist verse *Hothouses*, and the play *The Princess Maleine*. He achieved an international reputation with *Pelléas and Mélisande*, which inspired music by Debussy and Sibelius. Later plays incl. *Monna Vanna* (1902), *The Blue Bird*, *Mary Magdalene*, *The Betrothal*, and *The Burgomaster of Stilemonde* (1918), celebrating Belgian resistance in the F.W.W. – a theme which caused his exile to America in 1940. Among his philosophical works are *The Treasure of the Humble* (1896), *The Life of the Bee*, *The Buried Temple*, and *Death* (1912).

MAFEKING (maf'e-). A town in the N.E. of Cape Province, S. Africa, formerly the H.Q. of the administration of Bechuanaland Protectorate. It is chiefly famous for the siege during the South African War, when it was successfully defended against the Boers by a small garrison, under Baden-Powell, which held out from 12 Oct. 1899 until 17 May 1900. Pop. (1960) 8,280.

MAFIA (It. maf'ē-a; anglicized: maf'ēa). Originally a secret society of 15th cent. Sicily, hostile to the law and avenging their own wrongs by means of the vendetta. In the 19th cent. the M. was employed by absentee landlords to manage their *latifundia* (landed estates), and through terrorization, etc., soon became the unofficial ruler of Sicily. In spite of loss of power on the *latifundia*, which were expropriated and divided among the peasants after the S.W.W., the M. is still powerful in Sicily, especially in the towns, where they have turned their attention to industry. The govt. has

MARY. 'The Immaculate Conception', a fervently devout interpretation by Velasquez.

accepted the crown jointly with William. During his absences abroad she took charge of the government, and showed courage and resource when invasion seemed possible in 1690 and 1692.

MARY, Queen of Scots (1542–87). She succeeded her father, James V, in infancy, and as a child was sent to France, where she m. the dauphin, later Francis II. After his death she returned in 1561 to Scotland, which, during her absence, had accepted Protestantism. She m. her cousin, the earl of Darnley, in 1565, but they soon quarrelled, and Darnley took part in the murder of M.'s secretary, Rizzio. In 1567 he was assassinated as the result of a conspiracy formed by the earl of Bothwell, possibly with M.'s connivance, and shortly after Bothwell carried M. off and m. her. A rebellion followed; defeated at Carberry Hill, M. abdicated and was imprisoned. She escaped in 1568, raised an army, and after its defeat at Langside fled to England. Elizabeth held her a prisoner, while the R.C.s., who regarded M. as rightful queen of England, formed many conspiracies to place her on the throne. The discovery that she was involved in Babington's plot led to her trial and execution at Fotheringay Castle in 1587.

MARY (1457–82). Duchess of Burgundy. The dau. of Charles the Bold, she m. Maximilian of Austria in 1477, thus bringing the Low Countries into the possession of the Habsburgs, and ultimately of Spain.

MARY (mah'rē). Town in Turkmen S.S.R., on the Murgab. It dates from the 19th cent. and lies 18 m. W. of the ancient city of Merv (q.v.). It makes textiles, carpets, and metal goods and has food factories. Pop. (1967) 58,000.

MARYBOROUGH. Australian coastal town in S.E. Queensland, near coal- and gold-mining fields. It has iron and steel foundries. Pop. (1966) 19,647.

MARYBOROUGH. PORT LAOIGHIS.

MARYLAND. An Atlantic state of U.S.A., between

Pennsylvania and Virginia. It has a much-indented coastline, and is penetrated by Chesapeake Bay, a wide arm of the Atlantic. In the W. are wooded mountains and coal is mined; the centre is undulating wheatland, and on the coastal plains there are tobacco plantations, fruit orchards, etc. Fish is abundant, and oysters are very plentiful. The cap. is Annapolis; the largest city is Baltimore. The first settlers in M., 1634, were Roman Catholics, following the grant to Lord Baltimore in 1632 of a royal charter to establish a colony N. of the Potomac. They called their first township St. Mary's; it remained the cap. until displaced by Annapolis, 1694. M. was one of the 13 original states forming the Union. Area 10,577 sq. m.; pop. (1960) 3,100,689.

MARY MAGDALENE. Probably from Magdala, she is said in the Gospels to have had 7 demons cast out from her. She was present at the Crucifixion, and met the risen Jesus.

MARY OF MODENA (1658–1718). Queen consort of England and Scotland. The dau. of the duke of Modena, she m. James, duke of York, later James II, in 1673. The birth of her son, James, in 1688, which was widely believed to be fraudulent, gave the signal for the Revolution, and M. fled to France.

MASACCIO (mahsah'chō). Name given to the Florentine painter Tomaso di Giovanni di Simone Guidi (1401–28). B. nr. Florence, where, with his teacher Masolino di Panicale (c. 1384–1447), he executed his most famous work, the decoration of Santa Maria del Carmine. He was one of the first to apply the laws of perspective, had a good knowledge of anatomy and made effective use of light and shade.

MASA'DA. Rock fortress 1,300 ft. above the W. shore of the Dead Sea, Israel. Besieged by the Romans A.D. 72, its population of 953 committed mass suicide: the site was excavated 1963–5, incl. the palace of Herod.

MASAI (mahsī'). African people remarkable for their fine physique. Originally warriors and nomadic breeders of humped zebu cattle, on which they relied for their diet of milk, meat and blood, they disdained agriculture but are gradually adopting a more settled life. Their territory is divided between Tanganyika and Kenya, and at the time of independence in 1963 they unsuccessfully demanded its total inclusion in either one country or the other. Neither Negro nor Bantu, they speak a Hamitic language.

MASARYK (maz'erik), Thomas Garrigue (1850–1937). Czech statesman. B. of a humble Moravian family, he was apprenticed to a locksmith, but later studied at Leipzig and Vienna, and was a prof. at Prague univ. 1882–1911. On the outbreak of the F.W.W., he took the Allied side, and became a lecturer on Slavonic history and sociology at King's Coll., London. Always a champion of national minorities, he directed the Czech revolutionary movement, founding with Beneš and Stefanik the Czechoslovak National Council, and in 1918 was elected 1st pres. of the newly formed Czechoslovak Republic. He was thrice re-elected, but resigned in 1935 in favour of Beneš. His son Jan Garrigue M. (1886–1948) entered the Czech diplomatic service in 1918, and was Min. to Britain 1925–38. In 1940 he became For. Min. to the exiled govt. in London and continued to hold the post on its return to Prague in 1945, but when reorganization came following Communist pressure in Feb. 1948, he allegedly committed suicide. For 20 years no reference was allowed to be made to the Masaryks, but in the liberalisation of 1968 tribute was paid, and an official investigation into Jan M.'s death began.

MASCAGNI (mahskahn'yē), Pietro (1863–1945). Italian composer. B. at Leghorn, he became famous as the composer of the one-act opera *Cavalleria Rusticana*, first produced in Rome in 1890.

Budapest, Hamburg (1891-7), and at the Imperial Opera, Vienna (1897-1907), and later went to the U.S.A., becoming chief conductor at the Metropolitan Opera House (1907), and director of the Philharmonic Orchestra, New York. Outstanding among his symphonies is the 4th; *Das Lied von der Erde* is a symphony for solo voices and orchestra; his songs and song-cycles incl. the moving *Kindertotenlieder*.

MAHOGANY. Timber obtained from several genera of trees found in America espec. British Honduras. It is a warm red colour, very durable, and takes a high polish. True M. comes from the *Swietenia* but other types come from the Spanish and Australian cedars, the Indian redwood, and other trees of the family Meliaceae, native to Africa and the E. Indies.

MAHON (mahon'). Cap. and port of the Spanish island of Minorca, probably founded by the Carthaginians. It was in British occupation 1708-56 and 1762-82. Pop. (1967) 16,550.

MAHARATTAS or **Marathas**. A mixed race living in W. and central India, and speaking the Marathi language. In the 17th and 18th cents. they formed a powerful military confederacy, which proved a dangerous rival to the Mogul emperors, until their power was broken by the Afghans in 1761. M. generals founded great states in the Deccan and central India, e.g. Indore, Gwalior, and Nagpur. A series of wars with the British, 1779-1817, ended in the annexation of most of their territory. See **MAHARASHTRA**.

MAIDEN CASTLE. Name of a prehistoric fort and successive later earthworks on Fordington Hill, near Dorchester, Dorset, England. A rampart, about 60 ft. high, encloses an area of 45 acres. The site was inhabited from Neolithic times (c. 2000 B.C.), and was stormed by the Romans A.D. 43.

MAIDENHAIR. A fern (*Adiantum capillus-veneris*) with hair-like fronds terminating in small kidney-shaped pinnules containing the spores. It is widely distributed in America, and is sometimes found in the W. of the British Isles.

MAIDENHEAD. English town (bor.) and boating centre in Berkshire, 24 m. W. of London on the Thames. Two bridges, one of which was built in 1772, cross the river. Pop. (1961) 35,374.

MAIDS OF HONOUR. In Britain the immediate attendants on the person of a queen. They are chosen generally from the daus. and grand-daughters of peers, but in the absence of another title bear that of Honourable. Queen Elizabeth II was attended by 6 at her coronation.

MAIDSTONE. County town of Kent, England, on the Medway, 34 m. S.E. of London. There are the ruins of All Saints' Coll., founded in 1260, suppressed 1547, a 14th cent. church, and Chillington Manor House, an Elizabethan mansion, used as a museum and art gallery. Pop. (1961) 59,761.

MAIKOP (mi'kop). Cap. of Adyge autonomous region of the R.S.F.S.R. on the Bielaia r. It has timber mills, distilleries, tanneries, and tobacco and furniture are manufactured. M. petroleum fields, discovered in 1900, are linked by pipe-line with Tuapse on the Black Sea. Pop. (1967) 106,000.

MAILER, Norman (1923-). American novelist. Born in New Jersey, the son of a South African immigrant, he is best known for his novel of the S.W.W. *The Naked and the Dead*, (1949). He ran unsuccessfully for mayor of N.Y. 1969, campaigning for N.Y. as 51st state.

MAILLART (mahyahr'), Ella 'Kini' (1903-). Swiss traveller. She has travelled in Asiatic countries, and her books incl. *Forbidden Journey* (1937) and *The Land of the Sherpas* (1955).

MAILLOL (mahyol'), Aristide Joseph Bonaventura (1861-1944). French sculptor. B. at Banyuls, he was a painter and designer before turning his attention to sculpture and held his first exhibition in 1902,

Maillol's 'Striding Torso'.

becoming the leading sculptor in France. His principal works incl. the figure of 'Fame' for the Cézanne monument at Aix-en-Provence, and 'Flora' and 'Pomona' at Winterthur.

MAIL ORDER. Method of retail selling through specialized M.O. houses, by which the customer orders goods through the mail, usually with the aid of a glossy, illustrated catalogue. Originating as an organized business in the U.S., where the great distances made it a boon to isolated agricultural communities, it has expanded rapidly. Reduced prices to the consumer can follow from bulk buying and elimination of the middleman. Almost all the transactions are on credit, and sales are concentrated in clothing, footwear, household textiles and soft furnishings, though almost every known item is available by this method. In Britain M.O. has been comparatively slow to develop (3 per cent of retail sales in 1961) but is rapidly growing.

MAIMONIDES (mimon'idēz), Moses (Moses Ben Maimon) (1135-1204). Jewish codifier and philosopher. B. at Cordova, he evolved a philosophy of religion of great significance. His Code of Jewish Law is known as the *Mishneh Torah*, and his philosophical classic is *The Guide to the Perplexed*.

MAINE. The north-easternmost state of the U.S.A., and the largest New England state. It has a rugged coast, and there are some 1,300 islands off the shore. The surface is undulating with a number of mountain peaks, culminating in Mt. Katahdin (5,273 ft.). There are many lakes. Rivers incl. the Penobscot and Kennebec. In the valleys dairy farming and market gardening are carried on. 25,000 sq. m. of M. are forested, and pulp and paper are the chief products; blueberries, apples and shell-fish are produced, and catering for holiday-makers is an important industry. The cap. is Augusta; the largest city, Portland. Area 33,215 sq. m.; pop. (1960) 969,265.

MAINE. Old French prov. bounded on the N. by Normandy, on the W. by Brittany, and on the S. by Anjou. The modern depts. of Sarthe and Mayenne approximately correspond with it.

MAINE. French river, 7 m. long, formed by the junction of the Mayenne and Sarthe; it enters the Loire below Angers, and gives its name to M.-et-Loire dept.

MAINTENON (mahtnoñ'), Françoise d'Aubigné, marquise de (1635-1719). Wife of Louis XIV. The dau. of a Protestant, she was m. in 1657 to the poet Scarron (1610-60). Louis XIV employed her as governess, gave her a title in 1678, and soon afterwards made her his mistress. After the death of his queen she was secretly m. to him c. 1685.

MAINZ (mints). Cap. of Rhineland-Palatinate, W. Germany, on the Rhine, 23 m. W.S.W. of Frankfurt-am-Main. In Roman times it was a fortified camp and became the cap. of Germania Superior. Printing was invented c. 1448 in M. by Gutenberg. The Romanesque cathedral was severely damaged in the S.W.W. Pop. (1967) 146,200.

MAISKY (misk'kē), Ivan Mikhailovich (1884-). Soviet diplomat. A member of the revolutionary movement from 1899, he was twice exiled to Siberia and first visited Britain as a political refugee in 1912 as described in his *Journey into the Past* (1962), returning to Russia in 1917. After the revolution, he entered the diplomatic service, was Min. to Finland 1929-32 and ambassador to Britain 1932-43. He was

MASSACHUSETTS. Incorporated in 1861, the Massachusetts Institute of Technology has made a significant contribution to America's leading role in this field in the twentieth century. It was here in 1962 that light bursts were transmitted to the moon, the reflections being received through a telescope system at M.I.T.'s Lincoln Laboratory at Lexington.

Courtesy of Massachusetts Institute of Technology.

Ocean and incl. the 2 large islands of Nantucket and Martha's Vineyard. The N. coast is very rocky. Inland the country rises gradually to the Berkshire hills. There are many lakes, and the chief rivers are the Merrimac and the Connecticut. Agriculture is still important, but M. is largely industrial, e.g. electronics and communications equipment, shoes, textiles, and machine tools. Building stone is quarried. The cod fisheries have been famed for centuries. The famous M.I.T. (M. Institute of Technology, 1861) is at Cambridge, Mass., seat also of the Univ. of Harvard (1636).

The Pilgrim Fathers were the first settlers, at Plymouth in 1620, and the narrow Puritan outlook was long predominant. It was one of the original 13

states of the Union. The cap. is Boston. Area 8,257 sq. m.; pop. (1960) 5,148,578.

MASSAWA. Chief port of Ethiopia, in Eritrea, on the Red Sea, with a good harbour. Salt is produced and pearl fishing carried on. One of the hottest inhabited spots in the world, the temperature reaching 100°F (37.8°C) in May, it was held by the Italians 1885–1941. Pop. (est.) 30,000.

MASSÉNA (mahsānah'), André (1756–1817). Marshal of France. He served in the revolutionary wars, and under Napoleon was created a marshal of France in 1804, duke of Rivoli in 1808, and prince of Essling in 1809. He was in command in Spain 1810–11.

MASSENET (mahsnā'), Jules Émile Frédéric (1842–1912). French composer. B. near St. Étienne, he composed many operas, incl. *Hérodiade* (known in England as *Salomé*), *Manon* (1884), *Le Cid* (1885), and *Thaïs*; and also ballets, oratorios and orchestral suites, incl. *Scènes pittoresques*.

MASSEY, Sir Harrie Stewart Wilson (1908–). Australian physicist. Prof. of mathematics at Univ. Coll., London, 1938–50, he was on a special mission to Berkeley, California, 1943–5, and in 1950 became Quain prof. of physics at London. He has written largely on atomic physics and was knighted in 1960.

MASSEY, Vincent (1887–1967). Canadian Liberal statesman. B. at Toronto of a wealthy family of agricultural-machinery manufacturers, he was ed. at the univs. of Toronto and Oxford. With the estate of his grandfather, Hart M. (1823–96), he helped estab. in 1918 the M. Foundation which has erected many educational buildings, incl. M. Coll., Univ. of Toronto; his father Chester D. M. becoming the Foundation's chairman, until he succeeded him in 1926. He entered politics in 1925 at the invitation of Mackenzie King, although they later often disagreed, and was Min. to the U.S.A. 1926–30, High Commissioner to the U.K. 1935–46, and was 1st Canadian-born Gov.-Gen. 1952–9. His brother, Raymond M. (1896–), an actor, became a U.S. citizen in 1944. He made his stage début in 1922, appeared in such films as *Things to Come* and *Mourning Becomes Electra*; and in the television 'Dr. Kildare' series played the revered Dr. Gillespie.

MASSEY, William Ferguson (1856–1925). N.Z. Conservative statesman. B. in Ireland, he entered the N.Z. parliament in 1894, was leader of the opposition in 1903, and was P.M. 1912–23.

MASSILLON (mahsēyoh'), Jean Baptiste (1663–1742). French Catholic cleric. Joining the Congregation of the Oratory at 18, he became bp. of Clermont in 1717, and was celebrated for his gently persuasive preaching.

MASSINE (mahsēn'), Léonide (1896–). Russian dancer and choreographer. He appeared with the Diaghilev Ballet Russe in Paris (1914–20), and subsequently danced leading roles with many major European and American companies, in particular the Ballet de Monte Carlo (1932–41), to which he was also Artistic Director and Choreographer; he was famous for his interpretations of character roles. His choreographic work incl. the first Cubist ballet *Parade* (1917); *The Three Cornered Hat* and *La Boutique Fantasque* (1919); *Le Sacré du Printemps* (1920); a ballet based on Berlioz' *Symphonie Fantastique* (1936); *Daphnis and Chloe* (1944); and *Donald of the Burthens* (1951). He has appeared in films, e.g. *Red Shoes* (1948) and *Tales of Hoffmann* (1951).

MA'SSINGER, Philip (1583–1640). English dramatist. B. at Salisbury, he settled in London c. 1606. His masterpiece is *A New Way to Pay Old Debts* (c. 1625), in which the usurer, Sir Giles Overreach, appears. He collaborated with Fletcher and Dekker, and some critics credit him with a share in Shakespeare's *Two Noble Kinsmen* and *Henry VIII*.

MASS OBSERVATION. Method of ascertaining general facts bearing on contemporary life, and also the name of a society founded in London in 1937 for this purpose, and employing a panel of observers and a number of trained investigators. See GALLUP and HARRISON.

MASSON (mahsoh'), André (1896–). French artist. Joining the Surrealists in 1924, he often uses greenish-brown tints in his work, which strikes a philosophical note, and has been influential in the U.S.A.

MASSŌ'RAH. A collection of philological notes on the Hebrew text of the O.T. At first merely oral tradition, the M. was committed to writing in the Aramaic language at Tiberias in Palestine between the 6th and the 9th cents A.D.

MASS SPECTROMETER. An instrument in which positive ions (q.v.) of a material are separated by an electromagnet system which permits accurate measurement of the relative concentrations of the various ionic masses present, and detects non-radioactive isotopes.

MASSEY COLLEGE. Completed 1963 for the University of Toronto to the design of Ronald Thom.

Photo: Jack Marshall & Co. Ltd.

urgent eradication campaign. The aim was to reduce mosquito numbers sufficiently to break the parasite's transmission cycle, and thus eliminate it, and was stimulated by the development of mosquito resistance to the new residual insecticides D.D.T., dieldrin, etc., and of parasite resistance to the drugs plasmoquin, atabrin, chloroquine—synthetics which avoid the disadvantages of quinine. Annual world deaths are still c. 1,000,000.

Anopheles mosquito

MALAWI. Country in central Africa, known until 1964 as Nyasaland. The land area lies W. and S. of Lake M., which belongs to M., and incl. most of the Shiré basin and the Shiré Highlands. The cap. is Zomba (to be replaced by Lilongwe); other towns are Blantyre-Limbe, in the Shiré Highlands, Fort Johnston on Lake M., Karonga, and Kota-Kota. The chief products are tobacco, cotton, tea, coffee, sugar cane, and rice. Area 47,949 sq. m. (11,000 sq. m. water); pop. (1966) 4,042,412. M. was a Brit. protectorate from 1891, part of the Fedn. of Rhodesia and Nyasaland 1953–63, and became self-governing 1963, independent 1964, and a rep. (within the Commonwealth) 1966.

MALAWI, Lake. Formerly Lake Nyasa (q.v.).

MALAY PENINSULA. Southern projection of the continent of Asia lying between the Strait of Malacca, which divides it from Sumatra, and the China Sea. The northern portion is partly in Burma, partly in Thailand; the southern forms part of the Fed. of Malaysia (q.v.). The island of Singapore lies off its southern extremity.

The main physical feature is a central limestone range of wooded mountains, rising to above 7,000 ft. and flanked by undulating hills and alluvial plains. Mostly jungle-covered, they are watered by innumerable streams incl. the Perak, Bernam, and Muar on the W. and the Kelantan, Pahang, and Trengganu to the E. The extremely humid tropical climate has little difference between summer and winter, and there is a profusion of flora and fauna.

In ancient times the M.P. seems to have been dominated by various waves of immigrants from India, and was the centre (9th to 14th cents.) of Sri Vijaya, the great Malay Buddhist empire, which was ultimately overthrown by Majapahit, Java's last Hindu kingdom, which in its turn was destroyed by Islam.

MALAWI. Most of the country's tea is grown in the south in the Mlanje district, and this plantation lies at the very foot of 9,843 ft. high Mlanje Mountain, which rises rugged and cloud-capped.

Malacca became a centre of Islamic culture and an entrepôt for the spice trade, and a mighty Malay or Johore empire arose. Its growth was checked, however, by the conquest of Malacca by the Portuguese in 1511. In 1641 the Dutch ousted the Portuguese, and in 1773 the surrounding territory broke away from the Malay empire. Penang was founded by British interests in 1786, and Singapore in 1819. From 1874 Britain extended her control over the Malayan states, and before the S.W.W. the political organization of M. comprised the Straits Settlements (Singapore, Penang, incl. Prov. Wellesley, Malacca), the Federated Malay States (Perak, Selangor, Negri Sembilan, Pahang), and the Unfederated States (Johore, Kedah, Perlis, Kelantan, Trengganu). Occupied by the Japanese 1942–5, these various territories became in 1946 a crown colony, reorganized in 1948 as the *Federation of Malaya* which attained full independence 1957, and in 1963 (on the accession of Singapore, Sabah, and Sarawak) became known as Malaysia (q.v.).

MALAYSIA. Recent years have seen a spectacular revival of the ancient craft of the silversmith. Traditional methods are still used, and the individual pieces are the work of a single man, so that standards are high. Courtesy of Malaysian Govt.

MALAY'SIA. Federation in S.E. Asia, within the Brit. Commonwealth, formed in 1963 by the linking of the Fed. of Malaya, Sarawak, N. Borneo (then renamed Sabah), and Singapore (seceded 1965): its establishment was opposed by Indonesia, but militant 'confrontation' ceased 1966. Since 1966 the states of the former Fed. of Malaya have been known as West M., and Sabah and Sarawak as East M. The Supreme Head of the Federation is elected for 5 years by the rulers of the member states from among their number; the fed. parliament consists of a senate (partly elected, partly nominated) and a house of representatives elected by universal adult suffrage. The nat. language is Malay, usually written in Arabic characters, which belongs to the W. or Indonesian branch of the Malayo-Polynesian family of languages and originated in Malacca. English is also permitted officially in West M., and in East M. until the state legislatures decide. Islam is the official religion of West M.; East M. has no state religion.

Equatorial rain forest covers three-quarters of both East and West M., and besides the all-important rubber, copra, palm and coconut oil, timber, pineapples, kapok and rice (universally grown, but also imported) are produced. The chief mineral is tin, but gold, iron ore, bauxite, ilmenite, and coal are also mined, and there is petroleum in Sarawak. Industries are being developed to lessen M.'s dependence on raw material exports to more highly developed countries. Fishing is important. The cap. is Kuala Lumpur, also

MATLOCK. English spa and market town (U.D.) in Derbyshire, 15 m. N. of Derby on the Derwent. It has famous warm springs. Pop. (1961) 18,486.

MATO GROSSO. State of Brazil, between Bolivia on the W. and the R. Araguaia on the E. There are extensive forests (the name means dense forest), from which maté, quebracho, rubber, timber, etc., are extracted; diamonds, silver, gold, lead and other minerals are found, sugar and tobacco are grown, cattle reared. The cap. is Cuiaba. Area 484,360 sq. m.; pop. (1967) 1,322,000.

MATRIARCHY (mā'triahrki). That form of social organization in which the mother and not the father is head of the family, and descent and relationship are reckoned through the female line. M., often associated with polyandry, has been found in certain parts of India, in the South Sea Islands, Central Africa, and among Indian tribes in N. America.

MATSYS (mah'tis) (also Massys or Metsys), Quentin (1466–1530). Flemish painter. B. at Louvain, he was influenced by the masters of the Italian Renaissance, and is famous for his sacred pictures, such as the triptych of the 'Pietà', in the Antwerp museum. He also painted portraits, incl. one of Erasmus, which he presented to Sir Thomas More.

MATTER. In physics, the 'stuff' out of which all objects outside the mind are considered to be composed. The history of science is largely taken up with accounts of theories of matter, ranging from the hard atoms of Democritus to the 'waves' of modern electrophysical theory. See **ATOM**, etc.

MATTERHORN. Famous mountain peak in the Alps on the Swiss-Italian border S.W. of Zermatt, first climbed by Edward Whymper in 1865. It is 14,782 ft. high. See illus. under **ALPS**.

MATTHEW. Christian apostle and evangelist, the traditional author of the 1st Gospel. He is usually identified with Levi, who was a tax-collector in the service of Herod Antipas, and was called by Christ to be a disciple as he sat at the receipt of custom by the Lake of Galilee.

MATTHEWS, Sir Stanley (1915–). British footballer. B. in Stoke-on-Trent, the son of a boxer, he played for his native city 1931–47, was then with Blackpool till 1961, returning to Stoke till 1965, and gen. manager of Port Vale 1965–8. The length of his career at international level, his deft ball control and the grace of his style, make him unique in the history of the game.

MATTHIAS CORVINUS (1440–90). Greatest of the kings of Hungary. The son of the great warrior, John Hunyadi, he was elected king in 1458. His aim of uniting Hungary, Austria, and Bohemia involved him in long wars with the emperor and the kings of Bohemia and Poland, during which, in 1485, he captured Vienna and made it his capital.

MATTINGLY, Garrett (1900–62). American historian. Prof. of European history at Columbia from 1948, he pub. *Catherine of Aragon* (1942) *Renaissance Diplomacy* (1955), and a fascinating study of *The Defeat of the Spanish Armada* (1959).

MATTO GROSSO. Olderspelling of **MATO GROSSO**.

MAUBEUGE (mohböz?). Fortified French town in the Nord dept., on the Sambre, and close to the Belgian frontier. In the F.W.W., it was captured and held by the Germans 1914–18; in the S.W.W., 1940–4. Pop. (1962) 27,287.

MAUDLING (mawd'-), Reginald (1917–). British Cons. politician. Called to the Bar in 1940, he entered Parl. in 1950, becoming Min. of Supply (1955–7), Paymaster-Gen. (1957–9), Pres. of the Board of Trade (1959–61), and Colonial Sec. (1961–2). In 1962–4 he was Chancellor of the Exchequer, and in 1965 was a close contender with Heath for the succession to Home as leader of the Cons. Party.

MAUFE, Sir Edward (1883–). British architect. His works incl. the Anglican cathedral at Guildford,

REGINALD MAUDLING

Photo: Walter Bird.

the Runnymede (q.v.) Memorial, and reconstruction of the war-shattered Gray's Inn and Middle Temple. He was knighted in 1954.

MAUGHAM (mawm), (William) Somerset (1874–1965). Brit. author. B. in Paris, he was ed. at King's School, Canterbury, and Heidelberg univ. before studying medicine at St. Thomas's Hospital. He practised for a year in the London slums, but after the success of his first novel *Liza of Lambeth* (1897) devoted himself to writing. *Of Human Bondage* (1915)

has strong autobiographical elements, although whereas the hero was lame M.'s handicap had been a stammer; *The Moon and Sixpence* (1919), based on the life of Gauguin, was made into an opera by Gardner (q.v.), and *Cakes and Ale* (1930) satirizes Hardy and Walpole. Meanwhile M. had also been establishing a reputation as a fashionable dramatist, often having several plays running at the same time in the West End: *Lady Frederick* (1907), *The Circle* (1921) and *Our Betters* (1923). His cynical disillusion and urbanely ironic style is perhaps seen at its best in his short stories, e.g. *The Trembling of a Leaf* (1921) which incl. 'Rain', the story of an encounter between a missionary and a prostitute which has been dramatized and filmed. In the F.W.W. he was in Switzerland and Russia, where he was attempting to prevent the outbreak of revolution, as a secret agent – a role he again briefly played in the S.W.W. – and his adventures inspired the 'Ashenden' stories. His brother Frederic Herbert, 1st visct. M. (1866–1958), was a Judge of the High Court from 1928 and was raised to the peerage in 1939; and the latter's son Robert, 2nd visct. M. (1916–), is well known as an author under the name 'Robin M.', e.g. his novel *The Servant* (1948, filmed 1963).

MAU-MAU (mow mow). Terrorist secret society with Nationalist aims active in Kenya 1952–60. An offshoot of the Kikuyu Central Assocn., it was banned by the govt. at the outbreak of the S.W.W. Its members, chiefly of the Kikuyu tribe, were bound by oaths and ritual as repulsive as their methods of attack on white settlers, their cattle, and black Kenyans who opposed or refused to join them. In 1963 the independent Kenyan govt. offered free pardon to all M.-M. terrorists still outlawed.

MAUNDY THURSDAY. The Thursday before Easter. The name has been derived from the Lat. *mandatum*, the first word of the service chanted at the ceremony of washing the feet of pilgrims on that day, which was instituted in commemoration of Christ's washing the apostles' feet. The ceremony was observed in the Church from about the 4th cent., and performed by the English sovereigns until the time of William III. The rite of foot-washing was abandoned in 1754, but the Maundy money (M. pennies) is still presented in Westminster Abbey.

MAUPASSANT (mohpahsoñ?), Guy de (1850–93). French author. B. in Normandy, he entered the Civil Service, and was encouraged in his literary ambitions by Flaubert. In 1880 he estab. his reputation with the short story *Boule de Suif*. His later works include many short stories and novels, such as *Une Vie* (1883), *Bel-ami* (1885), and *Fort comme la mort* (1889). Becoming insane in 1892, he d. in a Paris asylum.

MAURIAC (mohr-ahk'), François (1885–). French novelist. B. in Bordeaux, he pub. his first important work *Le Baiser au lépreux* in 1922, which

11 Sept. 1709 the Allies, under Marlborough and Prince Eugene of Savoy, defeated the French under Villars.

MALRAUX (mah'roh'), André (1901–). French novelist. B. in Paris, he studied art and oriental languages, then went with an archaeological expedition to Indo-China. Later he became involved in the Kuomintang revolution, and *La Condition humaine* (1933: *Storm over Shanghai*) drew on these experiences. *L'Espoir* (1937: *Days of Hope*) is set in Civil War Spain, where he was himself a bomber-pilot in the International Brigade. In the S.W.W. he was an ardent supporter of the Gaullist Resistance. During 1947–50 he pub. a 3 vol. study of the psychology of art, and 1960–9 was Min. of Cultural Affairs.

MALT. Grain, usually barley, which has been allowed to germinate and then dried. It is used for brewing and fermentation.

The barley must be perfectly matured, and the grain of uniform size and variety. After steeping in hard water for 2 or 3 days at a temperature of 50–5° F, the grain swells and becomes soft. It is then spread out on the growing floors and kept at a temperature of 50°F., where germination commences. After 10 or 12 days it is transferred to the drying kilns and roasted. When dried, it is removed, passed through a beating machine, which removes the rootlets, and stored in airtight containers. For use in brewing, the malt is crushed to a fine powder. M. is used for colouring and flavouring, and by fermentation with yeast to produce alcohol.

MALTA, G.C. Largest of a group of islands in the Mediterranean, situated 58 m. S. of Sicily and 180 m. N. of the N. African coast. It is 17 m. by 9 m. and fairly low-lying. M. was colonized in turn by Phoenicians, Greeks, Carthaginians, and Romans – St. Paul was shipwrecked here – and fell to the Arabs in 870. It was the headquarters of the Knights of St. John from 1530, became French in 1798, and British in 1814. M. was a vital naval link in the S.W.W., and was besieged and attacked by air with heavy loss of life, so that the island was awarded the George Cross in 1942. In 1947 limited self-govt. was granted, and in 1964 M. became independent within the British Commonwealth: there is a House of Representatives (50 members).

British defence cuts and the closure of the Suez Canal by Egypt led to economic crisis in 1967–8, but long-term recovery is based on increased tourism, industrial development, conversion of the naval dockyard to commercial use, and establishment of a new freeport zone (Medport) in Marsaxlokk Bay. Agriculture and fishing are important, and lace-making a traditional craft. Valletta is the cap. and Luqa airport was completed 1958. The official languages are English and Maltese, related to Arabic and having ancient Phoenician survivals, but much influenced by Italian. Area 95 sq. m. With the islands of Gozo (26 sq. m.) and Comino (1 sq. m.) the total area of M. is 122 sq. m.; pop. (1966) 318,109.

MALTA, Knights of. See ST. JOHN OF JERUSALEM.

MALTHUS (mal'thus), Thomas Robert (1766–1834). British economist and churchman. B. near Guildford, Surrey, he is famous for his *Essay on the Principle of Population* (1798; 2nd ed. 1803), in which he maintains that population increases in geometrical ratio, whereas the food supply increases in arithmetical ratio. Hence the necessity for checks, of which moral restraint is one of the chief.

MALVERN, Godfrey Martin Huggins, 1st visct. M. (1883–). Rhodesian statesman. B. in Kent, and a doctor by training, he went out to S. Rhodesia in 1911, and continued in practice, after entering into politics in 1923. He was P.M. 1933–53 and strongly supported the creation of the Federation of Rhodesia and Nyasaland, of which he was P.M. 1953–6, and in 1955 was created visct.

MALVERN (maw'l'vern). English spa and inland

resort (U.D.) in Worcs, situated on the E. side of the Malvern Hills, 8 m. S.W. of Worcester. The Royal Radar Establishment is here. The M. Hills, which extend for 9 to 10 m., command a fine view. The highest point is Worcester Beacon, 1,395 ft. above sea-level. Pop. (1961) 24,373.

MALVINAS. Argentine name for FALKLAND Is.

MA'MELOKES. Freed Turkish slaves who long dominated Egypt. They formed the royal bodyguard in the 13th cent., and in 1250 placed one of their own number on the throne. M. sultans ruled Egypt until the Turkish conquest of 1517, and they remained the ruling class until 1811, when they were massacred by Mehmet Ali.

MAMMALS or **Mammalia**. A classification, invented by Linnaeus in 1758, incl. all vertebrates which suckle their young. Most forms are viviparous, but there are still egg-laying species, e.g. marsupials.

MAMMOTH. Extinct elephant (*Elephas primigenius*) about the size of an Indian elephant, with a pointed skull, small ears, and spiral tusks about 10 ft. long. The body was covered with long fur. The M. was abundant in N. Europe in Pleistocene times.

MAMMOTH CAVE. Huge limestone cavern, in M.C. National Park (estab. 1936), Edmonson co., Kentucky, U.S.A. The main cave is 4 m. long, and rises to a height of 125 ft.; it is famous for its stalactites and stalagmites. Indian councils were once held here.

MAN, Origins of. Remains of the oldest member of the stock which gave rise to true man were discovered by L. S. B. Leakey (q.v.) in 1967. Fragments of the skull of Europe's earliest man were found 1965 at Vertszöllös, 30 m. W. of Budapest: he belonged to the same species as Java and Peking Man (qq.v.) See also PILTDOWN.

MAN, Isle of. See ISLE OF MAN.

MANAGUA (mahnah'gwah). Cap. of Nicaragua, situated on the lake of the same name, about 25 m. N.W. of Granada. It was destroyed by earthquake in 1931, but was rebuilt. Pop. (1965) 275,000.

MANÁOS. Older spelling of MANÁUS.

MANÁUS (mahnah'os). Capital of Amazonas, Brazil, on the Rio Negro, near its confluence with the Amazon; though it is 1,000 m. from the Atlantic, it can be reached by sea-going vessels. Pop. (1960) 175,343.

MAN'CHA, La. Old prov. of Spain; the name, still used for the same district which covers the modern prov. of Ciudad Real and parts of Toledo, Cuenca, and Albacete, is derived from Arabic *al mansha*, the dry land.

MANCHE (moñsh), La. French name for the English Channel (q.v.). It gives its name to a Fr. dept.

MANCHESTER. City (1853) and co. bor. (1889) of Lancashire, on the Irwell, 158 m. N.W. of London and 31 m. E. of Liverpool. Originally a Roman camp, M. is mentioned in Domesday Book, and by the 13th cent. was a centre for woollens. Its damp climate made it ideal for cotton, introduced in the late 16th cent., and in the 19th cent. (with a period of stagnation during the American Civil War which cut off supplies from the South) the M. area was the world centre of manufacture: in the 20th, espec. after the S.W.W., there was a sharp decline, and the disused mills were used to provide cheap premises for new industries. The varied products of the vast industrial area of which M. is the commercial centre, incl. road vehicles and tractors, aircraft, textile machinery, woollen and cotton goods, chemicals, iron and steel tubing, rubber, paper, flour and processed foods. There is a fine port with an extensive transit trade.

attack on philistinism in the U.S.S.R. He committed suicide.

MAY DAY. May 1, formerly the occasion for popular festivities, ultimately derived from pre-Christian magical rites. They included the maypole dance and the morris dance. May 1 is now the festival of the international Labour movement.

MAYENCE. French form of MAINZ.

MAYENNE (mahyen'). French town in M. dept., on the r. M., 40 m. N.W. of Le Mans. It is a market for the agricultural products of the vicinity, and has some textile industry. Its church dates from the 12th cent., its castle from the 13th. Pop. (1962) 11,163.

The r. MAYENNE rises in the W. of Orne dept., flows in a generally S. direction through the depts. of M. (to which it gives its name) and Maine-et-Loire for 125 m. to join the Sarthe just above Angers and form the Maine.

MAYER, Maria Goeppert- (1906-). American physicist. B. in Kattowitz, Poland, and ed. at Göttingen univ., she became a U.S. citizen in 1933, and was senior physicist at the Argonne Nat. Lab. 1946-60, and prof. in the Univ. of California (La Jolla) from 1960. For her discoveries in the theory of atomic nuclear shell structure, she was awarded a Nobel prize in 1963.

MAYFAIR. The fashionable quarter in the W. of London, England, vaguely defined as lying between Piccadilly and Oxford Street, and including Park Lane, but increasingly devoted to offices.

***MAYFLOWER*.** Name of the vessel on which the 'Pilgrim Fathers' sailed from Plymouth, England, to Plymouth, Mass., founding the first colony in New England. The M. sailed with 102 passengers on 16 Sept. 1620 and landed at Plymouth Rock on 21 Dec. *Mayflower II*, a replica, re-enacted the original voyage in 1957, and was given as a token of goodwill by Britain to the U.S. to form part of a national shrine at Plymouth, Mass. See DARTMOUTH.

MAYFLY. Insects in the order Ephemeroptera (Gk. *ephemerōs* lasting for a day, an allusion to the very brief life of the adult), found in many parts of the world. The larval stage, which can last as long as a year, is passed in water, the adult form developing gradually from the nymph through successive moults. The adult has transparent, net-veined wings, the hind pair being noticeably smaller, and 3 caudal filaments. Both nymphs and adults are important as food for fish, esp. trout.

MAYHEW, Henry (1812-87). British author of the classic social survey *London Labour and the London Poor* (1851-62).

MAYNOOTH. Village in Co. Kildare, Rep. of Ireland, 13 m. W. of Dublin. St. Patrick's Coll. (1795) for the training of R.C. priests became an assoc. coll. of the Univ. of Dublin 1968.

MAYO, Katherine (1867-1940). American author and social reformer. B. in Philadelphia, in 1925 she attacked American maladministration in the Philippines in *Isles of Fear*, and in 1927 denounced child marriage in *Mother India*.

MAYO, Robert Hobart (1890-1957). British aircraft designer. He developed in the 1930s the Short-Mayo composite aircraft (a float seaplane carried on the back of a 'mother' flying-boat, the former being released at an agreed height and the latter returning to base). This device enabled a bigger fuel supply and payload to be carried by the seaplane.

MAYO, William James (1861-1939). American surgeon, founder with his brother, Charles Horace M., of the M. Clinic (1889) in Rochester, Minnesota, and of the M. Association (1919) of which the income is devoted to the M. Foundation for Medical Education and Research. The latter's son, Charles William M. (1898-1968), became prof. of surgery, M. Foundation, in 1947.

MAYO. A western county of Rep. of Ireland in

Connacht prov., facing the Atlantic Ocean and including Achill is. Much of it is wild and barren, and the coast is rocky. Castlebar is the co. town. Area 2,084 sq. m.; pop. (1966) 115,547.

MAYOR. The title of the principal officer of a municipal corporation of a city or bor. The title of Lord M. is borne by the chief magistrate of London, Belfast, Birmingham, Bradford, Bristol, Cardiff, Cork, Coventry, Dublin, Hull, Leeds, Leicester, Liverpool, Manchester, Newcastle-upon-Tyne, Norwich, Nottingham, Oxford, Plymouth, Portsmouth, Sheffield, Stoke-on-Trent, Westminster and York. There are also Lord Ms. in the 6 state caps. of Australia, and in Newcastle, N.S.W. In Scotland the title 'provost' is used instead of M. There are Lord Provosts for Aberdeen, Dundee, Edinburgh, Elgin, Glasgow, and Perth.

MAZARIN (mahzahrān'), Jules (1602-61). French statesman. B. at Piscina, he entered the papal diplomatic service, whence in 1639 he passed to that of France. He was created a cardinal in 1641, and succeeded Richelieu as chief minister in 1642. His policy of repressing the power of the nobility provoked the *Fronde* (q.v.), during which he was temporarily exiled. A great diplomatist, he conducted the Thirty Years War to a successful conclusion, and in alliance with Cromwell waged a victorious war against Spain.

MAZZINI (mahtsē'nē), Giuseppe (1805-72). Italian nationalist. B. at Genoa, he studied law and later joined the revolutionary society, the Carbonari. He was imprisoned in 1830, then went to France, where he founded 'Young Italy'. This was followed in 1834 by an international revolutionary organization, 'Young Europe'. For many years he lived in exile in France, Switzerland, and England, plotting uprisings in Italy, which all failed. In 1833 he was condemned to death in his absence by the Sardinian govt. On the outbreak of the 1848 revolution he returned to Italy, and for a few months in 1849 was at the head of the repub. govt. set up in Rome. After its overthrow he went into exile again. He achieved a widespread moral influence which was among the most potent factors making for Italian unity.

MBOOMA. Another spelling of BOMA.

MBOYA (mboi-ya), Tom (1930-). Kenya politician. Son of a Luo farmworker - he was the eldest of a family of 8 - he won a scholarship at Ruskin Coll., Oxford, and then returned to Kenya as an active labour leader. In 1960 he was among the founders of the Kenya African National Union (K.A.N.U.), a working alliance of the Kikuyu and Luo tribes. He was Min. of Lab. 1962-4, Justice 1963-4, and Economic Planning from 1964.

MEAD, Margaret (1901-). American anthropologist. Influential in questioning by comparative anthropology the conventions and customs of the West, she pub. *Coming of Age in Samoa* (1928), *Growing up in New Guinea* (1930), etc. She became Curator of Ethnology, American Museum of Natural History, N.Y. in 1964, and Chairman of Social Sciences at Fordham Univ. liberal arts college, Lincoln Center, 1969.

MEAD (mēd). Beverage made from honey and water fermented with yeast, drunk by the ancient Greeks and Britons, and still occasionally brewed in England.

MEAN. In mathematics, a specific related term intermediate between the first and last terms of a progression. The *arithmetic M.* is the average value of the quantities, i.e., the sum of the quantities divided by their number. The *geometric M.* is the corresponding root of the product of the quantities.

MEAN FREE PATH. The average distance travelled by a particle, atom or molecule between successive collisions.

MEANY, George (1894-). American labour leader. A plumber of Irish stock, he was pres. 1934-9 and sec.-treasurer 1949-52 of the N.Y. State Federation

from the lute, so called because its body is shaped like an almond (It. *mandorla*). It has 8 or 10 strings.

MANDRILL. W. African baboon (*Papio maimon*). The nose is bright red and the cheeks striped with blue. There are red callosities on the buttocks; the fur is brown, with a yellow beard.

MĀNĒS. The gods of the underworld in ancient Rome, later identified with the ghosts of the dead.

MANET (mahneh'), Édouard (1832–83). French painter. B. in Paris, he came under the influence of Velazquez and Hals, and exhibited with Monet, Renoir and Whistler at the *Salon des Refusés* in 1863.

This exhibition marked the beginning of the Impressionist movement, of which M. was the leading spirit. He summed up his aims in the famous dictum, 'The principal person in a picture is the light.' His best-known works incl. 'Déjeuner sur l'herbe', 'Absinthe Drinker', 'Olympia', 'Fife Player', and 'Bar at the Folies-Bergère'. See illus. p. 448.

MANGAN, James Clarence (1803–49). Irish poet. B. in Dublin, after 10 years as a copying-clerk he became librarian at Trinity Coll., and entered the Irish Ordnance Survey Office in 1833. In addition to beautiful lyrics, e.g. 'Dark Rosaleen', he pub. vols. of 'translations', e.g. *Anthologia Germanica* (1849).

MANGANĒSE (Lat. *magnes magnet*). A brilliant white metal, present in small quantities in most rocks: symbol Mn, at.wt. 54.94 and at.no. 25. Discovered by Gahn in 1774 by reducing the dioxide with carbon. M. has a high melting point and is normally very hard and brittle. Chemically it is very reactive, and combines readily with oxygen on heating. Chiefly used in alloys, espec. for M. steel which is very tough, it also serves as a depolarizer in dry batteries, and potassium permanganate (an oxidizing agent) is used as an antiseptic and in quantitative analysis.

MANGEL-WURZEL or Mangold. A variety of the common beet (*Beta vulgaris*) derived from the sea beet (*B. maritima*). It is used chiefly as feed for cattle and sheep.

[MANGO]

MANHATTAN. An island, 12½ m. by 2½ m., lying between the Hudson and Eas rivers, and forming a borough of New York City, U.S.A. The business centre of the city lies in M., through which runs Broadway, a street famed for its theatre associations. Pop. (1960) 1,698,281.

MANHATTAN PROJECT. The development of

the atom bomb in the S.W.W. See FERMI, OPPENHEIMER.

MANICHAEISM (man'ikē-izm). Religion founded by Mani (Latinized as Manichaeus), who was b. in Mesopotamia c. A.D. 216, and proclaimed his creed in 241 at the Persian court. Returning from missions to China and India, he was put to death at the instigation of the Zoroastrian priesthood c. 276. Despite persecution M. spread and flourished until the 10th cent. Its fundamental tenet was that the material world is an invasion of the realm of light by the powers of darkness: particles of goodness imprisoned in matter were to be rescued by messengers such as Jesus, and finally by Mani himself.

MANILA (mahnē'lah). Former cap. and principal port of the Philippines, situated on Luzon. The new cap., Quezon City, is in a N.E. suburb of M. M. is cut in 2 by the r. Pasig; to the N. are the modern suburbs. The old city, which lay to the S., was reduced to rubble during the fighting between U.S. troops and Japanese in 1945. M. was founded in 1571 by Spain, and captured by the U.S.A. in 1898. It is subject to earthquakes. M. has distilleries, textile and tobacco factories, foundries, shipbuilding yards, etc. The natural harbour of M. bay, perhaps the finest in the

MANITOBA. The discovery of valuable mineral deposits has transformed the old conception of the northern areas as an unproductive wilderness. At Thompson, 400 miles north of Winnipeg, International Nickel operates the first fully integrated nickel-producing complex in the western world. The town which houses its workers is seen above.

Courtesy of the International Nickel Company (Mond) Ltd.

Far East, has contributed to the city's commercial importance. Pop. Greater M. (1968) 3,100,000.

MANING, Frederick Edward (1812–83). New Zealand author. B. in Dublin, he was taken to Tasmania in 1824, and in 1833 went to New Zealand, where he m. a tribal chief's dau. He was a judge in a native court 1865–81, and in 1863 pub. an account of Maori customs and traditions, *Old New Zealand*.

MANIOC. See CASSAVA.

MANIPUR (manipoor'). Centrally administered territory of the Rep. of India, lying to the E. of Assam, and bounded on the E. by Burma. Most of M. is mountainous and covered with dense forests, but there is a broad fertile valley which incl. Loktak Lake and Imphal, the cap., and produces large quantities of rice. M. first entered into treaty relations with Britain in 1762. It was the scene of very heavy fighting against the Japanese in March–April 1944. M. is the original home of polo. Area 8,620 sq. m.; pop. (1961) 778,318.

MANITO'BA. Prov. of Canada, situated midway between the Atlantic and Pacific. The territory was within the charter of the Hudson's Bay Company 1670–1869, the prov. being created 1870. It developed rapidly with mechanized grain-farming.

M. is mainly flat, with scattered hills. The prairie area lies to the W and S.W., while in the N.E. the surface is broken by marshes. The prov. has a

British scientist. As Jodrell prof. of zoology and comparative anatomy 1951–62, he was in 1960 awarded a Nobel prize for medicine (with Sir Macfarlane Burnet, q.v.) for his work in immunology, having discovered that the body's resistance to grafted tissue etc. is undeveloped in the new-born child. In 1962 he became director Nat. Inst. for Medical Research at Mill Hill, and was knighted 1965.

MEDĒ'A. In Greek legend, a sorceress, dau. of Æetes, king of Colchis. When Jason reached Colchis seeking the golden fleece, M. fell in love with him and by her magic helped him in his aim, and then fled with him on board the *Argo*. But when Jason married Creusa in her place, M. sent the bride a poisoned garment which caused her death, and killed the 2 children she had borne to Jason.

MEDELLÍN (mädelýēn'). Capital of Antioquia dept., Colombia, lying at a height of 5,046 ft. The city has a univ. and is a large industrial centre. The seat of an archbishopric, it has a 17th cent. cathedral. Pop. (1965) 733,000.

MEDES (mēdz). An ancient Aryan people of W. Persia, on the borders of Mesopotamia. First heard of in the 9th cent. B.C. as tributaries to Assyria, their cap. was Ecbatana. In alliance with Babylon they destroyed Nineveh, the Assyrian cap., in 612, and extended their dominions as far as central Asia Minor. The Persians, who had been subject to the Ms., revolted in 550 B.C., and their king Cyrus became king of the Ms. and Persians, who rapidly merged.

MEDICI (mā'dēchē). A famous Florentine family. Its founder, Giovanni (1360–1429), acquired a fortune in commerce and banking, and exercised great political influence as a supporter of the popular party. His eldest son, Cosimo (1389–1464), dominated the govt. from 1434 onwards, and was succeeded by his son, Piero (1416–69), and his grandson, Lorenzo the Magnificent (1449–92). Both Cosimo and Lorenzo were munificent patrons of the arts, literature, and scholarship, while the latter was a poet of considerable ability; under their rule Florence was adorned with works of art, and became the centre of European culture. Lorenzo's son, Giovanni (1475–1521), became pope in 1513 as Leo X.

MEDICINE. The science and art of healing bodily and mental diseases; also any substance used in the treatment of disease. Taking the word in its former sense, M. covers every form of curative treatment, and also includes the study of the causes of disease and relative subjects. The basis of M. is anatomy or the structure and form of the body, and physiology, or the study of the body's functions. There are, however, many other sub-divisions, e.g. pathology, pharmacology, obstetrics, surgery, dentistry, etc.

M. as a scientific study had its rise in ancient Greece between 700 and 600 B.C., but the first Greek physician was Hippocrates (c. 460 B.C.). He it was who recognized that disease is the result of natural causes; and although his knowledge of the body was slight, he and his followers initiated the careful observation of symptoms out of which clinical M. has developed. In the Alexandrian age the city of Alexandria was the seat of a great medical school, and the knowledge acquired by the Alexandrian doctors was consolidated and extended by Galen, who lived in Rome in the 2nd cent. A.D. For more than 1,000 years Galen was chief medical authority, and it was not until the 16th cent. that any considerable additions were made to medical science. The discovery by Harvey in 1628 of the circulation of the blood was of epoch-making importance. John Hunter founded experimental and surgical pathology. Anatomists, botanists and chemists made valuable additions to the growing science, but it was in the 19th cent. that M. was revolutionized by the work of such men as Pasteur, Koch, Lister, and Manson.

In the 20th cent. spectacular advances have been

made in the treatment and control of disease. Salvarsan (q.v.), 1909, was the first specific antibacterial agent, and the sulphonamides synthesized by G. Domagk in the 1930s were active against groups of pathogenic bacteria, as were the later antibiotics (q.v.) of natural origin (penicillin, streptomycin, tetracycline, etc.). As a result, pneumonia is no longer fatal, and tuberculosis can usually be cured. Diabetes, which prior to 1921 took its toll of the sufferer in under 5 years, can now be controlled indefinitely with insulin (q.v.). All branches of M. and surgery have benefited by the growth of effective nationwide blood-transfusion (q.v.) services. Prevention and control of viral diseases, such as influenza and polio (qq.v.), have been possible by large-scale inoculation with vaccines; and a dramatic increase in the understanding of the human mind has followed the work of Freud (q.v.) and his successors, in the many branches of psychiatry (q.v.), incl. the effective use of drugs. Transplant surgery (see HEART) rapidly developed in the 1960s.

MEDICINE HAT. Town in Alberta, Canada, 180 m. S.E. of Calgary, on the S. Saskatchewan r., a flour-milling centre; natural gas, coal, and oil shale occur in the vicinity. Pop. (1966) 25,574.

MEDINA (medē'nah). City of Arabia, about 220 m. N. of Mecca. To Mohammedans it is a holy city second only to Mecca, since it was here that the Prophet lived many years after he fled from Mecca, and here he died. The Mosque of the Prophet contains his reputed tomb, and those of Abu Bekr, Omar, and Fatima, Mohammed's daughter. M. is linked with Jidda by an asphalted road. Pop. c. 60,000.

MEDITERRANEAN. The inland sea that separates Europe from N. Africa, with Asia on the E. The Strait of Gibraltar connects it with the Atlantic; the Suez Canal links it with the Red Sea and the Indian Ocean. In the N.E., through the Dardanelles and the Sea of Marmara, it is connected with the Black Sea. Its name means surrounded by land, and on its shores western civilization was built up. Its chief divisions are the Tyrrhenian, Ionian, Adriatic, and Aegean seas, and its extreme length is 2,300 m. Shallows stretching from Sicily to Cape Bon in Africa divide it into an eastern and a western basin. It is saltier and warmer than the Atlantic, and nearly tideless. Area about 1,145,000 sq. m.

MEDLAR. A small European fruit tree (*Mespilus germanica*) of the family Rosaceae, with fruits resembling a small brown-green apple. These are eaten when decay has set in and the taste is agreeably acid.

MEDOC (mehdok'). French dist. bordering the Gironde, N. of Bordeaux, famed for its wines; Margaux and St. Julien are 2 of the best-known varieties.

MEDUSA. See GORGON and JELLYFISH.

MEDWAY. River of S.E. England, rising in Sussex and flowing through Kent to Sheerness, where it enters the Thames. It is about 60 m. long, and divides the 'Men of Kent',

who live to the east, from the 'Kentish men', who live to the west.

MEEGEREN (mā'-), Hans van (1889–1947). Dutch artist who faked Vermeers, incl. 'Christ at Emmaus', which was sold to Rotterdam's Boymann's Museum. Altogether his pictures brought him c. £500,000. He admitted the forgeries when he was arrested in 1945 for collaboration with the Nazis. After a year's imprisonment he d. penniless.

MEENEN. Flemish form of MENIN.

MEDLAR

the cap. of Dakahlia prov. It lies on the Damietta branch of the Nile, and has a flourishing cotton industry. M. was founded c. 1220; St. Louis IX, king of France, was imprisoned in the fortress, 1250. Pop. (1960) 152,000.

MANTEGNA (mahntān'yah), Andrea (1431–1506). Italian painter of the Paduan school. B. at Vicenza, he came under the influence of Donatello, Uccello, Filippo Lippi, etc., and was the most important painter of the early Renaissance. His masterpiece is the 'Triumph of Caesar' (Hampton Court). The 'Madonna with John the Baptist and the Magdalen' (National Gallery), is one of the best preserved of all his works.

MANTES-LA-JOLIE. Town in the Seine-et-Oise dept. of N. France, on the Seine. William the Conqueror d. as a result of a fall from his horse at M. Pop. (1962) 19,227.

MANTIS. Insect of the family Mantidae. The praying mantis (*M. religiosa*) of S. Europe adopts an attitude characteristic of devotion while waiting for its prey—flies, grasshoppers, and caterpillars. The eggs are laid in September and hatch early in the following summer. Ms. have the power of changing their coloration in accordance with their surroundings. There are over 800 species.

MANTUA. Cap. town of M. prov., Lombardy, Italy, standing on an island of a lagoon of the Mincio, 25 m. S.W. of Verona. Among the chief buildings are the cathedral, founded in the 12th cent., the church of St. Andrea, and Gothic palaces. Virgil was b. near M., which dates from Roman times. The industries incl. tanning and brewing. Pop. (1961) 32,687.

MANU (ma'noo). In Hindu mythology, the founder of the human race. His preservation by Brahma from a deluge has caused him to be compared with Noah.

MANUTIUS (manū'shius), Aldus (1450–1515). The most famous Italian Renaissance printer. He estab. his printing press in Venice in 1490, and was the first to print Greek books. He made Venice the chief publishing centre of Europe.

MANX. The Gaelic language of the Isle of Man. Known only from the 17th cent., it is nearer akin to Scottish Gaelic than to Irish, and has been considerably influenced by English. Manx-speakers have declined: nearly 5,000 in 1900 and c.150 in 1961. Original literature in M. consists mainly of ballads and carols (known as *carvels*). Bishop Phillips' Manx translation of the Prayer Book appeared in 1610, and the Bible was completed in 1775.

MANZONI, Alessandro, count (1785–1873). Italian writer, author of tragedies but best remembered for his historical love story *I Promessi Sposi* (1825–7).

MAORI (mowri). The aboriginal population of New Zealand. They came from E. Polynesia, according to tradition, c. 1350, and are tall and muscular, flat-nosed, with brown skin and black hair. At the time of the coming of Europeans they numbered c. 150,000. Their civilization was still neolithic, but they had acquired great skill in wood and stone carving and in weaving patterned cloth; women did most of the agricultural work, whilst the chief occupation of the men was warfare. The M. religion incl. some sort of belief in a supreme god, but was concerned mainly with placation of spirits who punished breach of taboo. The chief of a clan was held sacred. Not long ago in decline, their numbers are once more increasing, 200,000 (1967), and although they are full citizens of New Zealand there is some slight 'colour' difficulty.

MAO TSE-TUNG (mow tze-toong') (1893–). Chinese Communist statesman. B. in Hunan, he was a founder member of the Chinese Communist Party and became Chief of Publicity and Propaganda under Sun Yat-sen, but, sacked by Chiang Kai-shek, he became leader of the Communists in 1927. He led the 'long march' to Shensi in 1935 and secured an alliance

with the Kuomintang in 1936, but civil war resumed in 1945 and in 1949 M. became Chairman of the People's Govt. In 1954 he was re-elected after the adoption of China's new constitution, but resigned in 1958, though remaining chairman of the Party, and during the Cultural Revolution he inspired from 1966 the 'little red book' of thoughts from his writings as its handbook. His 3rd wife, former actress Chiang Ching, played a leading role in the movement.

MAPLE. A deciduous tree of the genus *Acer* with opposite, stalked, palmately lobed leaves and green flowers, followed by two-winged samaras. There are about 115 species, chiefly in north temperate regions.

The only British species is *A. campestre*; but *A. pseudoplatanus*, the sycamore or great maple, is naturalized. The sugar maple, *A. saccharatum*, is the N. American species, and the chief source of maple sugar.

MAQUIS (makē). Name of the scrub in Corsica, among which bandits sought cover. The term Maquis was popularly applied to members of the French Underground Movement (*Forces Françaises de l'Intérieur*) during the German occupation of 1940–5.

MARACAIBO (mahrahki'bō). Seaport dating from the 16th cent., chief town of Zulia, Venezuela, on the channel connecting Lake M. with the Gulf of Venezuela, seat of the Univ. of Zulia. M. makes cement, soap, chocolate, bricks, and has saw mills and tanneries; but its chief importance, from 1918, has been as a port for the export of petroleum; other exports are coffee, cacao, sugar, and hardwoods. Pop. (1967) 500,000.

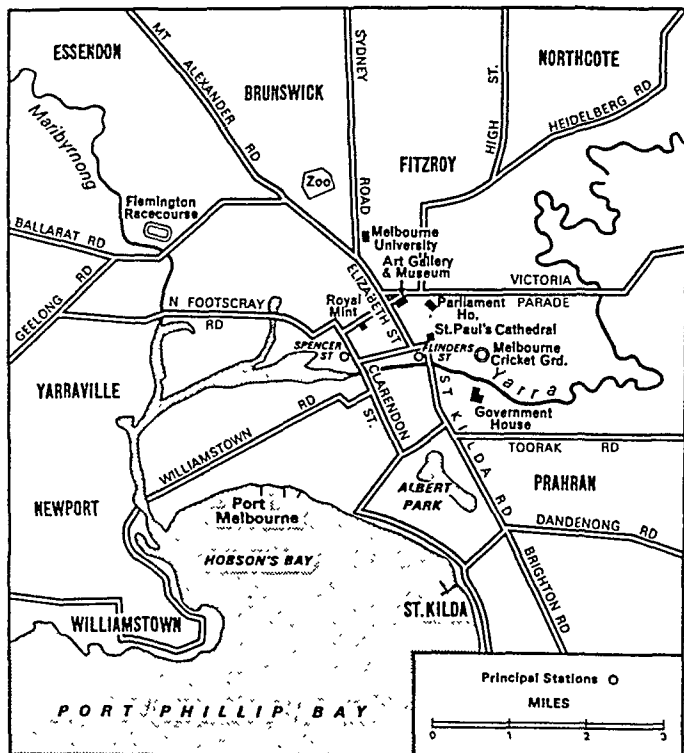

MARACAIBO. Rising from the sea like 'trees' in some Martian landscape, the oil derricks of Lake Maracaibo are a symbol of Venezuela's mineral wealth.

Courtesy of the Venezuelan Embassy

MARA'S. Turkish town in the Taurus Mountains, cap. of M. il, about 55 m. N. of the Syrian frontier. An agricultural centre, it is on the site of an ancient Hittite settlement. Pop. (1965) 63,300.

MARAT (mahrah'), Jean Paul (1743–93). French revolutionary. B. in Switzerland, he practised medicine in Paris. After the outbreak of the Revolution he edited *L'Ami du peuple*, later renamed *Journal de la République Française*. He was the idol of the Paris working-classes, and in 1792 was elected to the National Convention and carried on a long struggle against the Girondins. He helped to bring about their overthrow in May 1793, but in July he was assassinated by the Girondin enthusiast, Charlotte Corday.

MELBOURNE

for revues, e.g. the *Sweet and Low* series; plays, e.g. *Simon and Laura* (1954, also filmed), and light-hearted novels.

MELVILLE, Henry Dundas, visct. M. (1742–1811). British Tory politician. B. at Edinburgh, he entered parl. in 1774, and as Home Sec. 1791–4 persecuted the parliamentary reformers. He was Sec. of War 1794–1801, and 1st Lord of the Admiralty 1804–5, and received a peerage in 1802. His impeachment for malversation in 1806 was the last in English history.

MELVILLE, Herman (1819–91). American author. B. in New York, in 1837 he sailed to Liverpool as a cabin-boy, as described in *Redburn* (1849), and in 1841 joined the crew of a South Seas whaler, an experience which inspired his masterpiece, *Moby Dick* (1851), story of the contest between Captain Ahab and a great white whale which has symbolic overtones. M. held a post in the New York customs 1866–85. His other books incl. *Typee* (1846), *Omoo*, *Billy Budd*, and several vols. of verse.

MEMEL. German name of KLAIPEDA.

MEMLING or MEMLINC, Hans (c. 1430–94). Flemish artist, b. probably at M. nr. Alkmaar. His masters are said to have incl. Lochner and van der Weyden, and in 1466 he settled in Bruges, where he

MELVILLE. Hanging above the desk at which he wrote *Billy Budd*. In the Herman Melville Memorial Room, this portrait of the author at about the age of 30 is the work of Asa W. Twitcheell. Courtesy of the Berkshire Athenaeum, Pittsfield, Mass.

recovered from papyri used as papier mâché for Egyptian mummy cases.

MENCIUS (men'shē-us; Latinized form of Meng-tzu) (c. 372–289 B.C.). Chinese moralist. B. in Shan-Tung province, he founded a school in the tradition of Confucius. At the age of 40 he set out with his disciples to find a ruler who would put into practice his enlightened political programme. After 20 years he gave up the search and retired. His teachings (*Book of Meng-tzu*) were collected after his death.

MENCKEN, Henry Louis (1880–1956). American critic, known from his birthplace as 'the sage of Baltimore'. His unconventionally phrased, satiric contributions to *Smart Set* and *American Mercury* (both of which periodicals he edited) roused great controversy. His best book was *The American Language* (1918 and often revised).

ME'NDEL, Johann Gregor (1822–84). Austrian monk, abbot of the Augustinian abbey at Brunn from

was town painter 1475–87, and some of his finest works are preserved in the Hospital of St. John, e.g. the 'Deposition' triptych (1480), the 'Adoration of the Magi' altar (1479), and the shrine of St. Ursula (1489). He has a serene delicacy of touch and invests his madonnas with a rich sensitivity of feeling.

MEMPHIS (mem'fis). Ruined city beside the Nile, 12 m. S. of Cairo, Egypt. Centre of the worship of Ptah, it was made the cap. of the united kingdoms of Upper and Lower Egypt by Menes, but was superseded by Thebes under the new empire in 1570 B.C. It declined and was subsequently used as a stone quarry, although the necropolis of Sakkara escaped damage under sand.

MEMPHIS. Largest city of Tennessee, U.S.A., on the Mississippi, an important cotton port. Pop. (1960) 497,524.

MENAI (men'i) **STRAIT**. Channel of the Irish Sea, dividing Anglesey from the Welsh mainland. It is about 14 m. long, and its greatest width is 2 m.; it is crossed by Telford's suspension bridge (1826), and R. Stephenson's tubular railway bridge (1850).

MENANDER (c. 342–291 B.C.). Greek dramatist. B. in Athens, he was the most popular exponent of the new comedy of manners; and his highly improbable plots later became fashionable. Only a few fragments of his 105 plays were known until the discovery in 1957 of the *Dyscholos* (Bad-tempered man). Many fragments have been

MEMLING. Outstanding, even among the many treasures of the ancient city of Bruges, is the Memling Museum, housed in a 13th cent. ward of the 12th cent. St. John's Hospital. It contains some of the artist's finest masterpieces, including the shrine of St. Ursula seen here.

Courtesy of Belgian National Tourist Office

U.K. B. at Glamis Castle on 21 Aug. 1930, she is the younger dau. of George VI (q.v.). Religious and constitutional problems arose when it seemed possible that she might marry Group Captain Peter Townsend, former court equerry, who had been divorced, and in 1955 she announced her decision not to marry him. In 1960 she m. Anthony Armstrong-Jones, later created Lord Snowdon (q.v.), and is officially styled H.R.H. The Princess Margaret, Countess of Snowdon. They have a son, David, visct. Linley (1961-), and a dau., Lady Sarah Armstrong-Jones (1964-).

MARGATE. Famous English seaside resort (bor.) in Kent, a member of the Cinque Port of Dover. It has long promenades and fine sands. Pop. (1961) 45,708.

MARGRAVE. German title (equivalent of marquess) for the 'counts of the March', who guarded the frontier regions of the empire from Charlemagne's time. Later it was borne by other territorial princes. The most important were the margraves of Austria and of Brandenburg.

MARGUERITE. Popular name for the *Chrysanthemum frutescens*, of the botanical family Compositae. It is a shrubby perennial bearing white ray-florets surrounding a yellow centre.

MARGUERITE D'ANGOULÊME (doŋgoolâm) (1492-1549). Queen of Navarre, French poet, and author of the *Heptaméron*, an imitation of Boccaccio. The sister of Francis I, she was b. in Angoulême, and m. as her 2nd husband Henri d'Albret, king of Navarre, in 1527.

MARI (maré). An A.S.S.R. of the R.S.F.S.R., in the E. of European Russia. The Volga flows through the S.W. of M., some 60 per cent of which is forested. The chief industries are lumbering, woodworking, paper making, and others associated with timber; grain, flax, potatoes, and fruit are grown. Yoshkar-Ola is the cap. About half the inhabitants are of Mari stock, a people conquered by Russia in 1552. M. was made an autonomous region in 1920, an autonomous rep. in 1936. Area 8,900 sq. m.; pop. (1967) 653,000.

MARIANAS (mahr-eh-'nahz). Scattered group of islands and atolls in the N.W. Pacific. The largest, Guam (q.v.), was ceded by Spain to the U.S.A. in 1898. Spain sold the remainder to Germany in 1899 for £840,000, and these in 1919 were mandated to Japan which, against the terms of the mandate, fortified them; in 1947 they were placed under U.S. trusteeship. They produce rice, maize, sugar, tobacco, etc. Magellan discovered them in 1521. During the S.W.W., U.S. Marines in severe fighting re-captured Guam and secured control of the rest of the archipelago, 1944-5. Pop. (1967) 10,980 (excl. Guam). See PACIFIC IS. TRUST TERR.

MARIANNE Islands. Another form of MARIANAS. **MARIANSKE LAZNE** (mahr-'eanskā lahz-'nye). Spa in Czechoslovakia, internationally famous before the S.W.W. under its German name Marienbad. The water of its springs, which contains Glauber salts, has been used medicinally since the 16th cent. Pop. (1967) 8,500.

MARIA THERESA (1717-80). Austrian empress. The dau. of the Emperor Charles VI, she m. her cousin Francis of Lorraine in 1736, and succeeded her father as archduchess of Austria and queen of Hungary and Bohemia in 1740. Her claim was challenged by Charles of Bavaria, who was elected emperor in 1742, while Frederick of Prussia occupied Silesia. The War of the Austrian Succession followed, in which Austria was allied with Britain, and Prussia with France; when it ended in 1748, M. T. retained her heritage, except that Frederick kept Silesia, while her husband had succeeded Charles as emperor in 1745. Intent on recovering Silesia, she formed an alliance with France and Russia against Prussia; the

Seven Years War of 1756-63, which resulted, exhausted Europe and left the territorial position as before. After 1763 she pursued a consistently peaceful policy, concentrating on internal reforms; although her methods were despotic, she fostered education, codified the laws, and abolished torture. She also expelled the Jesuits. In these measures she was assisted by her son, Joseph II, who became emperor in 1765, and succeeded her in the Habsburg domains.

MARIBOR (mah'rëbor). Yugoslav town and resort in Slovenia, on the Drave, seat of a bishopric with a 16th cent. cathedral and some industry (boots and shoes, railway rolling stock are among products). M. dates from Roman times. Pop. (1961) 82,387.

MARIE (1875-1938). Queen of Rumania. The dau. of the duke of Edinburgh, 2nd son of Queen Victoria of the U.K., she m. Prince Ferdinand of Rumania in 1893, who was king 1922-7. She wrote a number of literary works, notably *Story of My Life* (1934-5). Her son Carol became king of Rumania, and her daus., Elisabeth and Marie, queens of Greece and Yugoslavia respectively.

MARIE ANTOINETTE (1755-93). Queen of France. The dau. of the Emperor Francis I and Maria Theresa, she m. in 1770 the dauphin, who 4 years later became king as Louis XVI. She forfeited her popularity by her frivolity, her extravagance, and her meddling in politics, often in Austrian interests. After the outbreak of the revolution in 1789 she exercised all her influence over her weak-willed husband to prevent concessions: she opposed Mirabeau's plans for a constitutional settlement, and brought about the unsuccessful flight to Varennes, which discredited the monarchy. She now relied on foreign intervention and when war with Austria began in 1792 betrayed the French plans to the enemy. In Oct. 1793 she was tried for treason and guillotined.

MARIE DE FRANCE (mahré' de froŋs) (fl. c. 1150-1215). French poet. B. probably in Normandy, she is thought to have been the natural dau. of Geoffrey Plantagenet and half-sister to Henry II, and to have been abbess of Shaftesbury (1181-1215). She was the author of *Lais*, or verse tales, and *Ysopet* a collection of fables.

MARIE DE' MEDICI (mā'dēchē) (1573-1642). Queen of France. The dau. of the grand duke of Tuscany, she m. Henry IV of France in 1600, and after his murder in 1610 acted as regent for her son, Louis XIII. She left the government to her favourites, the Concinis, until in 1617 Louis seized power and put them to death. Reconciled to him in 1619, she lost all influence after the coming to power in 1624 of Richelieu.

MARIE LOUISE (1791-1847). Second wife of Napoleon I. The dau. of Francis I of Austria, she was m. to Napoleon in 1810 after his divorce from Josephine, and bore him a son, the king of Rome, in 1811. On his fall she returned to Austria. Granted the duchy of Parma in 1815, she proved a comparatively liberal ruler.

MARIENBAD. Ger. name of MARIANSKE LAZNE. **MARIETTE** (mahryet'), Auguste Ferdinand François (1821-81). French Egyptologist. Beginning excavations in Egypt in 1850, he made many important discoveries, incl. the 'temple' between the feet of the Sphinx. He was the founder of the Egyptian Museum, Cairo, and Director of the Service des Antiquités from 1858.

MARIGOLD. Several plants of the Compositae family, espec. the pot M. (*Calendula officinalis*) in cultivation both in single and double forms for some 300 years, and the African M. (*Tagetes erecta*) and French M. (*T. patula*), both actually natives of Mexico.

MARIJUANA. See DRUGS and HEMP.

MARIN, John (1870-1953). American artist. B. in N.J., he was an architect's draughtsman until in 1899 he began to study art, living in Paris 1905-11. His

some women suffer from troubles such as flushing, excessive bleeding, and nervous disorder.

MENORCA. Spanish form of MINORCA.

MENOTTI, Gian Carlo (1911–). American composer. B. in Italy, he has lived in the U.S.A. since 1928. His operas are well known for their dramatic sense, excellent libretti (which he writes himself), and for the interdependence of words and music. Best-known are *The Medium* (1946); *The Telephone* (1947); *Amahl and the Night Visitors*, a Christmas story (1951); *The Consul* (1950); and *The Saint of Bleeker Street* (1954).

MENSHEVIKS. The right wing of the Russian Social-Democratic Party. They were so called because they formed the minority (Russ. *men'shinstvo*) at the 1903 party congress, the left-wing majority being known as Bolsheviks. During the Russian revolution they succeeded in setting up a govt. in Georgia, and after its overthrow disappeared.

MENSTRUATION. The female period; the monthly discharge from the womb of blood and breakdown products of the lining which has been prepared for the development of an egg-cell if fertilized. It starts at puberty, about 14, and ends with the change of life (see MENOPAUSE). If conception has taken place, the discharge does not occur. Otherwise M. may fail (amenorrhoea) in association with anaemia, depression, certain glandular disorders, etc. It may be painful (dysmenorrhoea), usually because of spasm of the womb; or the loss may be excessive (menorrhagia) because of inflammation, etc., within the womb.

MENTAL DISORDER. Generic term for all forms of mental ill health, of which there are in law 4 main types; mental illness in which patients of normal intelligence become disordered; severe abnormality in which mental development is arrested to such an extent that the patient is incapable of leading an independent life, those formerly called idiots or imbeciles; subnormality in which special care and training can to some extent overcome the incomplete development of the mind, many of those formerly called feeble-minded; and psychopathic disorder in which the patient may or may not be of normal intelligence, but is characterized by extreme irresponsibility or abnormal aggressiveness which makes it unsafe for others as well as himself if he is not under treatment. Among disorders coming in the last category are: schizophrenia; paranoia, in which the patient builds up an elaborate delusional system; manic depressive insanity, an alternation between elation (mania) and depression (melancholia). See SEDATIVES.

MENTAL TEST. Scientifically standardized procedure for measuring a defined characteristic of the mind. Pioneer work was done by Sir Francis Galton and Binet; and later by Burt, Thorndike and others. M.Ts. may measure either intellectual ability or temperamental and moral qualities, and may be subdivided into those testing inborn or acquired characteristics; and cross-classified into those testing general qualities such as 'general intelligence' or more specialized aptitudes and propensities. The first large-scale use of intelligence Ts. for adults was for 2,000,000 drafted men in the U.S.A. in 1917. In industry aptitude tests, e.g. for manual dexterity, are practically useful, but conventional intelligence Ts., at one time favoured in deciding suitable education for eleven-year-olds, have drawbacks. Improved results may be contrived by practice; people with unconventional backgrounds are at disadvantage, and original potentiality or 'creativity' cannot be measured: research is being directed to improved methods.

MENTHOL (C₁₀H₁₈O). Peppermint camphor; an alcohol derivative of menthone. It occurs in peppermint and is responsible for the plant's odour.

MENTON (mon-ton'). Resort on the French Riviera, close to the Italian frontier, in Alpes-Maritimes dept., favoured with an agreeable climate. It

belonged to the princes of Monaco until sold to France in 1861. Queen Victoria frequently visited it. Pop. (1962) 20,069.

MENTONE. Italian form of MENTON.

MENÚHIN, Yehudi (1916–). American violinist. Of Russian-Jewish parentage, he gave his first concert at 8 and 2 years later toured Europe, dazzling the critics by his maturity and freshness of approach. He retired for a period of intensive study 1935–7, and achieved a depth of interpretation, as in the Elgar and Beethoven concertos, which made him among the world's greatest players. His sister Hephzibah M. (1921–) is a pianist and has often accompanied him,

MENUHIN. Recording Berlioz' 'Harold in Italy', Menuhin forsakes his usual instrument to play the viola obbligato.

Photo: Godfrey MacDonnic.

and his dau. Zamira m. in 1960 the Chinese pianist Fou Ts'ong (1934–).

In 1963 he founded the *Y.M. School* at Stoke D'Abernon, Surrey, a boarding school for talented young musicians, the only one of its kind outside Russia. In 1965 he was created hon. K.B.E.

MENZIES, Sir Robert Gordon (1894–). Australian statesman. A successful Melbourne lawyer, he entered politics in 1928, was Attorney-Gen in the federal parl. 1934–9, and in 1939 succeeded Lyons as P.M. and leader of the United Australia Party (1939–41). Leading the Opposition from 1943, he in 1944 initiated the formation of a new party—the Australian Lib. Party—to unite all anti-Lab. groups except the Country Party, and in 1949 became P.M. of a Lib.-Country Party coalition govt., being re-elected 1951, 1954, 1955, 1958, 1961, and 1963. Knighted 1963, he succeeded Churchill as Lord Warden of the Cinque Ports in 1965, and retired as P.M. 1966.

MEQUINES. See MEKNES.

MERCATOR, Gerardus (1512–94). Latinized form of Gerhard Kremer, name of the Flemish map-maker who devised 'M.'s projection'—the first map using it being pub. in 1568. See ATLAS.

MERCHANT NAVY. Ships owned by shipping companies and used as trading vessels to provide sea transport for passenger traffic and for export and import cargoes. The chief types of merchant ships are: (1) tramps, which may coast between home ports or carry bulk cargoes for voyages of up to 2 years from one port to another throughout the world; (2) tankers and other ships carrying a single specialized cargo; (3) cargo liners, combining cargo and passenger traffic on short or world voyages—liners carrying passengers only are decreasing in modern conditions. Among the most famous passenger ships are the 3 Cunard 'queens', *Queen Mary* (1936: 1019 ft. long

an ethereal grace and lightness of movement, she is always associated with the great classical ballets in which she made her name, e.g. *Swan Lake*, *Casse-Noisette*, and, in particular, *Giselle*.

MARKS, Simon, 1st baron M. of Broughton (1888–1964). British chain-store magnate. The son of Polish immigrant Michael M., who started with Yorkshireman Tom Spencer a number of 'penny bazaars' in 1887, he entered the business in 1907 and built up a chain of more than 200 stores. Selling specially manufactured goods of high quality, he achieved a democratic revolution in dress for men and women.

MARL. A sedimentary rock sometimes called a clayey limestone, and incl. various types of calcareous clays and argillaceous limestones. Ms. are commonly laid down in freshwater lakes, and are usually soft, earthy, and of a white, grey, or brownish colour. They are used in cement making and as a top dressing for farmland.

MARLBOROUGH, John Churchill, 1st duke of (1650–1722). English soldier. The son of an impoverished Cavalier, he rose rapidly in the army through the favour of James, duke of York, and received a barony in 1685. At the revolution of 1688 he deserted James for William of Orange, who rewarded him with the earldom of M., yet in 1692 he fell into disfavour for intriguing with the Jacobites. He had m. Sarah Jennings (1660–1744), the friend of the Princess Anne, and after Anne's accession was created a duke. In the War of the Spanish Succession, he commanded the English and Dutch forces. His victory at Blenheim in 1704 saved Vienna from the French, and was followed by further victories at Ramillies (1706), Oudenarde (1708), and Malplaquet (1709). The return of the Tories to power in 1710, and a quarrel between Anne and the duchess, resulted in the dismissal of M. in 1711, and his flight to Holland to escape prosecution for corruption. He returned in 1714. The magnificent mansion and estate of Blenheim, in Oxon, were granted in recognition of his services. His London home, *M. House* (1709), was designed by Sir Christopher Wren: it was afterwards leased by Queen Anne, and later provided a home for Queen Adelaide, Edward VII (as prince of Wales), and Queen Mary. In 1959 it was lent to the govt. by Elizabeth II to provide a Commonwealth meeting place in London (opened 1962). See also CHURCHILL, SIR WINSTON.

MARLBOROUGH. English market town (bor.) in Wilts, 76 m. W. of London. It has a 16th cent. grammar school, and M. Coll., opened in 1843, is a great public school. Pop. (1961) 4,843.

MARLOWE, Christopher (1564–93). English poet and dramatist. B. in Canterbury, the son of a shoemaker, he left Cambridge for London c. 1587, where he joined the earl of Nottingham's theatrical company. His 4 great plays, written 1587–93, are *Tamburlaine*, which gave blank verse the freedom of the English stage; *Dr. Faustus*; *The Jew of Malta*; and *Edward II*. His poems incl. versions of Ovid's *Amores*, and of Musaeus' 'Hero and Leander'. In 1593 he was involved, owing to statements made by Thomas Kyd under torture, in charges of atheism. A warrant had been issued for his arrest, when he was killed by Ingram Frisar in a Deptford tavern, apparently in a brawl over a reckoning, but possibly owing to political intrigue.

MARMARA. Small inland sea separating Turkey in Europe from Turkey in Asia, and connected through the Bosphorus with the Black Sea, and through the Dardanelles with the Aegean. Length 170 m., breadth up to 50 m.

MARMONTEL (mahrmohnté'), Jean François (1723–99). French novelist and dramatist. He wrote tragedies and libretti, and contributed to the *Encyclopédie*; in 1758 he obtained control of the journal *Le Mercure*, in which his *Contes Moraux* (1761) appeared. Other works incl. *Bélisaire* (1767), and *Les Incas*

(1777). He was appointed historiographer of France (1771), secretary to the Académie (1783), and Professor of History at the Lycée (1786), but retired in 1792 to write his *Mémoires d'un père* (1804).

MARMOSET. Small monkey in the family Hapalidae found in S. and Central America. Most species have characteristic tufted ears and handsome tail, and some are full-grown when the body is only 7 in. long. Best-known is the common M. or ouistiti (*Hapale jacchus*) of Brazil, often kept there as a pet.

MARMOT. A burrowing rodent of the genus *Marmotta*, living in snowy regions, extending from the Alps to the Himalayas, and also in N. America. *M. marmotta* is the typical M. of the Central European Alps. Ms. live in colonies, make burrows, one to each family, and hibernate.

American Marmot

MARNE (mahrn). French river which rises in the plateau of Langres and joins the Seine at Charenton near Paris. It gives its name to the depts. of Marne, Haute Marne, Seine-et-Marne and Val de Marne; and to 2 battles of the F.W.W. (q.v.).

MARONITES. Christian sect probably deriving mainly from refugee Monothelites of the 7th cent. They were subsequently united with the R.C. Church, and number c. 400,000 in the Lebanon and Syria with an equal no. scattered overseas in S. Europe, and the Americas.

MAROT (mahrō'), Clément (c. 1496–1544). French poet. B. at Cahors, in 1524 he accompanied Francis I to Italy, and was taken prisoner at Pavia, but was soon released, and by 1528 was a salaried member of the royal household. Suspected of heresy, he fled to Turin, where he d. His graceful, witty style has been a model for all later writers of light verse.

MARPLES, Ernest (1907–). British Cons. politician. Entering parliament in 1945, he was Postmaster General 1957–9, displaying a flair for organization and publicity, and as Min. of Transport (1959–64) introduced various measures to cope with London traffic, planned many new motorways, and was responsible for the Transport Act (1962) and for carrying out the drastic reorganization of the railways recommended by the Beeching Report, 1963.

MARPRELATE CONTROVERSY. Name given to a pamphleteering attack on the clergy of the C. of E. made in 1588 and 1589 by a Puritan writer or writers, who took the pseudonym of Martin Marprelate. The pamphlets were printed by John Penry, a Welsh Puritan. His press was seized, and he was charged with inciting rebellion and hanged in 1593.

MARQUAND, John Phillips (1893–1960). American writer. Originally famous for a series of stories featuring the Japanese detective 'Mr. Moto', he made a serious reputation with his gently satirical novels of Bostonian society – *The Late George Apley* (1937) and *H. M. Pulham, Esq.* (1941).

MARQUESAS (mahrkă'sahs). A mountainous archipelago in the central Pacific Ocean, extending over some 250 m., with a total area of 490 sq. m. and pop. (1962) of 4,837. The 2 largest islands are Nukuhiva and Hiva Oa. Mendaña discovered the southern M. in 1595 and named them in honour of his patron, the marquess of Cañete, Span. viceroy of Peru. Ingraham, an American, discovered the northern group in June 1791 and named these the Washington Islands; a month later this group was discovered by Marchand, a Frenchman, who named it Islands of the Revolution. Their native inhabitants are Polynesians. France annexed the islands in 1842 and used them as a penal colony until 1865.

MARQUESS or Marquis. Title and rank of a nobleman who in the British peerage ranks below a duke and above an earl. The first English M. was created

chrome, copper, and agricultural produce, and has a large oil refinery, opened 1962, when built second in capacity in the Mediterranean area only to that of Naples. Pop. (1965) 87,300.

MERTHYR TYDFIL (mur'ther tid'vil). Welsh town (co. bor.) in Glamorganshire, on the Taff, 24 m. N.N.W. of Cardiff, in an iron and coal district. Between the 2 world wars it suffered heavily from unemployment. Pop. (1961) 59,008.

MERV. Oasis in Russian Turkmenistan, a centre of civilisation at least 1200 B.C., and site of a town founded by Alexander the Great. Old M. was destroyed by the Emir of Bokhara 1787, and the modern town of Mary (q.v.), founded by the Russians 1885, lies 18 m. W.

MERYON (mehryo'n), Charles (1821–68). French etcher. B. in Paris, son of an English father and French mother, he entered the navy, but left it in 1846, studied engraving, and began his famous series of etchings of Paris. He lived in poverty, and became mentally deranged.

MESCALIN. Drug derived from a turnip-shaped cactus (*Lophophora Williamsii*) of Texas and N. Mexico, known locally as peyote (payō'tā), etc. The tops, which scarcely appear above ground, are dried and chewed, or added to alcoholic drinks. Allegedly non-habit-forming and without after-effects, M. heightens the perceptions and is used by the Navajos of California and Indians of other states in the ceremonial of the Native American Church. It was used experimentally by Aldous Huxley (q.v.) and others.

ME'SHED. Capital of Prov. No. 9 (Khurasan) in Persia. It is the holy city of the Mohammedan sect of Shiah, and is visited by about 100,000 pilgrims annually. It has a univ. of medicine and is linked by railway with Ashkhabad, cap. of Turkmen S.S.R. Pop. (1964) 312,186.

MESMERISM. Theory that a subject may be reduced to a state of trance by the consciously exerted 'animal magnetism' of the operator, in which the will-power of the former is entirely subordinated. It is named from the Austrian physician, Friedrich Anton Mesmer (1733–1815). B. at Weil, near Constance, he took a medical degree at Vienna, and conducted experiments there, at first with actual magnets. Driven from Vienna by the police, he settled at Paris in 1778, and created a fashionable sensation. An investigating committee denounced him as a charlatan in 1785, and he d. in Switzerland. M. is now popularly identified with hypnotism.

ME'SONS. Unstable particles with masses intermediate between those of the electron and the proton, found in cosmic radiation and emitted by nuclei under bombardment by very high-energy particles.

MESOPOTAMIA. Classical name derived from

MESOPOTAMIA. The ruined palace at Ctesiphon (q.v.).

the Greek for 'middle' and 'river' given to the land between the Euphrates and the Tigris. Here the civilizations of Sumer and Babylon flourished, and some consider it the original home of civilized man. It is part of modern Iraq.

MESOZOÏA. Group of minute parasitic animals of the Metazoa. It is divided into 2 classes, the Rhombozoa and the Orthonectida.

MESSAGER (mesahzhā'), André Charles Prosper (1853–1929). French composer. He studied under Saint-Saëns. M. was successful with his light operas, such as *La Béarnaise* and *Véronique*.

MESSALINA, Valeria (c. A.D. 22–48). Roman empress. She was the 3rd wife of Claudius, and for some years dominated him. Her name has become a byword for immorality. In 48 she forced a noble to marry her, although she was still married to Claudius, and the latter had her executed.

MESS'AH. Word derived from the Hebrew for 'the anointed', the Greek equivalent of which is Christ. The Jews from the time of the exile have looked forward to the coming of the M., who shall be a deliverer. Christians believe that the M. came in the person of Jesus Christ.

MESSIAEN (mesi-an'), Olivier (1908–). French composer. At the Paris Conservatoire he studied the organ, and for composition was a pupil of Dukas. In 1931 he became organist at the Trinité and prof. at the École Normale de Musique, etc. His works incl. the choral *Trois petites liturgies de la Présence Divine*; *La Nativité de Seigneur* for organ; and *Les Visions de l'Amen* for 2 pianos.

MESSINA (mesé'nah). Sicilian city in the N.E. corner of the is. It was an ancient Greek foundation before it was taken by the Carthaginians and then the Romans. In 1908 it was destroyed by an earthquake in which 77,000 were killed. The Straits of M. separate Sicily and Italy. Pop. (1961) 251,423.

MESTROVIC (mesh'trovitch), Ivan (1883–1962). Yugoslav sculptor. B. at Vrpolje in Dalmatia, he studied in Vienna and early in the cent. was leader of a nationalist art movement. In 1947 he went to the U.S. and was naturalized in 1954. His notable works incl. portrait busts of Rodin, Sir Thomas Beecham, Pres. Masaryk, etc.

METABOLISM. The processes of building up and breaking down constantly taking place in living organisms to sustain life and growth. The 3 principal types relate to: green plants (based on photosynthesis in which complex organic substances are built up from water, carbon dioxide and mineral salts in the presence of chlorophyll and sunlight); plants not containing chlorophyll, e.g. moulds, yeasts, fungi, and bacteria, which secure energy by many different chemical transformations, e.g. oxidation of ammonia to nitrates; and animals dependent for food on complex compounds which they break down partially by digestion, and subsequently resynthesize. Thus animals are dependent on green plants either directly or indirectly.

METALIOUS, Grace (1924–64). American novelist, née de Repentigny. B. in Manchester, New Hampshire, she m. at 17 Christopher M. and, after writing many

MESON. The discovery of the meson is illustrated here by the track (with mirror image) passing through the glass walls and copper cylinder of a Geiger-Müller counter in a magnetic field. Measurements of curvature and density of the track give particulars of the charge and mass of the particle.

much discussion about the so-called canals, straight streaks crossing the deserts and dark regions. However, it is not now thought that intelligent or even animal life can survive under Martian conditions, though the probable existence of lowly plants shows that *M.* is by no means a dead world. The planet has 2 satellites, Phobos and Deimos, discovered by A. Hall in 1877; both are extremely small, with diameters of about 10 and 5 m. respectively, so that powerful telescopes are needed to show them.

In 1965 spacecraft *Mariner IV* (U.S.A.) showed the canals to be ridges of natural formation, and in 1969 *Mariner VI* and *VII* were despatched to prepare for an unmanned soft landing 1973.

MARSALA (mahrsah'lah). Italian seaport in the W. of Sicily, exporting the sweet, white *M.* wine. *M.* was a Carthaginian settlement. Its cathedral is dedicated to St. Thomas of Canterbury. Pop. (1960) 78,500.

MARSEILLAISE (mahrsay'z'), *La*. The French national anthem. The words and music were composed in April 1792 by Rouget de Lisle, an army officer stationed at Strasbourg, and were brought to Paris in Aug. by the volunteers from Marseilles, who led the storming of the Tuileries.

MARSEILLE (mahrsay'). The chief seaport of France, and cap. of the dept. of Bouches-du-Rhône, on the Golfe du Lion, Mediterranean Sea, connected with the Rhône by a canal. Much of *M.*'s old quarter was destroyed by the Germans in 1943. *M.* is surrounded by hills, and offshore are several islands, incl. Île d'If with its famous castle. Principal buildings incl. the 19th cent. cathedral, the pilgrimage church of Notre Dame de la Garde, also 19th cent., the 13th cent. church of St. Victor, the 17th cent. town hall and the 18th cent. Grand Théâtre.

M. was founded by mariners of Phocaea in Asia Minor about 600 B.C. Under the Romans it was a free city. After suffering from several invasions, *M.* was repopulated, and for several cents. was a free city. In 1481 it was included in France. Its modern prosperity was enhanced by the French conquest of Algeria and the opening of the Suez Canal. There are many industries, incl. soap making, engineering, and shipbuilding. Pop. (1962) 783,738.

MARSH, Dame Ngalo (1899–). N.Z. novelist. Originally on the stage, and still with a lively interest in the theatre as a repertory producer, she went to England in 1928 and worked as an interior decorator. Her first detective novel *A Man Lay Dead* (1934) has had many successors. Created D.B.E. 1966.

MARSHAL. A title given in certain countries to a high officer of state, though originally it meant one who tends horses, in particular a farrier. The Earl Marshal (q.v.), is a high officer of state in England. The corresponding officer in Scotland was the Earl Marischal. The rank of a Marshal of the R.A.F. corresponds to that of Admiral of the Fleet in the navy and Field Marshal (q.v.) in the army. In the French Army the highest officers bear the designation of Marshal of France.

MARSHALL, Benjamin (1767–1835). British sporting artist. B. in Leics, he excelled in painting horses, and was a pioneer in sporting journalism. His best-known pictures incl. 'The Death of a Fox', 'Mameluke' and 'The Malcolm Arabian'.

MARSHALL, George Catlett (1880–1959). American soldier and statesman. B. in Pennsylvania, he was commissioned in 1901, served in the F.W.W., and in 1939 became chief of staff with the rank of general. On resigning in Nov. 1945 he became ambassador to China, attempting to secure a coalition between the Nationalist and Communist forces against Japan. He succeeded Byrnes as Sec. of State (1947–9), and as Sec. of Defence Sept. 1950–Sept. 1951 (a post never normally held by a soldier), backed Truman's recall of MacArthur from Korea. The Marshall Plan, initiated by him in a speech at Harvard in June 1947

and officially known as the European Recovery Programme, was in fact the work of a State Dept. group led by Dean Acheson. It set the pattern for the large-scale foreign aid by the U.S. which was subsequently widened in scope to cover the entire non-Communist world.

MARSHALL, John (1755–1835). American jurist. B. in Virginia, as chief justice of the Supreme Court 1801–35, he laid down interpretations of the U.S. constitution in a series of important decisions, which have since become universally accepted.

MARSHALLS. Two chains of islands in the W. Pacific Ocean, comprising Radak and thealik groups, with 13 and 11 islands respectively. Occupied by German traders in 1888, they were made a German colony in 1906; in 1919 they were placed under Japanese mandate, in 1947 under U.S. trusteeship. They export phosphates and copra. Two of the *M.* are Bikini (q.v.) and Eniwetok, a permanent testing ground for atomic weapons from 1947 (its 137 inhabitants were moved to Ujelong, another of the group). Pop. (1967) 18,925. See PACIFIC IS. TRUST TERR.

MARSH GAS. See METHANE.

MARSH MARIGOLD. Plant (*Caltha palustris*) of the buttercup family Ranunculaceae, known as the kingcup in England and as the cowslip in the U.S.A. The 5-sepalled yellow flowers are brilliant in moist sheltered spots in March.

MARSH MARIGOLD

MARSILIUS OF PADUA (1270–1342). Italian scholar. B. at Padua, he studied and taught at Paris, and in 1324 collaborated with John of Jandun in writing the *Defensor pacis*, a plea for the subordination of the ecclesiastical to the secular power. He played a part in the establishment of the Roman republic in 1328, and was made archbishop of Milan.

MARSTON MOOR. Battle fought in the Civil War on 2 July 1644 on M.M., 7 m. W. of York. The Royalists, under Prince Rupert and the duke of Newcastle, were completely defeated by the Parliamentarians and Scots, under Cromwell and Lord Leven. Lord Fairfax, on the right of the Parliamentarians, was routed; but Cromwell's cavalry charges were decisive.

MARSUPIA'LIA (Gk. *mar supion*, little purse or bag). An order of Mammalia, in which the female has a pouch in which she carries her young for some considerable time after birth. The chief members are the kangaroo, wombat, opossum, Tasmanian wolf, bandicoot, and wallaby.

MARSYAS (mar'sias). Phrygian satyr who challenged Apollo to a musical contest after finding a magic flute discarded by Athena. The Muses judged Apollo the winner, and he slayed *M.* alive.

MARTELLA TOWERS. Towers built along the coast, especially in Sussex and Kent, in 1804, as a defence against the threatened French invasion. The name is derived from a tower on Cape Mortella, Corsica, which was captured by the British with great difficulty in 1794, and was taken as a model. They are round towers of solid masonry sometimes moated, with a flat roof for mounted guns.

MARTEN. Small carnivorous mammals belonging to the Mustelidae family, genus *Mustela*. They live in wild and rocky regions in the warmer parts of the northern hemisphere, and are hunted for their fur. The pine-marten (*M. martes*), has long, brown fur,

lished in the late 19th cent., when wireless telegraphy first permitted the rapid collection of weather reports from large areas. When the reports for successive standard observation times are displayed on a sequence of charts the situation, movement and development of various weather systems, such as cyclonic storms, becomes apparent. Forecasts are made by continuing their observed trend into the future, with a skill acquired as an art by long experience as much as by scientific understanding. The electronic computer has enabled a promising start to be made in the stupendous task of using physical laws to calculate the future trend and to give long-range weather forecasts. Much understanding of the earth's atmosphere, and its effect on weather, is gained from satellites, which signal back a wide range of information. The *World Meteorological Organization* (1950) has estab. weather centres at Suitland, Maryland, U.S.A.; Moscow; and Melbourne.

METER. A general term for any instrument used for measurement, often compounded with a prefix to denote a specific type of M., e.g. ammeter, voltmeter, flowmeter, pedometer, etc. Ms. may not only indicate but also integrate and/or record measurements.

METHANE or Marsh Gas (CH_4). The simplest hydrocarbon of the paraffin series; a constituent of the gas which arises in marshy districts from the decomposition of vegetable matter in stagnant water, and also of the explosive 'fire damp' in coal mines. M. is also a product of the distillation of coal, lignite, peat, wood, etc. It is colourless, odourless, and lighter than air, burns with a faintly luminous flame, and explodes when mixed with air or oxygen.

METHODISM. The evangelical movement founded by John and Charles Wesley in 1739; the name was originally applied to the Wesleys and their circle at Oxford as a nickname. M. originated within the C. of E., and only in 1795 became a distinct body.

The doctrines of M. are contained in John Wesley's *Notes on the New Testament* and sermons. The form of church government is Presbyterian in Britain, and episcopal in the U.S.A. The supreme authority is the annual conference, composed of equal numbers of ministers and laymen. Members are grouped under 'class leaders' and churches into 'circuits'. Disagreements have led to secessions, but the modern tendency is to reunion between the sects (as in 1932 in Britain and in 1939 and 1968 in the U.S.A.), and eventual merger with other Protestant denominations as a single Church (as in the union of Methodists, Presbyterians, and Congregationalists in Canada in 1925 as the United Church of Canada; the union of 7 major Protestant Churches, incl. the United Methodist Church, planned by 1980 in the U.S.A.; and the negotiations between the Methodist Church and the Anglican Communion in Britain).

METHIDIUS. See CYRIL.

METHUSELAH. One of the antediluvian patriarchs of Hebrew story. From the immense age with which he is credited, 969 years, M. has become the type of longevity.

METHYL ALCOHOL or Methanol (CH_3OH). The simplest of the monohydric alcohols, also known as wood alcohol, since it may be prepared by the dry distillation of hard woods. When pure, it is a colourless inflammable liquid with a pleasant odour and is highly poisonous. It is used in organic preparations, as a solvent (especially in the preparation of varnishes and lacquers), and for denaturing ethyl alcohol.

METHYLATED SPIRITS. Adulterated or 'denatured' alcohol, which has been rendered undrinkable, and is free of duty for industrial purposes. It is nevertheless drunk by advanced alcoholics, and eventually results in death.

METRIC SYSTEM. A system of weights and measures based on the *metre*, the unit of length based on the recommendations of a committee of the

French Academy (1791) in a report to the National Assembly which fixed the standard of length as one ten-millionth part of the earth's meridian quadrant at sea-level determined from extensive geodetic surveys between Barcelona and Dunkirk. A subsequent re-definition still in use for some purposes is the distance at 0°C between the centres of 2 lines engraved on a bar of platinum-iridium in Paris, but in 1960 an internat. conference on weights and measures officially redefined it as the length measured in vacuo of 1,650,763.73 wavelengths of the orange-red radiation emitted by krypton (isotope 86) corresponding to the unperturbed transition between the $2p_{10}$ and $5d_5$ levels. The M.S. became legal in France in 1801 and obligatory in 1840.

The M.S. - SI or International System - is universally used for scientific work, is in general use on the Continent, and is in process of adoption throughout the world, 1975 being the guideline date for its adoption by British industry.

The main M. descriptions are: metre (symbol m) for length, litre (l) for capacity, gramme (g) for weight, newton (N) for force, joule (J) for energy, and watt (W) for power. They are preceded by the following expressions to multiply or divide them: mega (M) million times; kilo (K) thousand times, hecto (h) hundred times, deca (da) ten times, deci (d) tenth part, centi (c) hundredth part, milli (m) thousandth part, micro (μ) millionth part. All multiples and sub-multiples are decimal. See p. 1118.

METROPOLITAN OPERA COMPANY. Foremost opera co. of U.S.A., founded N.Y. 1883. The M.O. House (opened 1883) was demolished 1966, and the co. transferred to the New Met. in the Lincoln Center.

METSU (met'sü), Gabriel (1630-67). Dutch painter. B. at Leyden, he worked in Amsterdam from 1657. His pictures are usually of the anecdotal type and

MEUNIER. Typical of the sculptor's interest in 'the worker' is this fine impression of a stevedore, 'Le Débardeur'.

Courtesy of Belgian National Tourist Office.

incl. 'The Duet' and 'Music Lesson', both in the National Gallery, London.

METTERNICH - WINNEBURG, Clemens Wenzel Lothar, prince (1773-1859). Austrian statesman. He was ambassador to France 1806-9, and Foreign Minister from 1809 until the 1848 revolution forced him to flee to England. At the Congress of Vienna in 1815 he advocated co-operation by the great powers to suppress democratic movements.

METZ. Cap. of Moselle dept., France, on the Moselle. It has a Gothic cathedral, is the centre of a rich agricultural region, and manufactures shoes, metal goods, and tobacco. It was long one of the great frontier fortresses of France. M. was a free city of the Holy Roman Empire until 1552, and was German 1871-1918. Pop. (1962) 109,678.

MEUNIER (mönyeh'), Constantin Émile (1831-1905). Belgian painter and sculptor. B. at Brussels, he is known for his paintings and sculptures of industrial life of Belgium.

MEURTHE (mört). French river, 102 m. long,

MARTINI. Dated 1342. 'Christ Found by his Parents in the Temple' is a late work which shows superbly the artist's gift for delicate portrayal of dramatic effect. Courtesy of Walker Art Gallery, Liverpool

greatest of the Sienese school, whose influence was widespread. B. in Siena, he was a pupil of Duccio, but excelling his master in his development of line and colour. He painted a portrait of Laura for Petrarch and is commemorated by the poet in 2 sonnets. He d. at Avignon.

MARTINIQUE (mahr-tēnēk'). French island in the W. Indies (Lesser Antilles), an overseas dept. of France from 1 Jan. 1947, after being a colony from 1635. The cap. and chief commercial centre is Fort-de-France (pop. 90,000). Sugar, cocoa, rum, etc., are produced. M. was discovered by Spanish navigators in 1493. It is of volcanic origin and has several active

volcanoes. See PELÉE, MONT. Area 420 sq. m.; pop. (1965) 325,000.

MARTINMAS. In the Christian calendar, the feast of St. Martin (11 Nov.). Fairs were frequently held on it, at which farm-workers were hired. In the Middle Ages it was also the day on which cattle were slaughtered and salted for winter consumption.

MARTINO, St. (1579–1639). Peruvian monk. The illegitimate son of a Spanish grandee and a freed Negro slave, he joined the Dominicans as a lay brother at 15, and estab. homes for Lima's abandoned children, caring also for stray animals. He became the first R.C. 'half-caste' saint in 1962.

MARTINSON, Harry (1904–). Swedish writer. B. in S. Sweden and orphaned at 7, he ran away to sea when only 14, travelling widely for 8 years as a sailor, and, at intervals, as a tramp. Forced by ill-health to leave the sea, he achieved success with his novel of tramp life, *The Road*, and, with *Aniara* (1956) a space-fiction epic poem which was adapted as an opera.

MARTYR (from the Gk. for 'witness'). In the Christian Church, one who voluntarily suffers death for refusing to renounce the Christian faith or a part thereof. The first recorded Christian M. was St. Stephen, who was killed in Jerusalem shortly after Christ's ascension.

MARVELL, Andrew (1621–78). English metaphysical poet and satirist. B. in Yorks, while tutor to the dau. of Lord Fairfax 1650–3 he wrote many of his finest nature poems, and was assistant to Milton as Latin Sec. to the Council of State 1657–60. He was M.P. for Hull from 1659, and devoted his last years mainly to verse satire and controversial prose works.

MARX (mahrks), Karl Heinrich (1818–83). German philosopher and Socialist. B. at Trèves, the son of a Jewish lawyer, he studied at Bonn and Berlin, and during 1842–3 edited the *Rheinische Zeitung* until its suppression. In 1844 began his life-long collaboration with Engels (q.v.), with whom he developed the Marxist philosophy, first formulated in their joint works, *The Holy Family* (1844), and *German Ideology* (1846), and M.'s *Poverty of Philosophy* (1847). Both joined the Communist League, a German refugee organization, and in 1847–8 they prepared its programme, 'The Communist Manifesto'. During the 1848 revolution M. ed. the *Neue Rheinische Zeitung*, until in 1849 he was expelled from Prussia.

He then settled in London where he wrote *Class Struggles in France* (1849), *The 18th Brumaire of Louis Bonaparte* (1852), *Critique of Political Economy* (1859), and his monumental work *Das Kapital* (1867: *Capital*). In 1864 the International Working Men's Association

was formed, whose policy M., as a member of the general council, largely controlled, and on behalf of which he wrote his defence of the Paris Commune, *The Civil War in France* (1871). Although he showed extraordinary tact in holding together its diverse elements, it was disrupted by the intrigues of the anarchists, and in 1872 collapsed. The 2nd and 3rd vols. of *Capital* were ed. from his notes by Engels, and pub. posthumously. M. was buried at Highgate.

MARX BROTHERS. Team of American film comedians, composed of 'Groucho' (Julius) (1895–), 'Harpo' (Arthur) (1893–1964), 'Chico' (Leonard) M. (1891–1961), and 'Zeppo' (Herbert) M. (1901–), who founded the Zeppo-M. agency in 1935 and appeared only in earlier films. Their best-known films incl. *A Night at the Opera*.

MARXISM. The philosophical system, also known as dialectical materialism or scientific Socialism, founded by Marx and Engels, and developed by Plekhanov, Lenin and Stalin. The main sources of Marx's thought were classical German philosophy, especially that of Hegel; English political economy, notably the works of Adam Smith and Ricardo; and the 'Utopian Socialism' of Saint-Simon, Fourier and Owen. M. is a complete and consistent philosophy, which has profoundly influenced current views on science, history, and literary criticism, even among non-Marxists. Modern British Marxist writers include C. Caudwell in philosophy, R. P. Dutt in politics, M. Dobb in economics, J. B. S. Haldane, J. D. Bernal, and H. Levy in science, V. G. Childe and C. Hill in history, and R. Fox, G. Thomson, B. Farrington and J. Lindsay in literary studies. See DIALECTICAL MATERIALISM; also COMMUNISM.

MARY (Blessed Virgin Mary). Mother of Jesus Christ. She was traditionally the miraculous child of Joachim and Anna in their old age; she m. Joseph, the carpenter of Nazareth, and accompanied him to Bethlehem. The question of her perpetual virginity (the 'brethren of Jesus' being presumed as the sons of Joseph by a former marriage) has occasioned much controversy, but is recognized as a dogma of the R.C. Church, as is her Immaculate Conception and bodily Assumption. Veneration of M. as a mediator has played an increasing part in worship since the Council of Ephesus, A.D. 431: Pope Paul proclaimed her 'Mother of the Church' 1964. See illus. p. 712.

MARY (1867–1953). Queen consort of George V (q.v.). The dau. of the duke and duchess of Teck, the latter a grand-dau. of George II, she became engaged in 1891 to the duke of Clarence, eldest son of the Prince

of Wales (later Edward VII). After his death in 1892, she in 1893 m. his br. George, duke of York, who succeeded to the throne in 1910, and was crowned with him in 1911. She was noted for her gracious dignity, and was a renowned art connoisseur and needlewoman.

MARY I (1516–58).

Queen of England. The dau. of Henry VIII by Catherine of Aragon, she was b. at Greenwich. When Edward VI d. in 1553, she secured the crown without difficulty in spite of the conspiracy

MARY I

to substitute Lady Jane Grey. In 1554 she m. Philip II of Spain, and as a devout Catholic obtained the restoration of papal supremacy. Although naturally humane, she sanctioned the persecution of Protestants which won her the nickname of 'Bloody M.'

MARY II (1662–94). Queen of England. The elder dau. of James II, she was m. in 1677 to her cousin, William of Orange. After the 1688 revolution she

on a new constitution of 1917 which expropriated owners of large estates and let the land to the peasants. Mexico declared war on the Axis powers June 1942, and was an original member of the United Nations.

MEXICO CITY. Cap. and largest city of Mexico, situated on the S. edge of the central plateau, at 7,400 ft. above sea-level near Lake Texcoco. It is spacious and regular, and the many fine buildings incl. the 16th cent. cathedral, the national palace, the national library, the Palace of Justice, and national univ. M.C. is an important cultural centre, a vital railway, road, and air service centre, and business and industrial development is growing. See illus. pp. 729 and 1104.

The city dates from c. 1325, when the Aztec cap. Tenochtitlán was begun on an island in Lake Texcoco. This city was levelled in 1521 by the Spaniards, who in 1522 founded a new city on the site. The lake has gradually shrunk, and is some 2½ m. from the present-day M.C. Pop. (1968) 3,118,059.

MEYER (mī'ēr), Conrad Ferdinand (1825–98). Swiss poet and novelist. B. at Zürich, he abandoned law for literature after the success of his *Balladen* (1867). He continued to write verse, but also developed the short story and the novel. Among his fictitious reconstructions of history are *Jürg Jenatsch* (1876), *Der Heilige* (1880), and *Angela Borgia* (1891).

MEYERBEER (mī'-er-bär), Giacomo. Adopted name of German composer Jakob Liebmann Beer (1791–1864). B. in Berlin, from 1826 he lived mainly in Paris, apart from his work after 1842 as general musical director in Berlin. A talented pianist, he became best known for his spectacular operas, e.g. *Robert le Diable* (1831) and *Les Huguenots* (1836).

MEYNELL (men'el), Alice (1847–1922). British poet, neé Thompson. She pub. *Preludes* (1875), and her collected poems appeared in 1923. Her essays incl. *Rhythm of Life* (1893), and *Second Person Singular* (1921). In 1877 she m. the Catholic author and journalist, Wilfrid M. (1852–1948) and with him befriended Francis Thompson. Her youngest son, Sir Francis M. (1891–), is a book designer, and in 1923 he founded the Nonesuch Press. He was knighted in 1946. Her 3rd dau., Viola M. (d. 1956), was a sensitive novelist, and also pub. a memoir of her mother (1929).

MEZZANINE (mez'anèn). Architectural term derived from the diminutive of the Italian word for middle; it is a low storey in a building between 2 higher ones.

MEZZOTINT (med'zo-). A method of etching in tone, widely practised during the 18th cent. A copper or steel plate is roughened by means of a rocking tool, which makes indentations and raises a 'burr'. The burr is then scraped away where lighter tones are wanted in the design. The process was used to reproduce the works of Turner, Reynolds, Constable, Romney, Lawrence and others.

MIAMI (mī-am'ī). City and port in S.E. Florida, U.S.A., where the M. river enters Biscayne Bay. In 1895 'Fort Dallas' was a tiny hamlet, but with the coming of the railway and its incorporation as the City of M. (Seminole 'sweet water') in 1896, it grew rapidly as a centre for citrus fruit, tourism, and oceanographic research, and as a commercial and manufacturing 'Gateway to Latin America'. Many Cuban refugees (c.125,000) settled here after 1959. Pop. (1960) 291,688; met area c. 1,000,000.

MIASKO'VSKY, Nicolai (1881–1950). Russian composer. He studied music at St. Petersburg under Rimsky-Korsakov and others, and was a prolific composer of symphonies. Other works incl. the symphonic poem 'Nevermore' (after Poe). After the S.W.W. he became well known as a prof. of composition at the Moscow conservatoire, and was denounced by the Soviet authorities in 1948, together with Prokofiev, Shostakovich, et al., for 'formalism', i.e. for being supposedly too intellectual, too modern.

MI'CA. A group of minerals distinguished by

their perfect basal cleavage causing them to split into thin flakes, and by their vitreous pearly lustre. They are found in schists, gneisses, and granites, and their good thermal and electrical insulation quality makes them valuable in industry. M. can be dated to a few thousand years by its geological context, and muon-neutrino tracks within it confirm evolutionary theories of the solar planetary system.

MI'CAH (fl. c. 700 B.C.). Hebrew prophet, whose writings in the O.T. denounce the oppression of the ruling class of Judah, and plead for justice.

MICHAEL. An archangel, referred to in the Book of Daniel as the guardian angel of Israel. In Revelation he leads the hosts of heaven to battle against Satan. In ecclesiastical art he bears a flaming sword.

MICHAEL (1596–1645). Tsar of Russia. He was elected tsar by a national assembly in 1613, at a time of anarchy and foreign invasion, and founded the house of Romanov, which ruled until 1917.

MICHAEL (1921–). King of Rumania. Son of Carol II, he succeeded his grandfather as king in 1927, but was displaced when his father returned from exile in 1930. In 1940 he was proclaimed king again on his father's abdication, and in 1944 he overthrew the dictatorship of Antonescu and enabled Rumania to share in the final victory of the Allies at the end of the S.W.W. He abdicated and left Rumania in 1947.

MICHAELMAS DAISY. Popular name for *Aster tradescanti* and also for the sea aster or starwort.

MICHAELMAS DAY. Festival of St. Michael and all Angels, observed on 29 Sept., and one of the English quarter days.

MICHELANGELO (mīkelan'jelō) (1475–1564). Italian artist and poet, whose full name was Michel-agnolo di Lodovico Buonarroti Simoni. B. near Florence, he studied painting under Domenico and David Ghirlandaio, and for a number of years lived in the palace of Lorenzo de' Medici. He worked in Rome 1496–1501, and again was chiefly in Rome 1508–64. His works of sculpture include the *Pietà*, David, and, for the tomb of pope Julius II, Moses, and the Slaves. In Florence he designed the Medici sepulchral chapel. His most important paintings are those on the ceiling and above the altar ('The Last Judgment') of the Sistine Chapel, Rome. In 1547 he was appointed chief architect of St. Peter's, and designed the dome. M. was the most gifted artist of the Italian Renaissance. He also wrote sonnets and madrigals, many of which were inspired by his friendship with Vittoria Colonna in his later years.

MICHELET (mēshlā'), Jules (1798–1874). French historian, prof. at the Collège de France from 1838. His *Introduction à l'histoire universelle* (1831), was followed by his masterpiece, the *Histoire de France* (1867); *Histoire de la révolution* (1853), etc.

MICHELSON, Albert Abraham (1852–1931). American physicist. Prof. at Chicago from 1892, he was the first American scientist to win the Nobel prize. He invented the M. interferometer, and in conjunction with E. W. Morley performed in 1887 the *Michelson-Morley Experiment* to detect the motion of the earth through the postulated ether. The failure of the experiment led to Einstein's theory of relativity.

MICHIGAN (mish'-). A north-central state of the U.S.A., consisting of 2 peninsulas separated by Lake M. and bordered by lakes Superior, Huron, and Erie, and Canada. The chief highlands are the Porcupine mts., and the rivers incl. the Muskegon, Grand, St. Joseph, Kalamazoo. The state, formerly agricultural, is now chiefly industrial, the motor-car industry being prominent. As the producer of iron ore, copper, cement, sand and gravel, gypsum, and salt, M. is one of the leading states in the Union. Detroit is the largest city; other cities are Grand Rapids, Flint, Saginaw, and Lansing (the cap.).

The area was explored by the French from 1618 onwards, their first permanent settlement being made

MASCARA. Algerian wine trade centre, after which the cosmetic M. is named, 60 m. S.E. of Oran. It was the H.Q. of Abd-el-Kader (c. 1807-83) who fought the French invasion of Algeria 1830-47, M. being captured 1841. Pop. (1960) 45,000.

MASEFIELD, John (1878-1967). Brit. poet. B. at Ledbury, Herefordshire, he went to sea, and while in the U.S.A. worked as a barman in a New York saloon. Returning to England, he joined the *Manchester Guardian* before settling in London. He attracted notice by such vols. of poetry as *Salt Water Ballads* (1902), but fame came with the verse narrative of a drunkard's conversion *The Everlasting Mercy* (1911), with its forcefully colloquial language. Later were the Chaucerian *Reynard the Fox* (1919), and novels such as *Sard Harker* (1924) and *Badon Parchments* (1947); and he essayed drama in *Tragedy of Nan* and *Pompey the Great*. He was appointed Poet Laureate in 1930, and in 1935 was awarded the O.M.

MASER (Acronym for Microwave Amplification by Stimulated Emission of Radiation). A high-frequency amplifier or oscillator dependent on the quantum properties of electrons. By inverting the populations of a pair of electron spin energy levels (i.e. by making the upper level more densely populated than the lower one) the resonance absorption at a frequency corresponding to the energy difference can be changed to emission; an M. results from suitable coupling of this radiation to a microwave cavity or travelling wave structure. The population inversion can be achieved by beam focusing, as in a two-level ammonia gas M., or pumping at a different frequency between another pair of levels, as in a solid-state three-level M. This latter can be tuned magnetically and operates at liquid helium temperatures (-269°C); it is the most sensitive amplifier known.

MASER. An L-band travelling wave maser operating at a frequency of about 1,420 Mc/s, which may be used for receiving weak signals from interstellar hydrogen in space. The signal enters through a small coaxial line, and travels about 250 times slower than the velocity of light along the copper comb-type structure from l. to r., where it is amplified 3,000 times by the ruby material and subsequently led out of the other coaxial line.

Courtesy of Bell Telephone Laboratories

The two-level M. was first suggested in 1954 by C. H. Townes at Columbia univ. and independently the same year by Basov and Prokhorov in the U.S.S.R. The principle of the three-level M. was envisaged by Bloembergen in 1956 at Harvard and Bell Telephone Laboratories embodied it in a cavity M. in the same year and in a travelling wave M. in 1958. The principle has since been extended to other parts of the electromagnetic spectrum. (See **LASER**.) The ammonia M. is used as a frequency standard oscillator (see **CLOCKS**) and the three-level M. as a receiver for satellite communications and radio astronomy.

MASERU (maz'erōō). Cap. of Lesotho, S. Africa, on the Caledon r.; it is a trading centre and there is a univ. (1964) at Roma, 30 m. N. Pop. (1967) 10,000.

MASHONALAND. The E. part of Rhodesia, occupied by the Mashona tribes. It was granted to the British South Africa Company in 1889, and occupied 1890. The company ruled it until 1923 when it came within the self-governing colony of Southern Rhodesia. Here are the ruins of Zimbabwe (q.v.).

MASKELYNE (mas'kelin), Nevil (1732-1811). British Astronomer Royal from 1765, who devised such instruments as the prismatic micrometer, and was founder-editor of the *Nautical Almanac* from 1766. His scheme to measure the earth's density was put into practice in 1774.

MASON, Alfred Edward Woodley (1865-1948). British novelist and playwright. Originally an actor, he pub. his first novel, *A Romance of Wastdale*, in 1895, and won a great reputation with *The Four Feathers* (1902), a tale of the Sudan. One of the first authors to write detective stories with convincing characters, motivation, atmosphere, etc., he also created the detective Hanaud, who appears in *At the Villa Rose* (1910), *House of the Arrow* (1924), and *Prisoner in the Opal* (1929). Later novels incl. *Fire over England* (1936).

MASON AND DIXON LINE. In U.S.A., the boundary line between Maryland and Pennsylvania (lat. $39^{\circ} 43' 26.3''$ N.), named after M. and D., English astronomers who surveyed it 1763-7. It became popularly regarded as dividing the slave states from the free before the Civil War, and generally the N. from the South.

MASQUE (mahsk). Form of amateur dramatic entertainment introduced into England from Italy during the reign of Henry VIII. It reached perfection in the Stuart period with the partnership of Inigo Jones and Ben Jonson. Based on a fairy or mythological theme, the plot was overshadowed by the elements of music, dancing, costume, and scenic design. The masked performers were drawn from the court nobility.

MASS. In physics, the quantity of matter in a body. The British unit of M. is the pound, i.e. the quantity of matter in a standard platinum cylinder preserved at the standards office at the Board of Trade; in the c.g.s. system it is the gramme, now defined as one-thousandth of the International Prototype Kilogram, which is a cylinder of platinum-iridium. M. determines the acceleration produced in a body by a given force working upon it, the acceleration being inversely proportional to the M. of the body. The M. also determines the force exerted on a body by the gravitational attraction of the earth, although this attraction varies slightly from place to place. At a given place, however, equal M. experiences equal gravitational forces, which are known as the weights of the bodies. M. may, therefore, be compared by comparing their weights at the same place, as in a balance.

MASS. In the Christian Church, the Eucharist, also known as the Lord's Supper, or Holy Communion; since the Reformation, the use of the word has been practically confined to the R.C. Church, but it is in use amongst Anglo-Catholics. R.C.s. believe that the M. is a real offering in which the bread and wine are transubstantiated, i.e. are converted into the body and blood of Christ. Changes were made to 'popularize' its celebration following the Second Vatican Council, e.g. the priest was to face the congregation, and English and other vernaculars could be used instead of Latin. Anglo-Catholics believe that Christ is really present under the forms of bread and wine. Protestants maintain that Christ's sacrifice was made on Calvary, and that Holy Communion is a commemorative rite.

Low M. is said by the priest without music; at high M. the priest is assisted by deacon and sub-deacon, and there is incense and music.

MASSACHUSETTS (masachoo'sets). One of the New England states of U.S.A., facing the Atlantic

settled in the 6th cent. by Saxon tribes, and its name comes from its position between the kingdoms of the E. and W. Saxons.

MIDDLETON, Sir Hugh (c. 1560–1631). London goldsmith, who between 1609 and 1613 built the New River Canal, whereby fresh drinking water was brought from wells in Herts to London.

MIDDLETON, Thomas (c. 1570–1627). English dramatist. B. in London, he produced numerous romantic plays and realistic comedies, both alone and in collaboration. Best-known are *A Fair Quarrel* and *The Changeling*, with Rowley; *The Roaring Girl* with Dekker; and *Women Beware Women*.

MIDDLETON. English market town (bor.) in Lancs, on the r. Irk, 6 m. N. of Manchester, with silk and cotton factories, printing works, etc. Pop. (1961) 56,674.

MIDDLETOWN. Name of a number of towns and villages in the U.S.A. The largest are M., an industrial city in Conn., on the Connecticut r., 14 m. S. of Hartford; it makes textiles, rubber products, clothing, chemicals, cigars, etc. A suspension bridge 3,420 ft. long, completed 1938, links it with Portland across the river. It dates from 1650. Pop. (1960) 33,250. Another M., in New York state, incorporated in 1888, is an agricultural centre with textile, machinery, paper, chemical, and other works. Pop. (1960) 23,475. M., a city in Ohio laid out in 1802, has steel-rolling and paper mills, tobacco and metal factories. Pop. (1960) 42,115.

For the 'M.' described by R. S. and H. M. Lynd, see **MUNCIE**.

MIDDLE WEST. Name given to a large area in the north-centre of U.S.A., usually taken as comprising the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, and Minnesota, and containing about a quarter of the total population. Lord Bryce, who first distinguished the area in 1888, said that the M.W. is the most distinctively American part of the U.S.A. It tends to be Republican and isolationist.

MIDGE. Name applied in popular speech to many gnat-like insects; in particular to the Chironomidae.

MIDLANDS. A section of England corresponding roughly to the Anglo-Saxon kingdom of Mercia. It is bounded on the N. by Yorks and Lancs, on the W. by Wales, on the S. by the Thames, and the E. by Norfolk, Suffolk, Essex, Herts, and Greater London.

MIDLÖTHIAN. Scottish county lying S. of the Firth of Forth. In the S. are the Moorfoot and the Pentland hills. Rivers incl. the Gala, the N. and S. Esk, and the Water of Leith. The co. is largely agricultural, but coal is mined extensively on the N. Esk. In addition to Edinburgh, the co. town, the towns incl. Dalkeith, Musselburgh, and Penicuik. Area 366 sq. m.; pop. (1961) 580,332.

MIDNIGHT SUN. Phenomenon seen N. of the Arctic Circle and S. of the Antarctic Circle when the sun is above the horizon at midnight during summer.

MIDRASH (Heb., inquiry, searching out). Name given to the ancient Jewish homiletical commentaries on the Bible, in which allegory and legendary illustration are freely used. They were compiled principally in Palestine from the 4th cent. onwards.

MIDSHIPMAN. Officer in training in the R.N., ranking below the lowest commissioned officer. Ms. are often called 'snotties', traditionally because they wiped their noses with their sleeves rather than handkerchiefs. In the U.S. students training at the naval academy are called Midshipmen.

MIDSUMMER. The summer solstice, about 21 June, but M. Day is 24 June—a quarter day and the festival of St. John the Baptist.

MIDWAY. Circular atoll and island group in the N. Pacific, c. 1,200 m. N.W. of Hawaii. Discovered by the U.S.A. in 1859 and acquired by that country in 1867. M. became a point of call for trans-Pacific aircraft in 1935. M. was attacked without success by

the Japanese in 1941. Area 2.2 sq. m.; pop. (1960) 416.

MIDWIFERY. Obstetrics; the assistance of women in childbirth. As one of the principal divisions of the qualifying course for medical practitioners, it incl. all sorts of treatment, medical and surgical, connected with birth, but the functions of a midwife are in most countries limited by law to the making of preparations and examinations, the giving of ordinary assistance and after-care, and the summoning of the doctor in an emergency. In England the local authorities conduct municipal M. services and license midwives for practice.

MIERIS (mē'ris). Name of a family of Dutch painters, of whom the most important was Franz van M. (1635–81). He painted small genre pictures distinguished by their polish and rendering of detail.

MIES VAN DER ROHE, Ludwig (1886–). American architect. Son of a stonemason, he was b. in Aachen, and was director of the Bauhaus 1929–33. He became prof. at the Illinois Institute of Technology (1938–58), for which he designed new logically functional buildings from 1941, and the bronze-and-glass Seagram building, N.Y.

MIGNARD (mēnyahr'), Pierre (1610–95). French painter. Known as 'Le Romain', he worked in Italy for 22 years, and subsequently in Paris, becoming an opponent of Le Brun. He painted many pleasant, graceful portraits of people of the day, e.g. Descartes, Molière, and Bossuet. The term 'Mignardise' (meaning sugar-sweet) is derived from his Italian-type Madonnas.

MIGNET (mēnyā'), François Auguste Marie (1796–1884). French historian. Notable for his sound judgment, he wrote a *Histoire de la révolution française* (1824), and *Histoire de Marie Stuart* (1851).

MIGNONETTE (minyonet'). Sweet-scented garden plant (*Reseda odorata*), bearing usually yellowish-green flowers in racemes, with abundant foliage. A native of N. Africa, it was brought to England about 1752.

MIGRAINE. Incapacitating disease, characterized by headaches, usually severe, and preceded in 75 per cent of cases by warning symptoms (disturbances of vision, especially flashing lights, and less frequently of sensation affecting the legs, arms or face). In 60 per cent of cases the headache is followed by nausea or vomiting. Preparations of ergotamine, taken early in the attack, are the best treatment, and in preventing attacks travel sickness compounds or, in 75 per cent of patients willing to take the drug all the time, l-methyl-D-lysergic acid butanolamide tartrate has proved beneficial.

MIGRATION. The seasonal movements of certain animals, particularly birds and fishes. Some fishes, notably eels and salmon, migrate at the breeding season. Many birds inhabiting temperate climates migrate in winter to warmer zones, usually travelling in large numbers. Observation of migrating birds is carried on chiefly from lighthouses, and the destinations, distance covered, and length of time taken have been ascertained by 'ringing' the legs of certain birds for identification.

MIHAILOVICH, Draga (1893–1946). Yugoslav soldier. He served in the army of his native Serbia in the Balkan and F.W.Ws. After the German occupation of Yugoslavia in the S.W.W., he withdrew to the hills with his guerrilla troops ('Chetniks'), but his antipathy to the Croatian Tito's Communist resistance fighters, and the withdrawal in 1943 of the support of the Allies and the exiled Y. govt., forced him to accept aid from the Italians and Germans, and he was eventually captured and shot for treason.

MIKADO (mikah'dō). Title applied by foreigners to the Japanese emperor; the Japanese style is *tenno*.

MIKOYAN, Anastasiy Ivanovich (1895–). Soviet statesman. B. at Tiflis, he was a prominent Bolshevik leader in Baku during the Revolution and was Min.

MASTER AND SERVANT. Although in Britain common law governs relations between employer and employee in circumstances not covered by special enactments, the latter cover an increasingly large field, e.g. the Wages Councils Act of 1945 which created councils empowered to fix wages and holidays in respect of certain trades and industries, the National Insurance (Industrial Injuries) Act of 1946, and the Contracts of Employment Act (1963) which requires a minimum period of notice to terminate employment for those employed for a qualifying period. In the U.S. wider scope is left for direct negotiation between employers and unions.

MASTER OF ST. BARTHOLOMEW (c. 1450–c. 1510). German artist of the Cologne school, named from his altar-piece of St. Bartholomew c. 1507, formerly in the Church of St. Columba, Cologne, but now in Munich. See GERMAN ART.

MASTER OF THE ROLLS. Title of an English judge ranking immediately below the Lord Chief Justice; he presides over the Court of Appeal, besides being Keeper of the Records and head of the Public Record Office.

MASTERS, Edgar Lee (1869–1950). American poet. B. in Kansas, he achieved fame with the free verse *Spoon River Anthology* (1915), in which the inhabitants of a small town tell of their frustrated lives. M. later pub. other collections of verse, novels and biographies.

MASTIFF. British dog, usually fawn, which was originally bred for sporting purposes. It has a large head, wide-set eyes, and broad muzzle.

MASTODON. The primitive elephant, whose fossil remains have been discovered in all the continents except Australia, particularly in deposits of Pleistocene Age in the U.S.A. and Canada. It resembled the modern elephant, but was lower and longer; its teeth suggest that it lived on leaves in the primeval swamps and forests.

MASULIPATNAM. Indian seaport in Andhra, at the mouth of the N. distributory of the r. Kistna. Its name means fish town, and it has a textile industry. Pop. (1961) 101,396.

MASURIAN LAKES. Lakes in Poland (former E. Prussia) which in 1914–15 were the scene of battles in which the Germans defeated the Russian invaders.

MATABELELAND (mahtahbā'le-). The western portion of Rhodesia, inhabited by Zulu tribes called Matabele. It consists of rich plains watered by tributaries of the Zambezi and Limpopo, with mineral wealth. The chief town is Bulawayo. M. was granted to the British S. Africa Company in 1889 and occupied in 1893 following attacks on white settlements in Mashonaland; in 1923 it was included in Southern Rhodesia.

MATADI. Chief port of Congo Republic (formerly Belgian Congo), on the Congo r. 70 m. from its mouth. It is linked by petroleum pipelines with Kinshasa and exports coffee, cacao, palm oil, cotton, copal, copper, etc. It has an airport. Pop. (1967) 47,000.

MATANZAS. Free port and cap. city of the prov. of M. on the N. coast of Cuba, chiefly engaged in the export of sugar. Pop. (1960) 82,700.

MATAPAN. Southernmost cape of the mainland of Greece, off which, on 28 March 1941, during the S.W.W., a British fleet under Admiral Cunningham sank an Italian squadron.

MATCHES. A match is a small strip of wood (usually aspen) or taper tipped with combustible material for producing fire. Friction matches containing phosphorus were first made by Dr. Charles Sauria in France in 1831. A 'safety' match is one in which the oxidizing agent and the combustible body

are kept apart, the former being incorporated into the striking part, and the latter on to the side of the box.

MATÉ (mat'éh) (Paraguay tea). The dried leaves of the Brazilian holly (*Ilex paraguayensis*), an evergreen shrub akin to the common holly, that grows in Paraguay and Brazil. The Jesuits were the pioneers in its cultivation, and it is still sometimes called Jesuits' tea. After roasting, the leaves are powdered and the prepared infusion is drunk through a tube.

MATERA. Italian town, cap. of M. prov., in Basilicata region, seat of an archbishopric. Today some 18,000 people are still living in rock caves that have been inhabited from prehistoric times. M., an agricultural centre with flour mills, woollen factories, and potteries, has a 13th cent. cathedral. Pop. (1961) 38,233.

MATERIALISM. The philosophical theory that everything that exists can be explained in terms of matter and motion. Thus it excludes any form of supernaturalism, regarding 'matter' as the one ultimate fact and 'mind' as a product of matter. Like most other philosophical ideas, M. probably arose among the early Greek thinkers. The Stoics and the Epicureans were materialists, and so were the ancient Buddhists. Among modern materialists have been Hobbes, d'Holbach, Büchner, and Haeckel; while Hume, J. S. Mill, Huxley, and Herbert Spencer showed materialist tendencies.

MATHEMATICS. The science of spatial and numerical relations. Pure M. includes, as its main divisions, geometry, arithmetic, and algebra, the calculus, trigonometry, etc.; while mechanics, the mathematical theories of astronomy, electricity, optics, and thermodynamics, etc., are included in the heading of applied M.

Probably prehistoric man had learned to count at least up to the 10 represented by his fingers, and Chinese, Hindus, Babylonians, and Egyptians all evolved methods of counting and measuring which were of practical importance in their everyday life. The first theoretical mathematician is held to be Thales of Miletus (640–546 B.C.), to whom we owe the first theorems in plane geometry. His disciple, Pythagoras, established geometry as a recognized science among the Greeks, so that the way was prepared for the school of Alexandrian geometers that produced Euclid, Archimedes, and others in the 4th and 3rd cents. B.C. Our present numerals are a Hindu-Arabic system which reached Europe about A.D. 1000. The Arab mathematicians of the Near East were the masters from whom European scholars learnt their science, and in the 15th cent. there began an uninterrupted development. Geometry was revived by the invention of algebraical geometry by Descartes in 1637. Napier invented logarithms, and Newton and Leibniz the calculus. Lobachevski (1793–1856) rejected parallelism and developed non-Euclidean geometry, followed by Einstein in 20th cent.

MATILDA (1102–67). Queen of England. The dau. of Henry I, she m. the Emperor Henry V, and after his death Geoffrey Plantagenet, count of Anjou. Although the barons had recognized her as Henry's successor, on his death in 1135 they elected her cousin Stephen king. M. invaded England in 1139, and in 1141 was crowned queen. Civil war followed, until in 1153 Stephen was recognized as king, and M.'s son, Henry II, as his successor.

MATISSE (mahtès'), Henri (1869–1954). French artist. B. at Le Cateau Nord, after becoming an associate of the Salon, he was a member of the group known as *les Fauves*. One of the leading painters of the modern French school, he was essentially a designer or decorator, employing pure colour, distorting natural forms, and subordinating subject matter to pattern. In 1947–51 he designed and decorated a chapel for the Dominicans of Vence.

MILFORD HAVEN. This deep-water marine terminal (54 ft. minimum depth in the approaches) is able to accommodate the great super-tankers, and is one of Europe's largest oil ports. Photo: Aerofilms.

large petroleum refinery, and a specially built jetty for tankers, connected by a 62-mile pipeline with refineries at Llandarcy, near Swansea, where there are also petrochemical works. Pop. (1961) 12,802.

MILHAUD (mêloh'), Darius (1892–). French composer. In Brazil (19 7–19) he wrote the piano pieces *Saudades do Brasil*, before returning to France, where he became a member of the satirical group of composers 'Les Six', writing e.g. *Machines Agricoles* (1919), a setting of an agricultural catalogue, and the jazz ballet *La Création du Monde* (1923). He was associated with Paul Claudel (q.v.), with whom he collaborated in various ballets. In 1940 he went to the U.S. as prof. of music at Mills College, Calif., and became prof. of composition at the National Conservatoire in Paris in 1947. Much of his later work, which incl. chamber, orchestral, and choral music, is polytonal.

MILITARY LAW. See **MARTIAL LAW**.

MILITIA. A home-defence force, as distinguished from the Regular Army, consisting of ordinary citizens, with usually some military training, who are on call in emergencies.

King Alfred estab. the 1st M. or *fyrð*, in which every freeman was liable to serve. After the Conquest a feudal levy was estab. in which landowners were responsible for raising the men required. This in turn led to the increasing use of the general levy by English kings to combat the growing power of the barons. In the 16th cent., under such threats as the Spanish Armada, plans for internal defence relied increasingly on the M., or what came to be called 'trained bands', of the general levy. After the Restoration, the M. fell into neglect, but it was re-organized in 1757, and relied upon for home defence during the French wars; and in the 19th cent. it extended its activities abroad, serving in the Peninsular, Crimean and Boer wars. In 1852 it adopted a volunteer status, and in 1908 the M. was merged with the Territorial Army and the Special Reserve forces, to supplement the Regular Army, and ceased to exist as a separate force. In 1939 the name 'Militiamen' was given to the 6 month conscripts known as the 'Home-Belisha Boys'.

The principle of a M. was introd. into the U.S. with the 1st settlers, who had to be able to defend as well as build their settlements. After an Act of 1792, it more or less replaced for a time the Regular Army, but was itself supplanted in the late 19th cent. by the volunteer National Guard units of individual states, which are under federal orders in emergencies, and are

now an integral part of the U.S. Army. In Switzerland, the M. is the national defence force, and every able-bodied man is liable for service in it.

MILK. The secretion of the mammary glands of female vertebrate animals which suckle their young, for whom it is a complete food. The M. of cows, goats and sheep is consumed by man. In the U.K. the Food and Drugs Act of 1899 (amended 1939) empowered a standard to be fixed below which the fats and solids content of cows' M. should not fall; the same standard applies in the U.S.A. Preservatives were forbidden after 1912, and in 1913 the notification of cattle with tuberculosis became compulsory. M. from Tuberculin Tested herds is the highest type of raw M.; 'pasteurized' M. is partially sterilized; these and lower grades of M. are rated according to the number of bacilli per cu.cm.; 'homogenized M.' has the fat content broken down so that the cream can be evenly distributed. In the U.S., as in the U.K., there are stringent regulations for the hygienic preparation of M., grading, detection of adulteration, etc. Markets for M. were widened in the 1960s by 'long life' M. which, by special heat treatment, remains fresh in the hottest climate for 6 months without refrigeration. See **DAIRYING**.

MILKWORT. Common name for plants of the genus *Polygala*, formerly supposed to increase the milk of cows. *P. vulgaris*, a common British plant, has blue or pink or white flowers.

MILKY WAY. The luminous band of light stretching around the heavens, and passing through constellations such as Cygnus (the Swan), Gemini (the Twins), Sagittarius (the Archer) and Crux Australis (the Southern Cross). It is composed of stars, together with bright and dark nebulae. These stars are not, however, packed closely together. When we look along the main plane of the Galaxy, we see many stars in more or less the same direction, and it is this which causes the M.W. appearance. In 1962 the magnetic field hitherto only conjectured as the cause of the M.W.'s spiral structure was measured by a research team at Jodrell Bank. See *illus. p. 74*.

MILL, John Stuart (1806–73). British philosopher and economist. B. in Pentonville, the son of James M. (1773–1836), eminent Utilitarian philosopher, he proved a remarkably precocious student. In 1822 he entered the India House, where he became head of his department before retiring in 1858. In 1826, as described in his *Autobiography* (1873), he passed through a mental crisis; he found his father's bleakly intellectual Utilitarianism emotionally unsatisfying, and abandoned it for a more human philosophy influenced by that of Coleridge. So, too, in his social philosophy he gradually abandoned the Utilitarians' extreme individualism for an outlook akin to liberal socialism, while still laying great emphasis on the liberty of the individual; this change can be traced in the later editions of *Principles of Political Economy* (1848). He sat in Parliament as a Radical 1865–8, and introduced a motion for women's suffrage. His feminist views inspired his *On the Subjection of Women* (1869). His philosophical and political writings incl. *A System of Logic* (1843), *On Liberty* (1859; generally considered his masterpiece), and *Considerations on Representative Government* (1861).

MILLAIS (millā), Sir John Everett (1829–96). British artist. B. at Southampton, he joined Holman Hunt and Rossetti in 1848, founding the Pre-Raphaelite Brotherhood, and all his best works were painted in the Pre-Raphaelite manner, e.g. 'Christ in the House of His Parents' (1850), 'Ophelia' (1852), and 'Autumn Leaves' (1856). In 1855 he m. Effie Gray, Ruskin's divorced wife. Although his early work had provoked fierce criticism, he later achieved great popularity with his story-pictures, such as the 'Boyhood of Raleigh' (1870), and 'The North-west Passage' (1874), sentimental child-studies, e.g. 'Bubbles' (1886), and

shows the conflict of an unhappy marriage. Similarly preoccupied with the irreconcilability of Christian practice and human nature are *Flouve de feu* (1923), *Désert de l'amour* (1925), and *Thérèse Desqueyroux*. He was awarded a Nobel literary prize in 1952.

MAURICE, (John) Frederick Denison (1805–72). Anglican churchman. Son of a Unitarian minister, he was ordained in the C. of E. in 1834, but in 1853 was deprived of his professorships in English history and literature and divinity at King's Coll., London, following the publication of his *Theological Essays* attacking the doctrine of eternal punishment. He founded with Kingsley the Christian Socialist movement and promoted popular education. In 1866 he became prof. of moral philosophy at Cambridge.

MAURISTS. A congregation of French R.C. monks, belonging to the Benedictine order, estab. in 1621 at the Benedictine monastery of St. Maur-sur-Loire. Subsequently its chief house was in Paris, and there the M. fathers carried on literary and historical work, while still maintaining the strict monastic discipline. In 1792 the congregation was suppressed.

MAURITANIA. Republic of N.W. Africa, in full the Islamic Republic of M., lying N. of Senegal. Made a French protectorate in 1903, a colony in 1920, and an overseas territory in 1946, it was given independence in 1960, remaining within the French Community. Much of its 419,000 sq. m. lie in the Sahara Desert; very large deposits of iron ore and copper exist; most of its inhabitants (1965) 1,100,000 are nomadic and live by their flocks and herds. The cap. is Nouakchott. The name M. was that of the Roman prov. of N.W. Africa, so called from the Mauri, a Berber people who inhabited it.

MAURITIUS (mawrish'us). Island in the Indian Ocean, 550 m. E. of Madagascar, which was discovered, then uninhabited, by the Portuguese c. 1510; occupied by the Dutch 1598–1710; by the French 1715 until conquered by the British in 1810 and ceded to them 1814. In 1968 M. became an independent monarchy (with Elizabeth II as queen) within the Commonwealth. Sugar is the chief product. The cap. is Port Louis (pop. 135,000). There is a Gov.-Gen., Council of Ministers and Legislative Assembly. Area 720 sq. m.; pop. (1968) 773,000. Most numerous (c.350,000) are the Hindus, originally imported from India as indentured labour in the early 19th cent. after the abolition of slavery. Most important of several small is. dependencies is Rodriguez c. 350 m. to the E.; area 40 sq. m.; pop. (1968) 20,000; the Chagos Archipelago was transferred in 1965 to the British Indian Ocean Territory (q.v.). Official languages are English and French, Creole French being widely spoken. M. is subject to occasional devastating cyclones.

MAUROIS (mohrwah'), André. Pseud. of French author Emile Herzog (1885–1967). In the F.W.W. he was attached to the British Army, and the essays *Les Silences du Colonel Bramble* (1918) give humorously sympathetic observations on the British character. His novels incl. the semi-autobiographical *Bernard Quesnay* (1926), but he was best known for his fictionalized biographies, e.g. *Ariel* (1923), a life of Shelley, and for his essays on contemporary problems.

MAURRAS (mohrah'), Charles (1868–1952). French author and politician. B. in Provence, he became a journalist and an ardent royalist, as appears in such books as *Trois Idées politiques* (1898), and *L'Avenir de l'intelligence* (1905). In 1908 he joined with L. Daudet in the direction of the daily paper, *Action française*. He was jailed as a collaborator 1945–52.

MAVOR, O. H. See BRIDIE, JAMES.

MAWSON, Sir Douglas (1882–1958). Australian Antarctic explorer. B. nr. Bradford, he was taken to Sydney as a child, and qualified as a mining engineer. As a member of Shackleton's expedition of 1907–9, he discovered the South Magnetic Pole, and in an expedition of his own (1911–14) extended Australia's

claim to sovereignty in the Antarctic to c. 2,720,000 sq. m. Prof. of geology and mineralogy at the Univ. of Adelaide 1920–53, he was knighted in 1914 and in 1954 his name was given to Australia's first permanent Antarctic base.

MAXIM, Sir Hiram Stevens (1840–1916). Anglo-American inventor. A naturalized Briton, he improved lighting methods, experimented with flight and invented the M. machine-gun.

MAXIMILIAN I (1459–1519). Holy Roman Emperor. The son of the Emperor Frederick III, he m. Mary of Burgundy in 1477, thus bringing the Low Countries under Habsburg rule, and became emperor in 1493. His dream of reviving the medieval empire involved him in long wars in Italy and Hungary with little result, but he made the Habsburgs the most powerful house in Europe, especially by marrying his son, Philip, to the heiress to the Spanish throne.

MAXIMILIAN (1832–67). Emperor of Mexico. The brother of the Emperor Francis Joseph of Austria, he was given command of the navy in 1854, and was gov. of Lombardy and Venetia 1857–9. He m. Princess Charlotte of Belgium in 1857. After the occupation of Mexico by French troops he accepted the title of emperor in 1864, but soon found himself a mere puppet in French hands. He met with resistance from the republicans under Juárez, and in 1866 French troops withdrew, at the demand of the U.S.A.; M., deserted, was captured by the republicans 1867 and shot.

MAXTON, James (1885–1946). British politician. He was a conscientious objector in the F.W.W. and was imprisoned for making a seditious speech in his native Glasgow, but entered Parl. in 1922 and was chairman of the I.L.P. 1926–46. His great sincerity attracted even those who could not share his views.

MAXWELL, James Clerk. See CLERK MAXWELL.

MAY, Phil (1864–1903). British artist. On the staff of the *Sydney Bulletin* 1885–8, he returned from Australia to Europe and in 1895 joined *Punch*. Well known for his vigorously vivid sketches of Bohemian and street life, he pub. *Phil May's Annual* 1892–1903.

MAY, Sir Thomas Erskine (1815–86). English constitutional jurist. Clerk of the House of Commons 1871–86, when he was created baron Farnborough, he wrote the standard *Treatise on the Law, Privileges, Proceedings, and Usage of Parliament* (1844).

MAYA (mah'yah). American Indian civilization of which remains are found in S. Mexico, Guatemala and British Honduras. Little survives of the earliest period from c. 500 B.C., but of the classic period c. A.D. 325–925 there are magnificent remains of buildings in stone (though metal tools were unknown to them), carved stelae, etc. They had a form of hieroglyphic writing, and were skilled in agriculture, mathematics and astronomy: their religion involved human sacrifice, but on a lesser scale than that practised by the Aztecs. Towards the end of this period there was an unexplained population movement away from the central area, and up till A.D. 1200 there was strong Mexican influence, subsequently thrown off. However, a general decline of the culture continued accompanied by civil wars, and the Spanish conquest in the 16th cent. completed its downfall, destroying much also of historical value incl. all except 3 of the ancient bark codices. See CHICHEN ITZA.

MAYA (mah'ya). Sanskrit word meaning 'illusion', applied frequently in Hindu philosophy, particularly in the Vedanta, to the cosmos which Isvara, the personal expression of Brahma or the Atman, has called into being. This is real, yet it also is illusion, since its reality is not everlasting.

MAYAKOVSKY, Vladimir (1893–1930). Russian poet. He combined revolutionary propaganda with efforts to revolutionize poetic technique, e.g. *150,000* (1920) and the dramatic poem *Mystery-Bouffe* (1918) on the October Revolution. He also wrote the satiric play *Klop* (1928: *The Bedbug*), taken in the West as an

Now We Are Six (1927), and *The House at Pooh Corner* (1928).

MILNE BAY. Most easterly bay of New Guinea, c. 225 m. S.E. of Port Moresby. The Japanese made a landing here on 25 Aug. 1942, but were beaten off by the Australians.

MILNER, Alfred, visct. (1854–1925). British statesman. As Gov. of Cape Colony 1897–1901, he negotiated with Kruger on behalf of the Uitlanders, before the outbreak of the S. African War, and undertook, as Governor 1901–5, the remodelling of the civil admin. of the Transvaal and Orange River colonies after their annexation. His concept (later modified) of the Empire as a 'permanent and organic union', not an alliance of self-governing colonies, and his advocacy of colonial trade preferences, etc., influenced his disciples (Geoffrey Dawson, Lionel Curtis, etc.), known as M.'s Young Men. In 1916 he became a member of Lloyd George's War Cabinet, and as Sec. for War 1918–19, was largely responsible for creating a unified Allied command under Foch. He was created a visct. in 1901.

MILNES, Richard Monckton, 1st baron Houghton (1809–85). British writer and politician, best remembered as the first editor of the *Life, Letters and Literary Remains of Keats* (1848).

MILLO. Italian form of MELOS.

MILTON, John (1608–74). English poet. B. in London, the son of a scrivener, he was ed. at Christ's Coll., Cantab. The best-known of his univ. poems are the ode 'On the Morning of Christ's Nativity' (1629), and his lines on Shakespeare. In 1632 M. retired to his father's house at Horton for 5 years of studious preparation for his poetic vocation, and there wrote the companion pieces *L'Allegro* and *Il Penseroso* (1632); the masque *Comus* (1634); and 'Lycidas' (1637), an elegy on the death of his friend, Edward King. In 1638–9 he visited France and Italy, where he met the imprisoned Galileo. Settling in London in 1640, he limited his creative writing during the next 20 years mainly to pamphlets. Among the chief of these are *Of Reformation Touching Church Discipline* (1641), one of several attacks on episcopacy; *Doctrine and Discipline of Divorce* (1643), and *Tetrachordon* (1644), both occasioned by the desertion of his Royalist wife, Mary Powell, whom he had m. in 1642; *On Education* (1644), a subject of which he had practical experience as tutor to his nephews and others; and *Areopagitica* (1644), a forthright defence of the freedom of the press. His only poetic productions during these years were his sonnets. He was reconciled to his wife in 1645, and 4 years after her death in 1652 m. Catherine Woodcock (d. 1658), and then in 1662 Elizabeth Minshull, who survived him. In 1649 he became Latin Secretary to the Commonwealth, and although blind by 1652, carried on his duties with the aid of assistants such as the poet A. Marvell. Although arrested at the Restoration, he was released on payment of a fine, and while living in obscurity began serious work on his long-projected epic, *Paradise Lost*, the story of the fall of mankind and the hope of ultimate redemption, appeared in 1667, and was followed by *Paradise Regained* and *Samson Agonistes*, a tragedy in the Greek tradition, in 1671. Among his other works are poems in Italian and Latin, the finest of the latter being the *Epitaphium Damonis*, lamenting the death of his friend, Charles Diodati; and a *History of*

JOHN MILTON

Britain (1670). He d. from an attack of gout, and was buried in St. Giles, Cripplegate, London.

Our illus., showing M. at c. 21, may be the original 'Onslow' portrait, which passed from the poet's widow to Arthur Onslow the Speaker and was 'lost' after 1827: its history is unknown before 1939.

MILTON KEYNES (kēnz). New town, Bucks, England, planned 1969 on a grid lay-out as 'Los Angeles in England'. It is the H.Q. of the Open Univ. Eventual pop. 250,000.

MILWAUKEE (milwau'kē). Largest city in Wisconsin state, U.S.A., on Lake Michigan, 85 m. N. of Chicago. With a fine harbour, it is a great grain- and coal-distributing port. Heavy machinery of many kinds is manufactured, and brewing and meat packing are important. Pop. (1960) 741,324.

MIMOSA. Genus of the family Leguminosae, found in tropical and subtropical regions and ranging from shrubby plants to large trees. The flowers are small, fluffy, golden balls (tufts of stamens) and the leaves are pinnate, divided into a multiplicity of small leaflets. Certain species, e.g. the sensitive plant of Brazil (*M. sensitiva*), shrink as if withered on being touched, though rapidly recovering.

MINARET (Arab. *manāra*). A slender turret attached to a Mohammedan mosque. It has one or more balconies, from which the *muezzin* calls the people to prayer 5 times a day.

MINAS GERAIS (mē'nahs zheris'). Inland state of Brazil, intersected by mountain ranges and deep valleys. Coffee, sugar, tobacco, etc., are grown in the lowlands and cattle are reared elsewhere; minerals incl. manganese and iron ores, gold, and diamonds. The cap. is Belo Horizonte. Area 224,700 sq. m.; pop. (1967) 11,440,000.

MIND. The presumed mental or psychical being or faculty that enables one to think, will, and feel; the seat of the intelligence and of memory; sometimes only the cognitive or intellectual powers as distinguished from the will and the emotions. The relation of M. to matter may be variously regarded. Materialists identify the two: mental phenomena equally with physical are to be explained in terms of matter and motion. Dualists hold that M. and matter exist independently side by side. Idealists maintain that M. is the ultimate reality, and that matter is the creation of intelligence, and does not exist apart from it. See **PSYCHOLOGY**.

MINDANAO (mindahnah'ō). The second-largest island of the Philippine Republic. It is very mountainous, rising in the active volcano Apo to over 10,000 ft., and is subject to severe earthquakes. Gold is worked. Chief towns are Davao and Zamboanga. Area 36,537 sq. m.; pop. c. 2,000,000.

MINDEN (min'-). Town of North Rhine-Westphalia, W. Germany, 35 m. W.S.W. of Hanover, on the Weser. The duke of Brunswick's Anglo-Allied army here defeated the French in 1759.

MINDORO (mindō'rō). Island of the Philippine Republic, S. of Luzon. Mount Halcon rises to 8,500 ft.; the cap. is Calapan. Area 3,759 sq. m.

MINDSZENTY, József (1892–). Hungarian archbishop, primate from 1945. Sentenced to life imprisonment in 1949 on a charge of treason by the Communist govt., he was released in 1956 when he was given asylum in the U.S. legation in Budapest. He has been the subject of much controversy.

MINEHEAD. English market town and seaside resort in Somerset, 21 m. N.W. of Taunton. Pop. (1961) 7,674.

MINERALOGY. The study of minerals. A mineral is a natural substance having a characteristic chemical composition. Most of them are crystalline, and in this they differ from rocks. The classification of minerals is based chiefly on their chemical constitution, viz. metallic, ionic, and molecular. In addition, their crystallographic and physical characters,

MEDALS. Left to right: Legion of Honour (France); Iron Cross (Germany); Waterloo Medal, Victoria Cross, George Cross (U.K.); Medal of Honor (army and air force) and Medal for Merit (U.S.A.). Courtesy of A. H. Baldwin Ltd., and Splink & Son Ltd.

of Labour. He then succeeded J. L. Lewis as pres. of the A.F.L. (of the A.F.L./C.I.O., q.v., from 1955). In 1963 he was one of the 1st recipients of the Presidential Medal of Freedom.

MEARNS, The. Another name for KINCARDINESHIRE.

MEASLES. An acute infective fever caused by a virus, and transmitted usually by coughing, sneezing, etc. Symptoms are severe catarrh, small spots inside the mouth, and a raised, blotchy red rash appearing about the 4th day; patients are isolated for a fortnight. In white children it is comparatively a minor ailment, although serious complications may develop, but among some African peoples it is the most acute infectious disease.

By 1963 virus vaccines had estab. their usefulness in a number of countries.

See also GERMAN M.

MEAT. The flesh of animals taken as food. Modern means of preparation and transport have made its use widespread in all prosperous manufacturing areas, but many eastern peoples rarely or never eat M. Grasslands support mainly cattle and sheep, and grainlands support swine. Heavily peopled countries tend to specialize in high-grade beef or dairy cattle, confining sheep to the non-arable areas. Exporting countries incl. Argentina, Australia, New Zealand, Canada, U.S.A., and Denmark (chiefly bacon).

MEATH, Reginald Brabazon. See COMMONWEALTH DAY.

MEATH. Co. of Rep. of Ireland, in Leinster prov., facing the Irish Sea. It is mainly agricultural. The co. tn. is Trim. Area 903 sq. m.; pop. (1966) 67,323.

MEAT PACKING. Name given to the industry in the U.S.A. of preparing meat for consumption at a distance, particularly overseas. The industry depends on refrigeration, which was invented in 1861. Frozen beef was first sent to Smithfield from America in 1874. The first frozen meat was dispatched from Argentina in 1878 and from Australia in 1879. Chicago has the world's greatest M.P. plants.

MEAUX (moh). French town in Seine-et-Marne dept., 28 m. N.E. of Paris, centre of the Brie region, famous for its cheese; seat of a bishopric from the 4th cent. Thousands of peasants were killed at M. during the Jacquerie, 1358. Pop. (1962) 23,305.

MECCA. City of Arabia, the cap. of Hejaz and one of the caps. of Saudi Arabia, the holiest city of the Mohammedan world, where the Prophet was born. It stands in the desert, about 45 m. E. of Jidda, its port on the Red Sea, with which it is linked by an asphalted road, and long before the time of Mohammed was a commercial centre, caravan junction, and place of pilgrimage. In the centre of M. is the Great Mosque, in whose courtyard is the Kaaba (q.v.); it also contains the well Zam-Zam, associated by tradition with Hagar and Ishmael, and the Maqām Ibrāhīm, a holy stone supposed to bear the imprint of Abraham's foot. Pop. about 250,000.

MECHANICAL ENGINEERING. The design and production of machinery and mechanical contrivances used in connection with power generation, transport manufacturing processes, mining, drilling, etc.

MECHANICS. That branch of applied mathematics that deals with the motions of bodies and the forces causing them, and also with the forces acting on bodies in equilibrium. It is usually divided into dynamics and statics.

MECHELEN. Flemish form of MALINES. Mechlin is an older form of Mechelen.

MECKLENBURG. Historic name of an area lying along the Baltic coast of Germany. It was divided into 2 grand duchies, M.-Schwerin (5,068 sq. m.) and M.-Strelitz (1,131 sq. m.) which became free states of the Weimar Rep., 1918–34, when they were joined to form the state of M. After the S.W.W., M., incl. that part of Pomerania W. of the Oder, was in 1946 made a Land (area c. 8,800 sq. m.) of E. Germany. In 1952 the historic boundaries were swept away, and parts of M. were incl. in the regions of Rostock, Schwerin, and Neubrandenburg.

MEDAL OF HONOR. Award instituted by the U.S. Congress for the navy (1861) and army (1862) for gallantry in action. Although differing in design, both army and navy medals are bronze stars bearing Minerva encircled in their centres. See Medal illus.

MEDALS and DECORATIONS. Coins struck or cast in commemoration of victories, coronations, or other historic events, or issued in recognition of acts of gallantry, war service, or other public services, as distinct from those circulated as money. The commemorative M. originated in Italy in the 15th cent., reaching its highest artistic level in the work of Pisanello, etc. Other schools of medallists flourished in Germany in the 16th cent., and in France, England and Holland in the 17th.

Important Ms. for distinguished service incl. the British Victoria Cross (q.v., military, 1856) and George Cross and M. (q.v., mainly civilian, 1940); the American M. of Honor (q.v., military, 1861–2), Medal for Merit (civilian, 1942), Presidential Medal of Freedom (civilian, 1963), and Order of the Purple Heart (q.v., military, originally 1782, revived 1932); the French Legion of Honour (civilian and military, 1802) – previously weapons 'of honour' had been awarded – and Order of Merit (civilian and military, 1963); the German *Pour la Mérite* (civilian – since 1842 awarded for science and art – and military, 1740) and Iron Cross (q.v., military, 1813); the Italian Ms. for Military Valour (1833); U.S.S.R. Gold Star M. (civilian and military); and Belgian Order of Leopold (civilian and military, 1832). In addition there are a large number of campaign Ms. commemorating specific victories. The earliest one in England celebrated the defeat of the Armada, but until the 19th cent. Ms. were awarded only to officers. The first issued to all ranks was the Waterloo M. in 1816.

MEDAWAR (med'awahr), Sir Peter (1915–).

bill proposed to legalize marriage without parental consent, and the making of a valid will after the age of 18 (both already possible in Scotland), and enabled anyone over 16 to give valid consent to personal medical treatment. In the U.S.A. the age of majority is 21, except that in some states women attain it at 18.

MINO'CA. The second-largest of the Balearic islands in the Mediterranean, belonging to Spain. Area 271 sq. m.; pop. (1960) 60,000.

MINOTAUR. In Greek legend, a monster, half-bull and half-man, the offspring of Pasiphaë, wife of King Minos of Crete, and a bull. The M. was housed in a labyrinth, and provided with victims from 7 youths and 7 maidens sent as annual tribute from Athens. It was slain by Theseus, with the aid of Minos' dau., Ariadne. See *KNOSSES*, and *illus.* p. 737.

MINSK. Cap. of White Russian S.S.R. Manufactures machinery, textiles, leather, etc. Dating back to the 11th cent. and in turn held by Lithuania, Poland, Sweden, and Russia, M. was destroyed by Napoleon in 1812. It is the seat of the White Russian state univ. Pop. (1967) 772,000.

MINSTER. Originally, a monastery, and in this sense often preserved in place names, e.g. Westminster; later the word was also applied to the church attached to a monastery, e.g. York Minster.

MINT. Genus of aromatic plants (*Mentha*) in the family Labiatae, widely distributed in temperate regions. The plants have square stems and creeping rootstocks, and the flowers grow in a terminal spike, usually pink or purplish. Garden mint (*M. viridis*) and peppermint (*M. piperita*), are the best-known.

MINT, Royal. Department which manufactures all British coins and also distinctive coinages, official medals and seals for the Commonwealth, foreign countries, etc. For cents. in the Tower of London, the R.M. was housed in a building on Tower Hill from 1810 until the new R.M. was opened at Llantrisant, Glamorgan, 10 m. N.W. of Cardiff in 1968. The nominal head is the Master and Worker, who is the Chancellor of the Exchequer, but the actual chief is the Deputy Master and Comptroller, a permanent civil servant. There are branches of the Mint at Melbourne and Perth, Australia. The equivalent in the U.S.A. is the Bureau of the M.

MINTO. Gilbert John Murray Kynynmond Elliot, 4th earl of (1845-1914). British statesman. He was Gov. Gen. of Canada 1898-1904, and Viceroy of India 1905-10. In India during a period of intense nationalist agitation, he collaborated with Lord Morley (q.v.) in the Morley-M. legislative reforms of 1909.

MINTON, John (1917-57). British artist. B. at Cambridge, he was well known as a stage designer, collaborating with Michael Ayrton on the décor for John Gielgud's production of *Macbeth* (1942). He was also an illustrator, and produced richly patterned romantic landscapes.

MINTON, Thomas (1765-1836). British potter. B. at Shrewsbury, he at first worked under Spode, but in 1789 estab. himself at Stoke-on-Trent as engraver of designs (he was the first to devise the 'willow pattern') and in 1793 founded a pottery there producing exquisite bone china incl. much tableware.

MINUTEMEN. Originally the armed citizens who agreed to act 'in a minute' before the American War of Independence. The name was adopted 1959 by the right-wing organisation estab. by Robert DePugh, a Missouri manufacturer, to combat a Communist invasion or uprising. The New York police seized quantities of arms 1966, and DePugh was sentenced to 3 yrs. imprisonment.

MIQUELON ISLANDS (meklon'). Small group off the S. coast of Newfoundland which with St. Pierre (q.v.) form a French overseas territory. Cod fishing is the chief occupation; silver fox and mink are bred for their fur. Area 83 sq. m.; pop. (1967) 621.

MIRABEAU (mērahbō'), Honoré Gabriel Riqueti, comte de (1749-91). French statesman. The son of a Provençal nobleman, he had a stormy career before the Revolution, during which he was 3 times imprisoned, and passed several years in exile. In 1789 he was elected to the States General as a representative of the third estate. His eloquence won him the leadership of the National Assembly; nevertheless, he was out of sympathy with the majority of the deputies, whom he regarded as mere theoreticians, his own aim being to establish a parliamentary monarchy on the English model. From May 1790 he secretly acted as political adviser to the king.

MIRACLE (Lat. *miraculum*, a marvel). An event which seems to transcend the laws of nature, and is regarded as a manifestation of Divine power. Hume attacked the credibility of the miraculous, and there has been a marked decline in its evidential value. In our own day, however, C. S. Lewis and others have argued in favour of the reasonableness of miracles, given belief in a God who is still concerned for His creation.

MIRACLE PLAYS. Medieval religious dramas based on sacred writ or saints' lives, which were performed chiefly on festivals, such as Corpus Christi day or Easter, and reached their highest development in the 15th and 16th cents. Separate episodes were performed by the various guilds of the towns on mobile stages, and in some instances, e.g. the Wakefield, York, and Chester plays, almost complete cycles survive.

MIRANDOLA. See *PICO DELLA MIRANDOLA*. **MIRFIELD.** English industrial town (U.D.) in the W. Riding of Yorks, on the Calder. It is the seat of the Mirfield Community: see *GORE, CHARLES*. Pop. (1961) 12,289.

MIRÓ (mērō'), Gabriel (1879-1930). Spanish author, celebrated for richly characterized novels of provincial life e.g. *Our Father Daniel* (1921).

MIRÓ, Joan (1893-). Spanish artist. B. at Barcelona, he was with Dalí one of the main originators of the Surrealist movement. His pictures tend to spindly lines and blobs, and primitive colour, e.g. 'Still-life with an Old Shoe' and 'Dog Barking at the Moon'. He designed sets for the Diaghileff co.

MIRZAPUR (mērzahpōor'). City of Uttar Pradesh, Republic of India, on the Ganges, c. 50 m. E.S.E. of Allahabad. It is a grain and cotton market, with bathing sites and temples on the river. Pop. (1961) 100,000.

MISCARRIAGE. See *ABORTION*.

MISDEMEANOUR. See *FELONY*.

MISERICORD or *Miserere*. In architecture, a bracket on the under-side of a hinged seat of the choir stalls in a church, used as a rest for a priest when standing during long services. Ms. are often decorated with carvings.

MISHNA. A commentary on written Hebrew law, consisting of discussions between rabbis and handed down orally from their inception in A.D. 70 until c. 200, when with the Gemara, the discussions in schools of Palestine and Babylon on law, it was committed to writing to form the Talmud.

MISKOLC (mish'kolts). Town in Hungary, 90 m. N.E. of Budapest. Seat of a tech. univ. It trades in local wines and tobacco and makes textiles, furniture, paper, etc. Pop. (1963) 156,000.

MISR. Egyptian name for *Egypt* and the Egyptian name for *CAIRO*.

MISSAL. In the R.C. Church, a service-book containing the complete office of Mass for the entire year. An easier, simplified M. introduced 1969 was the first major reform since 1570.

MISSIONS (Lat. *mittere*, to send). Organized attempts to spread religion among the unconverted. During the first 3 cents. Christianity was spread throughout the Roman Empire by missionaries, of

MEERSCHAUM (mērshawm; Ger. sea froth). A soft white mineral which, when dry, floats on the water; it is hydrated magnesium silicate, and is obtained chiefly from Asia Minor. It is used for pipe bowls and cigarette holders.

MEERUT (mē'rūt). City of Uttar Pradesh, Rep. of India, where the Indian Mutiny began in 1857. It contains many mosques and temples, the Jama Masjid dating from 1019. Pop. (1961) 283,878.

MEGALITHIC MONUMENTS (Gk. *megas* great, and *lithos* stone). A term for all prehistoric remains consisting of large stones either standing upright and singly (menhirs), or in rows (alignments), stone circles, generally with a central 'altar stone', or built into the form of a hut by means of flat stones set upright and a larger stone laid on them (dolmens).

MEGATHERIUM. Extinct quadruped of the order Edentata. Its skeleton has been found in Argentina.

MEGI'DDŌ. Ancient Palestinian fortress, situated in the valley of Esdraelon. Here Thothmes III defeated the Canaanites, c. 1450 B.C.; Josiah was killed in battle, 609 B.C.; and Allenby broke the Turkish front in 1918.

MEHEMET ALI (mā'hemet ah'lē) (1769–1849). Pasha of Egypt. An Albanian, he commanded a Turkish regiment sent to Egypt in 1799 to fight the French, secured his election as pasha in 1805, built up an army and navy on European models, went to war with his overlord the sultan of Turkey in 1831 and 1839, and conquered the Sudan. He was the founder of the royal house (till 1953) of Egypt.

MEIGHEN (mē'-en), Arthur (1874–1960). Canadian Cons. statesman. Becoming M.P. in 1908, he was Solicitor-Gen. 1913–17 and was attacked for his promotion of conscription in 1917. P.M. 1920–1 and 1926, he led the Cons. Party in the senate 1932–41.

MEIJI TENNO. See MUTSUHITO.

MEILHAC (māyahk'), Henry (1831–97). French dramatist. He made his reputation with a long series of light comedies, of which *La Belle Hélène* and *Frou-Frou* (1869) are typical.

MEININGEN (mīn'-). Town in E. Germany, 29 m. S. of Eisenach. It was founded in 982, and was cap. of the duchy of Saxe-M. 1680–1918. Pop. (est.) 24,000.

MEIR (mār), Golda (1898–). Israeli politician. B. in Kiev, she emigrated as a child to U.S.A., and settled in Palestine in 1921. A founder member of the Labour Party (Mapai), she was Min. of Labour 1949–56, Foreign Min. 1956–66, and became P.M. 1969.

MEISSEN (mī'sen). City in Dresden district, E. Germany, on the Elbe, 15 m. N.W. of Dresden. It was founded in 929 by Henry the Fowler, has a fine Gothic cathedral and is famed for its china, called Dresden from its original place of manufacture. Pop. (est.) 50,000.

MEISSONIER (mäsonyā'), Jean Louis Ernest (1815–91). French painter. B. at Lyons, he is known for his small pictures, chiefly of scenes in the Napoleonic Wars, which he painted with great attention to detail. He was also a wood-engraver, and illustrated a number of books, e.g. *Paul and Virginia*.

MEISTERSINGERS (Ger. master singers). German lyric poets of the 14th to 16th cents. who formed guilds for the revival of minstrelsy at Nuremberg and elsewhere.

MEKNÈS (mek'nez). City in Morocco, 36 m. W.S.W. of Fez, in a fertile valley, one of the traditional caps. Pop. (1965) 205,000.

MEKONG. River of S.E. Asia, rising in Tibet and flowing for 2,800 m. generally S. into the South China Sea. The 4 riparian powers (Cambodia, Laos, Thailand, and S. Vietnam) are developing the lower M. for irrigation and power projects.

MELANCHTHON (melangk'thon), Philip (1497–1560). German Protestant reformer and theologian, whose real name was Schwarzerd. He was appointed prof. of Greek at Wittenberg in 1518, and helped

Luther in preparing his German translation of the New Testament. From 1519 M. was a chief of the Reformers, and in 1521 he issued the first systematic formulation of Protestant theology. He composed the Augsburg Confession in 1530, and engaged in controversies with both Catholics and Protestants.

MELANĒSIA. A division of the islands in the central and western Pacific between Micronesia to the N. and Polynesia to the E. It embraces all the islands from the New Britain archipelago to the Fiji Islands, inhabited mainly by Papuans.

MELBA, Dame Nellie. Professional name of Australian soprano Helen Mitchell (1861–1931), prompted by her birthplace having been Melbourne. She made her operatic début in Brussels in 1887, and became the most renowned soprano of her day, notably as Donizetti's *Lucia*. In 1918 she was created D.B.E. (G.B.E. 1927). Her name has been given to fruit M., and M. sauce and toast.

MELBOURNE, William Lamb, 2nd visct. M. (1779–1848). British Whig statesman. In 1805 he m. Lady Caroline Ponsonby, who wrote novels under the title Lady Caroline Lamb and became infatuated with Byron from 1812, and from whom in 1825 he won a long fight for separation, following her becoming mad in the previous year. He had entered the Commons in 1806, became Irish Sec. in 1827, and succeeded his father in the title in 1828. He became Home Sec. in 1830 and was briefly P.M. in 1834, returning to office again as P.M. 1835–41. Falsely accused in 1836 of seducing C. E. S. Norton (q.v.), he lost William IV's favour, but was the confidential adviser of Victoria on her succession, teaching her statecraft.

MELBOURNE. Cap. of Victoria, Australia, on the Yarra, near its mouth. The settlement began in 1835, and was named M. in 1837, after Lord M.; its growth was accelerated by gold rushes, and M. is the second city of Australia. It was the seat of the Commonwealth government 1901–27, and its buildings incl. the Law Courts, Govt. Offices, Houses of Parliament, 2 cathedrals, and 3 univs. (Melbourne 1853, Monash 1958, and La Trobe 1964). Industries incl. engineering, food processing, clothing and textiles, and besides good road, rail, and air links, there are excellent dock facilities at Port M. Pop. (1966) 2,108,499. See map p. 722.

MELILLA (melil'ya). Spanish town in Morocco, on the N.E. coast. An important military base, it was captured by Spain in 1496. Pop. (1960) 79,056.

MELLON, Andrew William (1855–1937). American banker, administrator, and philanthropist. B. at Pittsburgh, he entered the Thomas Mellon banking house which later became the Mellon National Bank, with M. as its president. He resigned in 1921 on his appointment as Secretary of the Treasury, and in 1932 was ambassador to Great Britain. In 1937 he gave his art treasures to the American people. The Nat. Gallery of Art, Washington, D.C. (1937), was built with funds given by M., who also donated his superb art collection, incl. 21 paintings from the Hermitage.

MELON. Twining plant of the family Cucurbitaceae. The Musk M. (*Cucumis melo*) and the Water M. (*Citrullus vulgaris*) are common edible varieties.

MÉLOS. Greek island in the Aegean Sea, one of the Cyclades. It was important in antiquity, and many fine works of art have been unearthed, notably the Venus de Milo, now in the Louvre. The cap. is Plaka. Area 60 sq. m.; pop. (est.) 6,000.

MELTROSE. Scottish burgh in Roxburghshire, 30 m. S.E. of Edinburgh. The ruins of M. Abbey, founded in 1136, were immortalized by Sir Walter Scott. Pop. (1961) 2,133.

MELTON MOWBRAY. English market town (U.D.) in Leics, on the Eye, famous as a hunting and horse-breeding centre and for its pork pies. Pop. (1961) 15,913.

MELVILLE, Alan (1910–). British author, known

Her poetry, for which she was in 1945 awarded a Nobel prize, incl. *Sonetos de la Muerte* (1915: *Sonnets of Death*) and *Desolación* (1922).

MISTRAL. A cold, dry, northerly wind which occasionally blows during the winter on the Mediterranean coast of France. It has reached a velocity of 90 m.p.h. in the Rhône valley.

MITAU. German name of JELGAVO.

MITCHELL, Margaret (c. 1900–49). American novelist. B. in Atlanta, Georgia, she joined the *Atlanta Journal* as a reporter (1922–6) and in 1925 m. John R. Marsh. *Gone with the Wind* (1936), is a colourful novel of her home state in the Civil War period.

MITCHELL, Reginald Joseph (1895–1937). British aircraft designer. B. at Stoke-on-Trent, he joined Vickers in 1916, and became its chief designer in 1920. For his designs of the Schneider Trophy seaplanes he gained recognition by the Royal Aeronautical Society in 1927. Later designs incl. R.A.F. flying-boats and the Spitfire I fighter.

MITCHISON, Naomi Margaret (1897–). British novelist. B. at Edinburgh, she is a dau. of J. S. Haldane and sister of J. B. S. Haldane (q.v.), and m. G. R. Mitchison (created life peer 1964) in 1916. Her novels, of which *The Corn King and Spring Queen* (1931), and *The Blood of the Martyrs* (1939) are best known, mainly deal with the ancient world.

MITE. In zoology, an order of minute Arachnida. There are many varieties, mostly parasites, which infest birds, animals, and plants, causing diseases and sometimes death.

MITFORD, Mary Russell (1787–1855). British author. B. in Hants, she is chiefly remembered for her sketches, *Our Village* (1824–32), describing Three Mile Cross, near Reading where she lived for years.

MITFORD SISTERS. Of the 6 daus. of the 2nd Baron Redesdale, the best-known are Nancy (1904–), author of the semi-autobiographical *Pursuit of Love* (1945) and ed. of, and one of the contributors to, *Noblesse Oblige* (1956), with its serio-comic definitions of 'U' (upper class) and 'Non-U' speech and behaviour; Jessica (1917–), author of the autobiographical *Hons and Rebels* (1960) and *The American Way of Death* (1963), and m. 1st to her cousin Esmond Romilly, nephew of Winston Churchill, with whom in 1937 she ran off in a blaze of publicity to join the Republicans and report on the Spanish Civil War; and Unity (1914–48), who joined the British Union of Fascists in the 1930s, becoming associated with Hitler and other leading German Nazis. Diana m. Sir Oswald Mosley (q.v.).

MITFORD, William (1744–1827). British historian, author of a *History of Greece* (1784–1810), in which the anti-democratic attitude is marked.

MITHRADATES VI, called the Great (132–63 B.C.). King of Pontus from 120 B.C. His attempt to conquer all Asia Minor led to war with Rome in 88. He overran Asia Minor, massacred 80,000 Romans, and invaded Greece, but was defeated by Sulla and ultimately by Pompey. He was killed by a soldier at his own order.

MITHRAS. Persian god of light, whose creed seems to have been an extension of the Zoroastrian dualism. M. represented the power of goodness, and promised his followers compensation for present evil

MITHRAS. Wearing a Phrygian cap, this marble head was found in the excavation of London's temple of Mithras. Courtesy of the Guildhall Museum.

after death. His cult was introduced into the Roman Empire in 68 B.C., rapidly developed, particularly among soldiers, and by c. A.D. 250 rivalled Christianity in strength. M. was said to have captured and killed the sacred bull, from whose blood all life sprang, and a bath in the blood of a sacrificed bull formed part of the initiation ceremony. In 1954 remains of a Roman temple dedicated to M. were discovered on a site in the City of London, now occupied by Bucklersbury House, in front of which they were reassembled for permanent exhibition.

MITRE (mit'er). The head-dress worn by bishops, cardinals, and mitred abbots at solemn services. There are Ms. of many different shapes, but in the western Church it usually takes the form of a tall cleft-cap. The M. worn by the Pope is called a tiara.

MITYLENE (mitilē'nē). Greek city and port, cap. of the island of Lesbos (to which the name M. is sometimes applied) and a centre of sponge fishing. It has an airport. Pop. (1961) 25,518.

MO'A. Group of extinct birds (*Dinornithes*), once found in N.Z. They varied from 2 to 12 ft. high, with strong limbs, a long neck, and no wings. They occurred as far back as the Pliocene age.

MO'AB. An ancient country situated E. of the southern part of the Jordan and of the Dead Sea, in the area of modern Jordan. The region is hilly and in parts is very fertile; cereals and vines were formerly cultivated. The inhabitants were closely akin to the Hebrews in culture, language, and religion, but were often at war with them. M. eventually fell to Arabian tribes. The MOABITE STONE, discovered in 1868 at Dhiban, dates from the 9th cent. B.C., and records the rising of Mesha, king of M., against Israel.

MOBILE (-bē'l). City and only seaport in Alabama, U.S.A., 135 m. E.N.E. of New Orleans. Founded 1702 by the French a little to the N. of the present city, M. was cap. of the French colony of Louisiana until 1763, then British until 1780, Spanish to 1813. It has a substantial import and export trade, and possesses dry docks; meat packing and manufacture of paper, cement, clothing, industrial chemicals, etc., are industries. Pop. (1960) 202,779.

MOÇAMBIQUE. Alternative spelling of MOZAMBIQUE.

MOCHA (mō'ka). Seaport of Yemen, near the mouth of the Red Sea, which gives its name to M. coffee. Once the chief port of Yemen, it declined as Aden and Hodeida increased in importance. Pop. (est.) 600.

MOCKING-BIRD. Genus of American birds (*Mimus*), related to the thrushes. Most familiar in the U.S.A. is *M. polyglottus*, brownish grey on tiff upper part, with white markings on the almost black wings and tail. It often nests in trees close to human homes and courageously defends its young.

MODDER. Tributary of the Riet, Orange Free State and Cape Colony, S. Africa. Near the village of M. River, a holiday resort at the junction of the M. and the Riet in Cape Colony, Lord Methuen defeated the Boers in 1899, to meet disastrous defeat 6 m. farther N. at Magersfontein 4 days later.

MO'DENA. City of Emilia, Italy, the cap. of the prov. of M. 23 m. N.W. of Bologna. There are many fine buildings, incl. the 12th cent. cathedral, the 17th cent. ducal palace, and the univ., founded 1683,

MOA

1868. By experiments with generations of peas in the monastery garden he developed a theory of organic inheritance – Mendelism – governed by dominant and recessive characters. He pub. his results 1865–9, but his work remained unrecognized until the early 20th cent.

MENDELEYEV, Dmitri Ivanovich (1834–1907). Russian chemist. The framer of the Periodic Law of the atomic weights of chemical elements, he was prof. at St. Petersburg univ. (1866–90), and wrote *Principles of Chemistry* (1868), etc.

MENDELSSOHN-BARTHOLDY, Jakob Ludwig Felix (1809–47). German composer. B. in Hamburg, the grandson of Moses M., he settled in Berlin. When 11, M. already had numerous compositions to his credit, and a few years later his output included symphonies, operas, etc. M. revered the great classical composers, esp. Bach. At the age of 17, M. wrote the overture to *A Midsummer Night's Dream*. M. visited England for the first time in 1829, and was enthusiastically received. During later visits to England, he conducted his two oratorios, *St. Paul* and *Elijah*, and was fêted. During a tour of Scotland he was inspired to write the overture *Fingal's Cave*, and a tour of Italy resulted in the *Italian Symphony*. He accepted important musical appointments at Düsseldorf, Leipzig, Berlin, and in 1843 founded the Leipzig conservatoire. Among M.'s most popular compositions are the piano pieces *Songs without Words*, numerous songs, an early *Octet*, and the *Serious Variations* and *Rondo Capriccioso*, both for piano.

MENDERES, Adnan (1899–1961). Turkish statesman. A law graduate and agricultural expert, he became P.M. of a democratic govt. in 1950 (re-elected 1954 and 1957). In 1960, following an unrealistic economic policy, and a series of repressive measures against the opposition party and the freedom of the press, he was executed after an army coup.

MENDÈS (mondäs'), Catulle (1841–1909). French poet and author. B. at Bordeaux, of Jewish parentage, he wrote verse, novels, and plays of a voluptuous character. He m. the dau. of Théophile Gautier.

MENDES-FRANCE (-frahns), Pierre (1907–). French statesman. A lawyer, he was P.M. and For. Min. 1954–5, when he concluded the war in Indochina, and granted Tunisian independence.

MENDICANCY. The solicitation of alms. A perennial problem, even in the Welfare State, M. is particularly widespread in eastern countries and has been fostered in Moslem lands by almsgiving being a religious obligation. Stringent measures are taken against M. in the U.S.S.R., and in Britain, where legislation began in the 14th cent., it is an offence to solicit alms on the public highway, to expose any sore or malformation to attract alms, or cause a child to beg, and begging letters containing false statements are also illegal.

MENDICANT ORDERS. In the R.C. Church, the 4 orders of Mendicant Friars – Franciscans, Dominicans, Carmelites, and Augustinian Hermits (Austin Friars) – all of which arose in the early and middle 13th cent., and were inspired by a resolve to return to the simplicity of primitive Christianity. The friars estab. themselves in the slums of the cities and towns, made poverty a virtue, and at first depended on alms, although in course of time they accumulated property. Hinduism also has many M.Os.

MENDOZA (mendô'thah), Antonio de (1490–1552). 1st Spanish viceroy of New Spain (Mexico) 1535–51. His rule was enlightened and the system he estab. lasted until the 19th cent. Appointed viceroy of Peru in 1551, he d. there.

MENDOZA (mendô'thah). Cap. of the Argentine prov. of the same name. It was founded in 1561 and has greatly developed owing to its position on the Trans-Andean railway. Pop. (1967) 109,150. The prov. is well irrigated, and produces wine, alfalfa,

olives, and cereals. Area 57,445 sq. m.; pop. (1965) 936,000.

MEN'ELIK II (1844–1913). Negus (emperor) of Abyssinia from 1889. He defeated the Italians in 1896, and the independence of his country was fully recognized.

MEN'ÈS. Traditionally, the 1st king of the 1st dynasty of ancient Egypt. He is said to have been the founder of Memphis and the organizer of the worship of the gods.

MEN'GER, Karl (1840–1921). Austrian economist. Prof. of economics at Vienna 1873–6 and 1878–1903, he developed the theory of marginal utility.

MENGES, Antony Raphael (1728–99). German painter. B. at Aussig in Bohemia, the son of a Danish painter, in 1741 he went to Rome, where he copied the works of Raphael, and in 1754 he became director of the Vatican school of painting. At the invitation of Charles III of Spain he travelled to Madrid in 1761, where some of his best works were painted, incl. the 'Triumph of Trajan' and the 'Temple of Glory'.

MENGTSZ (mung'tse). City of S. China, in Yunnan, 130 m. S.S.W. of Kunming, cap. of M. county. Lying at a height of 4,655 ft., it is a centre of tin and antimony mines; rice, tea, sugar cane, and fruit are grown in the vicinity, and lumbering is carried on. M. was opened to foreign trade in 1889. Pop. (est.) 200,000.

MENIN. Belgian textile-making town in W. Flanders, 7 m. S.W. of Kortrijk, on the Lys. The Menin Gate at Ypres (q.v.), on the road to Menin, commemorates 54,896 British soldiers missing in the battles of Ypres in 1914–18.

MENIN'DEE. Village and sheep centre of New S. Wales. Australia, on the Darling r. 65 m. E.S.E. of Broken Hill, centre of a water-conservation scheme conserving the waters of the Darling in M. Lake (60 sq m.) and neighbouring lakes for irrigation.

MENINGITIS. Inflammation of the meninges, the lining membranes of the base of the brain and spinal cord. An acute attack can be caused by spread of infection from disease of the nose or ear, by other infections, such as influenza or typhoid fever, or by the organism of spotted fever (cerebro-spinal fever), so called because it also often produces a rash. The patient is very sensitive to light and cold, and resents being handled; he becomes delirious and his spine, with the neck and head, is curved backwards. Most acute cases are fatal, and recovery in the others takes a long time. More chronic forms are due to tuberculosis or syphilis.

MENKEN, Adah Isaacs (1835–68). American Jewish actress, whose name may originally have been Dolores Adios Fuertes, but who m. in 1856 A. I. Menken. B. in New Orleans, she made her most celebrated appearance (in Britain and the U.S.) in *Mazeppa*, strapped to a galloping horse while flimsily clad, and was also a dancer.

MENNOFER. Another name for MEMPHIS, Egypt.

MENNONITES. A Christian sect that originated in Zürich in 1523. They were baptists, and refused to hold civil offices and undertake military service. Similar sectarians in Holland found a leader in Menno Simons (1496–1559), and were named after him. After his death the Ms. spread rapidly, but their views led to persecution, and in 1683 a number of them settled at Germantown, Pennsylvania. Today there are more than a dozen separate Mennonite 'churches' in N. America. They are fundamentalists in theology, very simple in their ways of life, maintain their pacifism, and speak the languages of their ancestors.

MENOPAUSE. The change of life; the cessation of function of the female reproductive organs. The time of onset is usually about 45, but varies very much. Menstruation becomes irregular and ceases. The 'change' is natural and usually uneventful, but

teaching was the Koran, a sacred work dictated by him to amanuenses while he remained in a state of trance. His increasing success in gaining converts led to persecution, and M. was forced to flee to Medina in 622. This flight—the Hegira—marks the beginning of the Mohammedan era. After the battle of Badr, 623, M. was constantly victorious, and in 630 he entered Mecca as the recognized prophet of Arabia. He d. at Medina, and was there buried.

MOHAMMED. Name of 6 sultans of Turkey. **MOHAMMED II** (1430–81), captured Constantinople in 1453 and conquered Greece. **MOHAMMED VI** (1861–1926), the last sultan, was deposed in 1922, and d. in exile.

MOHAMMEDANISM. See ISLAM.

MOHAWKS. Tribe of the Iroquois (q.v.).

MOHENJO DARO. One of the most striking features of the excavated city is the advanced drainage system. A covered drain runs the full length of this street and the houses had bathrooms. In the case of the Great Bath asphalt was used to make it watertight.

Photo: J. Allan Cash.

MOHENJO DARO. Site of a city of c. 2500–1600 B.C., on the lower Indus, Pakistan, where excavations from the 1920s have revealed the Indus Valley civilization (q.v.) Artistically remarkable are the soapstone seals—elephants, snakes, etc. M. has its own airport (1967).

MOHI'CANS and **Mohē'gans.** Two closely related N. American Indian tribes, akin to the Algonquins, who formerly occupied Connecticut and the Hudson valley. J. F. Cooper (q.v.) confused the 2 tribes.

MOHOLE. American project for drilling a hole through the earth's crust, so named from the discovery by the Yugoslav, Andrija Mohorovičić, of the Mohorovicic (abbr. Moho) Discontinuity, which marks the transition from the crust to the earth's first inner layer or 'mantle'. Initial tests were made in 1961 off Guadalupe Island in the Pacific, since the thickness of the earth's crust is least beneath the oceans, lessening to c. 3 m. in places. Expense and technical difficulties have indefinitely postponed achievement of the ultimate aim, but the cores already brought up have illuminated the geological history of the earth and aided the development of geophysics. Anti-Cosmos (launched 1967) is the Soviet equivalent.

MOHOLY-NAGY (mahoi' noij), Ladislaus (1896–1946). Hungarian artist. Appointed by Gropius in 1923 prof. at the Bauhaus, he was noted for his work in photography—photo-montages, etc.—and in 1937 went to the U.S. where he founded the Institute of Design in Chicago.

MOHS (mōōs), Friedrich (1773–1839). German mineralogist. He devised in 1820 a scale classification of minerals in order of hardness, viz. diamond, corundum and sapphire, topaz, quartz, orthoclase, apatite, fluorite, calcite, gypsum, talc.

MOISEWITSCH (moisā'vich), Benno (1890–1963).

Russian pianist. He went to England in 1908, and became a British subject in 1937. He was known for his rendering of the works of the Romantics.

MOISSON (mwahsoñ), Ferdinand Frédéric (1852–1907). French chemist. In 1886 he isolated fluorine, in 1892 invented the electric arc furnace, and in 1906 was awarded a Nobel prize. He also made tiny artificial diamonds.

MOJI. See under KITAKYUSHU.

MOLA'SSES. Strictly the drainings from raw cane sugar, but also used as a synonym for treacle (q.v.). M. from sugar cane produces rum on fermentation; that from beet sugar gives alcohol.

MOLDAVIAN S.S.R. A constituent republic of the U.S.S.R. It is a fertile, well-watered plateau. Vineyards and orchards are its chief wealth; sheep and cattle are reared on the S. steppes. M. was created in 1940 from the former Moldavian A.S.S.R., and Bessarabia, ceded by Rumania in the same year, except the area bordering the Black Sea (added to Ukraine S.S.R.). Kishinev is the cap. Area, 13,100 sq. m.; pop. (1968) 3,484,000.

MOLE. Genus of mammals in the family Talpidae. The common M. of Europe (*Talpa europaea*) has a thick-set body c. 7 in. long, covered with soft dark fur. Purbblind, it lives underground in circular grass-lined nests and excavates extensive tunnels in its search for worms and grubs, throwing up the earth at intervals in 'mole hills'. The short muscular forelimbs and shovel-like hind feet are adapted for burrowing. Some members of the family are aquatic, e.g. the American shrew M. (*Scalops aquaticus*).

MOLECULE. The smallest particle of any substance that can exist free yet still exhibit all the chemical properties of the substance. Molecules are composed of a number of atoms (q.v.) ranging from one atom in a helium molecule to many thousands of atoms in the molecules of complex organic substances. The composition of the molecule is determined by the nature of the bonds, probably electric forces, which hold the atoms together.

According to the molecular or kinetic theory of matter, molecules are in a state of constant motion, the extent of which depends on their temperature, and they exert forces on one another.

MOLIERE (mōlyär'). Pseudonym of the French dramatist Jean Baptiste Poquelin (1622–73). B. in Paris, he studied law before assisting his father in his trade as an upholsterer. In 1643 he became one of the founders of the *Illustre Théâtre*, of which he was later the leading actor, and in 1655 wrote his first play, *L'Étourdi*. He estab. his reputation with *Les Précieuses ridicules* (1659), which was followed by some 40 comedies, incl. *L'École des femmes* (1662), *Tartuffe* (1664), *Le Festin de Pierre* (1665), *Le Misanthrope* (1666), *Le Médecin malgré lui* (1666), *Georges Dandin*, *L'Avare* (1668), *Le Bourgeois gentilhomme* (1670), *Les Fourberies de Scapin* (1671), *Les Femmes savantes* (1672), and *Le Malade imaginaire* (1673). His fearless social satire exposed him to many attacks from his enemies, against whom he was consistently protected by Louis XIV.

M. introduced to the stage a new comedy, which relied not on the formal neatness of the Greek plots, but on the exposure of hypocrisy and cant in the eternally recurrent types of human character. See illus. p. 450.

MOLINOS (mōlē'nos), Miguel de (1640–97). Spanish mystic. B. near Saragossa, he settled in Rome after being ordained a R.C. priest, and wrote in Italian several devotional works, incl. the *Guida spirituale*, which aroused the hostility of the Jesuits, who caused him to be arrested in 1685. In 1687 he was sentenced to life imprisonment. His doctrine, known as Quietism, puts particular emphasis on disinterested love and on the attainment of a state of spiritual repose in which we can approach most closely to God.

and 81,237 tons gross) which in 1967 went to Long Beach, California, as a floating hotel; *Queen Elizabeth* (1940: 1031 ft., 82,998 tons), was in 1969 at Port Everglades, Florida, awaiting a similar tourist use; and *Queen Elizabeth II* (1968: 963 ft., 58,000 tons); *France* (Fr. 1961: 1035 ft., 66,348 tons) and *United States* (U.S.A. 1952: 990 ft., 50,924 tons): see *SHIP*. The world's first atomic-powered merchant ship is the *Savannah* (U.S.A. 1959). Total world tonnage is c.200,000,000 tons, of which tankers constitute 1/3; the largest fleets are those of Liberia, U.K., U.S.A., Norway and Japan, all over 20,000,000 tons.

MERCIA (mer'shia). One of the Anglo-Saxon kingdoms, which at its greatest extent included all England between the Humber and the Thames, except E. Anglia. It first emerged c. 600, and in the 8th cent. dominated all England S. of the Humber. From c. 825 it came under the overlordship of Wessex. In 886 the E. of M. was included in the Danelaw.

MER'CURY. Roman god, identified with the Greek *Hermes*, and like him represented with the winged sandals and caduceus. He was the messenger of the gods.

MERCURY. The planet nearest to the Sun. Its distance from the Sun is 36,000,000 miles on the average, and its revolution period is 88 days; this is also the length of its axial rotation, so that part of its surface is permanently sunlit, while another region experiences permanent night. M. is a small planet, about 3,000 miles in diameter, and is practically devoid of atmosphere; maps of its surface have been constructed, but the details are difficult to study, and all that can be said with certainty is that light areas and darker patches exist there. The surface may well be mountainous. M. is easily visible to the naked eye when well placed for observation, but is never conspicuous.

MERCURY. The only common metal liquid at ordinary temperatures, it was known to the ancient Chinese and Hindus, and is found in Egyptian tombs of c. 1500 B.C.: symbol Hg, at. wt. 200.61, at. no. 80. A dense, mobile, silvery liquid, it is found free in nature, but the chief source is the mineral cinnabar, HgS. Its alloys with other metals are *amalgams*. It is used in drugs and chemicals, for mercury vapour lamps, arc rectifiers, power-control switches, vacuum and other scientific apparatus, barometers, thermometers, etc.

MERCURY FULMINATE. Highly explosive compound used in detonators and percussion caps. It is a grey, sandy powder, and highly poisonous.

MEREDITH (mer'edith), George (1828–1909). British novelist and poet. B. in Portsmouth, he was ed. in Germany, articulated to a London solicitor, but soon entered journalism, and in 1849 m. Mary Nicolls (d. 1861), the widowed dau. of Thomas Love Peacock, who left him in 1858. In 1851 he pub. *Poems* and in 1855 the prose romance, *The Shaving of Shagpat*. His first realistic psychological novel, *The Ordeal of Richard Feverel* (1859), was followed by *Evan Harrington* (1860), *Rhoda Fleming* (1865), *Harry Richmond* (1871), *The Egoist* (1879), *Diana of the Crossways* (1885), and *The Amazing Marriage* (1895). His later vols. of verse incl. *Modern Love* (1862) and *Poems and Lyrics* (1883). He was reader to Chapman and Hall 1862–94, and in 1867, 2 years after his marriage to Mary Vulliamy (d. 1885), made his home at Flint Cottage, Box Hill. In 1905 he received the O.M.

MEREZHKOVSKY, Dmitri Sergeievich (1865–1941). Russian novelist. An early exponent of the 'modernist movement' of the 1890s, he wrote the trilogy *Christ and Anti-Christ* (1895–1905), and other historical romances. After the Russian revolution he lived in Paris.

MERGAN'SER. Genus of ducks, mainly marine. The goosander (*Mergus merganser*) is widely distributed in the N. hemisphere, though rare in Britain.

MERGENTHALER (merg'entahler), Ottmar (1854–99). German-American inventor. B. in Hachtel, Württemberg, where he served his apprenticeship as a watchmaker, he went to U.S.A. in 1872 and there developed 1876–86 the first linotype (q.v.) machine: the principle of a circulating matrix is today universally used.

MERIDA (mer'édhah). Mexican city, cap. of the state of Yucatan and seat of a univ., it has a cathedral founded 1598. M., dating from 1542, is a centre of the sisal industry. Pop. (1960) 170,513.

MERIDIAN. A great circle drawn on the earth's surface so as to pass through both poles, and thus through all places with the same longitude. Terrestrial longitudes are usually measured from Greenwich M. An astronomical M. is a great circle passing through the pole and the zenith. (See *LATITUDE AND LONGITUDE*.)

MÉRIMÉE (mehrémeh'), Prosper (1803–70). French author. B. in Paris, he entered the public service, and under Napoleon III was employed on unofficial diplomatic missions. Among his best works are the stories *Colomba* (1841), dealing with a Corsican feud, and the Spanish *Carmen* (1846); and the witty and sceptical *Lettres à une inconnue* (1873).

MERINO (meré'no). Originally a term for sheep-pasture inspectors in Spain, M. now refers to a breed of sheep native to Africa. Its close-set, silky wool is of extremely good quality, and the M., now found all over the world, is the breed on which the Australian industry is built.

MERIO'NETHSHIRE. Co. in N. Wales, facing Cardigan Bay on the W. It has fine mountain and valley scenery, and includes Cader Idris and Bala lake. The Dee is the chief river. The co. is pastoral but slate and limestone are quarried. Dolgelly is the co. tn. Area 660 sq. m.; pop. (1961) 39,007.

MERIT, Order of. British order of chivalry, founded in 1902 by Edward VII and limited in number to 24. Though not a knighthood, it is very highly regarded. See *LEGION OF HONOUR*.

MERLIN. Small falcon (*Falco desaloni*), which breeds in England and Scotland. Males are steel-blue

MERLIN, an adult male.
Photo: G. Ronald Austing.

above and rufous below; females are brown. It nests in the heather. The N. American pigeon-hawk (*F. columbanus*) is similar.

MERMAIDS. In folklore, semi-human creatures who live in the sea; their form is that of a beautiful woman with the tail of a fish. The dugong and seal (qq.v.) have been suggested as possible origins for the legends.

MEROE (mer'ō-ē.) Ancient city of the Rep. of the Sudan, on the Nile near Khartoum, cap. of Nubia c. 600 B.C. to A.D. 350. Tombs and inscriptions have been excavated, and because of its iron smelting slag-heaps, it has been called the 'Birmingham of ancient Africa'.

MEROVINGIANS. The name of a Frankish dynasty, derived from its founder, Merovech (5th cent.). His descendants ruled France from the time of Clovis (481–511) to 751.

MERSEY. English river formed by the union of the rivers Goyt and Tame at Stockport, flowing between Cheshire and Lancashire to form an estuary at Liverpool. The M. railway tunnel under the r. was completed in 1886; Queensway, a road tunnel linking Birkenhead and Liverpool, was opened in 1934.

MERSIN (mersén'). Turkish port and market town, cap. of İçel il, and sometimes itself called İçel, on the Mediterranean, 40 m. W.S.W. of Adana. It exports

the product of a quantity and a distance. In particular the moment of a force about a point is the product of the force and the perpendicular distance from the point to the line of action of the force, and measures its turning effect or torque. The *M. of inertia* of a body measures its resistance to angular acceleration and depends on the particular axis of rotation being considered.

MOMENTUM. The *M.* of a body is the product of its mass and its linear velocity; angular *M.* is the product of its moment of inertia (*see under* MOMENT) and its angular velocity. The *M.* of a body does not change unless it is acted on by an external force. The law of conservation of *M.* is one of the fundamental concepts of classical physics. It states that the total *M.* of all bodies in a closed system is constant and unaffected by processes occurring within the system.

MOMMSEN, Theodor (1817–1903). German classical scholar. He went to Italy in 1843, where he carried out researches on Roman inscriptions, and from 1858 was prof. of ancient history at Berlin. His monumental *Roman History* appeared 1854–6.

MONA. Another name for the ISLE OF MAN.

MONACO. Small principality, under French protection, on the Mediterranean, bounded by the French

MONACO. In the distance are Cap-Martin and Italy. Local law made the principality a haven of escape from heavy taxes elsewhere until friction with France led to a tightening of the regulations. Courtesy of Consulat Général de Monaco.

dept. of Alpes-Maritimes. *M.* comprises 3 communes, Monaco-Ville, Monte Carlo, and La Condamine. At the old town of *M.* is the palace, and a remarkable aquarium. *M.* is governed by a Ministry, Council of State, and elected National Council, under the authority of the reigning prince, Rainier III (1923–), who succeeded his grandfather Prince Louis II in 1949. In 1956 he m. the American film star Grace Kelly (q.v.) and they have 3 children, Prince Albert Alexandre Louis Pierre (1958–), the heir-apparent, and Princess Caroline (1957–) and Princess Stephanie (1965–). If the reigning House of Grimaldi were to die out, with no male or female heir, the principality would pass under French sovereignty. Area 368 acres; pop. (1962) 21,783.

MONAGHAN (mon'ahan). County of Ulster prov., Rep. of Ireland, watered by the Finn and Blackwater. Cereals are grown, and linen made. Area 498 sq. m.; pop. (1966) 45,732. The co. tn. is *M.*; pop. (1961) 4,010.

MÓNASH, Sir John (1865–1931). Australian general. B. in Melbourne, of Jewish descent, he entered the Australian army in 1887, and during the F.W.W. showed exceptional powers of generalship at Gallipoli and as commander of the Australian forces in France in 1918. *M.* Univ. nr. Melbourne (1960) was named after him.

MONASTICISM (Gk. *monachos*, monk). Method of religious life, by which the individual, under vows of poverty, chastity, and obedience, devotes himself

to the service of God in retirement. *M.* was known in pre-Christian times among the Jews, eg. the Essenes, and forms part of non-Christian religions, eg. Buddhism. The institution of Christian *M.* is ascribed to St. Anthony in 3rd cent. Egypt, but the inauguration of communal life is attributed to his disciple, St. Pachomius. The full adaptation of *M.* to the conditions of western life was carried out by St. Benedict in the 6th cent., and the Benedictine Rule became general. In 910 the foundation of Cluny began the system of orders whereby each monastery was subordinated to the mother institution. During the Middle Ages other forms of *M.* were estab., incl. the eremitical Carthusians (1084), the Augustinian canons, who were clerics organized under a monastic system (11th cent.); the military Knights Templar and Knights Hospitaller (12th cent.); and in the early 13th cent. the 4 great mendicant orders, Franciscans, Dominicans, Carmelites, and Augustinians, who went out to work in the world.

M. reached the height of its influence during the 13th cent., declined during the 14th, and was severely affected by the Reformation. Renewed life came with the foundation of orders dedicated to particular missions, such as the great weapon of the Counter-Reformation, the Society of Jesus (1540). But the French Revolution exercised a repressive influence. Yet another revival came in the late 19th cent. and continues in the 20th, particularly in the active orders, although by the mid-20th cent. emphasis was moving to a combination of the active and contemplative life. Throughout the history of *M.* organizations for women have existed on parallel lines with those for men.

MONASTIR. Turkish name of BIRÖL.

MONCKTON of Brenchley, Walter Turner, 1st visct. (1891–1965). British lawyer and Cons. politician. Director-Gen. of the Min. of Information in the S.W.W., he was Min. of Labour 1951–55 and Defence 1955–6. He was created visct. in 1957.

MOND, Ludwig (1839–1909). British chemist. B. at Cassel, Germany, he moved to England in 1862, and, while partner in a chemical works at Widnes, perfected a process for recovering sulphur during the manufacture of alkali. In 1867 he became a British subject, and in 1873 helped to found the firm of Brunner, Mond and Co., which pioneered in the British chemical industry. *M.* was also instrumental in developing the Canadian nickel industry.

MONDRIAN (mon'drē-ahn), Piet (1872–1944). Dutch abstract painter. B. at Amersfoort, in 1917 he founded with Theo van Doesburg the review and movement known as *De Stijl* (The Style), which sought to apply the principles of geometrical abstract design to painting, sculpture, and architecture. Neo-Plasticism, which he founded in 1920, was a phase of *De Stijl*.

MONET (mōnā'), Claude (1840–1926). French Impressionist painter. B. at Paris, he studied under Boudin, and after spending 2 years in Africa with a French regiment, entered Gleyre's studio. He became a prominent member of the French Impressionist group, which incl. Manet, Degas, Renoir, and Sisley. He excelled in painting atmospheric effects, and was fond of depicting the same subject at different times of the day, eg. his series of haystacks.

MONEY. Any commodity which by custom, convention, or law, serves as the common medium of exchange in a community. It may be in the form of gold, silver, copper, printed paper, or anything else; as long as it performs this primary function it ranks as money. Other functions are as a measure of value, i.e. a means of estimating the value of all other articles; a standard of value of deferred payments; and a store of value. Where *M.* is removed from country to country it performs yet another function; that of a transfer of value.

short stories uneventfully, struck the headlines with *Peyton Place* (1956), an exposé of life in a small New England town that roused a storm of protest.

METALLURGY. The art of working metals. Process M. is concerned chiefly with their extraction from the ores, and refining and adapting them for man's use, while physical M. is interested in their properties and application. The foundations of metallurgical art were probably laid about 3500 B.C. in Egypt, Mesopotamia, and India, where the art of smelting metals from ores was discovered, and gold, silver, copper, lead, and tin were worked. The smelting of iron appears to have been discovered about 1500 B.C., and the Romans hardened and tempered steel. From the fall of the Roman Empire until the latter part of the Middle Ages, the only advances in M. were due to the Arabian chemists.

Cast iron began to be made in the 14th cent., and in the 18th cent. we find the beginning of the modern blast furnace. The application of steam power resulted in an enormous increase in iron and steel production.

Metals can be extracted from their ores in 3 main ways: (1) dry processes such as smelting, volatilization or amalgamation, (2) wet processes involving chemical reactions, and (3) electrolytic processes.

METALS. Elements which are classified as Ms. have certain characteristics and physical properties which can be increasingly accounted for by modern theories based on studies of their atomic and sub-atomic structures. Ms. are good conductors of heat and electricity; opaque, but reflect light well; malleable, which enables them to be cold-worked and rolled into sheets; and ductile, which permits them to be drawn into thin wires. Generally hard, they are crystalline in their normal pure state, many of them mixing with one another to form alloys with properties depending on the proportions of their constituents. Their hardness, tensile strength, toughness, brittleness, etc., may be varied by physical means such as heat-treatment, work hardening, etc., but their physical properties, such as melting point, coefficient of thermal expansion, density, etc., are constant.

60 to 70 Ms. are known, but only the following are used in commerce: (i) *Precious Ms.*: gold, silver, mercury, platinum, and the platinum Ms., used principally in jewellery. (ii) *Heavy Ms.*: iron, copper, zinc, tin, lead, the common Ms. of engineering. (iii) *Rarer heavy Ms.*: nickel, cadmium, chromium, tungsten, molybdenum, manganese, cobalt, vanadium, antimony, and bismuth; used principally for alloying with the heavy Ms. (iv) *Light Ms.*: aluminium and magnesium. (v) *Alkali Ms.*: sodium, potassium, lithium; and alkaline earth Ms.: calcium, barium, strontium, used principally for chemical purposes.

Other metals have come to the fore because of special nuclear requirements, e.g., technetium, produced in nuclear reactors, is corrosion-inhibiting; zirconium may replace aluminium and magnesium alloy in canning uranium in reactors; titanium is really tough and hard, titanium oxide finds wide application in artistic finishes, because of its inertness and whiteness. Of great importance are the carbides of titanium, zirconium, niobium, and hafnium, alone or in combination, because of their high melting points round 3,000°C.

METAMORPHISM. Geological term referring to the changes which have occurred in the rocks of the earth's crust, caused by increases of pressure or of temperature, or of both, since the rocks were formed.

METAPHYSICS. A branch of philosophy, concerned with the ultimate nature of reality. It has been maintained that no certain knowledge of metaphysical questions is to be had. Epistemology, or the study of how we know, lies at the threshold of the subject. M. is concerned with the nature and origin of matter and of mind, the interaction between them - i.e. the 'mind-body problem'; the meaning of time

and space, causation, determinism and free will, personality and the Self, arguments for belief in God, and human immortality.

The foundations of M. were laid by Plato and Aristotle. St. Thomas Aquinas, basing himself on the latter, produced a metaphysical structure that is accepted by the Catholic Church. The subject has been advanced by Descartes, Spinoza, Leibniz, Berkeley, Hume, Locke, Kant, Hegel, Schopenhauer, and Marx; and in modern times by Bergson, Bradley, Croce, McTaggart, and Whitehead.

METASTASIO (metahstah-zē-ō). Pseudonym of the Italian poet, Pietro Trapassi (1698-1782). B. in Rome, from 1730 he was court poet at Vienna, and wrote numerous lyric dramas.

METAXAS, Ioannis (1871-1941). Greek soldier and statesman. B. in Ithaca, he opposed co-operation with the Allies during the F.W.W. and was prominent in the restoration of the monarchy in 1935. To combat internal difficulties he estab. a dictatorship when he became P.M. in 1936, and introduced several important reforms. Refusing to abandon Greece's neutral position, he victoriously led the resistance to the Italian invasion in the S.W.W.

METAZOA. One of the 2 main sections into which the animal kingdom is divided, the other being the protozoa. M. are multi-cellular, and include all the higher forms of animal life.

MÉTÉOR. A small particle moving round the Sun. If a M. approaches the Earth to within 150 miles or so, it enters the upper atmosphere, and since it is moving very rapidly (at anything up to 45 m. per sec.) frictional heat is set up; the M. destroys itself in the streak of radiation known as a *shooting-star*. Most Ms. are smaller than grains of sand. They tend to travel in swarms, and when the Earth passes through a swarm the result is a shower of shooting-stars: the most famous annual shower is that of the Perseids, in early August. There are sporadic or non-shower Ms., which may appear from any direction at any moment.

MÉTÉORITE. A solid body which comes from space and lands on the Earth. Small Ms. are not uncommon, but large ones are extremely rare; during the present cent. there have been only 2 major falls, both in Siberia - one in 1908 and the other in 1947. The heaviest M. known is at Hoba West, in Africa, which fell in prehistoric times, and has a weight of over 60 tons. Ms. are fundamentally different from meteors or shooting-stars, and seem to be more nearly related to the minor planets or asteroids.

METEOROLOGY. The scientific observation and study of the phenomena of weather. At meteorological stations readings are taken of the more important factors determining weather conditions. Atmospheric pressure is measured by a mercury barometer, temperature by a screened thermometer, humidity by a hygrometer, which expresses relative humidity as a percentage of the maximum. Winds are categorized by the Beaufort Scale, and the Beaufort weather code signifies every weather condition by suitable initials, with capitals denoting intensity. Cloud observations gauge how many tenths of sky are covered by each type, and rainfall is measured each 12 hours in a funnel. Specially equipped weather ships maintained by several nations incl. Britain, at a number of ocean stations (9 in N. Atlantic and 4 in N. Pacific), report on weather conditions and advise air traffic. They carry radar (q.v.) and twice daily make balloon soundings of wind, temperature and humidity at heights up to about 60,000 ft. All these data are reported to, and collated by, central agencies, e.g. Meteorological Office, London; U.S. Weather Bureau, Washington, and then pooled on an international basis, when all nations can be informed on weather conditions as they affect crops, storms, hurricanes, etc., enabling regular weather forecasts to be made. As a public service, these were estab-

also *Awful Disclosures* (1836) of life therein.

MONKEY. Term usually applied to all the Primates, except man and the anthropoid apes. Ms. are numerous in tropical parts of Africa, S. America, and Asia, and are seldom found elsewhere.

MONKEY-PUZZLE TREE or Chilean Pine. Evergreen tree (*Araucaria imbricata*) native of Chile, first cultivated in Britain in 1796.

MONMOUTH, James Scott, duke of (1649–85). Leader of 'Monmouth's rebellion'. B. at Rotterdam, the natural son of Charles II by Lucy Walter, he was created duke of M. in 1663. He m. Anne Scott, countess of Buccleuch, and adopted her surname. The Whig opposition attempted unsuccessfully to secure him the succession to the crown by the Exclusion Bill, and in 1684, having become implicated in a Whig conspiracy, he fled to Holland. After James II's accession in 1685, he landed at Lyme Regis, claimed the crown, and raised a rebellion which was crushed at Sedgemoor, in Somerset. M. was captured and beheaded on Tower Hill.

MONMOUTH. Co. tn. (bor.) of Monmouthshire, England, 18 m. S. of Hereford, at the junction of the Monnow and the Wye. Henry V was born at M. Pop. (1961) 5,505.

MONMOUTHSHIRE. Co. of England, although for most purposes included in Wales (e.g. parliamentary). The chief rivers include the Wye and the Usk, which flow into the Severn estuary on the S. border. Most of the co. is hilly (Chwasel y Fan in the Black Mts. is 2,228 ft.) and sheep farming is carried on. There are numerous orchards, and wheat, oats, and barley are grown. There are coal mines and iron works in the W. upland valleys. The co. tn. is Monmouth; other towns are Newport, Pontypool, and Abergavenny. Area 542 sq. m.; pop. (1961) 443,689.

MONOCOTYLEDON (monokotilē'don). Plants having one seed-leaf (cotyledon). The stems of such plants are usually hollow or soft, e.g. palms, bamboos, grasses, and cereal plants. The foliage leaves are parallel-veined.

MONOPHYSITES (mono'fisits). Christian heretics of the 5th–7th cents., who taught that Christ had one nature, in opposition to the orthodox doctrine laid down at the Council of Chalcedon in 451, that He had 2 natures; the human and the divine.

MONO'POLY. Originally a grant from the Crown conferring the sole right to manufacture or sell a certain article. The abuse of such grants, which were frequently made to royal favourites, provoked many protests from parliament under Elizabeth, James I, and Charles I. The term is applied today to business organizations or groupings of organizations, formed into trusts or cartels, strong enough to dominate particular industries and so restrict competition and control prices. In the U.K. the Ms. Commission (1948, reconstituted under the Restrictive Trade Practices Act 1956, which also created a special court to deal with restric-

tive agreements) inquires into such problems and makes recommendations to the govt. A familiar example is the enforcement by manufacturers of minimum resale prices, which was abolished, unless shown to be in the public interest, under the Resale Prices Act (1964), following the example of U.S.A. and Canada.

MONORAIL. Originally a device with wheels running on a single overhead rail, designed to carry light loads up to 1 ton, and when driven by electricity, called a telpher (the first of these having been invented in 1882). Since the S.W.W., however, the M. has been increasingly advanced as the solution to traffic problems in congested areas: Germany (Cologne) and Japan are pioneers in the field and Britain and U.S.A. also favour the idea. In undeveloped areas, e.g. E. Africa, the M. may be a practical means of linking mines, etc., to ports and railheads without the heavy cost of road and rail construction and maintenance in difficult country.

MONOTHEISM (mon'othē-izm). Belief in one God, as opposed to polytheism, the belief in many.

MONO'THELITES. Christian heretics of the 7th cent., who sought to reconcile the orthodox and Monophysite theologies by maintaining that while Christ possessed 2 natures He had only one will.

MONOTYPE (mon'otip). Type-setting machine of American origin, commonly used for bookwork. It produces separate letters, and thus differs from the linotype machine, which produces type in solid lines called 'slugs'. The M. consists of a composing machine and a casting machine. The former has a keyboard, and by touching the keys the operator perforates a paper roll in the machine. The paper roll is then fed into the casting machine, which produces the separate types. The paper roll can be easily stored, and may be used several times. This encyclopaedia is an example of M. production.

MONRO (munrō), Harold (1879–1932). British poet. He pub. vols. of verse, e.g. *Strange Meetings* (1917), and *Earth for Sale* (1928), but is best remembered for his foundation of the 'Poetry Bookshop' (1912), which issued the influential *Poetry Review* (1912), and the *Chapbook*.

MONROE, Harriet (1860–1936). American poet. B. in Chicago, she founded the magazine *Poetry* (1912), which published the work of A. Lowell, T. S. Eliot, R. Frost, E. Pound, and H. Crane.

MONROE, James (1758–1831). 5th pres. of the U.S.A. B. in Virginia, he served in the War of Independence, was Minister to France 1794–6, and during 1803 negotiated the Louisiana Purchase. He was Sec.

MONORAIL. Of French origin, the Safege monorail system has been adopted by Taylor Woodrow for development in the United Kingdom and Commonwealth. On the left a car runs on the test track at Châteauneuf-sur-Loire, near Orléans, and the cut-away (right) shows a section of the beamway rail and one of the two traction bogies. Each of these is fitted with two electric motors, mounted longitudinally, driving through a geared axle and differential. Enclosure of the bogies, together with the use of rubber tyres, ensures maximum use of the system in all weather conditions.

Courtesy of the Taylor Woodrow Group.

MEXICO. Mosaic inspired by pre-Colombian art is strikingly used in modern Mexican buildings such as the library of the Univ. of Mexico (1951-3) designed by Juan O'Gorman, Gustavo Saavedra and Juan Martínez de Velasco.

Courtesy of the Mexican Embassy.

which rises in the Vosges Mts. and flows in a generally N.W. direction to join the Moselle at Frouard, 5 m. N.N.W. of Nancy. It gives its name to the dept. of Meurthe-et-Moselle. M. was also the name of a French dept., part of which was lost to Germany in 1871; the remainder was incl. in M.-et-Moselle; when the part ceded in 1871 was recovered in 1919 it was added to Moselle dept.

MEUSE (mös). River which rises in the dept. of Haute-Marne, France, passes Verdun, and flows in a N. direction into Belgium, past Namur and Liège, then enters the Netherlands S. of Maastricht, flowing N., then W. to join the Waal near Gorkum. The Dutch form of its name is Maas. Of its total length of c. 560 m., 300 are in France, 120 in Belgium, 160 in the Netherlands. The M., which gives its name to a French dept., was a line of battle in the F.W.W. in 1914, and the S.W.W. in 1940.

MEW, Charlotte Mary (1870-1928). British poet. B. in London, after a lifelong struggle against poverty she received a Civil List Pension in 1923, but committed suicide after the death of her mother and sister. She pub. 2 vols. of sensitive verse, *Farmer's Bride* (1915) and *Rambling Sailor* (1929).

MEWAR. Another name for **UDAIPUR**.

MEXICO. Federal rep. of Central America, lying S. of the U.S.A.

Physical. The Gulf of California divides the mainland to the E. from the elongated, mountainous peninsula of Lower California to the W. The 2 ranges of the Sierra Madre enclose an extensive central plateau and meet near the isthmus of Tehuantepec, on which both coasts converge. None of the rivers is of any commercial importance. Climatically, the country is divided into: (1) *Tierra Caliente*, a low-lying, tropical region adjacent to the coasts and including the peninsula of Yucatan; (2) *Tierra Templada*, a temperate region including most of the plateau; and (3) *Tierra Fria*, a cold region rising above 6,000 ft., in which Mexico City is situated. Over much of M. the rainfall is very scanty.

Economic. M. is predominantly agricultural, but requires food imports. The main crops are maize (the staple food), beans, wheat, coffee, sugar, rice, bananas, tobacco, sisal, and cotton. Cattle are bred. Contour-ploughing, re-forestation, and irrigation are being developed to conserve and extend cultivable land. Silver, gold, lead, zinc, arsenic, copper, iron ore and uranium are worked. The oil industry (nationalised 1938) is important and natural gas is supplied to U.S.A. Iron and steel, textiles, electrical goods, chemicals, etc., are increasingly produced, and traditional handicrafts in silver, pottery, weaving, leather, etc., supply valuable revenue. The chief

ports are Tampico and Vera Cruz, and communications by road, rail and air are excellent.

Political. M. comprises 29 states, 1 federal dist., and 2 territories. As amended in 1953, the federal constitution provided for a pres. popularly elected for 6 years and ineligible for re-election, and a congress consisting of a number of deputies elected for 3 years and a senate elected for 6 years. Men and women are eligible to vote at 18 if married, at 21 if unmarried.

Area and Population. The total area is 763,944 sq. m., and the pop. (mestizos, Indians, and whites), in 1967 c. 45,671,000. The official tongue is Spanish, but some 2,500,000 of the pop. (of whom perhaps half can speak Spanish) use Indian languages, among which Nahuatl is spoken by about 30 per cent; Mixtec (10 per cent); Maya (9 per cent); Zapotec (8 per cent); and Otomi (7 per cent). Most of the people are Roman Catholics, but Church and State have been separated since 1857, and Church activities are severely curtailed. Primary education up to 15 is free and in theory compulsory, but approx. half the pop. is under 15 and illiteracy is c. 20%.

Apart from Mexico City, the cap., the principal towns are Monterrey, Guadalajara, Puebla, San Luis, Potosi, Merida, and Veracruz. Tourism is increasingly important, the majority of visitors being from U.S.A., and resorts such as Acapulco are world-famous.

History. M. was the scene of the brilliant Indian civilizations of the Mayas, at its height c. A.D. 300-900, the Toltecs (c. 900-1100), and the Aztecs who settled on the central plateau, and whose last emperor, Montezuma II, was killed in 1520 during the Spanish invasion. M. became the viceroyalty of New Spain; Spanish culture and the Catholic religion were firmly established, and the natural wealth of the country was developed, but foreign rule became increasingly oppressive, and Spanish rule was ended in 1821. In 1824 a rep. was set up. Texas separated from M. in 1836, and New Mexico and California were ceded to the U.S.A. after the war of 1846-8. After 3 years of civil war, Benito Juarez established himself as ruler over the whole country in 1861. His repudiation of foreign debts led to foreign intervention, and in 1863 Maximilian of Austria was proclaimed emperor; but when the French troops supporting him were withdrawn, 1866, he was captured and executed, 1867. Juarez remained pres. until 1872. His successor, Lardo, was opposed by Porfirio Diaz who, entering Mexico City in force in 1876, was elected pres. 1877-80 and again in 1884 and at each succeeding election until forced to resign in 1911. The stability resulting from Diaz's dictatorship ended with his fall. But in 1920 a period of reconstruction began, based

MEXICO CITY. The Cathedral Square or Plaza de Armas is the heart of the city. The baroque cathedral itself is the greatest achievement of the colonial period, its foundations having been laid c. 1562 and the building completed in 1813.

Courtesy of the Mexican Government Tourist Department.

MONTENE'GRO. Fed. rep. of Yugoslavia, between Bosnia-Hercegovina and Albania. Once part of Serbia, it became independent in the 14th cent. It never submitted to the Turks and the treaty of Berlin, 1878, recognized M. as a sovereign principality; Prince Nicholas took the title of king in 1910. M. sided with Serbia in the Balkan wars and in the F.W.W., when it was overrun by the Austrians. After the defeat of Austria in 1918, King Nicholas was deposed and M. voted in favour of joining the new Kingdom of the Serbs, Croats, and Slovenes (renamed Yugoslavia, 1931). The cap. is Titograd. Area 5,330 sq. m.; pop. (1961) 471,894.

MONTERREY (mōntārā'), Capital of Nuevo León state, Mexico. There are iron and steel works, food processing plants, etc., and a univ. (1933). It was founded as León in 1560, renamed M. in 1599. Pop. (1967) 900,600.

MONTESPAÑ (mōntespoñ'), Françoise-Athénais de Pardaillan, marquise de (1641-1707). Mistress of Louis XIV. The dau. of the duc de Montmartre, she m. the marquis de M. in 1663, became Louis's mistress in 1667, and in 1691 retired to a convent. Her 7 children by Louis were legitimized, but her influence over him waned following her engagement of the future Mme de Maintenon (q.v.) as their governess.

MONTESQUIEU (mōnteskyō'), Charles Louis de Secondat, baron de la Brède et de (1689-1755). French philosophical historian. B. near Bordeaux, he became adviser to the Bordeaux parlement in 1714. After the success of his *Lettres persanes* (1721), he adopted a literary career. Later works are *Considérations sur les Causes de la grandeur des Romains et de leur décadence* (1734), and *De l'Esprit des Loix* (1748), a study of the principles of government.

MONTESSORI (montesaw'ri), Maria (1870-1952). Italian educationalist. B. near Ancona, she was the first woman to take a medical degree at Rome univ. (1894), and from experience with mentally deficient children evolved a system of spontaneous education adapted to normal infants, as described in her *Montessori Method* (1912).

MONTEUX (mōntō'), Pierre (1875-1964). French conductor. He estab. a reputation as conductor of Diaghilev's Russian Ballet 1911-14 and 1917, and Ravel's *Daphnis and Chloe* and Stravinsky's *Rite of Spring* were first performed under his direction. He then for many years conducted in America, notably with the San Francisco Symphony Orchestra 1935-52; and in 1961 became musical director and principal conductor to the London Symphony Orchestra. Since 1942 he had been an American citizen.

MONTEVERDI, Claudio (1567-1643). Italian composer. B. at Cremona, while in the service of the duke of Mantua, he achieved fame with the operas *Orfeo* (1607) and *Arianna* (1608), and became musical director at St. Mark's, Venice, in 1613.

MONTVIDEO. The coastline of this region is unusual. The natural harbour at the heart of the city is almost circular in shape, and a chain of fine curved beaches converts the suburbs to fashionable bathing and pleasure resorts.

Courtesy of National Tourist Office of Uruguay.

MONTVIDEO (montividā'-ō). Cap. and chief port of Uruguay, cap. also of M. dept., on the River Plate. Founded in 1726, M. is the seat of an archbishopric; it has a cathedral, a univ. (1849), and an international airport. The chief exports are beef and other animal products. Pop. (1967) 1,175,000.

MONTÉZ, Lola. Stage-name of the adventuress Maria Gilbert (1818-61). B. in Ireland, she appeared on the stage as a Spanish dancer, and in 1847 became the mistress of King Ludwig I of Bavaria, whose policy she dictated for a year. Her liberal sympathies led to her banishment through Jesuit influence in 1848. She later acted in the U.S.A. and Australia, and d. in New York.

MONTÉZUMA II (mōntēzoo'mah) (1466-1520). Aztec emperor of Mexico. He became emperor in 1502. When Cortes invaded Mexico in 1519 he made M. a prisoner, and shortly after the emperor was murdered by his subjects while attempting to dissuade them from attacking the Spaniards.

MONTFORT, Simon de, earl of Leicester (c. 1200-65). English statesman. The son of Simon de Montfort, leader of the crusade against the Albigenses, he came to England in 1230, and was granted the earldom of Leicester. From 1258 onwards he led the baronial opposition to Henry III's misrule, and in 1264 defeated and captured the king at Lewes. As head of the govt. in 1265 he summoned the first parl. in which the towns were represented. He was defeated and killed soon after at Evesham.

MONTGOLFIER (mōngolfyā'), Joseph Michel (1740-1810), and Étienne Jacques (1745-99). French balloonists. The 2 brothers were papermakers of Annonay, near Lyons, where on 5 June 1783 they sent up a balloon filled with hot air. The first successful human flight was made in a M. balloon on 21 Nov. 1783. The M. experiments greatly stimulated scientific interest in aviation.

MONTGOMERY OF ALAMEIN, Bernard Law Montgomery, 1st visct. (1887-). British field marshal. The son of an Ulster clergyman, he was commissioned in the Warwickshire Regt. in 1908, and served in France during the F.W.W. At the beginning of the S.W.W. he was commanding the 3rd division, which formed part of the B.E.F. in France 1939-40, and he took part in the evacuation from Dunkirk. In Aug. 1942 he took command of the 8th Army, then barring the German advance on Cairo; the victory of El Alamein in Oct. turned the tide in N. Africa, and was followed by the expulsion of Rommel from Egypt and

MONTEUX. One of the world's finest conductors, he was noted for the superb fire and clarity of his interpretations.

Photo: Godfrey MacDonnic.

MICHIGAN. The whisky stills which flourished along this attractive creek in the mid-19th cent. earned the little community growing up there the name of Hell. Not far from Detroit, Hell has a chain of beautiful lakes which make it today an up-and-coming tourist resort.

Courtesy of Hell Chamber of Commerce.

in 1668; it became British in 1763, was organized as a territory 1805 (M. territory, 1787, having incl. parts of other later states), and was admitted to the Union as a state 1837. Area 58,216 sq. m., incl. 1,194 sq. m. of inland water. Pop. (1960) 7,774,787.

LAKE M. is the 3rd largest of the great lakes of N. America, and the only one completely in the U.S.A. It is over 300 m. long, and has a water surface of 22,400 sq. m.

MICHIGAN CITY. City and port in the state of Indiana, U.S.A., lying on Lake Michigan, 40 m. E.S.E. of Chicago. It was founded c. 1830, and is a summer resort with metal and clothing industries. Pop. (1960) 36,653.

MICKIEWICZ (mitskē-ā'vich), Adam (1798–1855). Polish poet. B. in Lithuania, he was imprisoned and compelled to live for 5 years in Russia, owing to his revolutionary activities. There he pub. the narrative poem, *Konrad Wallenrod* (1828). He d. at Constantinople, while raising a Polish corps to fight against Russia in the Crimean War. The greatest of his later works is *Pan Tadeusz*, the Polish epic.

MICROBE. In biology, a microscopic organism, a germ, bacillus, micro-organism, or bacterium, instinct with life and power of multiplication. See BACTERIA.

MICROFILM RECORDING. Space-saving system for storing information by photographing books, documents, etc., on rolls of 16 or 35 mm. film.

MICROMETER. An instrument for making very small measurements with the greatest accuracy. For astronomical use, it consists of 2 very fine wires, one fixed and the other movable, placed in the focal plane of a telescope; the movable wire is fixed on a sliding plate and can be moved parallel to the other until the object appears between the wires. The movement is then indicated by a scale on the adjusting screw. *M. gauges* are measuring gauges having their adjustment effected by an extremely accurate fine-pitch screw; they are of great value in engineering.

MICROMINIATURIZATION. The reduction in size and weight of electronic components and circuits to meet space, airborne and military needs, and for such devices as electronic computers in which the number of circuits is very large. By the use of transistors, ferrites and printed circuits the no. of components contained in a given vol. has multiplied 4 times; by M. techniques 40 times; and it may well be multiplied by 400 or more by the use of solid state circuits (q.v.).

MICRONESIA. That part of Oceania lying N. of Melanesia and incl. the Caroline, Marshall and Mariana groups of islands and the Gilberts. Guam, in the Marianas, belongs to the U.S.A.; the Gilberts are British; the remainder, mandated to Japan in 1919, were placed under U.S. trusteeship in 1947 and formed into the U.S. Pacific Islands Trust Territory.

MICROPHONE. The first component in a sound-reproducing system, whereby the mechanical energy of sound waves is converted into electrical energy for the purpose of transmission. One of the simplest is the telephone transmitter, invented by Bell in 1876, and other well-known examples are those used with broadcasting and sound-film apparatus.

MICROSCOPE. An optical instrument for magnifying small objects for detailed examination. A simple M. or magnifying glass has a single convex lens. A compound M. has 2 sets of lenses, an objective (4) and an eyepiece (5). Light from the source (1) is concentrated by the condenser (2) on to the object, mounted on a slide, resting on the stage (3). The objective (4) forms a real, inverted and magnified image of the object, just within the focal length of the eyepiece (5) which acting as a simple M. allows the operator to view the image. The focusing control (6) moves the lens barrel up or down, to focus on to the object. Compound lenses are always used, to reduce distortion of colour and shape to a minimum.

The electron M. (q.v.) is a modern development using an electron beam instead of light; and electromagnetic instead of optical lenses. It is up to 200 times (linear) more powerful than the optical M., and a recent development by E. W. Müller of Pa. State univ., the field ion M., uses ions as the travelling particles to determine atomic structure, and metal itself as their source. Magnifications up to 2½ million are said to be possible.

MICROWAVE HEATING. Form of radio-frequency or dielectric H., using frequencies at least 20 times higher than usually employed. Instead of penetrating from the surface by conduction, heat is generated throughout an object simultaneously. It is used in instantaneous cooking of prepared foods, destruction of insects in grain, destruction of enzymes in processed food, liquid sterilization, pasteurization, and drying of timber and paper.

MIDAS. King of Phrygia, who was granted the gift of converting all he touched to gold, and who, for preferring the music of Pan to that of Apollo, was given ass's ears by the latter. Also instrument (black box) recording flight data in planes.

MIDDELBURG. Town in Walcheren Island, Netherlands, cap. of Zeeland prov. It has engineering works and tobacco and furniture factories, and a 15–16th cent. Town Hall. Pop. (1967) 28,000.

MIDDLE AGES. A term which came into use in the 17th cent. for the period of European history between the fall of the Roman Empire and the Renaissance. It is usually regarded as beginning in the 5th cent. and ending in the 15th. Its distinctive features were the unity of W. Europe within the R.C. Church, and the feudal organization of political, social and economic relations.

MIDDLESBROUGH. Formerly a co. bor., it amalgamated in 1968 with Stockton on Tees, Redcar, Billingham, Thornaby and Eston to form the co. bor. of Teesside (q.v.), of which it is the commercial, social and cultural centre. Dating from c. 1830, it depended on the iron industry, shipbuilding and – from the 1920s – chemicals, and entered a depressed phase from the 1930s until diversification in the 1960s.

MIDDLESEX. English county, which disappeared as an administrative div. in the re-organization attendant on the creation of the new Greater London 1964–5. Contained within the Thames basin, and where not built over good agricultural land, it was

execution in Honduras. He is now the symbol of Central American unity.

MORBIHAN (morbé-on'), Gulf of. Seawater lake, area 40 sq. m., in Brittany, W. France, linked by a channel with the Bay of Biscay. M. is a Breton word 'little sea'; the gulf gives it its name to a dext.

MORDVINIAN A.S.S.R. Autonomous rep. of the R.S.F.S.R., lying W. of the Sura r. Forested in the W., it is fertile elsewhere and produces sugar beet, grains, potatoes, etc. Sheep are reared and dairy farming is important. Timber, furniture, and textiles are produced. Mordvinia was conquered by the Russians during the 13th cent. It was made an autonomous region 1930, an A.S.S.R. 1934. A state univ. was set up 1957. The cap. is Saransk. Area 10,100 sq. m.; pop. (1967) 1,010,000.

MORE (môr), Hannah (1745–1833). British author. B. near Bristol, she went to London in 1774, and was one of the most brilliant 'blue-stockings'. After 1782 she again retired to the country to work among the poor and write such edifying books as *Coelebs in search of a Wife* (1809).

MORE, Henry (1614–87). Greatest of the Cambridge Platonists, he became a fellow of Christ's Coll. in 1639. His chief work is the *Divine Dialogues* (1688).

MORE, Sir Thomas (1478–1535). British statesman and author. B. in London, he studied under Linacre and Grocy at Oxford, and was influenced in his religious beliefs by Colet. In 1497 he first met Erasmus, while studying law at Lincoln's Inn, and in 1504 entered parliament. From 1509 he was favoured by Henry VIII, and employed on foreign embassies, becoming a member of the privy council in 1518 and Speaker of the House of Commons in 1523. He was knighted in 1521, and on the fall of Wolsey became Lord Chancellor in 1529, but resigned in 1532 owing to his failure to agree with the king on his ecclesiastical policy and the marriage with Anne Boleyn. In 1534 he refused as a devout Catholic to take the oath of supremacy to Henry VIII as head of the Church, and after imprisonment in the Tower was executed. Among his writings are the Latin *Utopia* (1516), sketching an ideal commonwealth; the English *Dialogue* (1528), directed against Tyndale; and a *History of Richard III.* M. was canonized in 1935.

MORÉA. Name used under Turkish rule for the Greek peninsula of PELOPONNESE.

MORÉAS (mōrā-ah'), Jean (1856–1910). French poet. B. in Athens, he was a leader of the Symbolist movement, and formulated its principles in 1885 in *XIXe Siècle*. When Symbolism departed from these original tenets, M. founded the *école romane*, which returned to more traditional versification. His vols. of verse incl. *Les Syrtès*, *Le Pèlerin Passionné* and *Stances*.

MOREAU (mōrō), Gustave (1826–98). French painter. B. in Paris, he was influenced by Chassériau, and became a prof. at the *École des Beaux Arts*. His works incl. 'Jason and Medea' and 'The Young Man and Death'.

MOREAU, Jean Victor Marie (1763–1813). French general. B. at Morlaix, he served in the Revolutionary War, and won a brilliant victory over the Austrians in 1800 at Hohenlinden. His republicanism involved him in intrigues against Napoleon, for which he was banished. In 1813 he offered his services to the Allies, and was killed at the battle of Dresden.

MORECAMBE AND HEYSHAM. English port and seaside resort (bor.) of Lancs, situated on Morecambe Bay. Heysham was incorporated in the borough in 1928. Pop. (1961) 40,950.

MORE'L. Edible fungi. The common M., *Morchella esculenta*, grows abundantly in Europe and N. America. A yellowish-brown, its edible cap is much wrinkled and about an inch long. M. is used for seasoning gravies, soups, sauces, etc.

MORESBY, John (1830–1922). British naval explorer and author, remembered for his discovery in

1873 of the finest harbour in New Guinea, on which Port Moresby now stands.

MORGAN, Charles (1894–1958). British novelist. As a boy he spent 2 years as a midshipman, also serving in the navy in the F.W.W., and these experiences underlay his novel *The Gunroom* (1919), withdrawn owing to its frank revelations of naval life. He was captured at Antwerp, and interned in Holland, which provided the background of *The Fountain* (1932). Principal dramatic critic to *The Times* 1926–39, he joined the intelligence section of the Admiralty in the S.W.W. and these years inspired *The River Line* (1949: dramatized 1952). Other works incl. *Portrait in a Mirror* (1929); *The Flashing Stream* (1938), a play; and *The Voyage* (1940). His lucid style endeared him to France where he was highly honoured. He m. in 1923 Hilda Vaughan, novelist and playwright, a descendant of the 17th cent. Welsh poet Henry Vaughan.

MORGAN, Conwy Lloyd (1852–1936). Psychologist and biologist. B. in London, he became prof. at Univ. Coll., Bristol, in 1884, and was principal 1887–1909. In his *Introduction to Comparative Psychology* (1894) and *Animal Behaviour* (1900), he anticipated the work of Thorndike, Watson, and others. Best-known of his later books is *Emergent Evolution* (1923).

MORGAN, Sir Henry (c. 1635–88). Welsh buccaneer. Joining the W. Indies buccaneers, he warred against the Spaniards, capturing and sacking Panama in 1671. In 1674 he was knighted and appointed lieutenant-governor of Jamaica.

MORGAN, John Pierpont (1837–1913). American financier and philanthropist. B. in Conn., he built up one of the greatest international banking-houses, financing gigantic steel, shipping and railway enterprises. He was succeeded in this by his son, John Pierpont M. (1867–1943), who raised loans for the Allies during the F.W.W. He assisted the preparation of the Dawes Plan (1922), and was unofficial U.S. delegate to the Reparations Conference (1929). He presented his father's art collection and library to the American nation.

MORGAN, Lewis Henry (1818–81). American anthropologist. B. in New York state, he made a study of Indian society, and pub. *League of the Iroquois* (1851), followed by *Systems of Consanguinity and Affinity of the Human Family* (1869), and *Ancient Society* (1877).

MORGAN, Thomas Hunt (1866–1945). American biologist. B. at Lexington, he was prof. of biology at Bryn Mawr Coll. 1894–1904, when he transferred to Columbia univ. In 1933 he was awarded the Noble prize for medicine. He originated the theory of paired elements within the chromosomes which govern heredity, using a fruit fly (*Drosophila melanogaster*) in his experiments.

MORGAN, William de. See DE MORGAN, WILLIAM.

MORGANATIC MARRIAGE. Marriage between a man of royal birth with a woman of lower rank, who does not share his rank. The marriage is recognized by the Church, and the issue are legitimate, but they cannot succeed to the rank or possessions of their father.

MORGANTOWN. City in W. Virginia, U.S.A., founded 1767, seat of the Univ. of W. Virginia (1867) with its school of mines. Glass and clothing factories derive power from natural gas. Pop. (1960) 22,487.

MORGENSTERN, Christian (1871–1914). German poet, best remembered for his vols. of original nonsense verse, e.g. *Galganlied* (1905) and *Böhmischer Jahrmarkt* (1938), but he also wrote love poetry, etc.

MORGENTHAU (-thaw), Henry (1891–1967). American statesman. Son of Henry M., prominent lawyer and financier, he was closely associated with the F. D. Roosevelt govt.'s measures for agricultural revival. As Sec. of the Treasury from 1934 to shortly after Roosevelt's death in 1945, he was mainly responsible for the administration's financial policy.

MILAN. Built in 1450 for Francesco Sforza on his succession to the duchy, the Castello Sforzesco was later decorated by Bramante and Leonardo da Vinci under the patronage of Lodovico. The 230 ft. Filarete tower, seen here, which ornaments one side of the open square it forms, was destroyed by an explosion in 1521 and rebuilt in 1904.

Courtesy of Italian Cultural Institute.

for Foreign Trade 1938-49 and for Home and Foreign Trade 1953-5. A member of the Presidium 1952-66 (of the Politbureau from 1934), he became a first Vice-Chairman (Deputy P.M.) in 1955 and was Pres. (Chairman of the Presidium) 1964-5.

MILAN (milan'). City of N. Italy, cap. of M. prov., on the r. Olona in the Plain of Lombardy. In the heart of the city is the Piazza del Duomo, at one end of which is the splendid Gothic cathedral—one of the largest Christian churches, with an area of 14,000 sq. yds., and capable of holding 40,000 worshippers. Begun in 1386, it was not finished until 1813, though St. Charles Borromeo consecrated it in 1577. The exterior is a mass of pinnacles, statues, etc. Nearby is the famous Scala opera house (1778). Other noteworthy buildings are the Palazzo Reale, the palace of the archbishop, the church of St. Ambrose (Ital. Ambrogio) with St. Ambrose's tomb, the Casa dei Borromei, the Brera picture-gallery, and the castle. Several 'skyscrapers' (one 400 ft. high with 31 stories) and an underground railway were constructed in the 1950s.

M., which is the seat of 2 univs., is also a great industrial centre, making aircraft, locomotives, motor-cars, bicycles, etc., and is the chief seat of the Italian textile industry. It was the ancient Mediolanum, and for cents. in the Middle Ages was an independent city-state under the Visconti and Sforza families. In 1859 it became part of the kingdom of Italy. Pop. (1961) 1,580,978.

MILDENHALL (mil'-). English market town in Suffolk, on the edge of M. Fen, 76 m. N.N.E. of London. In 1942 Roman silverware was dug up nearby, ascribed to the 3rd cent., and transferred to the British Museum in 1946. Pop. c. 7,000.

MILDEW. Name given to minute fungi, like a thin whitish coat, which appear as a destructive growth on plants, paper, leather, wood, etc., when exposed to damp. They incl. both parasites and saprophytes. See FUNGI.

MILE. Measure of length in English-speaking countries; 1,760 yds. (5,280 ft.). It is derived from the Roman M. of 1,000 paces. Considerably longer Ms. have been used in Ireland and Scotland. A nautical M. is 6,080 ft. A geographical M. is the length of 1 minute of latitude, and its mean length is 6,076.8 ft.

MILE END. A part of the Greater London bor. of Tower Hamlets in the district of Stepney in the East End. M.E. Green (later renamed Stepney Green) was the scene of Richard II's meeting with the rebel peasants in 1381, and the exercise ground of the train-bands.

MILES, Sir Bernard (1907-). British actor-producer. After repertory experience, he appeared in such parts as Briggs in *Thunder Rock* (1940) and Iago in *Othello* (1942), and his films incl. *Great Expectations* (1947). He founded a Trust which built the City of London's first theatre for 300 years, The Mermaid, opened in 1959 with the musical play *Lock Up Your Daughters*, and where he has since produced Mayakovsky's *The Bedbug* (1962), etc. He was knighted 1969.

MILETUS. Ancient Greek city in S.W. Asia Minor, which carried on an important trade with Egypt and the Black Sea. The scientists Thales, Anaximander, and Anaximenes were born at M.

MILFOIL. See YARROW.

MILFORD, Robin (1903-). British composer. He studied under Holst and Vaughan Williams at the R.C.M., and is best known for his songs and choral music, e.g. the oratorio *A Prophet in the Land* (1931).

MILFORD HAVEN, Louis Alexander, 1st marquess of (1854-1921). British sailor. B. Prince Louis of Battenberg (q.v.), he became a naturalized Briton in 1868, and entered the navy. In 1912 he was 1st Sea Lord, but he had to resign in 1914 owing to 'anti-German' agitation in the press. He gave up his German titles in 1917, assumed the surname of Mountbatten, and was made marquess of M.H. In 1921 he was appointed Admiral of the Fleet. He was the father of Earl Mountbatten, and the grandfather of the duke of Edinburgh. See also GUSTAV VI.

MILFORD HAVEN. Welsh seaport (U.D.) in Pembrokeshire, with a fine harbour comprising the estuary of the E. and W. Cleddau rivers. Here is a

MILDENHALL In this silver dish from the treasure hoard, the central mask of Neptune with dolphins in his hair is surrounded by a frieze showing the triumph of Bacchus over Hercules. Dating from the 4th century A.D., it is almost two feet in diameter.

Photo: British Museum

to N.E.; farther S. is the Anti-Atlas range, and in the N. the Rif Mountains. Chief rivers are the Moulouya, flowing to the Mediterranean, the Sebou and er Abia, flowing to the Atlantic. Much of the land is fertile, the vine, the olive, figs, almonds, dates, citrus fruits, wheat, barley, linseed, and rice being grown; sheep, cattle, goats, mules, horses, and camels are reared. Mineral products incl. phosphates, anthracite coal, iron ore, manganese, antimony, lead, zinc, silver, and petroleum. Fishing (tunny and sardines) is important. Area (est.) 174,000 sq. m.; pop. (1965) 13,320,000, of whom the great majority are Berbers or Arabs with c. 220,000 Europeans and 18,000 Jews.

History. The sultan of M., last of the Barbary states to maintain independence, accepted French protection in 1912, and the country was divided into three zones: the special zone of Tangier, 240 sq. m. (internationalized 1925 under a treaty of 1923); a Spanish protectorate in the N., 11,000 sq. m.; the rest a French protectorate. The Spanish and later the French had to contend with serious armed opposition from the tribesmen, but after the surrender of Abd El-Krim (q.v.) in 1926 the country was pacified, and a number of French and Spanish colonists settled in M. The sultan continued to be recognized as ruler. After the S.W.W. there was widespread unrest in M. and in 1956 the country's independence was recognized by France, Spain, and the powers controlling Tangier. In 1957 the sultan Mohammed V (1909–61) changed his title to that of king; he was succeeded by his son Hassan II (1929–). The king usually lives at Rabat, but sometimes visits the other traditional caps., Fez (founded 808), Marrakesh (1062), and Meknes. The constitution of 1962 was suspended 1965 when a state of emergency was declared and the King became P.M. until 1968. Despite nationalisation measures and land reform, unrest continued.

MORON. Adult with the mind of a 10-yr.-old.

MORONI (morō'nē), Giovanni Battista (c. 1525–78). Italian artist. His works incl. fine altar-pieces, and as a portrait painter, e.g. 'The Tailor' (Nat. Gallery) and 'A Gentleman in Adoration before the Madonna' (Nat. Gallery of Art, Washington), he influenced Van Dyck.

MORPETH. English market town (bor.) with iron and engineering works in Northumberland, situated on the Wansbeck, 15 m. N. of Newcastle. It grew up round the castle. Pop. (1961) 12,430.

MORPHEUS (mor'fūs). In Roman mythology the god of dreams or sleep.

MORPHIA (mor'fē-a). Name generally applied to the alkaloid morphine (C₁₇H₁₉O₃N), used to alleviate pain. It can be taken by mouth or injected.

MORRIS, William (1834–96). British poet, Socialist and craftsman. B. at Walthamstow, he was ed. at Oxford, where he formed a lasting friendship with Burne-Jones, and was influenced by Ruskin and Rossetti. He abandoned architecture to study painting, and in 1858 pub. his first book of verse, *The Defence of Guenevere*. He founded his own firm for the manufacture of furniture, wallpapers, church decorations, etc., in 1862, and did much to raise English standards of craftsmanship. He also pub. several more vols. of verse-romances, notably *The Life and Death of Jason* (1867), and *The Earthly Paradise* (1868–70). A visit to Iceland in 1871 inspired his greatest poem, *Sigurd the Volsung* (1876), and his translations of the Sagas. He joined the Social Democratic Federation in 1883, left it as too moderate in 1884, and founded the Socialist League. To this period belong the romances, *A Dream of John Ball* (1888) and *News from Nowhere* (1891); the critical and sociological studies, *Signs of Change* (1888) and *Hopes and Fears for Art* (1892); and the narrative poem, *The Pilgrims of Hope*. Besides active journalistic and propaganda work, he founded the Kelmscott Press.

MORRIS, W. R. See NUFFIELD.

MORRIS DANCE. An English folk-dance which is still popular. It was usually danced by 6 men, one of whom wore girl's clothing. It probably originated in pre-Christian ritual dances.

MORRISON, Arthur (1863–1945). British novelist. B. in Kent, he became successively a civil servant and journalist, and wrote realistic studies of London slum life, *Tales of Mean Streets* (1894), *A Child of the Jago* (1896), and *The Hole in the Wall* (1902).

MORRISON, Robert (1782–1834). British missionary. B. in Northumberland, he was sent to Canton by the London Missionary Society in 1807, and pub. a Chinese translation of the N.T. and a Chinese Grammar in 1814, and a Chinese Dictionary in 1821.

MORRISON OF LAMBETH, Herbert Stanley Morrison, baron (1888–1965). British Lab. statesman. On leaving elementary school he became a shop assistant, was appointed sec. of the London Lab. Party (1915–45), and was a member of the L.C.C. 1922–45. Entering parl. in 1923, he was Min. of Transport 1929–31, Home Sec. 1940–5, and Lord Pres. of the Council and Leader of the House of Commons 1945–51, briefly succeeding Bevin as For. Sec. (Mar.–Oct. 1951). In 1955 he was defeated by Gaitskill in the contest for leadership of the party.

MORSE (mors), Samuel Finley Breese (1791–1872). American inventor of the magnetic telegraph. B. in Mass., in 1836 he produced the first adequate electric telegraph, and in 1843 was granted \$30,000 by Congress for an experimental line between Washington and Baltimore. His system was soon in general use, and in 1842 he experimented with telegraphy by submarine cable.

MORSE CODE. System of dots and dashes invented by S. F. B. Morse, used for conveying messages by wireless, cable, etc. The dot is a signal of short duration, the dash is three times this length. In the table above is the international M. alphabet.

MORTGAGE (mor'gej). A transfer of property – usually land – as a security for repayment of a loan. A M. of land is made by a deed which conveys the full ownership of the land to the mortgagee subject to the mortgagor's right to get his land back on payment of both principal and interest.

MORTLAKE. Locality of the Greater London bor. of Richmond-upon-Thames, $\frac{1}{2}$ m. W. of Barnes Bridge, the finishing-point of the Oxford and Cambridge boatrace. It was once noted for tapestry.

MORTON, H(enry) V(ollam) (1892–). British author. Originally a journalist, he has written many books which vividly recall the past, incl. 'In Search of' *England* (1927), *Scotland* (1929), *Ireland* (1930), and *Wales* (1932); 'In the Steps of' *St. Paul* (1936) and *Jesus* (1953); and *A Traveller in Rome* (1957).

MORTON, John Bingham (1893–). British journalist. Ed. at Oxford, he has contributed a humorous column to the *Daily Express* since 1924 under the pseudonym of 'Beachcomber', and has pub. many humorous novels, e.g. *The Barber of Putney* (1919); also several works on the French Revolution.

MORTON, John Maddison (1811–91). British dramatist, whose adaptation of the French farce, *Box and Cox* (1847), featured the proverbial pair of lodgers.

MILLAIS. His first essay in the Pre-Raphaelite style was 'Lorenzo and Isabella', an illustration of the story borrowed by Keats from the *Decameron*. It has all the mature characteristics of the school — dramatic portrayal of character and incident, and exquisitely finished detail.

Courtesy of the Walker Art Gallery.

portraits. He was created a bart. in 1885 and elected P.R.A. in 1896.

MILLAY (millä), Edna St. Vincent (1892–1950). American poet. B. in Maine, she pub. her first collection of poems, *Renascence*, in 1917. This was followed by other vols. of direct emotional poetry, such as *The Harp-Weaver* (1922).

MILLBANK. Area bordering the Thames between the Houses of Parliament and Vauxhall Bridge, London, England. The Tate Gallery stands on the site of Millbank prison, built 1812–22, closed 1890, pulled down 1893.

MILLENNIUM. A period of 1,000 years, during which (so certain Christian sects believe), Christ will return to govern this earth in person. This belief, also called Chiliasm (from the Greek for 1,000), was widespread in the early days of Christianity. As hopes were disappointed, belief in the Second Coming tended to fade, but Millenarian views have been expressed at periods of great religious excitement, such as the Reformation. The Fifth Monarchy Men were millenarians, as are Jehovah's Witnesses.

MILLER, Arthur (1915–). American playwright. His concern with family relationships and contemporary American values is reflected in *All my Sons* (1947), and *Death of a Salesman* (1949), and *The Crucible* (1953) is an equation of the Salem witch hunt (q.v.) with political persecution of any age, with particular relevance to 'McCarthyism'. M. himself was convicted of Contempt of Congress in 1957 for refusing to reveal the names of those present at a meeting of Communist writers in 1947. He was m. (1956–61) to Marilyn Monroe (q.v.), for whom he wrote the film *The Misfits* (1960), in which she starred, and with whom Maggie of his play *After the Fall* (1964) has been popularly identified. Other notable plays incl. *A View from the Bridge* (1955).

ARTHUR MILLER

MILLER, Henry (1891–). American writer. B. in New York, he spent some years in the Paris underworld which provided material for the fictionalized *Tropic of Cancer* (1931), *Tropic of Capricorn* (1938) and *Black Spring* (1939). These were so out-spoken that the first could not appear in England until 1963,

and the 2nd was only pub. in the U.S. in 1961. *The Air-Conditioned Nightmare* (1945–7) records a trip across the U.S.A.

MILLES (miles), Carl (1875–1955). Swedish sculptor. Intending to emigrate to Chile, he was sidetracked in Paris to the study of art, and came under the influence of Rodin and Meunier. His imaginatively stylized treatment of real and mythical animals, and of the characters of history and legend, make his work unique. Notable are his great basin fountains (e.g. the Poseidon at Gothenburg and the Folke Filbyter memorial at Linköping), and the statue of Gustavus Vasa in the Northern Museum.

MILLET (millä), Aimé (1819–91). French sculptor. B. in Paris, he first became famous with his statue of 'Ariadne' (1857). His other works incl. the 'Mercury' in the Louvre, and the colossal statue of Vercingetorix at Alise-Ste-Reine.

MILLET, Jean François (1814–75). French painter. B. in Normandy of a peasant family, he went to Paris to study in 1837. He settled at Barbizon, in the forest of Fontainebleau, in 1848, and there became the leader of a group of artists who concentrated on naturalistic paintings of peasant life and rustic scenery. He is best known for his studies of peasants, such as 'The Reapers' (1854), 'The Gleaners' (1857), 'The Angelus' (1859), and 'The Man with a Hoe' (1863).

MILLET. In botany, members of the family Gramineae (grasses), cultivated in various countries, the grains as a cereal food and the stems as fodder. The most important are *Panicum miliaceum*, extensively cultivated in the warmer parts of Europe, and *Sorghum vulgare*, also known as Durra (q.v.)

MILLIKAN, Robert Andrews (1868–1953). American physicist. B. in Illinois, he held chairs in physics at Chicago and Pasadena, California, and was best known for his atomic research, in which he made the most accurate measurement of the electronic charge of negative electricity (1917). He was awarded a Nobel prize in 1923.

MILLIN, Sarah Gertrude (1889–1968). S. African novelist, née Liebson, noted for her treatment of the problems raised by colour. Her first novel, *Dark River* (1919), was followed by *God's Step-Children*, *Three Men Die*, and *King of the Bastards*. She also pub. biographies of Rhodes and Smuts; a series of War Diaries; and the autobiography, *Night is Long*.

MILLIPEDE. Animal of worldwide distribution, in the class Diplopoda. It has a segmented body, each segment usually bearing 2 pairs of legs, and the head bears a pair of antennae. The class is divided into a number of orders; some species roll into a ball. Certain orders are provided with silk glands. Ms. feed on decaying vegetable matter, but some species injure crops by feeding on tender roots.

MILLS, John (1908–). British actor. Making his stage début in 1929, he entered films in 1933, and has appeared in *Great Expectations* (1947), *Scott of the Antarctic* (1949), *Town on Trial* (1958) and *Tunes of Glory* (1960); in 1961 he played in *Ross* on the N.Y. stage. His dau., Hayley (1946–), has appeared in many films since her first success in *Pollyanna* (1960).

MILMAN, Henry Hart (1791–1868). British Anglican churchman. Ordained in 1816, he became dean of St. Paul's in 1849. He is remembered for his controversial *The History of the Jews* (1829) — the first by an English churchman to treat the contents of the O.T. rationally — and for his standard *History of Latin Christianity* (1854–6).

MILNE, Alan Alexander (1882–1956). British author. Of Scots parentage, he became a journalist and joined *Punch* (1906–16). His plays, which mingle sentiment and whimsical absurdity, incl. *Mr. Pim Passes By* (1919) and *The Dover Road* (1922), but he is best remembered for the children's classics *When We Were Very Young* (1924), *Winnie-the-Pooh* (1926),

Irish ancestry, she began working as a serious artist only c. 1927, and rapidly achieved popularity by her colourful and simple scenes from American life.

MOSKVA. Russian form of Moscow.

MOSLEM LEAGUE. Formed 1906, it demanded an independent M. state in India in 1941, its pres. Jinnah becoming 1st pres. of Pakistan 1947. It continues to represent Ms. remaining in the Rep. of India.

MOSLEMS. Adherents of Islam (q.v.). An unorthodox variant of the creed is held by Negro extremists of the U.S.A., the *Black Muslims* or *Nation of Islam*, whose aims are segregation from white America in one or two separate and sovereign Negro states. Christianity is rejected as merely a means of continuing Negro subjection. The movement was founded by Wallace D. Fard, a pedlar who claimed to come from Mecca, and led from 1934 by the Hon. Elijah Muhammad (1898–), having its H.Q. in Chicago. Its growth from 1946 was due to Malcolm X (1926–65), né Little, son of a Baptist minister, who was converted while serving 7 yrs. imprisonment for larceny and reformed: *Autobiography* ed. Alex Haley 1965. In 1964 he broke away and founded his own Organization of Afro-American Unity, preaching 'active self-defence', but was shot: 3 Negroes, 2 being B.M., were convicted 1966.

MOSLEY (mōz'li), Sir Oswald Ernald (1896–). British Fascist. In parl. as a Unionist 1918–22, Independent 1922–4, and Lab. member 1924 and 1926–31, he then founded the British Union of Fascists. Interned during the S.W.W., he was released on health grounds in 1943, and resumed Fascist propaganda with his Union Movement. He m. in 1920 Lady Cynthia, dau. of Lord Curzon (d. 1933), and in 1936 Diana Freeman-Mitford. See **FASCISM** and **MITFORD SISTERS**.

MOSQUE (mosk; Arabic *mesjid*, temple). Mohammedan place of worship. The earliest Ms. were based on the Christian basilican plan, but many different influences contributed towards their architectural development. Ms. vary a great deal in style in different parts of the world. Chief features are: the dome, the minaret, from which the faithful are called to prayer, the mihrab, or prayer niche, in one of the interior walls, showing the direction of Mecca, and an open court surrounded by porticos.

MOSQUITIA (mōsqētē'ah). An undeveloped, low-

lying coastal region in Central America, partly in Honduras, partly in Nicaragua, on the Caribbean Sea. Most of its inhabitants are Mosquito (or Miskitto) Indians, and M. is sometimes called the Mosquito Coast. Mahogany and cedar are extracted from its forests, and there is some agriculture, coconuts, bananas, and tapioca being produced. M. was a British protectorate from 1655 until ceded to Honduras and Nicaragua in 1860.

MOSQUITO. Word of Spanish derivation often used in referring to species of gnat (q.v.).

MOSS, Stirling (1929–). British racing driver. Taking up racing in 1946, he was British National Champion 1950–2 and 1954–9, and winner of the European Grand Prix in 1961. Following serious injury in a crash at Goodwood in 1962, he concentrated on car design and race management.

MOSSA'DEQ, Mohammed (1880–1967). Persian P.M. 1951–3. He prosecuted the oil dispute with the Anglo-Iranian Oil Co., and when he failed in his attempt to overthrow the Shah was imprisoned: from 1956 he was under house arrest. See **ABADAN**.

MOSSAMEDES (mōsām'idēz). Fishing and whaling port of Angola at the mouth of the Little Fish r. Pop. c. 5,000.

MOSSEL BAY. Port and bathing resort of S. Africa, in Cape Province. Pop. (est.) 12,000.

MOSSSES. Class of small non-flowering plants (Musci) forming with the liverworts (q.v.) the lower order Bryophyta. M. are found throughout the world, especially where other vegetation is thin, and each plant comprises a rhizoid and a stem, with leaves on its lower portion and producing sexual organs at its tip. The peat or bog moss (*Sphagnum*) was formerly used for surgical dressings. Moss gardens are popular in Japan, the most famous being at the Moss Temple, nr. Kyoto.

MOSTAGANEM (mōstahgahnem). Algerian town, cap. of M. dept. Founded 11th cent. it has distilling and metal-founding works, tobacco, cement, and other factories. It is linked by pipeline with the natural gas fields of Hassi Messaoud. Pop. (1966) 64,000.

MOSTAR. Town of Bosnia-Hercegovina, Yugoslavia, 50 m. S.W. of Sarajevo, famous for its grapes and wines. On the site of a Roman fortress, M. is on a brown coalfield and produces aluminium and tobacco. Pop. (1961) 72,452.

MOSUL (mōs'ool). City in Iraq, cap. of M. liwa, situated on the right bank of the Tigris, opposite the site of ancient Nineveh and 220 m. N.N.W. of Baghdad. Once famous for muslin (q.v.), it is the centre of rich petroleum fields developed by a British company. M. remained Turkish until 1925–6. Pop. (1968) 388,000.

MOTEL. Type of hotel first developed (1928) in the U.S.A. by A. Heinemann which provides especially for the touring motorist. Accommodation consists of individual self-contained sleeping quarters with bath, toilet facilities and garage. Meals are generally obtainable at a central restaurant.

MOTHER OF PEARL. See **PEARL**.

MOTHERWELL & WISHAW. Burgh of Lanark, Scotland, 12 m. S.E. of Glasgow, possessing iron and steel works and coal mines. The two burghs were amalgamated in 1920. Pop. (1961) 72,799.

MOTHS. Insects forming the greater part of the order Lepidoptera. Normally distinguished

MOTHS. 1, Broad-bordered bee hawk-moth; 2, oleander hawk-moth; 3, six-spot burnet; 4, Austrian emperor; 5, tiger-moth; 6, swallow-tail; 7, great oak beauty; 8, maple; 9, black arches; 10, green humming-bird hawk-moth; 11, small maple; 12, thistle-ermine; 13, Kentish glory; 14, Aclis leto; 15, currant clearwing; 16, yellow underwing.

their mode of formation and occurrence, form part of the study. In the case of minerals of economic importance a knowledge of mining and metallurgy is also needed.

MINERAL OIL. Term applied to oils obtained from mineral sources, e.g. coal, petroleum, as distinct from those obtained from vegetable or animal sources.

MINERAL WATERS. Waters with mineral constituents gathered from the rocks over which they flow, and classified by these minerals into earthy, brine, and oil M.Ws. Curative powers are believed to be attached to many M.Ws., the types of these medicinal waters being: alkaline (Vichy), bitter (Seidlitz), salt (Droitwich), earthy (Bath), sulphurous (Aachen), and special varieties, such as barium (Harrogate). The name M.Ws. is also applied to prepared drinks, artificially simulating the natural waters, and charged with carbon dioxide.

MINERVA. The Roman goddess of intelligence, and of the handicrafts and arts, identified with the Greek Athene. From the earliest times she had a temple on the Capitol in Rome.

MINHOW. Name 1934-43 of Foochow.

MINIATURE PAINTING. The term 'miniature' is derived from the Lat. *miniare*, to paint with minium, i.e. a vermilion colour, and is usually applied to portraits of small dimensions; it was formerly used to describe little pictures in the initial letters and borders of medieval manuscripts.

Although practised with exquisite delicacy in Persia and India in the medieval period, M.P. did not reach its height in Europe until the 16th cent. with Hans Holbein the Younger. The first English miniaturist was Nicholas Hilliard (q.v.), later practitioners incl. Samuel Cooper, Richard Cosway and George Engleheart (qq.v.). Notable in France were Jean (1486-1541) and François (c. 1522-72) Clouet, Nicolas Lancret and Pierre Prud'hon; in Spain Goya and in America C. W. Peale.

MINIATURE
Sir Walter Raleigh by
Nicholas Hilliard.

Photography led to a decline in demand, but the art is still practised.

MINING. The extraction of minerals from the earth, carried on from the earliest times, e.g. Neolithic man's galleries through chalk with reindeer-antler picks and flint hammers and wedges, and Egyptian mining of turquoise in the Sinai Peninsula with copper implements during the First Dynasty. Modern M., in view of the growing scarcity of rich, shallow deposits, encounters increasing difficulties of exploitation, e.g. low-grade ores require new methods of mass working, such as the possibility of underground nuclear explosions to break up the rock; deposits at great depth necessitate new drilling methods and involve the overcoming of high temperatures (e.g. at 12,000 ft. the temperature will be c. 130°F); or deposits under the sea-bed will lead to the evolution of new techniques. Petroleum and natural gas are already extracted from the ocean floor, e.g. North Sea and off Venezuela. See IRON and COAL MINING.

MINK. Genus (*Mustela*) of the weasel family incl. the European *M. lutreola* and N. American *M. vison*. Up to 1½ ft. long, exclusive of their bushy tails which add another 9 in., they produce an annual litter of half a dozen in their riverbank burrows. The demand for their rich brown fur led to the estab. from the 1930s of M. ranches, and production of varying shades. 'Escapes' become a destructive pest.

MINNEAPOLIS. Largest city in Minnesota,

U.S.A., on the Mississippi, seat of Minnesota univ. and of an important institute of arts. The main industry is flour milling; cream, electrical machinery, and motor-cars are also manufactured. It forms the large 'twin cities' area with St. Paul. Pop. (1960) 482,872.

MINNESINGERS. German lyric poets of the 12th and 13th cents., who in their songs dealt mainly with the theme of courtly love without revealing the identity of the object of their affections. Among the best-known M. were Dietmar von Aist, Friedrich von Hausen, Heinrich von Morungen, Reinmar, and, greatest of all, Walther von der Vogelweide (q.v.).

MINNESOTA. A N.-central state of the U.S.A. with innumerable lakes, and the sources of the Red, St. Lawrence, and Mississippi rivers. In the N. are pine-forests and the land is high; the remaining two-thirds are prairie. M. produces barley, flax seed, hay, rye, oats, potatoes, and wheat, and even more valuable livestock products - butter, milk, bacon, turkeys - but industry now leads farming. The chief industries are iron mining (60% of U.S. ore), food processing, farm and other machinery, pulpwood and paper. Minneapolis is the largest city, but St. Paul is the cap. Area 84,068 sq. m.; pop. (1960) 3,413,864.

MINNOW. Small fish (*Phoxinus phoxinus*) found in streams and ponds in Europe and Asia.

MINOAN. Name applied to the brilliant prehistoric civilization of Crete; it is derived from Minos, reputed son of Zeus, and the most famous of the legendary kings of Crete. No remains of palaeolithic man have as yet been found in Crete, but in the Neolithic Age some cents. before 3000 B.C. the island was peopled by men of non-Indo-European stock, coming probably from S.W. Asia Minor, and akin to the early Bronze Age inhabitants of the Gk. mainland. With the opening of the Bronze Age about 3000 B.C. the M. culture proper begins. This is divided into 3 main periods: Early M., c. 3000-2200 B.C.; Middle M. c. 2200-1580 B.C.; and Late M., c. 1580-1100 B.C. Each period is marked by cultural advances in copper and bronze weapons, pottery of increasing delicacy and intricacy of design, fresco-painting, and the construction of palaces (notably at Knossos, Phaistos, and Mallia), and of fine houses.

About 1400 B.C., in the late M. Period, the civilization was suddenly destroyed by earthquake or war. A partial revival continued till c. 1100 B.C.

In religion the Ms. seem to have worshipped principally a great mother goddess with whom was associated a young male god. The tales of Greek mythology about Rhea, the mother of Zeus, and the

MINOAN. Fresco of bull-leaping by youths and girls from the palace at Knossos, suggesting that there was a foundation of fact for the legend of the Minotaur.

birth of Zeus himself in a Cretan cave seem to be based on M. religion. The Ms. left many documents, in the form of tablets written in a highly developed script, which were long undeciphered. See VENTRIS, MICHAEL, KNOSSOS and ATLANTIS.

MINOR. Under the Family Law Reform Bill (1968) for England and Wales the age of majority in civil law was to be reduced to 18, and those under age were to be described as Ms. instead of infants. The

English pioneers, and in the 19th cent. practical steam coaches by Hancock and Goldsworthy Gurney were used for public transport, until stifled out of existence by punitive road tolls and legislation.

If another Parisian, Etienne Lenoir, made the first 'real' car in 1861, using electrically ignited petroleum vapour, Benz and Daimler can be said to be the first producers of cars for sale – from 1885; and Panhard 1890 (front radiator, engine under bonnet, sliding-pinion gearbox, wooden ladder-chassis) and Mercedes 1901 (honeycomb radiator, in-line 4-cylinder engine, gate-change gearbox, pressed-steel chassis) set the pattern for the modern car. Emerging with Haynes and Duryea in the early 1890s, U.S. demand was so fervent that 300 makers existed by 1895: many so ephemeral that there were 109 left in 1905.

Meanwhile in England cars were still considered to be light locomotives in the eyes of the law, and theoretically required a man to walk in front with a red flag. Despite this and other iniquities, which put U.K. development another 10 years behind all others, F. W. Lancaster in 1896 produced an advanced and reliable vehicle, later much copied. The period 1905–6 inaugurated a world boom continuing to the present.

Among the legendary M.Cs. of this cent. are: De Dion Bouton, with the first practical high-speed engines; Mors, notable first for racing and later as a silent tourer (*silentium mortis*); Napier, the doughty 24 hr.-record holder at Brooklands in 1907, unbeaten for 17 years; the incomparable 'Silver Ghost' Rolls-Royce; the enduring Model T Ford (known to rivals as the car which popularized walking); and the many types of Bugatti and Delage, from record-breakers to luxury tourers.

After the F.W.W. popular motoring was inaugurated with the era of cheap light (baby) cars made by Citroën, Peugeot and Renault (France); Austin 7, Morris, Clyno, and Swift (England); Fiat (Italy), and the cheap though bigger Ford, Chevrolet and Dodge in U.S.A. The inter-war years saw a great deal of racing, and experience thus gained was of benefit to the everyday motorist in improved efficiency, reliability and safety; and also saw the divergence between the lighter, economical European car, with good handling; and the heavier American car, cheap and rugged, well adapted to long distances at speed.

One typical modern European design would have a semi-monocoque construction in which the body panels, suitably reinforced, support the road loads through independent front and rear springing systems, with seats located within the wheelbase for comfort. A vertical 4-cylinder engine is supplied with a suitable petrol-air mixture by the carburettor and cooled by water circulating through the engine block to a front-mounted radiator. From the rear of the engine power is transmitted through a clutch (which disconnects the engine from the rear wheels) to a 4-speed gearbox (which enables optimum engine speed to be maintained for varying road speeds) through a drive shaft to the differential gear, and thence to drive the rear wheels.

After the S.W.W. small European cars tended to be of 3 varieties – front engine and rear drive, front engine and drive, rear engine and drive – in about equal numbers. From the 1950s a creative resurgence has produced in practical form automatic transmission for small cars, rubber suspension, and transverse engine mounting, self-levelling ride, disc brakes, safer wet-weather tyres; and the possibility of banishing reciprocating engine parts for ever, as shown by the Rover and Chrysler jet turbines, and the Wankel rotary engine. The prospect of world-wide anti-air-pollution laws led in the 1960s to renewed research on the steam car, and the electric 'city' car, limited in speed and range by the capacity of its batteries. See INTERNAL COMBUSTION ENGINE and HOVERCRAFT.

MOTOR CYCLE. A bicycle propelled by an internal combustion engine, usually single cylinder

and air-cooled, which is noisy but lightweight and capable of high power and speed. M.Cs. are traditionally chain-driven, but there is now a tendency to employ shaft drive with a sprung rear wheel, and to improve comfort by employing two or more cylinders, and screens for the driver and saloon-type passenger sidecars. More recent development's are the powered cycle (less powerful and fast), and the motor scooter.

Most famous of the M.C. races is the Isle of Man Tourist Trophy (T.T.) race estab. 1907, but other popular types of event are reliability trials and scrambling or roughriding, and scooter rallies.

MOTORING. Between the 2 wars M. developed into a universal pursuit, whether for business or pleasure. The Min. of Transport was estab., roads were improved, and various laws and safety precautions imposed to govern the use of cars. A driver must possess a licence, and his vehicle be registered with the local licensing authority, displaying the number assigned to it. In 1953 a flat-rate duty was imposed, which affected engine and car design, and inadequately powered cars persist in Britain for economic reasons. The law also insists on insurance for third-party risks. Motorists are organized in the Automobile Association (A.A.), and the Royal Automobile Club (R.A.C.).

MOTOR RACING. Competitive events, beginning with a timed trial from Paris to Rouen in 1894, enjoy great popularity for spectator excitement and for manufacturer's and driver's prestige. Great road races have incl. the mountainous Targa Florio (Sicily), and Mille Miglia (Italy). The 24-hr. of Le Mans (1923) is the foremost proving ground for production cars. Famous circuits incl. Brands Hatch, Brooklands (to 1939) and Silverstone, U.K.; Monthléry, France; Nurburgring, Germany; and Indianapolis, U.S.A. In Grand Prix M.R. (1906) individual events in 10 different countries, notably the Monaco Grand Prix, count towards the world championship; multi-winners incl. J. Fangio (Argentina) 1951, 1954–7; J. Brabham (Australia) 1959–60, 1966; G. Hill (Brit.) 1962, 1968; and J. Clark (Brit.) 1963, 1965. For the driver of the production car M. rallies, often time-checked across a continent, are increasingly popular.

MOTOR SPEED RECORD. See SPEED RECORDS.

MOTTRAM, Ralph Hale (1883–). British author. B. at Norwich, he entered banking, but made his name as a novelist by his *Spanish Farm* trilogy 1924–6 promoted by his F.W.W. experiences.

MOULINS (mōōlah'). Cap. of the dept. of Allier, France; 90 m. N.W. of Lyons. It makes cutlery, textiles, glass, etc. M. was cap. of the old prov. of Bourbonnais 1368–1527. Pop. (1962) 25,671.

MOULMEIN (mowlmīn'). Port in Lower Burma, on the Salween estuary, which exports teak and rice. Pop. (1967) 160,000.

MOUNTAIN ASH. Welsh coal-mining town (U.D.) in Glamorganshire, on the Cynon r., 18 m. N.N.W. of Cardiff. The Three Valleys Musical Festival is held annually at M.A. Pop. (1961) 29,590.

MOUNTAIN ASH or Rowan. Flowering tree (*Sorbus aucuparia*) of the family Rosaceae. Growing to a height of about 30 ft., it has pinnate leaves and large cymes of whitish flowers, followed by scarlet berries.

MOUNTBATTEN of Burma, Louis Mountbatten, 1st earl (1900–). British administrator. Son of Princess Victoria, a granddau. of Queen Victoria, and Prince Louis of Battenberg, marquess of Milford Haven (q.v.), Lord Louis entered the navy in 1913 and

MOUNTAIN ASH

whom the greatest was Paul. In the Dark Ages the new faith was spread beyond the Empire by men such as Gregory the Illuminator, Ulfilas, Chrysostom, Patrick, and Martin of Tours. And in addition to the great figures of medieval times, such as Columba, Aidan, Boniface, Cyril, etc., there were combined efforts of the Benedictine, Dominican and Franciscan orders. The explorations of the Renaissance opened new fields, and the foundation of the Jesuit order supplied such missionaries as Francis Xavier (1506–52). Gradually the Protestant churches also showed an interest in missions, the pioneer being the S.P.C.K., founded in 1698, and after 1731 the continental Moravians. In the late 18th and early 19th cents. many Protestant missionary societies were founded, incl. the Baptist (1792), the London (1795), and the Church (1799). Efforts were maintained throughout the cent., notably in the foundation of the China Inland Mission by J. H. Taylor (1865), but renewed impetus came from the career of David Livingstone, and since the World Missionary Conference at Edinburgh in 1910 there has been growing international co-operation. The 19th cent. also saw a growth of activity on the part of the R.C. and Eastern Orthodox churches.

Christianity's chief rival in the mission-field is Islam; particularly in Africa are there many Mohammedan converts.

MISSISSIPPI. With the Missouri, considered by some the longest river in the world. It is the main arm of the great river system draining the U.S.A. between the Appalachians and the Rockies, and was discovered in 1541 by the Spanish explorer Hernando de Soto at a point near present-day Memphis. The M. rises in the lake region of N. Minnesota, flowing through marsh and lakeland to St. Anthony Falls at Minneapolis. Below the tributaries Minnesota, Wisconsin, Des Moines, and Illinois, the confluence of the Missouri and M. occurs at St. Louis. The river turns at the Ohio junction, passing Memphis, and taking in the St. Francis, Arkansas, Yazoo, and Red tributaries, en route to its delta on the Gulf of Mexico beyond New Orleans. Length of M. proper, 2,348 m.; length of the Missouri and the Lower M., 3,643 m.

MISSISSIPPI. A S. central state of the U.S.A., bounded on the W. by the M. river and on the S. by the Gulf of Mexico. It is mainly lowland, rising to 650 ft. in the N.E. Second only to Texas in cotton, M. also produces sweet potatoes, sugar, rice, pecan nuts, and soya beans. Oil and natural gas are exploited, and other industries incl. food processing, pulpwood and timber, chemicals, and canned seafood, based on Biloxi, also a holiday resort. A 'static test' rocket centre was estab. in Hancock co. 1967.

M. was traversed by De Soto in 1540, settled by the French in 1699, was English 1763–79, Spanish 1779–98, then part of the U.S. territory of M. (which incl. Alabama) until admitted to the Union in 1817. It was the second state to join the Confederacy, 1861; was re-admitted to the Union 1870. Jackson is the cap., Gulfport the chief harbour. Area 47,716 sq. m.; pop. (1960) 2,178,141.

MISSOURI (mɪzəʊ'ri). The longest tributary of the Mississippi in the U.S.A., rising in S.W. Montana among the Rockies, and flowing through N. and S.

MISSOURI. Truman went to the White House from Independence, and in 1957 the Harry S. Truman Library was dedicated there to house his papers and documents. Other presidential libraries, which form part of the U.S. National Archives, are the F. D. Roosevelt at Hyde Park, N.Y., Eisenhower at Abilene, Kansas, and Hoover at West Branch, Iowa. Courtesy of Harry S. Truman Library.

Dakota, and Missouri; it forms the boundary between Nebraska and Iowa. The main towns in its course are Sioux City, Omaha, Kansas City, Kans., and Kansas City, Mo., its largest tributaries the Yellowstone, Platte and Milk. The M. is navigable to Fort Benton. Length from its formation at the Three Forks confluence to the Mississippi, 2,466 m. Total length from source of Red Rock r. 2,683 m. Dams provide flood control, irrigation, and electric power.

MISSOURI. A central state of the U.S.A., in the agricultural valley of the Mississippi, which forms the E. border. The M. river flows across the state from W. to E. In the S. rises the forested Ozark Plateau, while N. are prairies. Maize, soya beans, and wheat are grown, and pigs, cattle and sheep are bred. Minerals incl. lead (largest U.S. producer), barytes, lime, coal and iron ore. Besides a large aerospace industry (space capsules, rocket engines, aircraft etc.), it has motor assembly plants, food processing, chemical, and cement works, and tourism, e.g. the Mark Twain State Park, is very important. The cap. is Jefferson City; other towns are St. Louis and Kansas City. Area 69,674 sq. m.; pop. (1960) 4,319,813.

MISTINGUETT (mistaŋet'). Stage-name of the French actress and dancer Jeanne Bourgeois (1873–1956). A leading music-hall artist in Paris from 1899, she also appeared in revue at the Folies-Bergère, Casino de Paris, and Moulin Rouge, singing songs such as 'Mon Homme'. Maurice Chevalier often partnered her.

MISTLETOE. Parasitic plant (*Viscum album*) found in Europe. It occurs on deciduous and evergreen trees, most commonly on the apple, where it produces an evergreen bush. See DRUIDISM.

MISTRAL (mɛstrahl'), Frédéric Joseph Étienne (1830–1914). Provençal poet. In 1854 he founded the literary society of the Félibrige, whose aim was the revival of Provençal. His works incl. the narrative poem *Mirèio*, the verse collection *Lis Isclo d'or*, and the blank-verse epic *Lou Pouèmo ddu Rouse*.

MISTLETOE

MISTRAL (mɛstrahl'), Gabriela. Pseud. of the Chilean poet Lucila Godoy Alcayaga (1889–1957). B. at Vicuña, she became a teacher, estab. herself as her country's leading educationist, and represented Chile as consul in Lisbon, Los Angeles, Mexico, etc.

Variations on a Time Theme (1934) and *Journeys and Places* (1943).

MUIR, John (1810–82). Scottish Sanskrit scholar. He was attached to the East India Co. (1829–53), and founded a chair of Sanskrit at Edinburgh univ. in 1862. His greatest work was *Original Sanskrit Texts* (1858–70). His brother, Sir William M. (1819–1905), was a celebrated Arabic scholar. He was in the Indian govt. service 1837–76, and was principal of Edinburgh univ. 1885–1903.

MUI-TSAI (mōo-i-tsi). System formerly prevailing in Hong Kong whereby girls could be 'adopted' or, in effect, sold into a kind of domestic slavery. Legislation introduced in 1923 proved ineffective, and in 1938 the govt. ordered the compulsory registration of adopted girls as a preventive measure. At this time there were some 8,000–9,000 M. girls.

MUKDEN. Former and historical name of SHENYANG.

MULATTO (mulat'ō). The offspring of parents, one of whom is a European and the other a Negro. *Mestizos* are of mixed European and South American Indian parentage.

MULBERRY. Genus of trees (*Morus*) of the family Moraceae, with a dozen species of which the best-known is black M. (*M. nigra*). Native to Persia, it was introduced into Britain in the 16th cent. It has heart-shaped toothed leaves, and spikes of whitish flowers. The fruit resembles a raspberry in appearance, but is a cluster of small berries. The leaves of the white M. (*M. alba*) are those chiefly used in feeding silkworms.

M. was also the code name for the 2 artificial harbours (one at the British and one at the American landing-place) which were floated across the Channel for the invasion of France in 1944.

MULE. Hybrid animal of the horse family, usually the offspring of a male ass and a mare.

MULFORD, Clarence (1883–1956). American author, whose 'Westerns' featuring ranch 'Bar 20' and 'Hopalong Cassidy' were filmed and televised.

MÜLHAUSEN. German form of MULHOUSE.

MÜLHEIM (mül'hm). Town on the Ruhr, W. Germany, 16 m. N. of Düsseldorf. It is the centre of a coal-mining dist. and has ironworks. Pop. (1966) 190,230. Also the name of a former town on the Rhine (Mülheim-am-Rhein) merged with Cologne in 1914.

MULHOUSE (mül'ooz). Town in Haut-Rhin dept. France, 62 m. S.S.W. of Strasbourg. Cotton textiles, paper, etc., are manufactured. Pop. (1962) 110,735.

MULL. Second-largest is. of the Inner Hebrides, Argyllshire, Scotland. It is separated by the Sound of Mull from the mainland. There is only one town, Tobermory. Area 367 sq. m.; pop. (1961) 2,342.

MULLAH. Name given to a judge of the Moham-medan sacred law; also a title of respect given to various other dignitaries who perform duties connected with the sacred law.

MULLEIN (mul'len). Plant (*Verbascum thapsus*) of the family Scrophulariaceae. It produces lance-shaped leaves a foot or more in length, and in the second year of growth a large spike of yellow flowers. Common in Britain, and found through Europe and Asia, it is naturalized in N. America.

MULLET. Two genera of food fishes found in river estuaries. The red M. (*Mullus*) contains about 40 species, is red with yellow stripes, and measures about 15 in. The grey M. (*Mugil*) includes about 70 species, which are found in temperate and tropical

coastal regions. It is greenish above and grey below.

MULLIKEN, Robert Sanderson (1896–). American chemist and physicist. Professor at Chicago from 1931, he received a Nobel chemistry prize 1966 for his development of the molecular orbital theory.

MULLINGA'R. Co. tn. of Westmeath, Rep. of Ireland. It is an agricultural and trout-fishing centre and makes woollens; there is tanning and brewing. Pop. (est.) 5,500.

MULOCK. See CRAIK, Dinah.

MULREADY (mul'redi), William (1786–1863). Irish artist. B. in co. Clare, he painted genre pictures, e.g. 'Fair Time' and 'Roadside Inn', and illustrated books. In 1840 he designed the first penny-postage envelope, known as the 'Mulready envelope'. He was elected R.A. in 1816.

MULTAN (mooltahn'). City in W. Pakistan, on a site inhabited since the time of Alexander the Great, 190 m. S.W. of Lahore. Cap. of M. dist., it is a busy trade centre with shawl and carpet manufactures. Pop. (1961) 358,201.

MUMBLES. Welsh seaside resort 5 m. S.W. of Swansea, Glamorganshire, on Swansea Bay. The M. lifeboat is renowned for its work in the Bristol Channel area.

MUMFORD, Lewis (1895–). American sociologist. B. on Long Is., he ed. the *Dial* 1919, and studied architecture both in England and the U.S.A., having an especial concern with skylines. His books incl. *Technics and Civilisation* (1934), *The Culture of Cities* (1938), *The Condition of Man* (1944), and *The Conduct of Life* (1951).

MUMPS. An acute, highly infectious fever marked by painful inflammation and swelling of one or both of the glands situated in front of the ear (parotid). The cause is probably a virus. It is commonest in young children. Incubation is about 18 days, and isolation should last at least 3 weeks.

MUNCH (moonk), Edvard (1863–1944). Norwegian artist. The son of a physician, he studied in Paris, and achieved in his portraits and landscapes the expression of the spirit of the northern peoples.

MÜNCHEN. German form of MUNICH.

MUNCHHAUSEN (mun'k'howzen), Baron (1720–97). German soldier. B. in Hanover, he had served with the Russian Army against the Turks, and after his retirement in 1760 told exaggerated stories of his campaigning adventures. This idiosyncrasy was utilized by the German writer, Rudolph Erich Raspe (1737–94), in his extravagantly fictitious account of the *Adventures of Baron M.* (1785), compiled while he was taking refuge in London from a charge of theft in his own country. The book was very popular, and was frequently enlarged by other hands.

MUNCIE (mun'sē). City in Indiana, U.S.A., on the White r., 55 m. N.E. of Indianapolis. Coal and natural gas provide power for glass, iron and steel, clothing, and other works. M. is the 'Middletown' of three social studies of a typical Middle W. town by R. S. and H. M. Lynd, published 1929, 1937, 1947. Pop. (1960) 68,603.

MUNICH (mü'nik). Cap. of Bavaria, W. Germany, on the Isar. It is famous for its magnificent buildings and art treasures, many of which it owes to the kings Ludwig I and Maximilian II of Bavaria. The cathedral is late 15th cent. The Old Pinakothek contains paintings by old masters, the New Pinakothek, modern paintings; there is a Bavarian National Museum, the Bavarian State Library, and the *Deutsches Museum* of science and technology. M. is the see of the R.C. archbishopric of Munich-Freising. It has a univ. (transferred to M. in 1826), and several other learned institutions. The principal industries incl. brewing and printing and the manufacture of stained glass, machinery, locomotives, and textiles. M. is also an important railway centre and has an international airport. Developed in 1158, M. became the residence

MULLEIN

MODULE. 'Spider', the Apollo IX lunar module viewed from the command service module. Carrying 2 astronauts, it is flying upside down in relation to the earth below, with landing gear deployed and lunar surface probes or sensors extending out from the landing gear foot pads. Courtesy of NASA.

which is famed for its medical and legal faculties. Pop. (1961) 139,496.

MODERATOR. The material in a reactor used to reduce the energy, and hence the speed, of fast neutrons, so far as possible without capturing them. Slow neutrons are much more likely to cause fission in a U-235 nucleus than to be captured in a U-238 nucleus, so by using a M. a reactor can be made to work with fuel containing only a small proportion of U-235.

MODERATOR. One who presides over a meeting, especially in the Presbyterian and Congregational churches (e.g. the General Assembly of the Church of Scotland). Also applied to the chairman of town meetings in the U.S.A. and to the officials who superintend examinations at Oxford and Cambridge.

MODERNISM. In the C. of E. a development of the liberal church movement, known as M. since c. 1910, which attempts to reconsider Christian beliefs in the light of modern scientific theories and historical methods without abandoning the essential doctrines. Prominent Modernists incl. E. W. Barnes, J. A. Robinson, A. M. Stockwood, J. L. Wilson, and W. R. Inge. Similar movements exist in many non-conformist churches and in the R.C. Church. M. was condemned by pope Pius X in 1907.

MODIGLIANI (modēlyah'nē), Amedeo (1884–

MOCKING-BIRD. It earns its name by its mimicry of the songs of 20 to 30 other birds, and also of mechanical noises such as creaking doors or hooters, but not human speech.

Photo: G. Ronald Austling.

1920). Italian artist. B. in Leghorn, of Jewish family, he settled in Paris in 1906, became interested in primitive art, and in 1909 began to produce sculptures showing the influence of Negro masks. His originally conceived, strangely elongated portraits have a mournful attraction. Always penniless, and a prey to drink and drugs, he d. of tuberculosis and his pregnant mistress, Jeanne Hébuterne, threw herself to death from a window the next morning.

MO'DULE. Unit of measurement; used in architecture of the size of a structural part which governs the proportion of the remainder, and in space research, e.g. the 3 components in a spacecraft making a moon landing: command M. (working, eating, and sleeping compartment), service M. (containing electricity generators, oxygen supplies and manoeuvring rocket), and lunar M. (for landing astronauts on the surface and returning them to the command ship in lunar orbit).

MOERAN, Ernest John (1894–1950). British composer. He received little formal education, but was influenced by Ireland, under whom he studied composition 1920–3, and by folk music in much of his early work. Valuable among his essentially lyrical, and often experimental, productions, are a symphony (1937), violin and cello concertos, piano and orchestral music and songs.

MODIGLIANI. Nude, dated c. 1917. Courtauld Institute Galleries, London, rights reserved A.D.A.G.P.

MOFFAT, James (1870–1944). Scottish minister of the united Free Church. He pub. a colloquial translation of the Bible (N.T. 1899 and O.T. 1924).

MOGADISHU (mogudi-'shōō). Cap. and chief port of Somali Republic. It has a cathedral built 1925–8 and mosques dating back to the 13th cent. It also has an airport. Pop. (1967) 100,000.

MOGADO'R. Port in Morocco (Essouira), on the Atlantic, founded c. 1760. Pop. (est.) 32,000.

MŌ'GILEV. Town in White Russian S.S.R., 120 m. E. of Minsk, annexed by Russia from the Swedes in 1772. It makes tractors, clothing, furniture, etc. Pop. (1967) 164,000.

MO'GOK. Village of Burma, 71 m. N.N.E. of Mandalay, famous for its ruby and sapphire mines.

MANGOLS (mōgūlz'). A dynasty which ruled in N. India from the establishment of their empire by Baber in 1526 till the dethronement and imprisonment of the last M. emperor by the British in 1857. The emperors were called Ms. (Mongols) as being descendants of Tamerlane: among the greatest were Akbar (1542–1605), Shah Jehan (fl. 1614–66), and Aurangzebe (1618–1707).

MOHÁCS (mō'hahch). City on the Danube, Hungary, 110 m. S. of Budapest, famous for 2 battles, in 1526 the Turks beating the Hungarians, and in 1687 being beaten by the Austrians.

MO'HAIR. The hair of the Angora goat. Fine, white, and lustrous, the fibre is manufactured into fabric. Commercial M. is now obtained from cross-bred animals, pure-bred supplies being insufficient.

MOHÁMMED, Muhammad or Mahomet (Arab., 'praised') (c. 570–632). Founder of Mohammedanism or Islam (q.v.). B. in Mecca, he became a shepherd and caravan conductor, before obtaining leisure for meditation by his marriage with a wealthy widow in 595. He received his first revelation in 610, and after some years of secret teaching openly proclaimed himself the prophet of God, c. 616. The basis of his

at Oxford 1908–36. Author of *History of Ancient Greek Literature* (1897), he became best known for his fine verse translations of the Greek dramatists, espec. Euripides. He was awarded the O.M. in 1941.

MURRAY, Sir James Augustus Henry (1837–1915). Scottish philologist. B. near Hawick, he was pres. of the Philological Society 1878–80 and 1882–4, and compiled and edited the *New English Dictionary*, the 1st vol. of which was pub. in 1884 at Oxford.

MURRAY, or Moray, James Stuart, earl of (c. 1531–70). Scottish statesman. An illegitimate son of James V, he was among the leaders of the Scottish Reformation, and after the deposition of his half-sister, Mary, in 1567, became regent. He was assassinated by a supporter of Mary.

MURRAY, John (1778–1843). British publisher. Son of John McMurray (1745–93), Scottish founder of the firm in 1768, he was Byron's friend and estab. in 1809 the *Quarterly Review*.

MURRAY. Principal river of Australia. It rises in the Australian Alps near Mt. Kosciusko, and flows W., forming the boundary between N.S.W. and Victoria. It reaches the sea at Encounter Bay, and is 1,600 m. long. Its chief tributaries are the Darling and the Murrumbidgee (qq.v.).

MURROW, Edward R. (1908–65). American radio commentator. S. of a N. Carolina farmer, he joined C.B.S. in 1935, becoming Foreign News Director. He broadcast memorably to America from London during the S.W.W., and helped to discredit Senator McCarthy on TV in 1954. Politically independent, he was Director of the U.S.I.A. 1961–4.

MURRUMBIDGEE. River of N.S.W., rising in the Australian Alps, flowing N. to the Burrinjuck reservoir, and then W. to meet the Murray after covering 1,050 m.

MURRY, John Middleton (1889–1957). British writer. B. in Peckham of humble family, he won a scholarship to Oxford, and in 1913 m. Katherine Mansfield (q.v.), whose biography he wrote. He produced studies of Dostoevsky, Keats, Blake, and Shakespeare, poetry and an autobiographical novel *Still Life* (1916). For many years he was an ardent pacifist.

MUSCAT AND OMAN (ōmah'n). A sultanate in the eastern corner of Arabia. A mountain range rising to more than 9,000 ft. runs from the N.W. to the S.E., but the coastal plain N.W. of Muscat is fertile, and famous for its dates. The cap. is M. H. H. Saiyid Said bin Taimur (1910–), 13th of his dynasty, succeeded as sultan in 1932; a treaty of friendship between him and Britain was signed in 1951. Area 82,000 sq. m.; pop. (1968) 750,000.

MUSCLE. Tissue with the special function of contraction. Every M. is made up of collections of large numbers of long spindle-shaped elastic cells, enclosed in coverings of connective tissue (fascia), and contracts and relaxes in response to the impulses reaching the nerves which supply it. All motion in the body is brought about by Ms., which are very numerous and varied in their shape, size and function. The Ms. which move the limbs and trunk in obedience to the will are called voluntary, and also striped, Ms. from the faint cross-shading visible under the microscope. Walls of blood vessels and intestines, hair follicles, the interior of the eye, etc., contain muscle not under the control of the will – involuntary or unstriped M. Muscular dystrophy (dis'trōfē) is a progressive muscular weakness leading to premature death, more frequent in boys than girls.

MU'SES. In Greek mythology, the 9 minor divinities who inspired artistic creation. The offspring of Zeus and Mnemosyne, their names and spheres were: Clio (history), Euterpe (lyric poetry), Thalia (comedy), Melpomene (tragedy), Terpsichore (dancing), Erato (love poetry), Polyhymnia (sacred hymns), Urania (astronomy), and Calliope (epic poetry).

MUSIC. Consisting solely of percussion instruments, the Javanese gamelan orchestra sounds unusual to western ears. Instruments are often richly carved and painted; the saron, here being played so intently, is a type of xylophone made from pieces of bamboo. Courtesy of Indonesian Embassy.

MUSHROOM. See FUNGI.

MUSIC. The art of combining sounds in melodic or harmonic combination, so as to express thought and feeling in an aesthetic form. The Gr. word *mousikē* covered all the arts presided over by the Muses, and not only music in the modern sense. Of ancient Greek music only a few fragments have survived, and scholars are not agreed as to how these are to be deciphered. The various civilizations of the ancient and modern world – such as the Chinese, Hindu and Arabic cultures – developed their own musical systems, which are based on scale-divisions often differing entirely from those we know in the west. It is in modern western civilization, however, that music has reached its most complex development. The history of this begins with the liturgical music of the medieval Church, which was derived partly from Greek, partly from Hebrew antecedents. The 4 scales, or modes, to which the words of the liturgy were chanted, were 1st set in order by St. Ambrose in A.D. 384. St. Gregory the Great (c. 540–604) added 4 more to the original Ambrosian modes, and this system forms the basis of the Gregorian plainsong still in use in the R.C. Church. Originally all chants were sung in unison, but c. 11th cent. counterpoint was introduced, notably at the monastery of St. Martial, Limoges, and in the late 12th cent. at Notre Dame in Paris by Léonin and Perotin the Great. Meanwhile the Provençal and French troubadours had developed a purely secular music, derived from church and folk music.

The 15th and 16th cents. have been called the Golden Age of contrapuntal or polyphonic music.

One of the earliest names is that of John Dunstable (d. c. 1453), an Englishman, whose works influenced the Frenchman Guillaume Dufay (c. 1400–74) and in turn helped to produce the great achievements of the Flemish school whose members incl. Dufay's pupil Joannes Okeghem (c. 1420–c. 1495) and Josquin des Prés. Other notable composers were the Italian Palestrina and the Fleming Orlando de Lassus, who settled in Italy, the Spaniard Victoria and the Englishmen Tallis and Byrd. The

MUSIC. Beethoven, portrait possibly painted from life by Franz Liedtke (1780–1859), in the collection of Mrs. Barcal.

MOLLUSCS. A large sub-division of the animal kingdom. The majority are marine animals, but some inhabit fresh water, and a few are terrestrial. They incl. shell-fish, snails, slugs, and cuttles. The body is soft, limbless, and cold-blooded. There is no internal skeleton, but most species have a hard shell covering the body. The shell takes a variety of forms, univalve (e.g. snail), bivalve (e.g. mussel), chambered (e.g. nautilus), and many other variations. In some cases, e.g. cuttle and squid, the shell is internal. There is a fold of skin, the mantle, which covers the whole body or the back only, and which secretes the calcareous substance forming the shell. The lower ventral surface forms the locomotory organ, or foot. Ms. vary in diet, the carnivorous species feeding chiefly upon other members of the class. Some are vegetarian. Reproduction is by means of eggs, and is sexual.

Shellfish (oysters, mussels, clams, etc.) are commercially valuable, espec. when artificially bred and 'farmed'. The Romans, and in the 17th cent. the Japanese, experimented with advanced methods, and raft culture of oysters is now widely practised. The cultivation of pearls, pioneered by Kokichi Mikimoto, began in the 1890s and became an important export industry after the F.W.W.

MOLLUSCS. Bivalve (above), and univalve.

CLASSIFICATION OF MOLLUSCA

Class Amphineura

Order, Polyplacophora; coat-of-mail shells.

Order, Aplacophora.

Class Gastropoda

SUB-CLASS, Streptoneura.

Order, Aspidobranchia; limpets, top shells, ear-shells.

Order, Pectinibranchia; rock snails, whelks, harp shells, cones, periwinkles.

SUB-CLASS, Euthyneura.

Order, Opisthobranchia; bubble shells, sea hairs, umbrella shells.

Order, Pulmonata; true snails and slugs, false limpets.

Class Scaphopoda

Family: Dentaliidae.

Class Lamellibranchia

Order, Protobranchia; Nucula.

Order, Filibranchia; common mussel, pearl oyster, scallops.

Order, Eulamellibranchia; freshwater mussel, cockle, razorshell, oyster, shipworms.

Order, Septibranchia; Poromya.

Class Cephalopoda

SUB-CLASS, Tetrabranchia; pearly nautilus.

SUB-CLASS, Dibranchia.

Order, Octopoda; octopus; argonaut.

Order, Decapoda; squids, cuttlefish.

MÖLNÄR, Ferenc (1878–1952). Hungarian novelist and playwright. His best novel is *Paul Street Boys* (1907), but he is most widely known for his plays, *Liliom* (1909), a study of a circus barker, adapted as the play *Carousel*.

MOLOCH (mō'lok), or Molech. A Phoenician deity worshipped at Jerusalem in the 7th cent. B.C., to which children were sacrificed.

MOLOKAI (mōlōkī'). A mountainous island of Hawaii state, U.S.A., lying S.E. of Oahu; Kamakou (4,960 ft.), is the highest peak. In 1873–89 Father Damien took charge of, and organized, the leper settlement, which is on the N. coast. at Kalaupapa. Area 259 sq. m.; pop. (1960) 5,000.

MOLOTOV, Vyacheslav Mikhailovich. Name assumed by Soviet statesman V. M. Skryabin (1890–). Joining the Bolshevik Party in 1906 while a student at Kazan, he was 3 times exiled for revolutionary activities, and in 1921 was elected a member of the C.C.C.P., becoming a member of the Politbureau in 1929 (Presidium from 1952). He was Chairman of the Council of People's Commissars (P.M.) 1930–41, succeeded Litvinov as Foreign Commissar in 1939, Foreign Min. 1946–9 and 1953–6 and was first deputy premier 1953–7. After a few months as Min. of State Control 1956–7, he was one of the 'anti-party' group expelled from the govt. for Stalinist activities. He was Soviet Ambassador to Mongolia 1957–60, and was appointed Chief Permanent Representative to the International Atomic Energy Agency in Vienna (1960–2), shortly after Khrushchev's public denunciation of Stalinism and the beginning of his de-Stalinization campaign.

MOLOTOV. Name 1940–57 of PERM.

MOLTKE, Helmuth Carl Bernhard, count von (1800–91). Prussian general. B. in Mecklenburg, he entered the Prussian Army in 1821, became chief of the general staff in 1857, and was responsible for the Prussian strategy in the wars with Denmark (1863–4), Austria (1866), and France (1870–1). He was created a count in 1870 and a field marshal in 1871. His nephew, Helmuth Johannes Ludwig von M. (1848–1916), became chief of staff in 1906, and drew up the plans for the invasion of France carried out at the beginning of the F.W.W.

MOLUCCAS. Groups of islands, most of them volcanic, forming part of the Republic of Indonesia. The N. group comprises Morotai, Halmahera (the largest), Ternate, Tidore, Makian, Bachan, Obi Islands, Sula Islands; the S. group, Buru, Ceram, Amboina, Banda Islands, Kai Islands, Aru Islands, Tanimbar Islands, Babar Islands, Kisar, and Wetar. Pepper, cloves, nutmeg (especially from the Bandas) and other spices; for which the M. are still noted, attracted the Portuguese in the 16th cent. The Dutch acquired the M. in 1612 and held them until they were seized by the Japanese in 1942. Area c. 33,000 sq. m.; pop. (est.) 893,000.

MOLYBDENITE. Molybdenum disulphide, MoS₂, the chief ore mineral of molybdenum. It possesses a hexagonal crystal structure, and has a metallic lustre resembling graphite.

MOLYBDENUM (Gk. *molybdos* lead). Very brittle and malleable white metal, an electric furnace product of molybdenite (MoS₂) and wulfenite, and one of many fission products from a nuclear reactor: symbol Mo, at. wt. 95.95 and at. no. 42. Discovered by Scheele in 1778, it has a melting point of 2,620°C, and is not found in the free state. Producing countries incl. the U.S.A., Canada and Norway. Important in producing specialized steels, it is also used for electrodes (since it is easily welded to soda and Pyrex glass and to other metals), and for filaments (alloyed with tungsten) in thermionic valves. In use as an aid to lubrication, M. disulphide (MoS₂) makes an outstanding reduction in surface friction between ferrous metals.

MOMBASA (mombah'sah). Port of Kenya, E. Africa, situated on M. island, and together with the adjacent port of Kilindini handling nearly all the foreign trade of Kenya and Uganda. It is the terminus of the Kenya and Uganda Railway, and has an airport. M. was cap. of the British E. Africa Protectorate 1888–1907. Pop. (1960 est.) 189,000 (4,900 white).

MOMENT. In physics and engineering the M. is

with the problems of the self viewed from a mystic but agnostic viewpoint. M.'s reputation is largely posthumous.

MUSK. Perennial plant (*Mimulus moschatus*) of the family Scrophulariaceae. The small oblong leaves formerly exuded the musky scent which gave it its name, but within the last 20 or 30 yrs. the scent has disappeared. It has yellow flowers.

MUSK DEER. Small deer (*Moschus moschiferus*) native to Asia. It has no antlers, does not travel in herds, and is hunted for the musk secreted by an abdominal gland, and used as a medicine or a perfume.

MUSKEG. Canadian word (of Cree Indian derivation) for swampland. There are some 500,000 sq. m. of M. in northern Canada.

MUSK OX. Animal (*Ovibos moschatus*) native to the Arctic regions of N. America. It displays characteristics of both the sheep and the ox, is about the size of domestic cattle, and has long brown hair. At certain seasons it exhales a musky odour.

MUSLIMS. See MOSLEMS.

MUSLIN (muz'lin). A light cotton fabric named after Mosul, in Iraq, where it was 1st made. Its manufacture was introduced into England from India during the 17th cent.

MUSQUASH (mus'-kwash). Rodent (*Fiber zibethicus*), also named Musk Rat. About a foot long, its body is adapted to aquatic life, having webbed feet and a flattened tail. It builds up a store of food, plastering it over with mud, for winter consumption. The light brown fur is highly valued.

MUSSEL. Popular name for a number of bi-valve molluscs. Most notable of the sea Ms. is the edible *Mytilus edulis*, which is found in clusters attached to rocks around the Atlantic coasts in the N. hemisphere and the Mediterranean, and has a blue-black shell. The freshwater pearl Ms. (*Unio*) incl. the *U. margaritiferus* found in some N. American and European rivers.

MUSSELBURGH (mus'burō). Town (burgh) in Midlothian, Scotland, 5 m. E. of Edinburgh. Here is Loretto public school. Pop. (1961) 17,273.

MUSSET (müsä'), Alfred de (1810-57). French poet, playwright and novelist. B. in Paris, he abandoned the study of law and medicine to join the circle of writers about Victor Hugo, and achieved success with the vol. of poems, *Contes d'Espagne et d'Italie* (1829). In 1833 he accompanied George Sand to Italy, and his *Confession d'un enfant du siècle* (1835) recounts the story of their broken relations. Most typical of his genius are the verse *Les Nuits* (1835-7) and the short plays *Comédies et proverbes* (1840).

MUSSOLINI, Benito (1883-1945). Italian dictator. B. in the Romagna, the son of a blacksmith, he worked in early life as a teacher and journalist, and became active in the Socialist movement, from which he was expelled in 1914 for advocating Italian intervention in the F.W.W. In 1919 he founded the *Fasci di Combattimento*, whose programme combined violent nationalism with demagogic republican and anti-capitalist slogans, and launched a campaign of terrorism against the Socialists. This movement was backed by many landowners and industrialists, and by the heads of the army and police, and in Oct. 1922 the king and the army leaders installed M. in power as P.M. In 1925 he assumed dictatorial powers, and in 1926 all opposition parties were suppressed. During the years that followed the entire political, legal and educ. system was remodelled on Fascist lines. In 1935-6 M. embarked on a career of conquest, with his successful invasion of Ethiopia:

this was followed by Italian intervention in the Spanish Civil War of 1936-9, and the conquest of Albania in 1939. This policy drew M. into close co-operation with Nazi Germany, and in June 1940 Italy entered the S.W.W. Italian defeats in N. Africa, the Allied invasion of Sicily, and rising discontent at home destroyed M.'s prestige, and in July 1943 he was compelled to resign by the Fascist Grand Council. He was released from his imprisonment by German parachutists in Sept., and set up a 'Republican Fascist' govt. in N. Italy. In April 1945 he and his mistress were captured at Lake Como by partisans while trying to flee the country, and shot. Their bodies were exposed to the execration of the mob in Milan. See FASCISM. His son, BRUNO M. (1915-41), served as a bomber pilot in Ethiopia, Spain, and Greece, and was killed in an air accident. His dau. EDDA, m. Count Ciano (q.v.). See illus. under GERMAN HISTORY.

MUSSORGSKY (moosorg'skē), Modest Petrovich (1839-81). Russian composer. B. at Karevo, he entered the army in 1856, but resigned his commission in 1858 to concentrate on music while working as a govt. clerk. His opera *Boris Godunov* was completed in 1869, although not produced in St. Petersburg until 1874. His other works incl. the incomplete operas *Khovanshtchina* and *Sorochintsy Fair*; the orchestral *Night on the Bare Mountain*; the suite *Pictures at an Exhibition*; and many songs. Some of his works were 'revised' by Rimsky-Korsakov, and only recently has their harsh and primitive beauty been recovered. M. d. in poverty, having taken to drugs.

MUSTAFA KEMAL. See ATATÜRK.

MUSTAGH. Another name for KARAKORAM.

MUSTARD. Annual plants of the family Cruciferae. The seeds of Black M. (*Brassica nigra*), and White M. (*B. alba*), are used in the production of table mustard, and are cultivated in Europe, N. America and England, where wild M. or charlock (*B. arvensis*) is also found. The seedlings of white M. are used as a salad food. M. is frequently grown by farmers and ploughed in to enrich the soil.

MUTATION. In heredity, a new characteristic which suddenly appears in the offspring of a plant or animal and which breeds true is said to be a M. This type of change is one of the bases of evolutionary theory. Mutational changes may be spontaneous, or induced, e.g. by radiation. See EVOLUTION.

MUTSUHITO (mootsoohē'tō) (1852-1912). Emperor of Japan. He took the title Meiji Tenno (enlightened peace), when he became emperor in 1867. During his reign Japan became a world power.

M.V.D. (Ministerstvo Vnutrennykh Del, Ministry for Internal Affairs). New title from 1968 for the already existing Ministry of Public Order, given in an attempt to strengthen the fight of the ordinary police/militia against increasing crime and hooliganism; also the title 1946-53 of the secret police, now the K.G.B. (q.v.).

MYCENAEAN (mīsinē'an) **CIVILIZATION.** The civilization, also known as the Aegean Civilization, which flourished in Crete, Cyprus, Greece, the Aegean islands, and W. Anatolia, c. 4000-1000 B.C. Its nature was 1st laid bare by the excavations of Schliemann at Troy, Mycenae (an ancient Greek city in Argolis), and Tiryns after 1870, and of Sir Arthur Evans in Crete after 1899. Originating in Crete, it spread into Greece c. 1600 B.C., where it continued to flourish, with its centre at Mycenae, after the decline of Crete c. 1400. It was finally overthrown by the Dorian invasions, c. 1100. The system of govt. was by kings, who also monopolized priestly functions; their palaces were large and luxurious, and contained highly efficient sanitary arrangements. Commercial relations were maintained with Egypt throughout. Pottery, fresco-painting, and metal-work reached a high artistic level.

Until comparatively recently, most M. consisted of coins, and monetary theorists have described the properties that M. should possess as: general acceptability, durability, portability, homogeneity, divisibility, stability of value, indestructibility, and cognizability, etc. Gold and silver in practice have been found to answer best these requirements. In the early stages the precious metals passed current by weight and not by count, but the advantages of coined M. were made manifest much more than 2 thousand years ago. The Lydians in 7th cent. B.C. are supposed to have been the first to use coins. Very soon the right of coinage became, as it still is, the monopoly of the State.

Important in the study of M. is the **QUANTITY THEORY** according to which if the quantity of M. be increased above the real needs of the people, its value will be diminished; in other words, the price of commodities will rise, since the monetary unit will purchase less than it did before the amount of the circulating medium was increased. The principal factors that determine the value of M. at any given time are: the quantity of M. in circulation, and the quantity of goods and commodities on sale. There is, however, another element; account must also be taken of the velocity or rapidity of circulation, or number of times each unit of M. is used. M. hoarded or kept out of circulation, even if issued by the State mint or bank, can have no effect on the value of money in circulation, or on the prices of commodities.

At the present time coins are used as a rule only for small transactions. Far more important are the 2 forms of 'representative M.', viz. Government M. or bank notes, and bank M. transferred by cheques. Checks on the process of 'credit creation' or the creation of 'bank money' are the necessity on the banker's part to keep a balance sufficient to meet all demands for repayment, and in the U.K. the control exercised by the Treasury through the Bank of England.

INTERNATIONAL MONEY. The problems that faced nations after the S.W.W. of 1939-45 were not dissimilar to those that existed after the F.W.W. Disordered exchanges, depreciated monetary units, with the resulting interference with overseas trade, were the common experience. Various cures for these ills were tried, the suspension of the gold standard among them. Then in July 1944 a United Nations Monetary and Financial conference was held at Bretton Woods, New Hampshire, U.S.A., which led to the establishment of an International Bank for Reconstruction and Development, and the opening of the International Monetary Fund, in Washington, U.S.A., which is designed to assist in the smooth working of trade and in the prevention of crises, in addition to the preservation of exchange stability. The Fund system has many of the advantages of the gold standard, without its rigidity, but distorted balance of payments positions were a marked feature of the late 1960s, e.g. Britain struggling against an adverse balance and Germany in the reverse position. See **BANKING, GOLD STANDARD**, etc.

MONGOLIA. A vast plateau region of E. central Asia, lying between L. Baikal and the Nan Shan mountains. The 3 physical divisions are: (1) the Gobi region, a long central depression within the plateau; (2) the N.W. mountains; (3) the S.E. mountains. The plateau climate is dry and subject to extremes of cold and heat, particularly in the Gobi region, where N.W. winds prevail; the N.W. and S.E. mountains receive the rainy winds. The inhabitants are Mongols, mainly nomadic and living in tents, who keep herds of horses, camels, cattle, goats, and sheep and are expert horsemen. The former organization of the Mongols under hereditary princes as a military society has broken down under Communist rule, as has the power of Islam and Lamaism (qq.v.), but in 1967

there was violent opposition to the Maoist Cultural Revolution in both Outer and Inner M. Discoveries made by expeditions in the 1920s confirmed that M. is a main area of world evolution, many remains being found of prehistoric animals and early human culture. The language of M. belongs to the Altaic family, and its literature is mostly colloquial fairy tales.

The name Mongols first appears in Chinese annals in the 6th cent., and their power reached its zenith under Genghis Khan, who became emperor in 1206, and his grandson, Kublai Khan (1216-94), the first Mongol emperor of China. Separation of the N. Mongols from the S. Mongols dates from the 14th cent., following the overthrow in 1368 of the Mongol dynasty of China by the Mings.

Inner Mongolia, the S. part of M., was made an autonomous region of China in 1947. To it in 1950 were added Hsingan and Liaopei, formerly provs. of Manchuria, and deducted Ningxia and Suiyuan. The last was restored to I.M. in 1954, and part of the former Jehol prov. was added in 1955. Only about 3 per cent. of the total area is cultivated, millet, soya beans, sugar beet, and oilseeds being grown. Timber is produced, and there are reserves of coal and iron ore. Little worked. The cap. is Huhehot (Chinese Kweisui). Area 450,000 sq. m.; pop. (1957) 9,200,000.

Outer Mongolia, the N. part of M., is bounded on the N. by the R.S.F.S.R., elsewhere by China. It was part of China from 1686 until given autonomy at the Chinese revolution of 1911-12. In 1924 it adopted the soviet system of government and proclaimed itself the Mongolian People's Republic. China recognized its independence in 1946, and M. has a mutual assistance pact with U.S.S.R. (1966). Agriculture is on the collective system, and new areas are being brought into cultivation. Minerals incl. gold, tungsten, uranium, coal and oil. Ulan Bator is the cap. and chief manufacturing centre, but industry is being developed at Darkhan (nr. Soviet border N. of the cap.) and Choybalsan (in the E.) mainly by Soviet aid. Area c. 6,000 sq. m.; pop. (1966) 1,120,000.

MO'NGOOSE. Mammal in the family Viverridae. The Indian M. (*Herpestes mungo*) is greyish in colour, about 18 in. long, with a long tail. It may be tamed, and is often kept for its ability to kill snakes. The Egyptian M. or Ichneumon is larger.

MONISM. In philosophy, the belief that the universe may be reduced to a single principle, whether mental, material, or other. It is thus opposed to dualism and pluralism.

MO'NITOR. Armoured vessel of light draught and slow speed, specializing in long-range coastal bombardment, which takes its name from the first of its class, the Federal turret-ship *Monitor*, used in the American Civil War. Ms. were largely used in the F.W.W., especially off the Belgian coast. None was built between the wars, but a few of the larger type were used in the S.W.W. The word M. also denotes a family of lizards (see **DRAGON**), and a professional listener to and reporter of broadcasts.

MONK, or MONCK, George. 1st duke of Albemarle (1608-69). English soldier. During the Civil War he fought for the king, but after being captured changed sides and took command of the parliamentary forces in Ireland. He served in Cromwell's Scottish campaign 1650, and at sea against the Dutch 1652-3, and under the Commonwealth became C.-in-C. in Scotland. Leading his army into England in 1660 he brought about the restoration of Charles II, and was created duke of Albemarle.

MONK, Maria (c. 1817-50). Claiming to have escaped from a Montreal nunnery, she pub. palpably

(1945), *Prin* (1957) and *Lolita* (1955), story of the infatuation of the middle-aged Humbert Humbert for a precociously experienced child of 12 which added the word 'nymphet' to the language.

NĀ'DIR. Astronomical term denoting a point in the heavens diametrically opposite to the zenith.

NAEMEN. Flemish form of **NAMUR**.

NAEVIVS (nē'vius), Gnaeus (c. 265–c. 194 B.C.). One of the earliest Roman poets. He produced tragedies, comedies, and an epic on the Punic War.

NAEVUS (nē'vus). 'Port wine mark'; a bright red tumour of the skin, consisting of a mass of small blood vessels. A N. of moderate size is harmless. It can sometimes be treated by cutting out, burning with an electric needle, or freezing with carbon dioxide snow.

NAGALAND (nah'gah-). 16th state of the Rep. of India. It lies N. of Manipur and borders Burma on the E. The cap. is Kohima; area 6,366 sq. m.; pop. (1961) 369,200. Formerly part of Assam, N. is inhabited by Naga tribes once notorious as head-hunters. The British sent 18 expeditions against them 1832–87; and after India attained independence in 1947 they rose against their new ruler, who undertook military action against them 1955–6. Unable to repress them, the Indian govt. entered into negotiations with their leaders in 1960 and in 1962 passed an act giving them autonomy; the new state was inaugurated 1963, but resistance continued.

NAGASAKI (nahgahsah'kē). Seaport on Kyushu Is., Japan, destroyed by an atom bomb during the S.W.W. on 9 Aug. 1945. Of its pop. of 212,000, 73,884 were killed, 76,796 injured. N. was the only Japanese port open to European trade from the 16th cent. until other ports were opened in 1859. Coal is mined and there are iron works and shipbuilding yards. Pop. (1965) 405,000.

NAGOYA. Seaport of Honshu, Japan, with a Shogun fortress (1610) and a famous Shinto shrine, Atsuta Jingu. Textiles and clocks are made. Pop. (1965) 1,935,000.

NAGPUR (nagpoor'). City in Maharashtra state, India, cap. of N. division and district, seat of N. univ. (1923), with an airport. Close to the cotton-growing area of the Deccan, it is a centre for cotton and silk textiles. Pop. (1961) 643,659.

NAGY (nahzh), Imre (1896–1958). Hungarian leader of the revolt against Soviet domination in 1956. He was executed.

NĀ'HUM (7th cent. B.C.). Hebrew prophet, possibly

b. in Galilee, and author of a prophecy of the destruction of Nineveh incl. in the O.T.

NĀ'IAVS. Water-nymphs of classic mythology.

NAILS. Hard, smooth, elastic appendages to the skin, made of a horny modification of its outer layer, and protecting and strengthening the tips of the fingers and toes. They are related to the claws and hooves of animals. The N. grows from a bed, or matrix, in the lower germinal layer of the skin.

NAIPAUL (nī'pawl), Vidiadhar Surajprasad (1932–). British writer. B. in Trinidad of Hindu parents, he was ed. in Port of Spain and at Oxford, then worked as a freelance broadcaster and for the B.B.C. He is best known for his novels *A House for Mr. Biswas* (1961), *Mr. Stone and the Knights Companion* (1963), and *The Mimic Men* (1967).

NAIRN. County town (burgh) of Nairnshire, Scotland, on the Moray Firth. It is a fishing port with a good harbour. Pop. (1961) 4,899.

NAIRNE (nārn), Carolina Oliphant, baroness (1766–1845). Scottish song-writer, author of 'Land o' the Leal', 'Call'er Herrin', and other well-known songs.

NAIRNSHIRE. County of Scotland, bounded on the N. by the Moray Firth. Its principal rivers are the Nairn and Findhorn. Agriculture is carried on, but only a small part is cultivated. The co. town is Nairn. Area 163 sq. m.; pop. (1961) 8,421.

NAIROBI (nirō'bē). Cap. of Kenya, E. Africa, 330 m. by rail N.W. of Mombasa. Founded in 1899, it is well planned; it was granted city status by Royal Charter in 1950. Its elevation (5,450 ft.) gives it a bracing climate. Univ. Coll. (1956) is one of the 3 constituent colls. of the Univ. of E. Africa, and the Lumumba Inst. (1964) is 7 m. to the N. There is an international airport. Pop. (1968) 400,000.

NAMAQUALAND. Great N. is a desert region N. of the Orange r., S.W. Africa. It is inhabited by the sparsely distributed Namaquas, a Hottentot tribe. Area c. 150,000 sq. m. Little N. is the desert region S. of the Orange r., incl. in Cape Prov. Copper and diamonds are mined. Area c. 20,000 sq. m.; pop. c. 26,000.

NAMIBIA. See SOUTH WEST AFRICA.

NAMUR (nahmūr'). City and railway junction in Belgium, cap. of the prov. of N., situated at the junction of the Sambre and the Meuse. It has iron and steel foundries, and is famous for cutlery. Pop. (1966) 32,650.

NANAIMO (nahnī'mō). Coal-mining centre of British Columbia, Canada, on the E. coast of Vancouver Is., 60 m. N.W. of Victoria. Pop. (1966) 15,200.

NA'NA SA'HIB (1820–c. 1859). Name by which Dandhu Panth, an adopted son of the ex-peshwa of the Mahrattas, was commonly known. He joined the rebels in the Indian Mutiny, and was responsible for the massacre at Cawnpore. After the rebellion he took refuge in Nepal.

NANCHANG. Chinese city, cap. of Kiangsi prov. on the Kan r. 160 m. S.E. of Wuhan. Dating from the 12th cent., it is a road, railway, and air junction, with cotton mills and pottery, glass, match, and soap factories. It is the seat of a univ. Pop. (1957) 398,000.

NANCY (noñsi'). Cap. of the dept. of Meurthe-et-Moselle, France, on the Meurthe, 175 m. E. of Paris. Dating from the 11th cent., N. has a univ. and contains many fine buildings, incl. the Hôtel de Ville and the cathedral (1742). Pop. (1962) 133,532.

NANKING. Chinese city on the Yangtze-Kiang, 165 m. N.W. of Shanghai, made cap. of Kiangsu prov. in 1952. Dating from the 2nd cent. B.C., and perhaps earlier, it received the name N. (meaning southern cap.) under the Ming dynasty. It was cap. of China under several early dynasties, and from 1368–1403, 1928–37, 1946–9. It is an industrial and communications centre, and has a univ. (1888). On Purple Moun-

NAGOYA. Two nude statues frame the 590 ft. high television tower in the beautiful Sakae Park at Nagoya, the largest industrial city of central Japan. Halfway up the tower is an observation room, giving a wonderful view over the city.

Courtesy of Japanese Embassy.

of State 1811–17, and was elected Pres. in 1816, and again in 1820. His name is associated with the *Monroe doctrine*, expressed in his message to Congress in 1823, when European intervention against the revolting Spanish colonies in S. America was proposed, in which he declared that the American continents 'are henceforth not to be considered as subjects for future colonization by any European powers', and that any attempt to extend European colonies in the Americas would be regarded as dangerous to U.S.A. peace and safety.

MONROE, Marilyn. Professional name of Norma Jean Baker (1928–62), American film actress and sex symbol. An illegitimate child, suffering wretchedly in early life, she first made her name in *The Asphalt Jungle*: later films incl. *The Seven Year Itch* and *Some Like it Hot*. Her second husband was Joe Di Maggio, the baseball star, and her third Arthur Miller (q.v.). She d. of an overdose of sleeping tablets.

MONROVIA (munrō'via). Port and cap. of the Liberian rep., Africa. M., founded in 1821, was named in honour of President Monroe (q.v.). Along the coast, 60 m. S.W., Buchanan handles iron exports from the Nimba mountains. Pop. (1967) 80,000.

MONS (monz). Cap. of the prov. of Hainault, Belgium, situated in the centre of an extensive coal-field, and with textile and sugar industries. The retreat from Mons in Aug. 1914 followed the 1st important battle (23 Aug.) fought by the B.E.F. in the F.W.W. Pop. (1958) 26,206.

MONSARRAT, Nicholas (1910–). British author. B. in Liverpool, he served in the R.N. during the S.W.W., and made his name with the war novel *The Cruel Sea* (1951): later books incl. *The Story of Esther Costello* (1953), *The Ship That Died of Shame* (1959) and *Richer Than all His Tribe* (1968). He lives in Ottawa.

MONSOON (Arabic *mausim*, season). Term originally applied by the Arabs to a wind which occurs at fixed seasons in the Arabian Sea; now applied to any seasonal wind, particularly those which occur in India and the N. Indian Ocean.

MONSTERA. Plant of the Arum family (Araceae), a native of tropical America. The small flowers crowd

MONSTERA. Growing easily anywhere in the tropics, the Mexican *Monstera deliciosa* is familiar in Australian gardens and yields a pleasant fruit. Besides the fully ripe specimens, several unripe fruits (foreground) are still enclosed in their spathes. Courtesy of the Agent-General for Queensland.

on thick, fleshy spikes, each enclosed by a large leaf. A striking feature is the drying up of areas between the veins of the leaves, which ultimately form holes and deep marginal notches.

MONSTRANCE. In the R.C. Church, a vessel used from the 13th cent. to hold the Sacred Host when exposed at Benediction or in processions.

MONTAGNA (montahn'yah), Bartolomeo (1450–1523). Italian painter. B. in Brescia, he was influenced by Carpaccio and Bellini, his most important work being the altar-piece executed for San Michele at Vicenza, now in Milan.

MONTAGU (mon'tagū), Edwin Samuel (1879–1924). British Lib. politician, the 2nd son of the 1st Lord Swaythling. Entering parl. in 1906, he was Sec. of State for India 1917–22.

MONTAGU, Lady Mary Wortley (1689–1762). British letter-writer and society poet. *Née* Pierrepont, she m. Edward Wortley M., ambassador to Constantinople. Returning to England in 1718, she introduced inoculation against smallpox, and quarrelled with Pope, her former friend and correspondent.

MONTAGU, Victor. See SANDWICH, Lord.

MONTAIGNE (montān'), Michel Eyquem de (1533–92). French essayist. B. at the Château de Montaigne, near Bordeaux, he studied law, and in 1554 became a counsellor of the Bordeaux parlement. Little is known of his earlier life, except that he frequented the court of Francis II and tasted the pleasures of Paris. In 1571 he retired to his estates, relinquishing his magistracy, and in 1580 pub. the 1st 2 vols. of his *Essays*. He toured Germany, Switzerland, and Italy 1580–1, returning on his election as mayor of Bordeaux, a post he held till 1585. The 3rd vol. of *Essays* appeared in 1588. He d. of quinsy, and was buried in Bordeaux. The originator of the modern essay form, M. deals with all aspects of life in a mood of urbane scepticism, and as translated by John Florio in 1603, largely influenced English writers and thinkers.

MONTALE, Eugenio (1896–). Italian poet. His vols. of highly individual poetry – e.g. *Ossi di seppia* (1925: *Cuttlebones*), *Le Occasioni* (1939: *The Occasions*), *La bufera* (1956: *The Storm*) – reflect his concern with language and meaning, and explore with stoicism such experiences as isolation, uncertainty and exile, in the context of contemporary life.

MONTANA (montah'nah). State of the U.S.A., on the Canadian border. It is bisected by the Rocky Mts. and their subsidiary ranges: to the E. lies the Great Plains region. The chief rivers are the Missouri and Yellowstone. There is extensive irrigation, and wheat is the principal crop, but stock raising is also very important. Forestry supports timber, pulp, and plywood industries. M. is rich in minerals, espec. copper, first worked 1880: others incl. fluorspar, manganese, vermiculite, oil, and natural gas. The cap. is Helena. Area 147,138 sq. m.; pop. (1960) 674,767.

MONTANISM. A movement within the early Church which strove to return to the purity of primitive Christianity. Originating in Phrygia c. 156 with the teaching of a prophet named Montanus, it spread to Asia Minor, Rome, Carthage, and Gaul.

MONTAUBAN (montōboñ'). Town of S. France, dating from 1144, cap. of the dept. of Tarn-et-Garonne, 31 m. N. of Toulouse, long a Protestant stronghold. Pop. (1962) 43,401.

MONT BLANC (moñ blōñ). The highest mountain in the Alps (15,781 ft.). First ascended by Jacques Balmat and Dr. Michel Paccard in 1786. A 7½ m. road tunnel (1965) links France and Italy.

MONTBRETIA (-brēsh'ia). Genus of plants (*Tritonia*) in the family Iridaceae. The yellow or reddish flowers are borne on long stems.

MONTCALM (montkahn'), Louis-Joseph de Montcalm-Gozon, marquis de (1712–59). French general. B. near Nîmes, he was appointed commander of the troops in Canada in 1756. He won a succession of victories over the British, but was defeated by Wolfe at Quebec, where he and Wolfe were slain.

MONTE CARLO. One of the 3 communes of Monaco (q.v.), famous for its gaming tables.

MONTE CRISTO. A small uninhabited island off the W. coast of Italy, 25 m. S. of Elba. It is chiefly famous because of Dumas' novel, *The Count of M. C.*

Leipzig and driven from Germany. After a brilliant campaign on French soil, he abdicated in 1814, and was banished to Elba.

In March 1815 he returned to France and re-assumed power; in June he marched into Belgium to meet the Allies, was defeated at Waterloo, and again abdicated. Having surrendered to the British, he was exiled to St. Helena, where he d. and was buried in 1821. His body was reinterred in the Hôtel des Invalides, Paris, in 1840. For his family, see BONAPARTE.

NAPOLEON II (1811–32). Title given by the Bonapartists to the son of Napoleon I and Marie Louise; until 1814 he was known as the king of Rome, and after 1818 as the duke of Reichstadt. After his father's abdication in 1814 he was taken to the Austrian court, where he spent the rest of his life. By Hitler's order his body was removed from Vienna in 1940 and reinterred in the Hôtel des Invalides, Paris.

NAPOLEON III (1808–73). Emperor of the French. The son of Louis Bonaparte and Hortense de Beauharnais, brother and step-daughter respectively of Napoleon I, he led two unsuccessful revolts, at Strasbourg in 1836 and at Boulogne in 1840, and after the latter was imprisoned. Escaping in 1846, he lived in London until the 1848 revolution. He was elected president of the republic in Dec., and set himself to secure a following by posing as the champion of order and religion against the revolutionary menace. He secured his re-election by a military coup d'état in 1851, and a year later was proclaimed emperor. Hoping to strengthen his régime by military triumphs, he joined in the Crimean War, waged war with Austria (1859), and attempted unsuccessfully to found a vassal empire in Mexico (1863–7); thereby he aroused the mistrust of Europe and isolated France. At home, his régime was discredited by its notorious corruption; republican and Socialist opposition grew, in spite of severe repression, and forced N., after 1860, to make concessions in the direction of parliamentary govt. Manœuvred by Bismarck in 1870 into war with Prussia, he was forced to surrender at Sedan, whereupon the empire collapsed. After the war he withdrew to England, where he died. See illus. p. 824.

His son by the empress Eugénie (q.v.), Eugène Louis Jean Joseph N., Prince Imperial (1856–79), was killed fighting with the British Army against the Zulus.

NAPOLI. Italian form of NAPLES.

NARBONNE (nahr'bon). City in Aude dept., France, 8 m. inland from the Mediterranean coast and 34 m. E. of Carcassonne. The former cathedral is of the 13th cent. As Narbo it was the chief town of southern Gaul in Roman times. Pop. (1962) 35,899.

NARCISSUS (nahr'sis'us). In Gk. legend, a beautiful youth, who rejected the love of the nymph Echo, and as a punishment was made to fall in love with his own reflection in a stream. He eventually pined away for love of himself, and in the place where he d. there sprang up a flower

which was named after him. His name is the origin of the psychological term **Narcissism**, meaning an excessive valuation of the self and its attributes, an exaggeration of normal self-respect and pride in oneself into vanity and conceit, which may amount to insanity.

NARCISSUS. Genus of bulbous plants of the family Amaryllidaceae. There are about 35 different species, of which the best-known are the daffodil, jonquil, and poet's N.

NARCOTICS. Drugs

NARCISSUS

that relieve pain and cause deep sleep. The principal are opium and its derivatives and synthetic modifications (morphine, heroin, etc.); the alcohols (paraldehyde, ethyl alcohol, avertin, etc.); and the barbiturates (veronal, luminal, evipan, etc.).

NARES (närz), Sir George Strong. (1831–1915). Scottish admiral and explorer. He commanded the *Challenger* during part of her voyage of deep-sea exploration round the world (1872–4), and led the Arctic expedition of 1875–6.

NARSES (nahr'sēz) (c. 478–c. 573). Byzantine statesman and general, originally a eunuch slave, and later an official in the imperial treasury. He was joint commander with Belisarius in Italy 538–9, and in 552 destroyed the Ostrogoths at Taginae.

NARVA (nahr'vah). Seaport of Estonian S.S.R., on the Narva, 70 m. S.W. of Leningrad, founded in 1223 by the Danes. Charles XII of Sweden in 1700 inflicted a severe defeat here on the army of Peter the Great who was besieging N.; but 4 years later Peter captured N. There are tanneries, and textiles and rope are made. Pop. (1967) 25,000.

NARVIK. Seaport in Norway, on Ofot Fjord. It exports iron ore from the Swedish mines. To secure this ore supply the Germans seized N. in April 1940. British, French, Polish, and Norwegian forces recaptured N., but had to abandon it on 10 June owing to the worsening Allied situation elsewhere in Europe; this was the end of fighting in Norway during the S.W.W. Pop. (1967) 13,500.

NARWHAL

NARWHAL. A cetacean (*Monodon monoceros*), found only in the Arctic Ocean. The male has a spirally fluted tusk, 6–10 ft. long.

NASEBY (nāz'bi). English village in Northants, 12 m. N.N.W. of Northampton, the scene of the decisive battle of the Civil War (14 June 1645), when the Royalists were defeated by Cromwell and Fairfax.

NASH, John (1752–1835). British architect. He laid out Regent's Park, London, and designed many of the terraces nearby. Between 1813 and 1820 he planned Regent Street (subsequently rebuilt), and later repaired and enlarged Buckingham Palace for which he designed Marble Arch, intended as the entrance gateway.

NASH, Ogden (1902–). American poet. B. in Rye, N.Y., he has pub. numerous vols. of humorous verse of impeccable technique and quietly puncturing satire, e.g. *Hard Lines* (1931), *The Face is Familiar* (1941), and *Collected Verses* (1961).

NASH, Paul (1889–1946). British artist. B. in London, he became famous for his pictures of the F.F.W., such as 'The Menin Road', in the Imperial War Museum, in which he created strange patterns out of the scorched landscape of the Western Front. During the S.W.W. he was appointed official war artist to the Air Ministry. Two of his most celebrated pictures, depicting the struggle in the air, are *Totes Meer*, and 'The Battle of Britain', reproduced on p. 168. He also illustrated books and designed posters, textiles, stage scenery and costume. His brother, John Northcote N. (1893–), is also a painter and engraver. He produced 1916–18 a number

rapid advance into Tunisia. In Feb. 1943 M.'s forces came under Eisenhower's command, and during the following months were prominent in the conquest of Tunisia and Sicily and the invasion of Italy. He commanded the Allied armies during the opening phase of the invasion of France in June 1944, and from Aug. the British and Imperial troops which liberated the Netherlands, overran N. Germany, and entered Denmark. He was in command of the British occupation force in Germany until Feb. 1946, when he was appointed C.I.G.S. He was promoted to field marshal in 1944, and in 1946 was created a viscount. In Oct. 1948 M. became permanent military chairman of the C.S.-in-C. in Committee for W. European defence, and 1951-8 was deputy Supreme Commander, Europe.

MONTGOMERY. U.S. city, cap. of Alabama, on the Alabama r., 150 m. N.E. of Mobile. Settled in 1814, M. became the state cap. in 1847; it was the cap. of the Confederate govt. Feb.-May 1861. M. exports cotton and makes fertilizers, cigars, machinery, and cotton textiles. Pop. (1960) 134,393.

MONTGOMERYSHIRE. County of N. Wales. It is partly mountainous, but on the E. side there are fertile valleys. The principal rivers are the Severn, the Dovey, and the Vyrnwy. Most of the county consists of pastureland. The co. tn. is Montgomery; other towns are Welshpool and Newtown. Area 797 sq. m.; pop. (1961) 44,228.

MONTH. Originally the time between a new moon and the next, averaging 29½ days, now called a lunar M. The calendar M. is for convenience composed of a complete number of days, 30 or 31 (February 28), the extra 6 hours' time per year being added to February as a day each 4th or leap year.

MONTHERLANT (mon'terlon'), Henri de Millon (1896-). French author. B. in Paris, he was a Nazi sympathizer, and his novels, which are marked by an obsession with physical relationships, include *Aux fontaines du désir* (1927), and *Pitié pour les femmes* (1936). His tempered masterpiece is *Le Chaos et la nuit* (1963), drawn from one man's awareness of death.

MONTMARTRE (mon'mar'tr). Bohemian quarter of Paris, France, dominated by the basilica of Sacré Cœur, 1875. It is situated in the N. of the city on a 400 ft. high hill.

MONTPELLIER (mon'pelyā'). Cap. of the dept. of Hérault, France, 31 m. S.W. of Nîmes. There is a 14th cent. cathedral and a univ. (1289) with a famous medical school. Industries incl. engineering, food processing, textiles. Pop. (1962) 123,367.

MONTREAL (mon'trē-awl'). Largest city, gre. inland port, and commercial centre of Canada, in Quebec prov., on the island of Montreal, at the junction of the Ottawa and St. Lawrence rivers. A number of bridges, incl. the Victoria Jubilee Bridge, spanning the St. Lawrence, link the city with the mainland. M. is linked with the inland canal system, and the Canadian National and Canadian Pacific Rlys. M. was founded as Ville Marie de Montréal in 1642 by Paul de Chomé. Sieur de Maisonneuve; suffered much from Iroquois hostility; and was the last place surrendered by the French to the British. 1760. Nevertheless, when troops of the rebel Continental Congress occupied M. 1775-6, the citizens refused to rise against the British. French remains the language of the majority of the pop. Mount Royal (or Mont Réal), 753 f., overlooks the city. M. is the seat of both R.C. and Anglican dioceses, and of the R.C. M. univ. (formerly

a branch of Laval) and the Protestant McGill and Sir George Williams univs. M. has excellent rail, waterway, dock and airline facilities (H.Q. of I.C.A.O.); and industries incl. aircraft, chemicals, oil refining and petrochemicals, flour milling, sugar refining, brewing and meat packing. Carefully preserving its old quarter, M. is also the modernest of cities, e.g. the Place Ville Marie project, consisting of a 45-storey skyscraper above a 7-acre plaza, with a weather-proof 4-level underground 'city' beneath: c. 40 acres of shopping arcades with 1½ m. of promenades; then 2 levels of parking space and service roads; and a bottom level for railway tracks and station platforms. The M. Internat. Exhibition (Expo 67) on 2 man-made is. in the St. Lawrence has been succeeded by the world's largest permanent exhibition. Pop. (1966) of met. area 2,436,817.

MONTREUX (mon'trō'). Winter resort in Vaud canton, Switzerland, on the E. shore of Lake Geneva. Close by is the castle of Chillon. At the annual television festival (1961) the premier award is the *Golden Rose of M.* The *Convention of M.* in 1936 allowed Turkey to re-militarize the Dardanelles. Pop. (1960) 20,000.

MONTROSE (mon'trōz'), James Graham, marquess of (1612-50). Scottish soldier. The son of the 4th earl of M., he supported the Covenanters in their struggle against Charles I, but after 1640 went over to the king's side. In 1644 Charles created him a marquess and lieutenant-general in Scotland, whereupon he rallied the Highlanders and won a succession of brilliant victories. Defeated in 1645 at Philiphaugh, he escaped to the Continent. He returned in 1650, and after attempting to raise a rebellion was hanged at Edinburgh.

MONT ST. MICHEL (mon'sān-mēs'hel'). Small rocky island (165 ft. high), situated near the coast of Manche dept., France. It is famous for its Benedictine monastery, estab. in 708. See illus. p. 931.

MONTSEERRAT. Mountain of Spain, 24 m. N.W. of Barcelona; so called because its uneven outline resembles the serrated edges of a saw (Sp. *monte serrado*). It rises to a height of 4,070 ft. The Benedictine monastery of M., built 2,910 ft. high on the mountain, contains a famous image of the Virgin.

MONTREAL. Seen from the Plaza, La Grande Salle, dominant structure of the Place des Arts, a multi-unit centre for the performing arts. It seats 3,000 and the stage for opera, ballet and drama converts easily for symphony concerts.

Courtesy of Panda Photography and Affleck, Desbarats, Dimakopoulos, Lebensold and Sise, Architects.

MONTSEERRAT. Volcanic island in the British W. Indies, one of the Leeward group. It was discovered by Columbus (1493), who named it after the mountain in Spain. It was first colonized by the Irish, 1632. M.'s principal products are cotton and cottonseed, citrus and other fruits, and vegetables. The chief town is Plymouth (pop. 3,500). Area 32½ sq. m.; pop. (1966) 14,464.

(q.v.), dates from the revolution of 1792, and the Belgian *Brabançonne* from that of 1830. The *Internationale* (q.v.), adopted as the Russian N.A. in 1917, was replaced by the song 'Unbreakable Union of Freeborn Republics' in 1944. The American N.A., 'The Star-spangled Banner', written during the war of 1812, was officially adopted in 1931.

NATIONAL BOOK LEAGUE. British association of authors, publishers, booksellers, librarians, and readers, to encourage the reading and production of better books. Founded as the National Book Council in 1925, it was renamed the N.B.L. in 1944.

NATIONAL DEBT. Debt incurred by the central government of a country. The first issue of government stock in England was made in 1693, to raise a loan of £1,000,000. The main cause of increase in the debt has always been wartime expenditure; thus, after the War of the Spanish Succession, it reached £54,000,000, after the Seven Years War £146,000,000, after the American War £230,000,000 and after the Napoleonic Wars £834,000,000. By 1900 it had been brought down to £610,000,000, but the F.W.W. forced it up, by 1920, to £7,828,000,000, and the S.W.W., by 1945, to £21,870,221,651. By 1968 the figure stood at £33,484,000,000. Stocks were consolidated in 1750-7, the origin of the 3 per cent consols; a further consolidation was carried out by G. J. Goschen (q.v.), in 1888, interest being reduced to 2½ per cent, and after 1903 to 2½. The U.S. Public Debt (as it is there called), \$2,436,453,269 in 1870, was \$1,132,357,095 in 1905, but had risen to \$24,299,321,467 by 1920 and, although in 1930 it sank to \$16,185,309,831, it has since then almost continually risen. In 1968 it was \$347,578,406,426.

NATIONAL GALLERY. Art gallery housing the British national collection of pictures, founded in 1824, when parliament voted £57,000 for the purchase of 38 pictures of the Angerstein collection, plus £3,000 for the maintenance of the building in Pall Mall, London, where they were housed. The present building in Trafalgar Square was designed by William Wilkins, and opened in 1838: there have been several extensions. Works of living artists are excluded.

NATIONAL GUARD. See MILITIA.

NATIONALISM. A general term for movements aiming at the strengthening of national feeling and tradition, and particularly at the unification of a nation or its liberation from foreign rule. Under the influence of the French Revolution, strong movements arose in the 19th cent. in favour of national unification in Germany and Italy, and of national independence in Italy, Ireland, Belgium, Hungary, Bohemia, Poland, and the Balkan states, and remained a potent factor in European politics until 1918. Since 1900 N. has become a strong force in Asia and Africa. The term N. is also applied to the exaggerated expression of national pride, and to aggressive movements for national aggrandizement, e.g. imperialism and fascism; this represents a perversion of the outlook of the great 19th cent. nationalists.

A revival of interest in the national language, history, traditions, and culture has accompanied and influenced many political movements, e.g. in Ireland, Czechoslovakia, Poland, and Finland. In recent years a strongly national literary movement has developed in Scotland and Wales. N. in music usually takes the form of employing themes and rhythms derived from folk music, as in the works of Dvořák, Sibelius, and Vaughan Williams.

NATIONALIZATION. Policy of bringing essential services and industries under public ownership, pursued by the Labour Govt. which held office in the U.K. 1945-51. Acts were passed nationalizing the Bank of England, coal, and most hospitals (1946); transport and electricity (1947); gas (1948), and iron and steel (1949). In 1953 the succeeding Conser-

NATIONAL PARK. Mixed game, such as these zebra, blue wildebeest and impala, often graze together in big herds, especially at water holes or rivers. It is here that they are most vulnerable to attack, and the methods of defence peculiar to each can be combined for the common good.

Courtesy of The South African Information Service.

vative Govt. provided for the return of road haulage to private enterprise and decentralization of the railways; and denationalization of iron and steel - the last-named re-nationalized by Labour 1967. The term is also used for the taking over of assets in the hands of foreign govts. or cos. in the newly emergent countries, e.g. Abadan, Suez Canal.

NATIONAL LABOUR PARTY. See L.P.

NATIONAL LIBERALS. See LIBERAL PARTY.

NATIONAL PARKS. Areas set aside and protected from exploitation in order to preserve them for public enjoyment. In England and Wales under the N.P. Act (1949) the Peak District, Lake District, Snowdonia, Dartmoor, Pembrokeshire coast, Yorkshire Dales, Exmoor, and other areas of great natural beauty were designated as N.P. (See also NATURE RESERVE.) Port Hacking, N.S.W., Australia, near Sydney, is the chief N.P. in Australia. N.P. in the U.S.A. incl. Crater Lake, Oregon; the Grand Canyon, Arizona; the Mammoth Cave, Kentucky; Mt. McKinley, Alaska; Sequoia and Yosemite, California; and Zion Canyon, Utah. Of the 30 N.P. in Canada, the largest is Jasper (4,200 sq. m.), in the Rockies. Kruger N.P., 8,000 sq. m., established in 1898 as a game reserve (see *illus.*), and Natal N.P. are 2 notable S. African examples.

NATIONAL PHYSICAL LABORATORY. Estab. in 1900 at Teddington, England, the N.P.L. is a research establishment under the control of the Min. of Technology from 1965: the chairman of the visiting committee is the Pres. of the Royal Soc. Subjects studied come under 10 divisions: aerodynamics, applied physics, autonomies, chemical standards, light, mathematics, metallurgy, molecular science, ship, and standards, with special units for advanced instrumentation and inorganic materials.

NATIONAL PORTRAIT GALLERY. Art gallery in St. Martin's Place, Trafalgar Square, London, containing over 3,800 individual portraits of distinguished British men and women of the past, of which about one-third are exhibited in the public galleries. It was founded in 1856: present building opened in 1896.

NATIONAL RESEARCH DEVELOPMENT COUNCIL. Under the Development of Inventions Acts, 1948-65, it exploits inventions deriving from public or private sources, usually acting jointly with industrial firms.

NATIONAL SOCIALISM. See GERMANY; HITLER.

NATIONAL TRUST. A non-profit-making organization in Britain incorporated by Act of Parliament

MORMONS. The Mormon temple at Salt Lake City, dedicated 1893, took forty years to build. Just beyond is the domed roof of the tabernacle (1870), which can seat 8,000.
Courtesy of Church of Jesus Christ of Latter-Day Saints

MORISCOS. Name given to Spanish Moslems who accepted Christian baptism, and their descendants. They were all expelled from the country in 1609.

MORISON, Stanley (1889–1967). Brit. typographer. Adviser to the Cambridge Univ. Press and Monotype Corporation, he designed Times New Roman (1932).

MORLAND, George (1763–1804). British painter. B. in London, the son of the artist Henry M., he first exhibited at the R.A. at the age of 10. After leaving home in 1784 he lived a dissolute life, but was a hard worker, sometimes painting 2 pictures a day. He excelled in country subjects showing gypsies, stable interiors, etc.

MORLEY, Christopher Darlington (1890–1957). American author. B. in Pennsylvania, he was a Rhodes scholar at Oxford (1910–13), and then entered journalism in the U.S.A. He pub. verse, essays, and plays, but is best known for such novels as the fantasies *Where the Blue Begins* (1922), and *Thunder on the Left* (1925); the realistic *Kitty Foyle* (1939), and *Thorofare* (1942).

MORLEY, John, 1st visct. M. of Blackburn (1838–1923). British Liberal statesman and writer. He entered parliament in 1883, and was Sec. for Ireland in 1886 and 1892–5. As Sec. for India 1905–10, he prepared the way for more representative government. He was Lord President of the Council 1910–14, but resigned in protest against the declaration of war in 1914. He pub. lives of Voltaire, Rousseau, Burke, and Gladstone. He received a peerage in 1908.

MORLEY, Robert (1908–). British actor. With a presence and delivery which would have made him an ornament of the diplomatic corps for which he was originally intended, he excels in such roles as Oscar Wilde (both stage and screen), Sheridan Whiteside in *The Man Who Came to Dinner*, and the Prince Regent in *The First Gentleman*. He m. in 1940 Joan Buckmaster, dau. of Gladys Cooper.

MORLEY, Thomas (1557–c. 1603). English composer. He studied with Byrd, and became organist at St. Paul's, obtaining a monopoly of music printing.

He wrote madrigals, and songs for Shakespeare's plays. His *Plaine and Easie Introduction to Practicall Music* (1597) is a useful historical source.

MORLEY. English industrial town (bor.) in the W. Riding of Yorks, 4 m. S.W. of Leeds. Woollen textiles are the chief manufacture; glass and leather are also made. Pop. (1961) 40,322.

MORMONS, or Latter-Day Saints. Religious organization founded by Joseph Smith (1805–44). B. in Vermont, he received his first call in 1820, and in 1827 claimed to have been granted the revelation of the *Book of Mormon*, which relates the supposed early history of America, and predicts the Millennium and the establishment of the New Zion there. The 'Church of Jesus Christ of Latter-Day Saints' (1830) was founded at Fayette, N.Y., and accepted the book as supplementing the Christian scriptures. Further settlements were rapidly estab. despite persecution, and Brigham Young and the Twelve Apostles undertook the first foreign M. mission in England, the earliest European converts reaching the U.S.A. in 1840. In 1843 Smith claimed revelation of the legality of plural marriage, and this caused the secession of some church members, who set up a newspaper in opposition to the Prophet. Smith was arrested on charges connected with attempting the paper's suppression and was shot by a hostile mob, who broke into the gaol.

Smith was succeeded by Brigham Young, who to escape further persecution led an emigration to the valley of the Great Salt Lake in 1847, and in 1850 Utah was created a territory, with Young as governor (1851–8). After the formal repudiation of the doctrine of polygamy by the Mormons in 1890, Utah was recognized as a state of the Union in 1896. The Ms., headed by Pres. David O. McKay (1873–), number c. 2,000,000, largely in Utah, but there are 20,000 in Britain.

MORNING GLORY. Plant (*Ipomoea purpurea*) of the family Convolvulaceae (see CONVULVULUS), native to tropical America. It has dazzling blue flowers and small quantities of substances similar to LSD (q.v.) are found in the seeds of one variety.

MOROCCO (mōrok'ō). Country in N.W. Africa; its Arabic name Al-Maghreb means farthest west. It has a long coastline to the N.W. on the Atlantic, continued in the N. on the Mediterranean. The High and Middle Atlas, rising to 15,000 ft., cross M. from S.W.

MOROCCO. European visitors mingle with the people of Tangier in the open-air market.
Courtesy of British European Airways.

DESTROYER. First ship in the Royal Navy's 'County' class, the dual-purpose *Devonshire* is here seen entering Devonport. She has a displacement of more than 5,000 tons, is 520 ft. long, and is armed with a Sealug surface-to-air guided-weapons system, two Seacat close-range weapons systems and four radar-controlled 4.5 inch guns in twin mountings. For anti-submarine work she has modern underwater detection equipment and embarks a 'hunter killer' Westland Wessex helicopter. Crown Copyright.

Navy under Nelson won a victory over the French at Trafalgar in 1805 which ensured British naval supremacy for the rest of the 19th cent.

In the New World the American navy owes its origin to the need for the more exposed provs. to protect their harbours at the outbreak of the War of Independence, and Washington's need to capture British war supplies. Late in 1775 Washington prepared 5 schooners and a sloop, manned with army personnel, and sent them to prey on inbound supply vessels, and by the time of the Declaration of Independence in 1776 these were augmented by armed brigs and sloops from the various colonies: the hero of the period was John Paul Jones. The fleet earned further distinction in actions against Tripoli 1803-5 and Britain 1812-14, and rapidly expanded during the Civil War and again for the Spanish War of 1898.

In the F.W.W. Britain fought off Germany's bid for naval power, but in the inter-war years the American fleet was developed to protect U.S. trade routes, and also with an eye to the renewed German threat and the new danger from Japan. See F.W.W. and S.W.W. After the S.W.W. the American fleet emerged as the world's most powerful, although the Soviet Union with the specialization in submarine warfare which its geographical situation renders almost inevitable is a serious contender for equality.

NAVY. U.S.S. *Bainbridge*, world's first nuclear-powered guided-missile frigate. Official U.S. Navy photograph.

The future development of naval forces is suggested by the plans of the U.K. in 1967 to have Polaris nuclear submarines as the chief strike force; to phase out aircraft carriers and rely instead for support (in the same way as the Army) on R.A.F. land-based aircraft, and to introduce smaller frigates and destroyers, as well as a new class of cruiser, all equipped with surface-to-air guided missiles and helicopters carrying anti-submarine weapons and sonar. But, by 1969, the carrier's role as base seemed likely to be revived.

NAWANAGAR (nownu'gar). Former princely state of India, merged in Saurashtra (q.v.) in 1948. Its cap., Jamnagar (q.v.), is sometimes called N. The famous cricketer Ranjitsinhji (q.v.) was its maharajah.

NAXOS (naks'os). An island of Greece, the largest of the Cyclades. Famous since early times for its wine, it was a centre for the worship of Bacchus, who found the deserted Ariadne asleep on its shore. It produces wine, olive oil, and marble. Area 175 sq. m.; pop. 17,000.

NA'ZARETH. A town of Galilee, Israel, famous as the place where Jesus spent his boyhood.

NAZARITE or Nazirite. A Hebrew under a vow, who in ancient times observed certain rules until it was fulfilled, e.g. not to cut his hair or to drink wine. Samson and Samuel were Ns. for life.

NAZE. The. Headland on the coast of Essex, England, 5 m. S. of Harwich.

NAZI'MUDDIN, (Sir) Khwaja (1894-1964). Pakistani statesman. He succeeded Jinnah as Gov.-Gen. of Pakistan in 1948, and was P.M. 1951-3 after the assassination of Liaquat Ali Khan.

NAZIS (nah'tsēz). German Fascist Party. The name is derived from the first two syllables, as pronounced in German, of the full name, *Nationalsozialistische Deutsche Arbeiterpartei* (National Socialist German Workers' Party). Related were the movements founded in Britain by Sir Oswald Mosley (q.v.) and Colin Jordan (Nat. Socialist Movement 1962), and in U.S.A. by George Lincoln Rockwell (American Nazi Party 1958) who was assassinated 1967, allegedly by a party 'officer'. See Fascism.

NEAGH (nā), Lough. Lake in N. Ireland, the largest in the British Isles (153 sq. m.).

NEAGLE, Dame Anna (1908-). Brit. actress. B. at Forest Gate, Essex, she was successful as a dancer and in roles as varied as Nell Gwynn (1934), Victoria the Great (1937), and Odette (1950). D.B.E. 1969.

NEALE (nēl), Sir John (1890-). British historian. Astor prof. of English history at London 1927-56, he specializes in the Tudor period, e.g. *Queen Elizabeth* (1934) and *Elizabeth I and Her Parliaments* (1953-7).

NEALE, John Mason (1818-66). Anglican churchman, famous as a translator of ancient and medieval hymns, incl. 'Jerusalem, the Golden'.

NEANDERTHAL (-tahl) MAN. A species of man of the Palaeolithic period. The name is derived from the locality in the Rhineland where the first skeleton was discovered in 1857. This type of man was much more ape-like than any existing race, though the brain-case was large enough to contain a well-developed brain. It is believed that N.M. became extinct through interbreeding with modern man.

NEAR EAST. Geographical term applied to the regions of Asia and Africa shown on the map opposite. During the S.W.W. the expression Middle East was applied to the same area.

NEATH (nēth). Market town (bor.) in Glamorgan-shire, S. Wales, situated nr. the mouth of the r. Neath. It contains the remains of a castle, destroyed 1231, and a Cistercian abbey, and has steelworks, foundries and other industries. Nearby is the Roman fort Nidum, discovered 1949. Pop. (1961) 30,884.

NEBRA'SKA. A north-central state of the U.S.A., bounded on the N. by S. Dakota, and on the W. by Wyoming and Colorado. In the W. are the foothills of the Rocky Mountains, rising to over 5,000 ft.; then

MOSCOW. The Kremlin from the Moskva river. The present walls date from 1492 in the reign of Ivan III, but the city gained its first wooden-walled 'little Kremlin' in 1156, built by George Dolgoruki, prince of Rostov who founded the city in 1147.
Photo: Novosti Press Agency

MOSAIC (mozāk'). A design or picture produced by inlaying variously coloured pieces of marble, stone, glass, or other substances, used chiefly for the decoration of floors and walls, especially in churches. M. was commonly used by the Romans for the decoration of their villas (e.g. Hadrian's villa at Tivoli), and by the Byzantines. The art was revived by the Italians during the 13th cent., when it was used chiefly for the decoration of churches. Examples of modern M. work may be seen in the hall of the Houses of Parliament, and in Westminster Cathedral.

MOSCICKI (mosytsi'tski), Ignacy (1867–1946). Polish statesman. Owing to his activities in the Polish nationalist movement, he was exiled 1892–1912. Elected President of Poland in 1926, after Pilsudski's death in 1935 he was virtual dictator. Following the German invasion of 1939 he resigned, and became a Swiss citizen.

MOSCOW (mos'kō). Russian city, cap. of the R.S.F.S.R. from 1918, of the U.S.S.R. from 1922; cap. also of the M. region, and of Russia from the 14th cent. until 1709, when Peter I transferred the cap. to St. Petersburg (renamed Leningrad in 1924). It stands on the Moscow r., 400 m. S.E. of Leningrad. The Kremlin (Citadel), which is situated on the northern bank of the r., is at the centre. First built in the 12th cent., it consists of a walled enclosure containing some of the most important buildings in M., including the cathedral of the Assumption of the Virgin; the cathedral of the Archangel Michael, which was the burial place of the tsars down to Ivan Alexievich, brother of Peter the Great; the cathedral of the Annunciation; the Ivan Veliki tower (300 ft. high), a famine relief work commissioned by Boris Godunov in 1600; various palaces, incl. the former Imperial Palace, museums, and other buildings. The Tsar Kolokol (king of the bells), 200 tons (1735), is also in the Kremlin. The walls of the Kremlin are crowned by 18 towers and have 5 gates. Near the Kremlin stands the Kitai Gorod, containing various govt. offices. Lenin's mausoleum is in Red Square (near

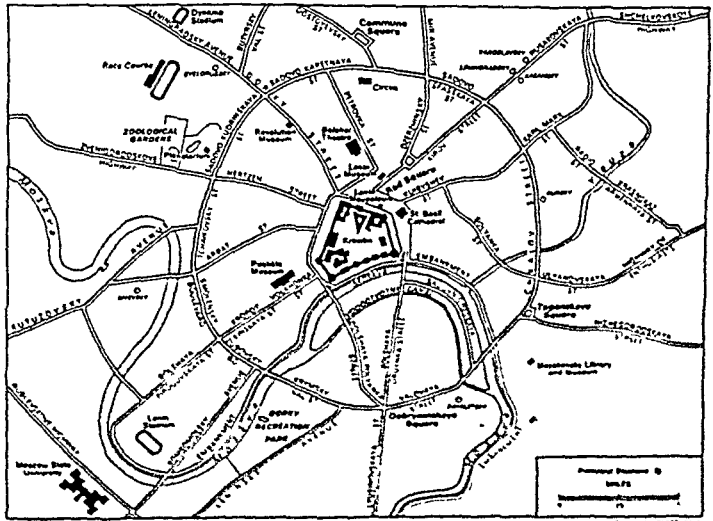

the Kremlin), a famous open space in M. used for political demonstrations and processions. M. also has 2 univs., one of which was founded in 1755 and is the oldest in Russia, the other (32 storeys high) opened 1953; the Academy of Sciences, founded at St. Petersburg (Leningrad) 1726, moved to M. 1934; the M. Arts Theatre, founded 1898; and the state opera house. M. is the seat of the Patriarch of the Russian Orthodox Church; is linked with Stavropol by petroleum pipeline (300 m.), completed 1957; is the centre of the railway system, and has an international airport. An underground railway, opened 1935, later extended, is a tourist showpiece. M. is also the largest industrial centre of the U.S.S.R., producing machinery, electrical equipment, textiles, chemicals, and many food products. From its foundation in the 12th cent. the city has had a stormy history. It was burnt in 1571 by the Khan of the Crimea, and ravaged by fire in 1739, 1748, and 1753; in 1812 it was burnt by its own citizens to save it from Napoleon's troops, or perhaps by accident. In the S.W.W. Hitler's troops were within 20 m. of M. on the N.W. by Nov. 1941, but the stubborn Russian defence and severe winter weather forced them to withdraw in Dec.; the Germans were never able to make a fresh attempt to take M. Pop. (1968) 6,567,000.

MOSELEY (mōz'li), Henry Gwyn-Jeffreys (1887–1915). British physicist. He did valuable work on atomic structure, and in 1913 devised the series of atomic numbers. He was killed in action at Gallipoli.

MOSELLE (mōzel'). River, 320 m. long, which rises in the Vosges, France, and is canalized from Thionville to its confluence with the Rhine at Koblenz. It gives its name to the depts. of M. and Meurthe-et-Moselle.

MOSES (14th cent. B.C.?). Jewish lawgiver and judge who led the Israelites out of Egypt to the promised land of Canaan. According to the O.T., M. was hidden among the bulrushes on the banks of the Nile when the Pharaoh commanded that all new-born male Hebrew children should be destroyed. He was found by a dau. of Pharaoh, who reared him. Eventually he became the leader of the Israelites in the Exodus, and the 40 years' wandering in the wilderness. On Mt. Sinai he received from Jehovah the Ten Commandments engraved on tablets of stone, and died at the age of 120, after having been allowed a glimpse of the Promised Land from Mount Pisgah.

MOSES, Anna Mary (1860–1961). American artist, née Robertson, known as 'Grandma' M. Of Scots-

NEBULA. Hubble's variable nebula, n Monoceros (the Unicorn), is associated with a variable star. Naturally, the appearance of the nebula changes according to the brightness of the star which illuminates it.

Courtesy of Lick Observatory, Univ. of California.

the Egyptians at Carchemish and brought Palestine and Syria into his empire. Judah revolted, with Egyptian assistance, in 596 and 587–586 B.C.; on each occasion N. captured Jerusalem and carried off many of the Jews into captivity. N. largely rebuilt Babylon, constructed the famous Hanging Gardens, and carried out ambitious irrigation schemes.

NEBULA. A luminous patch in the night sky, composed of thinly spread gas and dust. The most famous N. lies below the Belt of Orion, and is clearly visible to the naked eye; large numbers of similar objects may be seen with the aid of telescopes. It is thought that these nebulae are the birthplaces of the stars, and that fresh stars are being created all the time out of the nebular material. A N. shines because of the stars contained in it; if there are no suitable stars, the N. is *dark*, but may be traced because it blocks out the light of stars lying beyond. The 18th cent. astronomer Messier catalogued over 100 nebular objects, incl. true nebulae; *planetary nebulae*, now known to be stars with extensive gaseous surroundings; and *resolvable* or *starry nebulae*, now known to be galaxies in their own right, and to lie far beyond the boundaries of our own star-system or galaxy.

NECK. The structures between the head and the trunk. Its bones are the upper 7 (cervical) vertebrae, it comprises many powerful muscles which support and move the head, and in front it contains the pharynx and wind-pipe (trachea), and behind these the gullet (oesophagus). Within it are the large arteries (carotid, temporal, maxillary), and veins (jugular), which supply the brain and head.

NECKER, Jacques (1732–1804). French statesman. B. at Geneva, he made a fortune in Paris as a banker. As Finance Minister, 1776–81, he attempted to introduce certain reforms, and was dismissed through Marie Antoinette's influence. Recalled to office in 1788, he persuaded Louis XVI to summon the States-General; this earned him the hatred of the court, and in July 1789 he was banished. The storming of the Bastille forced Louis to reinstate him, but in Sept. 1790 he resigned and retired to Switzerland. See *MME DE STAEL*.

NE'CTAR. The drink of the Greek gods.

NECTARINE (-ēn or -in). A smooth-skinned peach, usually smaller than other peaches, with firmer flesh.

NEEDLES. The. The name given to a group of rocks lying off the W. extremity of the Isle of Wight, England. On the most westerly, 100 ft. high, is the N. lighthouse. See *illus.*, p. 581.

NEFERTITI (-tē'tē) or Nofretiti (14th cent. B.C.). Egyptian queen, favourite wife of Ikhnaton (q.v.). She bore 6 daus., and is frequently represented with her husband and children; her name does not appear on monuments later in the reign but it is more probable that she d. than that she was disgraced. The portrait head found at Amarna in 1912 ranks as one of the world's masterpieces, but may be that of one of her daus.

NEGEV. Desert area in S. Israel, lying between Beersheba, where it is c. 40 m. wide, and the Gulf of Aqaba, where it tapers to the port of Eilat; c. 120 m. long; area c. 4,700 sq. m. In ancient times the N. was fertile, and Israel has developed the irrigation begun in the 1930s, notably with a water pipeline (1964) from the Sea of Galilee (Lake Kinnereth). Minerals being exploited incl. oil (1955) at Heletz and copper at Timna, near Eilat. N. is a Hebrew word meaning south or arid.

NEGEV. A giant irrigation pipe.

NEGIGENCE. In law, N. consists in doing some act which a prudent and reasonable man would not do, or omitting to do some act which he would do. N. may arise in respect of a person's duty towards an individual or towards his fellow-men in general. In the first class are such duties as arise from parenthood, guardianship, trusteeship, or a contractual relationship. In the second are the duties owed to the community, such as care upon the public highway, the maintenance of structures in a safe condition, etc. Contributory N. is a defence sometimes raised where the defendant to an action for N. claims that the plaintiff by his own N. contributed to the cause of the action.

NEGRI'N, Juan (1889–1956). Spanish Socialist. A one-time prof. of physiology at Madrid, during the Civil War he became Finance Min. in Sept. 1936, and in May 1937 P.M. of the cabinet which conducted the war for the next 2 years. His govt. was overthrown in March 1939 by a military coup d'état, which was shortly followed by the final Republican surrender. N. escaped to France, and thence to England.

NE'GRI SEMBILAN (sembē'lan). State of the Federation of Malaysia, on the W. side of the Malay peninsula. It came under British rule in 1873 and entered the Federated Malay States in 1895. Its cap. is Seremban, its harbour Port Dickson. The chief

NEGRI SEMBILAN. Most of Malaysia's major cities have a botanical garden. This beautiful lake garden at Seremban is a popular weekend attraction for families.

from butterflies (q.v.) by the absence of a knob on the end of the antennae. When at rest, Ms. commonly hold their wings flat or sloping over the body; butterflies close them vertically. The wings are covered with flat, microscopic scales, but in the bee hawk-Ms. and the clearwings the scales are confined to certain areas. The mouth-parts are formed into a sucking proboscis, and certain Ms. have no functional mouth-parts, and, being unable to feed, rely upon stores of fat and other reserves built up during the caterpillar stage. In many cases the males are smaller and more brightly coloured than the females, and have the antennae branched or comb-like. In other cases, including the vapourer and winter Ms., the females have wings either absent or aborted to minute flaps.

Ms. vary greatly in size: thus the minute Neptulicidae sometimes have a wing-spread less than 3 mm., while the giant Noctuid or owl M., *Erebos agrippina*, measures about 280 mm. (11 in.) across its extended wings. The largest British Ms. are the death's head and convolvulus hawk-Ms., which have a wing-spread ranging from 4½ to 5½ in.

Ms. feed chiefly on the nectar of flowers, on honeydew, and other fluid matter: some, like the hawk-Ms., the Silver Y, and its relatives, frequent flowers and feed while poised with rapidly vibrating wings.

The larvae or caterpillars have a well-developed head, 3 thoracic and 10 abdominal segments. Each thoracic segment bears a pair of short legs, ending in single claws; a pair of sucker-like abdominal feet is present on segments 3 to 6 and 10 of the hind-body. In the family Geometridae the caterpillars bear the abdominal feet only on segments 6 and 10 of the hind-body. They move by a characteristic looping gait and are known as 'loopers' or geometers. Projecting from the middle of the lower lip of a caterpillar is a minute tube or spinneret, through which silk is emitted to make a cocoon within which the change to the pupa or chrysalis occurs. Silk glands are especially large in the silkworm M. Many caterpillars, including the geometers, which are eaten by birds, etc., are protected by their resemblance in both form and coloration

to their immediate surroundings. Others, which are distasteful to such enemies, are brightly coloured or are densely hairy.

Ms. are economically important, owing to the damage caused by the feeding caterpillars, e.g. the winter M. and the codling M., which attack fruit trees; the Mediterranean flour moth, which infects flour mills; and the several species of clothes Ms. At least 100,000 different species of Ms. are known.

MOTLEY, John Lothrop (1814-77). American historian and diplomat. B. in Boston, he was U.S. Min. to Austria 1861-7, and to Britain 1869-70. His masterpiece, *The Rise of the Dutch Republic* (1856), is no longer thought to give a true picture of the period.

MOTOR, Electric. A machine by which electrical energy is converted into mechanical power, which it supplies directly through motor-shaft, gearing, belt-drive, or other form of coupling. The 2 main types are direct-current and alternating-current Ms.

MOTOR BOAT. Small, water-borne craft powered by an internal combustion engine, either of the piston-petrol, compression-ignition oil, or gas-turbine type. Any boat not specially equipped as a M.B. may be converted by a detachable outboard motor. For increased speed, espec. in racing, M.B. hulls are designed to skim the water and reduce frictional resistance. Plastics, steel, and light alloys are now used in construction as well as the traditional wood. In recent designs, drag is further reduced with hydrofins and hydrofoils, which enable the hull to rise clear of the water, at normal speeds. Notable events in M. or 'power-boat' racing incl. the American Gold Cup (1947) over a 90 m. course, and the Round-Britain race (1969).

MOTOR CAR. A self-propelled vehicle able to be run and be steered on normal roads. Although it is recorded that in 1479 one Gilles de Dom was paid 25 livres by the treasurer of Antwerp, for supplying such a vehicle, the 'father of the automobile' is generally agreed to be N. Cugnot's cumbrous steam carriage (1769), still preserved in Paris.

Steam was an attractive form of power to the

and for nearly 2 years blockaded Toulon. When in 1805 Villeneuve eluded him, N. pursued him to the W. Indies and back, and on 21 Oct. totally defeated the combined French and Spanish fleets off Cape Trafalgar, 20 of the enemy ships being captured. N. himself was mortally wounded; his body was brought to England, and buried in St. Paul's.

NELSON. English industrial town (bor.) in Lancs, about 24 m. N. of Manchester. Pop. (1961) 31,950.

NELSON. Town in South Is., New Zealand, situated on Tasman Bay, with an excellent harbour. It has an airport, saw mills, fruit-canning plants, etc. Pop. (1967) 28,100.

NE MATODA. Phylum covering round or thread worms.

NEMERTĒA. A group of unsegmented worms, allied to the Platyhelminthes. They are ribbon-shaped and mostly marine.

NE MESIS. Greek goddess of retribution. She punished certain moral faults, esp. *hybris*, the arrogant self-confidence which, more than other crimes, excited the hostility of the gods.

NEMI (nā'mē). Lake occupying an extinct volcanic crater in the Alban Hills, some 18 m. S.E. of Rome, near Aricia. Nearby are the sacred woods and ruins of a famous temple of Diana. Two pleasure barges belonging to Caligula were raised from the bed of the lake, 1930-1; they were burned by the Germans in 1944. A village called N. stands on a hill above the lake, pop. 1,200.

NENNIUS (fl. 796). Welsh chronicler, believed to be the author of a Latin *Historia Britonum*, which contains the earliest reference to King Arthur's wars against the Saxons.

NEOLITHIC or New Stone Age. See **STONE AGE**.

NEON (Gk. *neos* new). Chemically inert gas, discovered by Ramsay and Travers in 1898: symbol Ne, at. wt. 20.183, at. no. 10. Present in the atmosphere in the proportion 18 parts per million by volume, it is extracted by liquefaction and fractional distillation. It glows bright orange-red in a discharge tube, e.g. its use in advertisement signs. N. is also used in electronics.

NEO-PLASTICISM. A geometric-abstract movement in painting, sculpture, poster design, and interior decoration, founded by Piet Mondrian.

NEO-PLATONISM. Philosophical system, based on the doctrines of Plato and beliefs adopted from Oriental religions, which developed in the 3rd cent. at Alexandria, and was 1st fully expounded by Plotinus. Its principal doctrine is the attainment of unity with the Deity through purifying ascetic practices. Under Porphyry, N. became the great opponent of Christianity, and its supremacy was almost secured by the advocacy of the emperor Julian. It ceased to exist as an independent system in the 6th cent., but it greatly influenced Augustine, and the whole tradition of Christian mysticism.

NEPAL (nepawl'). An independent kingdom in the Himalayas, bounded on the N. by Tibet, on the E. by Sikkim, and on the S. and W. by India. It is composed of the Tarai, a level strip of land along its S. border, and the Himalayan slopes to the N. culminating in Everest (29,028 ft.), Kanchenjunga (28,146 ft.), and other immense border peaks, which determine the courses of the 4 groups of rivers that divide the country. Katmandu, the cap., stands in the chief valley; it is linked by air with Calcutta. The people are mixed Mongols, Gurkhas (q.v.) being dominant. Sanatan, an ancient form of Hinduism, and Buddhism are the prevailing religions. The effective ruler of N. from 1846 was the hereditary P.M. always a member of the Rānā family; a revolution in 1950 restored power to the king, and a new constitution (1962) provided for a single-chamber national panchayat (council), indirectly elected by local panchavats. All political parties are banned, but under stress of

pro-Chinese Communist activities, the Nepali Congress dropped 1968 the demand for democratic govt. Major hydro-electric projects power new industries, e.g. chemicals, leather goods, synthetic textiles, iron and steel, and jute and sugar. India and U.S.A. are aiding construction of a 640 m. E.-W. highway. Area 54,000 sq. m.; pop. (1967) 10,500,000.

NEPHRITIS. Inflammation of the substance of the kidney; Bright's disease. It is sometimes due to cold or pregnancy, but more commonly to infection by a streptococcus, the colon bacillus, or tuberculosis. The 1st symptoms are usually dropsy, an accumulation of fluid under the skin all over the body, back pain, and fever. The degree of illness varies; it may be quickly fatal or not very incapacitating. The principal complication is uraemia (q.v.). Treatment is by rest, purgation, and vapour baths.

NE'PTUNE. Roman god of the sea. Most of his myths are borrowed from the Greek stories of Poseidon. According to these, N., Zeus (Jupiter), and Hades (Pluto), the sons of Cronus, dethroned their father and divided his realms, N. taking the sea.

NEPTUNE. The outermost of the giant planets. It is 2,793,000,000 miles from the Sun, and has a revolution period of 164.8 years. Its diameter is 30,500 miles, and in every respect it seems to be similar to Uranus: it is however considerably fainter, and is not visible to the naked eye. N. was discovered in 1846 by J. Galle and H. d'Arrest at Berlin, after calculations by U. Le Verrier (Fr.) and J. C. Adams (Brit.) indicated its probable position. The surface temperature has been est. at -184°C , and the atmosphere appears turbulent. There is an outer satellite with a very eccentric orbit, and an inner one—Triton—which revolves in a retrograde direction at about the same distance as the Moon from Earth.

NEPTŪNIUM. Transuranic element, symbol Np, at. wt. 237, at. no. 93. It is produced in atomic reactors as an intermediate in making plutonium. U-238 absorbs a neutron to become U-239 which emits a beta-ray from its nucleus thus turning into Np-239 with a half-life of 2.3 days.

NEREIDS (nē'rē-ids). In Greek mythology, minor goddesses of the sea, one of the classes of nymphs. They sometimes mated with mortals, as in the case of Thetis, who bore Achilles.

NE'RGAL. A Babylonian and Assyrian sun-god; he was also the god of war and pestilence, and ruler of the underworld. He was symbolized in sculpture by a winged lion.

NERI, St. Philip (1515-95). Italian ecclesiastic. B. in Florence, in 1533 he went to Rome, where he devoted himself to good works. Ordained a priest in 1551, he organized the Congregation of the Oratory, and built the oratory over the church of St. Jerome, where prayer meetings were held, and scenes from the Bible were performed with music—hence *oratorio*. He was canonized in 1622.

NERINA (nerē'na), Nadia. Professional name of S. African dancer Nadine Judd (1927-). With the Royal Ballet 1952-69, she possessed lyric fluency, excelling in roles such as Aurora in *The Sleeping Beauty*.

NERO (A.D. 37-68). Roman emperor, whose full name was N. Claudius Caesar Drusus Germanicus. The son of Domitius Ahenobarbus and Agrippina, he was adopted by his stepfather, Claudius, and succeeded him as emperor in 54. He has become proverbial for cruelty and debauchery, and is said to have murdered Claudius's son, Britannicus, his mother, his wives, Octavia and Poppaea, and many others. He was a poet and an enthusiast for art, and himself appeared on the public stage as an actor and singer. After the great fire of Rome in 64, he persecuted the Christians, who were suspected of causing it, while an aristocratic conspiracy against him in 65 led to the execution or suicide of Seneca, Lucan, and many others. A military revolt followed in 68; the

served in the F.W.W. After holding destroyer commands 1939–41 he was appointed Chief of Combined Operations in 1942 and C-in-C. in S.E. Asia in 1943. He was responsible for the reconquest of Burma in 1944–5, and received the surrender of the Japanese S. armies at Singapore in Sept. 1945. He succeeded Lord Wavell as last Viceroy of India in March 1947, and on the transfer of power in Aug. became the 1st Gov.-Gen. of the Dominion of India until June 1948. Promoted Admiral of the Fleet in 1956, he was First Sea Lord 1955–9, and Chief of U.K. Defence Staff 1959–65, and Gov. of the Isle of Wight from 1965. He received a viscounty 1946, earldom 1947, and O.M. 1965. In 1922 he m. Edwina Ashley (1901–60), the elder dau. of the 1st baron Mount Temple.

MOUNTEVANS, Edward Ratcliffe Garth Russell Evans, 1st baron M. (1881–1957). British admiral. Joining the Antarctic Expedition of 1909, he took command after the death of Scott and wrote *South with Scott* (1921). In 1917 as commander of H.M.S. *Broke* he joined with H.M.S. *Swift* in the destruction of 6 German destroyers and was popularly known as 'Evans of the *Broke*'. He was created baron in 1945.

MOUNT VERNON. Village in Virginia, U.S.A., on the Potomac, 16 m. S. of Washington, D.C. The estate and house here which belonged to the Washington family, and was owned by George Washington from 1752 until he died there, 1799, is preserved as a national monument.

MOUSE. Small rodent of the Muridae family. The house M. (*Mus musculus*) is universally distributed; 3 in. long, with naked tail of equal length, with grey-brown body, it nests in paper and straw. Commonly found in Britain are the long-tailed field M. (*Apodemus sylvaticus*), richer in colour, and the harvest M. (*Micromys minutus*), 2½–3 in. long. In the U.S.A. are found the short-tailed meadow M. (*M. riparius*), and the common white-footed M. (*Peromyscus americanus*) with rich fawn upper parts and snowy-white underparts and feet.

MOUTH. The cavity enclosed by the jaws, cheeks and palate. It is the outer end of the digestive and the respiratory tracts, and in addition to its part in masticating food, and in breathing, has a highly specialized mechanism for producing significant sounds. It is also largely responsible for facial expression, and plays a part in sexual activity. At the back of the M. is a passage (isthmus of the fauces) bounded on each side by 2 folds called the pillars of the fauces; between each pair of folds is one of the tonsils.

MOUTH ORGAN. See HARMONICA.

MOW'NER, Edgar Ansel (1892–). American newspaper columnist, author of *Germany Puts the Clock Back* (1932) and *An End to Make-Believe* (1961).

MOYNE (moin), Walter Edward Guinness, 1st baron M. (1880–1944). British Cons. politician. A son of the 1st Lord Iveagh, he was Min. of Agriculture 1925–9, and Col. Sec. 1941–2. Appointed resident Minister in the Middle East in 1944, he was assassinated in Cairo by members of the 'Stern Gang' of Jewish Zionists.

MOZAMBIQUE (mōzambék'). Country of E. Africa, formerly a Portuguese colony, made an overseas prov. in 1951. M. was discovered by Vasco da Gama in 1498, and first colonized by the Portuguese in 1505. Since 1954 it has been divided into 9 districts: there is a govt. council (officials plus elected representatives of commercial, industrial and agricultural interests) and executive council. A nationalist organization Frente de Libertação de Moçambique (Frelimo), operating from Tanzania, began guerrilla warfare in 1964. The cap. is Lourenço Marques. The principal rivers are the Zambezi and Limpopo. The chief products are sugar, cotton, maize, copra, sisal, and beeswax; coal, gold, silver, uranium, and asbestos deposits exist. Area 297,729 sq. m.; pop. (1965) 6,956,000.

MOZART (mō'sahrt), Wolfgang Amadeus (1756–91). Austrian composer. B. at Salzburg, he showed astonishing precocity, and was trained by his father, Leopold M., who was also a professional musician and composer. With his sister, Maria Anna, he was taken on a number of tours (1762–79) in the course of which they visited Vienna, the Rhineland, Holland, Paris, London, and Italy. Young M. not only gave public recitals, but had already begun to compose a considerable amount of music. In 1770 he was appointed master of the archbishop of Salzburg's court band. He found the post uncongenial, as he was treated as a mere servant, and in 1781 he was suddenly dismissed. From then on he lived mostly in Vienna, and m. Constanze Weber in 1782. He supported himself as a pianist, composer, and teacher, but his lack of business acumen often rendered his existence a hard struggle. He composed prolifically, his works including 25 piano concertos, 25 string quartets, 40 violin sonatas; 49 symphonies, of which the most important are the E flat, G minor, and C major ('Jupiter') symphonies, all composed in 1787; a number of operas, including *Idomeneo* (1781), *Il Seraglio* (1782), *The Marriage of Figaro* (1786), *Don Giovanni* (1787), *Così fan tutte* (1790), and *The Magic Flute* (1791), and much other music. His Requiem was left unfinished at his death, and subsequently completed by a pupil. The composer had been in failing health, and regarded its commission (made by an eccentric nobleman in mysterious circumstances) as an evil omen. See illus. p. 763.

MTWARA. Seaport of Tanganyika; E. Africa, cap. of Southern prov., on Mtwara Bay. Opened in 1954, M. was the only deep-water port between Mombasa and Durban. It has an airport. Pop. (1968) 20,500.

MUCOUS (mū'kus) **MEMBRANE**. A thin skin containing cells which secrete mucus, a moistening and lubricating fluid. It is found on all internal surfaces of the body, such as the eyelids, breathing and digestive passages, and genital tract.

MUDFISH. N. American fish (*Amia calva*) having a highly developed air-sac, enabling it to live out of water for some time. The name is also applied to the lung-fish of the order Dipnoi.

MUDIE (mū'di), Charles Edward (1818–90). British publisher, who founded in 1842 M.'s lending library, which in Victorian days achieved outstanding success, but was closed in 1937.

MUEZZIN (mōō-ez'in). Mohammedan official who calls the faithful to prayer from the minaret or from the side of a mosque.

MUFTI (Arabic, a magistrate). Mohammedan official who expounds the Islamic law. In Turkey the Grand Mufti had supreme spiritual authority in the state, but this office was abolished in 1924 after Turkey had been proclaimed a republic.

MUFTI OF JERUSALEM. Arab religious and political leader. Haj Amin el-Husseini (1899–), who was elected M. in 1921, assisted the Nazis in their subversive agitation in the Middle E. during the S.W.W., and subsequently directed anti-Zionist activities. Sought as a war criminal, and found but not arrested in Baghdad and Cairo, he now lives in Beirut.

MUGGERIDGE, Malcolm (1903–). British journalist, editor of *Punch* 1953–7, and known for his controversial views on the monarchy.

MU'GWUMP. In U.S. political history Republican who voted for Cleveland, the Democratic candidate, rather than their own, hence 'non-party or neutral'. From Algonquian Indian 'chief'.

MUIR (mūr), Edwin (1887–1959). British writer. B. in Orkney, he became a clerk, then a journalist, and lived in Prague 1921–31. He translated the novels of Kafka (with his wife, Willa Anderson, whom he m. in 1919); wrote novels such as *The Three Brothers* (1931), criticism such as *The Structure of the Novel* (1928), and was a distinguished poet, e.g. *First Poems* (1925),

1,800 people and ruined for several years acres of fertile soil—has been completed, linking Walcheren with N. and S. Beveland. The E. Scheldt Bridge (1965) linking Noord-Beveland and Schouwen-Duiveland is Europe's longest, and an integral part of the plan. The whole Delta scheme, with a sea wall linking Walcheren in the S. to a point W. of Rotterdam in the N., was planned for completion by 1978.

ECONOMIC LIFE. Both industry and agriculture are thriving. Agriculture concentrates on cattle breeding and the export of cheese, butter, flower bulbs, and vegetables. The chief crops are rye, potatoes, oats, and sugar beet. Industrial activities incl. shipbuilding; the manufacture of textiles, earthenware, cigars, spirits, paper, electrical equipment, margarine, chemicals; iron and steel goods; the cutting and polishing of diamonds, etc.; refining of petroleum. Coal is mined in Limburg; petroleum (discovered in 1943) is worked; salt is extracted at Hengelo in Overijssel; a huge deposit of natural gas, discovered in 1962, exists in Groningen. Shipping and fishing are of great importance, and there is a large trade with Germany, Belgium, and the U.K. Amsterdam and Rotterdam are among the most important commercial centres of Europe.

The N. is covered by a network of canals, the larger constructed as a means of transport, many others (some very small) used for drainage. The North Sea Canal (linking Amsterdam with the N. Sea), and the New Waterway (running between Rotterdam and the Hook of Holland), can take ocean-going vessels. The state-controlled railways are electrified. Dutch airlines cover the whole world.

AREA AND POPULATION. Area 13,551 sq. m.; incl. gulfs and bays, 15,771 sq. m.; pop. (1968) 12,676,000, incl. some 300,000 Eurasians of Dutch-Indonesian blood, as well as Amboinese soldiers in the Dutch service, who were absorbed 1949–64. The main towns are Amsterdam (the commercial cap.), Rotterdam, The Hague (the admin. cap., chief residence of the royal family, and seat of parliament and the govt.), Utrecht, Haarlem, Eindhoven, Groningen, Tilburg, and Nijmegen. The Roman Catholics form the largest single religious group, and preponderate in the S., but over the whole of the country they are outnumbered by Protestants, the majority of whom are members of the Dutch Reformed Church, to which the royal family belongs; Calvinists are also numerous. The standard of educ. is high. There are 5 public univs., at Leiden (1575), Groningen (1614), Utrecht (1636), Amsterdam (1877), and Rotterdam (1966); 2 religious and 6 technical.

GOVERNMENT. The N. is a constitutional monarchy under the house of Orange. Legislative powers are exercised by the 2 chambers of the States-General, and there is also an advisory Council of State under the presidency of the sovereign. Members of the 1st (upper) chamber (Senators) are elected for 6 years (half retiring every 3 years) by the members of the provincial states; members of the 2nd chamber (Deputies) are directly elected for 4 years by universal suffrage on a system of proportional representation.

For the history and status of the Dutch colonial empire, see **INDONESIA**; **NETHERLANDS ANTILLES**; **NETHERLANDS EAST INDIES**; **NEW GUINEA**; **SURINAM**.

History. In Roman times the country S. of the Rhine was brought under Roman rule. The Franks followed, and their kings subdued the Frisians and Saxons N. of the Rhine in the 7th–8th cents., and imposed Christianity on them. After the break-up of the Frankish Empire the local feudal lords, headed by the count of Holland and the bishop of Utrecht, achieved practical independence, although nominally owing allegiance to the Holy Roman Empire. Many Dutch towns during the Middle Ages became prosperous trading centres, usually ruled by a merchant oligarchy. In the 15th cent. the whole of the Low

Countries (present-day N. and Belgium) passed to the dukes of Burgundy, and thence to the Habsburgs and Spain.

In the 16th cent. the religious and secular tyranny of Philip II of Spain led to general revolt in the whole of the Netherlands, in which William the Silent, Prince of Orange (1533–84), and his sons Maurice (1567–1625) and Frederick Henry (1584–1647) were the guiding spirits. The south was re-conquered by Spain, but not the north, and at last in 1648 the independence of the north as the Dutch Rep. was recognized under the Treaty of Westphalia (or Munster). The rep., estab. in 1581 as the United Provs., was a confederacy of sovereign provs., and it had become customary to elect the Prince of Orange for the time-being as chief officer (Stadholder) and commander-in-chief for the confederacy. A long struggle took place between the Orangist or popular party, which favoured centralization, and the oligarchical or 'states' rights' party. The oligarchs, headed by De Witt, seized control in 1650, after the death of Frederick Henry, and abolished the stadholderate. Despite the continuing war of independence, during the early 17th cent. the Dutch led the world in trade, in art and in science, and founded an empire in the E. and W. Indies. Commercial and colonial rivalries led to naval wars with England in 1652–4, 1665–7, and 1672–4.

The French invasion of 1672 enabled William of Orange (William III of England) to recover the stadholderate, and thenceforward until 1713 Dutch history was dominated by the struggle with Louis XIV. These wars exhausted the N., which in the 18th cent. ceased to be a great power. The French revolutionary army was welcomed in 1795. In 1806 Napoleon created his brother Louis king of Holland, and in 1810 annexed the country to France. In 1814 the north and south Netherlands were once more united under King William I (son of Prince William V of Orange); but the S. broke away and in 1839 was recognized as independent (see under **BELGIUM**). A liberal constitution was granted in 1814, and the Crown assumed a constitutional position. The sovereigns have been: William I (reigned 1814–40), William II (1840–9), William III (1849–90), Queen Wilhelmina (1890–1948), and Queen Juliana, who succeeded on her mother's abdication in 1948. Universal suffrage was granted in 1917. The N. were occupied by the Germans 1940–5, while Queen Wilhelmina and her govt. took refuge in London.

Art. With the rise of the Dutch nation in the second half of the 16th cent. came the full emergence of Dutch art with Frans Hals, Pieter Lastman (1585–1633) – the teacher of Rembrandt – and Gerard van Honthorst. Among the many masters of the 17th cent. are Rembrandt and his pupil Gerard Douw; Adriaen van Ostade, who transplanted Flemish peasant scenes; Gerard Ter Borch the Younger, first painter of characteristic Dutch interiors; Albert Cuyp; Jan Steen; Jakob van Ruysdael, greatest of the landscapists; Pieter de Hooch; Jan Vermeer van Delft; Willem van de Velde, sea painter to Charles II of England; Jan van der Heyden; and Meindert Hobbema. The houses, market and town halls of this period were also a consummate expression of the Dutch genius.

In the 18th and 19th cents. there was a marked decline, except for the genre painters Cornelis Troost (1697–1750) and Jozef Israëls (1824–1911), and the outstanding genius of Vincent van Gogh.

Language. A branch of the West Germanic, or, more specially, the German division of the Germanic languages (q.v.), and like Flemish (q.v.) an offshoot of Low Franconian, which is known from c. 800. D. is the official language of the Netherlands, whence it spread to the D. colonies; whilst in S. Africa 'Cape Dutch' developed into a language of its own, called Afrikaans (q.v.).

of the dukes of Wittelsbach in the 13th cent. M. was the scene of the Nov. revolution of 1918, the 'Soviet' rep. of 1919, and the Hitler putsch of 1923. It became the centre of the Nazi movement, and the Munich Agreement of 1938 was signed here. During the S.W.W. parts of the town were completely destroyed by bombing. Pop. (1966) 1,235,600.

MUNICH AGREEMENT. The agreement between Britain, France, Germany, and Italy, signed by Chamberlain, Daladier, Hitler, and Mussolini, at Munich on 29 Sept. 1938, whereby the Sudeten-German dists. of Czechoslovakia were ceded under duress by that country to Germany without a plebiscite. Although the signatories all guaranteed the new Czechoslovak frontiers, Hitler seized the rest of the country in March 1939.

MUNKÁCSY (moön'kahchē), Mihály. Assumed name of the Hungarian painter Michael Lieb (1844–1900). B. at Munkács, he settled in Paris, and became famous for his genre and historical pieces, and such works as 'Last Day of a Condemned Prisoner' and 'Milton Dictating *Paradise Lost* to his Daughters'.

MUN'NINGS, Sir Alfred (1878–1959). British sporting artist. B. at Mendham, Suffolk, he studied at Norwich and Paris, and in the F.W.W. was official artist to the Canadian Cavalry Brigade. Among his best-known pictures of racing and hunting incidents are 'Epsom Downs, City and Suburban Day' (Chantry Bequest) and 'The Edge of the Wood' (Manchester Art Gallery). P.R.A. 1944–9, and knighted in 1944, he was famed for his outspoken dislike of 'modern art'.

MUNRO', Hugh Hector. See SAKI.

MUNSTER. A prov. of Rep. of Ireland, containing the cos. of Clare, Cork, Kerry, Limerick, Tipperary, and Waterford. M. was a kingdom until the 12th cent. Area 9,316 sq. m.; pop. (1966) 859,316.

MUNSTER. Town of N. Rhine-Westphalia, Germany, on the Dortmund-Ems Canal; formerly the cap. of Westphalia. The Treaty of Westphalia was signed simultaneously here and at Osnabrück in 1648. Seat of a univ. (1773) M. makes wire, cement, and iron goods and has breweries and distilleries. Damaged in the S.W.W., its ancient buildings, incl. the 15th cent. cathedral and town hall, have been restored. Pop. (1966) 200,300.

MUNTERNIA. Rumanian name of WALLACHIA.

MUNTHER (moon'te), Axel (1857–1949). Swedish writer. He became physician to the king of Sweden in 1903, and to the queen in 1908, but retired to live in the house called San Michele, on Capri. His celebrated *Story of San Michele* (1929) traces the history of his home.

MUNTJAC (-jak). Small deer (*Cervulus muntjac*) found in S.E. Asia. The buck has short spiked antlers, and two sharp canine teeth forming tusks.

MURAL PAINTING. (Lat. *murus*, wall). The decoration of walls, and, by extension, of vaults and ceilings, by means of fresco, oil, or encaustic methods. See ENCAUSTIC; FRESCO; and TEMPERA.

MURASAKI SHIKIBU (moorahsah'kē shik'iboo) (978–c. 1015). Japanese author, whose real name is unknown. Her greatest work is the *Tale of Genji*, the earliest realistic Japanese novel.

MUNICH. Snow lends enchantment to the neo-Gothic town hall on the Marienplatz. Designed by George Bauberrisser and built 1867–1908, it has a slender tower 280 ft. high, and the façade is decorated with statues of the dukes and electors of Bavaria. Courtesy of the German Tourist Information Bureau.

MURAT (mūrah'), Joachim (1767–1815). King of Naples. The son of an innkeeper, he rose rapidly in the French Army through the friendship of Napoleon, and won the reputation of a dashing cavalry commander. He was made king of Naples by Napoleon in 1808, but deserted him in 1813 in the hope that the Allies would recognize him. In 1815 he attempted unsuccessfully to make himself king of all Italy, and when he landed in Calabria in an attempt to recover the throne he was captured and shot.

MURATORI (moorahtō'rē), Ludovico Antonio (1672–1750). Italian scholar. B. at Vignola, he entered the Church, and in 1700 became keeper of the archives at Modena. He pub. works on Italian history, and discovered the Muratorian Canon, a 2nd cent. document giving the oldest known list of books of the N.T. in order.

MURCIA (moor'thē-ah). Cap. of the Spanish prov. of M. on the Segura, 28 m. N.N.W. of Cartagena. The seat of a univ., M. was founded in 825 on the site of a Roman colony by Abd-ur-Rahman II, caliph of Cordoba; it has a 14th cent. cathedral; silks, metals, and glass are manufactured. Pop. (1965) 259,267.

MURDER. The unlawful killing of one person by another, who is of sound mind, has reached years of discretion, and acts with malice aforethought, express or implied.

MURDOCH (mer'dok), Iris (1919–). British novelist. B. in Dublin, she specializes in the chess-board intricacies of the adventures of a number of unconventional-type lovers, conveyed in witty prose with a degree of fantasy. Her books incl. *Under the Net* (1954), *The Sandcastle* (1957), *A Severed Head* (1961); dramatized by Priestley in collaboration with M. in 1963, and *An Unofficial Rose* (1962). A student of philosophy, she became in 1948 fellow of St. Anne's Coll., Oxford, and pub. in 1953 *Sartre, Romantic Rationalist*. She m. in 1956 J. O. Bayley.

MURDOCK, William (1754–1839). Scottish inventor. B. at Auchinleck, Ayrshire, in 1792 he first used coal-gas to illuminate his house and offices in Redruth, and in 1797 and 1798 he held public demonstrations of his invention.

MURGER (mürzhār), Henri (1822–61). French writer. B. in Paris, he studied painting, and in 1848 pub. *Scènes de la Vie de Bohème*, which formed the basis of Puccini's opera, *La Bohème*. He d. of overwork and dissipation.

MÜRILLÖ, Bartolomé Estéban (1617–82). Spanish painter. B. at Seville, in 1642 he went to Madrid, where he was befriended by Velasquez, then at the height of his fame. After his return to Seville in 1645 he received many important commissions, and founded the academy there (1660). One of the leading painters of the Spanish school, he is famed for his religious and genre pictures.

MURMANSK. Seaport of the Russian S.F.S.R., on the Barents Sea. It is the only port on the Arctic coast of Russia which is ice-free at all times of the year. M. is cap. of M. region, which is coterminous with the Kola peninsula. It is linked with Leningrad by railway, and after the entry of Russia into the S.W.W. in 1941, supplies from Britain and later from the U.S.A. were unloaded at M. Pop. (1967) 279,000.

MURNAU (moor'now), F. W. Pseudonym of the German film director Friedrich Wilhelm Plümpe (1889–1931). His 'subjective' use of a moving camera to tell the story, through expressive images and without subtitles, in *The Last Laugh* (1924) made him famous. After making *Faust* (1926), M. went to the U.S.A., where his films incl. *Sunrise* (1927) and *Tabu*, filmed in Tahiti in 1931.

MURRAIN. See FOOT AND MOUTH DISEASE.

MURRAY, Gilbert (1866–1957). British scholar. B. in Sydney, N.S.W., he was taken to England in 1877, and was prof. of Greek at Glasgow univ. 1889–99 and

hours, but any prisoners carried must be released. Any violation of N. may be resisted by force. The problem of the rights of neutral goods on belligerent vessels, and vice versa, has been a frequent source of international controversy. An attitude of active sympathy towards a belligerent, known as 'benevolent N.' or 'non-belligerence', is often adopted in practice, although unwarranted by international law; e.g. the attitude of the U.S.A. to Britain 1939-41.

NEUTRINO (nūtrē'nō). A very small uncharged fundamental particle (see **ATOM**) of minute mass, very difficult to detect and of great penetrating power, emitted in all radioactive disintegrations which give rise to beta rays. All reactors emit numbers of Ns.

NEUTRON (nū'trōn). A nuclear particle having no electric charge and the approximate mass of a hydrogen nucleus. It is found in the nuclei of atoms and plays a vital part in nuclear fission. Outside a nucleus a N. is radioactive, decaying with a half-life of about 12 min. to give a proton and an electron.

NEVADA (nēvā'h'dah). One of the western states of the U.S.A., lying within the Great Basin between

NEVADA. The Comstock Lode, one of the richest-ever deposits of silver, was discovered in 1859, and a U.S. branch mint was established at nearby Carson City in 1866. The building seen here was in use for this purpose 1870-93, but became the Nevada State Museum in 1957.

Courtesy of the Nevada State Museum, Carson City.

the Rockies and Sierra Nevada, forming a plateau (average alt. 5,500 ft.) crossed by mountain ranges and intervening valleys. The climate is arid and the soil barren. The Humboldt and its tributaries provide enough irrigation to permit limited agriculture, but the mining of copper, lead, silver, gold, etc., is more important. Its easy divorce law (only 6 weeks' residence necessary) brought it its widest fame. The cap. is Carson City, but the fastest-growing town is Las Vegas. Area 110,540 sq. m.; pop. (1960) 285,278.

NEVERS (nēvār). Cap. of Nièvre dept., France, on the Loire, about 135 m. S.S.E. of Paris. The cathedral was started in the 11th cent., finished c. 1500. Pop. (1962) 41,051.

NEVILLE'S CROSS. Battle fought near Durham between King David Bruce of Scotland and the English under William de la Zouch, archbishop of York, on 17 Oct. 1346. David was taken prisoner.

NEVINS, Allan (1890-). American historian. Prof. at Columbia 1931-58 and Oxford from 1964, he pub. lives of Frémont, Cleveland, and J. D. Rockefeller, and *America, the Story of a Free People* (1944), written in collaboration with H. S. Commager.

NEW AMSTERDAM. Town in Guyana, on the Berbice, founded by the Dutch. Pop. (est.) 10,000. See also **NEW YORK**.

NEWARK. Largest city of New Jersey, U.S.A., on the Passaic, 8 m. W. of Manhattan. Its main products are electrical equipment, machinery, fountain pens, chemicals, paints, canned meats. N. dates from 1666, when a settlement called Milford was made on the site. Pop. (1960) 405,220.

NEWARK. English market town (bor.) in Notts, on the r. Trent. It contains the ruins of a 12th cent. castle, in which King John d. in 1216. There are engineering industries, and a flourishing trade in corn, cattle, wool, etc. Pop. (1961) 24,610.

NEWBOLT, Sir Henry John (1862-1938). British poet. A barrister 1887-99, he was an authority on naval matters, e.g. *The Year of Trafalgar* (1905) and *A Naval History of the War* (1920) on the F.W.W. His *Songs of the Sea* (1904) and *Songs of the Fleet* (1910) were set to music by Stanford.

NEW BRITAIN. Largest island in the Bismarck Archipelago, W. Pacific, off the N.E. coast of New Guinea (q.v.), and forming part of the Australian New Guinea trust territory. N.B. has a number of active volcanoes, including Father (7,500 ft.), which is the highest peak. The chief town is Rabaul, and the main products are cocoa and copra. Area, incl. the adjacent islands, 14,100 sq. m.; est. pop. (1966) 148,817 (incl. c. 5,000 non-indigenous).

NEW BRUNSWICK. Eastern maritime prov. of Canada, to the N.W. of Nova Scotia. Its sea coast is more than 500 m. long, and there are many bays and harbours. It is undulating country, with hills which rise no higher than 900 ft. above sea-level. Of the many rivers, the most important are the St. John and the St. Croix, both of which flow into the Bay of Fundy. There are also many lakes, the largest being the Grand Lake (67 sq. m.). With large forests in the interior, lumbering is of great importance. The soil is fertile, and wheat, potatoes, oats, and turnips are grown. Fredericton is the cap.; St. John, the chief port, and Moncton are other towns. The chief industries are paper manufacture, saw milling, fishing and fish curing, and mining (lead, zinc, copper), and oil and natural gas.

Discovered by Cartier in 1534, N.B. was first explored by Champlain in 1604 and remained a French colony until, as part of Nova Scotia, it was ceded to England in 1713. It was separated from Nova Scotia in 1784. It is governed by a Lieut.-Gov. with a Legislative Assembly elected for 5 years by adult suffrage. Area 28,335 sq. m. (incl. 519 sq. m. of water); pop. (1966) 616,788.

NEW BUKHARA. See **BUKHARA**.

NEWBURY. English market town (bor.) in Berks, on the Kennet, 16 m. S.W. of Reading. Aircraft, bricks and tiles, chemicals, are made. During the Civil War 2 battles were fought near N., in 1643 and 1644. Pop. (1961) 20,386.

NEWBY, Percy H(oward) (1918-). British novelist. Lecturer in English at Cairo 1942-6, he joined the B.B.C. 1949, and became Controller, Third Programme, 1958. His subtle novels incl. *Something to Answer For* (1968), awarded the first Booker McConnell prize of £5,000 in 1969.

NEW CALEDONIA. French overseas territory in the S. Pacific, situated between Australia and the Fiji Is. Nouméa is the capital. N.C. was discovered by Cook in 1774, and became French in 1853. Area, including dependencies, c. 8,000 sq. m.; pop. (1964) 89,000 (incl. 34,000 Europeans).

NEWCASTLE, Thomas Pelham-Holles, duke of (1693-1768). British Whig politician. He was Sec. of State 1724-54, and then P.M. during the Seven Years War, until 1762, although Pitt was mainly responsible for the conduct of the war.

NEWCASTLE, William Cavendish, duke of (1592-1676). English Royalist. He commanded the king's forces in the N. during the Civil War until 1644, when he was defeated at Marston Moor. He then withdrew

Elizabethan age in England was spec. notable for the flowering of the secular madrigal, and produced such great names as Thomas Morley, Orlando Gibbons, etc.

The beginning of the 17th cent. saw a remarkable development, arising from the ideas of the Florentine Academy, a group of artists and literary men who wished to revive the principles of Greek tragedy. This led to the invention of dramatic recitative, and the beginning of opera. The 1st great operatic composer was Monteverdi (1567–1643), but before the end of the cent. the form had evolved further in the hands of Alessandro Scarlatti in Italy, and Lully in France. In England a promising start was made by Purcell, but was ended by his premature death which marked a decline in English music. The 17th cent. was also important for the emancipation of instrumental music from purely vocal forms.

The early 18th cent. is dominated by the great figures of J. S. Bach and Handel. The former, perhaps the greatest of all composers, though comparatively neglected in his own day, possessed a complete mastery of harmony and counterpoint, and has exercised a far-reaching influence on the subsequent development of music. Handel is most noteworthy for his magnificently dramatic oratorios, but had at 1st written operas based on Italian models, which had then hardened into lifeless conventionality. However, against this, Gluck later exhibited an important reaction.

Bach's great achievements had been in the handling of contrapuntal forms, but the next generation, incl. his own sons, C. P. E. Bach and J. C. Bach, reacted against this way of writing, and began the development of sonata-form, which is the basis of the 'Classical' sonata, quartette, and symphony. In these fields perfection of style was reached by the Viennese school of Haydn and Mozart, who were followed by the commanding figure of Beethoven. With the latter, music assumed dynamic and expressive functions hitherto undreamed of, and the way was opened for the Romanticism of the 19th cent.

'Romantic' music, represented in its earlier stages by Schubert, Schumann, Mendelssohn, Chopin, and Weber, tended to be subjectively emotional. The resources of orchestral colour were increasingly exploited – particularly by Berlioz – and harmony became more and more chromatic in character. National characteristics also became prominent. Thus we have the intense Polish nationalism of Chopin, and the exploitation of Hungarian-gypsy music by Liszt. National schools of composers, such as the Russian, represented by Rimsky-Korsakov, Borodin, Mussorgsky, and, less typically, by Tchaikovsky; the Czech, represented by Dvořák and Smetana, and the Norwegian, represented by Grieg, also emerged. The most revolutionary changes were brought by Wagner into the field of opera, though the traditional Italian lyricism was still perpetuated in the line of Rossini, Verdi and Puccini. Wagner's contemporary, Brahms, stood for Classical discipline of form, though in other respects, he, too, is deeply Romantic in feeling. The Belgian, César Franck, though he went far in the development of chromaticism, also renewed the tradition of polyphonic writing.

At the turn of the cent. there was a certain reaction against Romanticism and a tendency to experiment, which 1st became apparent in the French 'Impression-

MOZART
Mozart Museum, Salzburg.

ist' school, which incl. Debussy and Ravel. In Austria and Germany, Bruckner, Mahler and Richard Strauss, the last great representatives of Romanticism, were succeeded by the highly intellectual 'Atonal' school of Schönberg, Webern and Berg. Other experiments have incl. the 'Neo-Classicism' of Stravinsky, Bartók and Hindemith, and the work of the French group known as *Les Six*, which incl. Francis Poulenc and Darius Milhaud. The works of the Jewish composer, Bloch, are often influenced by Hebrew tradition. Sibelius's music blends Romanticism with a certain northern austerity.

The revival in British music begun by Sullivan, Stanford and Parry was continued in the early 20th cent. by Elgar, Delius and Holst. Among the many notable more recent composers in Britain are Vaughan Williams, William Walton, Benjamin Britten, Michael Tippett, Lennox Berkeley, Arthur Bliss, Eugene Goossens and Alan Rawsthorne; in America Aaron Copland, George Gershwin, Charles Ives, Gian Carlo Menotti and Stravinsky; in the U.S.S.R. Shostakovich, Prokofiev and Khachaturian; in Germany Paul Hindemith, Werner Egk (1901–), Carl Orff (1895–), Hans-Werner Henze (1926–), and Karl Hartmann (1905–); in Italy, Francesco Malipiero; in Hungary Kodály.

MUSIC, Electronic. Musical sounds produced by audio frequency oscillations of signal generators, electro-magnetic instruments, etc. Henk Badings (1907–), a Dutch composer, has produced some of the most attractive romantic use of this, e.g., 'Capriccio for Violin and Sound Tracks'.

MUSICAL. A play interspersed with songs and dance sequences, which grew out of the similar, but more farcical, M. comedy, originally developed in the late 19th cent. from the French *opéra bouffe* at the Gaiety Theatre in London by George Edwardes, and spread to the U.S. It is still largely limited to English-speaking countries; notable writers incl. R. Friml, S. Romberg, J. Kern, I. Berlin, N. Coward, I. Novello, Cole Porter, Sandy Wilson and Lionel Bart. Whereas M. comedy was romantically escapist, Ms. tend since the S.W.W. to deal with contemporary problems, e.g., colour in *South Pacific* (1949) by Rodgers and Hammerstein and gang warfare in *West Side Story* (1957) by Leonard Bernstein.

MUSIC HALL. A theatre offering light entertainment consisting of 'turns', in which singers, dancers, comedians, acrobats, etc., perform in turn. The history of the M.H. begins in the 17th cent., when tavern-keepers acquired the organs which the Puritans had banished from churches. On certain nights organ music was played, and this practice resulted in the weekly entertainment known as the 'free and easy'. Certain theatres in London and the provs. then began to specialize in variety entertainment. The heyday of the M.H. was at the beginning of the present cent., when such artists as Albert Chevalier, Marie Lloyd, and Vesta Tilley performed to full houses. Later stars of M.H. have incl. Sir George Robey, Gracie Fields, the Crazy Gang, Ted Ray, and the American Danny Kaye. The cinema 'killed' M.H., but in the 1960s there were signs of a revival in the working men's clubs, espec. of the N. of England, and in public houses.

MUSICK, Master of the King's/Queen's. Appointment to the British Royal 'Household', the holder being responsible for composing appropriate music for state occasions. 1st M. of the K.M. was Nicholas Lanier (appointed by Charles I in 1625); Sir Arthur Bliss held the post from 1953.

MUSIL, Robert (1880–1942). Austrian novelist. B. at Klagenfurt, he devoted long years to *Der Mann ohne Eigenschaften* (3 vols., 1930–43; *The Man Without Qualities*), even then unfinished. Its hero combines the author's background of philosophical study and scientific and military training, and is preoccupied

NEWGATE. A prison in London, England, which stood on the site of the Central Criminal Court. Originally a gatehouse (hence the name), it was estab. in the 12th cent., rebuilt after the Great Fire, and again in 1780, and was demolished in 1903. Public executions were held outside it 1783–1868.

NEW GUINEA. Is. in the S.W. Pacific, to the N. of Australia, entirely within the Tropics. It is divided into East, or Australian, N.G. and West N.G. (or W. Irian), formerly Dutch. N.G. is very mountainous, the Nassau Range in the W. reaching 16,000 ft. The chief rivers are the Mamberamo, Sepik, Fly, and Digul. The climate is hot and moist in the coastal dists. Gold, silver, platinum, copper, manganese, and other minerals exist, and oil and natural gas are found both in W. Irian and Papua. Copra, rubber, coffee, kapok are the chief items grown for export; sago, breadfruit, sandalwood are also produced; and there are pearl shell fisheries. The indigenous inhabitants are of Melanesian type; they are divided into many tribes, some in the highlands being pygmies. Area: W. 160,000 sq. m., E. 183,540 sq. m.; pop. W. (1962) 700,000, E. (1966) 1,272,126.

The first Europeans to reach N.G. were the Portuguese, in 1527. In the 17th cent. the Dutch East India Co. laid claim to it, and when the govt. of King William I took over the Indies it estab. regular administration in W. N.G. as part of the Netherlands E. Indies. When the islands to the W. became independent in 1949 as Indonesia, the Dutch retained control of Netherlands N.G. until 1962, when it was transferred to the U.N., to be ceded to Indonesia in 1963, a self-determining plebiscite to follow 1969.

The annexation of E. N.G. by Queensland in 1883 was not recognized by the home govt. which, however, in 1884 set up a protectorate over S.E. N.G. This was annexed to the Crown 1888, transferred in 1901 to the new govt. of the Commonwealth of Australia, and in 1906 named the Territory of Papua. N.E. N.G. was annexed by Germany in 1884, occupied by Australia 1914, and governed as a mandate from 1921 and trust terr. from 1946 (the whole is. was Japanese-occupied 1942–5). Australia estab. 1949 the combined Trust Terr. of Papua-N.G. (incl. New Britain and adjacent is.), eventually to be independently self-governing. There is an admin. council and house of assembly; the admin. H.Q. is Port Moresby.

NEW HAMPSHIRE. One of the New England states in the N.E. corner of the U.S.A., bounded on the N. by Canada, on the E. by Maine, on the S. by Massachusetts, and on the W. by Vermont. It was one of the original 13 states, and the first colony to declare its independence of Britain, 15 June 1776. Called the 'granite state', it is a mountainous region. The chief rivers are the Connecticut, Androscoggin, Merrimack, Saco, and Piscataqua. Agriculture, formerly the principal occupation, remains important (fruit, poultry, dairy products, etc.); industrial products incl. textiles, paper, leather goods, electrical machinery and apparatus. The state cap. is Concord. Area 9,304 sq. m.; pop. (1960) 606,921.

NEWHAVEN. English seaport (U.D.) in Sussex, on the English Channel, at the mouth of the Ouse, with steamer service to Dieppe. Pop. (1961) 8,325.

NEWHAVEN. Co. seat of New Haven co., Conn., U.S.A., 4 m. from Long Is. Sound and 62 m. E.N.E. of New York. It is the seat of Yale univ. N.H. was founded as Quinnipiac in 1638, renamed in honour of Newhaven. Sussex, 1640. Pop. (1960) 152,048.

NEW HEBRIDES. Group of Pacific is. to the N.W. of Australia under the joint administration (set up 1906) of Britain and France. The principal is. are Espiritu Santo, Malekula, Epi, Ambrym, Efate or Sandwich, Erromanga, Tanna, and Anietyum. The chief town, Vila, on Efate, was severely damaged by a cyclone 1959. Area 5,700 sq. m.; pop. (1964) 65,800.

NEW JERSEY. One of the 13 original states of the

NEW JERSEY. Built in 1887 to the design of Edison, this combined workshop and laboratory at West Orange saw his development of the motion-picture camera and his work on sound reproduction which led to his evolving the 'modern' long-playing record. Courtesy of the U.S. National Park Service.

U.S.A., called the 'garden state', situated on the Atlantic coast between New York and Delaware Bay. The S. half of N.J. is a coastal plain, most of it less than 100 ft. above sea-level. To the N.W. is a triassic lowland, with an irregular surface varying in height up to 900 ft. The N.W. corner of the state is hilly, rising to 1,803 ft. at High Point. The rivers include the Hudson, Passaic, Hackensack, Raritan, and Delaware. Along the coast are a number of pleasure resorts, such as Atlantic City and Cape May. The principal towns incl. Trenton (the cap.), Newark, and Jersey City. Agricultural produce (e.g. asparagus, fruits, potatoes, tomatoes, poultry) is important; industrial products incl. chemicals, electrical machinery, clothing, metal goods. N.J. was perhaps visited by Verrazano in 1524. The Dutch were the first to settle, c. 1620. N.J. became British in 1664. Area 7,836 sq. m.; pop. (1960) 6,066,782.

NEW LONDON. Naval base and yachting centre of S.E. Connecticut, U.S.A., on the r. Thames, 3 m. from Long Island sound. It was founded 1646, and named N.L. 1658. Pop. (1960) 34,182.

NEWLYN. Seaport near Penzance, Cornwall, England, brought within the bor. of Penzance in 1934. It gave its name to a group of artists, 'the N. school', who painted there. The Ordnance Survey relates all heights in the U.K. to the mean sea-level at N.

NEWMAN, Ernest (1868–1959). British music critic. B. in Liverpool, he was music critic to the *Sunday Times* 1920–58, and noted for studies of Gluck, Beethoven, Liszt, and Wagner.

NEWMAN, John Henry (1801–90). British cardinal. B. in London, he was ordained in the C. of E. in 1824, and in 1827 became vicar of St. Mary's, Oxford. There he came under the influence of R. H. Froude and Keble, and in 1833 pub. the first of the *Tracts for the Times*, which gave their name to the 'Tractarian Movement', and culminated in Newman's celebrated *Tract 90* in 1841. He was received into the R.C. Church in 1845, and finally settled as an oratorian at Edgbaston. Appointed rector of Dublin univ. in 1854, he pub. lectures on *The Idea of a University*, and in 1864 pub. his autobiography, *Apologia pro vita sua*, defending himself against Kingsley's attack on the R.C. attitude to truth. His poem, *The Dream of Gerontius*, appeared in 1866, and *The Grammar of Assent*, an analysis of the nature of belief, in 1870. In 1879 he was created a cardinal. His best-known hymn is 'Lead, Kindly Light'. His brother, Francis William N. (1805–97), prof. of Latin at Univ. Coll., London, 1846–69, adopted Unitarian views. He wrote the autobiographical *Phases of Faith* (1850).

NEWMARKET. English market town (U.D.) in

MYERS, Frederic William Henry (1843–1901). British psychic investigator. B. at Keswick, he was one of the founders and the 1st pres. of the Society for Psychical Research. His book, *The Human Personality and its Survival of Bodily Death* (1903), is a classic of psychical research.

MYITKYINA (mitchē'na). Town, cap. of Kachin state and of M. district, in N. Burma. It stands at the limit of navigation of the Irrawaddy and is the terminus of a railway from Rangoon, 723 m. to the S. It was recaptured by the Allies from the Japanese in Aug. 1944 after 2½ months' siege. Pop. (est.) 10,000.

MYOPIA (mī-ō'pia). Short sight. It is due to the eye being slightly too large, so that the incoming light is focused before it reaches the retina. The error can be corrected by concave lenses.

MYRON (mī'ron) (fl. 500–440 B.C.). Greek sculptor. B. at Eleutheræ in Boeotia, he is remembered for the Discobolus, or discus-thrower.

MYRRH (mer). Gum resin produced by a small tree (*Commiphora myrrha*), of the family Burseraceae, found in Abyssinia and Arabia. In ancient times it was used for incense and perfume, and in embalming.

MYRTLE (mer'tl). Genus (*Myrtus*) of evergreen shrubs in the family Myrtaceae. The common Mediterranean M. (*M. communis*) has oval opposite leaves and white flowers followed by purple berries, all of which are fragrant.

MYSORE (misor'). Indian city in M. state (of which it was formerly the cap.), 80 m. S.W. of Bangalore. Buildings incl. the fort and the univ. (estab. 1916). Pop. (1961) 253,865.

MYSORE. State in the Republic of India, bordered N. by Maharashtra, E. by Andhra Pradesh, S. by Kerala and Madras, W. by the Arabian Sea. Bangalore is the cap. It was formed in 1956 from the former princely states of M. (29,500 sq. m.) and Coorg (1,586 sq. m.) and districts transferred from Bombay and Madras states. Chief rivers are the Vistna, Tungabhadra, and Cauvery. Agriculture is the main occupation, rice and other grains, ground-nuts, and cotton being grown. Textiles, paper, metal goods, and sugar are produced. Gold, iron, asbestos, and manganese are among minerals worked. Area 74,210 sq. m.; pop. (1961) 23,586,772.

MYSTERY RELIGIONS. Cults of the ancient world open only to the initiated. The most important of such cults among the Greeks were the Eleusinian mysteries, celebrated annually in honour of Demeter at Eleusis, near Athens, and the Orphic mysteries, in honour of Dionysus. A number of Asiatic mystery cults, such as those of Attis, Cybele, Isis, and Mithras, attained great popularity under the Roman Empire. All these cults derived from primitive fertility rituals; their principal feature was a ritual drama, normally

portraying the death and resurrection of the god, while a sacramental meal took place through which the initiate obtained communion with the god by feeding on his flesh and blood, hoping thereby to attain to life beyond the grave. These ideas strongly influenced early Christianity.

MYSTICISM. A mode of religious belief depending on personal spiritual experience of God as the ultimate reality, distinct from all references to thought or reason. The element of M. is common to all the higher religions – Hinduism, Buddhism, Judaism, Islam, and Christianity. M. was 1st introduced to W. Europe through Neoplatonism (q.v.) which was largely affected by Oriental schools of thought, and in its turn influenced the rise of Christian M. through the work of the pseudo-Dionysius the Areopagite. M. flourishes espec. in periods when a civilization is passing through a major crisis, as in Germany in the 14th–16th cents., when feudalism was breaking down, e.g. Thomas à Kempis and Jacob Boehme. Often M. assumed heretical forms, as with the Anabaptists and early Quakers, but the Counter-Reformation also produced mystics such as St. Teresa and St. John of the Cross. Mystical movements of the 17th cent. incl. those of the Quietists in France, and Henry More and the Cambridge Platonists in England, while the 18th cent. produced two great English mystics in William Law and William Blake. In the 20th cent. there has been a revival of M. in England and the U.S.A., largely due to Hinduism, which is expressed in the works of W. B. Yeats, Gerald Heard, and Aldous Huxley. The scientific study of M. was estab. by the work of Dean Inge, William James, and Evelyn Underhill, and valuable light has been thrown by the use of psychological methods.

MYTHOLOGY (Gk. *muthos*, fable). Science which attempts the interpretation of the stories invented by primitive peoples to express their imaginative conception of the origin of the universe, useful arts, etc., and assess their relationship to similar stories told by other races. The myth is distinguished from the legend (q.v.), which may have an ultimate basis in fact, by being purely fictitious. Great Ms. are those of Egypt, India, Greece, Rome, and Scandinavia.

MYTILENE. See MITYLENE.

MYXOEDEMA (miksīdē'ma). A disease due to deficiency of the secretion of the thyroid gland chiefly seen in middle-aged women. The mind becomes dull, the temper irritable, and the memory is lost. There is a coarsening of the features, the skin becomes yellow and dry, and the speech thick. The condition can be improved by giving thyroid preparation.

MYXOMATOSIS (mīk'so-). A contagious filterable-virus infection of rabbits, causing much suffering, sometimes deliberately introduced to reduce rabbit population.

N 14th letter of the Roman alphabet, representing a dental nasal sound. In several Romance languages *n* in many circumstances disappears, with nasalization of the preceding vowel.

NAAFI. In full: Navy, Army, and Air Force Institutes. Non-profit-making association, providing canteens for H.M. Forces at home and overseas; its H.Q. is at Claygate, Surrey.

NABOKOV (nab'okof), Vladimir. Pseudonym of Russian author Vladimir Sirin (1899–). B. in St. Petersburg, he settled in the U.S.A. in 1940, and was prof. of Russian literature at Cornell univ. 1948–59, producing a fine translation and commentary on *Eugene Onegin* in 1963. He is also a noted lepidopterist, a pursuit which has something in common with his treatment of his fictional characters. His best-known books incl. *The Real Life of Sebastian Knight*

U.S.A. incl. *Sydney Bulletin* (1880), Australia; *Times of India* (1838), Bombay; *La Prensa* (1869), Argentina; *Arbeiter-Zeitung* (1889), Vienna; *Le Figaro* (1826) and *Le Monde* (1944), Paris; *Algemeen Handelsblad* (1828) and *De Telegraaf* (1893), Amsterdam; *Die Welt* (1946), Hamburg; and *Frankfurter Allgemeine Zeitung* (1949), Frankfurt-am-Main; *Corriere della Sera* (1875), Milan, and *Avanti* (1896), Rome; *National-Zeitung* (1842), Basle; *Journal de Genève* (1826), Geneva; and *Neue Zürcher Zeitung*, Zürich; *Izvestiya* (1917) and *Pravda* (1912), Russia.

NEWT. Genus of tailed amphibians (*Molge*) in the family Salamandridae, mainly found in Europe. The common N. (*M. vulgaris*) is c. 3 in. long.

NEWTON, Sir Isaac (1642–1727). British natural philosopher. B. at Woolsthorpe, Lincs, he was ed. at Grantham grammar school and Trinity Coll., Cambridge, of which he became a fellow in 1667. During 1665–6 he discovered the binomial theorem and the differential and integral calculus, and began to investigate the phenomena of universal gravitation. He was elected F.R.S. in 1672, and soon afterwards published his *New Theory about Light and Colours*. *De Motu* was written in 1684, and the next year his universal law of gravitation was completely expounded as follows: 'Every particle of matter in the universe attracts every other particle with a force whose direction is that of the line joining the two, and whose magnitude is directly as the product of the masses, and inversely as the square of their distance from each other.' His greatest work, *Philosophiæ Naturalis Principia Mathematica*, was pub. in 3 vols. in 1686–7, with the aid of Halley. N. resisted James II's attacks on the liberties of the univ., and sat in the parls. of 1689 and 1701–2 as a Whig. Appointed warden of the mint in 1696, and master in 1699, he carried through a reform of the coinage. He was elected president of the Royal Society in 1703, pub. his *Optics* in 1704, and was knighted in 1705. N. was buried in Westminster Abbey.

N.'s laws of motion are: (1) Every body continues in its state of rest or of uniform motion in a straight line except in so far as it may be compelled to change that state by the action of some external force; (2) change of motion is proportional to the applied force and takes place in the direction of the line of action of the force, and (3) to every action there is an equal and opposite reaction.

NEWTON ABBOT. English market town (U.D.)

on r. Teign, Devon, with railway repair shops, pottery and metal works; there are clay mines in the vicinity. Pop. (1961) 18,066.

NEW WESTMINSTER. City and freshwater port of British Columbia, Canada, cap. of British Columbia before it became a prov., on the N. bank of the Fraser r., 12 m. S. of Vancouver. Pop. (1966) 38,013.

NEW YEAR'S DAY. 1 January, the first day of the year; celebrations are held in many parts of the world on this day, and in Scotland, the U.S.A., and other countries it is a public holiday. In England until 1753 the year began for many purposes on 25 March.

NEW YORK CITY. The largest city in the U.S.A., often abbreviated N.Y.C. It is in New York state, on the Atlantic, at the junction of the Hudson and East rivers. N.Y. Bay was discovered by Giovanni da Verrazano, a Florentine, in 1524, and explored by Henry Hudson in 1609. The Dutch estab. a settlement there in 1613, named New Amsterdam in 1626; this was captured by the English in 1664, and renamed N.Y. During the War of Independence, British troops occupied N.Y. from 1776 until evacuation day, 25 Nov. 1784; it was the cap. of the U.S.A., 1785–9. N.Y.C. was formed in 1898 by the creation and linking of the boroughs of the Bronx, Brooklyn, Manhattan, Queens, and Richmond. N.Y.C. is the commercial and financial cap. of the U.S.A., and probably the busiest port in the world. The docks have a total water frontage of over 990 m. The harbour is divided into an outer harbour, called Lower Bay, and an inner harbour, called Upper Bay; these are connected by the Narrows, a channel about 1 m. wide, between Long Is. and Staten Is. The Statue of Liberty stands on Liberty Is. (called Bedloe's Is. until 1956) in the inner harbour. Manhattan Is., the business centre, is 13½ m. long and averages 1½ m. in width. Among the most famous buildings are the H.Q. of the U.N. (1951, *illus.* p. 1058), the Empire State (tallest in the world at 1,250 ft., plus 222 ft. TV tower added 1950), Chrysler (1,046 ft.), 60 Wall Tower (950 ft.) and Chase Manhattan buildings, and Rockefeller Center (850 ft., *illus.* p. 908). The best-known street is Broadway, which is 16 m. long, but 5th Avenue, the main shopping district, is the finest thoroughfare. Greenwich Village, Lower Manhattan, is the artist-writer-Bohemian section. On a 50-acre site between Broadway and the Hudson is the Lincoln Arts Center (opera house, concert hall, theatre, Julliard School of

NEW YORK. By day or night the skyscrapers are breathtaking. The Empire State Building, tallest of all on the far left, has enough floor space to shelter a city of 80,000. Courtesy of U.S. Travel Service.

tain nearby Sun Yat-Sen is buried. Pop. (1957) 1,419,000.

NANNING. Chinese river port, on the Yü-kiang, a headstream of the Si-kiang (or West River), cap. of Kwengsi-Chuang autonomous region. A former treaty port (1907), it is also a road centre and trades in the fruit and sugar grown in the area. Pop. (1957) 264,000.

NANSEN, Fridtjof (1861–1930). Norwegian explorer, scientist, and statesman. He made his first voyage to Greenland waters in a sealing-ship in 1882, and in 1888–9 attempted to cross the Greenland icefield. He sailed to the Arctic in 1893 in the *Fram*, which was deliberately allowed to drift with an iceflow. Later, N. left the *Fram* and, accompanied by Johansen, continued northwards on foot. They reached 86° 14' N., the highest latitude then attained, and wintered in Franz Josef Land, returning in 1896. The *Fram* also returned safely. After the F.W.W. N. became League of Nations High Commissioner for refugees, and in 1923 received the Nobel peace prize. The N. inst. for humanist and social research was estab. at Oslo in 1956.

NANTES (noñt). Seaport of France, cap. of the dept. of Loire-Atlantique, on the Loire, 35 m. from its mouth. Its buildings incl. the cathedral (1434–1884), built over a 12th cent. crypt, and the castle, founded in 938. Here Henry IV signed the Edict of N. (1598), granting religious freedom to the Huguenots. Pop. (1962) 246,227.

NANTEUIL (noñtöy), Robert (c. 1623–78). French engraver and craftsman, famous for his portraits.

NANTUCKET. Is. (area 46 sq. m.; pop. 3,600) and pleasure resort 25 m. S. of Cape Cod, Mass, U.S.A. In the 18–19th cents. N. was a famous whaling port.

NA'PALM. Fuel used in flame-throwers and incendiary bombs. Produced from jellied petrol, it is named from *naphthenic* and *palmitic* acids.

NAPHTHA (naf'tha). Originally applied to naturally occurring liquid hydrocarbons, the term is now used for the mixtures of hydrocarbons obtained by destructive distillation of petroleum, coal-tar, and shale oil.

NAPHTHALENE (C₁₀H₈). A solid, aromatic hydrocarbon, m.p. 80°C, b.p. 218°C, obtained from the middle oil distillate of coal-tar. A white, shiny, crystalline solid with a penetrating smell, it is used in making indigo and certain azo-dyes; also as a mild disinfectant and insecticide (moth balls have the characteristic smell of N.).

NAPIER, Sir Charles James (1782–1853). British general. After serving in the Peninsular War and capturing a number of vessels in the American War of 1812–14, his great achievement came in his campaigns in Sind 1841–3 which he conquered with a very small force and governed until 1847. He seldom agreed with his superiors, but was liked by his men and was the first to mention in despatches men from the ranks who had distinguished themselves. His brother, Sir William Francis Patrick N. (1785–1860), wrote a *History of the Peninsular War* (1828–40) in which he had also served.

NAPIER, John (1550–1617). Scottish mathematician. He was the inventor of logarithms, publishing his Tables in 1614, and of 'N.'s Bones' an early type of calculating device for multiplication and division.

NAPIER. Seaport of North Island, New Zealand. Pop. (1967) 39,300.

NAPIER OF MAGDALA, Robert Cornelis Napier, 1st baron (1810–90). British field marshal. Knighted for his services at the siege of Lucknow, and thanked by parliament for his part in the Chinese War of 1855, he crowned his career in the Abyssinian campaign of 1868 by storming Magdala, and was created a baron.

NAPLES. Seaport and cap. of N. prov., situated on the Bay of N., 120 m. S.E. of Rome. Formerly the cap. of the kingdom of N., it is the 3rd town of Italy, and as a port second only in importance to Genoa.

NAPOLEON I. The meeting with Francis II after Austerlitz, a painting by Antoine Jean Gros.

There are shipbuilding yards, factories making locomotives, textiles, paper, etc.; a famous museum and a marine aquarium. To the S. is the Isle of Capri, and behind the city is Mt. Vesuvius, with the ruins of Pompeii at its foot. Outstanding buildings of N. incl. the royal palace, the San Carlo Opera House, and the Castel Nuovo (1283). N. has one of the oldest univs. (1224) in the world. Pop. (1961) 1,179,608.

NAPOLEON I (Bonaparte) (1769–1821). Emperor of the French. B. at Ajaccio, Corsica, he received a commission in the artillery in 1785, and first distinguished himself at the siege of Toulon in 1793. N. m. Josephine de Beauharnais in 1796. Having suppressed a royalist rising in Paris in 1795, he received the command against the Austrians in Italy, and by his victories at Lodi, Arcole, and Rivoli (1796–7), compelled them to make peace. The Directory then accepted his plan to conquer Egypt as a halfway-house to India (1798), but although he overran Egypt and invaded Syria his fleet was destroyed by Nelson. In 1799 he returned to France, overthrew the govt. of the Directory, and estab. his own dictatorship, nominally as First Consul. He then invaded Italy, defeated the Austrians at Marengo (1800), and broke up the coalition which had been formed against France. Peace was restored in 1802.

Soon afterwards a plebiscite confirmed him in his consulship for life, and another in 1804 granted him the title of emperor. While retaining and extending the legal and educational reforms of the Jacobins, he substituted a centralized despotism for the democratic constitution estab. by the Revolution, and by his Concordat conciliated the Church. The war was renewed by Britain in 1803; Austria and Russia joined the coalition against France in 1805, and Prussia in 1806. Prevented by British sea power from invading England, N. drove Austria out of the war by his victories at Ulm and Austerlitz (1805), and Prussia by the victory of Jena (1806), and after the hard-fought battles of Eylau and Friedland formed an alliance with the tsar at Tilsit (1807).

He now attempted to ruin Britain by his 'Continental System' of excluding British goods from Europe, and to enforce its operation sent an army to occupy Portugal, and in 1808 placed his brother Joseph on the Spanish throne. Spain and Portugal revolted, with British assistance, while in 1809 Austria re-entered the war, only to be defeated at Wagram. To assert his equality with the Habsburgs, N. now divorced Josephine and m. the emperor's daughter, Marie Louise. When the tsar failed to enforce the Continental System, N. invaded Russia in 1812, and occupied Moscow, which was set on fire. The disastrous French retreat encouraged Prussia and Austria to declare war in 1813, and N. was defeated at

NEW ZEALAND. The signature of the Treaty of Waitangi in 1840. Courtesy of the High Commissioner for New Zealand.

Rainfall is moderate, except in the W. of the S. Alps.

The principal cities are Wellington, the cap., Auckland, Hamilton and Palmerston North in N. Is.; Christchurch and Dunedin in S. Is.: all have univs. The majority of the inhabitants of N.Z. are of European (chiefly British) descent. The aboriginal Maori, after decreasing to 42,000 in 1896, numbered 201,159 at the 1966 census, most of them living in N. Is. Area, N.Z. proper, 103,736 sq. m.; island territories, 104 sq. m. Pop. (1966), N.Z. proper 2,676,919 (incl. Maoris); island territories, 7,095.

Economic. The soil is fertile, and the most important industry is agriculture, including sheep and dairy farming. The most important crops are wheat, oats and barley. Fruits and vegetables are also grown. Gold was discovered in 1861 at Tuapeka in Otago, and gold was later exploited in other regions of S. Is. Other minerals incl. silver, silica sand, pumice, limestone and coal, and in the 1960s oil and natural gas were found on and offshore in the Taranaki area of N. Island, near New Plymouth. The chief exports are wool, frozen lamb and dairy produce; production of gold has latterly declined. There are some 3,200 m. of state railway, over 7,000 m. of state highways, and both internal and external air services.

Government. N.Z. is governed by a Gov.-Gen. appointed by the Crown, who is aided by an Executive Council and a General Assembly, or parl., of one house, the House of Representatives, with 80 members including 4 Maoris, popularly elected for 3 years; the former upper chamber or legislative council was abolished from 1 Jan. 1951. Women received the franchise in 1893.

History. N.Z. was occupied by Polynesian tribes before the 14th cent. Its coasts were explored by Tasman in 1642 and by Cook in 1769, 1773, and 1777. British missionaries began to arrive in 1815. By the Treaty of Waitangi (1840) the Maoris accepted British sovereignty; colonization began, and large-scale sheep farming was developed. Self-govt. was granted in 1853. The Maoris resented the loss of their land, and rose in revolt 1845-7 and 1860-72, until concessions were made, incl. representation in parl. Sir George Grey, Gov. 1845-53 and 1861-70, and Radical P.M. 1877-84, was largely responsible for the conciliation of the Maoris and the introduction of manhood suffrage. The Cons. held power 1879-90, and were succeeded by a Lib. govt., which with trade union support ruled until 1912; this govt. introduced women's suffrage (1893) and old-age pensions (1898), and was a pioneer in labour legislation. N.Z. troops served in the S. African War. In 1907 Dominion status was granted. After 1912 the Cons. (Reform) Party regained power, and the trade unions broke with the Libs. to form the Lab. Party. More than 120,000 N.Z. troops fought in the F.W.W., and greatly distinguished themselves at Gallipoli and elsewhere. The Cons. and Libs., who united to form the Nat. Party in 1931,

were defeated in 1935 by the Lab. Party, which introduced a comprehensive social security programme. N.Z. declared war against Germany in 1939 a few minutes after the U.K.; 135,000 New Zealanders served overseas, doing notable work in N. Africa and Italy; 10,000 were killed, and there were some 20,000 other casualties. Since 1949 the Nat. Party has been almost continuously in power. The most vital issue of recent years, owing to N.Z. dependence on the U.K. market, has been the conditions of Britain's entry into the E.E.C.

Art. N.Z. cannot yet claim to have produced any artist of world-wide fame, except the cartoonist, Sir David Low, but much meritorious work has been done, and there is a lively interest in art, as is evidenced by the many art societies and galleries. The Auckland Society of Arts, founded in 1870, is the oldest art society in N.Z. The N.Z. Academy of Fine Arts and the National Art Gallery are at Wellington. The Maoris are very fine craftsmen, and are noted for their carvings in wood, stone, and bone.

Literature. Among interesting pioneer records are those of Edward Jerningham Wakefield and F. E. Manning (qq.v.); and *A First Year in Canterbury Settlement* by Samuel Butler (q.v.). Earliest of the popular poets was Thomas Bracken, author of the N.Z. national song, followed by native-born Jessie Mackay and W. Pember Reeves (qq.v.), though the latter is better-known as the author of the prose account of N.Z. *The Long White Cloud*, and Ursula Bethell (1874-1945). In the 20th cent. N.Z. literature attained an international appeal with the short stories of Katharine Mansfield (q.v.), produced an excellent exponent of detective fiction in Dame Ngaio Marsh (q.v.), and struck a specifically N.Z. note in *Tutira, the Story of a N.Z. Sheep Station* (1926) by W. H. Guthrie Smith (1861-1940). Poetry of a new quality was written by R. A. K. Mason (1905-) in the twenties, and in the thirties by a group of which A. R. D. Fairburn (1904-57), with a witty conversational turn, and Allen Curnow (1911-), poet, critic and anthologist, are the most striking. In fiction the thirties were remarkable for the short stories of Frank

PAUL NASH. One of the leading British artists of the twentieth century.

of pictures for the Imperial War Museum and during the S.W.W. was an official artist to the Admiralty.

NASH, Richard (1674–1762). British dandy, known as Beau Nash. As master of ceremonies at Bath from

United Arab Republic from 1958. His appropriation of the Suez Canal (q.v.) and his ambitions for an Egyptian-led Arab union have led to disquiet in the area (see under EGYPT, ISRAEL, and YEMEN), but his internal policies are generally sound, although a rapidly increasing population lessens their good effect.

NASTURTIUM (naster'shyum). Genus of plants of the family Cruciferae, including *N. officinale*, watercress. The garden species, *Tropaeolum majus*, which has orange- or scarlet-coloured flowers, and *Tropaeolum minus*, which has smaller flowers, belong to the S. American Tropaeolaceae. The leaves and buds are sometimes served in salads.

NATAL. A prov. in the Rep. of S. Africa, to the N.E. of Cape Province, and bounded on the E. by the Indian Ocean; so called because it was discovered

by Vasco da Gama on Christmas Day, 1497. From the Drakensberg the country slopes to a fertile subtropical coastal plain. There are many plantations of sugar cane. Other products incl. the black wattle (*Acacia mollissima*), maize, fruits, vegetables, tobacco, and coal. The cap. is Pietermaritzburg; the chief port and largest town is Durban. N. was a part of Cape Colony 1844–56, when it was made into a separate colony. Zululand was annexed to N. in 1897, and the districts of Vrijheid, Utrecht, and part of Wakkerstroom were transferred from the Transvaal to N. in 1903. In 1910 the colony became a part of the Union of South Africa. Area 33,578 sq. m.; pop. (1960) 2,933,447 (340,293 white).

NATAL. Seaport and city of Brazil, cap. of the state of Rio Grande do Norte. It has textile mills and salt refineries. Founded in 1599, N. was made a city in 1822. Pop. (1967) 100,000.

NATIONAL ANTHEM.

A patriotic song employed on official occasions. 'God Save the King/Queen' (q.v.), has been accepted as such in Britain since 1745, although both tune and words are of much earlier origin. The music of the Austrian 'Emperor's Hymn' was written by Haydn in 1797, and was retained after the revolution of 1918, with some new words, until 1948. The German *Deutschland über Alles* is sung to the same tune. In 1951 Pres. Heuss selected a new N.A. for the Federal Republic (Germany having been without one 1945–51): this was unpopular and the old one

PRESIDENT NASSER
Middle East News Agency.

NASTURTIUM

NATAL. A Kaffir people, the Pondo, live on the south coast of the province, and their women are skilled in coloured beadwork. Their elaborately prepared hairstyle takes far longer to arrange to perfection than the European 'permanent wave'. Courtesy of Satsur.

1705, he made it the most fashionable watering-place in England, and did much to bring a more polished code of manners into general use.

NASH, Sir Walter (1882–1968). New Zealand statesman. B. at Kidderminster, he emigrated to N. Z. in 1909. In the Labour govt. of 1935 he became Min. of Finance, to which he added the post of Deputy P.M. 1940–9. During the S.W.W. he was a member of the War Cabinet, and Minister to Washington 1942–4. P.M. 1957–60, he led the Opposition 1950–7 and 1960–3: knighted 1965.

NASH(E), Thomas (1567–1601). English poet, dramatist and pamphleteer. B. at Lowestoft, he settled in London c. 1588, where he was rapidly drawn into the Martin Marprelate controversy, and wrote at least 3 attacks on the Martinists. Among his later works are the satire *Pierce Pennilesse* (1592); the religious *Christes Teares over Jerusalem* (1593); *Jacke Wilton*, the first English picaresque novel; and the comedy, *Summer's Last Will and Testament*.

NASHUA. City in New Hampshire, U.S.A., founded as Dunstable in 1665, renamed 1836. It makes textiles, hardware, steel goods, etc. Pop. (1960) 39,096.

NASHVILLE. Cap. of Tennessee, U.S.A., on the Cumberland r., 200 m. N.E. of Memphis. An important river port, it is in the fertile area of the Tennessee Valley, with a trade in cotton, tobacco, wheat and livestock; is a banking and commercial complex, and has large printing, recording and music publishing industries. There are 3 univs. and Peabody Coll. was founded by George Peabody (q.v.). N. dates from 1778, and the Confederate army was badly defeated here in 1864. Pop. (1960) 170,874.

NASMYTH, Alexander (1758–1840). Scottish portrait and landscape painter. B. in Edinburgh, he is best remembered for his portrait of Burns in the Scottish National Gallery.

NASMYTH, James (1808–90). Scottish engineering inventor. B. in Edinburgh, the son of Alexander N., he developed a successful foundry at Patricroft and invented his steam-hammer, planing machine, and hydraulic machinery.

NASSAU. Port of New Providence island and cap. of the Bahamas. English settlers founded it in 1629. Pop. (1967) 100,000.

NASSER, Gamal Abdel (1918–). Egyptian statesman. Son of a postal clerk, he entered the army from Cairo Military Academy, and was wounded in the Palestine War of 1948–9. In 1952 he was the driving power behind the Nguib coup, became P.M. in 1954 and in 1956 pres. of the Rep. of Egypt – of the

Brothers'. B. at Denham, Bucks, he studied at the Slade, as well as on the Continent and in California. Developing an interest in abstract art, he became known for his geometrical reliefs and as an exponent of Constructivism (q.v.). His work is remarkable for its exquisite control and delicacy. Awarded O.M. 1968.

NICHOLSON, John (1822–57). British soldier. He was administrative officer at Bannu, in the Punjab, 1851–6, and the justice and firmness of his rule led to his being worshipped as a god. Promoted to brigadier, on the outbreak of the Mutiny, he crushed resistance in the Punjab, but was killed during the storming of Delhi.

NICKEL. Lustrous white metal discovered by Cronstedt in 1751, the name being an abbreviation of Swedish *kopparnickel* (false copper): symbol Ni, at. wt. 58.71, at. no. 28. It has a high melting point, low electrical and thermal conductivity, and can be magnetized. N. may be readily forged when hot, and is tough, malleable, and ductile when cold. Canada provides the most extensive deposits, which are usually extracted with copper. Smelting precedes separation, after which the N. is purified. It is used in coinage; in chemical and foodstuff industries for its resistance to corrosion; in electronics and for electroplating. The most important use, however, is in alloys with iron, steel, copper, and chromium, incl. N. steel for armourplating and burglar-proof safes, Monel metal, invar, constantan, nichrome permalloy, permivar, and other magnetic alloys and stainless steels, cupro-N., N.-silver, and others. Finely divided N. is used as a catalyst in the hydrogenation of vegetable oils.

NICOBARS (nikōbahrz?). Group of 19 islands (7 uninhabited) in the Bay of Bengal, S. of the Andamans and forming with the Andamans a territory of the Rep. of India. The Is. were occupied by the Japanese 1942–5. Area 635 sq. m.; pop. (1961) 14,563.

NICOLAI (nik'ōli), Otto (1810–49). German composer. He was a conductor in Vienna and in Berlin, and wrote several operas, of which *The Merry Wives of Windsor* (1849) was an outstanding success.

NICOLSON, Sir Harold (1886–1968). Brit. diplomat and author. Son of Lord Carnock, he entered the Foreign Service, held embassy appointments and served on the British delegation to the Paris Peace Conference of 1919. He was a Nat. Labour M.P. 1935–45, and in 1947 joined the Labour Party. A distinguished biographer, e.g. *Lord Carnock* (1930), *Curzon: the Last Phase* (1934), and *King George V* (1952), he also pub. studies such as *Monarchy* (1962). He m. in 1913 Victoria Sackville-West (q.v.).

NICOSIA. Capital of Cyprus, situated 32 m. W. of Famagusta. It has leather, textile, pottery and other industries, and an international airport. N. was the residence of the Lusignan kings of Cyprus 1192–1475. The Venetians, who took Cyprus in 1489, surrounded N. with a high wall which still exists; it fell to the Turks 1571. Pop. (1966) 105,600.

NICOTINE (nik'ōtēn). An alkaloid obtained from the dried leaves of the tobacco plant (*Nicotiana tabacum* or *N. rustica*). A colourless oil, soluble in water, it turns brown on exposure to the air. Pur. N. is poisonous, but, as it is destroyed by burning, it is not present in tobacco smoke.

NIEBUHR (nē'bōōr), Barthold Georg (1776–1831). German historian. He was Prussian ambassador at the Holy See 1816–23, and then prof. of Roman history at Bonn until 1831. He wrote a history of Rome (1811–32).

NIEBUHR, Reinhold (1892–). American theologian. Prof. of ethics at the Union Theological Seminary, N.Y., 1928–60, he has been influential in his books on Christianity and present-day problems, e.g. *Moral Man and Immoral Society* (1932), and *The Structure of Nations and Empires* (1959).

NIEDERSACHSEN. See LOWER SAXONY.

NIELSEN (nēl'-), Carl (1865–1931). Danish com-

poser. At 14 an army bugler, he became director of the Copenhagen Conservatoire in 1915. His reputation extended outside Scandinavia after the S.W.W., and his works are remarkable for their progressive tonality, as in his opera *Saul og David* and 6 symphonies.

NIEMEYER (nē'mīer), Oscar (1907–). Brazilian architect. He was one of the architects employed in designing the H.Q. of the U.N. in N.Y., and from 1957 worked on Brasilia (q.v.).

NIEMÖLLER (nē'möller), Martin (1892–). German pastor. He led a campaign against the Nazification of the German Church, was dismissed in 1934, and later suffered gaol and the concentration camp, remaining a prisoner throughout the S.W.W. In 1946 he proclaimed Germany's war guilt at the International Missionary Council in Geneva, and 1947–64 was first bp. of the newly formed Evangelical Church of Hesse-Nassau. In 1961 he became a pres. of the World Council of Churches.

NIETZSCHE (nē'tshe), Friedrich Wilhelm (1844–1900). German philosopher. B. at Röcken, Saxony, he attended Bonn univ. and was prof. of Greek at Basle 1869–80. He had abandoned theology for philology, and was influenced by the writings of Schopenhauer and the music of Wagner, with whom he became on close terms. Both these attractions passed, however, and ill-health caused his resignation from the univ. He spent his later years in N. Italy, in the Engadine and in S. France. During his mature years till 1889 he pub. *Morgenröte* (1880–1), *Die fröhliche Wissenschaft* (1881–2), *Also sprach Zarathustra* (1883–5), *Jenseits von Gut und Böse* (1885–6), *Genealogie der Moral* (1887), and *Ecce Homo* (1888). He suffered a permanent breakdown in 1889 from overwork and loneliness.

The philosophy of N. is the rejection of the accepted absolute moral values and the 'slave morality' of Christianity. His ideal was the 'Overman' or 'Superman' who would impose his will on those who are too weak and worthless to be anything but slaves. Until this century, his beliefs remained ignored or opposed, by Conservatives and Socialists alike, but support for modern Totalitarianism has often been claimed (possibly wrongly) in Nietzsche's writings.

NIÈVRE (nyävr'). River in central France rising near Varzy and flowing 25 m. S. to join the Loire at Nevers. It gives its name to a dept.

NIGERIA. At work on the blueprint of his concrete sculpture for the Chase Manhattan Bank, Ibadan, Festus Idehen is surrounded by some of his own striking wood carvings.

Courtesy of the Chase Manhattan Bank.

in 1895 for the purposes of promoting the permanent preservation of lands and buildings of historic interest or beauty for the people. It administers more than 210,000 acres, with over 1,000 properties.

NATIVITY. Name given to 3 Christian festivals: (1) Christmas; (2) the N. of the Virgin Mary, celebrated by the R.C. and Greek Churches on 8 Sept.; and (3) the N. of John the Baptist, celebrated by the R.C., Greek and Anglican Churches on 24 June.

NATTIER (nahtyā'), Jean Marc (1685–1766). French painter. B. in Paris. He painted Tsar Peter the Great in 1715, and is best known for his portraits of the artificial 'Ladies' of Louis XV's court.

NATURAL HISTORY MUSEUM. The 5 natural history departments of the British Museum: zoology, entomology, geology, mineralogy, and botany. The museum is in a building (designed by Waterhouse and erected 1873–80) in S. Kensington.

NATURE RESERVE. Area set aside to preserve its original scenic formation or vegetation, and often to provide a sanctuary and breeding ground for rare birds or animals. The National Parks Act, 1949, gave powers to designate such areas in Britain, to be placed in the charge of the Nature Conservancy estab. 1949.

NAUCRATIS. Ancient Greek city in Egypt, whose ruins were discovered by Sir Flinders Petrie in 1884, situated in the W. extremity of the Nile delta.

NAURU (now'roo). Pacific island 26 m. S. of the equator in long. 167° E. Discovered in 1798, seized by Germany 1888, it was in 1920 placed under British Empire mandate by the League of Nations, in 1947 under U.N. trusteeship, Australia being the effective administrator except during Japanese occupation in the charge of the Nature Conservancy, estab. 1949. 1942–5. N. achieved independence 1968, becoming 'a special member' of the Commonwealth. N.'s importance is due to its phosphate deposits, which will be exhausted c. 1990. Area 8 sq. m.; pop. (1968) c. 3,000.

NAUSICAA. In the *Odyssey*, a daughter of Alcinous, king of Phaeacia, who welcomed Odysseus when he had been cast up by the waves on her island.

NAUTILUS. Name applied to 2 widely differing cephalopods. The pearly N. (*Nautilus pompilius*), found in the Indo-Pacific Ocean, has a chambered spiral shell and supplies a fine quality mother-of-pearl used in inlay, etc.; the paper N. is also known as the Argonaut (q.v.).

NAVARINO (nahravhrē'nō). Italian and historic name of Pylos Bay, on the W. coast of Peloponnese, Greece, famous for a naval victory, the decisive action in the Greek war of liberation, won here in 1827 by the combined fleets of the English, French, and Russians under Codrington, over the Turkish and Egyptian fleets.

NAVARRÉ (navahr'). Mountainous prov. of N. Spain, the highest peak being Monte Adi (4,931 ft.). The principal rivers are the Ebro and its tributary the Arga. The cap. is Pamplona; Estella, 51 m. S.W., where Don Carlos was proclaimed king in 1833, is the centre of agitation by Carlists (q.v.) in favour of Don Carlos Hugo (see BOURBON TABLE), who m. Princess Irene, dau. of Queen Juliana (q.v.). An annual rally is held on nearby Montejurra mountain. Area 4,092 sq. m.; pop. (1960) 402,000.

This Spanish prov. is part of the old kingdom of N. which incl. also an area in present-day France. N. successfully resisted the Moorish conquerors of Spain and was independent until it became an appanage of the French crown, 1284–1316, by the marriage of Philip IV to the heiress of N. Ferdinand of Aragon annexed Spanish N., 1479, French N. going to Catherine of Foix who kept the royal title. Her grandson became Henry IV of France, and the ancient kingdom of N. was absorbed in the French crownlands in 1620.

NAVARETE (nahravhrā'tā), Juan Fernandez (1526–79), surnamed *El Mudo* (the Mute). Spanish

painter. In 1568 he was appointed painter to Philip II and executed a number of pictures for the Escorial.

NAVE. In architecture, the central part of a church, between the choir and the entrance.

NÁVEL. In anatomy, a round scar in the human abdomen, where the umbilical cord was attached until severed after birth.

NAVIGATION ACTS. A series of Acts passed from 1381 onwards, to protect the Eng. shipping industry against foreign competition. The best-known was that of 1651, forbidding the importation of any goods not carried in English ships or the ships of the country where the goods were produced; this was aimed against the Dutch, who controlled most of the carrying trade. The N.A. were repealed in 1849.

NAVY. A nation's warships and the organization to maintain them. Naval power was an important factor in the struggle for supremacy in the Mediterranean in the 5th cent. B.C., e.g. the defeat of Persia by Greece at Salamis, but the first permanent naval organization was estab. by Rome in 311 B.C. with the appointment of navy commissioners to safeguard trade routes from pirates and eliminate the threat of rival sea power. Next came Byzantine dominance until the Turkish invasions of the 12th cent. A.D., and during the Middle Ages the Italian city-states, e.g. Genoa, were influential. From Genoa came the admirals of the first French royal fleet, estab. by Louis IX in the 13th cent., and there was a great deal of cross-Channel raiding during the Hundred Years War (1339–1453) on the part of both sides. The English forces taking part had their origins in the fleet (a few king's ships, plus ships from the shires and a few privileged coastal towns) with which Alfred the Great overcame the Norsemen in 878. Building on the beginnings made by his father, Henry VIII raised a force which incl. a number of proper battleships, created the long-enduring administrative machinery of the Admiralty, and by mounting heavy guns low on a ship's side revolutionized strategy by the use of the 'broadside'. Often compelled to parsimony, Elizabeth yet encouraged Drake, Frobisher, Hawkins, Raleigh and others who were to set the seal on the decline of the great sea power of Spain, which had burgeoned in a great era of exploration and conquest in the early 16th cent., by their defeat of the Armada. In the 17th cent. there was a remarkable development in naval power among the powers of northern Europe, e.g. in the Netherlands, which then founded an empire in the East; in France, where a strong fleet was built up by Richelieu and Louis XIV which maintained the links with possessions in India and Canada; and in England, comparatively briefly under Cromwell. However, effectively reorganized by Pitt in time for the French revolutionary wars, the Royal

NAVY. The *Great Harry*, built by Henry VIII, the first double-decked English warship.

League. Brewing is carried on and there are leather and tobacco works. Pop. (1967) 144,000.

NIJNI-NOVGOROD. See GORKY.

NIKE (nī'kē). Greek goddess of victory. One of the most beautiful architectural monuments of Athens was the temple of N. Apteros. N. is shown in sculpture with wings, as in the 'Winged Victory' (Louvre).

NIKOLAYEV (nēkōlī'ef). Seaport in the Ukrainian S.S.R., at the mouth of the S. Bug, on the Black Sea, cap. of N. region. A naval base, it has important shipyards. Pop. (1967) 289,000.

NILE. The longest river in Africa; its remotest head stream is the Luvironzo branch of the r. Kagera flowing from the S.W. into Lake Victoria and thence to the Mediterranean. The N. proper begins where the main stream leaves Lake Victoria 2½ m. above Owen Falls (q.v.); it is c. 3,500 m. long. From Lake Victoria it flows over rocky country, and there are many cataracts and rapids, including the Murchison Falls, until it enters Lake Albert. From here it flows across flat country and in places spreads out to form lakes. At Lake No it is joined by the Bahr el Ghazal, and from this point to Khartoum it is called the White N. At Khartoum it is joined by the Blue N., which rises in the Ethiopian highlands, and 200 m. below Khartoum it is joined by the Atbara. From Khartoum to Aswan (q.v.) there are 6 cataracts. The N. is navigable to the 2nd cataract, a distance of 960 m. The delta of the N. is 120 m. wide and 105 m. deep.

NILGAI (nēl'gi). Large antelope (*Boselaphus tragocamelus*) found in India. The bull has short conical horns and is bluish-grey.

NIMES (nēm). City of the S. of France, cap. of the dept. of Gard, 18 m. N.W. of Arles, famous for its Roman remains which incl. an amphitheatre dating from c. 2nd cent. A.D. Pop. (1962) 105,199.

NIMITZ (nim'its). Chester William (1885–1966). American admiral. He was responsible for the reconquest of the Solomons (1942–3), the Gilbert Is. (1943), and the Marianas and Marshalls (1944), and as U.S. representative signed the Japanese surrender.

NINEVEH (nin'evē). Cap. of the Assyrian Empire from the 8th cent. B.C. until its destruction by the Medes under Cyaxares in 612 B.C. It was situated on the Tigris opposite the modern town of Mosul, and was adorned with splendid palaces. Excavations from 1842 onwards brought to light the ruins of N. under the mounds, or tells, of Kuyunjik and Nebi Yunus.

NINGPO'. Fishing port in Chekiang, China, on the Yung Kiang, 12 m. from its mouth. N. was a centre of foreign trade already under the Tang dynasty (618–907), and was one of the original treaty ports opened to European traders in 1842. It sends fish, tea, cotton, etc., to Shanghai, and makes straw hats and mats, furniture, lace. Pop. (1957) 240,000.

NI'ŌBE. In Greek legend the daughter of Tantalus and wife of Amphiion, king of Thebes. Proud of her 12 children, she showed contempt for the goddess Leto who had only two; whereupon Leto induced her own children, Apollo and Artemis, to slay N.'s N. d. of grief, and was changed into stone by Zeus.

NIOBIUM. Light grey metal closely allied to tantalum, and known in the U.S. as columbium, which was first prepared by Blomstrand in 1864, though discovered in an ore by Hatchett in 1801: symbol Nb, at. wt. 92.91, at. no. 41. Occurring in a number of rare minerals, it is generally obtained from an African ore, and is a valuable addition to stainless steels, also being used for canning high-temperature nuclear fuel elements, e.g. fast breeder-reactors, espec. when liquid sodium is the coolant.

NIPPON. Transliteration of the native name for Japan.

NIPPUR (nip-poor'). Ancient city of Sumeria, its site now marked by the village of Niffer, Iraq. It lay on the Euphrates (now 25 m. away), 90 m. S.E. of

RICHARD NIXON

Courtesy U.S. Information Service

Baghdad. It was the cult centre of the god Enlil.

NIRENBERG (nē'ren-), Marshall (1927–). American biochemist. Working at the Nat. Inst. of Health at Bethesda, Maryland, he was awarded a Nobel prize (with Robert Holley and H. Gobind Khorana) for interpreting the genetic code and its function in protein synthesis in 1968.

NIRVANA (nirvah'na) (lit. 'blowing-out'). In Buddhism, the attainment of perfect serenity by the

eradication of all desires. To some Buddhists it means complete annihilation, to others it means the absorption of the self in the infinite.

NITHSDALE, William Maxwell, 5th earl of (1676–1744). Jacobite leader who was captured at Preston, brought to trial in Westminster Hall, and condemned to death on 9 Feb. 1716. With his wife's assistance he escaped from the Tower of London in woman's dress, and fled to Rome.

NITRE (nī'tr) or **Saltpetre**. Potassium nitrate, KNO_3 , a mineral found on the ground and in the soil near the surface of the ground at Bihar, India, Persia, and Cape Province, S. Africa. The native salt was formerly used for the manufacture of gunpowder, but the supply of N. for explosives is nowadays largely met by making the salt from nitratine (Chile saltpetre, NaNO_3).

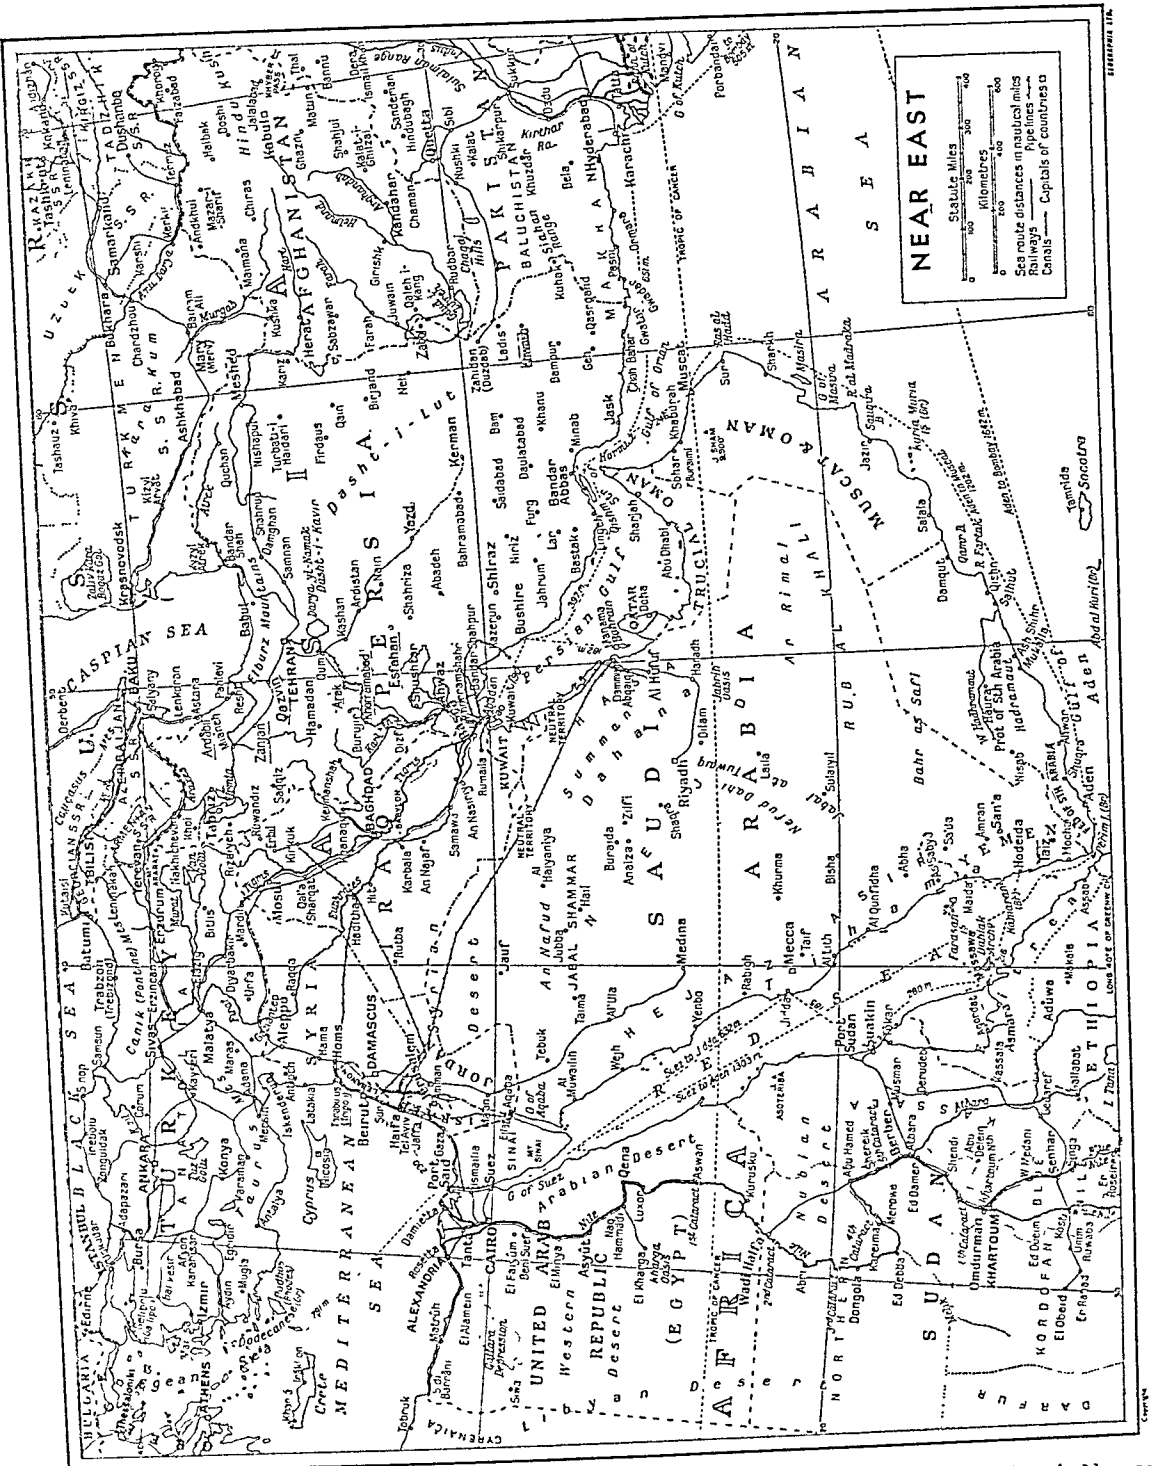

NITRIC ACID. Mineral acid, HNO_3 , also called aqua fortis, first prepared by Raimon Lull (q.v.) by heating nitre and clay; its real nature was demonstrated by Cavendish. Obtained directly from the air by the various processes for fixation of atmospheric nitrogen, it is a strong oxidizing agent, dissolves most metals, and is used for nitration and esterification of organic substances; for explosives, plastics, and dyes; in making sulphuric acid and nitrates.

NITROCELLULOSE. Series of esters with 2–6 nitrate groups per molecule, made by the action of concentrated nitric acid on cellulose in the presence of concentrated sulphuric acid; those with 5 or more nitrate groups are explosive (gun cotton), but those with less were used in lacquers, rayon, and plastics, espec. celluloid and photographic film, until replaced by non-inflammable cellulose acetate.

NITROGEN. Colourless, odourless, inert gas isolated by Daniel Rutherford in 1772: symbol N, at. wt. 14.008, at. no. 7. There are an est. 4,000 billion tons of N. in the atmosphere of which it forms c. 78 per cent by vol. (Gk. nitreforming). Many N. compounds, e.g. nitric acid, nitrates, ammonia and the oxides, are of greatest importance in foods, drugs, fertilizers, dyes, and explosives. N. is a constituent of many organic substances, particularly proteins, but is generally obtained from nitrate deposits, e.g. Chile; or from the atmosphere by liquefaction and fractional distillation; or by N. fixation, e.g. the Haber process in which N. and hydrogen are heated under pressure in the presence of a catalyst to form ammonia. In nature atmospheric N. is fixed by certain soil bacteria.

NITROGLYCERINE. Substance produced by the action of nitric and sulphuric acids on glycerol. Very poisonous, it explodes with great violence if heated in a confined space. It is used in the preparation of dynamite, cordite, and other high explosives.

NIXON, Richard Milhous (1913–). American Repub. politician. B. in California, of Quaker family, he became a lawyer, entered Congress in 1947, and in 1948 attracted attention as a member of the Un-American Activities Committee when he pressed for

come sandhills now stable and grass-covered; the prairies, whose fertility is very high, slope to the Missouri, whose tributaries, White, Platte, and Niobrara, with the Big Blue, tributary of the Republican, are the chief rivers. The crops incl. maize, wheat, oats, barley, etc., livestock are important, and the chief industry is food processing, but fertilizers,

and oil and natural gas are also produced. N. was purchased by the U.S.A. from France in 1803, and it became a state of the Union in 1867. Area 77,237 sq. m.; pop. (1960) 1,411,330.

NEBUCHADNEZZAR (nebukadnezzar) II, or Nebuchadnezzar (d. 562 B.C.). King of Babylonia. Shortly before his accession in 604 B.C. he defeated

NORE. The. A sandbank at the mouth of the Thames, England. A lightship – the first of its kind – was placed there in 1732. The 'Mutiny of the Nore' in the British fleet took place in the vicinity in 1797.

NORFOLK. Bernard Marmaduke FitzAlan Howard, 16th duke of (1908–). Earl Marshal of England, and premier duke and earl. Succeeding his father in 1917, he was in charge of the Coronation arrangements in 1937 and 1953, and is keenly interested in horses (steward of Jockey Club), agriculture (Joint Parl. Sec. to the Ministry 1941–5), and cricket (manager of the M.C.C. team in Australia 1962–3).

NORFOLK. Co. on the E. coast of England. Its coastline is flat, except at Hunstanton and in the region of Cromer where there are cliffs, and much land has been reclaimed from the Wash near King's Lynn. The chief rivers are the Ouse, Yare, Bure, and Waveney. The series of lakes called the Broadas are famous for their wild life, and are favoured for sailing and motor cruises. The soil consists mainly of sand, loam, and chalk. The chief crops incl. oats, wheat, barley, turnips and beet. Turkeys and geese are reared for the London market. Norwich, the co. tn., is the only industrial centre. Other towns incl. Gt. Yarmouth, King's Lynn, Cromer, and Hunstanton. From 1965 large natural gas deposits were located 15–60 m. off the coast, and a terminal and treatment plant were estab. at Bacton. Area 2,054 sq. m.; pop. (1967) 593,990.

NORFOLK. A seaport of Norfolk co., Virginia, U.S.A., on the estuary of the r. James. On the opposite bank is the suburb of Portsmouth, where there is a navy yard. Pop. (1960) 305,872.

NORFOLK ISLAND. Is. in the Pacific, midway between New Zealand and New Caledonia, discovered by Capt. Cook in 1774. N.I. was settled in 1856 by descendants of the mutineers of the *Bounty* from Pitcairn Is., and was under the jurisdiction of New South Wales until 1914, when it became a territory of the Australian Commonwealth. It has fertile soil and an agreeable climate; citrus fruits, bananas, and vegetables are grown, and a whaling station was set up in 1956. Area 13½ sq. m.; pop. (1968) 1,500.

NORMAN. Style of architecture used in England from the time of Edward the Confessor until about the end of the 12th cent.

NORMAN ARCH

N. buildings are massive, the semi-circular arch is used (except in the case of small openings for which trefoil arches are sometimes used), buttresses are of slight projection, and vaults are barrel-roofed. Examples are the Keep of the Tower of London, and parts of the cathedrals of Chichester, Gloucester, Oxford, and Ely.

NORMANDY (Fr. *Normandie*). One of the old provs. of France, on the seaboard of the English Channel; it is covered by the depts. of Seine-Maritime, Eure, Orne, Calvados, and Manche. Its cap. was Rouen, and it incl. also Dieppe, Le Havre, Harfleur, Caen, Falaise, St. Lô, Bayeux, Cherbourg, Coutances, and Alençon.

Part of Roman Gaul and then of the Frankish kingdom of Neustria, the region was occupied by the pagan Norsemen in the early 10th cent., and in 912 Rouen and some neighbouring land was given to their leader Rollo, who after becoming a Christian took the name of Robert. A descendant of Robert was William the Conqueror. During the Anglo-French wars N. changed hands several times, but it was finally conquered by the French under Charles VII in 1450.

N. again became a battleground during the S.W.W. in 1944 after Allied forces had landed on the beaches near Arromanches and Carentan on D-Day (q.v.). There was bitter fighting for weeks, particularly at Caen and Falaise.

NORMAN-FRENCH. The French dialect used by the Norsemen who settled in Normandy in the 10th cent., and subsequently by the Norman ruling class in England. Although generally replaced by English in the 14th cent., it remained the language of the court until the 15th and the official language of the law courts until the 17th, and is still used in the Channel Is. A considerable literature written in England in N.F. exists, including the 12th cent. chronicles of Gaimar and Wace, and the fables of Marie de France.

NORMANS. The Norsemen who were granted Normandy by the king of France in 911, and adopted the French language and culture. During the 11th and 12th cents. they conquered England, parts of Wales and Ireland, S. Italy, Sicily, and Malta, settled in Scotland, and took a prominent part in the Crusades. After the 13th cent. they ceased to exist as a distinct people.

NORRIS, Frank (1870–1902). American novelist. B. in Chicago, he completed only 2 parts of his great projected trilogy, the *Epic of Wheat: Octopus* (1901) dealing with the growing of wheat, and *The Pit* (1903) describing the gamble of the Chicago wheat exchange.

NORSEMEN. The early inhabitants of Norway. The term is used in a more general sense for all the Scandinavian Vikings who during the 8th–11th cents. raided or settled in Britain, Ireland, France, Russia, Iceland, and Greenland.

NORTH, Frederick, 8th lord (1732–92). British statesman. He entered parl. in 1754, became Chancellor of the Exchequer in 1767, and was P.M. in a govt. of Tories and 'King's Friends' in 1770. Throughout his premiership his policy was largely dictated by George III, and it was against his better judgment that he carried on the war with America. He resigned in 1782, returned to office in 1783 in a coalition with Fox, and after its defeat retired from politics.

NORTH, Sir Thomas (c. 1535–1601). English translator. His translation of Plutarch's *Lives* (1579), a masterpiece of Elizabethan prose, formed the source of Shakespeare's Roman plays.

NORTH AMERICA. A continent covering 18 per cent of the earth's land area, whose physical bounds reach Panama, Alaska, and Labrador, and divided into N. America proper (Canada, the U.S.A. and Mexico) and CENTRAL AMERICA (q.v.).

N.A. bears marked physical features. The Laurentian region is disordered rock structure in a low-lying ring round Hudson Bay, from Labrador on the E. to the Arctic. Lakes and streams abound amid wild afforestation. The Appalachian area is a mountainous range running from Newfoundland S.W. to Alabama. Called the Appalachians from Nova Scotia to Pennsylvania, and the Allegheny plateau S. to Alabama, the area is occupied by large coal deposits. A coastal plain borders the Gulf of Mexico and the Atlantic. The Western Highlands or Cordilleras are complex ranges forming a vast interior barrier down the W. of the continent from Alaska to Central America. Rising to more than 20,000 ft. in Mt. McKinley, Alaska, the individual ranges are the Alaska range, Brooks range, Mackenzie mts., Rocky mts., Colorado plateau, and Mexican plateau. Parallel to the Rockies are the Coast range, Cascade range, and Sierra Nevadas, which bound narrow, fertile, Pacific-coast plains. The Central Plains are a wide belt stretching from the Arctic to the Gulf of Mexico, averaging 1,500 m. in breadth and including the Canadian and U.S.A. wheat and plantation areas; roughly along the U.S.-Canadian border they slope gently downwards to N. and to S.

The chief river systems are the E.-flowing St.

exports are tin, rubber, oil palm, and coconuts. Area 2,550 sq. m.; pop. (1966) 503,323.

NEGRO. A member of the Negroid race: with Caucasoids and Mongoloids one of the 3 main human racial groups. Ns. are mainly found in Africa S. of the Sahara and incl. the S. and Central African pygmies (Negrillos), but also in the East, e.g., the Indian, S.E. Asian and Indonesian pygmies (Negritoos) and the Melanesian Negroids (New Guinea to the Fiji Is.). Ns. of African – espec. W. African – descent are distributed from the 16th cent. as a result of the slave trade in S., Central and N. America.

Characteristic of most Ns. are broad, short nose; high cheek bones; thick, everted lips; black, wiry hair of elliptical section, often short and curly; above average height; and a dark brown skin pigmentation – also shared with some Indian Caucasoids, Australian aborigines, etc. A quadroon is of $\frac{3}{4}$ Caucasoid or Mongoloid blood and $\frac{1}{4}$ Negroid; and an octoroon is $\frac{7}{8}$ Caucasoid or Mongoloid and $\frac{1}{8}$ Negroid: *see also* MULATTO.

The American Ns. comprise the largest single racial group in the U.S.A., c. 22,000,000 or approx. 10 per cent of the pop. Of these only 25 per cent – as a result of intermarriage, etc. – are still pure N., and they have adopted the language and usually a non-conformist or revivalist type of Christianity. Formerly almost exclusively employed on cotton and tobacco plantations in the Atlantic and S. Central states, they moved in large numbers to the N. after both world wars to ease the industrial labour shortage, and cities such as N.Y. and Chicago have a large N. population. Particularly after the S.W.W. there have been widespread efforts by Ns. and their supporters to end racial discrimination with some degree of success, e.g. desegregation in schools, buses and restaurants in the S. However, progress is slow and even in the N. educ., housing, employment opportunities, etc., tend to be less for them, with the result that, perhaps inspired by the emergence of the new African states, there are movements such as that of the Black Moslems (q.v.). A report (1968) by Johnson's Nat. Advisory Commission concluded that 'Our nation is moving towards two societies, one Black, one White – separate and unequal', but that it was not too late to reverse the trend, e.g. the Civil Rights Act (1968) protecting the exercise of civil rights by N. in housing, education, employment, jury service, franchise, and use of public facilities. For distinctively N. (American and African) contributions to world culture, *see* AFRICAN NEGRO ART AND JAZZ.

NEHEMIAH. Jewish statesman, who was appointed governor of Judaea by the king of Persia, rebuilt the walls of Jerusalem, and carried out religious and social reforms. Some scholars date his appointment in 445–444 B.C., others in 384 B.C. His memoirs are incorporated in the O.T. book of N.

NEHRU (nā'rōō), Jawaharlal (1889–1964). Indian

statesman. He was b. at Allahabad, the son of Motilal N., a wealthy lawyer who adopted strong Nationalist views. Educ. at Harrow and Cambridge, he practised from 1912 at the Allahabad Bar, and soon became prominent in the Congress Party as the leader of its Socialist left wing, acquiring an influence second only to Gandhi's. During 1921–45 he was imprisoned 9 times for his political activities. He became For. Min. in the interim govt. set up in Sept.

Rep.) of India in Aug. 1947. In 1951–4 he was also pres. of the Congress Party (a post in which he had succeeded his father in 1929, and had also held in 1936, 1937, and 1946). N. was the author of several distinguished literary works, notably *Glimpses of World History* (1934), and an autobiography (1936). His influence over the country remained strong as ever until his death. The *J.N.Award for International Understanding* (1966) of 100,000 rupees is awarded annually to individuals not organisations.

His dau. Indira (1917–) studied at Oxford, and was imprisoned during the struggle for independence. In 1942 she m. Feroze Gandhi (not related to the Mahatma), and acted as hostess for her father from 1947. In 1966 she succeeded Shastri as P.M. and leader of the Congress Parliamentary Party.

NEILL (nēl), Alexander Sutherland (1883–). British educationist. He worked as a teacher and journalist before founding the International School, Hellerau, Dresden, in 1921, of which his division was later transferred 1st to Austria then to England (Summerhill at Leiston, Suffolk). Famed for his progressive views, he has written *The Problem Child* (1926), *The Problem Parent* (1932), *Summerhill* (1962).

NEISSE (nīs'e). Tributary of the r. Oder in E. Europe, 140 m. long. It rises in the Iser Mountains, Czechoslovakia, and flows generally N. It marks the S. part of the boundary set up in 1945 between E. Germany and Polish-occupied Germany. Another trib. of the Oder, the Glatzer Neisse (Polish Nysa Kluz), lies 110 m. farther E. On its banks is the town of N. (Polish Nysa), from which the German pop. were expelled in 1945; it was cap. of the prince-bishops of Breslau (Wrocław) from 1198–1810.

NEJD. Region of central Arabia consisting chiefly of desert. It forms part of the kingdom of Saudi Arabia, and is inhabited by Bedouins. The cap. is Riyadh. Area c. 800,000 sq. m.; pop. c. 4,000,000.

NEKRASOV (nyekrah'sof), Victor (1911–). Ukrainian writer. A journalist, after the S.W.W. he became well known for his book *In the Trenches of Stalingrad* (1946). He later received much hostile criticism for his balanced account of his visits to Italy and the U.S.A. *Both Sides of the Ocean* (1962).

NELSON, Horatio, viscount (1758–1805). British admiral. He was b. at Burnham Thorpe, Norfolk, where his father was rector, and entered the navy in 1770. While serving in the W. Indies he m. Mrs. Frances Nisbet. He was almost continuously on active service in the Mediterranean 1793–1800 and as a result of wounds he lost his right eye in 1794 and his right arm in 1797. His share in the victory off Cape St. Vincent in 1797 made him a national hero, and was rewarded by promotion to rear-admiral.

In 1798 he tracked the French fleet to Aboukir Bay, and almost entirely destroyed it in the Battle of the Nile. He then lingered at Naples for a year, during which he helped to crush a democratic uprising, and fell completely under the influence of Lady Hamilton (q.v.). In 1800 he returned to England, and soon after separated from his wife. He was promoted to vice-admiral in 1801, and sent to the Baltic to operate against the Danes, nominally as second-in-command; in fact, it was N. who was responsible for the victory of Copenhagen, and for negotiating peace with Denmark. On his return to England he was created a visct.

In 1803 he received the Mediterranean command.

1946, and P.M. on the creation of the Dom. (later

NORTH CAROLINA. State of the U.S.A. on the Atlantic seaboard, one of the original 13. It is fertile, and agriculture, incl. the production of tobacco and cotton, is the principal industry. Kaolin, mica, feldspar, tungsten, and granite are worked; timber is important; textiles, cigarettes (about half those produced in the whole Union), furniture, paper, chemicals, and artificial fibres are produced. The fisheries are valuable. The cap. is Raleigh, the largest city Charlotte, and the chief port is Wilmington. Verrazano, 1524, and De Soto, 1540, were the earliest European

NORTH CAROLINA. Erected by George W. Vanderbilt 2 m. south of Asheville, Biltmore is a monumental mansion incorporating French Renaissance elements, and is now preserved as a museum. *Courtesy of the Biltmore Museum.*

visitors; the first English settlement in America was made on Roanoke Is. in 1585, but it was wiped out. Area 52,712 sq. m.; pop. (1960) 4,556,155.

NORTHCLEFFE, Alfred Charles William Harmsworth, 1st visct. N. (1865–1922). British newspaper proprietor. He founded his publishing business, later the Amalgamated Press, in 1887 and in 1894 took over the *Evening News*. Founding the *Daily Mail* (1896), he revolutionized popular journalism with attractive make-up and writing, and with the *Daily Mirror* (1903) originated the picture paper: in 1908 he also obtained control of *The Times*. He was chairman of the British War Mission in the U.S.A. in 1917. He was created a baron in 1905 and visct. in 1917. His brother Harold Sidney Harmsworth, 1st visct. Rothermere (1868–1940), was associated with him in many of his projects, and was founder of the *Sunday Pictorial* in 1915. He was created baron in 1914 (visct. 1919), and was Air Min. 1917–18.

NORTHCOTE, James (1746–1831). British artist. Going to London from his native Plymouth in 1773, he established himself as a portrait painter. He is remembered as the assistant and biographer of Reynolds.

NORTH DAKOTA. West North Central state of the U.S.A., bounded in the N. by Canada, situated in the Great Plain region, and consisting of 3 huge tablelands, viz. the Red River valley in the E., the Pembina mts. in the N.E., and the Missouri plateau which covers the western half of the state. In the S.W. are the Bad Lands, so called because the pioneers had great difficulty in crossing them. The valley of the Red River is very fertile, and grain production is the chief industry of the state. The cap. is Bismarck, the largest town Fargo. Area 70,665 sq. m.; pop. (1960) 632,446.

NORTH-EAST FRONTIER AGENCY. Tribal district geographically in Assam, India, but administered separately by an adviser directly responsible to the Governor of Assam. It lies in the Himalayas on the borders of China (Tibet) and Burma. Disputes over the boundary led to an invasion of the area by

China in 1962. Area 31,438 sq. m.; pop. (1961 est.) 530,000.

NORTH-EAST PASSAGE. The sea route from the Atlantic round the N. of Asia to the Pacific, followed successfully for the first time by A. E. Nordenskjöld (q.v.) in 1878–9. Since 1935 the use of this route has been extensively developed by the Soviet govt., in connection with its colonization of N. Siberia.

NORTHERN IRELAND. A self-governing country within the U.K. estab. in 1920 and comprising the counties of Antrim, Down, Armagh, Tyrone, Londonderry, and Fermanagh, and the co. bors. of Belfast, the cap., and Londonderry, all in the prov. of Ulster. Area 5,242 sq. m.; pop. (1966) 1,484,770. The largest single group, predominant near the border with the Irish Rep., is R.C., but overall the Protestant denominations are in the majority, Presbyterians being the most numerous. There are 2 univs., Queen's (1849) at Belfast and the New Univ. of Ulster at Coleraine (1968).

Physical. Most of N. Ireland occupies a peninsula of Ireland projecting N.E. towards Scotland. Its centre is the fertile basin of Lough Neagh, joined to Belfast Lough by the valley of the Lagan. To the N. are the plateau of Antrim extending to the rugged coast, and the valley of the Bann. Farther W. the Sperrin mts. (Sawel, 2,240 ft.) rise above boggy plateaux, while in the S.E. of the country the Mourne mts. culminate in Slieve Donard (2,796 ft.). A low temperature range and high humidity and precipitation are characteristic of the climate.

Economics. The traditional industries of linen and shipbuilding are maintained, but since the S.W.W. the country has become one of the world's biggest manufacturers of man-made fibres and textiles. There are also chemical, electronics, car component and aircraft industries, and tobacco factories. One quarter of the land surface is mountain and bog – producing peat

NORTHERN IRELAND. The seat of Northern Ireland's Parliament, Stormont was designed by Sir Arnold Thornley in severe classical style and built 1928–32 of Portland stone on a plinth of grey granite from Slieve Donard, the highest peak in the Mountains of Mourne. It is approached by a flight of steps 90 ft. high. *Courtesy of Northern Ireland Tourist Board.*

and used for rough grazing – but on the remainder a thriving agriculture supports a growing food processing industry. Formerly on a basis of smallholdings, agriculture now moves towards amalgamation in large farms, highly specialized and mechanized. Products include milk, butter, cheese, beef, bacon, eggs and chicken; and the chief crops are barley, oats, hay, potatoes, flax, and – in co. Armagh – fruit.

Government. Since 1920 N.I. has had its own parl. (a House of Commons and a Senate elected by the Commons) at Stormont, near Belfast. It retains the right of sending members to Westminster. A Governor represents the Sovereign, and there is a cabinet consisting of a P.M. and 9 other ministers. The parl. legislates for N.I. except in matters of imperial concern.

senate condemned N. to death, whereupon he committed suicide.

NE'RUDA, Jan (1834-91). Czech poet. B. in Prague, the leading Czech writer of his day, he pub. *Cosmic Songs and Ballads and Romances* (1883), lyrics of great charm. His *Tales of the Malá Strana* (1878) are stories of Prague life.

NERUDA, Pablo. Pseudonym of Chilean poet Neftali Ricardo Reyes (1904-). A widely travelled diplomat, he ranges in his verse from the intimate lyric, e.g. *Veinte poemas de amor y una canción desesperada* (1924), to an epic treatment of the history of the American continent *Canto General* (1950).

NERVA, Marcus Cocceius (c. A.D. 35-98). Roman emperor. He was a senator who was proclaimed emperor on Domitian's death in 96, and proved a humane ruler. He introduced state schemes for loans for farmers and family allowances, and an agrarian law for the allotment of land to poor citizens.

NERVAL (nervahl'), Gérard de. Adopted name of French Romantic poet Gérard Labrunie (1808-55). He pub. short stories, plays, poems, translations, and the semi-autobiographical romance, *Sylvia* (1848-50). He lived a wandering life, darkened by periodic insanity, and committed suicide.

NERVES. The highly specialized cells with their processes through which all the activities of the body are initiated and controlled. The bodies of the cells form most of the grey matter of the brain and spinal cord (central nervous system); long, fine fibres (axons) run out and branch from these to all parts of the body. One set of Ns. transmits the commands of the will to the muscles (motor), another transmits the sensations from the skin, eyes, ears, digestive system, etc. (peripheral nerves), to the brain (sensory). Much of the work of the Ns. is automatic, and never comes into consciousness at all (autonomic nervous system).

NERVI, Pier Luigi (1891-). Italian engineer and architect. Partner in an engineering firm since 1932, he believes in the unity of builder and architect, and was prof. of the technology and technique of construction at Rome (1946-61). Among his most striking works are the National Stadium in Rome (in collaboration with his son Antonio N., 1959) and Field House for Dartmouth College, U.S.A.

NESBIT, Edith (1858-1924). British writer, best remembered for her children's books, e.g. *The Treasure-Seekers* (1899), *The Would-be Goods* (1901) and *Five Children and It* (1902). Her creation of the Bastable family was a notable departure from the conven-

NETHERLANDS. Gay national costumes, painted clogs and an ice dance-floor at Marken.

tional, class-conscious mode of the period. She m. the Fabian Hubert Bland (d. 1914), in 1880, her writing being the mainstay of the marriage, and had 4 children.

NESS, Loch. Lake in Inverness-shire, Scotland, 23 m. long, average width 1 m., forming part of the Caledonian Canal. It is surrounded by mountains rising to 2,284 ft. in Mealfourvie. From 1933 onwards reports of a 'monster' said to have been seen in L.N. were pub.; sceptics offered various suggestions as a possible explanation of the phenomenon.

NESTÓRIUS (d. c. 451). Syrian ecclesiastic. Appointed patriarch of Constantinople in 428, he maintained that Mary was the mother of the man Jesus only, and therefore should not be called the 'Mother of God'. This doctrine was condemned by the council of Ephesus in 431, and N. was deposed and banished. His followers, the NESTORIANS, estab. a powerful Church in Syria and Persia, and successfully carried on missionary work in India, N. China, and all over central Asia. They still survive as the Assyrian Church in Syria, Iraq, Persia, etc., and as the Christians of St. Thomas in S. India.

NETHERLANDS. Kingdom of W. Europe, bounded on the N. and W. by the North Sea, on the S. by Belgium, and on the E. by Germany. It is often referred to as Holland, the name of its two wealthiest provs., N. and S. Holland.

PHYSICAL FEATURES. The flatness of the N. is proverbial. Only in S. Gelderland, near the German border, and in Limburg are there any hills, the highest part of the country, rising to c. 1,000 ft., being in S. Limburg. Much land has been wrested from the sea and is below sea-level, esp. in N. and S. Holland; some of the polders, or drained lands, lie 21 ft. below sea-level. A noteworthy feature is the extensive and fertile delta formed by the Rhine and the Maas (Meuse) and their distributaries. Other important rivers are the IJssel, draining to the IJsselmeer, and the Scheldt estuary. Off the coast are 2 groups of is.: in the S., Over Flakkee, Schouwen, Tholen, Noord and Zuid Beveland, and Walcheren; in the N. the West Frisian Is. incl. Texel, Vlieland, Terschelling, Ameland, Schiermonnikoog, and Rottumeroog. When plans of reclamation are completed, both groups will form part of the mainland. Reclamation of the former Zuider Zee (q.v.), started in 1920, has already added more than 120,000 acres of cultivable land to the country; and the southern part of the ambitious Delta plan to shut off from the sea the river estuaries of S. Holland and Zeeland - a scheme launched to prevent a repetition of the disastrous sea floods of 1953 which killed

NERVI. One of the most striking examples of modern Italian architecture is the Palace of Labour, Turin, of which the interior is seen here. It was designed jointly by Pier Luigi Nervi and Antonio Nervi, the steel structure being the work of G. Covre.

the E. by Sweden, Finland, and the U.S.S.R., on the N. by the Arctic Ocean, on the N.W. by the Norwegian Sea, and on the W. by the North Sea.

Physical. The surface is mountainous, the highest part of the country (rising to more than 8,000 ft.) being in the region of the Sogne fjord. There is an

NORWAY. The Church of Our Saviour, Oslo's cathedral, stands in the flower market by the main square. Completed in 1697, it was greatly altered 1850, and the octagonal sacristy dates from 1949-50.

Courtesy of the Norwegian National Tourist Office.

extensive coastline, deeply indented with fjords; and numerous islands lie offshore. Some of the most beautiful fjords are Hardanger, Sogne (largest and deepest), Nord, Trondheim, Vest, and Ofoten. The Midnight Sun (q.v.) is seen in northern N., and at the North Cape part of the sun's disc is continuously above the horizon from mid-May to the end of July, and there is no sunrise for 2 months in winter. During the long winter nights the Northern Lights appear (see *AURORA*).

The only river of any length is the Glomma (350 m.); from the numerous short, rapid rivers with many waterfalls, N. harnesses an ample supply of electric power.

Economic. Forests cover nearly one-quarter of the area; they are one of the principal sources of wealth, and the paper and wood-pulp industries flourish. Although less than one-twenty-fifth of N. is under cultivation, agriculture is an important industry. The principal crops are hay, potatoes, barley, and oats. Cattle and sheep are raised, and there are important fisheries. Whaling is carried on in the Antarctic. The canning industry is growing. The most important mineral products are pyrites and iron ore. The chief towns incl. Oslo (the cap.), Bergen, Trondheim, Stavanger, Drammen, Kristiansand, and Haugesund; there are univs. at Oslo (1811), Bergen (1948), Tromsø, and Trondheim.

The climate, thanks to the Gulf Stream, is not so rigorous as might be expected from the latitude.

Area 125,068 sq. m.; pop. (1967) 3,769,269.

Government. N. is a constitutional monarchy. Under the constitution of 1814 legislative power is vested in the Storting (Parl.), elected every 4 yrs. by men and women over 21. The Storting is then divided by election among its own members into a Lagting (upper committee of one quarter of its members) and Odelsting (lower committee). See *OLAF V*.

History. N. was originally inhabited by a Finnish people, who were gradually conquered by Teutonic invaders from c. 1700 A.C. The country remained under local chieftains until Harald Fairhair (reigned 872-c. 930), the most powerful of them, unified N. and introduced the feudal system. Christianity was introduced by Olaf II in the 11th cent.; he was defeated

by rebel chiefs backed by Canute in 1030, but his son Magnus I regained the throne 5 years later. Haakon IV (1217-63) estab. the authority of the Crown over the nobles and the Church and made the monarchy hereditary. Denmark and N. were united by marriage in 1380, and in 1397 N., Denmark and Sweden were united under one sovereign; union with Denmark continued after Sweden, following a long struggle, was recognized as independent in 1523. The Reformed religion was introduced in 1536.

Denmark in 1814 ceded N. to Sweden, but the Norwegians declared their independence and adopted a parliamentary constitution. The Swedes then invaded N., and a compromise was reached whereby N. was to remain an independent kingdom, with its own parl., united with Sweden under a common king. Conflict between the Norwegian parl. and the Swedish monarchy continued until 1905, when the parl. declared N. completely independent. This was confirmed by plebiscite, and Prince Charles of Denmark was elected king under the name Haakon VII.

N. was invaded by Germany in April 1940, and in spite of armed resistance by the Norwegian Army, assisted by British and French forces, completely overrun by June. The king and govt. escaped to Britain, while a puppet govt. was set up under Quisling (q.v.). A strong resistance movement was maintained inside N., and 4 million tons of Norwegian merchant shipping rendered good service to the Allies. The Labour Party, which had held office since 1935, except for Aug.-Sept. 1963, were succeeded in 1965 by a 4-party non-socialist coalition.

Language. A member of the Scandinavian branch of the Germanic family of languages. As a consequence of the political union of Norway with Denmark (1380-1814), Danish became the literary medium of Norway, until in the 19th cent. the scholar Aasen (1813-96) produced the *Landsmål*, which he based on the local dialects of Norway; it has been accepted in many dists. of Norway, in schools, in churches, and for speeches in the Storting; but Dano-Norwegian, or the *Riksmål* continues to be used side by side with it.

Literature. The most remarkable production of N. L. before the eclipse which followed the union with Denmark in 1380 are the Skaldic genealogical poems of the 10th cent., the poetic Edda (q.v.) assembled in the 12th, and the prose sagas such as the *Heimskringla* of Snorri Sturluson in the 13th. A revival came in the 17th cent. with the descriptive poetry of Petter Dass (1647-1708), but the work of Ludwig Holberg and Johan Wessel (1742-85) belonged rather to the joint Dano-N. tradition. In the 19th cent. J. S. Welhaven (1807-73) still looked to the Danish connection, but the great national poet Henrik Wergeland turned to Norway's own spiritual resources for inspiration. The national revival became more vigorous through the work of the great folklorists and under the influence of vernacular writers such as Aasmund Vinje (1818-70) and Arne Garborg (1851-1924) who adopted Ivar Aasen's *Landsmål*. The great figures of the later 19th cent. were Bjørnstjerne Bjørnson, Henrik Ibsen, and the novelists Jonas Lie and Alexander Kielland. To the earlier 20th cent. belong the novelists Hans Kinck (1865-1926), Knut Hamsun, Sigrid Undset, and Olaf Duun. Later prominent figures are Helge Krog (1889-1962), dramatist and critic; the poets Arnulf Overland (1889-1968) and Olaf Bull (1887-1933); the novelists Johan Falkberget (1879-1967), Cora Sandel (1880-), and Sigurd Høi (1890-1960); and the poet, playwright, and novelist Nordahl Grieg.

Music. Among well-known names are those of the violinist-composer Ole Bull (1810-80), the nationalist Grieg and the smaller-scale genius of Sinding (qq.v.).

NORWICH (nor'ij). English city (co. bor.), cap. of Norfolk, situated on the Wensum, just above its confluence with the Yare. Notable buildings incl. the

Literature. Earliest known poet to use the Dutch dialect was Henric van Veldeke (12th cent.), but the finest example of early Gothic literature is *Van Den Vos Reinaarde* (About Reynard the Fox) by a poet known only as 'Willem-who-made-the-Madoc'. To the Golden Age belong Pieter C. Hooft (1581–1647), lyricist, playwright and historian; Constantijn Huygens (1596–1687), who was knighted by James I in 1622; Gerbrand A. Bredero (1585–1618), gifted in comedy and light verse; the great lyric, satiric and dramatic poet Joost van den Vondel (1587–1679), and the moralizing poet Father Jacob Cats (1577–1660). As in art, the 18th cent. was generally a period of decline, although the epic poet Willem Bilderdijk (1756–1831) ranks high. The Romantic movement found its fullest expression in the nationalist periodical *De Gids* (The Guide) founded in 1837. Among the best-known writers of the period were Nicolas Beets (1814–1903), with his famous sketches *Camera Obscura*, and Eduard Douwes Dekker (1820–87), who wrote novels under the pseudonym 'Multatuli' and was a forerunner of the movement grouped round a second periodical *De Nieuwe Gids* (The New Guide, estab. 1885) which marked the late 19th cent. revival. Among writers of the period were lyricist Herman Gorter (1864–1927), the staid poet Albert Verwey (1865–1937), the poet, playwright and novelist Frederick van Eeden (1860–1932), the novelists Louis Couperus (1863–1923), Marcellus Emants (1848–1923), and Arthur van Schendel (1874–1946). After the F.W.W. Hendrik Marsman (1899–1940), a rhetorical 'vitalist' influenced by German expressionism, led a school counterbalanced by the more sober *Forum* group led by critic Menno Ter Braak (1902–40). No recent writers have attained international standing.

NETHERLANDS ANTILLES. Overseas part of the kingdom of the Netherlands composed of the islands of Curaçao (q.v.), Aruba, and Bonaire, lying off the coast of Venezuela, together with St. Eustatius, Saba, and the S. part of St. Maarten, c. 500 m. to the N.E. Total area 381 sq. m.; pop. (1965) 209,000. Willemstad, on Curaçao, is the cap. Maize, salt, and phosphates are produced, and huge refineries on Curaçao and Aruba treat petroleum from Venezuela. N.A. has full internal autonomy (from 1954) under a gov. assisted by a council of ministers and a single-chamber elected legislature, but oil workers in Curaçao revolted 1969 and demanded the resignation of the N.A. gov't. Dutch marines were flown out to restore order.

NETHERLANDS EAST INDIES. Name used for the East Indian Archipelago until those islands achieved independence as Indonesia (q.v.). The Portuguese were the 1st European traders to reach the islands, in the early part of the 16th cent. Before the end of that cent. they had been driven out by the English and the Dutch. But the Dutch soon obtained the monopoly of trade there and in 1602 formed their East India Co., which set up a factory at a spot named Batavia in 1619 (re-named Djakarta in 1949). Gradually the company subdued the warring rulers and brought the islands one after another under its rule until in 1798 (during the French occupation of the Netherlands) the company was abolished. The British seized the N.E.I. to prevent them from falling into French hands, restoring them in 1816 when they came under the control of the Dutch gov't. In the 20th cent. various preliminary measures intended to lead to self-gov't. were introduced, but this orderly progress was brought to an abrupt end by the Japanese occupation of the N.E.I., 1942–5.

NETTLE. Genus (*Urtica*) of plants, many of which have ovate or lanceolate leaves covered with stinging hairs. When lightly touched these penetrate the skin and release an acrid juice causing inflammation. The common stinging nettle (*U. dioica*), found in

waste places in Europe and naturalized in parts of

WHITE DEAD NETTLE

N. America, yields a tough fibre which was made into cloth in ancient Egypt.

NETTLE-RASH. Urticaria; an acute allergic reaction of the skin. In answer to the specific stimulus, whether it be the eating of shellfish, contact with a horse, or an emotional shock, the skin erupts in a rash and weals as though it had been badly stung by nettles, and itches intolerably. Treatment is by removing the cause; by soothing baths and lotions; and by injections of adren-

alin. The eruption often disappears as rapidly as it came. See ALLERGY.

NEUCHÂTEL (nōshahtel'). Swiss city, cap. of N. canton, nr. the N.E. of N. Lake, 25 m. W. of Berne. It is the seat of a univ. (1909). Pop. (est.) 30,000. The canton lies between N. Lake and the French frontier, in the Jura mts. Area 308 sq. m.; pop. (1960) 147,500.

NEURALGIA (nūral'ja). A severe pain felt along the track of a nerve and not due to inflammation of it (see NEURITIS). Some forms are due to exhaustion or illness, others to an unhealthy stimulus, sometimes at a considerable distance – e.g. sciatica – resulting from displacement of one of the discs which lie between the vertebrae. Treatment is by general measures, sometimes by the injection of alcohol into the nerve trunk, and sometimes by cutting or stretching of the nerve.

NEURASTHENIA (nūrasthē'nia). An unscientific term meaning nervous weakness or exhaustion, and used to cover a variety of symptoms of neurosis.

NEURATH (noi'raht), Constantin von (1873–1956). German Nazi politician. Ambassador to Britain 1930–2, he then became For. Min., retaining his position under the Hitler régime until 1938, and was 'protector' of Bohemia and Moravia 1939–41. Sentenced at Nuremberg to 15 yrs. imprisonment, he was released on grounds of age and ill-health in 1954.

NEURITIS. Inflammation of a nerve or nerves as a result of poison, infection, or injury. Multiple N., the inflammation of a large number of nerves, results from chronic drunkenness (Korsakow's psychosis), or poisoning by lead, arsenic, etc., or the toxins of diseases such as diphtheria or sleepy sickness.

NEUROSIS. Mental disorder not amounting to insanity, resulting from unrecognized conflict between the patient's primitive and his ethical impulses. It is often classified into anxiety, marked by irrational apprehension; obsession, in which the will is dominated by compulsive 'rituals' such as the need to wash the hands frequently; and hysteria, in which the trouble is chiefly infantile dependence on others and a lack of emotional control.

NEUTRA (noi'trah), Richard Joseph (1892–). Austrian architect. Ed. at the univs. of Vienna and Zürich, he worked in Switzerland 1919–23, when he went to the U.S.A., where he was naturalized in 1929. His works incl. the Lovell Health House and the Military Academy, both in Los Angeles.

NEUTRALITY. Non-participation in a war between other states. Under international law, neutral states must not supply men, arms, money, or war-supplies to belligerents, or allow the passage of belligerent troops, the establishment of military, naval, or air bases on their territory, or recruiting among their subjects by belligerents. Any favour granted to one belligerent must be extended to the other. Troops entering neutral territory must be interned; belligerent warships may remain in a neutral port for 24

of Canada, 1867. Area 21,842 sq. m., incl. 1,441 sq. m. of water; pop. (1966) 756,039.

NOVAYA ZEMLYA'. Group of islands in the Arctic off the N. coast of European Russia. It has few inhabitants, but is visited by seamen and hunters. Whales, seals, walruses, dolphins, and birds are found there in large numbers. Area c. 35,000 sq. m.

NOVEL. A full-length fictitious prose narrative. Probably inspired by Oriental story-telling, the European N. originated in Greece in the 2nd cent. B.C. Best-known of the Greek examples is the *Daphnis and Chloë* of Longus, and almost the only surviving specimen of the Latin N. is the *Golden Ass* of Apuleius, based on a Greek model. But the modern N. took its name and inspiration from the Italian *novella*, the short tale of varied character which became popular in the late 13th cent. Most famous of these It. writers were Boccaccio and Bandello, whose works were translated into English in such collections as Painter's *Palace of Pleasure* (1566-7), and inspired the Elizabethan novelists, e.g. Lyly, Sidney, Greene, Nash, and Lodge. In Spain, Cervantes' *Don Quixote* (1604) made an outstanding contribution to the development of the N., but the 17th cent. was largely dominated by the French romances of La Calprenède and Mlle de Scudéry, although Congreve and Aphra Behn continued the English tradition.

In the 18th cent. the realistic novel came to maturity in the work of Defoe, Richardson, Fielding, Sterne, and Smollett. Walpole, and later Mrs. Radcliffe, by their development of Gothic romance, prepared the way for Sir Walter Scott, while Jane Austen perfected the domestic N. of manners. The great representatives of the Victorian Age are Dickens, Thackeray, the Brontës, Kingsley, Charles Reade, George Eliot, Trollope, and Stevenson. The 19th cent. was also a great period for the N. on the Continent, with Hugo, Balzac, the two Dumas, George Sand, and Zola in France; Goethe and Jean Paul in Germany; Gogol, Turgeniev, Dostoevsky, and Tolstoy in Russia; and in America with Cooper, Melville, Hawthorne, Twain, and Howells.

To the transition period from Victorian to modern times belong the rebels Meredith, Butler, Hardy, and Gissing; the slightly alien genius or subject-matter of Henry James, Kipling, Conrad, and George Moore; and the sober realism of Wells, Bennett, and Galsworthy. Slightly later are W. S. Maugham, E. M. Forster, Hugh Walpole, James Joyce, D. H. Lawrence, I. Compton-Burnett, and Virginia Woolf — the last three being particularly influential in the development of N. technique. Among those who began writing in the '20s are J. B. Priestley, Richard Hughes, Aldous Huxley, Christopher Isherwood, Graham Greene, William Plomer, V. S. Pritchett, and Evelyn Waugh; and the women writers E. Bowen, Rose Macaulay, and Rosamund Lehmann. The next decade produced Nigel Balchin, Joyce Cary, Lord Snow, Lawrence Durrell, and George Orwell. Twentieth-cent. novelists abroad incl. (German) Lion Feuchtwanger, Thomas Mann, Franz Kafka, Ernst Wiechert, and Stefan Zweig; (French) André Gide, Marcel Proust, Jules Romains, François Mauriac, and Alain Robbe-Grillet; (Italian) Gabriele d'Annunzio, Ignazio Silone, and Alberto Moravia; (Russian) Maxim Gorky, Mikhail Sholokhov, Aleksei Tolstoy, and Boris Pasternak; (Spanish) Arturo Baréa, Pío Baroja and Ramón Pérez de Ayala; and (American) Edith Wharton, Theodore Dreiser, Ernest Hemingway, Upton Sinclair, Sinclair Lewis, and William Faulkner.

NOVELLO. Ivor. Stage-name of British actor, manager, and composer I. N. Davies (1893-1951). B. in Cardiff, son of the singer Clara Novello Davies, he made his name as a song-writer, e.g. 'Keep the Home Fires Burning', in the F.W.W., and author of straight plays, e.g. *The Truth Game* (1928), but is best remembered for the spectacular musical plays in

which he often appeared with romantically handsome charm, e.g. *Glamorous Night* (1925), *The Dancing Years* (1939), *Perchance To Dream* (1945-7), *King's Rhapsody* (1949) and *Gay's The Word* (1951).

NOVGOROD. Town of the R.S.F.S.R., cap. of N. region, on the Volkhov, 2 m. N. of Lake Ilmen. N. dates from the 9th cent. and was an important and prosperous city from the 12th cent. until destroyed by Ivan the Terrible in 1570. It is an agricultural centre and has distilleries, meat-packing works, etc. Pop. (1967) 61,000.

NOVIKOV-PRIBOY, Alexey (1877-1944). Soviet writer. He served in the Tsarist navy, and was a prisoner of war in Japan. He wrote realistic sea stories and novels based on his own experiences, of which the best-known is *Tsushima*.

NOVI PAZAR (nov'e pahzahr'). Town in S. Serbia, Yugoslavia, on the Raska. The original home of the Serbs, it has the ruins of a medieval Serbian castle; the Turks captured it in the 15th cent. Pop. (est.) 12,500.

NOVI SAD. Cap. of the autonomous prov. of Voivodina, Yugoslavia, the seat of a bishopric. Pottery and cotton goods are manufactured. Pop. (1961) 110,877.

NOVOCAINE. A synthetic drug widely used as a local anaesthetic. It has replaced cocaine, being equally strong when injected but only one-third as toxic and not habit-forming. It is, however, not nearly so effective when used as a surface anaesthetic. It is always used with adrenaline.

NOVO KUZNETSK (nov'o kooznyet'sk). Town in Kemerovo region, R.S.F.S.R., on the r. Tom, 225 m. S.S.E. of Tomsk, an important centre of steel and iron manufacture in the Kuzbas. A town of less than 4,000 in 1939, it had a pop. of 484,000 in 1967. It was called Stalinsk 1932-61.

NOVOROSSI'YSK. Seaport of the R.S.F.S.R., of the N.E. coast of the Black Sea. Cement, bicycles, furniture, etc., are made. Pop. (1967) 120,000.

NOVOSIBIRSK. Town in the R.S.F.S.R., cap. of N. region. It has flour mills and grain elevators, and factories making textiles, metallurgical goods, plastics, soap, etc.; it is a centre for the distribution of agricultural machinery. Pop. (1967) 1,049,000.

NOVOYA BUKHARA. See BUKHARA.

NOYES (noiz), Alfred (1880-1958). British poet. B. at Wolverhampton, he was ed. at Oxford, and was prof. of modern English literature at Princeton univ. 1914-23. His 1st vol. of verse, *The Loom of Years* (1902), was followed by many others, equally smooth in versification and traditional in theme, e.g. *Drake, an English Epic* (1906-8) and *The Torch Bearers* (1922-30). His best-known poems incl. 'The Highwayman' and 'Barrel Organ'. Other works incl. the prose *The Unknown God* (1934), telling of his conversion to R. Catholicism, and *The Accusing Ghost* (1957), an attempt to clear the name of Roger Casement.

NOYON (nwah-yon'). Town in Oise dept., France. Calvin was b. at N. which had a cathedral, destroyed in the F.W.W., founded by Pepin the Short in the 8th cent. Pop. (1962) 9,548.

NU (nō), U (1907-). Burmese statesman. He signed the independence treaty in 1947 and became first P.M. of the Rep. of Burma in 1948. He was superseded by General Ne Win in 1958 on the grounds of a state of grave disturbance, returned as P.M. after the 1960 elections, but was arrested following a military coup by the general in 1962.

NU'BIA. A region of N.E. Africa, probably named from *nub*, the ancient Egyptian word for gold. It was one of the chief battlegrounds of the ancient world, where the struggle for supremacy in N. Africa was waged between the black and white peoples, and the great rock-cut temple at Abu Simbel and such forts as Buhen are relics of Egyptian occupation: to the Egyptians northern N. was known as Wawat and

to the Netherlands, and lived in exile until the Restoration. His biography was pub. in 1667 by his wife, Margaret, duchess of N. (c. 1624–74), who also wrote plays, poems, and essays.

NEWCASTLE. City and port of New South Wales, Australia, 70 m. by sea N.N.E. of Sydney. Industries incl. the manufacture of iron, steel, and ships, using coal from nearby mines, discovered 1796. There is a univ. (1965). Pop. (1966) 327,500.

NEWCASTLE-UNDER-LYME. English market town (bor.) in Staffs, 2 m. W. of Stoke-on-Trent. The parish church has a tower dating from the 13th cent. The chief industries are coal mining and the making of clothing, bricks, and tiles. Keele (q.v.) univ. is nearby. Pop. (1961) 76,433.

NEWCASTLE UPON TYNE. English city (co. bor.) and port in Northumberland, on the N. bank of the Tyne, about 8 m. from its mouth. The castle was built by Henry II 1172–7, on the site of an older castle; its keep is still preserved, together with parts of its walls and Black Gate and Watergate. Other noteworthy buildings include St. Nicholas's cathedral, which is (apart from the Perpendicular tower) chiefly

NEWCASTLE UPON TYNE. In the background row upon row of nineteenth-century industrial housing, but in the foreground a pleasing combination of the ancient and the very modern: St. Thomas's church and the new Town Hall.

Courtesy of Tyne Tees Television.

14th cent. work; St. Andrew's church, which dates back to the 12th cent.; and the Guildhall, built in 1658. N. is connected with the neighbouring town of Gateshead by several bridges. Chiefly famous as a coal centre, it first began to trade in coal in the 13th cent. In 1826 iron works were estab. by George Stephenson, and the first engine used on the Stockton and Darlington railway was made at N. There are good quay and harbour facilities. Major industries incl. coal mining, shipbuilding, marine and electrical engineering, chemical and metal manufactures. The chief exports are coal, iron and steel goods, chemicals, and copper. The H.Q. of the Min. of Social Security is here. Since 1906 N. has had a Lord Mayor. The Univ. of N. (1852) was, until 1963, part of the Univ. of Durham (1832). Pop. (1961) 269,389.

NEW CHURCH. See SWEDENBORG.

NEWCHWANG. Town in Liaotung prov., China, the oldest port in the Liao valley, 25 m. N. of Yingkow. Owing to the changing course of the Liao and the silting up of its mouth, the outer port of N. was moved c. 1800 to Tienchwang, and in 1836 to Yingkow.

NEWCOMEN, Thomas (1663–1729). British inventor. B. at Dartmouth, he devised an atmospheric steam engine, or 'fire engine', patented in 1705, which was used for pumping water from mines until Watt invented one with a separate condenser.

NEW DEAL. The programme of reforms introduced in U.S.A. by F. D. Roosevelt from 1933 on-

wards, to counteract the effects of the economic crisis that began in 1929. Immediate relief measures included the provision of employment on public works, and of govt. loans to farmers at low rates of interest, and the raising of agricultural prices by planned restriction of output. Reforms associated with the programme incl. the introduction of old-age and unemployment insurance, measures to prevent the use of sweated labour and child labour, protection of the right to organize against unfair practices by employers, and the provision of loans to local authorities for slum clearance. A notable feature was the Tennessee Valley scheme (q.v.). The N.D. reduced unemployment from 17 million to 8 million, but met with opposition, and many of its provisions were declared unconstitutional by the Supreme Court in 1935–6.

NEW DELHI. See DELHI.

NEWDIGATE, Sir Roger (1719–1806). British collector of antique marbles, etc., who founded in 1805 the N. prize for English verse, open to students of Oxford univ.

NEW ENGLAND. The name of a region in the N.E. of the U.S.A., consisting of the states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Is., and Connecticut (qq.v.), which was originally settled in the main by Puritan groups from England. The name was suggested by Capt. John Smith, who explored it in 1614. The original Puritan immigrant developed into the shrewdly witty Yankee (a name which became current in the 18th cent.).

NEW ENGLISH ART CLUB. Society founded in England in 1886 by a group of painters dissatisfied with the administration of the R.A., to secure better representation for younger painters. Its members incl. Sargent, Augustus John, Paul Nash, Rothenstein, and Sickert.

NEW FOREST. Woodland district in Hants, England, W. of Southampton. It was a royal hunting-ground in Saxon times, and was enlarged by William I. Oak trees from the forest were once an important source of timber for the navy. Area 144 sq. m.

NEWFOUNDLAND. Prov. of Canada; it incl. the is. of N., at the entrance of the St. Lawrence r., and the coastal region of Labrador, over which N. was given jurisdiction in 1713; the boundary between the part of Labrador attached to N. and the part attached to the prov. of Quebec was settled in 1927. The island is triangular, with Capes Bauld, Race, and Ray forming the angles. It has a rugged coastline indented with many bays. There are many lakes, of which the largest are Grand Lake (129 sq. m.) and Red Indian Lake (70 sq. m.). The highest mountains, which rise to over 2,500 ft., are in the N.W. Most of the country consists of barren lands and marshes, but the soil is fertile on the borders of the lakes and rivers, and the valleys of the Gander, Humber, and Exploits, the 3 most important rivers, are densely wooded. The chief exports are timber and paper pulp; others incl. iron ore, zinc, lead, and fishery products. St. John's is the cap.

The is. of N. was discovered by Cabot in 1497, and was the first English colony, Sir Humphrey Gilbert formally taking possession in 1583. The French also estab. settlements, and did not recognize British sovereignty until 1713, while disputes over fishing rights continued until 1904. Responsible government was granted to the island in 1855, but in 1934, as N. had fallen into financial difficulties, administration was vested in a governor and a special commission. In 1948 a referendum resulted in favour of federation with Canada, and in 1949 N. became the tenth prov. of Canada. Area 156,185 sq. m.; pop. (1966) 493,396 (of which Labrador formed 110,000 sq. m with pop. 21,157.)

NEWFOUNDLAND. A breed of dog, said to have originated in Newfoundland. There are several varieties, the most important being the black and white, which has a broad muzzle, curly hair and bushy tail.

guaranteed weight originated with the Lydians of Asia Minor (early 7th cent. B.C.) who used electrum, a local natural mixture of gold and silver: the first to issue gold and silver coins was Croesus of Lydia in the 6th cent. B.C. In modern times the right to make and issue coins is a state monopoly and the great majority are tokens, in that their face value is greater than that of the metal of which they consist. A milled edge, originally used on gold and silver coins for greater security against 'clipping', is retained in some modern token coinage.

NUN (Lat. *nonna*, an elderly woman). Woman devoted to the service of God under the vows of poverty, chastity, and obedience, and living under a certain rule. It is possible that the institution of communities for Ns. preceded the establishment of monasteries (see MONASTICISM), and the majority of the male orders have their feminine counterparts. The convent is ruled by a superior (often elected), who is subject to the authority of the bishop of the diocese or sometimes directly to the Pope.

NUNEATON. English market town (bor.) in Warwickshire, 9 m. N.N.E. of Coventry. The principal industry is coal-mining; there are also brickworks and factories making hosiery and other textiles, and hats. Pop. (1961) 56,598.

NÚÑEZ DE ARCE (nōōn'yāth dā ahr'thā), Gaspar (1832–1903). Spanish poet. B. in Valladolid, he made his reputation with the lyrical and patriotic *Battlecries* (1875); the most famous of his later vols. of verse are *El Vértigo* (1879) and *La Visión de Fray Martín* (1880).

NUREMBERG (Ger. Nürnberg). A city of Bavaria, E. Germany. It lies on the Pegnitz, c. 90 m. N.N.W. of Munich, and was noted for its ancient walls and fine old buildings, incl. the castle; the churches of St. Lorenz, St. Sebald, and Our Lady; the town hall; and the houses of Hans Sachs and Albrecht Dürer, until it suffered some 75 per cent devastation in the S.W.W. Manufactures incl. toys, electrical and other machinery, precision instruments, calculating machines, pencils and fountain pens, textiles, beer. The hop trade is of importance.

A castle was founded on the site in 1050, and in 1219 N. became a free imperial city. During the Middle Ages it attained great importance both as a commercial and a cultural centre, but it decayed after the 30 Years War and was annexed by Bavaria in 1806. Nazi Party rallies were held here from 1933, and in 1945 the N. Trials (q.v.). Pop. (1966) 469,800.

NUREMBERG TRIALS. The trials held in judgment of the leading Nazi war criminals Nov. 1945–Oct. 1946. The International Military Tribunal consisted of 4 judges and 4 prosecutors; 1 of each from U.K., U.S.A., U.S.S.R. and France. The main charges in the indictment were: (1) conspiracy to wage wars of aggression; (2) crimes against peace; (3) war crimes, e.g. murder and ill-treatment of civilians and prisoners of war, deportation of civilians for slave labour, and killing of hostages; (4) crimes against humanity, e.g. mass-murder of Jews and murder and ill-treatment of political opponents. An appendix accused the German Cabinet, General Staff, and High Command, Nazi leadership corps, S.S., S.A., and Gestapo of criminal responsibility. Of the 24 men accused, Krupp was too ill to be tried; Ley committed suicide during the trial, and Bormann, who had fled, was sentenced to death in his absence. Fritzsche, Schacht and Papen were acquitted. The other 18 were found guilty on one or more counts. Hess, Funk and Raeder were sentenced to life imprisonment, Shirach and Speer to 20 yrs., Neurath to 15 yrs., and Doenitz to 10 yrs. The remaining 11 men, sentenced to death by hanging, were Goering (committed suicide before execution), Ribbentrop, Kaltenbrunner, Rosenberg, Frank, Frick, Sauckel, Seyss-Inquart, Streicher, Keitel, and Jodl. The leadership corps, S.S., and Gestapo were declared criminal organizations.

NUREYEV (noorā'yef), Rudolf (1939–). Russian dancer. B. at Ufa, son of a farmer, he was trained at the Kirov Ballet School, then danced with the co. until he sought political asylum in the West while they were appearing in Paris in 1961. He joined Le Grand Ballet du Marquis de Cuevas, and subsequently made a series of appearances with Dame Margot Fonteyn in *Giselle*, *Marguerite and Armand*, etc.

NURSERY RHYMES. Jingles current among children. Usually limited to a couplet or quatrain with strongly marked rhythm and rhymes, they have often been handed down by oral tradition from remote antiquity. Some of the oldest N.Rs. are connected with a traditional tune and accompanied the ancient ring games, e.g. 'Here we go round the mulberry bush', which were part of the May Day festivities. Others preserve in a mutilated form the memory of incantations and other rites; and yet others, e.g. Jack Sprat, Jack Horner, and Mary with her little lamb, have a factual basis and have commemorated popular figures.

NURSING. The care of the sick, very young or old and disabled. Originally practised by members of religious orders, N. became progressively secularized following the Renaissance and Reformation, but organised training was first instituted in Germany in 1836. The work done there influenced Florence Nightingale (q.v.) who, during the Crimean War, estab. standards of scientific, humanitarian care in military hospitals, which had a beneficial effect throughout the world. In Britain the General Nursing Councils, estab. by the Nurses Registration Act of 1919, register nurses qualified by examination following a 3-year training in a hospital and (since the 1943 Nurses Act) enrol nurses who have completed a less advanced 2-year training. In addition to courses which lead to state registration in special fields of N. (e.g. sick children, mental N., etc.) there are a large number of post-registration programmes for health visiting, midwifery, etc., many organized by the Royal College of Nursing (1916). In the U.S., although registration is the responsibility of individual states, an almost uniform standard has been estab. by the National League for N. (1952). Both 3-year diploma courses in hospital schools and 4–4½-year degree programmes in univs. lead to registration; in addition there is a c. 1-year training for practical nurses. Nursing corps now form an important part of all branches of the services in most countries.

NUSA TENGGARA. Indonesian prov., formed 1954 from the Lesser Sunda Islands. See SUNDA ISLANDS.

NUT. A fruit consisting of a kernel with a hard outer shell which decays when ripe, releasing the seed. It may be situated in a whorl of bracts (e.g. filbert), a cupule (e.g. acorn), or fibrous covering (e.g. coconut); embedded in the flesh of a fruit (e.g. almond); or with a bristly outer covering (e.g. chestnut). Most Ns. contain nutritive oils.

NUTHATCH (nut'-). European bird (*Sitta europaea*) about the size of a sparrow, having a blue-grey back and buff breast. It is a climber and feeds chiefly upon nuts. The nest is placed in a hole in a tree, and 5 to 8 white eggs with red spots are laid in early summer.

NUTMEG

NUTMEG. Kernel of the seed of the evergreen tree (*Myristica fragrans*), native to the Moluccas. Both the N. and its secondary covering (known as mace) are used as a spice in cookery.

NYASA (nyah'sah). A long, narrow lake in S.E.

Suffolk, 13 m. E.N.E. of Cambridge. Horse-racing has been held here since James I's reign, and the H.Q. of the Jockey Club is at N. Important events are the Two Thousand Guineas, the One Thousand Guineas, the Cambridgeshire, and the Cesarewitch. Pop. (1961) 11,207.

NEW MEXICO. State of the U.S.A., lying between Colorado and the Mexican frontier on a rocky tableland, 2,800 to 6,000 ft. high. In the W. there are extensive forests, and the N.E. region is famous for its beautiful 'parks'. The principal rivers are the Rio Grande and its affluent the Rio Pecos, the Canadian, and San Juan; all are dammed for irrigation. The valleys are fertile, the principal crops being wheat, maize, beans, cotton; cattle are raised. Petroleum and natural gas, potash, copper, uranium, gold, silver are among mineral products. Los Alamos is one of several atomic research centres in N.M. The most characteristic forms of vegetation are the yucca and cactus. N.M. is noted for its mild climate. It was colonized by Spaniards in the 17th cent., was acquired from Mexico by the U.S.A. in 1848, and became a state in 1912. The cap. is Santa Fé, but the largest town is Albuquerque. Area 121,666 sq. m.; pop. (1960) 951,023.

NEW ORLEANS (or'-le-anz). Chief city of Louisiana, U.S.A., an important commercial centre and port on the Mississippi. At high tide the city is below river-level, and is therefore protected by embankments or levees. It is a market for sugar, rice and cotton; a banking and business centre; has a large oil industry, and produces the Saturn rockets used in *Apollo* spacecraft. There are excellent road, rail and air facilities. Educational institutions incl. Tulane Univ. (1834). N.O. was founded by the French in 1718, and the Vieux Carré or French Quarter with its Mardi Gras celebrations is a tourist attraction. It passed to Spain 1763, was returned to France 1800, and was part of the Louisiana Purchase made by the U.S.A. from France in 1803. In the late 19th cent. it was the birthplace of jazz (q.v.). Pop. (1960) 627,525.

NEWPORT. English river-port and market town (bor.) cap. of the Isle of Wight, at the head of the estuary of the Medina. S.W. of the town is Carisbrooke Castle. Pop. (1961) 19,482.

NEWPORT. English seaport (co. bor.) in Monmouthshire, on the r. Usk. It exports iron and coal, has extensive docks and a steelworks at nearby Llanwern. St. Woollos cathedral is partly Norman, and there is a ruined castle. N. was the scene of a Chartist rising in 1839. Pop. (1961) 108,107.

NEWPORT NEWS. City and port of Virginia, U.S.A., on the r. James. It has shipbuilding yards and foundries. Pop. (1960) 113,662.

NEWQUAY (nū'kē). Seaport and holiday resort on the N. coast of Cornwall. Pop. (1961) 11,877.

NEW SOUTH WALES. State of the Australian Commonwealth, at first called New Wales by Capt. Cook, who put in at Botany Bay in 1770, and was struck by the resemblance of the coast to that of Wales. It is situated in the S.E. of Australia. The E. and S.E. coastal district of the country is separated from the inland plains by the Great Dividing Range. In the S.E. are the Australian Alps, of which the highest point is Mt. Kosciuszko (7,328 ft.); they extend N. as the Snowy Mts. Behind Sydney the Dividing Range is called the Blue Mts., and to the N. is the New England Range. The coastal dist. is watered by many rivers, incl. the Hunter, Clarence, and Macleay. The W. part of the country is watered by the rivers of the Murray-Darling system, of which the most important are the Murrumbidgee, Lachlan, and Macquarie. The principal towns are Sydney, the most important Australian seaport, in which 60 per cent of the pop. of N.S.W. live, and largest city in the Australian Commonwealth, Newcastle, Wollongong, Broken Hill, Blue Mountains, and Maitland.

N.S.W. is situated in the temperate zone, and has an

equable climate. Wheat, rice, maize, oats, sugar cane, tobacco, and fruit are grown. Sheep rearing and forestry are important. There are rich mineral deposits, incl. gold, silver, copper, tin, zinc, and coal. The diversion westward, through the Snowy Mts., of the upper waters of the Snowy r., started in 1949, was planned to provide irrigation and hydro-electric power for large areas of N.S.W. and Victoria.

N.S.W., which was used as a convict settlement 1788-1850, was opened to free immigration 1819, received self-govt. in 1856, and became a state of the Commonwealth of Australia in 1901. Legislative power is vested in a parl. of 2 houses, the legislative council of 60 members, and the legislative assembly of 94 members. Voting is compulsory. Area 309,433 sq. m.; pop. (1966) 4,231,103.

Lord Howe Is., 436 m. N.E. of Sydney, is a dependency. It is volcanic, highest point Mt. Gower 2,840 ft. Area 3,200 acres; pop. 280.

NEWSPAPER. Publication giving news and comments on it. One of the earliest Ns., the Roman *Acta Diurna*, said to have been started by Julius Caesar, contained announcements of marriages, deaths, military appointments, etc., and was posted up in public places. Not until after the invention of printing, however, were news sheets pub. as commercial undertakings, and, following their introduction into Germany (1609) and the Netherlands (1616), the first English N., *The Weekly News*, ed. by N. Bourne and Thos. Archer, appeared in 1622, followed later by the first daily N., *Daily Courant*, in 1702. Despite the stamp duty imposed on Ns. 1713-1855, with the object of restricting them because of their alleged subversive tendencies, by 1776 there were 53 in London alone. The chief British morning daily papers, based on London (1968 circulations in thousands) are: *The Times* (1785) 415, *Guardian* (originally *Manchester Guardian*, 1821-1959) 268, *Daily Telegraph* (1855) 1,378, *Daily Mail* (1896) 2,039, *Daily Express* (1900) 3,786, *Daily Mirror* (1903) 4,948, *Daily Sketch* (1915) 885, *The Sun* (*Daily Herald*, 1919-64) 1,009, *Financial Times* (1888) 162; the evening Ns., once 10, now number 2, *Evening News* (1881) 1,094 and *Evening Standard* (1860) 594. Important regional daily papers incl. *Scotsman* (1855) 74 and *Yorkshire Post* (1866) 117.

The chief Sunday Ns. are: *Observer* (1791) 853, *Sunday Times* (1822) 1,440, *News of the World* (1843) 6,131 (largest circulation of any N. in the world), *People* (1881) 5,426, *Sunday Mirror* (formerly *Sunday Pictorial*, 1915) 5,015, *Sunday Express* (1918) 4,206, and *Sunday Telegraph* (1961) 747 - the last 3 are each linked with a daily of the same name.

Owing to the vastness of the U.S.A., no N. there has a national distribution, and none has a circulation comparable with the largest in Britain. The first successful daily N. was the *Pennsylvania Packet* and *General Advertiser* (1784). In 1968 there were pub. 1,749 daily Ns. in English with a combined circulation of 61,560 thousand; they incl. (circulation in thousands) the *Baltimore Sun* (1837) (morning and evening), 398, *Chicago Tribune* (1847) 805, Sunday edn. 1,124, *Los Angeles Times* (1881) 856, Sunday edn. 1,145, *New York Times* (1851) 840, Sunday edn. 1,494, *Philadelphia Bulletin* (1841) evening 671, Sunday edn. 728, *Philadelphia Inquirer* (1829) 516, Sunday edn. 936, *Wall Street Journal* (1889) 1,079, *Washington Post* (1877) 467. *The Christian Science Monitor* (1908) evening, pub. in Boston, with a circulation of only 202, nevertheless has a world-wide reputation.

Experiments have been made in Japan with photo-tegraphic Ns., for which the original is set in type in the normal way, but the completed pages are then transformed into electronic signals for transmission to sub-stations where facsimiles are made, the ultimate aim being a receiver in every home.

Ns. of world repute pub. outside the U.K. and

OAK. Tree with leaves, flower, fruit and acorn.

California, U.S.A., on the E. coast of San Francisco Bay. It has shipbuilding yards and fruit-canning, textile and iron and steel factories. An 8 mile double-deck bridge, opened 1936, links O. with San Francisco. Pop. (1960) 367,548.

OAKRIDGE. Town in Tenn., U.S.A., the site of the govt. works set up in 1943 for the manufacture of plutonium for atomic bombs. Pop. in 1945 was 78,000. Pop. (1960) 27,169.

OAKS. Horse-race, run at Epsom by fillies of 3 years old, usually on the Friday of Derby Week.

OASTLER, Richard (1789–1861). British social reformer. B. at Leeds, he opposed child-labour and the Poor Law of 1834, winning the nickname of 'the Factory King', and was largely responsible for securing the Factory Act of 1833 and the Ten Hours' Act of 1847.

OATES, Laurence Edward Grace (1880–1912). British Antarctic explorer who accompanied Scott on his final dash to the South Pole and died, 'a very gallant gentleman', alone in the blizzard. The museum at the home of Gilbert White (q.v.) contains a Captain O. room with relics.

OATES, Titus (1649–1705). British perjurer. A clergyman, he entered the Jesuit colleges at Valladolid and St. Omer as a spy in 1677–8, and on his return to England announced he had discovered a 'popish plot' to murder Charles II and re-establish Catholicism. Although this story was almost entirely false, many innocent R.C.s. were executed during 1678–80 on O.'s evidence. In 1685 he was flogged, pilloried and imprisoned for perjury. He was pardoned and granted a pension after the revolution of 1688.

OATH. A solemn promise to tell the truth or perform some duty, combined with an appeal to a deity or something held sacred. Primitive peoples often swear on a weapon or the body of a beast of prey, which is appealed to to kill the person swearing if he breaks his word.

In English courts a witness normally swears to tell the truth holding a N.T. in his right hand; in the U.S.A. a witness raises his right hand in taking the O. Sects which object to the taking of Os., e.g. Quakers, and atheists, etc., give a solemn promise to tell the truth. A Jew swears holding the Pentateuch, with his head covered. Mohammedans, Hindus, etc., swear by their respective sacred books; a Chinese witness breaks a saucer before giving evidence. In Scottish courts witnesses swear to tell the truth 'as I shall answer to God at the great day of judgment'.

OATS. Genus of plants (*Avena*); an important cereal food. The plant has long, narrow leaves, and stiff straw stem; the panicles of flowers, and later of grain, hang downwards. The cultivated O. (*A. sativa*) is produced for human food and for feeding horses and domestic animals and birds.

OB. A river of Asiatic Russia, flowing for 2,100 m. from the Altai mts. through the W. Siberian Plain to a delta in the Gulf of Ob in the Arctic Ocean.

O'BAN. Seaport of Argyllshire, Scotland, on the Firth of Lorne. It is a popular tourist centre. Pop. (1961) 6,859.

OBERRAMMERGAU (oh'berahm'ergow). Village of Bavaria, Germany, 45 m. S.W. of Munich, noted for the performance approx. each decade since 1634 of a Passion play.

O'BERON. King of the fairies. He figures in the 13th cent. French *Huon of Bordeaux*, was adopted by Shakespeare in *A Midsummer Night's Dream*, and was made the hero of an epic by Wieland and an opera by Weber.

O'BI. A form of witchcraft practised by the Negroes of the W. Indies. It combined Christian elements with pagan ceremonies imported from Africa, such as snake-worship.

OBOE (ō'bō). Musical instrument of the woodwind family. Played vertically, it is a wooden tube with a bell, is double-reeded, and has a yearning, poignant tone. The range is almost 3 octaves. There are O. concertos by E. Goossens and G. Jacob.

OBOTE, (Apollo) Milton (1924–). Uganda statesman. A migrant to Kenya in 1950, where he worked as a labourer, salesman and clerk, he was a founder member of the Kenya African Union. Returning home he led the opposition 1961–2, and became P.M. in 1962, taking over in addition For. Affairs and Defence 1963 and the presidency 1966.

OBRENOVICH. Name of a Serbian dynasty which ruled 1816–42 and 1859–1903. They were engaged in a feud with the rival house of Karageorgevich, which obtained throne by the murder of the last O. in 1903.

OBERRAMMERGAU. In thanksgiving for the cessation of an outbreak of the Black Death (q.v.) in 1632, the villagers vowed to enact a Passion play every ten years, which they have done whenever possible since 1634. With a cast of several hundred, including 62 actors in named roles, an orchestra of 60 and choir of 38 entirely drawn from natives of the village, the play is performed in the open air and lasts for about 8 hours.

Courtesy of the German Tourist Information Bureau.

O'BRIEN, William Smith (1803–64). Irish nationalist. A Limerick landowner, he sat in parliament from 1828, and from 1846 was closely associated with the Young Ireland movement. He led the rebellion of 1848 and was transported to Tasmania. Pardoned, he returned to Ireland in 1856.

OBSERVATORY. A building designed for observation of natural phenomena, especially astronomical. The earliest O. was at Alexandria, built by Ptolemy Soter, c. 300 B.C. The erection of Os. was revived in W. Asia c. A.D. 1000, and extended to Europe. That built on Hven island, Denmark, in 1576, for Tycho Brahe, was elaborate, but survived only till 1597. It was followed by those at Paris (1667), Greenwich (1675), and Kew (1769).

The number of Os. grew rapidly during the 19th cent., both in Britain and abroad. Development, with more powerful telescopes, has been most marked in the U.S.A., where the principal Os. are at Mount

NEW YORK CITY

Music, library, and restaurants). The Metropolitan Museum of Art (1870) has the finest collection in the Western hemisphere (see CLOISTERS); the Museum of Modern Art (1929) also covers architectural and industrial design, photography and film; and the Pierpont Morgan Library has a research collection based on that of the millionaire (q.v.). Wall Street is the financial centre of the U.S.A. City Hall is the H.Q. of the Mayor and City Council: see TAMMANY HALL. Most famous of the parks, which cover 34,673 acres, is Central Park. The pop. incl. large Negro (see HARLEM) and Puerto Rican minorities, as well as large communities of European stock—German, Greek, Hungarian, Irish, Italian, Polish and Russian—and there are c. 2,000,000 Jews. The leading newspaper is the *N.Y. Times*. Columbia Univ. (1754) is the most notable of the educational institutions. Largest of the 4 airports is Kennedy International (until 1963 called Idlewild). There are 2 cathedrals: St. John the Divine (1892 Protestant Episcopal: Romanesque and Gothic) and St. Patrick's (1858–79 R.C.: Gothic). Industries incl. printing, publishing, clothing, tobacco, electrical machinery, cosmetics, etc. Area 359 sq. m. (incl. 44 sq. m. inland water); pop. (1960) 7,781,984.

NEW YORK STATE. One of the original 13 states of the U.S.A., the 'Empire State'. The 2nd most populous and wealthiest of the Union, it is situated S. of the St. Lawrence, which forms part of the boundary between N.Y. and Canada, and N. of Pennsylvania, and has a coastline on the Atlantic. The central and W. regions are low-lying, but in the E. are the Adirondack and Catskill mts. In the W. there are a number of lakes, of which the largest are Lake Seneca and Lake Cayuga; N.Y. also includes part of Lakes Erie and Ontario. In the E. are the George and Champlain lakes. The most important river is the Hudson, which is connected with the Great Lakes by the Erie canal (1825). The largest cities are New York, Buffalo, Rochester, Syracuse, Yonkers, Albany (the cap.), Niagara Falls, and Utica. N.Y. is the most important manufacturing state in the country, its chief industries being clothing and printing. The administration is in the hands of a Governor, elected for 4 years, and a Senate and Assembly elected for 2.

N.Y. was first explored by Champlain and by Hudson in 1609, was colonized by the Dutch from 1609, and annexed by the English in 1664. The first constitution was adopted in 1777, transforming the

colony into a state. Area 49,576 sq. m.; pop. (1960) 16,782,304.

NEW ZEALAND. A country of the British Commonwealth, situated in the S. Pacific between 33° and 53° S. lat. and 167° and 178° E. long., and consisting of a group of islands. The most important are North, South, Stewart (separated from S. Island by Foveaux Strait) and Chatham Islands (Chatham area 347 sq. m. and Pitt area 25 sq. m.), 536 m. E. of N.Z. Outlying is. incl. within N.Z. geographical boundaries are the Kermadec (annexed 1887), Three Kings, Auckland, Campbell, Antipodes, Bounty, Snares and Solander: only the Kermadec and Campbell is. are inhabited. These are grouped with the main is. in 13 statistical areas: North Island Auckland (Central and South), East Coast, Hawke's Bay, Northland, Taranaki and Wellington; South Island Canterbury, Marlborough, Nelson, Otago, Southland and Westland. The Terr. Overseas comprise Tokelau Is. (3 atolls transferred 1926 from the former Gilbert and Ellice Is. colony) and Niue Is.

(one of the Cook Is., but separately admin. from 1903: chief town Alafi). The Cook Is. (q.v.) are internally self-governing, but share common citizenship with New Zealand. The Ross Dependency (q.v.) is in the Antarctic. See also SAMOA.

Physical Features. The coastline of S. Is. is almost unbroken, except in the N. and S.W., but N. Is. has more indentations. There are not many good harbours, except Cook Strait, which separates S. Is. from N. Is.

Except for the N.W. peninsula ending in Cape Maria van Diemen, N. Is. is mountainous and incl. 3 active volcanoes—Ruapehu (9,175 ft.), erupted 1950, highest point in the is., Ngauruhoe (7,515 ft.), erupted 1956, and Tongariro (6,458 ft.), erupted 1950—as well as the remarkable Rotorua dist. with its geysers and hot springs. In S. Is. the S. Alps stretch almost from one end to the other. The highest peak of this range (and in N.Z.) is Mt. Cook (12,349 ft.), at least 17 other peaks rise above 10,000 ft. In the higher valleys there are huge glaciers.

Most of the rivers are shallow and rapid, and navigable for only a short distance. The Waikato, in N. Is., the largest river in N.Z., rises in the region of Mt. Ruapehu, flows in a northerly direction, and empties into the Tasman Sea; it is navigable for 70 m. In S. Is. the important rivers incl. the Wairau, Mataura, and Waitaki: from the hydro-electric station on the Waitaki at Benmore (1965) power is transmitted by under-sea cable across Cook Strait to N. Island. There are many lakes, of which the largest is Lake Taupo, in N. Is. N.Z. has a temperate climate.

NEW ZEALAND

	Area in sq. m.	Pop. (1966)
North Island	44,281	1,893,326
South Island	58,093	783,593
Stewart Island	670	(332)*
Chatham Island	372	(520)*
Minor Islands	320	(19)*
	103,736	2,676,919
Island Territories		
Niue Island	100	5,195
Tokelau Islands	4	1,900
Cook Islands	88	19,251
Ross Dependency	175,000	262
* Included in the N. and S. Island totals		

British in 1900, and is rich in phosphates. Area 2 sq. m.; pop. (1966) 2,300.

OCEANUS. In Greek mythology, a river supposed to encircle the earth.

O'CONNELL, Daniel (1775–1847). Irish politician, called 'the Liberator'. B. in Kerry, he was educ. for the priesthood, but adopted a legal career. In 1823 he founded the Catholic Association to press R.C. claims. Although ineligible as an R.C. to take his seat, he was elected M.P. for co. Clare in 1828, and so forced the govt. to grant Catholic emancipation. In parliament he co-operated with the Whigs in the hope of obtaining concessions until 1841, when he launched his campaign for repeal of the union. His timid and vacillating leadership and conservative outlook on social questions alienated his most active supporters, who broke away and formed the 'Young Ireland' movement. He d. at Genoa.

O'CONNOR, Feargus (1794–1855). Irish politician. B. in Ireland, he sat in parliament 1832–5 as a follower of O'Connell, but then, as editor of the *Northern Star* and a powerful speaker, made himself the most influential figure in the English Chartist movement, and its collapse in 1848 helped unsettle his reason and he d. insane.

OCTAVIAN. See **AUGUSTUS**.

OCTOPUS. Genus of Cephalopoda having a round or oval body, and 8 arms with 2 rows of suckers on each, though the word

is sometimes used to cover other members of the order. Occurring in all temperate and tropical seas, where they feed on crabs, etc., they can vary their coloration according to their background and may either swim with their arms or proceed through a type of jet propulsion by means of their funnel. The common O. (*O. vulgaris*), relished as a delicacy in S. Europe, may reach 6 ft. and is sometimes found off Britain. Generally speaking the perils of O. attack are exaggerated, but off the Pacific coast the giant *O. apollyon* may span more than 25 ft.

is sometimes used to cover other members of the order. Occurring in all temperate and tropical seas, where they feed on crabs, etc., they can vary their coloration according to their background and may either swim with their arms or proceed through a type of jet propulsion by means of their funnel. The common O. (*O. vulgaris*), relished as a delicacy in S. Europe, may reach 6 ft. and is sometimes found off Britain. Generally speaking the perils of O. attack are exaggerated, but off the Pacific coast the giant *O. apollyon* may span more than 25 ft.

ODE. Lyric poem containing the spontaneous expression of emotional fervour. Originating in ancient Greece as a chant sung to a musical accompaniment, it was brought to perfection by Sappho and Pindar, and by Horace and Catullus among the Romans. Among the modern writers of Ods. are Spenser, Milton, Dryden, Collins, Coleridge, Wordsworth, Shelley, Keats, Tennyson, and Swinburne.

ODENSE (d'ense). City and port on the island of Fünen, Denmark. Its cathedral was founded in 1086. Hans Andersen was born at O., which has some industry and exports dairy products and hides. Pop. (1965) 107,530.

ODER. A European river, 550 m. long, rising in Czechoslovakia. It flows generally N.W. past Wrocław and Frankfurt-on-O. to Szczecin, on the Baltic Sea. It was chosen in 1945 as the provisional German-Polish border N. of its confluence with the Neisse.

ODESSA. Seaport in the Ukrainian S.S.R. on a bay in the N.W. corner of the Black Sea, cap. of O. region. It is an important commercial air and railway centre, and has excellent harbour facilities. Lying between the Dnieper and Dniester estuaries, O. was founded by Catherine II in 1795 near the site of an ancient Greek settlement. In German occupation 1941–4, O. suffered severe damage under the Russian 'scorched earth' policy and from German destruction. It has a univ. Pop. (1967) 753,000.

ODETS (ödets'), Clifford (1906–63). American

playwright. B. in Philadelphia, he was brought up in the Bronx, New York, and went on the stage at 15. He won fame with *Waiting for Lefty* (1935), a one-act play depicting a strike, which was followed by *Awake and Sing* (1935), a play of Jewish life, and *Till the Day I Die* (1935), an anti-Nazi horror play. Later were *Golden Boy* (1937) and *The Country Girl* (1950).

ODIN. One of the chief gods of the ancient Germanic tribes, called Woden in Anglo-Saxon. The husband of Frigga and father of Baldur and Thor, he lives in Asgard when he is a sky-god, or in Valhalla when he is conceived as a god of the dead and as receiving the ghosts of brave warriors.

ODY'SSEUS. The chief character of the *Odyssey* (see HOMER), mentioned also in the *Iliad* as one of the most prominent leaders of the Greek forces at the siege of Troy. He is said to have been the ruler of the island of Ithaca. Among the Greek heroes O. was distinguished for his sagacity.

OEDIPUS (éd'ipus). Legendary king of Thebes. As his father, King Laius, had been warned by an oracle that his son would kill him, O. was exposed at birth and left to die, but was rescued and brought up by the king of Corinth. When grown to manhood O. killed Laius, whom he did not know, in a quarrel. Having saved Thebes from the Sphinx, he was granted the kingdom, and in ignorance married his mother, Jocasta. After 4 children had been born, the truth came out, whereupon O. blinded himself and Jocasta hanged herself. In his later wanderings O. was led by his dau. Antigone. The story of O. forms the subject of 2 of Sophocles' tragedies.

OEDIPUS COMPLEX. Term invented by Freud for the emotional conflict set up by a young child's relations with his parents. The child develops a sexual passion for his mother, and a feeling of jealousy and hostility towards his father; the unconscious conflicts created by this problem are a major cause of neuroses, and one of the most important factors in the development of character. *Hamlet* has been interpreted as a study in the O.C.

OERSTED (ör-), Hans Christian (1777–1851). Danish scientist. Prof. of physics at Copenhagen from 1806, in 1820 he discovered magnetic fields, thus founding the science of magnetism. The *oersted*, the c.g.s. electromagnetic unit of magnetizing or magnetic force named after him, is equal to the force in dynes on a unit magnetic pole at any point in a vacuum.

OESOPHAGUS (eso'fagus). The gullet; the passage by which food travels from mouth to stomach. It is about 9 in. long, and its upper end is at the bottom of the pharynx, immediately behind the windpipe.

OESTROGEN. A hormone which produces oestrus, i.e. menstruation in women and heat in the females of the lower mammals. Three principal oestrogens have been isolated – oestrone, oestriol, and oestradiol.

OFFA (d. 796). Anglo-Saxon king of Mercia in 757. He conquered Essex, Kent, Sussex, and Surrey, defeated the Welsh and the West Saxons, and estab. Mercian supremacy over all England S. of the Humber.

O'FFALY. Co. of Rep. of Ireland, in the prov. of Leinster, between Galway on the W. and Kildare on the E. The Shannon flows along its W. boundary; other rivers incl. the Brosna, Clodagh, and Broughill. In the S.E. are the Slieve Bloom mts. Named King's County in honour of Philip II of Spain, husband of Mary I, it was so called until the estab. of the Irish Free State in 1922. The co. town is Tullamore. Area 771 sq. m.; pop. (1966) 51,717.

OFFENBACH (ofenbakh'), Jacques (1819–80). French composer. B. at Cologne, he studied at Paris, became a member of the orchestra of the Opéra Comique, and later conductor at the Théâtre Français. He wrote light opera for presentation at the Bouffes Parisiens, of which he held the lease, and afterwards for various theatres. His most widely known works

Sargeson (1903–) and Roderick Finlayson (1904–), and the talent of John Mulgan (1911–45), who is remembered both for his novel *Man Alone* (1939), and for his posthumous factual account of the war in which he died, *Report on Experience* (1947). More recently Kendrick Smithyman (1922–) has struck a metaphysical note in poetry, and James K. Baxter (1926–) has pub. fluent lyrics.

NEXO (nɪks'ö), **Martin Andersen** (1869–1954). Danish novelist. Of humble birth, he was largely self-educated, and produced 2 famous multi-vol. novels *Pelle the Conqueror* (1906–10) and *Diite, Child of Man* (1917–21). He became a Communist in 1922 after visiting Moscow, where he also fled from the Nazis in the S.W.W., and d. in E. Germany.

NEY, Michel, duke of Elchingen, prince of the Moskowa (1769–1815). Marshal of France. The son of a cooper, he joined the army in 1788, and rose from the ranks to marshal of France. He served throughout the Revolutionary and Napoleonic Wars, commanding the rearguard during the retreat from Moscow, and for his personal courage was called 'the bravest of the brave'. When Napoleon returned from Elba, N. was sent to arrest him, but instead deserted to him and fought at Waterloo. He was subsequently shot for treason.

NGO Dinh Diem (1901–63). Pres. of S. Vietnam. A dedicated nationalist refusing compromise with either the Communist Viet Minh or the French, he became P.M. in 1954, and pres. in 1955 when the country became a rep. The influence exercised by his family, all devout R.C.s., especially his brother Ngo Dinh Nhu and Mme Nhu, led to charges of Buddhist persecution (they form c. 70 per cent of the pop.), nepotism, and general intolerance of opposition. Both brothers d., perhaps by suicide, following a military coup in 1963.

NIAGARA FALLS (ni-ag'ara). Two waterfalls on the Niagara r., on the Canadian-U.S.A. border, connecting Lake Erie with Lake Ontario; they are separated by Goat Is. The American Fall, to the N., in U.S.A., is 167 ft. high, 1,080 ft. wide; the Horseshoe Fall, to the S., in Canada, is 160 ft. high, 2,600 ft. across.

On the Niagara r., 2 m. below the falls, lie (1) on the W. bank, N.F., a city of Ontario, Canada, with a large hydro-electric generating plant; pop. (1966) 60,768 (2) on the E. bank, N.F., a city of New York state, U.S.A., seat of a univ., with hydro-electric

works and a tourist trade; pop. (1960) 102,394.

NIBELUNGENLIED (nē'beloongenlēf) (Ger., Song of the Nibelungs). Medieval German epic poem composed from older sources, c. 1200, by an unknown author. Siegfried, possessor of the Nibelung treasure, marries Kriemhild, sister of Gunther of Worms, wins Brunhild as a bride for the latter, and is murdered by Hagen, Gunther's vassal. Kriemhild obtains vengeance for Siegfried's death by marrying Etzel (Attila) of the Huns, at whose court Hagen and Gunther, with their retinue, are slain. Wagner based his *Ring des Nibelungen* mainly on the Norse versions.

NICAEA (nis'e'a). Ancient city of Bithynia, Asia Minor, founded c. 316 B.C. Here was held in 325 a famous Council of the Christian Church, convened by the Emperor Constantine I; it promulgated the first version of the Nicene Creed (q.v.). The modern Turkish village of Iznik is on the site.

NICARAGUA (nikarah'gwah). A republic of Central America, N. of Costa Rica, stretching from the Pacific to the Caribbean Sea. Crossing the country from N.W. to S.E. is the main cordillera of Central America. The Caribbean coast is swamp land (see MOSQUITIA). The most important towns are Managua (the cap.), León, Matagalpa, and Granada. Corinto, on the Pacific, is the chief port. Products incl. bananas, cotton, coffee, cocoa, sugar, timber, gold, silver, and copper.

The first European to reach N. was Gil Gonzalez de Avila (1522), who brought it under Spanish rule. It remained Spanish until 1821, when it gained its independence. Under the revised constitution of 1960, legislative power is vested in a Congress of two houses of 45 deputies and 18 senators, elected (like the pres.) for 4 years, by popular vote. Area (est.) 57,150 sq. m.; pop. (1967) 1,783,000.

NICE. French resort on the Riviera, 8 m. S.W. of Monte Carlo, on the Bay of the Angels, the cap. of the dept. of Alpes Maritimes. Many festivities are held here, incl. the famous 'Battle of the Flowers', and chocolates and perfume are made. Pop. (1962) 294,976.

NICENE CREED. One of the fundamental creeds of Christianity, promulgated by the Council of Nicaea in 325. It gives the orthodox doctrine of the Trinity as against the Arian heresy. The N.C. was modified by the Council of Constantinople in 381, and the *filioque* clause was added during the 5th and 6th cents. in the western Church.

NICHOLAS, St. (4th cent.). Bishop of Myra in Lycia, and patron saint of Russia, children, merchants, and sailors. His festival is 6 Dec. and the custom of giving presents to children on the eve of this day, still retained in some Continental countries, e.g. Germany and the Netherlands, has been transferred in English-speaking countries to Christmas Day; hence the association of his name, Santa Claus (corruption of San Nicolaas), with the latter festival.

NICHOLAS I (1796–1855). Tsar of Russia from 1825. His ambition to dominate the Balkans involved Russia in war with Turkey in 1827–9, and in the Crimean War.

NICHOLAS II (1868–1918). Last Tsar of Russia. Succeeding Alexander III in 1894, he was dominated by his wife, Princess Alix of Hesse, who, in turn, was under the influence of Rasputin. His mismanagement of the Japanese War led to the revolution of 1905, which he ruthlessly suppressed. He entered the F.W.W. in 1914, and in 1917 was forced to abdicate. N. and his family were shot by the Bolsheviks at Ekaterinburg in July 1918. His recognized heir is the Duchess Christian Ludwig of Mecklenburg, but see ANASTASIA.

NICHOLSON, Ben (1894–). British artist. He is the son of the painter, Sir William N. (1872–1949), remembered for the series of striking posters and other works he produced with his brother-in-law, James Pryde, under the signature 'The Beggerstaff

NIAGARA FALLS. The Great Lakes which serve as its reservoir make this the most even-flowing of all waterfalls, 212,000 cubic ft. of water per second passing over it. Besides domestic supplies, the falls provide industrial power economically on a vast scale, for example, they can generate heat for furnaces making calcium cyanamide, which requires a temperature of 3,600°F.

Courtesy of Cyanamid.

OKAYAMA (ōkahyahmah). Japanese city in Honshu on the Asahi r. 7 m. from its mouth. It makes textiles and is noted for its fine park and three Buddhist temples. Pop. (1965) 292,000.

OKEHAMPTON. English market town (bor.) in Devon, 22 m. W. of Exeter. It makes shoes, agricultural machinery, and fertilizers; nearby are limestone and slate quarries. Pop. (1961) 3,833.

O'KELLY, Sean Thomas (1882–1966). Irish politician. He collaborated with Griffith in founding Sinn Féin, was Min. for Local Govt. 1932–9, Education Min. 1939, Finance Min. 1939–45, and succeeded Hyde as pres. (1945–59).

OKINAWA. Largest of the Ryukyu Islands (q.v.) in the Pacific Ocean, c. 300 m. S.W. of Japan, of which it was a prefecture until captured by U.S. forces in a violent battle lasting 1 April–21 June 1945, in which there were 47,000 U.S. casualties (12,000 killed and missing) and the Japanese garrison of 60,000 were all killed except for a few hundred taken prisoner. O. and the rest of the Ryukyu Islands continued to be administered by the U.S.A. under the peace treaty with Japan, 1951, ratified 1952. The chief town is Naha (pop. 218,000), cap. of the Ryukyus. Area 485 sq. m.; pop. (1965) 760,000.

OKLAHOMA. South-central state of the U.S.A., deriving its name from an Indian word meaning 'red people'. The surface is for the most part an upland prairie. The principal rivers are the Arkansas, Red, and Canadian. The most important mountains are the Wichita range in the S. and the Ozark range in the E. The climate is continental with considerable extremes between summer and winter temperatures; the O. 'panhandle' is part of the dustbowl area of the U.S.A. Minerals incl. petroleum, natural gas, coal and lead. The chief crop is wheat, and cattle are raised. The principal cities are Oklahoma City (the cap.), and Tulsa. O., part of the Louisiana Purchase of 1803, was admitted to the Union as a state in 1907; it was 'dry' from then until, as the result of a referendum, prohibition was abolished in the state in 1939. Area 69,919 sq. m.; pop. (1960) 2,328,284.

OKLAHOMA CITY. Cap. of Oklahoma, U.S.A., on the North Canadian river, the commercial metropolis of the state. The chief industry is petroleum refining; iron and steel goods, clothing, pottery, paint, flour, and packed meats are other products. O.C. is the seat of a univ. (1904). Pop. (1960) 324,253.

OLAF. Name of 5 kings of Norway. Olaf I Trygvasson (969–1000), elected king in 995, began the conversion of Norway to Christianity, and was killed in a sea battle against the Danes and Swedes. Olaf II Haraldsson (995–1030), king from 1015, offended his subjects by his centralizing policy and zeal for Christianity, and was killed in battle by Norwegian rebel chiefs backed by Canute (q.v.) of Denmark. He was declared the patron saint of Norway in 1164. Olaf V (1903–) succeeded his father Haakon VII (q.v.) in 1957.

OLD AGE. The progressive degeneration of bodily and mental processes associated with the later years of life. Its cause is still unknown, but every one of the phenomena can occur at almost any age, and the process does not take place throughout the body at an equal speed. Normally, however, ageing begins after about 30. The arteries start to lose their elasticity, so that a greater strain is thrown upon the heart. The resulting gradual impairment of the blood supply is responsible for many of the changes, but between 30 and 60 there is a period of maturity in which, if life is lived sensibly and in accordance with natural law, ageing makes little progress. Research into the causative process of O.A. (gerontology) incl. study of dietary factors, and the mechanisms behind structural changes in arteries and bones.

OLD BAILEY. Properly the name of a street in the City of London, England, leading off Ludgate

Hill, but more usually applied to the Central Criminal Court (q.v.) which is there situated.

OLD CATHOLICS. R.Cs. who refused to accept the dogma of papal infallibility, declared in 1870, and set up their own ecclesiastical organization. The movement originated in Bavaria, and still survives in Germany, the Netherlands, Austria, Czechoslovakia, and in Switzerland. Its organization is episcopal. Certain modifications of R.C. practice were adopted, e.g. church services are in the vernacular, not in Lat., and priests are allowed to marry.

OLDENBURG. City in Lower Saxony, W. Germany, 23 m. W. of Bremen on the Hunte, once cap. of O. duchy. It dates from the 9th cent. Pop. (1966) 129,000.

OLDFIELD, Anne (1683–1730). English actress, popularly known as 'Nance O.'. She made her début in 1700, and was successful both in comedy and tragedy.

OLDHAM. English town (co. bor.) in Lancs, 7 m. N.E. of Manchester. It is an important manufacturing centre. There are collieries and foundries in the vicinity. O.'s industries incl. cotton spinning and the manufacture of textile machinery. Pop. (1961) 115,426.

OLD MOORE'S ALMANAC. Annual publication in Britain containing 'prophecies' of the events of the following year. It was first pub. in 1700, under the title *Vox Stellarum*, by Francis Moore (1657–c. 1715), astrologer and quack-doctor, to advertise his pills.

OLD STONE AGE ART. Paintings, engravings, and sculptures of the palaeolithic or O.S.A. – i.e. 20,000 to 10,000 years ago – found in caves and rock shelters in S.W. France and Spain. The usual subjects are animals, such as the mammoth, bison, elephant, and horse, but the human figure is occasionally depicted. The finest examples, distinguished for their great vigour and naturalistic treatment, are the polychrome paintings at Altamira and the paintings in the Lascaux caves (qq.v.). It is supposed that the paintings were in the nature of 'sympathetic magic', designed to increase the food supply.

OLD STYLE. A qualification, often abbreviated as 'O.S.', applied to dates before the year 1752 in England as quoted in later writers. In that year the calendar in use in England was reformed by the omission of 11 days, in order to bring it into line with the more exact Gregorian system, and the beginning of the year was put back from 25 March to 1 Jan. See CALENDAR.

OLDUVAI GORGE. Deep cleft in the Serengeti steppe, Tanganyika. In 1958–9 Leakey (q.v.) discovered here Pleistocene remains of gigantic animals – sheep similar in size to a carthorse, pigs as big as a rhinoceros, a gorilla-sized baboon, and a skull (*Zinjanthropus*) with huge teeth that led to the nickname 'Nutcracker Man'. It is thought that conditions in the O.G. enabled creatures of the Pliocene to survive to a comparatively late date.

OLD VIC. Theatre S. of the Thames in Waterloo Rd., London, founded in 1818 as the Coburg. Taken over by Emma Cons in 1880, when it was known as the Royal Victoria Hall, it became a popular centre for opera and drama, and was affectionately dubbed the Old Vic. In 1898 Lilian Baylis, niece of Emma Cons, assumed the management, and in 1914 began the celebrated series of Shakespeare productions, which continued until the S.W.W. The theatre was badly damaged by enemy action in 1940, but the O.V. company continued to appear at the New Theatre, and in 1950 the O.V. was re-opened, becoming in 1963 the temporary home of the National Theatre.

OLEANDER. Evergreen shrubs of the genus *Nerium*, native to the Mediterranean region. The pink flowers grow in clusters, and the lance-shaped leaves contain a poisonous juice, oleandrin.

OLGA, St. (d. c. 969). The wife of Igor, the Scandi-

NIGER (nī'jer). Third-longest river in Africa, rising 150 m. from the W. coast, in the highlands bordering Sierra Leone and the rep. of Guinea. It flows N.E., then S.E., and enters the Gulf of Guinea; length 2,600 m. The Benue joins the N. at Lokoja. The N. is a sluggish r., frequently flooding its banks.

NIGER, Republic of. Country in W. Africa, formerly the French colony (later territory) of Niger. It lies N. of Nigeria. Cattle raising and the cultivation of ground-nuts, millet, and cotton are carried on in the S., but the N., where there are uranium deposits, is part of the Sahara desert. The cap. is Niamey (pop. 30,000). Area 459,000 sq. m.; pop. (1965) 3,330,000. The country was occupied by France in 1912, made into a territory 1926. It became independent outside the French Community in 1960, under a president.

NIGERIA, Federation of. A country of the Brit. Commonwealth, in W. Africa on the Gulf of Guinea, with Dahomey to the W., Cameroon to the E., and the rep. of Niger to the N. Since 1967 the former 4 regions have been divided into 12 states: N.-Western, N.-Central, Kano, N.-Eastern, Benue Plateau, W.-Central (former N. region: mainly Moslem); E.-Central, S.-Eastern and Rivers (former E. region: Christian and pagan); Mid-Western, unchanged, and like the Western and Lagos (enlarged from former W. region) Christian and Moslem. The cap. and chief port is Lagos; other large towns are Ibadan, Ogbomosh, Kano, Oshogbo, Abeokuta, and Port Harcourt. Area 356,670 sq. m.; pop. (1967) 61,450,000.

Physical Features. To the S. is a coastal strip, a maze of creeks and mangrove swamps, including the delta of the Niger. To the N. of this lies a belt of tropical forest. The rest of the country is savannah, becoming arid and treeless towards the N. The E. strip is rugged and mountainous. The main rivers are the Niger and its tributary the Benue; both are navigable.

The whole country is hot, in the N. the heat is very dry, and in the S. damp and enervating. The dry season is characterized by a dust-laden N.E. wind, the *harmattan*. The annual rainfall, about 72 in. in Lagos, but over 150 in. elsewhere on the coast, is only about 25 in. in the extreme N.

Economic Life. The country is agricultural. The main food-crops are guinea-corn, groundnuts, yams, and cassava, while ground-nuts, palm oil and kernels, and cocoa are exported. There are large herds of cattle in the N. and there is a big export of hides. Minerals incl. oil in the E., tin in the Bauchi plateau, and coal nr. Enugu, and high-grade timber is produced.

Inhabitants. The people belong to many different tribes, with widely different languages, social organizations, and customs. In the N. the main tribes are the Hausa and the Fulani; in the W. the Yoruba; in the Mid-W. and E. the Ibo.

Hausa is a *lingua franca*, English the official language. There is a lively literature, e.g. playwrights Wole Soyinka and Hubert Ogunde, and poet Cris Okigbo.

History. Lagos was bought from an African chief by British traders in 1861; in 1886 it became the colony and protectorate of Lagos. Activity in the Niger valley was developed by the National African Co. (later the Royal Niger Co.) which came to an end in 1899; two protectorates, N. Nigeria and S. Nigeria, were set up in 1900; Lagos was joined to S.N. in 1906. In 1954 N. became a federation which in 1960 achieved independence, becoming in 1963 a federal rep. within the Commonwealth. A military *coup d'état* in 1966 led to the death of Tafawa-Balewa (q.v.). After much unrest Maj.-Gen. Jakabu Gowon became head of the Fed. Military Govt. later in 1966, but in 1967 the E. region seceded as the Rep. of Biafra (q.v.) and civil war ensued. Biafran resistance continued only in a limited area in the interior 1969. Elsewhere the nat. development plan carried on, e.g. the Kainji dam (1969), on the Niger.

NIGHTINGALE, Florence (1820–1910). British hospital reformer. B. in Florence of wealthy parents, in 1854 she took a staff of nurses to Scutari, where inefficiency and insanitary conditions were causing unnecessary loss of life among the British soldiers from the Crimea, and within 6 months reduced the death-rate in the hospitals from 42 to 2 per cent. For the rest of her life, although living in retirement, she worked constantly to raise the status of the nursing profession. She received the O.M. in 1907.

NIGHTINGALE. Song-bird (*Luscinia megarhynchos*) which winters in Africa, but breeds in S. Europe and S. England in the late spring and early summer. The song of the male has a legendary beauty and though to be heard in the daytime is most striking at night when other birds are silent. Allied species are found in E. Europe.

NIGHTSHADE. Common name for several plants in the family Solanaceae; best-known are the Black N. (*Solanum nigrum*), bittersweet or woody N. (*S. dulcamara*), and deadly N. or belladonna (q.v.).

NIHILISTS. Russian revolutionaries of the reign of Alexander II (1855–81). The name, popularized by Turgenev, means those who approve of nothing (Lat. *nihil*) belonging to the existing order. From 1878 they launched a terrorist campaign which culminated in the murder of the Tsar in 1881.

NIJINSKY (nēzhin'ski), Vaslav (1890–1950). Russian ballet dancer and choreographer. He made his début in 1908, appeared with the Diaghileff company in Paris in 1909, and later in St. Petersburg. He turned to choreography in 1912, creating *L'après-midi d'un faune*, *Jeux*, and *Le Sacre du printemps*. After tours of S. and N. America, he retired because of ill-health.

NIJMEGEN (nī'mākhen). Town in the Netherlands, in the province of Gelderland, on the Waal, about 10 m. S. of Arnhem. The Roman Noviomagus, N. was a free city of the Holy Roman Empire and a member of the Hanseatic

NIGERIA. Girls from Bornu Province in traditional Kanuri costumes. Courtesy of the Federation of Nigeria.

FLORENCE NIGHTINGALE

NIGHTSHADE

NIGERIA. Gelede Society mask from the Yoruba, S. Nigeria, used in funeral dances. British Museum.

Spain, and in 756 assumed the title of emir of Cordova. His dynasty, which took the title of caliph in 929, ruled at Cordova until the early 11th cent.

OMBUDSMAN (om'boōdsman). Post of Scandinavian origin instituted to safeguard citizen rights against encroachment by the govt. or its employees: introduced in Sweden 1809, Denmark 1954, and Norway 1962. The O. investigates complaints of injustice which would otherwise have no hope of redress. First Commonwealth country to appoint an O. was N.Z. 1962; the U.K. followed 1966 with a Parliamentary Commissioner (Sir Edmund Compton); and Hawaii was the 1st U.S. state to appoint an O. 1967.

OMDURMAN (omdoor'mahn). City in the rep. of Sudan, on the White Nile, opposite Khartoum. It was the residence of the Mahdi, 1884-98, and is an important trading centre. Pop. (1964) 167,000. The Battle of O. (1898) was a victory for Kitchener over the forces of the Mahdi.

OMMANNEY, Francis Downes (1903-). British marine biologist. He has worked in areas as varied as the Arctic and the Seychelles, and lectured 1957-60 at Hong Kong. His books incl. *South Latitude* (1938), *Fragrant Harbour* (1962), dealing with Hong Kong, and *The River Bank* (1966) autobiographical.

OMNIBUS (abbr. bus). A road conveyance for all. Originating in Paris in the reign of Charles X, the first English O. travelled between Paddington and the Bank. The London General O. Co. (founded in 1856)

OMNIBUS. Single-decker Red Arrows are designed to economize in manpower and speed London's rush hour. There is no conductor, fares being inserted into coin boxes, and to increase carrying capacity there is rear seating only, the forward section being for standing passengers.

Courtesy of London Transport.

became the most prominent, and its horse Os. survived until 1911. Since then, the growth of single- and double-decker motor Os. has been universal. Strict safety precautions now govern their usage, and their originally limited journeys extend to transcontinental vehicles usually called motor-coaches.

OMSK. Town in the R.S.F.S.R., cap. of O. region, at the confluence of the Om and the Irtysh. Agricultural and other machinery is made and O. has food-processing factories and saw-mills; also petroleum refineries linked with Tuimazy in Bashkiria by a 1,000 m. pipeline. It developed round a fortress dating from 1716. Pop. (1967) 746,000.

ONASSIS, Aristotle Sokrates (1906-). Greek shipowner. B. in Smyrna, he was a refugee to Greece at 16, but revived the family tobacco business in Buenos Aires and became an Argentine citizen. After the S.W.W. he was a pioneer in the construction of supertankers, and his wealth, e.g. the palatial yacht *Christina*, is legendary. He m. Jacqueline Kennedy, widow of J. F. Kennedy in 1968.

ONEGA (on'egah). Second-largest lake in Europe, situated partly in Leningrad region, partly in Karelia A.S.S.R. Area 3,820 sq. m. The O. canal, along its S.

shore, is part of the Mariinsk system linking Leningrad with the r. Volga.

ONEIDA (ōn'īdah). Town in N.Y. state, U.S.A., on O. Creek, 26 m. E. of Syracuse. It makes silverware, fertilizers, paper, etc., but is best known as the site of the O. community, moved here from Vermont in 1848. Members of the community held all things in common, and practised a form of 'complex marriage' much criticized outside the community, which was dissolved in 1879. A co-operative company took over its commercial activities in 1881. Pop. (1960) 11,677.

O'NEILL (ō-nēl'), Eugene Gladstone (1888-1953). American playwright. B. in N.Y. City, son of the actor James O., he had varied experience as gold prospector, seaman, actor, etc., and began learning his craft at George Pierce Baker's drama school at Harvard in 1914. His first full-length play *Beyond the Horizon* (1920), an immediate success, was followed by the expressionist study in fear *The Emperor Jones* (1920); the realistic *Anna Christie* (1921); *The Hairy Ape* (1922). *All God's Chillun Got Wings* (1924) dealt with miscegenation, and this, together with the peasant sensuality of *Desire under the Elms* (1924), provoked the censor. Symbolism predominated in *The Great God Brown* (1926) and *Lazarus Laughed* (1927); *Strange Interlude* (1928) used a stream of consciousness method; and the trilogy *Mourning Becomes Electra* (1931) developed the Orestean theme of Greek drama. *Ah, Wilderness!* (1933) approached the norm of New England comedy, *Days Without End* (1934) returned to Catholic inspiration, and *The Iceman Cometh* (1946) struck again a confused note. Events of his own early life, e.g. his mother's mental instability, are portrayed in *Long Day's Journey into Night*. In 1936 he was awarded a Nobel prize and was undoubtedly America's leading dramatist between the wars.

O'NEILL, Terence Marne (1914-). Irish statesman. Member for Bannside, co. Antrim, from 1946, he held many posts in the Ulster govt. and was Min. of Finance from 1956 until he succeeded Brookeborough as P.M. (1963-9).

ONION (un'yen). Bulbous plant (*Allium cepa*) of the family Liliaceae. Cultivated from ancient times, it probably originated in Asia. The edible part is the bulb, containing an acrid volatile oil, giving a strong flavour. The O. is a biennial, the common species producing a bulb in the 1st season and seeds in the second.

ONSA'GER, Lars (1903-). Norwegian-born American chemist. Prof. of theoretical chemistry at Yale from 1945, he was the discoverer in 1931 of the 'reciprocity relations of O.', fundamental to the process of turning heat into energy. He received a Nobel prize in 1968.

ONTARIO. Province of Canada, between the Great Lakes and Hudson Bay. It has an undulating surface, with a range of hills extending towards Lake Huron. The principal rivers are the St. Lawrence and Ottawa. The climate of O. is healthy, the soil in the S. is fertile, and large areas are under cultivation. There are dairy and fruit farms, and cattle and poultry are raised. Tobacco is cultivated. The chief minerals include gold, nickel, copper, and uranium. More than a quarter of the region is covered by forests, and lumbering is one of the most important industries. O. is the most important manufacturing centre in Canada because of its great water-power resources. Railway rolling-stock, agricultural implements, motor-cars, textiles, tannery and rubber products, pulp and paper are among the main manufactures. The chief cities are Toronto (the cap.), Ottawa, Hamilton, Windsor, and London.

O. is administered by its own provincial govt. at the head of which is a Lieut.-Gov., assisted by an executive council and a single-chamber legislature elected for 5 years (117 members in 1969). O. became

the investigation of Alger Hiss (q.v.). He was senator from California from 1951 until Vice-Pres. of the U.S. under Eisenhower 1953-61. He failed to defeat J. F. Kennedy in the pres. elections of 1961, but in a 'law and order' campaign defeated Vice-Pres. Humphrey in 1968 in one of the most closely contested elections in U.S. history. Abroad he aimed at withdrawal from Vietnam and limitation of future U.S. commitment to repulsion of external aggression rather than combating internal subversion, and aid to Far Eastern countries to stand on their own feet economically and militarily.

NKRUMAH (nkrōō'mah), **Kwame** (1909-).

KWAME NKRUMAH

Ghanaian statesman. B. in the Gold Coast, he was ed. at a R.C. mission school and Achimota Coll., and was a schoolmaster 1931-4. He studied abroad at Lincoln Coll. and the Univ. of Pennsylvania, and at the London School of Economics, returning to Africa in 1948 where he formed in the next year the Convention People's Party with the aim of immediate self-govt. In 1950 he was imprisoned for incitement of illegal strikes, but was released the same year, becoming P.M. of the Gold Coast (1952-7), of Ghana (1957-60), and first pres. of the rep. 1960. His rule proved increasingly dictatorial. He was deposed while on a visit to Peking 1966, and was appointed joint Head of State of Guinea.

N.K.V.D. See **M.V.D.**

NŌ'AH. Biblical character. The son of Lamech and father of Shem, Ham, and Japheth, he built an ark so that he and his family and specimens of all existing animals might survive the Deluge (Gen. 6-8). In a Babylonian version the hero is Ut-napishtim.

NOAILLES (noh-iy), **Anna Elisabeth Brancovan**, comtesse de (1876-1933). French poet. B. in Paris of a Greek mother and a Rumanian father. Her poetry is of a musical quality; among the best collections are *Le Cœur innombrable* and *L'Ombre des jours*.

NŌ'BEL, **Alfred Bernhard** (1833-96). Swedish chemist. B. at Stockholm, he invented dynamite in 1867, and ballistite, a smokeless gunpowder, in 1889. He amassed a large fortune from the manufacture of explosives and the exploitation of the Baku oilfields, the bulk of which by his will he left in trust for the endowment of five Nobel Prizes. These are awarded internationally each year for outstanding achievement in chemistry, physics, medicine, literature, and the promotion of peace: a 6th, for economics and financed by the Swedish Nat. Bank, was first awarded 1969. The prizes have a value of c. £30,000.

NOEL-BAKER, **Philip John** (1889-). British Lab. politician. An ardent supporter of the League of Nations and U.N., he pub. *The Arms Race* (1958), and was in 1959 awarded a Nobel peace prize. In 1950-1 he was Min. of Fuel and Power and was a Lab. M.P. 1929-31 and from 1936.

NOGINSK (nogēnsk'). City in the R.S.F.S.R., on the Klyazma r., 32 m. E. of Moscow, dating from 1791 and until c. 1930 called Bogorodsk. It makes textiles and has saw mills. Pop. (est.) 70,000.

NOGUCHI (nōgōō'chē), **Hideyo** (1876-1928). Japanese bacteriologist, who did much valuable work in connection with syphilitic diseases, and discovered the parasite of yellow fever, a disease from which he died while working in British W. Africa.

NOISE. Unwanted sound, an increasing problem

in industrialized societies. Permanent, incurable loss of hearing can be caused by prolonged exposure to high N. levels (above 85 decibels in an octave), and even below this, if the N. is in a narrow frequency band: temporary loss occurs when exposure is for shorter periods. Lower levels of N. form an irritant, but seem not to increase fatigue or affect efficiency to any great extent. Roadside meter tests, introduced by the Min. of Transport in Britain in 1968, allowed 87 decibels as the permitted limit for saloon cars and 92 for lorries.

NŌ'LA. Ancient city of Naples prov., Italy, 17 m. N.E. of Naples, probably of Etruscan origin. The Emperor Augustus d. at N. Pop. (1960) 25,000.

NŌ'LAN, **Sidney** (1917-). Australian artist. B. in Melbourne, he developed, with little formal training, an individual interpretation of the Australian scene - the explorers and drought landscapes of the outback - but is most famous for his interpretation of the theme of Ned Kelly (q.v.). Created C.B.E. 1963.

NŌ'LDE, **Emil**. Name - taken from his native village of N. in Schleswig - adopted by the German Expressionist artist Emil Hansen (1867-1956). Working both in water colour and oil, he excelled in colourful seascapes and such mystic religious works as 'The Last Supper' and 'Joseph tells his Dream'.

NOLLEKENS (nol'ekenz), **Joseph** (1737-1823). British sculptor. B. in Soho, he executed busts of George III, the Prince of Wales (later George IV), Pitt, Fox, Garrick, Sterne, and others.

NOME (nōm). Town on Norton Sound, Alaska. Gold was discovered there in 1898-9, and there followed in 1900 a great gold rush, the pop. rising rapidly to 20,000, then declining. Amundsen arrived at N. in 1906 after completing the North-West Passage. The town has become a commercial centre for Seward peninsula. Pop. (est.) 2,000.

NOMINALISM. One of the two main trends in the medieval philosophy of Scholasticism. In opposition to the Realists, who maintained that universals, i.e. the distinctive qualities which enable us to group objects into classes, have a real existence, the Nominalists taught that they are mere names invented to describe the qualities of real things. Controversy on this issue continued at intervals from the 11th to the 15th cent.

NONCONFORMISTS. A term originally applied to the Puritan section of the C. of E. clergy who in the Elizabethan age refused to conform to certain practices of the Church, e.g. the wearing of the surplice and kneeling to receive Holy Communion. After 1662 the term was confined to those who left the Church rather than conform to the Act of Uniformity. It is now applied mainly to members of the Free Churches.

NONJURORS. Clergymen of the Church of England who after the Revolution of 1688 refused to take the oaths of allegiance to William and Mary. They continued to exist as a rival Church for over a century, and consecrated their own bishops, the last of whom d. in 1805. Notable Ns. were Thomas Ken, Jeremy Collier, and William Law.

NORDENSKJÖLD (nor'denshōld), **Nils Adolf Erik**, baron (1832-1901). Swedish explorer. He made voyages to the Arctic with the geologist Torell, and in 1878-9 discovered the North-East Passage. On his return he was made a baron, and pub. the results of his voyage in a series of books, incl. *Voyage of the Vega round Asia and Europe* (Eng. 1881).

NORDIC. A racial type, characterized by tall stature, long (dolichocephalic) head, and fair skin, hair, and eyes, found chiefly in Scandinavia and adjoining parts of Europe. The N. type is present in its purest form among the Swedes and Finns, some what less typically in Norway, Denmark, and the coastal region of Germany, and among the Baltic peoples; it is well represented in Britain, esp. in the north of England and the Western Isles of Scotland.

Oporto. Built in the form of an amphitheatre on two hills of granite on the left bank of the river Douro, the main part of the city faces the Villa Nova de Gaia where are the red-tiled wine lodges supplied by the vineyards of the Douro district. Spanning the river is the Dom Luiz I bridge (1881-5).
Courtesy of the Portuguese State Office.

in an area placed under Polish admin. in 1945. It dates from the 13th cent. and its many ancient buildings were badly damaged in the S.W.W. Industries incl. cement and textiles. Pop. (1966) 56,000.

OPO'RTU. Second city of Portugal, and cap. of the prov. of Douro Litoral, situated on the r. Douro, near its mouth. It is chiefly famous for the export of port wine. The cathedral dates from the 12th cent., the univ. from 1911. It has an airfield. Pop. (1960) 310,474.

OPO'SSUM. Marsupial of the family Didelphidae. Os. are small arboreal animals, with prehensile tails, hands and feet well adapted for grasping, and yellowish-grey fur. These true Os. are confined to N. and S. America, but the name is popularly applied to the somewhat similar members of Phalangeridae found in Australia, New Zealand, etc.

OPPELN. German form of **OPOLE**.

OPPENHEIM (op'en-him), Edward Phillips (1866-1946). British author of some 200 books dealing with high society and the Continental underworld, e.g. *A Prince of Sinners* (1903), *The Moving Finger* (1911) and *The Great Impersonation* (1920).

OPPENHEIMER (op'-en-himer), Robert (1904-67). American physicist. The son of a German immigrant, he worked with Rutherford at Cambridge. As director of the Los Alamos Science Laboratory 1943-5, he was in charge of the development of the 1st atom bomb and director 1947-66 (senior prof. theoretical physics from 1966) Inst. of Advanced Study, Princeton. Objecting to the development of the H-bomb, he was declared a security risk in 1953 by the U.S. Atomic Energy Commission - an incident of the McCarthy era - but was rehabilitated in 1963 when the Commission granted him the Fermi (q.v.) Award.

OPPOSITION. Leader of His/Her Majesty's. In Britain the official title borne since 1937 by the leader of the largest opposition party in the Commons. The post carries a salary of £4,500 p.a.

OPTICS. The scientific study of the phenomena of light and vision, e.g. shadows cast by opaque objects, images formed in mirrors, and lenses, microscopes, telescopes, cameras, etc. Light rays are for all practical purposes straight lines, although Einstein has demon-

strated that they may be 'bent'. On striking a surface they are reflected or refracted with some attendant absorption, and the study of these facts is the subject-matter of geometrical optics. See **LIGHT**.

OPUNTIA. See **PRICKLY PEAR**.

OPUS DEI (ō'pus dā'ē). An R.C. secular institution aiming at the dissemination of the ideals of Christian perfection, particularly in intellectual and influential circles. Founded in Madrid in 1928, and still especially powerful in Spain, it is now international. Its members may be of either sex, lay or clerical.

O'RACLE. In Greek religion, the answer given by a deity to an inquirer, also used of the place where the answer is given. The earliest O. referred to in classical writings is that at Dodona, where priests expounded the meaning of sounds made by the sacred oaks of Zeus; but the best-known is the O. of Apollo at Delphi.

ORADEA (orah'dyah). Ancient town in Rumania, cap. of O. region, 80 m. W.N.W. of Cluj. A railway junction with an airport, it is the centre of a wine-producing area and varied industries incl. agricultural machinery, chemicals, non-ferrous metallurgy, leather goods, printing, glass, textiles, clothing, beer, etc. Made the seat of a bishopric by St. Ladislav in 1083, it was destroyed by the Turks in 1241 and rebuilt. Many of its buildings date from the time of Maria Theresa. It was ceded to Rumania in 1919, held by Hungary 1940-5. Pop. (1966) 122,500.

ORAN (orahn'). Seaport in Algeria, cap. of O. dept. and situated on a hill rising above the Mediterranean, c. 230 m. W. of Algiers, with a fine harbour. It was under Spanish rule 1509-1708 and 1732-91, being under Turkish rule in the interval. O. was occupied by France in 1831. After the surrender of France to Germany in 1940, the French warships in the naval base of Mers el-Kebir nearby were put out of action by the R.N. to prevent them from falling into German hands. A univ. was estab. 1967. Pop. (1967) 324,000.

ORANGE. House of. The royal family of the Netherlands. The title is derived from the small principality of O., in S. France, held by the family from the 8th cent. to 1713. They held considerable possessions in the Netherlands, to which, after 1530, was added the German county of Nassau. From the time of William the Silent the family dominated Dutch history, bearing the title of stadholder for the greater part of the 17th and 18th cents. The son of the Stadholder William V was made King William I by the Allies in 1815.

ORANGE (oranzh'). Town in Vaucluse dept., France, 15 m. N. of Avignon. It has remains of a Roman theatre and arch. Pop. (1962) 21,450.

ORANGE. Special species of evergreen tree in the genus *Citrus*, remarkable for bearing blossom and fruit at the same time. They are commercially cultivated in Spain, Israel, Brazil, S. Africa, U.S.A., etc., but seem to have originated in S.E. Asia. Among the principal types are the Jaffa, Maltese blood, tangerine, mandarin, and Seville - the bitter O. used in making marmalade. Os. yield several essential oils.

ORANGE (or'anj). River of S. Africa, rising on the Mont aux Sources in Basutoland and flowing in W. direction to the Atlantic. It runs along the boundary of the Orange Free State, and was given its name in 1779 in honour of the Dutch stadtholder. Length 1,300 m.

ORANGE FREE STATE. Prov. of the Rep. of S. Africa, to the N. of the prov. of the Cape of Good Hope, from which it is separated by the r. Orange. Its surface consists chiefly of plateaux, extending S.W. from the Drakensberg mts. in the E. The principal rivers are the Vaal and Orange. The most important industry is stock farming, and in the E. there is large area under cultivation. Coal is mined at Verreiging and at Sasolburg; oil fuel is produced from coal; diamonds are found near Jagersfontein and

OPOSSUM

Lawrence, Missouri, Arkansas, and Rio del Norte; the W.-flowing Yukon, Snake, and Colorado rivers; the S.-flowing Mississippi, and the N.-flowing Mackenzie. Between Canada and U.S.A. lies the unique lake system, comprising Superior, Michigan, Huron, Erie, and Ontario, from which issues the St. Lawrence. The climate varies greatly with latitude.

The American Indians, incl. the Eskimo, are believed to have entered the continent from Asia, to whose people they bear a marked resemblance. They are thought to have numbered c. 1,000,000 when Europeans first arrived, and although some tribes declined into extinction, there has been a general increase in the 20th cent. Today they number c. 200,000 in Canada; 600,000 in U.S.A.; and 3,000,000 in Mexico: their social and economic plight in U.S.A. led to a special federal aid programme being planned 1968. There has been a considerable admixture of White and Negro blood. Negroes, originally introduced as slave labour in the S. of the continent, are now more widely distributed throughout the U.S.A., where they form about 10% of the pop., though only

a quarter have no admixture of White or other blood. There has been continuing immigration into N.A. from Europe since the 17th cent., during the peak period 1880–1930 averaging half a million annually, so that the population is predominantly White. English, with distinctive accents and usages, is the principal language of the U.S.A. and Canada, but French is a strong minority language in Canada, and Spanish is the nat. language of Mexico. The Indian language survives in great diversity.

NORTHAMPTON. Ancient English town (co. bor.), county town of Northants on the r. Nene. It is the centre of the boot and shoe industry. Other industries incl. engineering, leather tanning, iron foundries and the manufacture of leather goods, toys, roller bearings, and women's clothing. There was a settlement at N. before the Norman Conquest, after which a castle was built there. Pop. (1961) 105,361.

NORTHAMPTONSHIRE or Northants. Midland county of England, which incl. the sources of the Cherwell, Avon, Leam, Welland, and Nene. Its churches with broached spires are famous. The N. climate is mild, the soil fertile, and cattle raising and wheat and barley growing are the chief occupations; boots and shoes are widely made. The largest towns

NORTHAMPTONSHIRE. Sulgrave Manor was the ancestral home of the family of George Washington and in 1914 it became a museum. The Stars and Stripes is said to originate in the Washington arms of 3 mullets and two bars seen in the right spandrel of the arch of the main doorway. Courtesy of Sulgrave Manor Board.

are Northampton (co. town), and Kettering. Area 914 sq. m.; pop. (1967) 433,880.

NORTH ATLANTIC TREATY. Treaty signed in Washington, D.C., on 4 April 1949 by Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, Netherlands, Norway, Portugal, U.K., and U.S.A. The signatories agreed that 'an armed attack against one or more of them in Europe or North America shall be considered an attack against them all'. Greece and Turkey acceded in 1952, and Germany in 1955.

The chief body of the N.A.T. Organization is the Council of Foreign Ministers which holds periodic meetings and also functions in permanent session through the appointment of permanent representatives. The unified international secretariat has its H.Q. at Brussels from 1967 (formerly Paris) as does a Military Committee consisting of chiefs of staff (until 1967 in Washington). The military H.Q. is called Supreme Headquarters Allied Powers, Europe (SHAPE) and moved from Rocquencourt, France, to Chievres-Casteau, nr. Mons, 1967. The Supreme Allied Commanders, Europe and Atlantic, are Americans, but there is also an Allied Commander, Channel—a British admiral. France withdrew from the organisation, but not from the alliance, 1966.

COUNTRIES OF NORTH AMERICA

ORDERS. L. to r. Doric, Tuscan, Ionic, Corinthian, Composite.

(incl. capital, shaft, and base), and the entablature, considered as an architectural whole. The 5 orders, viz. Doric, Ionic, Corinthian, Tuscan, and Composite, are shown in the illustration above. See also COLUMN.

ORDER IN COUNCIL. In Britain an order issued by the sovereign with the advice of the Privy Council; in practice it is issued only on the advice of the cabinet. Acts of parliament often provide for the issue of Os. in C. to regulate the detailed administration of their provisions or they may be used to introduce wartime emergency legislation.

ORDNANCE SURVEY. The official mapping of Britain. Its establishment in 1791 followed the making of military surveys in Scotland and elsewhere. The 1st map – of Kent – was pub. in 1801. Maps of large and small scales have since been produced, and their revision is now the main task of the O.S. Dept., the administration of which is controlled by the Min. of Housing and Local Govt.

OREGON. Mountainous N.W. state of the U.S.A. The extensive forests are one of the state's principal sources of wealth. The chief rivers are the Columbia (which flows along most of the N. boundary) and its tributary, the Snake. The chief towns are Portland, Salem (the cap.), and Eugene. The state of O. is the S. part of the much larger O. Country, over the N. boundary of which there was a long-standing dispute with Britain, settled in 1846 when it was agreed that the frontier should be extended to the W. coast along lat. 49° N. O. Country was made a Territory 1848 from which Washington Territory was detached 1853. O. with its present boundaries entered the Union 1859. Spanish explorers visited the coast in the 16th cent. Robert Gray, a U.S. navigator, discovered and named the Columbia r. in 1792. Area 96,981 sq. m.; pop. (1960) 1,768,687.

O'REL. Town in the R.S.F.S.R., cap. of O. region, situated on the Oka, c. 200 m. S.S.W. of Moscow. It is an important grain market and rail centre with engineering industries. Pop. (1967) 202,000.

O'RENBURG. Town in the R.S.F.S.R., cap. of O. region, on the right bank of the Ural r. c. 230 m. E.S.E. of Kuibyshev. It dates from the early 18th

cent. and is an important trading and mining centre. It was called Chkalov 1938–57 in honour of a long-distance flyer. Pop. (1967) 316,000.

ORESTES (ōres'tēs). In Greek legend, the son of Agamemnon, and of his wife, Clytemnestra (qq.v.).

ORFILA (orfēlah'), Mathieu Joseph Bonaventure (1787–1853). French scientist of Spanish origin. B. at Mahón, Minorca, he became prof. of medical jurisprudence (1819), and of chemistry (1823) at Paris. His *Traité des poisons* (1813) laid the foundations of the modern toxicology.

ORFORD. Earl of. See WALPOLE.

ORGAN. A musical wind instrument of ancient origin, developed from the Pan-pipe and hydraulis, mentioned as early as the 3rd cent. B.C. Leather bags and bellows were added, and the hydraulic type more favoured than the pneumatic O., which has since prevailed. Os. were imported to France from Byzantium in the 8th and 9th cents., after which their manufacture in Europe began. The supersession of the old drawlides by the key system dates from the 11th–13th cent., the first chromatic keyboard from 1361. The more recent designs date from the 1809 composition pedal.

The modern O. produces sound from varying-sized pipes under applied pressure. One note only is sounded by each pipe, but these are grouped into stops, which are ranks or scales of pipes prepared to 'speak' by a knob. These, in turn, form part of a sectional O., one of the tonal divisions comprising the whole O. These separate manuals are the great, swell, choir, solo, echo, and pedal Os., controlled by the player's hands and feet. By this grouping and sub-division extremes of tone and volume are obtained.

Apart from its continued use in churches, the O. has been adapted for entertainment. The electrically controlled O. substitutes electrical impulses and relays for some of the air-pressure controls.

ORGANIC CHEMISTRY. The chemistry of carbon compounds. The great number and diversity of these compounds render it convenient to group them separately. They are built up chiefly through the combination of carbon with hydrogen, oxygen and nitrogen. Compounds containing only carbon and hydrogen are known as hydrocarbons.

O.C. is largely the chemistry of a great variety of homologous series, in which the molecular formulae, when arranged in ascending order, form an arithmetical progression with the common difference CH₂. The physical properties undergo a gradual change from one member to the next.

The chain of carbon atoms forming the backbone of an organic molecule may be built up from beginning to end without branching; or it may throw off branches at one or more points. This division of organic compounds is known as the *Open-Chain*, or *Aliphatic*, compounds. Sometimes, however, the ropes of carbon atoms curl round and form rings. These constitute the second division of organic compounds known as *Closed-Chain*, *Ring*, or *Cyclic*, compounds. Other structural varieties are known. Upon the capacity of carbon atoms to form molecular rings and chains depends the infinite variety of organic nature.

In inorganic chemistry a specific formula usually represents one substance only, but in O.C. it is exceptional for a molecular formula to represent only one substance. Substances having the same molecular formula are called *isomers*, and the relationship is known as *isomerism*. Where substances have the same molecular formula, but differ in their structural formulae, they are called *structural isomers*. *Spatial isomers*, or stereoisomers, have the same molecular formula, and also the same structural formula, the difference lying in their spatial dispositions. The study of spatial isomers led to the recognition of a new and extensive field of chemistry, known as *stereochemistry*, or 'chemistry in space'.

OREGON. Never itself frozen, though more than 6,000 ft. above sea-level, Crater Lake marks the site of an extinct volcano, and the surrounding lava cliffs rise in places to 2,000 ft. Brilliantly blue, it is six miles in diameter and nearly 2,000 ft. deep. Courtesy of the U.S. National Parks Service.

History. The recent history of N.I. dates from the early 17th cent. when Protestant Scottish and English 'planters' settled there and gave the region an outlook very different from that of the rest of the island. Separation from the S. came in 1920; the border, which excluded 3 Catholic Ulster counties, was agreed on in 1925. Since N.I. came into existence, the Ulster Unionist Party has been in power (see BROOKBOROUGH). By the 1960s Nationalist agitation for union with the Rep. of I. had faded, but in 1968–9 serious Civil Rights disturbances in protest against alleged discrimination against R.Cs. in employment and housing, and against the restricted franchise in local govt. elections, led to promise of reform (see LONDONDERY). They also caused a split in the Unionist party, Captain O'Neill (q.v.) being succeeded by James Chichester-Clark (1923–) after a general election which had given the former P.M. no very clear mandate. Renewed rioting and bloodshed in Belfast and Londonderry then necessitated the despatch of a British military peacekeeping force.

NORTHERN RHODESIA. See ZAMBIA.

NORTHERN TERRITORY. A territory of the Commonwealth of Australia, bounded on the N. by the Arafura Sea and lying between Queensland and W. Australia. Darwin is the cap. Most of the N.T. is within the tropics, and the climate is hot, with considerable variations in temperature in the S. There is an insufficient rainfall, but beef cattle are reared, with the help of water from artesian bores; fishing and pearl fishing are carried on on the coast; and gold, copper, tungsten, manganese, bauxite, and uranium are among minerals worked. Area 523,620 sq. m.; pop. (1966) 37,433, plus 21,119 aborigines.

NORTH POLE. See ARCTIC.

NORTH RHINE-WESTPHALIA. Land of W. Germany, to the W., in the valley of the Rhine, and including the Ruhr (q.v.) industrial dist. It was formed in 1946 from the N. part of the former Rhine prov. and the prov. of Westphalia (q.v.). Sugar-beet and potatoes are the biggest crops, coal and iron the chief mineral products. All kinds of iron and steel goods, fertilizers, artificial fibres, textiles are made. Düsseldorf is the cap.; other large towns are Cologne, Essen, Dortmund, Duisburg, and Wuppertal. Area 13,110 sq. m.; pop. (1966) 16,835,500.

NORTH SEA. Sea bounded by the E. coast of Britain, and the coasts of Belgium, the Netherlands, Germany, Denmark, and Norway. In the N.E. it joins the Norwegian Sea, and in the S. it meets the Strait of Dover. Its mean depth is about 30 fathoms; greatest depth is 361 fathoms, off Norway. There are a series of banks extending from the coast of Yorkshire to the Skagerrak, the most important being the Dogger Bank. There are rich fisheries, and oil and natural gas resources. Area c. 202,000 sq. m.

NORTH SHIELDS. English seaport in Northumberland, at the mouth of the Tyne, opposite South Shields, 7½ m. E.N.E. of Newcastle; it is included in the co. bor. of Tynemouth and exports coal and coke. It has shipbuilding yards, and factories making cables, chemicals, etc.

NORTH UIST. See UIST.

NORTHUMBERLAND. John Dudley, duke of (c. 1502–53). English statesman. Son of Edmund Dudley, he was created duke of N. in 1551, and was chief minister until Edward VI's death in 1553, when he attempted to place his daughter-in-law Lady Jane Grey on the throne. His misrule had made him so hated that the scheme immediately collapsed, and N. was beheaded.

NORTHUMBERLAND. Co. in the N. of England, separated from Scotland by the Cheviot Hills and the Tweed, and bounded on the S. by Durham, on the W. by Cumberland. The surface in the E. is flat, but it rises to the central moorland region, and in the N.W. there are mountains which culminate in the Cheviot

(2,676 ft.). The chief rivers are the Tyne and Tweed. In the S.W. are the Northumbrian lakes, of which the largest is Greenlee Lough. The chief towns are Newcastle upon Tyne (the co. town), Tynemouth, Blyth, Wallsend, and Whitley Bay. There is a large coalfield in the S.E. and Tyneside is a great industrial area for shipbuilding, engineering, iron, steel, chemicals, etc. Area 2,019 sq. m.; pop. (1967) 828,290.

NORTHUMBRIA. An Anglo-Saxon kingdom covering N.E. England and S.E. Scotland. It originally comprised two independent kingdoms founded in the 6th cent., Bernicia, extending from the Forth to the Tees, and Deira, from the Tees to the Humber, which were united in the 7th cent. During the 7th–8th cents. N., under the influence of Irish missionaries, became a cultural centre of European fame. It accepted the supremacy of Wessex in 827, and during the later 9th cent. was conquered by the Danes.

NORTH-WEST FRONTIER PROVINCE. Prov. of British India, formed in 1901, which lay between Afghanistan and Punjab. Predominantly Moslem, it became part of Pakistan in 1947 and in 1955 was absorbed in W. Pakistan. Containing the Khyber and other passes, this mountainous area was strategically vital to successive Mogul, Sikh and British rulers, who waged constant warfare against the Pathan tribesmen. The cap. was Peshawar.

NORTH-WEST PASSAGE. The sea route from the Atlantic round the N. of Canada to the Pacific. Many attempts were made to discover it from that of Frobisher (1576–8) onwards. Franklin's failure to return in 1847, as planned, from his search for it led to the organization of 39 expeditions in the next 10 years. R. McClure discovered the passage 1850–3, though he did not cover the whole route by sea: this was done for the first time by Amundsen (1903–5). It was under consideration for commercial use in 1969 following oil discoveries at Prudhoe Bay, Alaska.

NORTHWEST TERRITORIES. The N.W. region of Canada, situated between Yukon on the W. and Baffin Bay on the E., and bounded on the S. by British Columbia, Alberta, Saskatchewan, and Manitoba. In the W. is the r. Mackenzie. There are many lakes, of which the largest are the Great Slave Lake and the Great Bear Lake. The area was the northern part of Rupert's Land, bought by the Canadian govt. from the Hudson's Bay Co. in 1869, and is divided into Mackenzie, Keewatin, and Franklin dists. An Act of 1952 placed the N.W.T. under a commissioner acting at Ottawa under the Min. of Northern Affairs and National Resources. Mining, fur trapping, and fishing are the chief industries. Mineral products incl. gold, silver, pitchblende, and petroleum. The Mackenzie r. and its tributaries are an important means of transport; regular air services operate to and from the main settlements. Area 1,304,903 sq. m.; pop. (1966) 25,995, two-thirds Indian or Eskimo.

NORTHWICH. English market town (U.D.) in Cheshire, on the Weaver, 18 m. N.E. of Chester, long famous for its salt mines and brine springs. It has some beautiful old houses and is an important centre of chemical production. Pop. (1961) 10,454.

NORTON. Caroline Elizabeth Sarah (1808–77). British author. The granddau. of R. B. Sheridan, she m. the Hon. George N. (1800–75) in 1827. In 1836 her husband falsely accused Lord Melbourne of seducing her, and subsequently tried to obtain the profits from her books. In 1877 she m. Sir Maxwell Stirling. Her best works were *Undying One* (1830), dealing with the Wandering Jew; and *Voice from the Factories* (1836), attacking child labour.

NORTON. Charles Eliot (1827–1908). American scholar. B. in Mass., he was prof. of the history of art at Harvard 1873–98, helped to found the *Nation*, and wrote some notable *Letters*.

NORWAY. A kingdom occupying the N. and W. portion of the Scandinavian peninsula, bounded on

made an autonomous prov. 1937, and 22 former princely states. Cuttack, the largest city, was replaced as cap. by Bhubaneswar in 1956; Puri is famous for its temple of Jagannath or Juggernaut. Area 60,164 sq. m.; pop. (1961) 17,548,846.

ORIZABA (orēthah'bah). City of Veracruz state, Mexico, 65 m. W.S.W. of Veracruz. It is a popular resort and industries incl. brewing, paper making, and textiles. Pop. (1960) 70,053.

O. peak, over 18,700 ft., a volcano (erupted 1687) 25 m. N. of O. city, is the highest mountain in Mexico. Its Aztec name was Citlaltepētl (star mountain).

ORKNEY. A co. of Scotland, consisting of a group of islands situated off the N. coast. It is separated from the mainland by the 6 m. wide Pentland Firth. There are c. 90 islands and islets, of which 28 are inhabited. The most important are Pomona (or 'Mainland'), the largest of the group, N. and S. Ronaldsay, Hoy, Rousay, Stronsay, Westray, Shapinsay, Eday, and Sanday. Kirkwall, on Pomona, is the cap. Owing to the influence of the Gulf Stream, the climate is comparatively mild. The highest point is Ward Hill (1,560 ft.) in Hoy. Fishing and agriculture, incl. rearing of cattle, sheep, and pigs, are the chief occupations. The Os. are the *Orcades* of ancient geographers. They were conquered by Harold I (Fairhair) of Norway in 876, pledged to James III of Scotland for the dowry of Margaret of Denmark 1468, and, the dowry not being paid, annexed by Scotland in 1472. Scapa Flow, used as a base by the R.N. in both world wars, is between Pomona and Hoy. It was here that the surrendered German fleet scuttled itself on 21 June 1919. Area 370 sq. m.; pop. (1961) 18,743.

ORKNEY CAUSEWAY. Construction put up in the F.W.W., completed in 1943 during the S.W.W., joining 4 of the Orkney Is., built to protect the fleet from intrusion through the eastern entrances to Scapa Flow. It has a road surface and serves as a land link between Kirkwall and the islands.

ORKNEYS, South. See **SOUTH ORKNEYS.**

ORLANDO, Vittorio Emanuele (1860–1952). Italian politician. As P.M. 1917–19 he attended the Paris Peace Conference, forming one of the 'big four' with Lloyd George, Wilson, and Clemenceau, but dissatisfaction with his handling of the Adriatic settlement led to his resignation. He at first supported Mussolini, but was in retirement 1925–46, when he returned first to the assembly and then the senate.

ORLANDO. City of Florida, U.S.A., named in 1857 after Orlando Reeves, a soldier killed in a clash with Indians. Centrally situated at the hub of communications, it has grown phenomenally industrially. Pop. (1960) 88,135, est. by 1980 c. 800,000.

ORLEANS (orlā-on'). Capital of Loiret dept., France, formerly the cap. of the old prov. of Orléanais, situated on the Loire, 70 m. S.S.W. of Paris. O., of pre-Roman origin, is famous for its association with Joan of Arc (q.v.), who liberated it from the English in 1429, and is an important commercial centre, industries incl. textiles, engineering and processed foods. Pop. (1962) 88,105.

ORMOLU (or'molōō; Fr. *or moulu*, ground gold). A gold-tinted alloy of copper, zinc, and sometimes tin, used for mountings of furniture.

ORMONDE (aw'rmond), James Butler, duke of (1610–88). Irish general. He commanded the royalist troops in Ireland 1641–50 during the Irish rebellion and the English revolution, and was Lord-Lieut. 1644–7, 1661–9, and 1677–84. He was created a marquess in 1642 and a duke in 1661. His grandson, James, 2nd duke (1665–1745), succeeded Marlborough as C.-in-C. in 1711, but was impeached in 1715 for Jacobite intrigues, and exiled.

ORMSKIRK. English industrial and market town (U.D.) in Lancs, about 10 m. N.E. of Liverpool. Pop. (1961) 21,815.

ORMUZ (ormooz'). Persian is. in the Persian Gulf

with village of O. on its N. coast. O. was formerly the name of a port on the Persian mainland, c. 20 m. E. of the island, visited by Marco Polo in the 13th cent. Trade moved to the island in the 14th cent. and when captured by the Portuguese 1507–14 O. was flourishing. The British took it in 1622, and it gradually lost its importance to Bandar Abbas (q.v.).

ORMUZD. See **AHURA MAZDA.**

ORNE (orn). French river rising E. of Sées and flowing N.W., then N.E. to the English Channel below Caen. A ship canal runs alongside it from Caen to the sea at Ouistreham. The O. is 94 m. long and gives its name to a dept.

ORNITHOLOGY. The section of zoology concerned with the study of birds (q.v.). It covers not only scientific aspects relating to the structure and classification of birds, but also the activities of the many amateurs in all countries interested primarily in the natural beauty of birds, their habits, song, flight, etc., secondarily in their value to agriculture as destroyers of insect pests. This interest has led to the formation of societies for their protection (developing into their study), of which the Society for the Protection of Birds (1889) in Britain was the first; it received a royal charter in 1904. The Audubon Society (1905) in the U.S.A. has similar aims. France, Canada, Switzerland, the Netherlands are other countries having bird protection societies, and there is an International Council for Bird Preservation. Legislation in various countries to protect wild birds dates from a British Act of 1880.

ORPEN, Sir William Newenham Montague (1878–1931). Irish artist. He studied at Dublin and London, became famous as a portraitist, was knighted in 1918, and was elected R.A. in 1919.

ORPHEUS (-fūs). Mythical Greek poet and musician. He was the son of Apollo and a muse, and m. Eurydice, who d. from the bite of a snake. O. went down to Hades to bring her back, relying on his sweet singing to charm the nether gods. Her return to life was granted on condition that he walked ahead of her without looking back. O. broke this condition, and Eurydice was irretrievably lost. In his grief, he despised the Maenad women of Thrace, and was torn in pieces by them.

The Orphic religion was one of the mystical cults of Greece, its most distinctive features in doctrine being the belief in a future life in which the condition of O.'s worshippers could be bettered by asceticism and the performance of mystical rites.

ORRIS ROOT. The underground stem of species of iris grown in S. Europe. Violet-scented, it is used in perfumery.

ORSK. Town in Orenburg region, R.S.F.S.R., at the junction of the Or and Ural rivers. Originally a fortress, it has large petroleum refineries fed by a pipeline from Guriev, locomotive and aluminium plants, etc. Pop. (1967) 212,000.

ORTEGA Y GASSET (awrtā'gah-ē-gah'set), José (1883–1955). Spanish philosopher and critic. He considered Communism and Fascism the cause of the downfall of western civilization. His *Toward a Philosophy of History* (1941) contains philosophical reflections on the State, and an interpretation of the meaning of human history.

ORTHOPAEDICS (-pē'diks). The science of correcting deformities. It progressed tremendously during both world wars. Among its most important techniques are the treatment of fractures, bone and nerve grafting, the restoration of function after infantile paralysis, the reconstruction of joints, and especially rehabilitation, in which the patient is treated as a whole and all the resources of surgery, medicine, psychology, physical training and occupational therapy are concentrated on him.

ORTHOPTERA. Order of terrestrial insects, incl. grasshoppers, crickets, and locusts (qq.v.).

cathedral (founded 1096), Norman castle (the keep housing a museum and collection of paintings by the Norwich School), Guildhall (15th cent.), medieval churches, Tudor houses, Georgian Assembly House, City Hall (1938), and Central Library (1963). The Univ. of E. Anglia (1963) is at Earlham to the W. of the city. Industries incl. footwear, engineering, printing, chemicals, clothing, and foodstuffs; and it is a marketing, banking, insurance, and commercial centre. Pop. (1961) 119,904.

NORWICH, Alfred Duff Cooper, 1st visct. N. (1890–1954). British diplomat. Entering parl. as a Unionist (later Cons.) in 1924, he was War Min. 1935–7, and then 1st Lord of the Admiralty, resigning in 1938 in protest against the Munich agreement. Under Churchill he was Min. of Information (1940–1); gov't. rep. with the French Committee of National Liberation 1943–4, and ambassador to France 1944–7. Knighted in 1948, he was created a visct. in 1952, and pub. his memoirs, *Old Men Forget*, in 1953. He m. in 1919 Lady Diana Manners (1893–), a celebrated beauty, who created a sensation in Max Reinhardt's production of *The Miracle* (1924).

NOSE. The upper orifice of the respiratory tract; the organ of the sense of smell. It is divided down the middle by a septum of cartilage. The nostrils or outer portion contain plates of cartilage which can be moved by muscles and have a growth of stiff hairs at the margin to prevent foreign bodies from entering. The whole nasal cavity is lined with mucous membrane which warms and moistens the air and ejects dirt. Inside the nose 3 wide air spaces, separated by plates of bone, lead back to the nasopharynx at the head of the windpipe. The lining of the lower, or respiratory, part of the cavity is covered with cilia; that of the upper part is furnished with olfactory cells which receive impressions of smell from particles in the entering air and transmit them through special nerves to the brain. The cavity communicates with various sinuses.

NOSTRADAMUS. Latinized name of Michel de Notredame (1503–66). French astrologer. He was consulted by Catherine de' Medici and was physician-in-ordinary to Charles IX.

NOTTINGHAM. English city (co. bor.), co. tn. of Notts, situated at the confluence of the Leen and the

(1844) is by Pugin; there is an attractive theatre, and Newstead Abbey, 11 m. N., was the home of Lord Byron. Pop. (1961) 311,645.

NOTTINGHAMSHIRE or Notts. Midland county of England. Most of the county is undulating, rising to a height of 600 ft. in the S.W. Sherwood Forest, famous for its association with Robin Hood, is in the S.W.: what remains of the forest is incl. in the region called the 'Dukeries'. The chief rivers are the Trent and its tributaries, the Idle, Erewash, and Soar. In the W. are Cresswell Crags where remains of prehistoric man have been found. The chief manufactures are lace and hosiery, bicycles, tobacco; and there are also iron foundries and machinery and motor works; coal has been mined since the Middle Ages. The co. tn. is Nottingham. Area 844 sq. m.; pop. (1967) 962,450.

NOUAKCHOTT. Town in W. Africa, cap. of the Islamic rep. of Mauritania. It lies on the Atlantic, 150 m. N.N.E. of St. Louis-de-Sénégal (from which Mauritania was formerly governed). It was built from 1957, with French help. Pop. (1967) 15,000.

NŌVA. A star which suffers an outburst, and flares up for a period which may amount to several weeks – after which it subsides to its former state. In novae such an expansion causes a light increase of 10–15 magnitudes; in supernovae, thought to be the result of the explosion of a complete star, up to 20 magnitudes.

NOVALIS (novah'lēs). Pen-name of Friedrich Leopold, Freiherr von Hardenberg (1772–1801). German poet. The most genuinely inspired poet of the older Romanticists, he approached the great problems of God and Nature, life and death, with profound intuition. The death of his fiancée Sophie von Kühn in 1797 called forth the mystical beauty of his *Hymnen an die Nacht* (1800). N. left two unfinished romances, *Die Lehrlinge zu Sais* and *Heinrich von Ofterdingen*.

NOVA LISBOA. Town of Angola, W. Africa, founded as Huambo in 1912, and intended to replace Luanda as cap. in 1927. It was re-named Nova Lisboa in 1928, but remains only the cap. designate. N.L. is an agricultural trading centre with railway repair shops and an airport. Pop. (est.) 17,000.

NOVA SCOTIA (nōv'ahskōsh'jah). A prov. of Canada, consisting of a long, narrow peninsula and the island of Cape Breton, S. of the Gulf of St. Lawrence. Its E. and S. shores are washed by the Atlantic, and an isthmus, 11½ m. wide, connects the province with New Brunswick. The Cobequid mts. stretch across the interior. The length of the coastline is about 2,000 m.; there are many rivers, most of them under 50 m. long, lakes, and fine harbours. The cap. and chief port is Halifax. Agriculture is the most important industry, particularly dairying, poultry rearing and fruit growing. The fisheries are valuable. Lumbering is carried on, and wood pulp for paper is manufactured. Coal, gypsum, lead, zinc, and copper are mined, and there are iron and steel works, paper mills, food factories, and shipyards. The legislature of N.S. consists of a Lieut.-Gov., who is appointed by the Federal Gov't. for a term of 5 years, and a House of Assembly (of 46 members) elected by popular vote every 5 years.

History. N.S. was visited by Cabot in 1497, but it was not until 1604 that a permanent settlement was established by Europeans. In that year the French under De Monts established themselves on the peninsula. In 1613 they were expelled by English colonists from Virginia. The name N.S. was given to the colony, which had hitherto been called Acadia, by Sir William Alexander in 1621. England and France subsequently contended for possession of the territory. In 1713, N.S. (which then incl. present-day New Brunswick and Prince Edward Is.) was ceded to the English; Cape Breton Is. remained French until 1763. N.S. was one of the 4 original provs. of the dominion

NOTTINGHAM. To the west of the city is the university, overlooking University Lake. The Trent Building, to the left, is named after Lord Trent (q.v.), and was opened in 1928. Linked to it, on the right, is the Portland Building (1956).

Courtesy of Cecil Howitt & Partners, Architects, Nottingham.

Trent. Situated on an important coalfield, N. is linked by canal with the Atlantic and North Sea, and manufactures lace, hosiery, bicycles and typewriters, tobacco, chemicals, and beer. The castle, erected in the 17th cent. on the site of a Norman fortress, rebuilt 1875, is used as a museum; the R.C. cathedral

for refineries in Ukraine. Founded in the 19th cent. as Berdiansk, it was re-named O. in 1940. Pop. (1967) 75,000.

OSIRIS (Egypt. *Ausar*). Ancient Egyptian god who personified the power of good; he was the enemy of Set, the god of evil. He was united in the sacred triad with his wife Isis, and his son Horus. Slain by Set, he was avenged by Horus, and went to rule over the dead in the underworld.

O'SLER, Sir William (1849–1919). British physician. B. in Canada, he was chosen as Regius prof. of medicine at Oxford in 1905, and created a bart. in 1911. He is chiefly remembered for his work on diseases of the blood and the spleen.

OSLO (oz'lō). Cap. of Norway, on the S.E. coast, at the head of Oslo fjord. The first recorded settlement was made by Harald III (Hardrada) c. 1050 in Ekeberg, but the modern city lies mainly to the N. and W. of the fortress of Akershus, built by Haakon V in the late 13th cent. This change was due to Christian IV who re-planned the city after the fire of 1624; in his honour it was called Christiania from 1624 to 1924. Important buildings incl. the Royal Palace, the Parl. House, the univ. (1811), the national theatre, and the new town hall (1931–50). O. is a prosperous seaport and has considerable shipbuilding, engineering, and textile industries. Pop. (1967) 485,200.

OSMAN or **Othman I** (1259–1326). Turkish sultan. He began his career in the service of the Seljuk Turks, but in 1299 he set up a kingdom of his own in Bithynia and assumed the title of sultan. He conquered a great part of Asia Minor, so founding the Turkish Empire. His successors were known as 'sons of O.', whence the term 'Ottoman' is derived.

O'SMIUM (Gk. *osme*, odour). Bluish-white, hard, crystalline metal, very heavy and infusible: symbol Os, at. wt. 190.2, at. no. 76. Discovered in 1803 by Tennant in residue left when crude platinum was dissolved in aqua regis (concentrated nitric and hydrochloric acids), it is found in platinum-bearing river sands and with iridium in osmiridium. Heated in air it gives off a pungently irritating poisonous vapour. It is used for lamp filaments, with iridium to form a very hard alloy suitable for pen-nibs and fine machine bearings, and, when finely divided, as a catalyst.

O'SNABRÜCK. City and episcopal see in the Land of Lower Saxony, W. Germany, 70 m. W. of the city of Hanover. Before the S.W.W., when O. was severely damaged, it had fine examples of both Gothic and Renaissance architecture; O. bishopric was founded by Charlemagne, 783. Industries incl. engineering, iron and steel, textiles and clothing, paper, and processed foods. The Treaty of Westphalia was signed at O. and Münster in 1648. Pop. (1966) 141,398.

OSPREY. Bird of prey (*Pandion haliaetus*), known in America from its diet as the fish hawk, and formerly breeding in Scotland. Dark brown above and a striking white below, it measures 2 ft., with a 6 ft. wingspread. The 'O.' plumes of the milliner are those of the egret (q.v.).

OSSA. A mountain in Thessaly, Greece, elevation 6,490 ft. The vale of Tempe separates it from Olympus. Mt. Pelion, to the S., is said to have been piled on O. by the Giants to enable them to scale Olympus.

OSSETIA (os'esh'ia). Area in the Caucasus inhabited chiefly by a fair-haired people called Ossets or

Alans. It is divided into North O., an A.S.S.R. of the R.S.F.S.R., cap. Ordzhonikidze; area 3,500 sq. m.; pop. (1967) 518,000 (80 per cent. Ossets); and South O., an autonomous region of Georgian S.S.R.; cap. Tskhinvali; area 1,500 sq. m.; pop. (1967) 102,000 (70 per cent Ossets). N.O. has some industry served by water-power from the r. Terak and grows maize, fruit, and market-garden crops; S.O. is a mountain health resort with lumbering, fruit growing, and livestock rearing.

OSSIAN (osh'ian). Irish hero and poet, properly called Oisín. He is represented as the son of Finn Mac Cumhaill, c. A.D. 250, and as having lived to tell the tales of Finn and the Ulster heroes to St. Patrick, c. 400. The publication, from 1760 onwards, of the 'Ossianic' poems of J. Macpherson (q.v.), has made O.'s name familiar throughout Europe.

OSSIETZKY (osyets'ki), Karl von (1889–1938). German pacifist. A leading figure in Liberal-pacifist circles in republican Germany, he was imprisoned 1931–2 for publishing an article proving that the Reichswehr was secretly rearming, and was sent to a concentration camp 1933–6. The award to him of the Nobel peace prize in 1935 provoked a protest from the German govt.

O'SSORY. Ancient kingdom, lasting until 1110, in Leinster, Ireland; the name is preserved in existent Church of Ireland and R.C. bishoprics.

OSTADE (ostah'de), Adriaen van (1610–85). Dutch painter and engraver, famous for his pictures of tavern scenes, village fairs, etc. B. at Haarlem, he studied under F. Hals. His brother, Isaac van O. (1621–49), excelled in winter landscapes, and roadside and farm-yard scenes.

OSTEND. Seaport and pleasure resort of Belgium, in the prov. of F. Flanders, 67 m. N.W. of Brussels. It has a fine promenade over 3 m. long, and a casino and royal chalet on the sea front. There are large docks, and the Belgian fishing fleet has its headquarters here. Pop. (1966) 57,750.

O'STEO-ARTHRITIS. Degenerative disease of the joints in later life, the result of excessive wear or earlier injury, and to which there may be some inherited tendency. The result may be disabling stiffness and wasting of muscles.

OSTEOLOGY. Part of the science of anatomy, dealing with bones and their uses. See BONE.

OSTEOMYELITIS (o'stē-ōmi-el'i'tis). Infection of bone. The organism may be introduced through an injury or through the blood-stream, especially shortly after an illness. The symptoms are high fever, severe illness, and pain over the limb. If the infection is at the surface of the bone it may quickly form an abscess; if it is deep in the bone marrow it may spread into the circulation and set up fatal blood poisoning.

OSTEOPATHY. A system of unorthodox medical teaching and practice which regards the chief cause of disease as a disorder of structure, a 'lesion' in tissue of any kind, but most commonly a minor displacement of one or more vertebrae. The treatment combines manipulation of the lesion, with other more orthodox remedies. In Great Britain osteopaths have no legal standing.

O'STIA. Ancient Italian town and harbour near the mouth of the Tiber. Dating from c. 330 B.C., it was the port of Rome and at one time had a pop. of c. 100,000; in modern times a seaside resort (Ostia Mare) has been estab. nearby.

O'STRACISM (-siz-). Political device to preserve order in ancient Athens. As a result of votes written on oyster-shells (Gk. *ostraka*, whence the name), political personages might be exiled for a period of 10 years.

OSTRACODA. A sub-class of Crustacea. Found in both salt and fresh water, these minute animals have a bivalve shell enclosing the body and limbs.

O'STRAHA. Town in Czechoslovakia, cap. of N. Moravian region created 1960, 85 m. N.E. of Brno,

OSPREY

NUBIA. Rameses completed this superb temple, hewn from the living rock and dedicated to the worship of Re-Harmachis, at Abu Simbel (between the Nile's 1st and 2nd cataracts) in 1359 B.C. The 4 seated statues of the king at the entrance are more than 70 ft. high and between the legs of each are large-size statues of Queen Nefertari and some of the royal children. Within (right) there are four 30 ft. statues in the great hall (54 ft. wide and 58 ft. long), again showing the king wearing the Double Crown and holding the crook and flail sceptres. To preserve it from flooding following completion of the High Dam at Aswan, it was cut up and re-erected on higher ground.
Courtesy of the Egyptian State Tourist Administration.

southern N. as Kush, and of modern N. the north is part of Egypt and the south part of the Rep. of Sudan. Of particular interest are the mysterious X-group, people who occupied the greater part of N. c. A.D. 250–550, and whose royal tombs were excavated by W. B. Emery. By the building of the Aswan High Dam the greater part of N. was submerged beneath the extended reservoir (Lake Nasser).

NUCLEAR FISSION. The splitting of a heavy nucleus into 2 (or very rarely more) approximately equal fragments – the fission products. Fission is accompanied by the emission of neutrons (q.v.) and the release of energy. It can be spontaneous, or it can be caused by the impact of a neutron, a fast-charged particle or a photon.

NUCLEAR POWER. See ATOMIC ENERGY.

NUCLEAR REACTOR. A structure in which a fission chain reaction can be maintained and controlled. It usually contains a fuel, coolant, and moderator, and is most often surrounded by a concrete biological shield to absorb neutron and gamma-ray emission.

NUCLEAR WARFARE. For the use of nuclear weapons in the S.W.W. see BOMB. In a Third World War, with initial concentration on large industrial cities, casualties from blast and fallout (q.v.) have been est. at 120,000,000 if the U.S.S.R. struck first, and 70,000,000 if the U.S.A. began: China might not have sufficient intercontinental ballistic missiles (ICBMs) to strike until the early 1970s and a relatively small no. of bombs could destroy half her own industry and town population since it is concentrated in c. 50 cities. Defence would be by anti-ballistic missile (ABM) system, such as the American Nike X, which comprises a radar system, plus 2 types of missile with nuclear warhead, one shorter-range with high acceleration, and one comparatively long-range, able to intercept above the atmosphere. Long-range multiple missiles carrying a number of warheads (MIRV - Multiple Independently Targetable Re-entry Vehicle) were developed by 1968. To avoid the spread of weapon manufacture the U.K., U.S.A., U.S.S.R. and 56 other countries signed a Treaty of Nuclear Non-Proliferation 1968.

NUCLEIC ACIDS. Complex organic acids with long-chain spiralling molecules, some of which like DNA (deoxyribonucleic acid) and RNA (ribonucleic

acid) play an important part in protein synthesis and in the transmission of hereditary characteristics.

NUFFIELD, William Richard Morris, visct. N. (1877–1963). British manufacturer and philanthropist. Starting with a small cycle-repairing business, he planned in 1910 a car to run at low cost for the ordinary man, and built up Morris Motors Ltd. at Cowley, Oxford—now merged in British Motor Holdings. His benefactions incl. establishment of the Oxford Medical School Trust, Nuffield Coll., Oxford, and the Nuffield Foundation (1943). He was created baron 1934 and visct. 1938.

NUMA POMPILIUS. Legendary king of Rome, whose reign is traditionally dated 716–679 B.C. He succeeded Romulus and instituted religious rites.

NUMIDIA. Roman name, meaning nomads' land, for a territory of N. Africa, the E. part of modern Algeria.

NUMISMATICS. The study of coins and medals. The invention of coinage is attributed to the Chinese in the 2nd millennium B.C., the earliest types being small-scale bronze reproductions of barter objects – knives, spades, etc. In the W. coinage of stamped,

NUFFIELD. An early 'bullnose' Morris Oxford (1913) driven by Lord Nuffield. He pioneered mass-production and the use of pressed steel for bodies. *British Motor Holdings Ltd.*

OUDH (owd). E. part of a former prov. of British India, the United Provs. of Agra and Oudh, 1901–47. O. lay between the Nepal frontier and the Ganges; Lucknow was the cap. Anciently a kingdom, it was under Mogul rule until it regained independence 1732–1856 when the British deposed the king. Area 24,000 sq. m. From 1950 it formed part of the Indian state of Uttar Pradesh.

OUSSANT. French form of **USHANT**.

OUIDA (oo-ē'da). Pseudonym of British novelist Marie Louise de la Ramée (1839–1908), author of highly coloured romances, e.g. *Under Two Flags* (1867) and *Moths* (1880).

OULU. Port in Finland, cap. of O. dept. It stands on the Gulf of Bothnia at the mouth of the r. O., which drains Lake O. It grew up round a castle built by the Swedes in 1375 (the Swedish name for the town being Uleåborg), and has a cathedral (1830) and univ. (1958). There are saw mills, flour mills, tanneries, shipbuilding yards, etc. Pop. (1967) 81,200.

OUNCE. A unit of weight, the 12th part of a pound Troy = 480 grains; in avoirdupois, the 16th part of a pound = 437.5 grains. The fluid O. is a measure of capacity, in the U.K. equivalent to an avoirdupois O. of distilled water at 62°C.

OUNDLE (own'dl). English market town (U.D.) in Northants, 13 m. S.W. of Peterborough. O. grammar school, founded in 1556, developed during the 19th cent. into one of the great public schools. O. dates from before the Norman Conquest. Pop. (1961) 2,546.

OUSE (ōz). Name of several British rivers. The Great O. rises in Northants, and after a winding course of some 160 m. it enters the Wash N. of King's Lynn. A huge sluice across the Great O., near King's Lynn, part of extensive flood-control works, was opened in 1959. The Yorkshire O. is formed by the junction of the Ure and Swale near Boroughbridge, and joins the Trent to form the Humber. The Sussex O. rises between Horsham and Cuckfield, and flows through the S. Downs to enter the English Channel at Newhaven.

OUSEL or **Ouzel** (ōzl). Ancient name of the black-bird, now applied to the dipper (or water-O.) and ring-O. Water-Os. occur in Europe and in the Americas.

OUTLAWRY. Ancient punishment, now virtually obsolete, for felony and misdemeanour, which meant that the outlaw might be apprehended by any person, and lost all his civil rights, his lands and goods were forfeit to the Crown.

OUTRAM (ōt'ram), Sir James (1803–63). British general. B. in Derbyshire, he entered the Indian Army in 1819, served in the Afghan and Sikh Wars, and commanded in the Persian campaign of 1857. On the outbreak of the Mutiny he co-operated with Havelock to raise the siege of Lucknow, and held the city until relieved by Sir Colin Campbell.

OVAL. The. A cricket ground, dating from 1846, the headquarters of the Surrey County Cricket Club, at Kennington, London, England. The first Test Match between England and Australia was played here in 1880.

OVARIES. The pair of organs which in the female generate the ova, or egg-cells, from which, if they are fertilized, grow the offspring. In woman they are 2 whitish rounded bodies about 1 by 1½ in., situated near the ends of the Fallopian tubes. The ovum develops in the Graafian follicle and bursts out about the 13th day after menstruation starts. In its place grows the 'yellow body' (*corpus luteum*). If the ovum

is fertilized this persists until near full term; otherwise it dies off. The Os. also secrete the hormones responsible for the secondary sexual characteristics of the female, such as smooth, hairless skin and large breasts.

OVERIJSEL (ō'verīsel). A prov. of the Netherlands, lying N. of Gelderland, S. of Drenthe, and watered by the IJssel and the Vecht. Zwolle is the cap. Sheep and cattle rearing and dairy farming are the chief occupations. Area 1,300 sq. m.; pop. (1966) 887,300.

OVERTURE. A piece of instrumental music, usually preceding an opera. There are also Os. to suites, plays, etc., and 'concert' overtures such as Elgar's *Cockaigne* and John Ireland's descriptive *London Overture*. The use of an O. in opera came into being during the 17th cent., the 'Italian' O. consisting of 2 quick movements interspersed with a slow one, and the 'French' of a quick movement between 2 in slower tempo.

O'VID (43 B.C.–A.D. 17). Roman poet, whose full name was Publius Ovidius Naso. B. at Sulmo, he studied rhetoric in Rome in preparation for a legal career, but soon turned to literature. In A.D. 8 he was banished by Augustus to Tomi, on the Black Sea, where he d.: this punishment was supposedly for his immoral *Ars amatoria*, but was probably due to some connection with Julia, the profligate dau. of Augustus. Among his works are the youthful *Amores*; the *Heroides*, fictitious love-letters of legendary heroines; the *Metamorphoses*, mythical stories of miraculous transformations; the *Fasti*, forming an incomplete poetic calendar; and the fruits of his exile, the elegiac *Tristia* and *Epistulae ex Ponto*.

OVIEDO (ōvē-ā'dō). An episcopal city, cap. of O. prov., Spain, 16 m. S. of the Bay of Biscay. The cathedral dates from the 14th cent., and there is a univ. (1604). O. makes textiles, matches, chocolate, sugar, etc. Pop. (1960) 127,058.

OVUM. An egg-cell which, if it is fertilized by fusion with a spermatozoon (conception), attaches itself to the rich lining of the womb; there it grows by cell division and differentiation into a child.

OWEN, Alun (Davies) (1926–). British writer. A Bevin boy in the mines during the S.W.W., he gained stage experience in repertory at Perth and Birmingham, spent a year with the Old Vic, and then in 1957 started to write. Beginning in radio, he became well known for his TV plays, e.g. *No Trams to Lime Street* (1959) and *You Can't Win 'Em All* (1962).

OWEN, Robert (1771–1858). British Socialist and Co-operator. B. at Newtown, Montgomery, he became manager in 1800 of a mill at New Lanark, where by improving working and housing conditions and by providing schools he created a model community. From 1817 he proposed that 'villages of co-operation', self-supporting communities run on Socialist lines, should be founded; these, he believed, would ultimately replace private ownership. After an unsuccessful attempt to run such a community in the U.S.A., he organized the Grand National Consolidated Trades Union in 1833, in order that the unions might take over industry and run it co-operatively. Although this scheme collapsed in 1834, O.'s ideas did much to stimulate the co-operative movement.

OWEN, Wilfred (1893–1918). British poet. B. at Plas Wilmot, Oswestry, in 1913 he went to France as a tutor, returning to England to enlist in 1915, and was killed in action a week before the Armistice. His poetry expresses his hatred of war.

OWEN FALLS. Cataract in Uganda on the White Nile, 2½ m. below the point at which the river leaves Lake Victoria. A dam, built 1949–60, provides hydro-electricity for Uganda and Kenya, and helps to control the flood waters.

OWENS, John (1790–1846). Manchester cotton merchant, who endowed Owens Coll. (1851), nucleus of Manchester Univ.

RING OUSEL

LAKE NYASA. Dhows with lowered sails enter Leopard Bay, near Salima. With one square sail and extremely long yards, these vessels run easily with the monsoons, and once had an evil reputation on the East African coast as slavers.
Courtesy of the Office of the High Commissioner for Malawi.

Africa, discovered by Livingstone from the S. and Roscher from the E. in 1859. The 3rd-largest lake in Africa, it is 350 m. in length, and has a total area of 11,000 sq. m. It was re-named Malawi 1965.

NYASALAND. Country of S.E. Africa, known from 1964 as Malawi (q.v.).

NYERERE (nyerār'ē), Julius Kambarage (1922–). Tanzanian statesman. Ed. at Makerere Univ. Coll. and at Edinburgh, he became a schoolmaster until devoting himself in 1954 to the formation of the

Tanganyika African National Union and subsequent campaigning for independence. He became Chief Min. in 1960, was P.M. 1961–2, and was elected 1st pres. of the Tanganyika Rep. in 1962 (re-elected 1965). He introduced one-party govt. in 1963, as more suited to the situation, but is noted for his wisdom and moderation: he is a Christian.

NYLON. Name given to a group of synthetic fibre-forming substances which are similar in chemical

JULIUS NYERERE

structure to proteins, and were developed in the U.S.A. by W. H. Carothers and his associates. N. is used in the manufacture of toilet articles, textiles, medical sutures, etc. N. fibres are stronger and more elastic than silk, and relatively insensitive to moisture and mildew. N. is particularly suitable for hosiery

NYLON. The production of nylon yarn begins with the melting of the polymer and its extrusion through spinnerets. It is then cooled and solidified by air currents and wound on to cylinders for cold drawing and processing. Seen here are some of the spinning units at the H.Q. of British Nylon Spinners, Pontypool.
Courtesy of British Nylon Spinners Ltd.

and woven goods simulating other materials such as silks and furs; it is also used in carpets. See DU PONT.

NYMPHS (nimfz). In Greek mythology, the guardian spirits of various natural objects. Hamadryads or Dryads were tree Ns., the Naiads were Ns. of springs and pools, the Oreads of hills and rocks, and the Nereids of the sea.

O 15th letter of the Roman alphabet, whose form was derived from the Semitic alphabet. In modern Eng. it represents a wide range of sounds, from the diphthong ō (so) to the open sounds in or, on, etc., and the oo-sound in wolf, etc.

OAHU (wah'hoo). Chief island in the state of Hawaii, U.S.A., seat of Honolulu, the state cap., of Hawaii univ., and of Pearl Harbor naval base. Pineapples and sugar are grown for export. The island contains several extinct volcanoes, Waikiki and other bathing beaches. Area 589 sq. m.; pop. (1960) 347,529.

OAK. Genus of trees and shrubs (*Quercus*) in the beech family (Fagaceae). Widely distributed in temper-

ate zones, over 300 species are known. They are valuable for their timber, the wood being durable and straight grained. The English oak (*Q. robur*), also found in Europe, grows to a height of 120 ft. and may have a girth of 50 ft. Other European varieties are the evergreen oak (*Q. ilex*), the Turkey oak (*Q. cerris*), and the cork oak (*Q. suber*), of the W. Mediterranean region; valuable American timber Os. are the white O. (*Q. alba*) and the evergreen live O. (*Q. virginiana*). See illus. p. 802.

OAKHAM. Co. tn. of Rutland, England. An agricultural and hunting centre, it manufactures clothing, boots, and shoes. Pop. (1961) 4,571.

OAKLAND. A seaport and cap. of Alameda co.,

OXLIP. A wild plant (*Primula elatior*), in character between the primrose and cowslip.

OXUS. Ancient name of AMU DARYA.

OXY-ACETYLENE WELDING. The fusion of metals by burning acetylene in pure oxygen, producing high-temperature flames. In the high-pressure system the gases are delivered to a blowpipe from cylinders in correct proportion.

OXYGEN (Gk. *oxys* acid, and *genes* forming). Colourless, odourless, tasteless, non-toxic gas, slightly soluble in water; symbol O, at. wt. 16.00, at. no. 8. Discovered by Priestley in 1774 by heating mercuric oxide using the sun's rays and a burning glass (and independently in the same year by Scheele), it is the most abundant element, and both free and combined

OXYGEN. The liquid-oxygen vacuum insulated container used in high-flying aircraft must be assembled under surgical-clean conditions. To prevent dirt or grease being present while the units are fitted together, surgeon-style gloves are worn and the assembly room at Harlow, Essex, is a fully air-conditioned "clean area".

Courtesy of the British Oxygen Co.

makes up nearly one-half of the total material on the surface of the earth — 21 per cent by volume of the atmosphere, nearly 50 per cent by weight of the rocks, and 89 per cent by weight of the water. The only gas able to support respiration, it is just as essential for almost all combustion, and is used in high-temperature welding, improving blast-furnace working, low-temperature work, and aiding respiration. Liquefied O. is pale blue and magnetic.

O. is obtained by fractional distillation of liquid air, by electrolysis of water, or by heating manganese dioxide with potassium chlorate. It is very reactive, and combines with all other elements except the inert gases and fluorine.

OYSTER. Bivalve mollusc of the family Ostreidae, the upper valve being flat, the lower concave, hinged

Anatomy of the oyster: 1, palps; 2, gills; 3, mantle; 4, vent; 5, intestine; 6, liver; 7, adductor muscle; 8, stomach; 9, mouth.

by an elastic ligament. The mantle, lying against the shell, protects the inner body, which incl. respiratory, digestive and reproductive organs. Os. are distinguished by their change of sex, which may alternate annually or more frequently, and by the no. of their eggs — a female may discharge up to a million eggs during a spawning period. Among the species commercially exploited for food are the European O. (*Ostrea edulis*) — there are famous beds at Whitstable, Kent, and Colchester — and the American (*O. virginica*) of the Atlantic coast: the former is larviparous (eggs and larvae remain in the mantle cavity for a period before release) and the latter oviparous (eggs are discharged straight into the water). O. farming is increasingly practised, the beds being specially cleansed for the easy setting of the free-swimming larva (which then as a miniature O. is known as 'spat'), and the Os. later properly spaced for growth and fattened. Pearls (q.v.) are not obtained from members of the true O. family.

OYSTER CATCHER. Wading bird of the plover family. The common O.C. of European coasts (*Haematopus ostralegus*) is black and white, with a long red beak to open shellfish; the allied American species has an even longer bill and a less musical cry.

OZONE. Blue gas O₃ of characteristic odour, a form of oxygen, found in the atmosphere. Slightly soluble in water, it is produced when oxygen or air is subjected to a silent electrical discharge, ultra-violet ray action (e.g. the O. layer in the upper atmosphere is caused by the ultra-violet rays of the sun), or radium emanation. It is a powerful oxidizing agent, and is also used in bleaching and air-conditioning.

P Sixteenth letter of the Roman alphabet. In Semitic languages, in Gk., and in Latin *p* had much of the same sound as it normally has today in English when final, or when following *s* at the beginning of a word, the sound of an unvoiced labial stop. In other positions in English, and especially when initial, *p* is aspirated.

PAARL (pahrl). S. African town in Cape Province, the chief centre of the wine industry. P. was settled c. 1688 by Huguenots from France who brought the vine with them. The name is Dutch for pearl. Pop. (1960) 38,059 (14,035 white).

PAASIKIVI (pahsikē'vë), Juho Kusti (1879–1956). Finnish statesman. A leader of the Coalition Party, he conducted armistice negotiations with Russia in 1944, then becoming premier (1944–6) and succeeding Mannerheim as pres. (1946–56).

PACIMANN (pak'h'mahn), Vladimir de (1848–1933). Russian pianist. B. at Odessa, he studied at Vienna, made his début in 1869, and was celebrated for his exquisite touch and as an interpreter of Chopin.

PACIFIC ISLANDS, Trust Terr. of. Is. of the Caroline, Marshall and Mariana (except Guam) groups, qq.v., which were formerly mandated to Japan, and became a U.N. Trust Terr. admin. by the U.S.A. in 1947. They consist of over 2,000 atolls and is., area 700 sq. m.; pop. (1967) 91,500.

PACIFIC OCEAN. The largest ocean of the world, extending from Antarctica to the Bering Strait. Area 64,186,300 sq. m.; average depth 13,739 ft.; greatest depth 36,198 ft. in the Mariana Trench.

PACIFIC SECURITY TREATY. See ANZUS.

PACIFISM. The belief that violence should never be resorted to as a means of settling disputes. Among the holders of pacifist views are some Christians, e.g. the Soc. of Friends, Jehovah's Witnesses; some Hindus, e.g. Gandhi and his followers.

PADANG (pahdahng'). Port on the W. coast of Sumatra, Indonesia, seat of a univ. (1951), with an airport. It exports coffee, copra, rubber, tea, resin, etc. The Dutch secured trading rights here in 1663, and built a factory c. 1680. Pop. (1961) 325,000.

OCEAN. A mobile undersea powerhouse and diving habitat for use in depths up to 600 ft. in missions of several days' duration. Transfer of personnel would be effected on the bottom by a submersible diving chamber despatched by the support ship. Equipment could include a salvage crane, coring sampler, and trench-digger for laying pipelines.

Courtesy of Cammell Laird & Co. Ltd.

Wilson, California; Flagstaff, Arizona; and Mount Palomar, California. This latter O. is noted for its 200-in. diameter telescope, the largest in use. Radio astronomic Os. — with greater penetration and range — found at Jodrell Bank (q.v.), England; Green Bank, W. Virginia, U.S.A.; are both steerable bowls. Fixed-array types have been constructed in U.S.S.R., Puerto Rico (for U.S. Govt.), and Australia.

O'CASEY, Sean (1884–1964). Irish dramatist. B. in Dublin, he worked as a labourer in early life, and was largely self-educated. His first plays, *The Shadow of a Gunman* (1922), and *Juno and the Paycock* (1925), created a sensation by their realistic picture of Dublin slum life during the 'troubles'; they were followed by *The Plough and the Stars* (1926), an unromantic depiction of the Easter Rebellion, which led to riots when first produced. His later plays incl. *The Silver Tassie* (1929), *Within the Gates* (1934), *The Star Turns Red* (1940), *Red Roses for Me* (1943), *Oak Leaves and Lavender* (1946) and *The Drums of Father Ned* (1960). O.'s work is unique in its harmonious blending of stark realism with symbolism, tragedy with comedy and Dublin slang with a richly poetic diction. He also pub. a 6-vol. autobiography beginning with *I Knock at the Door* (1939).

OCCAM (o'kam), or Ockham, William of (c. 1300–49). English philosopher, known as the Invincible Doctor. B. at Ockham, Surrey, he became a Franciscan monk, defended the doctrine of evangelical poverty against pope John XXII, and was imprisoned at Avignon on charges of heresy in 1328, but escaped to Munich, where he d. In philosophy, he revived the fundamentals of Nominalism.

OCEAN. The continuous water surface of the Earth, covering c. 140,000,000 sq. m. or 70.8% of the total area, and having a mean depth of 12,000 ft. There are strictly 3 oceans — Atlantic, Indian, and Pacific (qq.v.) — to which the Arctic (q.v.) is usually added. Their surface temperature varies with latitude; between -2°C and 29°C ; beneath the surface temperature decreases rapidly to 1,200 ft., more slowly to 7,200 ft., and hardly at all deeper still. Changes of temperature are less extreme than those of land, a factor greatly affecting the climate of countries bordering the Os., and prevailing winds and the positioning of land masses affect surface currents which produce further modifications. Salinity averages about 34‰. Beyond the continental shelves, shallow ledges to 600 ft., the continental slope reaches down the abyssal zone, the largest area, lying between 6,000 and 18,000 ft. Only a small area lies deeper, the greatest recorded depth being 36,198 ft. by the *Vityaz* (U.S.S.R.) in 1957 in the Mariana

Trench in the W. Pacific. Study of the O. floors has provided confirmation, e.g. the extension of the 'break' in the Earth's crust beneath the Atlantic round the Cape of Good Hope, that c. 20,000,000 yrs. ago the Earth had a single land mass (Pangea; see also WEGENER), with N. America bordering with Greenland between) on Eurasia; and with Africa's west coast adjoining S. America, and her east coast adjoining India, Antarctica, and Australia.

James Cook (q.v.), the American Matthew Maury (1806–73), and John and James Ross (qq.v.) were pioneers in the study of the Os., known as oceanography or oceanology. Mid-19th cent. submarine cable-laying gave a useful impetus, but the most rapid advances have come since the S.W.W. with the development of new techniques in undersea photography, drilling of cores from the O. floors (see MOHOLE), use of sonic sounding devices, and the perfection of manned submersibles — the ships of inner space — able to move about the sea floor at depths of up to 6,000 ft. Besides pure research (see also ARCHAEOLOGY), there have been military and commercial incentives, the latter including sea farming (see FISHING) and the lure of mineral wealth — under the sea bed (coal, petroleum, natural gas, etc.); in the sediment of its floor and in the natural continuing deposition of valuable metals there (for example, self-forming manganese nodules which are in effect a 'mine' perpetually renewed); and in the waters themselves (bromine, magnesium, potassium, salt, etc. already commercially extracted, and aluminium, calcium, copper, gold, manganese, silver, etc. potentially recoverable). Research centres incl. the British Inst. of Oceanography at Godalming and in the U.S.A. the Naval Oceanographic Office co-operates with the Scripps Inst. (California) and Woods Hole Inst. (New England); international co-operation is assisted by an Oceanographic Commission under UNESCO.

OCEANARIUM. Large-size display tank in which aquatic animals and plants live, not separated according to species as in the conventional aquarium

OCEANARIUM. The leaps of the porpoises at feeding-time are enjoyed as much by the performers as by their audience. Marine Studios, Marineland, Florida

but living together much as they would in their natural environment. The world's first O. was founded by the explorer and naturalist W. Douglas Burden in 1938 at Marine Studios, Marineland, Florida.

OCEANIA (ōsē-ā'nia). Term embracing the islands of the S. Pacific Ocean. The divisions are Micronesia, Melanesia, and Polynesia; Australasia is sometimes included.

OCEAN ISLAND. Island included within the British colony of Gilbert and Ellice Islands. It became

SCHOOLS OF PAINTING

Italian, 13th–18th cents. *Florence:* Cimabue, Giotto, Orcagna, Taddeo Gaddi, Fra Angelico, Uccello, Masaccio, Filippo and Filippino Lippi, Botticelli, Michelangelo, Sarto. *Siena:* Duccio. *Umbria:* Francesco, Perugino. *Milan:* Leonardo da Vinci, Borgognone, Luini. *Parma:* Correggio. *Venice:* Bellini, Carpaccio, Giorgione, Titian, Palma Vecchio, Tintoretto, Veronese, Tiepolo, Canaletto. *Padua:* Mantegna. *Verona:* Pisano. *Bologna:* The Carracci, Reni, Domenichino. *Rome and Naples:* Raphael, Caravaggio, Sassoferrato, Rosa.

Spanish, 16th–19th cents. El Greco, Ribera, Zurbarán, Velasquez, Murillo, Goya, Picasso.

Flemish, 14th–20th cents. Van Eyck, Weyden, Bouts, Memlinc, Bosch, Brueghel, Mabuse, Patinir, Rubens, Van Dyck, Brouwer, Teniers.

Dutch, 16th–19th cents. Rembrandt, Hobbema, Hooch, Vermeer, Hals, Ostade, Ruysdael, Steen, Hondcoeter, Van Gogh.

German, 15th–20th cents. Lochner, Lucas Cranach, Schongauer, Grünewald, Dürer, Holbein, Elsheimer, Chodowiecki, Kandinsky, Klee, Ernst, Koschka.

French, 16th–20th cents. Clouet, Poussin, Claude, Watteau, Chardin, Boucher, Fragonard, David, Ingres, Corot, Géricault, Delacroix, Manet, Monet, Degas, Renoir, Camille Pissarro, Cézanne, Gauguin, Matisse, Rouault, Braque, Utrillo, Vuillard, Vlaminck.

British, 17th–20th cents. Hilliard, Lely, Kneller, Hogarth, Wilson, Reynolds, Stubbs, Gainsborough, Romney, Rowlandson, Raeburn, Blake, Morland, Crome, Lawrence, Girtin, Turner, Constable, Crompton, Cox, Etty, Bonington, Watts, Frith, Hunt, Rossetti, Millais, Burne-Jones, Brangwyn, Sickert, Wilson Steer, Duncan Grant, Augustus John, Paul Nash, Stanley Spencer, Graham Sutherland, Sir Alfred Munnings, Ben Nicholson, John Bratby, Francis Bacon, Victor Pasmore.

American, 18th–20th cents. John S. Copley, Benjamin West, Charles W. Peale, Gilbert Stuart, Washington Allston, John James Audubon, Winslow Homer, Thomas Eakins, J. A. M. Whistler, Mary Cassatt, John S. Sargent, John Marin, Rockwell Kent, Diego Rivera, Lyonel Feininger, Laszlo Moholy-Nagy, Jackson Pollock, Ben Shahn, Edward Giobbi.

PAISLEY. Scottish burgh on the White Cart, Renfrewshire, 7 m. W.S.W. of Glasgow; famous for the manufacture of thread, introduced c. 1810. There are also distilleries, engineering works, and ship-building yards. P. grew up round an abbey founded 1160. Pop. (1961) 95,753.

PAKISTAN. Islamic rep. in S. Asia, within the British Commonwealth of Nations. It comprises 2 provs., East P. (lying E. of West Bengal, India) and West P., occupying most of the Indus basin and mountainous regions to the N. and W. The 2 provs. are, 1,000 m. apart, separated by the Rep. of India. Karachi was the cap. until 1959 when Rawalpindi was temporary cap. till the completion of Islamabad, N.W. of Rawalpindi in 1967. Other important towns are: in W.P., Lahore (cap. of prov.), Hyderabad, Multan, Peshawar, Quetta; in E.P., Dacca (cap. of prov.) and the port of Chittagong. Area 364,737 sq. m. (54,501 in E.P.); pop. (1961) 93,720,613 (E. Pakistan 50,840,235).

Agriculture is the main occupation in both provs. W.P. grows wheat, cotton, barley, millet, rice, etc., in the artificially irrigated plains of the Indus and its tributaries, fruit and dates in the mountainous W. Cattle, sheep, goats, horses, camels are reared. Rice and jute are the principal crops in E.P.; tea, tobacco, sugar cane, etc., are also grown. Cotton and woollen fabrics, lacquered and embroidered goods are made in W.P. where coal is mined in the N.W.; chromite, iron, and gypsum are worked; and natural gas from Sui near Quetta is taken to Karachi by pipeline. E.P. has little industry, though the manufacture of jute (formerly milled at Calcutta) is being developed, and Dacca muslins are famous.

History. The name P., for a Moslem division of

PAKISTAN. A rustic bridge near Khulna, in East Pakistan. Photo: B. Deane.

British India, was put forward at the time of the Round Table Conference of 1930–1; it was made up by Choudhary Rahmat Ali (1897–1951) from the names of the predominantly Moslem parts of the sub-continent: Punjab, N.W. Frontier (inhabited chiefly by Afghans), Kashmir, Sind, and Baluchistan (*stan* in Urdu meaning land; the fact that *pak* means pure in Urdu probably added to the attraction of the name). Moslem fear of domination by the vast Hindu majority in British India brought in 1940 a serious demand for a separate Moslem state which delayed for some years the transformation of India into a dominion. This was at last effected in 1947 by the passing of an Act of the Imperial Parliament in London which divided British India into 2 dominions, predominantly Hindu India and predominantly Moslem P. See JINNAH.

In accordance with the distribution of the Moslem pop., P. was in 2 sections: a western part consisting of western Punjab, Sind, the N.W. Frontier Prov., British Baluchistan, and an eastern part made up of eastern Bengal and the Sylhet district of Assam. The subsequent drawing of frontiers was followed by violent religious disturbances, and flights of thousands of refugees from India to P. and vice versa, with many deaths and acute distress. But in a few years these tragic beginnings were overcome and P. settled down to play its part as the country with the largest Moslem pop. in the world. W.P. was constituted a single prov. in 1955, into which were absorbed Bahawalpur, Khaipur, and other princely states; and in 1956 P. became a republic, but chose to remain within the Commonwealth. Lack of industry in E. Pakistan, and her smaller share of development funds, although her jute exports supply a large part of Pakistan's foreign exchange and she has the larger pop., led to agitation for autonomy and in 1969 to a peasant revolt. Pres. Ayub Khan (q.v.) resigned, martial law was proclaimed, and the C.-in-C. of the army, Gen. Yahya Khan became president. The 1962 constitution was reintroduced pending a new one to be prepared by representatives elected by direct franchise.

PALAEOCLIMATOLOGY. The determination of climatic conditions on the earth's surface in earlier times. Evidence is drawn from rocks and fossils, by new techniques, e.g. past temperatures may be indicated by the proportions in which certain isotopes of oxygen exist in fossilized materials. Complicating factors are possible changes over the years of the plane of the earth's axis in relation to the sun, and in the pattern of earth's land masses.

PALAMAS, Kostas (1859–1943). Greek poet. He enriched the Gk. vernacular as a literary language by

are *Orphée aux enfers* (1858), *La belle Hélène* (1864), and *Les contes d'Hoffmann* (1881).

O'FLAHERTY (ô-flah'herti), Liam (1897–). Irish author. B. on the Aran Is., he has written novels of Irish life, notably *Thy Neighbour's Wife*, *The Informer*, and *Land* (1946), dealing with Fenian activities in co. Mayo, and also short stories, e.g. *Mountain Tavern* and *A Life of Tim Healy*.

O'GAM or Ogham. System of alphabetic writing once in use in the British Isles. The name O. is sometimes extended to the oldest-known form of the Gaelic languages. Some 300 funerary inscriptions in O. are known, mainly from the S.W. parts of Ireland, but also from Wales, Scotland, the Isle of Man, and Hampshire. The script developed during the 5th cent. and consists of a system of strokes or notches suited to be carved in rough stones.

OGDEN, Charles Kay (1889–1957). British originator, with I. A. Richards, of Basic English (q.v.). Together they wrote *Foundations of Aesthetics* (1921) and *The Meaning of Meaning* (1923).

OGDON, John (1937–). British pianist. Son of a schoolmaster, he was ed. at Manchester Grammar School and the Manchester Royal Coll. of Music. Appearing on British concert platforms from 1959, he created a sensation in Moscow in 1962 when he won the Tchaikovsky award with Ashkenazy (q.v.). He is noted for his interpretation of Busoni.

O'GILVY, Angus James Bruce (1928–). British business man. Second son of the earl of Airli, he was educ. at Eton and Trinity Coll., Oxford, and from 1956 was associated with the Drayton group of investment trusts as a director. In 1963 he m. Princess Alexandra (1936–), sister of the duke of Kent (q.v.), who is styled H.R.H. Princess Alexandra, the Hon. Mrs. Angus O.

OGLETHORPE, James Edward (1696–1785). English soldier. He joined the Guards, and in 1732 obtained a charter for the colony of Georgia, intended as a refuge for debtors and for European Protestants, and administered it himself until 1743.

O'GMORE AND GARW (gar'oo). Coal-mining town (U.D.) in Glamorganshire, S. Wales. Pop. (1961) 20,955.

OGPU. See G.P.U.

O'HIGGINS, Bernardo (1776–1842). Chilean soldier and statesman. Of Irish descent, he was foremost among the leaders of the Chilean struggle for independence from Spanish rule 1810–17, and headed the first permanent national govt. 1817–23.

OHIO (ôh'îô). North-central state of the U.S.A., S. of Lake Erie, between Indiana on the W. and Pennsylvania on the E. It takes its name from the r. Ohio. An important farming state—livestock products, maize, oats, tomatoes, grapes, soya beans, etc.—it is also one of the industrial leaders, producing cars, aircraft, boats, machine tools, industrial and office machinery, electrical goods, hardware and glass, tyres and plastic goods, etc. Minerals incl. bituminous coal, lime, clay, and natural gas. The chief towns are Akron, Cleveland, Cincinnati, Dayton, Toledo, and Columbus, the cap. It became a state 1803. Area 41,222 sq. m.; pop. (1960) 9,706,397.

OHIO. River of the U.S.A., second-largest affluent of the Mississippi. It is formed by the union of the Allegheny and Monongahela at Pittsburgh, Pa., and is 980 m. long. Its name is Indian and means 'beautiful river'.

ÖHLENSCHLÄGER (ô'lenschläger), Adam Gottlob (1779–1850). Danish Romantic poet and dramatist. B. at Copenhagen, he drew his inspiration from Nordic mythology and history, and estab. his fame with the poem *Guldhornene*. Among his later works are the plays *Hakon Jarl*, *Baldur hin Gode*, and *Axel og Valborg*; and the verse *Aladdins Lampe*. In 1810 he became prof. of aesthetics at Copenhagen.

OHM, Georg Simon (1787–1854). German physicist.

He was prof. successively at Cologne, Nuremberg, and Munich, and in 1827 promulgated what is known as OHM'S LAW: the steady current in a metallic circuit is directly proportional to the constant total electromotive force in the circuit. If a current I flows between two points in a conductor across which the potential difference is E , then by O.'s law E/I is a constant which is known as the resistance R between the two points. Hence $E/I = R$. Equations relating E , I and R are often quoted as O.'s law but the term resistance did not enter into the law as originally stated.

OHM. In electricity, the practical unit of resistance, named after G. S. Ohm. A circuit's resistance is 1 ohm when a potential difference of 1 volt is required to produce a current-flow of 1 ampere.

OILS. Three main classes of oils are distinguished: essential oils, mineral oils (see PETROLEUM), and fixed or fatty oils. All Os. are composed chiefly of carbon and hydrogen, are inflammable, and usually are insoluble in water. They may be solid at ordinary temperatures, when they are termed fats, or liquid. Most essential oils are liquids and are obtained from vegetable sources. Fixed oils are products of varying consistency, widespread in the animal and vegetable kingdoms. Vegetable oils are generally obtained from the nuts or seeds of plants, and animal oils and fats occur in the fat-containing tissues; fish oils are important in this group. They are widely used as food, in soap manufacture, in paint and varnishes, lubrication and illumination.

OISE (wahz). European river which rises in the Ardennes, Belgium, and flows through France in a generally S.W. direction for 186 m. to fall into the Seine c. 40 m. below Paris. It gives its name to the French depts. of O. and Val d'Oise.

OISTRAKH. An informal moment in rehearsal when the two violinists paid a visit to Britain. From left to right, Colin Davis, Igor Oistrakh and David Oistrakh. Photo: Godfrey MacDonnic.

OI'STRAKH, David Fyodorovich (1908–). Russian violinist. B. at Odessa, he became prof. at the Moscow Conservatory in 1939, and is world-renowned as an executant, often playing with his son Igor O. (1931–). Shostakovich has dedicated a violin concerto to him.

OJOS DEL SALADO (okhos' del sahlah'dhô). Peak in the Chilean Andes, c. 280 m. S.E. of Antofagasta. Its height was found in 1956 to be at least 23,293 ft., making it the loftiest mt. in the Americas.

OKAPI (okah'pi). Animal (*Okapia johnstoni*) of the giraffe family though with much shorter legs and neck, found in central Africa, but very rare and strictly protected. Purplish brown, with creamy face and black and white stripes on the legs, it is beautifully camouflaged.

clocks and watches; parts of delicate balances and surgical instruments; dental fillings; and as alloy with gold to make white gold.

PALLIUM, or Pall. A pure wool vestment worn by the Pope and by Catholic metropolitans, primates, and archbishops. It is in the shape of a Y, falling across the shoulders back and front.

PALM. Plant of the family *Palmaceae* characterized by a single tall stem carrying a thick cluster of large palmate or pinnate leaves at the top. The majority of the some 1,500 species are tropical or sub-tropical, have products of great economic importance, e.g. the coconut, date, sago, and oil (*Elaeis guineensis*) Ps.

PALMA (pahl'mah). Cap. and port of the Balearic Is., Spain, on Majorca. A Roman colony founded 276 B.C., P. has a cathedral begun in 1229. Products incl. silk and woollen textiles, cement, paper, pottery. There is an airport at Son San Juan. Pop. (1960) 193,862.

PALMA. One of the Canary Islands, Spain, a fertile, wooded island producing wine, fruit, honey, and silk. Area 281 sq. m.; pop. (1960) 76,000. Santa Cruz de la Palma is the principal town.

PALMAS (pahl'mahs), Las. Cap. of the Spanish Canary archipelago, on Gran Canaria. The port of La Luz is an important fuelling depot. Pop. (1960) 193,862.

PALM BEACH. Winter resort in Florida, U.S.A., on an island between Lake Worth and the Atlantic. Pop. (1960) 6,055.

PALMER, Sir Frederick (1862–1934). British engineer. The son of a carpenter, he first estab. a reputation as a bridge builder (the Son Bridge at Dehri—India's longest—and the Hooghli and Zambesi bridges), but is now remembered as a port development engineer (Calcutta, London and Southampton), being the first to realize the superiority of long straight quays in dock lay-out for maximum use of space.

PALMER, Samuel (1805–81). British artist, whose landscapes show the influence of Blake.

PALMERSTON, Henry John Temple, 3rd visct. P. (1784–1865). British Whig statesman. He succeeded to an Irish peerage in 1802, and became a Tory M.P. in 1807. He was Secretary-at-War 1809–28, broke with the Tories in 1830, and sat in the Whig cabinets of 1830–4, 1835–41, and 1846–51 as For. Sec. His foreign policy was marked by distrust of France and Russia, against whose designs he upheld the independence of Belgium and Turkey. He became Home Sec. in 1852, and was P.M. from 1855 until 1858. His final period as Premier (1859–65) was marked by the 2nd war with China, and by the American Civil War, in which he nearly involved Britain on the side of the South. Popular with the people, for he made good use of the press, he was a constant source of annoyance to the Queen and other ministers because of his high-handed attitude.

PALMERSTON NORTH. City of N. Island, N. Zealand, centre of a timber-growing and dairy-farming dist. Massey Univ. was estab. in 1963. Pop. (1967) 50,000.

PALMGREN (pahlm'grän), Selim (1878–1951). Finnish composer, pianist, and conductor. B. at Bjoerneborg, P. was prof. of composition at Helsinki from 1939. The operas *Daniel Hjort* and *Peter Schlemihl* are 2 of his best-known works.

PALM SUNDAY. The Sunday before Easter, and first day of Holy Week; so called because in the R.C. Church palm branches are carried to commemorate Christ's entry into Jerusalem on that day.

PALMYRA (palmi'ra). Ancient city and oasis in the desert of Syria, lying about 150 m. N.E. of

Damascus. P., the Biblical Tadmor, was flourishing by c. 300 B.C., but was destroyed in A.D. 272 after Queen Zenobia had led a revolt against the Romans. Extensive ruins of the Temple of Bel exist. On the site is a village called Tadmur in Arabic.

PALOMAR, Mount. The location of an observatory, 50 m. N.E. of S. Diego, California, having a 200-in. diam. reflector, when dedicated in 1948 the largest telescope in the world.

PAMIRS (pahm'ärz). A treeless plateau of C. Asia, most of which is in the U.S.S.R., the rest in China and Afghanistan. The P. are traversed by mountain ranges rising to 24,590 ft.; to the S. lies the Hindu Kush.

PAMPAS. Flat treeless Argentine plains, lying between the Andes and the Atlantic, and rising gradually from the coast to the lower slopes of the mountains. In the E.P. are the great cattle ranches and the flax- and grain-growing area of Argentina; to the W. the P. are arid and unproductive. Characteristic of the P. is P. grass. The prov. of La Pampa is in the E.P. Area 55,100 sq. m.; pop. (1960) 194,200.

PAMPAS GRASS. Genus of S. American grasses (*Gynerium*). *G. argenteum* is grown in gardens and has tall leaves and large panicles of white flowers.

PAMPLONA. Cap. of the Spanish prov. of Navarre and of the old kingdom of Navarre. A pre-Roman town, P. was rebuilt by Pompey in 68 B.C., captured by the Visigoths 476, sacked by Charlemagne 778, and taken by Wellington 1813. It makes wine, leather and shoes, textiles, etc. Pop. (1965) 124,200.

PAN. Greek deity, the patron of flocks and herds, worshipped mainly in Arcadia. He is represented as a man with the horns, ears, and hoofs of a goat, and usually playing upon a shepherd's pipe.

PANAMA (pahnahmah') CITY. Cap. of the rep. of P., situated near the Pacific end of the P. Canal. Founded on the present site in 1673, P. has its port at Balboa, which is in the Canal Zone. An earlier P., 5 m. N.E., founded 1519, was destroyed 1671 by the Welsh buccaneer Morgan. Pop. (1968) 373,200.

PANAMA. A rep. of C. America, forming an isthmus divided at its narrowest point by the P. Canal (q.v.) and the Caral Zone. It is traversed by a chain of mountains running parallel to the coasts. The climate is tropical; products incl. bananas, cacao, pearl shell, etc. P. is governed by a president, and an elected national assembly. Spanish is the official language. The cap. is P. City. Formerly part of Colombia, P. declared its independence in 1903 with the encouragement of the U.S.A., which was interested in the Canal Zone. Area 28,576 sq. m.; pop. (1967) 1,328,700.

LORD PALMERSTON.

Courtesy of Lord Mountbatten of Burma

navian prince of Kiev, her baptism (c. 955) was an important step in the Christianization of Russia.

OLIPHANT, Margaret Oliphant (1828–97). British novelist. B. in Midlothian, née Wilson, she m. her artist cousin, Francis O. (d. 1859) in 1852. Best-known of her numerous books are *The Chronicles of Carlingford*, incl. *Miss Marjoribanks* (1866); and the supernatural *A Beleaguered City* (1880).

OLIPHANT, Sir Mark (1901–). Australian physicist. B. in Adelaide, he was Poynting prof. of physics at Birmingham 1937–50, and directed the Research School of Physical Sciences at Canberra 1950–63. He was knighted in 1959.

OLIVE (o'liv). An evergreen tree (*Olea europaea*) of the family Oleaceae. It grows to about 25 ft. high, has spiny branches and opposite, lance-shaped leaves. The white flowers are followed by bluish-black oval fruits, from which O. oil is expressed; pale yellow, it is chiefly composed of glycerides and, besides being edible, is used in soap, ointments, and as a lubricant. It is native to Mediterranean regions, but is now of wide distribution in warm climates.

OLIVENITE (oliv'enit). Hydrated copper arsenate, occurring as a mineral in olive-green prisms.

OLIVES, Mount of. A range of hills E. of Jerusalem. Gethsemane was at its foot, while a chapel (now a mosque), marks the traditional site of the Ascension.

OLIVIER, Sir Laurence Kerr (1907–). British actor. B. at Dorking, Surrey, son of a clergyman, he made his début as Katherine in 1922 at Stratford-on-Avon in a boys' performance of *The Taming of the Shrew*. Among his most famous parts are Romeo,

OLIVE

SIR
LAURENCE OLIVIER
Photo: Angus McBean.

Sir Toby Belch, Macbeth, Hamlet, and Archie Rice in *The Entertainer*. His films including *Wuthering Heights* and *Rebecca*, and he has produced, directed and played the leading role in film versions of *Henry V*, *Hamlet*, and *Richard III*. Knighted in 1947, he was for many years associated with the Old Vic and in 1962 became director of the National Theatre. He m. the actresses Jill Esmond (1930–40), Vivien Leigh (1940–61), with whom he played in *Antony and Cleopatra*, etc., and in 1961 Joan Plowright.

O'LIVINE. A pale green mineral, magnesium iron silicate, (Mg,Fe)₂SiO₄. Transparent O. is called chryso-lite, and used in jewellery.

OLNEY. English market town in Bucks, on the Ouse, 17 m. N.E. of Buckingham. The house in which Cowper (q.v.) lived is a museum. Women run a 'pancake race' here every Shrove Tuesday (since 1946 in a time contest with Liberal, Kansas). Pop. c. 2,500.

OLOMOUC (ölömöts'). Town in Czechoslovakia, at the confluence of the Bystrice and Morava. It has a univ. and is an industrial centre. Pop. (1965) 75,000.

OLSZTYN (ol'shtin). Polish form of Allenstein (q.v.), cap. of O. voivodship, in Polish-occupied E. Prussia.

OLYMPIA (olim'pia). An ancient Greek sanctuary, in the W. Peloponnese on the Alpheus, and the scene of the original Olympic Games. It contained temples

of Zeus Olympius, Hera, etc. The events of the Games were contested in the Stadium and Hippodrome; the former for foot-races, boxing, wrestling, etc., the latter for chariot- and horse-races. The Games were held every 4 years (*olympiad* – this method of reckoning time ceased to be used with the abolition of the games in A.D. 394) during a sacred truce and from 776 B.C. continuous records were kept. Religious offerings were followed by the contest, originally only foot-races, but subsequently greatly enlarged. Women were forbidden to be present and contestants were men of Hellenic descent only, until in later years Romans were admitted.

The revival of the Games was initiated by the French Baron Pierre de Coubertin in 1894; an International Olympic Committee organized the meetings which it was intended should be held each 4 years, but they were interrupted by both world wars. The Olympic emblem of 5 interlaced circles represents the 5 continents.

The modern O.G. cover a much wider range of events, e.g. swimming, skating, equestrian events, football, rowing. Similar games on a limited basis are the Commonwealth, European and Asian G.

OLYMPIO, Sylvanus (1902–63). Togolese leader. A member of the Ewe tribe, though with some Portuguese blood, O. was interned by Vichy in the S.W.W., and subsequently devoted himself to the struggle for independence. He became P.M. of independent Togo in 1960, and pres. in 1961. He was killed in a military rising.

OLYMPUS (ölím'pus). Name of a large number of mountains in Greece and in neighbouring countries. The most famous of them, identified with the abode of the gods in the *Iliad*, is a group of hills, the highest point of which reaches 9,570 ft. in the N. of Thessaly.

There is a Mt. Olympus, 7,954 ft., in the Olympic mts., Washington state, U.S.A., which forms Olympic National Park (1938), area 1,390 sq. m.

OMAGH (ō'ma). Co. tn. of Tyrone, N. Ireland, on the r. Strule, 30 m. S. of Londonderry. O. grew up round an abbey founded in the 8th cent.; it has ruins of a castle destroyed in 1641. Pop. (1961) 8,109.

Ō'MAHA. Principal city of Nebraska, U.S.A., and co. seat of Douglas co., on the Missouri. The principal industries incl. lead smelting and meat packing. Pop. (1960) 301,598.

The landing-point in France of the U.S. 5th Corps on 6 June 1944, between Port-en-Bressin and the estuary of the Vire r., Calvados dept., was given the code name O. beach.

OMAN, Carola Mary Anima (1897–). British author. She is the dau. of Sir Charles O. (1860–1946), prof. of modern history at Oxford from 1905, who wrote *History of the Peninsular War* (1902–30) and *The Art of War in the 16th Cent.* (1937). Her own books incl. historical novels such as *Miss Barrett's Elopement* and biographies, e.g. *Nelson* (1948), *Sir John Moore* (1953), and *Mary of Modena* (1962).

OMAN. See MUSCAT AND OMAN.

Ō'MAR (c. 581–644). Arabian caliph. He was one of Mohammed's ablest advisers, and in 634 succeeded Abu Bekr as the 2nd of the caliphs. During his reign Syria, Palestine, Egypt, and Persia were conquered by the Arabs. He was assassinated. The mosque of O. at Jerusalem is attributed to him.

OMAR KHAYYĀM (khiyahm') (c. 1050–1123). Persian astronomer and poet. B. in Nishapur, he founded a school of astronomical research and assisted in reforming the calendar. The result of his observations was the *Jalālī* era, begun in A.D. 1079. In the West, O.K. is chiefly known as a poet through Edward Fitzgerald's translation of his *rubā'īs* as *The Rubāiyāt*, also trans. by Robert Graves 1967.

OMAYYADS (ōm'yadz). An Arabic dynasty which held the caliphate 661–750. They were overthrown by Abbasids, but a member of the family escaped to

Leno, Harriet Vernon, and Vesta Tilley, and magnificent 'transformation' scenes. In the 20th cent. Ps. are fewer, because of the decline of live theatre, but Ps. on ice became popular after the S.W.W. Provincial Ps. are truer to tradition than London productions.

PANZER (pahn'tser). German word meaning 'armour', used in connection with armoured vehicles, regiments, etc. The Nazi P. divisions overwhelmed the French, English, and Belgians in 1940.

PAPACY. The office of the Pope or bishop of Rome, as head of the R.C. Church. According to the R.C. claim, the leadership or 'Keys' of the Church was entrusted by Christ to Peter, who became the first bishop of Rome. For many cents., however, Rome was recognized as only one of the great patriarchates of the Church, and Constantinople never accepted the primacy of Rome, breaking away in 1054. The missions of Gregory I (590-604) marked the P.'s first attempt to extend its authority outside Italy. Its position was strengthened in the 8th-9th cents. by the support of the Frankish kings, and reached its height in the 11th-13th cents. under Gregory VII and Innocent III. In the 14th cent. the P. fell completely under French control; its headquarters were removed to Avignon (1309-78), and this 'Babylonian Captivity' was followed by the Great Schism (1378-1417) between rival popes at Rome and Avignon. The reformation withdrew much of N. and W. Europe from the Roman obedience, and throughout the 17th and 18th cents. the P. lost prestige and political influence. Under Pius IX the Papal States (territory

or triple crown, at St. Peter's. Following the Second Vatican Council (1962-6) an Episcopal Synod (200 bishops elected by the local hierarchies) was estab. 1967 to collaborate with the Pope in the govt. of the Church.

PAPAW'. See PAWPAW.

PAPEETE ('little water'). Chief town of Tahiti in the Windward Islands, French Polynesia. It exports

PAPER. Some newsprint is given an additional finishing by being passed rapidly through the rolls of a supercalender stationed beyond the 'dry end' of the machine, as here at Bowater's Kemsley Mills. Courtesy of the Bowater Organization.

copra, vanilla, phosphates, mother of pearl. Pop. (1964) 15,220.

PAPEN (pahpen), Franz von (1879-1969) German politician. Chancellor in 1932, he negotiated the Nazi-Conservative alliance which put Hitler in power, and was Vice-Chancellor 1933-4, envoy to Austria 1934-8, and ambassador to Turkey 1939-44. At the Nuremberg Trials, 1945-6, he was acquitted, but was imprisoned by a denazification court.

PAPER. Sheet of vegetable fibre, the name deriving from Lat. *papyrus*, a form of writing material made from the water reed and used in ancient Egypt. The invention of true P., made of pulped fishing nets, rags, etc., is credited to Tsai Lun, a Minister of Agriculture under the Han dynasty of China, in A.D. 105. Its use gradually spread from the 8th cent. and the 1st English paper mill was estab. at Stevenage in the 15th cent. The spread of literacy led to the invention by Louis Robert in 1799 of a machine to produce a continuous reel of paper, since production by hand of single sheets could no longer keep pace with demand. Some modern machines have an output of 2,000 ft. per min. or more than 250 tons per day. Apart from its obvious uses in writing, printing and packaging, P. is today also employed in towels and toilet tissues; hardboard, roofing felt, insulating panels and drainpipes; and in electrical work as an insulator.

PAPHOS (pā'fos). Ancient city of Cyprus, originally a Phoenician colony. According to legend Aphrodite landed here after her birth from the sea waves. Pop. (1966) 10,600.

PAPINEAU (pahpēnō'), Louis Joseph (1786-1871). Canadian politician. B. in Montreal, he organized the unsuccessful rebellion in Lower Canada in 1837, then fled the country, but returned in 1847 to sit in the United Canadian legislature until 1854.

PAPUA (papoo'a). Name originally given to the island of New Guinea, later particularly to its S.E. section. See NEW GUINEA.

PARÁ (pahrah'). State of Brazil containing the lower valley and mouth of the Amazon. Timber, cacao, and Brazil nuts are produced; tyres are made from local rubber. The cap. is Belem. Area 474,770 sq. m.; pop. (1967) 1,914,000.

PAPACY. The Inauguration of the 2nd Vatican Council in St. Peter's on 11 October 1962. Enthroned under the canopy of the high altar was Pope John, the Council Fathers sat on either side of the nave, and observers from other Churches were also present.

Photo: Planet News.

ruled by the Pope as sovereign) were annexed to Italy in 1870, and the conflict with the Italian monarchy lasted until the Lateran Treaty (1929) recognized papal sovereignty over the Vatican City. The Vatican Council (1870) proclaimed the doctrine that the Pope is infallible when he speaks *ex cathedra*. The Pope is elected by the Sacred College of Cardinals, and his pontificate is dated from his coronation with the tiara,

British in 1763, and after the War of American Independence many British loyalists settled in the region, from 1791 called Upper Canada until re-named O. in 1867. Area 412,582 sq. m.; pop. (1966) 6,960,870.

O'NYONG-NYONG. Virus disease transmitted by mosquitoes which first appeared in East Africa in 1961. Symptoms: pains in the joints and glands, an itching rash and fever.

ONYX (on'iks). A cryptocrystalline variety of silica having straight parallel bands of different colours; milk-white, black, and red. Sardonyx has layers of sard or red carnelian alternating with lighter layers of O. It can be used for cutting cameos.

OLITE (ō'olit). A calcareous rock formed of small grains of carbonate of lime, resembling the hard roe of a fish: the name derives from the Gk. for 'egg' and 'stone', coarse-grained Os. are termed pisolites from Gk. for 'pea' and 'stone'. The structure may arise from the accretion of carbonate of lime round grains of sand or particles of shell in moving water. It may also be formed from calcareous algae deposited in hot springs. The term is also used to indicate the middle and upper layers of the Jurassic system.

OOSTENDE. Flemish form, meaning east end, of **OSTEND**.

OPAL. A non-crystalline form of silica, occurring in stalactites in volcanic rocks. The common O. is opaque, milk-white, yellow, red, blue, or green, and lustrous. The precious O. is colourless, having innumerable cracks from which emanate brilliant colours produced from minute crystals of cristobalite. Os. are found in Hungary, New South Wales (black Os. were 1st discovered here in 1905) and Mexico, noted for fire Os.

OPENCAST MINING. See **COAL**.

OPEN SHOP. A factory or other business employing men not belonging to trade unions, as opposed to the 'closed shop' (q.v.), which employs trade unionists only.

OPERA. A dramatic work in which singing takes the place of speech, and in which the music accompanying the action has paramount importance, although dancing and spectacular staging may also play their part. It originated in late 16th cent. Florence

OPERA. Among the world's most modern opera houses is that of Sydney. The white 'wings' over the auditorium reflect in the harbour like the sails of a yacht.

Courtesy of the N.S.W. Govt. Office.

when a number of young poets and musicians attempted to reproduce in modern form the musical declamation, lyrical monologues, and choruses of classical Greek drama. One of the earliest composers was Jacopo Peri (1561-1633), whose *Euridici* influenced Monteverdi (q.v.). At first solely a court entertainment, O. soon became popular and in 1637 the first public O. house opened in Venice. In the later 17th cent. the elaborately conventional aria, designed to display the virtuosity of the singer, became predominant over the dramatic element, composers of this type of O. incl. Cavalli, Cesti, and Scarlatti. In France O. was developed by Lully and Rameau, and in England by Purcell, but the Italian style retained its ascendancy, as in the career of Handel (q.v.).

Comic O. (*opera buffa*) was developed in Italy by such composers as Pergolesi, while in England *The Beggar's Opera* (1728) started the vogue of the Ballad O., using popular tunes and spoken dialogue, of which *Singspiel* was the German equivalent.

The revolt against artificiality began with Gluck, who insisted on the pre-eminence of the dramatic over the purely vocal element. Mozart learned much from Gluck in his serious operas, but his greatest triumphs were won in the field of Italian *opera buffa*, and in those works, such as *The Magic Flute*, in which, taking the *Singspiel* as a basis, he laid the foundations of a purely German O. This line was continued by Beethoven in *Fidelio*, and in the work of Weber, in which the Romantic style appears for the first time in O. The Italian tradition, which placed the main stress on vocal display and melodic suavity, continued unbroken into the 19th cent. in the Os. of Rossini, Donizetti, and Bellini.

It is in the Romantic O. of Weber and Meyerbeer that the work of Wagner has its roots. Dominating the contemporary operatic scene, he attempted to create, in his 'music-dramas', a new art-form, and completely transformed the 19th cent. conception of O. In Italy, Verdi succeeded in assimilating, in his mature work, much of the Wagnerian technique, without sacrificing the Italian virtues of vocal clarity and melody, and this tradition was continued by Puccini.

French O. in the mid-19th cent., represented by such composers as Delibes, Gounod, Saint-Saëns, and Massenet, tended to be of rather secondary importance. More serious artistic ideals were put into practice by Berlioz in *The Trojans*, but the merits of his work were largely neglected in his own time. Bizet's *Carmen* began a fashion for 'realism' in O.; his lead in this respect was followed in Italy by Mascagni, Leoncavallo, and Puccini. Debussy's *Pelléas and Melisande* represented a reaction against the over-emphatic emotionalism of Wagnerian Os. National operatic styles were developed in Russia by Glinka, Rimsky-Korsakov, Mussorgsky, Borodin and Tchaikovsky, and in Bohemia by Smetana, and several notable composers of light O. emerged, incl. Sullivan, Lehár, Offenbach, and Johann Strauss.

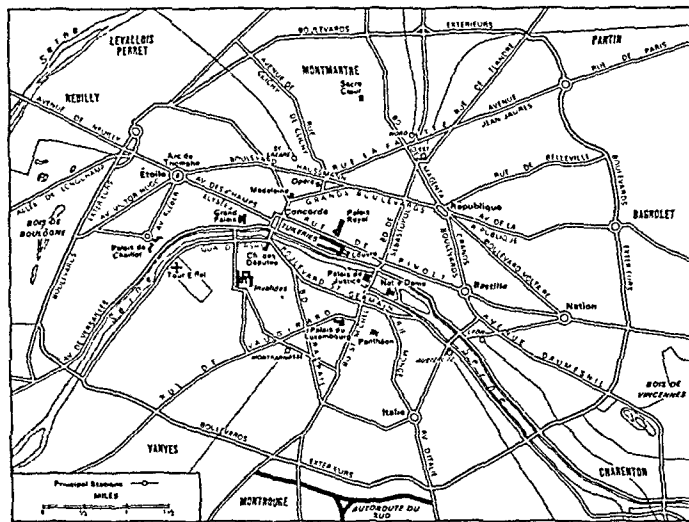

In the 20th cent. the atonal school produced an outstanding O. in Berg's *Wozzeck* and the Romanticism of Wagner was revived by Richard Strauss, e.g. *Der Rosenkavalier*. Notable modern composers incl. in Britain Delius, Britten, John Gardner and Phyllis Tate; in the U.S. Gershwin, Menotti, Kurt Weill, and Stravinsky; in Germany Werner Egk; in the U.S.S.R. Prokofiev; and in Italy Mascagni.

OPHTHALMIA (of-). Inflammation of the eye. O. neonatorum (newborn) is an acute inflammation of a baby's eyes at birth with the organism of gonorrhoea caught from the mother. Sympathetic O. is the diffuse inflammation of the sound eye which is apt to follow septic inflammation of the other. To prevent it, surgeons remove a damaged eye if there is no hope of its sight being restored.

OPIE, John (1761-1807). British artist. B. in St. Agnes, Cornwall, he became famous as a portrait painter in London from 1780, later painting historical pictures such as 'The Murder of Rizzio'. His 2nd wife, Amelia O. (1769-1853), was a popular novelist.

OPIUM. A narcotic drug obtained from the juice of the opium poppy (*Papaver somniferum*). The unripe seed capsules are cut and the milky juice exuded from them is dried and compressed. Most of the O. used for medicinal purposes comes from Turkey. In the Far East a concentrated extract of O. is used for smoking. It is dangerous and habit-forming, containing a high percentage of morphine.

OPOLE. Town in Poland, cap. of O. voivodship, on the Oder, c. 50 m. S.E. of Wrocław; cap. 1919-45 of the former German prov. of Upper Silesia. O. lies

PARIS

MODERN P. The Seine is spanned by 32 bridges, the oldest being the Pont Neuf (1578). On the Ile de la Cité stand Notre-Dame (begun 1163), the seat of the archbishopric, and the Palais de Justice. On the N. bank are the Hôtel de Ville; the former palace of the Louvre, now one of the world's finest art galleries; the Tuileries gardens; and the Place de la Concorde. Thence the Champs Elysées leads to the Place de l'Etoile, in the centre of which is the Arc de Triomphe, with the tomb of the Unknown Warrior under it. Farther W. is the Bois de Boulogne. On the S. bank are the univ. (founded c. 1150); the Panthéon; the Invalides, with the tomb of Napoleon; the Champ de Mars, in which stands the Eiffel Tower; the Luxembourg Palace and Gardens; and the Jardin des Plantes. Montmartre, in the N. of the city, on which stands the 19th cent. basilica of Sacré Cœur, rises to 410 ft. P. is one of France's main industrial centres, producing metal goods, chemicals, leather goods, glass, tobacco, food products, and luxury goods. It is also an important port, being connected by canals with N.E. and N.W. France; besides Orly it also has an airport at Le Bourget 7 m. N.E. Pop. (1962) 2,811,171.

PARIS, Treaties of. Name given to a number of peace treaties signed in P., the chief being those concluding the Seven Years War (1763), the American War of Independence, the Napoleonic Wars, and the Crimean War. The peace conference after the F.W.W. which drew up the Treaty of Versailles was held in P. in 1919–20. The P. Peace Conference of 1946 drew up the peace treaties between the Allies and Italy, Rumania, Hungary, Bulgaria, and Finland.

PARISH COUNCILS. Local govt. bodies in English rural districts, estab. by the Local Government Act 1894. Elected triennially, they are empowered to carry out certain public duties, for which purpose they may impose a limited local rate. A P. meeting is an assembly of the electors of a parish, and where there is no P.C. exercises minor responsibilities.

PARIS-PLAGE. See TOUQUET-PARIS PLAGE, LE.

PARK, Mungo (1771–1806). Scottish explorer. B. near Selkirk, he explored the course of the Niger 1795–7, and d. during a 2nd expedition in 1805–6. He pub. *Travels in the Interior of Africa* (1799).

PARKER, Matthew (1504–75). English churchman. B. at Norwich, he was converted to Protestantism at Cambridge. He received high preferment under

Henry VIII and Edward VI, and, as abp. of Canterbury from 1559 was largely responsible for the Elizabethan religious settlement.

PARKER OF WADDINGTON, Hubert Lister P., baron (1900–). British judge. Called to the Bar in 1924, he became a Lord Justice of Appeal in 1954, was noted for his conduct of the bank-rate-leak tribunal in 1957, and succeeded Goddard as Lord Chief Justice in 1958.

PARKES, Sir Henry (1815–96). Australian statesman. B. in Warwickshire, he emigrated to Australia in 1839, and between 1872 and 1891 was several times P.M. and Colonial Secretary.

PARKINSON, Cyril Northcote (1909–). British historian and satirist. Raffles prof. of history at the Univ. of Malaya, Singapore, 1950–8, he sprang to fame with *Parkinson's Law* (1958), a study of the world of public and business administration, which laid down that 'work expands to fill the time available for its completion' with its corollary 'subordinates multiply at a fixed rate regardless of the amount of work produced'.

PARKINSON, James (1755–1824). British neurologist and palaeontologist. Parkinson's disease (*paralysis agitans*) is named after him.

PARLIAMENT. The supreme legislature of Great Britain. P. originated under the Norman kings as the Great Council of royal tenants-in-chief, to which in the 13th cent. representatives of the shires were sometimes summoned. De Montfort's parliament (1265) set a precedent by incl. representatives of the boroughs as well as the shires, which was followed by Edward I from 1275 onwards. Under Edward III the burgesses and knights of the shires began to meet separately from the barons, thus forming the House of Commons. By the 15th cent. P. had acquired the right to legislate, vote and appropriate supplies, examine public accounts, and impeach royal ministers. The powers of P. were much diminished under the Yorkists and Tudors, but under Elizabeth I a new spirit of independence appeared. The revolutions of 1640 and 1688 estab. parliamentary control over the executive and the judiciary, and finally abolished all royal claim to tax or legislate without parliamentary consent. During these struggles the 2 great parties emerged, and after 1688 it became customary for the king to choose his ministers from the party dominant in the Commons.

The English P. was united with the Scottish in 1707, and with the Irish during 1801–1922. The franchise was extended to the middle classes in 1832, to the urban working classes in 1867, to agricultural labourers in 1884, and to women in 1918 and 1928. Payment of members was introduced in 1911. The duration of Ps. was fixed at 3 years in 1694, at 7 in 1716, and at 5 in 1911, but any P. may extend its own life, as happened during both world wars. Constituencies are kept under continuous review by the Parliamentary Boundary Commissions (1944): no. of M.P.s 630.

The House of Lords comprises the temporal peers, i.e. all hereditary peers of England (created to 1707), all hereditary peers of Great Britain (created 1707–1800), and all hereditary peers of the U.K. 1801 onward); all hereditary Scottish peers (under the Peerage Act 1963); all peeresses in their own right (under the same act); all life peers (both the Law Lords and those created under the Life Peerages Act of 1958); and the spiritual peers – the 2 archbps. and

Koffiefontein, and gold at Odendaalsrust. The chief towns are Bloemfontein (the cap.), Harri-smith, Smithfield, Kroonstad, and Jacobsdal. The first Boers settled N. of the r. Orange about 1820. During the Great Trek of 1836 some 10,000 emigrants settled in this region to get away from British rule. The country was annexed by Sir Harry Smith in 1848, but was granted its independence in 1854, when it became the 'Orange Free State'. As the ally of the S. African Republic (Transvaal), it joined in the struggle against the British in the S. African War of 1899–1902. In 1900 it was annexed as a British Crown Colony, named the Orange River Colony. In 1910 it became a prov. of the Union of S. Africa, and reverted to its old name. Area 49,866 sq. m.; pop. (1960) 1,373,790, of whom 274,596 were white.

ORANGEMEN. An Ulster Protestant society founded in 1795 to combat the United Irishmen and the peasant secret societies, a revival of the Orange Institution (1688) formed in support of William (III)

of Orange, the anniversary of whose victory over the Irish at the Boyne (1690), is celebrated by O. on 12 July.

O' RANG-UTAN (-oo'-tan). An anthropoid ape (*Simia satyrus*) found solely in Borneo and Sumatra. It stands about 4 ft. high, is covered with red-brown hair, is arboreal in habit, and feeds upon fruits. Sometimes considered the most highly intelligent of the apes, it is being rapidly exterminated.

ORASUL STALIN. Name 1948–56 of BRASOV.

ORATORIANs. An R.C. order of secular priests, called in full Congregation of the Oratory of St. Philip Neri, formally constituted by St. Philip Neri in 1575 at Rome, and characterized by the degree of freedom allowed to individual communities. It was first estab. in England by Cardinal Newman in 1848, and in 1884 Brompton Oratory in London was opened. All churches of the O. are famed for their music.

ORATÓRIO. A musical setting of religious incidents, scored for orchestra, chorus, and solo voices, on a scale more dramatic and larger than a cantata. The term derives from St. Philip Neri's Oratory in Rome, where settings of the *Laudi spirituali* were performed in the 16th cent. The definite form of O. began in the 17th cent. with Cavalieri, Carissimi, Scarlatti, and Schütz, and reached perfection in such works as J. S. Bach's Christmas O. and St. Matthew Passion, and Handel's *The Messiah*, etc. Other famous examples of Os. are Haydn's *Creation and Seasons*, Mendelssohn's *Elijah*, and Elgar's *Dream of Gerontius*.

ORCAGNA (orkahn'yah), Andrea (c. 1308–68). Italian painter, sculptor, and architect of the Florentine school, whose real name was Andrea di Cione. He studied under Pisano, and was influenced by Giotto.

ORCHESTRA (ôr'kestra). A composite group of instruments combining to play music. The 4 sections into which it is divided are the strings, wood-wind, brass, and percussion. Development of the O. is wrapped up with that of music, particularly with opera and symphony. The bowed strings proved its lasting foundation, and during the 17th and 18th cents. wind, percussion, and plucked instruments were gradually added. The strings have 5 separate subsections, first violins, second violins, violas, violoncellos, and double basses, in strength proportionate to maintain a balance of tone. The wood-wind became standardized by the end of the 18th cent., consisting of a pair each of flutes, oboes, clarinets, and bassoons.

INSTRUMENTS AND ARRANGEMENT OF THE ORCHESTRA

1st violin ...	16	Bassoon ...	2	Tuba ...	1
2nd violin ...	16	Piccolo ...	1	Timpani ...	3
Viola ...	12	Cor Anglais	1	Side Drum	1
Violoncello	12	Bass Clarinet	1	Bass Drum	1
Double Bass	8	Double		Triangle ...	1
Flute ...	3	Bassoon...	1	Cymbals ...	1
Oboe ...	2	Horn ...	4	Gong ...	1
Clarinet ...	2	Trumpet ...	4	Harp ...	1
		Trombone	3		

PERCUSSION

BRASS

WOOD-WIND

CELLOS

VIOLAS

DOUBLE BASSES

1st VIOLINS

CONDUCTOR

HARPS

2nd VIOLINS

Later modifications to these were the piccolo, cor anglais, bass clarinet, and double bassoon.

A pair each of trumpets and horns sufficed till the late 18th cent., when trombones began to be specified, appearing in triplicate. Since then 2 extra horns and 1 tuba have been added. Two kettledrums were used during the 17th cent., and their number was later raised to 3. From Turkey came the bass drum, cymbals, side-drum, and triangle.

The harp is the only permanent plucked instrument. Other instruments sometimes incl. are the xylophone, celesta, piano, organ, etc.

ORCHID (or'kid). Family of monocotyledonous plants (Orchidaceae) containing some 5,000 species, distributed throughout the world except in the coldest areas, and most numerous in damp equatorial regions. The flowers have 3 sepals and 3 petals. The lowest petal, the labellum, is usually large, and may be

spurred, fringed, pouched, or crested. The flowers are sometimes solitary, but more usually are borne in spikes, racemes or panicles, either erect or drooping. Tropical Os. are epiphytes (attached to trees, etc., although non-parasitic), but temperate Os. commonly grow on the ground, e.g. the spotted orchis (*Orchis maculata*) and other British species. Os. are cultivated under glass for the luxury flower trade, and among private collectors, some specimens commanding very high prices.

PAPHIOPEDELIUM GLAUCOPHYLLUM

ORCZY (ort'sy), Baroness (1865–1947). Hungarian-born novelist, dau. of baron Felix O., she m. an Englishman, Montague Barstow. Going to London in 1881 to study art, she began to write in 1900, and is best remembered as the author of *The Scarlet Pimpernel* (1905). Sir Percy Blakeney, apparently a foppish weakling but actually bold rescuer of victims of the French Revolution, appeared in many sequels.

ORDEAL. A primitive mode of trial and of testing the guilt of an accused person. It is based on the belief that heaven will protect the innocent, and methods used included walking barefoot over glowing ploughshares, carrying a red-hot iron, and dipping the hand into boiling water. In England such tests were largely superseded after the Norman Conquest by trial by battle. Os. are still used among the Indians, Arabs, and Africans.

ORDER. In classical architecture, the column

who estab. his own firm nr. Newcastle upon Tyne in 1889. He was knighted in 1911 and received the O.M. in 1927.

PARTHENON. The temple of Athena Parthenos (the Virgin) on the Acropolis at Athens. It was built in 447–438 B.C., under the supervision of Phidias, and is considered the most perfect example of Doric architecture. Later it was used as a Christian church and by the Turks as a mosque, then as a powder magazine, as a result of which it was reduced to ruins when the Venetians bombarded the Acropolis in 1687. See **ELGIN MARBLES**.

PARTHIA. Ancient name for a country of W. Asia in what is now N.E. Persia. Originating c. 248 B.C., it reached the peak of its power under Mithradates I in the 2nd cent. B.C. Ctesiphon was the cap. of P. which was annexed to Persia in A.D. 226.

PARTNERSHIP. A P. in English law is the relation of 2 or more persons carrying on a common business for profit. It differs from a company in that it may not consist of more than 20 members, and that members (and not only the directors) commonly take part in the conduct of the business. In the U.S.A. the sharing of profits is regarded as the distinctive feature.

PARTRIDGE, Eric (1894–). New Zealand lexicographer. He studied at Oxford after serving in the F.W.W. and settled in England to write with entertaining scholarship *A Dictionary of Slang and Unconventional English, Dictionary of the Underworld, British and American* (1950), and many others.

PARTRIDGE. Game bird, 2 species of which are found in Great Britain. The grey P. (*Perdix cinerea*) is mottled brown above, with grey speckled breast, and patches of chestnut barred on the sides. The French P. (*Caccabis rufa*) is distinguished from the grey P. by red legs, bill, and eyelids. The back is plain brown, with a white throat edged with black. The sides are barred chestnut and black.

PASADENA. City in California, U.S.A., 11 m. N.E. of Los Angeles, originally a Spanish settlement. The annual East-West football game, started here 1902, was held in the Rose Bowl (85,000 seats) from 1923. The Mt. Wilson observatory is 5 m. N.E. Pop. (1960) 116,407.

PASCAL (pahskahl'), Blaise (1623–62). French philosopher and mathematician. B. at Clermont-Ferrand, he was a precocious student, and produced a treatise on conic sections in 1640. Coming under Jansenist influence, he took refuge at Port Royal in 1655, and defended the Jansenist doctrines against the Jesuits in the *Lettres Provinciales* (1656). He investigated the laws governing the weight of air, the equilibrium of liquids, the hydraulic press, the infinitesimal calculus, and the mathematical theory of probability. His *Pensées*, a fragmentary apology for the Christian religion, appeared in 1670.

PAS-DE-CALAIS (pah-de-kahlä'). French name for the Strait of Dover; name also of a French dept. bordering the Strait of which Arras is the cap., Calais the chief port.

PASHA. A Turkish title of honour borne originally by military commanders, and later by high civil officials. Abolished in Turkey in 1934, it was in use in other Middle East countries until 1952.

PASK, Gordon (1930–). British electronics engineer and biologist. Ed. at Downing Coll., Cambridge, he has directed research into various cybernetic systems, incl. adaptive teaching machines, and also into self-organizing controllers or chemical and biological computers, and in 1959 worked as assoc. prof. at the Univ. of Illinois.

PASMORE, Victor (1908–). British artist. B. in Surrey, he was in local govt. service with the L.C.C. 1927–37, taught 1949–53 at the Central School of Arts and Crafts, London, where he had once attended evening classes, and was Master of Painting, Durham university, 1954–61. He is noted for abstract com-

GORDON PASK. The inventor in his study at his laboratory in Richmond, Surrey, with Eucrates, his first adaptive teaching machine, built 1954. Courtesy of System Research, Ltd.

positions and as an exponent of the 'classic' tendency in British art.

PASSAU (pahs'sow). Town of Bavaria, W. Germany, at the junction of the Inn and Ilz with the Danube, close to the Austrian frontier. The *Treaty of P.* (1552) between Maurice, Elector of Saxony, and the future Emperor Ferdinand I, allowed the Lutherans full religious liberty, and prepared the way for the Peace of Augsburg; see **REFORMATION**.

PASSCHENDAELE (pa'shendäl). Village in W. Flanders, Belgium, near Ypres. The P. ridge before Ypres was the object of a costly, but unsuccessful, British offensive, July–Nov. 1917; British casualties numbered nearly 400,000 (17,000 officers).

PASSFIELD, Sidney Webb, baron P. (1859–1947). British Socialist theorist. B. in London, he was till 1891 a civil servant, and in 1895 was the principal founder of the London School of Economics, where he was prof. of public administration 1912–27. Among the founders of the Fabian Soc. in 1884, he was a member of the Labour Party executive 1915–25, entered parliament in 1922, and was pres. of the B. of T. 1924, Dominions Sec. 1929–30, and Colonial Sec. 1929–31. He received a peerage in 1929. He m. in 1892 Beatrice Potter (1858–1943), who collaborated with him in a series of books, e.g. *History of Trade Unionism* (1894), *English Local Government* (1906), and *Soviet Communism* (1935), and whose own writing incl. *My Apprenticeship* (1926) and *Our Partnership* (1948).

PASSION FLOWER. Genus of climbing plants (*Passiflora*). The name is derived from the likeness of certain parts of the flower to symbols of the crucifixion of Christ.

PASSIONISTS. R.C. religious order founded in 1720 by St. Paul of the Cross (1694–1775), which combines the active and the contemplative life.

PASSION PLAY. A play representing the death and resurrection of a god. In ancient Egypt there were plays in honour of Osiris held at Abydos, and in Greece the mysteries of Dionysus were performed. Christian plays depict the crucifixion and resurrection of Christ, e.g. certain of the medieval miracle plays, and that held at Oberammergau, in Bavaria.

PASSOVER. An ancient Jewish spring festival, which commemorates the Exodus from Egypt. Its

PASSION FLOWER

Hydrocarbons form one of the most prolific of the many organic types. Typical groups containing only carbon, hydrogen, and oxygen are alcohols, aldehydes, ketones, ethers, esters, carbohydrates, etc. Among nitrogenous types are amides, amines, nitro-compounds, amino-acids, proteins, purines, alkaloids, and many others, both natural and artificial. Other organic types contain sulphur, phosphorus, halogens, etc.

The most fundamental of organic chemical reactions are oxidation, reduction, hydrolysis, condensation, polymerization, and molecular rearrangement. In nature, such changes are often brought about through the agency of promoters known as *enzymes*, which act as catalytic agents in promoting specific reactions. The most fundamental of all natural processes is *synthesis*, or building up. In living plant and animal organisms the energy stored in carbohydrate molecules, derived originally from sunlight, is released by slow oxidation and utilized by the organisms. The complex carbohydrates thereby revert to carbon dioxide and water, from whence they were built up with absorption of energy. Thus, a so-called carbon food cycle obtains in nature. In a corresponding nitrogen food cycle, complex proteins are synthesized in nature from carbon dioxide, water, soil nitrates, ammonium salts, etc., and these proteins ultimately revert to the elementary raw materials from whence they sprung, with the discharge of their energy of chemical combination.

Originally it was believed that carbon compounds derived from plant and animal sources could not be artificially prepared in the laboratory, but now many organic compounds can be synthesized, some of which are unknown in nature.

ORGANISATION DE L'ARMÉE SECRÈTE (O.A.S.). French terrorist organization formed in 1961 with the aim of overthrowing the constitutional régime in Algeria and establishing *Algérie française*. It was headed by Gen. Raoul Salan (imprisoned 1962–8) and Bidault (q.v.).

ORGANIZATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT (OECD). New title of the OEEC from 1961, when the U.S.A. and Canada became full members and its original scope was extended to incl. development aid. Its H.Q. are in Paris.

ORGANIZATION OF AFRICAN UNITY. By its charter, adopted at the Addis Ababa Conference of Heads of African States (30 independent countries were represented) in 1963, it is pledged to eradicate colonialism, emancipate still dependent territories, and improve conditions in the economic, cultural and political spheres throughout Africa and its adjoining islands. The permanent H.Q. is at Addis Ababa.

The French-speaking *Joint African and Malagasy Organisation* (Organisation commune africaine et malgache: OCAM) was estab. 1965 to work within the framework of the O.A.U. for African solidarity: H.Q. Yaoundé. See *INTER-AFRICAN and MALAGASY O.*

ORGANIZATION OF AMERICAN STATES. In 1890 at Washington, under the auspices of U.S. Sec. of State James G. Blaine, the *International Union of the American Republics* was estab. to encourage friendly relations. Its central office at Washington, known from 1910 as the *Pan-American Union*, became in 1948 the central and permanent organ of the more comprehensive O. of A.S.

ORGANIZATION OF CENTRAL AMERICAN STATES (*Organización de Estados Centro Americanos*: O.D.E.C.A.). The 1st organization of this name, estab. in 1951, was superseded by a new one in 1962: membership – Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua, provision being made for Panama to join at a later date. The permanent H.Q. is in Guatemala City.

ORIENTEERING. Sport of pedestrian route-

finding, developed in Scandinavia and introduced to Britain c. 1960. Competitors start at minute intervals, with a 2½ in. to the mile map marked with the exact location of control points about half a mile apart, where their control cards are stamped.

ORIGEN (ô'rijen) (c. 185–c. 254). A Father of the Christian Church. He was b. probably at Alexandria, and his father was the Christian martyr, Leonidas, beheaded in 202. After teaching at Alexandria 204–32 he was banished and settled in Caesarea, where he founded another school. Under Decius in 250 he was arrested and put to torture at Tyre, where he d.

His writings covered every aspect of Christianity, but he is chiefly remembered for his fanciful method of allegorical exegesis of the Bible.

ORIGINAL SIN. The Christian doctrine that, as a result of Adam's fall, man is by nature corrupt, and can obtain salvation only through divine grace.

ORINOCO. River of northern S. America, flowing for c. 1,500 m. through Venezuela, and forming for

c. 200 m. the boundary with Colombia in which rise the Guaviare, Meta, Apure, and other left-bank tributaries; right-bank tributaries incl. the Ventuari, Caura, and Caroni. The O. is navigable by large steamers for 700 m. from its Atlantic delta. Rapids obstruct the upper river.

ORIOLES (ô'ri-ôlz). Passeriform birds of the Oriolidae family, well known in Europe. They are

shy and restless, with brilliant plumage. Other species

extend to Asia and Africa, while in America the name is applied to the Icteridae family. The golden O. visits Britain.

ORISSA. State of the Rep. of India, situated between W. Bengal to the N.E. and the Bay of Bengal and Andhra to the S.W. The Mahanadi flows through the state, and iron is mined. The state of O. includes the former British prov. of O., conquered 1803 and

soprano. B. at Madrid, she made her debut in America in 1859, and was celebrated in such roles as Lucia and Amina in *La Sonnambula*. She became a British subject in 1898.

PATTON, George Smith (1885–1945). American gen., known for his fiery daring as 'blood and guts' P. He commanded the 2nd Armoured Division in 1940, and in 1942 led the W. Task Force which landed at Casablanca. After commanding the 7th Army, he led the 3rd Army in France, Belgium, and Germany, and in 1945 took over the 15th Army. He d. following a motor accident.

PAU (poh). Town and health resort of S.W. France, cap. of Basses-Pyrénées dept. P. was the birthplace of Henry IV of France and of Marshal Bernadotte, afterwards Charles XIV of Sweden. Pop. (1962) 61,468.

PAUL (c. A.D. 3–c. 64 or 68). Christian saint and apostle, whose real name was Saul. B. in Tarsus, the son of well-to-do Pharisees, he possessed Roman citizenship, and was ed. at Jerusalem at the school of Gamaliel. He took part in the stoning of Stephen, but while on a journey to Damascus was himself converted by a vision. After 3 years' meditation in Arabia, he returned to Damascus to begin his work as an apostle. After some 12 years of preparatory work he set out from Antioch on the first missionary journey among the Gentiles with Barnabas, journeying through Cyprus and Pamphilia. On a 2nd journey he revisited the churches estab. during the 1st, and founded further churches in Greece. The 3rd journey covers similar ground, but is chiefly concerned with his return to Ephesus, which became one of the great centres of Christian teaching. Returning to Jerusalem, he was arrested, appealed to Caesar, and was sent to Rome for trial c. 57 or 59. After 2 years' imprisonment he was possibly released before his final arrest and execution under Nero. Thirteen epistles in the N.T. are attributed to him.

PAUL. Name of 6 popes. Paul VI (Giovanni Battista Montini, 1897–). B. nr. Brescia, the son of

PAUL. Pope Paul VI is seen emerging from the small chapel of the tomb of Christ in Jerusalem, during his pilgrimage to the Holy Land, in 1964. Photo: Associated Press.

a banker and journalist, he spent more than 25 years in the Secretariat of State under Pius XI and Pius XII before becoming archbp. of Milan in 1954. In 1958 he was created a cardinal by Pope John, with whom he was in close accord, and visited the new African states at his request in 1962. In 1963 he succeeded him as pope and was crowned in St. Peter's Square – thought to be the first open-air coronation in the history of the Church – taking the name of Paul as symbolic of ecumenical unity. In 1964 he became the first pope to visit the Holy Land since St. Peter.

PAUL I (1754–1801). Tsar of Russia. The son of Peter III and Catherine II, he succeeded his mother in 1796. His mind was already unhinged, and his foreign policy was capricious. He was assassinated.

PAUL (1901–64). King of the Hellenes. The son of King Constantine, he served in the navy for some years and in 1947 he succeeded his brother George II. He m. in 1938 Princess Frederika (1917–), dau. of the duke of Brunswick, whose political role brought her under attack. He was succeeded by his son Constantine XIII.

PAULING (pawl'-), Linus Carl (1901–). American chemist. Professor at the California Institute of Technology 1931–63, he was noted for his fundamental work on the nature of the chemical bond and was awarded the Nobel prize for chemistry in 1954. An outspoken opponent of nuclear testing, he received the Nobel peace prize in 1962.

PAUL, NUS (d. 644). Missionary. B. in Rome, he joined Augustine in Kent in 601, and converted the Northumbrians in 625, becoming first archbp. of York. He returned to Kent in 633.

PAULUS (pow'lus), Friedrich (1890–1957). German field marshal, commander of the forces besieging Stalingrad 1942–3. He gave evidence at Nuremberg, and later lived in E. Germany.

PAUSANIAS (2nd cent. A.D.). Greek geographer. B. probably in Lydia, he based his *Description of Greece* on his own travels.

PAVIA (pahv'e'ah). Cap. of P. prov., Lombardy, N. Italy. Notable buildings incl. the 11th cent. basilica of S. Michele, the 15th cent. cathedral, and the univ. (1490). In 1525 P. saw the defeat of the French under Francis I by the Emperor Charles V. Pop. (1961) 73,503.

PAVLOV, Ivan Petrovich (1849–1936). Russian physiologist. B. near Ryazan, he became a director of the Institute of Experimental Medicine at St. Petersburg in 1913. He carried out research on digestion, for which he received a Nobel prize in 1904. His study of conditioned reflexes in animals influenced the behaviourist school of psychology.

PAVLOVA, Anna (1885–1931). Russian dancer. B. at St. Petersburg, she made her début in 1899, appeared in London in 1910, and subsequently toured the world with outstanding success, espec. in *Le Cygne*, popularizing the Russian ballet everywhere. She d. in Holland.

PAWNBROKER. One who lends money on the security of goods held the traditional sign of the premises being the 3 gold balls which were the symbol used in front of their houses by the medieval Lombard merchants. In Britain, under an Act of 1872 (amended 1960), the sum lent must not exceed £50 and pledges are redeemable within 6 months and 7 days: unredeemed goods pledged for less than £2 become the P.'s property, others are sold by public auction. The trade has much declined in post-war Britain.

PAWPAW or Papaya. Tropical tree (*Carica papaya*), originating in S. America and grown in many tropical countries. The edible fruits resemble a melon, with orange-coloured flesh and numerous blackish seeds in the central cavity, and may weigh c. 20 lb. The fruit juice or the tree sap are often used to tenderize meat for the table. In the U.S.A. the name 'pawpaw' is given to *Asimina triloba*, which has an unpleasant odour but carries fleshy edible oval berries c. 3 in. long.

PAXINO (pak'sin-oo), Katina (1904–). Greek actress. Leading lady of the Greek National Theatre from 1932, she excels in the classic roles of Clytemnestra, Electra, Medea, etc., and was awarded an Oscar for her film appearance as Pilar in *For Whom the Bell Tolls*.

PAXTON, Sir Joseph (1801–65). British architect, garden superintendent to the duke of Devonshire from 1826 and designer of the Great Exhibition

ORTOLAN. A bird (*Emberiza hortulana*) of the bunting family, common in Europe and W. Asia. Migrating southward or returning, it is netted, then fed and killed for the table. It is variously coloured, with a grey head.

ORTON, Arthur (1834–98). The 'Tichborne Claimant'. B. in Wapping, the son of a butcher, he claimed in 1866 to be Sir Roger Tichborne, bart., who had been lost at sea in 1854, and was accepted as such by Sir Roger's mother. After a sensational trial, he was imprisoned for perjury.

ORVIETO (orvĕ-ā'tō). City in Terni prov., Italy. It stands on an eminence, 10 m. N.E. of Lake Bolsena. The magnificent 14th cent. cathedral contains sculpture by Orcagna and frescoes by Luca Signorelli and Fra Angelico, and doors (1963) by Emilio Greco (q.v.). It is on the site of Volsinii, one of the 12 Etruscan cities, which was destroyed by the Romans 280 B.C.; it has many Etruscan remains. Pop. (1960) 25,200.

ORWELL, George. Name adopted by British author Eric Blair (1903–50). B. in India, he was ed. at Eton as a scholarship boy, and for 5 yrs. served in the Burmese police force, an experience reflected in the novel *Burmese Days* (1935). Adventures as dishwasher, schoolmaster, and bookshop assistant were related in *Down and Out in Paris and London* (1933) and service for the Republican cause in the Spanish Civil War in *Homage to Catalonia* (1938). His greatest book is the satire *Animal Farm* (1945) which incl. such sayings as 'All animals are equal, but some are more equal than others', but the greatest sensation was made by *1984* (1949) which carries state control of existence to the ultimate.

ORYX

ORYX (or'iks). Genus of large African desert antelope, incl. 6 species, some of which extend to Syria and Arabia, but are almost extinct. Attempts are being made to breed them in captivity. In profile the 2 long horns appear as one and the O. may have given rise to the legend of the unicorn.

OSAKA (ōsah'ka). Second-largest city and a port of Japan. Situated on the island of Honshu, and lying on a plain sheltered by hills and opening on to O. bay, O. is honeycombed with waterways. Oldest city of Japan, it was at times the seat of govt. 4–8th cents., was a mercantile centre in the 18th, and in the 20th set the pace for Japan's revolution based on light industries. Manufactures incl. iron and steel, ships, chemicals, and textiles. It is a tourist centre for Kyoto and the Seto Inland Sea, and linked with Tokyo by fast electric train (124 m.p.h.), and was chosen as the site for the 1970 World Exposition. Pop. (1968) 3,150,000.

OSBORNE, Dorothy (1627–95). English letter-writer. In 1655 she m. Sir William Temple (1628–99), to whom she wrote her letters (1652–4), first pub. in 1888.

OSBORNE, John James (1929–). English dramatist and actor. He became well known as an 'angry young man' when his first play, *Look Back in Anger* (1956), in which the hero satirises middle-class life, was produced. His later plays incl. *The Entertainer* (1957), and *Luther* (1960). He was m. to the actress Mary Ure (1957–63), film critic Penelope Gilliat (1963–8), and actress Jill Bennett from 1968.

OSBORNE HOUSE. A favourite residence of Queen Victoria, for whom it was built in 1845, 1 m. S.E. of Cowes in the Isle of Wight, England. It was presented to the nation by Edward VII.

OSCAR. The name of 2 kings of Sweden and Norway. Oscar I (1799–1859) succeeded his father, Charles XIV, in 1844, while his younger son, Oscar II

(1829–1907), came to the throne in 1872. He abandoned the title of king of Norway on the separation of the two kingdoms in 1905.

OSCAR. Annual cinema award in various fields (10 in. bronze-gilt statuette) estab. 1927 by the American Academy of Motion Pictures, and nicknamed O. 1931 because a new secretary exclaimed, 'That's like my uncle Oscar!'

OSAKA. In 1585 warlord Toyotomi Hideyoshi, who chose the city as his base for unifying the country, mobilized 30,000 workers for three years to build this giant castle, largely reconstructed 1931. Courtesy of Japanese Embassy.

OSCILLATOR. An O. is a generator producing a desired oscillation. It is an essential part of a radio transmitter, as it generates the high-frequency carrier signal necessary for radio communication. There are many types of O. for different purposes involving various arrangements of valves or transistors, inductors, capacitors, and resistors, and the frequency is often controlled by the vibrations set up in a crystal, e.g. quartz.

O'SCILLOGRAPH. Instrument for producing a graph representing a varying quantity that can be measured electrically as a function of time. The most

OSBORNE HOUSE. In this bedroom, carefully preserved with its original furnishings, Queen Victoria died. Next to the picture of the Prince Consort, to the left of the bedhead, is the pocket in which he placed his watch each night before retiring. Crown copyright.

common form now used is the cathode-ray O. See CATHODE-RAY TUBE.

OSIER (ō'zhier). A tree or shrub of the willow genus (*Salix*), cultivated for basket making.

OSIPENKO (osype'nkō). Port in the Ukrainian S.S.R., on the N.W. of the Sea of Azov, with ship-building yards, agricultural machinery and aircraft factories, etc. It is a port for petroleum from Baku

temperate countries), in the family *Rosa ccae*. Blooming earlier than the apple, it is less hardy.

PEARL. Calcareous substance secreted by many molluscs, which when deposited in thin layers on the inside of the shell forms the mother-of-pearl used in ornamental and inlay work, and when deposited round some irritant body forms Ps. Although commercially valuable Ps. are obtained from freshwater mussels, etc., the precious P. comes from the various species of *Margaritifera* in the family *Aviculidae*, found in tropical waters off N. and W. Australia, the Californian coast, and in the Indian Ocean. The introduction on a commercial scale by the Japanese c. 1920 of cultured Ps., produced by inserting an artificial irritant in the body of the oyster, largely affected the value of natural Ps.

PEARL HARBOR. U.S. Pacific naval base in Oahu, chief of the islands forming Hawaii state, U.S.A., the scene of a Japanese attack on 7 Dec. 1941, during the S.W.W., which took place while Japanese envoys were holding 'peace' talks at Washington. 66 Japanese aircraft operating from aircraft carriers did much serious damage to warships and naval and military aircraft and installations. The local commanders, Admiral Kimmel and Lt.-Gen. Short, were relieved of their commands, and in the report of a final inquiry, made after the war, they were held responsible for the fact that the base, despite warnings, was totally unprepared at the time of the attack.

PEARS, Peter (1910–). British tenor. A co-founder with Britten of the Aldeburgh Festival, he is closely associated with the composer's work and played the title role in *Peter Grimes*: he has also often been the first performer of works by Tippett and Berkeley.

PEARSE, Patrick Henry (1879–1916). Irish poet and republican. B. in Dublin, he was prominent in the Gaelic revival, and led the Easter Rebellion of 1916. He was proclaimed president of the provisional govt., and after its suppression was court-martialled and shot.

PEARSON, Sir Cyril Arthur (1866–1921). British newspaper proprietor. He founded *P.'s Weekly* in 1890 and the *Daily Express* in 1900, and purchased the *Evening Standard* in 1904. Blindness obliged him to retire from business in 1910, and in 1915 he turned his house, St. Dunstan's, Regent's Park, into a hospital for blinded soldiers.

PEARSON, Lester Bowles (1897–). Canadian Liberal statesman, known as 'Mike' P. B. in Toronto, son and grandson of Methodist clergymen, he was ambassador to Washington 1945–6. Appointed For. Min. by St. Laurent (1948–57), he effectively represented Canada at the U.N. and only Soviet opposition prevented his becoming Sec.-Gen.: in 1957 he was awarded a Nobel peace prize principally because of his role in the creation of the U.N. Emergency Force. Leader of the Liberal Party from 1958, he was twice defeated by Diefenbaker at the polls, but in 1963 achieved enough seats to head a minority govt., renewed after a general election (1965–8). In 1968 he became Head of the World Bank Commission on Economic Development.

PEARY, Robert Edwin (1856–1920). American Polar explorer. B. in Pennsylvania, at his 7th attempt he was the first man to reach the North Pole, on 6

April 1909. He sailed to Cape Sheridan in the *Roosevelt*, and then made a sledge journey to the Pole.

PEASANTS' REVOLT. The rising of the English peasantry in June 1381. Led by Wat Tyler and John Ball, the rebels occupied London and forced Richard II to abolish serfdom, but after Tyler's murder were compelled to withdraw. The movement was then suppressed, and the king's concessions revoked.

PEAT (pēt). Deposit, which varies from compacted fibre to a type of woody brown coal or lignite, formed by the decomposition of aquatic plants, e.g. sphagnum moss and *Thacomitrum lanuginosum*. It may reach a depth of 30 ft. and extend for miles, Russia, Canada and Finland having large deposits. In Scotland and Ireland, dried P. has been used as fuel from time immemorial and our ill. shows P. being cut in Morayshire for malting the barley used in making Scotch whisky: the peat 'reek' contributes to the flavour.

Courtesy of the Distillers Co. Ltd.

PECAN (pikan). Nut-producing tree (*Carya illinoensis*), native to southern U.S.A. and possibly N. Mexico, and now widely cultivated. The tree grows to over 150 ft., and the edible nuts are smooth-shelled, the kernel resembling a smoothly ovate walnut. See HICKORY.

PECCARY. American genus of pig-like animals (*Dicotyles*), having a gland in the middle of the back which secretes a strong-smelling substance. Blackish in colour, they are covered with bristles, and the skins make a useful leather. Travelling in herds, they are often belligerent.

PECHENGA (pye'chenga). Ice-free fishing port in Murmansk region, R.S.F.S.R., on the Barents Sea, more familiar under its Finnish name Petsamo. Russia ceded P. to Finland in 1920, recovered it under the peace treaty with Finland, 1947. Pop. (est.) 5,000.

PÉCS (päch). Univ. town of S.W. Hungary, cap. of Baranya county, close to a coalfield. Dating from Roman times, P. was under Turkish rule 1543–1686, and 2 of its churches were originally mosques. Pop. (1966) 130,000.

PEDERSEN (peh'dersen), **Christiern** (1480–1554). Founder of Danish literature. He became a canon of Lund cathedral, and accompanied Christian II into exile in 1525. While in Holland he completed a Danish version of the N.T. and the Psalms (1529–31).

PEDIATRICS. Branch of medicine dealing with diseases of children and the study of childhood.

PEDIMENT. In architecture, the triangular part crowning the fronts of buildings in classic styles. The P. was a distinctive feature of Greek temples.

PEDO-METER. Instrument for measuring the distance covered by a pedestrian from the number of his steps and their average length. It is so arranged that each step moves a swinging weight, which in turn causes a mechanism to rotate and move a pointer step by step over a dial.

PEDRO. Name of 2 emperors of Brazil. **Pedro I** (1798–1834), the son of John VI of Portugal, escaped to Brazil on Napoleon's invasion, and was appointed regent in 1821. He proclaimed Brazil independent in 1822, and was crowned emperor, but abdicated in 1831 and returned to Portugal. His son **Pedro II** (1825–91), who succeeded him, proved an enlightened ruler, but his anti-slavery measures alienated the landowners, who in 1889 compelled him to abdicate.

PEEBLESSHIRE. Pastoral county of S. Scotland. It has several high peaks, such as Broad Law (2,754

LESTER PEARSON
Courtesy of the High Commissioner for Canada.

OSTRICH. In Victorian and Edwardian times ostrich feathers were the hallmark of feminine fashion, but are now used chiefly in costumes for stage and cabaret productions. These fine specimens are seen in the Mountain Zebra National Park on the Karroo.

Courtesy of the South African Information Service, Pretoria.

in a coal-mining district. It has heavy iron works and furnaces. Pop. (1967) 270,000.

OSTRICH. Genus (*Struthio*) of flightless birds found in Africa and Arabia. The male may be c. 8 ft. tall and weigh 300 lb., and is the largest of extant birds. Living in family groups of 1 cock with several hens, the O. has exceptionally strong legs and feet (2-toed) which enable it to run at high speed and are also used in defence. The beautiful tail feathers have commercial value and Os. are bred in farms, especially in S. Africa. See RATITAE.

OSTROGOTHS. See GOTHS.

OSTROVSKY, Alexander Nikolaevich (1823-86). Russian playwright. B. in Moscow, he founded a model theatre and a school of drama at Moscow. His best-known play is *The Storm* (1860), depicting the merchant class.

OSTWALD, Wilhelm (1853-1932). German chemist. B. at Riga, he held professorships at Riga and Leipzig, and in 1909 was awarded the Nobel prize for chemistry. He is remembered for his work on the affinity constants of acids and bases, on the viscosity of solutions, and on oxides of nitrogen.

OSWALD, St. (c. 605-42). King of Northumbria. While exiled in Iona, he was converted to Christianity, and in 634 won the Northumbrian crown. With the assistance of St. Aidan he furthered the spread of Christianity until he was defeated and killed by the heathen king Penda of Mercia.

OSWESTRY (oz'estri). English market town (bor.) in Salop, near the Welsh border. There is a church dedicated to St. Oswald, king of Northumbria, who was killed here in 642. Agricultural machinery, plastics, clothing, etc., are made. Pop. (1961) 11,193.

OTAGO (ōtah'go). Statistical area in S. Is., New Zealand, in which sheep are reared, wheat and oats grown, and gold is found. Area 14,070 sq. m.; pop. (1966) 183,477.

O. was formerly the name of a provincial dist., area 25,530 sq. m., with cap. at Dunedin, seat of O. univ.

OTARU (ōtah'roo). Fishing port on W. coast of Hokkaido, Japan, with paper mills; processes fish and makes sake. Pop. (1965) 197,000.

OTIIMAN (c. 574-656). Arabian caliph. A son-in-law of Mohammed, he was elected caliph in 644. Under his rule the Arabs became a naval power and captured Cyprus, but his personal weaknesses led to his assassination.

OTHMAN I. See OSMAN.

OTRANTO. Seaport and archiepiscopal see in Apulia, Italy, on the Strait of O. The cathedral was begun in 1080. Pop. (1960) 4,100.

OTTAWA. Cap. of Canada, in the prov. of Ontario, occupying a hilly region overlooking the r. Ottawa, about 100 m. W. of Montreal. It is divided into 2 parts by the Rideau Canal—to the W. Upper Town, to the E. Lower Town. There are 2 falls providing power for the city, viz. the Chaudière Falls, on the Ottawa, and the Rideau Falls. The principal buildings are the govt. buildings on Parl. Hill, the R.C. cathedral of Notre Dame, Christ Church cathedral, the Nat. Museum, the Nat. Art Gallery, the Observatory, Rideau Hall—the gov.-gen.'s residence—and the Nat. Arts Centre (1969). The chief industry is lumbering, and wood pulp and paper are manufactured. The city was founded when a body of men under John By were building the Rideau Canal, 1826-32, and was named Bytown in By's honour; it was renamed O. (from the Outaouac Indians who traded furs with the French in the 17th cent.) in 1854 and chosen by Queen Victoria as cap. of Canada in 1858. Pop. (1966) 494,535.

OTTAWA AGREEMENTS. The trade agreements concluded at the Imperial Economic Conference, held at Ottawa in 1932, between Britain and the Dominions (except the Irish Free State), India, and S. Rhodesia. The Dominions agreed to lower their preferential tariffs on British manufactures, while Britain admitted almost all Dominion produce free of duty, granted preferences to the rest, and increased duties on foreign imports competing with Dominion produce. The agreements marked the abandonment by Britain of her traditional free-trade policy.

OTTER. Aquatic carnivore of the weasel family. The O. of Europe and Asia (*Lutra vulgaris*) has a broad head, elongated body covered by grey-brown fur, short legs, and webbed feet: including a 1½ ft. tail, it measures c. 3½ ft. It lives on fish and in Britain is hunted. There are a no. of American species, e.g. the larger *L. canadensis* of N. America and the commercially valuable fur-bearing sea O. (*Lutra lutris*) of the N. Pacific.

mercially valuable fur-bearing sea O. (*Lutra lutris*) of the N. Pacific.

OTTO. Name of 4 Holy Roman emperors. Otto I (912-73) succeeded in 936, restored the power of the empire, asserted his authority over the Pope and the nobles, ended the Magyar menace by his victory at the Lechfeld in 955, and re-founded the East Mark, or Austria, as a barrier against them. Otto IV (c. 1182-1218), elected emperor in 1198, engaged in controversy with Innocent III, and was defeated by the Pope's ally, Philip of France, at Bouvines in 1214.

OTTOMAN EMPIRE. Moslem Empire founded in Turkey c. A.D. 1300, succeeding the Seljuk Empire. Driven out of central Asia in 1402, the Turks recovered and captured Constantinople in 1453, destroying the remnants of the Byzantine Empire. After various conquests the O.E. by the end of the 16th cent. extended from Hungary to Egypt and parts of Persia. From then a period of disintegration followed until in 1920 the O.E. came to an end, being replaced by the Rep. of Turkey (q.v.).

OTWAY, Thomas (1652-85). British dramatist. B. near Midhurst, Sussex, he wrote for the stage from 1675, his chief plays being *The Orphan* (1680) and *Venice Preserved* (1682). He d. destitute in London.

OUDENAARDE (ow'denahrde). Small town of E. Flanders, Belgium, on the Scheldt, 18 m. S.S.W. of Ghent. O. was the site of Marlborough's victory over the French in 1708.

Wales. The Teify and the E. and W. Cleddau are the chief rivers. The main occupations are agriculture and coal-mining. Haverfordwest is the county town; Fishguard, with ferry connections to Ireland, and Milford Haven, with petroleum refineries, are important ports. Most of the coast was made a national park in 1951. Area 614 sq. m.; pop. (1961) 93,980.

PE'MMICAN. A preparation of dried fatless beef or venison pressed into cubes, used as a food by Arctic explorers and N. American Indians.

P.E.N. Literary association estab. in 1921 by C. A. Dawson Scott, to promote international understanding between writers. The initials stand for Poets, Playwrights, Editors, Essayists, Novelists.

PENANCE. Term in theology used for repentance for sin; an R.C. sacrament, involving confession of sins and the reception of absolution; and works performed or punishment self-inflicted in atonement for sin.

PENANG. State of W. Malaysia, Fed. of Malaysia under a governor, formed of P. Island (bought by the British from the ruler of Kedah 1785), Province Wellesley (acquired 1800) and the Dindings on the mainland. Its chief town is George Town. Area 400 sq. m.; pop. (1966) 743,833.

PENARLAG. Welsh name of HAWARDEN.

PENARTH. Seaport (U.D.) and resort in Glamor-

PENANG. Malaysia's chief port—the name means 'betel nut'—is built on a promontory running out towards the mainland and lies at the foot of Penang hill (2,428 ft.). There are fine buildings dating from the 19th century as well as modern offices and stores beyond the busy waterfront.

Courtesy of Malaysian Govt.

ganshire, Wales, across the mouth of the Ely from Cardiff. Pop. (1961) 20,897.

PENATES. The household gods of a Roman family.

PENDA (d. 655). King of Mercia from 626. He raised Mercia to a powerful kingdom, and defeated and killed 2 Northumbrian kings, Edwin and Oswald. He was killed in battle with the Northumbrians.

PENDELBURY. John Devitt Stringfellow (1904–41). British archaeologist. Working with his wife, he excavated at Tell el Amarna and became the world's leading expert on Crete, pub. in 1939 a survey *Archaeology in Crete*. In the S.W.W. he was deputed to prepare guerrilla resistance on the island, was wounded during the German invasion and shot by his captors.

PENELOPE. Wife of Odysseus. During his absence after the siege of Troy she kept her many suitors at bay by asking them to wait until she had woven a shroud for her father-in-law, but undid her work nightly. When Odysseus returned, he slew her suitors.

PENFIELD. Wilder Graves (1891–). Canadian neurosurgeon. B. in the U.S.A., he has specialized in operations for epilepsy and in the electrical stimulation of the brain. He received the O.M. in 1953.

PENGUIN. Family of flightless seabirds found only

in Antarctic regions. Designed for speed in and under the water, they are awkward on land, where they congregate in 'rookeries' to breed. One or 2 eggs are laid in a hole in the ground or 'nest' of stones. Well known among smaller species is the black-footed P.: the largest are the king P. (*Aptenodytes longirostris*) and emperor P. (*A. fosteri*).

PENIAKOV. Vladimir. See **POPSKI'S PRIVATE ARMY.**

PENICILLIN. An organic acid formed during the growth of the common mould, *Penicillium notatum*. Even in very weak dilutions it prevents the growth of certain bacteria, many of which are harmful to man, e.g. some of the staphylococci and streptococci, and the organisms of pneumonia, gonorrhoea, meningitis, anthrax and tetanus. Extremely valuable in medicine and surgery, it played an important part in the S.W.W. It was discovered by Sir Alexander Fleming, and its practical use was developed by Sir Howard Florey and E. B. Chain at Oxford.

PENINSULAR WAR. The war of 1808–14 caused by Napoleon's invasion of Portugal and Spain. Portugal was occupied by the French in 1807, and in 1808 Napoleon placed his brother Joseph on the Spanish throne. Armed revolts followed all over Spain and Portugal. A British force under Sir Arthur Wellesley was sent to Portugal and defeated the French at Vimeiro; Wellesley was then superseded, and the French were allowed to withdraw. Sir John Moore took command and advanced into Spain, but was forced to retreat to Corunna, when his army was evacuated. Wellesley took a new army to Portugal in 1809, and advanced on Madrid, but after defeating the French at Talavera had to retreat. During 1810–11 Wellesley (now Visct. Wellington) stood on the defensive; in 1812 he won another victory at Salamanca, occupied Madrid, and forced the French to evacuate S. Spain. The victory at Vittoria (1813) drove the French from Spain, and in 1814 Wellington invaded S. France. The war was ended by Napoleon's abdication.

PENIS. The male organ of generation in reptiles, birds, and mammals; it also carries the passage through which urine is discharged from the bladder.

PENKI (pen'chē). Chinese industrial centre in Liaoning prov., 40 m. S.E. of Mukden. It dates from the 18th cent., but its industrial development began in 1915. It covers nearly 200 sq. m. and produces pig iron, steel, cement, refractories, etc., based on the presence of high-grade coking coal. Pop. (1965) 530,000.

PENN. William (1644–1718). British Quaker and founder of Pennsylvania. B. in London, the son of the Admiral Sir William P. (1621–70), he joined the Quakers in 1667. In 1681 he obtained a grant of land in America, in settlement of a debt owed by the king to his father, on which he estab. the colony of Pennsylvania as a refuge for the persecuted Quakers.

PENNEL. Joseph (1860–1926). American illustrator, etcher, and lithographer. B. in Philadelphia, he settled in London where he came under the influence of J. M. Whistler, whose life he wrote.

PENNEY. William, baron (1909–). Brit. scientist. He worked at Los Alamos (q.v.) 1944–5, and for his design of the first British atom bomb was knighted in 1952. Director of Atomic Weapons Research Establishment 1953–9, he was chairman of U.K.A.E.A. 1964–7: created life peer 1967, awarded O.M. 1969.

BLACK-FOOTED PENGUINS

OWL. Bird of prey in the sub-order Striges, the majority being nocturnal. The Os. are characterized by large eyes encircled by radiating feathers set in a forward position (though the head has a compensating mobility); short, hooked beak; and soft, thick plumage which gives them a soundless flight. The diet consists mainly of rodents consumed whole, the indigestible remains being disgorged in pellets or 'castings'. All species lay white eggs, and, contrary to the habit of most birds, incubation begins as soon as first is laid. Familiar species are the tawny O. (*Strix aluco*) of Europe and the Near East; the large eagle O. (*Bubo ignavus*) of Europe and Asia – both with closely allied species in America – and the long-eared O. (*Asio otus*) and short-eared O. (*A. accipitrinus*) which have a wide range in both the old and new worlds. Also of interest are the little O. (*Athene noctua*), symbol to the Greeks of the goddess of wisdom and naturalized in Britain, and the handsome snowy O. (*Nyctea scandiaca*), which moves south in winter from the Arctic. Generally Os. are sombrely coloured, and have a reputation as birds of ill-omen from the unearthly quality of their cries.

TAWNY OWL

OX. The castrated male of domestic species of cattle (q.v.), used particularly in underdeveloped countries for ploughing and other agricultural purposes, also the extinct wild O. or aurochs of Europe, and extant wild species.

OXALIC ACID. One of the oldest known organic acids, $(\text{COOH})_2 \cdot 2\text{H}_2\text{O}$, it is a white, crystalline, poisonous solid, soluble in water, alcohol, and ether. Salts occur in wood sorrel and other plants. It is used in the leather and textile industries, in dyeing and bleaching, ink manufacture, metal polishes, and for removing rust and ink stains.

OXENSTJERNA (oks'enshärna), Axel Gustafsson, count (1583–1654). Swedish statesman. As Chancellor from 1612, he ably seconded Gustavus Adolphus's foreign policy by his organizing and diplomatic ability. He acted as regent for Queen Christina, and conducted the Thirty Years War to a successful conclusion.

OXFORD, Edward de Vere, 17th earl of (1550–1604). English lyric poet, to whom Shakespeare's plays have been attributed by some.

OXFORD. Cathedral city (co. bor.) and co. tn. of Oxfordshire, England, on the Thames, 51 m. W.N.W. of London. The tower of the Saxon church of St. Martin stands close to Carfax, the intersection of the 4 main roads. During the 13th cent. O. was the meeting-place of several parliaments, and during the Civil War was the Royalist headquarters. The city has greatly expanded with the advent of the large Morris motor works at Cowley, developed under Lord Nuffield. O.'s chief magistrate's title was changed from Mayor to Lord Mayor in 1962. Pop. (1961) 106,124. See OXFORD UNIVERSITY.

OXFORD AND ASQUITH, Earl of. See ASQUITH.

OXFORD GROUP. See BUCHMAN, F. N. D.

OXFORD MOVEMENT. Known also as the Tractarian Movement and Catholic Revival, it attempted to revive Catholic religion in the Church of England. Newman dated the movement from Keble's sermon at Oxford in 1833. The O.M. by the turn of the cent. had transformed the face of the Anglican communion, and is represented today by Anglo-Catholicism.

OXFORDSHIRE. A southern midland county of England, bounded on the S. by the Thames. It is

for the most part in the Thames basin, but there are the Chiltern Hills in the S.E. and spurs of the Cotswolds in the W. Farming flourishes; bricks, paper, cement, and motor-cars are made. The county town is Oxford; other centres are Banbury and Chipping Norton. Area 749 sq. m.; pop. (1967) 358,690.

OXFORD UNIVERSITY. Oldest of the British univs., it was estab. during the 12th cent., the earliest existing coll. being founded in 1249. After suffering from land confiscation during the Reformation, it was reorganized by Elizabeth in 1571. Besides the colls., notable academic buildings are the Bodleian Library (with the New Bodleian, opened in 1946, with a capacity of 5 million books), the Divinity School, and the Sheldonian Theatre. The U. is governed by the Congregation of the Univ.; Convocation, composed of Masters and Doctors, has a delaying power. Normal business is conducted by the Hebdomadal Council. There are c. 10,000 undergraduates.

OXIDE. A binary compound of oxygen and another element. The 3 main classes are: (1) Acidic Os., which combine with basic Os. to form salts; (2) basic Os., reacting with acids to form salts; and (3) neutral Os., possessing neither acid nor basic properties.

OXFORD UNIVERSITY. Magdalen Bridge and College and, in the foreground, punts moored on the river Cherwell. Photo: British Travel and Holidays Association

PERAK. The Ubud Mosque at Kuala Kangsar, was built by the Sultan Idris, regent of Perak, an enlightened ruler and administrator of the late 19th cent. The Italian marble of which the mosque was originally planned to have been built was destroyed by a mad elephant and local stone was substituted. Courtesy of Malaya House.

Under British protection from 1874, it is ruled by a sultan. Towns incl. Ipoh the cap. and centre of the Kinta tin-mining fields and Taiping. It exports tin and rubber. Area 7,980 sq. m.; pop. (1966) 1,613,728.

PERCEVAL, Spencer (1762–1812). British Tory statesman. The son of the earl of Egmont, he became Chancellor of the Exchequer in 1807, and P.M. in 1809. He was shot in the lobby of the House of Commons in 1812 by a madman.

PERCH. Genus of spiny-finned fish in the family Percidae. The common freshwater *P. (Perca fluviatilis)*, found in Europe, N. Asia, and N. America, is olive-green or yellowish in colour, with 5 or more dark bands across the back.

PERCY, Sir Henry, called Hotspur (1364–1403). English soldier. The son of the 1st earl of Northumberland, he defeated the Scots at Homildon Hill in 1402, and was killed at Shrewsbury while in rebellion against Henry IV.

PERCY, Thomas (1729–1811). British scholar and bishop of Dromore from 1782. B. at Bridgnorth, he discovered a MS. collection of songs, ballads, and romances, from which he pub. a selection as *Reliques of Ancient English Poetry* (1765), largely influential in the Romantic revival.

PERCZ (pärztz), János (1920–). Hungarian artist. B. in Budapest, he has taught at the Academy of Arts there and since 1948 at an industrial school. At first working mainly in the graphic arts, ceramics and mosaics, from 1950 he specialized in metalwork, and is a leader of the modern Hungarian revival.

PEREZ GALDOS (pä-reth gahl-dós), Benito (1845–1920). Spanish writer, b. at Las Palmas. His novels incl. *La Fontana de oro* (1870), *El Audaz* (1871), the historical series of *Episodios nacionales* (1873–1912), *Gloria* (1877), etc. He also wrote dramas.

PERFUME. Fragrant essence in which more than

100 natural aromatic materials may be blended from a range of c. 60,000 flowers, leaves, fruits, seeds, woods, barks, resins and roots, linked by natural animal fixatives and various synthetics, the latter increasingly used even in expensive Ps. Favoured ingredients incl. balsam, civet, hyacinth, jasmine, lily of the valley, musk, orange blossom, rose and tuberose.

PERGA. Ruined city of Pamphylia, 10 m. N.E. of Adalia, Turkey, noted for its local cult of Artemis. It was visited by St. Paul.

PERGAMUM. Ancient Greek city in W. Asia Minor, which became the cap. of an independent kingdom in 283 B.C. As the ally of Rome it achieved great political importance in the 2nd cent. B.C., and became a famous centre of art and culture. On its site is the Turkish town of Bergama, pop. (est.) 17,000.

PE'RI. In Persian mythology, a species of beautiful, harmless beings, between angels and evil spirits, but ruled by Eblis, the greatest of the latter.

PERICLES (c. 490–429 B.C.). Athenian statesman. He dominated Athenian politics from 461 as leader of the democratic party. He created a confederation of cities under Athens' leadership, but the disasters of the Peloponnesian War led to his overthrow in 430, and although quickly reinstated he d. soon after. The period of his rule marks the climax of Greek culture.

PERIGUEUX (pèhrëgö'). French town, cap. of Dordogne dept., 79 m. E.N.E. of Bordeaux. The Byzantine cathedral dates from 984; there is trade in wine and truffles. Pop. (1962) 41,134.

PERIM (pä-rëm') Island in the strait of Bab-el-Mandeb, the S. entrance to the Red Sea; part of the Rep. of Southern Yemen. Area 5 sq. m.; pop. 300.

PERIODICAL. Publication brought out at regular intervals, which may be informative, entertaining, religious, etc. One of the earliest Ps. pub. in Britain was the *Complete Library* (1691/2), which contained articles and reviews of books. Notable later were Steele's *Tatler* (1709), Addison's *Spectator* (1711), the *Gentleman's Magazine* (1731), John Wilkes's *North Briton* (1762), the *Edinburgh Review* (1802–1929), *Quarterly Review* (1806), *Blackwood's Magazine* (1817), *Spectator* (1828), *Punch* (1841), *Economist* (1843), *Contemporary Review* (1866), *New Statesman* (1913), etc. The increasing spread of literacy at the end of the 19th cent. was accompanied by a demand for light reading matter, and there are today a large number of popular P. at various levels.

In the U.S. periodicals, unlike newspapers, circulate all over the country and some achieve vast circulations, e.g. *Reader's Digest* (1922) sold more than 16½ million copies in 1966. Other notable American Ps. are *Saturday Evening Post* (1728–1969), *Nat. Geographic Magazine* (1888), *New Yorker* (1925) – the two latter have a world circulation – *Look* (1937), *Life* (1946).

PERIODIC TABLE OF THE ELEMENTS. A classification following the statement by Mendeleyev (q.v.) in 1869, that 'the properties of elements are in periodic dependence upon their at. wt.'. In each of 9 main groups there are striking similarities among the elements, based on electronic structure and nuclear charge. See **INORGANIC CHEMISTRY** for chart of P.T.

PERISCOPE. An optical instrument designed for observation from a concealed position. The essence of a P. consists of a tube with parallel mirrors at each end inclined at 45° to its axis. It attained prominence in naval (especially in submarines) and military operations of the F.W.W.

PERIWINKLE. Genus of gastropods found between tide-marks in brown seaweed. The common edible species of 'winkle' (*Littorina littorea*), abundant in Britain, has spread to the Atlantic coast of America. Also genus of plants (*Vinca*), of which the lesser P. (*V. minor*), with light blue flowers, is found in Europe.

PERJURY. The offence of deliberately making a false statement on oath when appearing as a witness in legal proceedings, on a point material to the question

PERCZ. 'Female Figure' – filigree figurine in a frame of welded iron.

PADUA. Under the seven domes of the Basilica del Santa the bones of St. Anthony, to whom it is dedicated, rest in a chapel rich in carved marble. Begun soon after his death in 1231, the building was completed in the 14th cent.

Courtesy of the Italian State Tourist Office.

PADERBORN (pah'dér-). Town of N. Rhine-Westphalia, W. Germany, already the seat of a bishopric in Charlemagne's time. The 11th–13th cent. cathedral was destroyed in the S.W.W. A former Hanseatic town, it makes textiles, leather goods, precision instruments. Pop. (1960) 52,000.

PADEREWSKI (pahderef'skē), Ignacz Jean (1860–1941). Polish pianist, composer and statesman. The son of a Polish patriot, he gained European and American fame after his début in Vienna in 1887 and became a noted exponent of Chopin. After the F.W.W., during which he raised money in America for the relief of Polish war victims and organized the Polish army in France, he became in 1919 P.M. of the newly independent Poland, which he represented at the Peace Conference, but continuing opposition forced him to resign the same year. Having resumed a musical career in 1921, he was Pres. of the Polish National Council in Paris in 1940 and d. in N.Y.

PADUA (pad'ua) (It. Padova). City of N. Italy,

PAGAN. Close by the river is the Shwezigan pagoda, one of many once belonging to the ancient capital, and now beautifully restored. On its platform are seen votive bowls, a golden dragon, and artificial sacred trees.

Courtesy of the Burmah Oil Co. Ltd.

25 m. W. of Venice. The 13th cent. Palazzo della Ragione, and the basilica of S. Antonio, are notable. The univ., founded in 1222, is famous. Pop. (1961) 198,403.

PAESTUM (pes'tum). Ancient Greek city, near Salerno in S. Italy, founded c. 600 B.C. There are a number of temple ruins. See illus. under SALERNO.

PAGAN. Village in Burma, S.W. of Mandalay. It lies close to the ruins of a former Burmese cap., founded 847, taken by Kublai Khan 1287.

PAGANINI (pahgahnē'nē), Nicolo (1782–1840). Italian violinist. B. at Genoa, he first appeared at 9 years old, and from 1805 took Europe by storm. His appearance, his amours, and his virtuosity, especially his performances on a single string, created the legend of his being in league with the Devil. He composed works for the violin notable rather for their ingenious exploitation of the instrument than intrinsic value.

PAGE, Sir Earle Christmas Grafton (1880–1961). Australian statesman. He led the Country Party 1920–39, was P.M. of a caretaker govt. in April 1939 following Lyons's death, represented Australia in the British War Cabinet 1941–2, and as Min. of Health under Menzies, 1949–55, introduced the Australian health scheme in 1953.

PAGE, Sir Frederick Handley (1885–1962). British aircraft engineer, founder of one of the earliest manufacturing cos. in 1909, and designer of long-range civil aircraft and multi-engined bombers in both wars, e.g. the Halifax in the S.W.W. He was knighted in 1942.

PAGOPAGO (pā'gō-pā'gō). Cap. of American Samoa; a harbour in the island of Tutuila. Formerly a naval coaling station, it was acquired by the U.S.A. under a commercial treaty with the local king in 1872. Pop. (1960) 1,251.

PAHANG (pah-hahng'). State of the Federation of Malaysia, ruled by a sultan. The cap. is Kuantan. Rubber, tin, gold, etc., are exported. Area 13,873 sq. m.; pop. (1966) 418,720.

PAHLA'VI, Riza Khan (1877–1944). Shah of Persia. B. at Savad Kuh, he joined the army. In 1921 he headed a revolt, captured Tehran, and became C.-in-C. He assumed the premiership in 1923, and was crowned shah in 1926. He carried out many reforms, but his attitude towards the Allies in the S.W.W. led to his abdication in 1941.

PAHSIEN (pahsyen'). See CHUNGKING.

PAINE, Thomas (1737–1809). British author. B. at Thetford, he went to America in 1774, where he pub. 'Common Sense' (1776), an influential republican pamphlet, and fought for the colonists in the War of Independence. In 1787 P. returned to England, and in 1791 he pub. *The Rights of Man*, an answer to Burke's *Reflections on the Revolution in France*. In 1792 he was indicted for treason but escaped to France, to represent Calais in the Convention. Narrowly escaping the guillotine, he regained his seat after the fall of Robespierre. In 1793 he pub. *The Age of Reason*, opposing Deism to Christianity and Atheism. He returned to America in 1802, and d. in New York.

PAINTING. The chief methods of P. are tempera or distemper, fresco, oil P. (discovered by the Van Eyck brothers in Flanders), and water colour, which evolved from the wash drawings of the 15th–17th cents. and reached its highest development with Turner. The chief kinds of P., apart from those dealing with religious and mythological subjects, are *historical*, as seen in the work of David, Ingres, Delacroix; *portrait*, Van Dyck, Rembrandt, Velasquez, Goya, Reynolds, Gainsborough, Sargent, Sutherland; *landscape*, Claude Lorrain, Corot, Turner, Constable, Cotman; *seascape*, Jan van de Cappelle, van de Velde the Younger, Turner; *genre*, Brueghel, Vermeer, de Hooch; *still life*, Jan and Cornelius van Heem, Chardin, Courbet, Manet, Braque; *abstract*, Picasso, Ernst, Klee, Nicholson.

houses (Majlis, estab. 1906, elected, and Senate, half elected, half nominated by the shah, estab. 1950). Area c. 633,000 sq. m.; pop. (1967) 26,015,000. Most Persians are Shiah Moslems.

History. P. was overrun from c. 1600 B.C. by Aryan tribes, incl. the Persians and the Medes. Cyrus II, who seized the Median throne in 550, formed an empire incl. Babylonia, Syria, and Asia Minor, to which Egypt, Thrace, and Macedonia were later added. During 334–328 it was conquered by Alexander, then passed to Seleucus and his descendants, until overrun in the 3rd cent. B.C. by the Parthians. The Parthian dynasty was overthrown in A.D. 226 by Ardashir, founder of the Sassanid dynasty. During 633–41 P. was conquered for Islam by the Arabs, and then in 1037–55 came under the Seljuk Turks. Their empire broke up in the 12th cent., and was conquered during the 13th cent. by the Mongols. After 1334 P. was again divided until its conquest by Tamerlane in 1380s. A period of anarchy in the later 15th cent. was ended by the accession of the Safavi dynasty, who ruled 1499–1736, but were deposed by the great warrior Nadir Shah (1736–47), after whose death a confused period followed until the accession of the Qajar dynasty (1794–1925). During the 18th cent. P. was threatened by Russian expansion, culminating in the loss of Georgia in 1801 and a large part of Armenia in 1828. Persian claims on Herat, Afghanistan, led to war with Britain in 1856–7. Revolutions in 1905 and 1909 resulted in the establishment of a parliamentary régime. During the F.W.W. P. was occupied by British and Russian forces. An officer, Riza Khan, seized power in 1921, and was proclaimed shah in 1925. P. was occupied by Allied troops during 1941–6, and Riza, who had shown Axis sympathies, abdicated in 1941 in favour of his son Mohammed Riza Shah Pahlavi (1919–). He m. first in 1939 Princess Fawzia of Egypt (div. 1948), secondly in 1951 Soraya Esfandiari (div. 1958) and thirdly in 1959 Farah Diba. Absence of a male heir, only males being eligible to succeed to the Persian throne, led to his divorce from Queen Soraya: a son, Prince Riza, was b. to Queen Farah in 1960. The Shah celebrated the culmination of his 'white revolution' of social and economic reform, incl. distribution of much crown land among the peasants, by his coronation as Shahanshah in 1968.

Art. Persian art dates from the foundation of the Persian nation by Cyrus in 550 B.C. At first the dominant influence was Assyrian art, but throughout its history Persian geographical boundaries have been constantly shifting, and Persian art has been influenced by many different peoples. In pre-Islamic times the Persians were celebrated for their architecture, e.g. the palaces of Darius and Xerxes. Persian carpets, with their beautiful designs based on animal forms, hunting scenes, etc., are the best expression of Persian craftsmanship, but the Persians are also famous for their pottery, especially the ware made at Rhages, probably in the 12th cent. A.D., and their exquisite miniature paintings.

PERSIAN. The earliest language to be used in Persia was the so-called Old Persian (Achaemenian), which used a cuneiform script and appears to date from the period 550–340 B.C. It was followed by Avestic or Zend, the language of the sacred books of Zoroaster. Avestic, which appears to have originated in the N.W. of the country and to have survived until the 3rd cent. A.D., gave way in turn to Pahlavi (3rd–7th cent. A.D.), which shows marked Semitic affinities and incl. much Zoroastrian literature. Parsee or Farsi (A.D. 700–1100) was the immediate predecessor of modern Persian. The latter belongs to the Indo-European group of languages, uses the Arabic alphabet with a few additional letters, has many Arabic words, and was once widely used in India.

P. literature prior to the Arab conquest is represented by the sacred books of the Parsees known as

the Avesta and later translated into Pahlavi, in which language there also appeared various secular writings. After the conquest the use of Arabic became widespread. The P. language was revived during the 9th cent. and the following cents. saw a succession of brilliant poets incl. the epic writer Firdousi (q.v.), Nizami (1140–1203), who excelled in romance, the didactic S'adi (q.v.), the mystic Rumi (1207–73), the lyrical Hafiz (q.v.), and Jami (q.v.) who combined the gifts of his predecessors and is considered the last of the classical poets. Omar Khayyam (q.v.) whose name is so well known outside Persia is less considered there. In the 16th and 17th cents. many of the best writers worked in India, still using classical forms and themes, and it was not until the revolutionary movements and contact with the West of the present cent. that Persian literature moved forward again. Among modern poets are Adib i Pishavari (d. 1930) and the rebel Lahuti (d. 1957) who spent his later life in the Soviet Union, and prominent after the S.W.W. Parviz Natel Khanlari (1914–) and Mohammed Hussein Shahriyar (1904–).

PERSIAN GULF. A large inlet from the Arabian Sea, running N.W. between Persia and Arabia. Area c. 90,000 sq. m.; average depth 90 ft; length 500 m.; average width is about 150 m.

PERSIMMON or Virginian Date Plum. Tree (*Diospyros virginiana*) of the family Ebenaceae, native to N. America. Some 40 ft. high, the P. has alternate oval leaves, and yellow-green unisexual flowers. The small sweet orange fruits are edible.

PERSPIRATION. Sweat, the secretion of the sweat glands. These microscopic structures are found all over the skin; they secrete all the time and the 'insensible' P. may amount to 3 or 4 pints a day. The sweat consists of water-containing cells and also fatty acids from the sebaceous glands. In a warm atmosphere or on exertion the output is raised to keep the body temperature down by evaporation, and the sweat then becomes visible (sensible). Inflammation of the sweat glands is prickly heat.

PERTH. City, royal burgh, cap. of Perthshire, Scotland. 32 m. N.N.W. of Edinburgh, on the Tay. It

PERTHSHIRE. The river Tay winds gently between wooded banks near Aberfeldy. Photo: George Outram & Co. Ltd.

has famous dye-works. Pop. (1961) 41,199. (2) Cap. of W. Australia, 12 m. N.E. of the mouth of the Swan where its port Fremantle lies. P., founded in 1829, is the commercial and cultural hub of the state; it has an airport. Pop. (1966) 558,821.

PERTHSHIRE. Inland county of central Scotland. There are 50 mountains exceeding 3,000 ft., incl. Ben Lawers (3,984 ft.) and Ben More (3,843 ft.). The Grampians lie to the N.W. and the Tay is the chief r. The largest of the narrow lochs are Rannoch and Tay. Crops are raised, but cattle rearing is more important. Perth (the cap.) and Crieff are the chief towns. Area 2,493 sq. m.; pop. (1961) 127,018.

PERU (perô). Republic of S. America, bordering the Pacific Ocean and lying wholly within the Tropics.

his use of it, particularly in his poetry, e.g. *Songs of my Fatherland* (1886) and *The Flute of the King* (1910), expressing vivid awareness of Gk. history.

PALATE. The ceiling of the mouth. The bony front part is the hard, the muscular rear part the soft, P.; this contains in the middle line a short appendage called the uvula. Incomplete fusion of the P. causes interference with speech.

PALATINATE. An historic division of W. Germany, dating back before Charlemagne. It was ruled by a county palatine (hence the name) and varied in size. When it was attached to Bavaria in 1815 it consisted of Rhenish (or Lower) P. on the Rhine (cap. Heidelberg), and Upper P. (cap. Amberg on the Vils) some 130 m. to the E. In 1946 Rhenish P. became an administrative division of the Land of Rhineland-Palatinate with cap. at Neustadt; Upper P. remained an administrative div. of Bavaria with cap. at Regensburg.

PALDISKI (pahl'děskē). Small, ice-free port in Estonia, a naval base of the Soviet navy, 25 m. W. of Tallinn at the entrance to the Gulf of Finland.

PALEMBA'NG. Indonesian town, cap. of S. Sumatra prov., centre of petroleum production, with large refineries. Coffee and pepper are important articles of trade. P. was the cap. of a sultanate when the Dutch estab. a trading station there in 1616. The large mosque dates from 1740. Pop. (1961) 500,000.

PALENCIA (pahlen'thē-ah). Ancient walled city, cap. of P. prov., Spain. Pop. (1960) 48,200.

PALE'RMU. Cap. and seaport of Sicily, founded by the Phoenicians. Notable buildings incl. the Capella Palatina built by King Roger II in the 12th cent., univ. (1805) and museum. Pop. (1961) 587,063.

PALESTINE. Historic name of a region in S.W. Asia lying between the Mediterranean and the Jordan-Dead Sea-Araba depression, *the Holy Land* of Jews and Christians, and *a holy land* to Moslems.

Geography. Along the W. coast lies a fertile plain up to 20 m. wide, and to the E. lies the central plateau, which is interrupted only by the plain of Esdraelon. The Jordan runs through a deep rift, which at the

caused it to come in turn under the domination of Egypt, Assyria, Babylonia, Persia, Macedonia, the Ptolemies, the Seleucids, and Rome. P. formed part of the Roman and later of the Byzantine empire until A.D. 636, when it was conquered by the Arabs. The Crusaders occupied Jerusalem 1099–1187, after which P. came under the rule of the Mamelukes. The Turks conquered the land in 1516, and held it until the F.W.W. when the British conquered it, 1917–18, and estab. a military administration replaced by civil administration in 1920; in 1922 Britain received a League of Nations mandate (which incorporated the BALFOUR DECLARATION, q.v.) to administer an area described as P., but incl. historic P. and lands across the Jordan that were in 1923 recognized by Britain as a separate country (see JORDAN, Hashimite Kingdom of). Some 300,000 Jewish immigrants were allowed to enter P. during 1920–39; under the care of the Jewish Agency they developed agriculture and industry. Discontent, in particular over the admission of Jewish settlers to a land that had become Arabic in 636, resulted in serious Arab rebellions in 1929 and 1936–8. Various plans were made, one drawn up in 1939 recommending independence for P. within 10 years, further Jewish immigration after 1944 to be only with Arab consent. The outbreak of the S.W.W. brought the troubles to a temporary end, and both Arab and Jewish Palestinians served as volunteers in the Allied forces. The war over, Jewish terrorist organizations staged a series of outrages. Britain put the problem before the U.N. which proposed partition, accepted by neither Arabs nor Jews; and in 1947 Britain announced its intention to give up the mandate on 15 May 1948. On 14 May, eight hours before the mandate ended, the Jewish Agency broadcast a proclamation of a Jewish state of ISRAEL (q.v.).

The P. Nat. Council, as a Palestinian Arab govt. in exile, is devoted to total liberation of the state of P., on the lines of resistance movements in German-occupied Europe during the S.W.W., the enemy being not the Jews but the Zionists. It co-ordinates activities by Al Fatah, the P. Liberation Organization (PLO), etc., and is supported by Egypt, Jordan and Syria.

PALESTRINA (pahlestrē'nah), Giovanni Pierluigi da (1525–94). Italian composer. B. at Palestrina, he became choirmaster at the Vatican in 1551. A master of contrapuntal composition, P. composed masses, motets, hymns, magnificats, and litanies.

PALEY, William (1743–1805). British latitudinarian theologian, whose *Evidences of Christianity* (1794) and *The Principles of Moral and Political Philosophy* (1795) approach religion from the utilitarian viewpoint.

PALI (pah'lē). The sacred language of the Buddhist canonical texts. Of uncertain origin, it shows the influence of Vedic Sanskrit.

PALISSY (pahlē'sē), Bernard (c. 1510–89). French potter, noted for his richly coloured rustic pottery, e.g. dishes with realistic modelled fish and reptiles or with the network piercing, and a favourite of Catherine de' Medici. Imprisoned in the Bastille as a Huguenot in 1588, he d. there.

PALLADIO (pahlah'dē-ō), Andrea (1518–80). Italian architect, whose country houses (e.g. Malcontenta, and the Villa Rotonda nr. Vicenza), designed from 1540 for patrician families of the Venetian Rep. influenced the architecture of Washington's home at Mount Vernon, the palace of Tsarskoe Selo, and in England, Holkham, Prior Park, Stowe, etc.

PALLADIUM. White metal of the platinum family, discovered in 1803 by Wollaston, and found in platinum ore in Brazil, California and the Urals, and in nickel ores of Canada: symbol Pd, at. wt. 106.4, at. no. 46. It is also a non-radioactive product of a slow neutron nuclear reactor. P. does not tarnish in air, and when finely divided or spongy absorbs up to 3,000 times its volume of hydrogen and is used as a catalyst. Other uses incl. non-magnetic springs in

PALESTINE. The bleak and barren Qumran promontory, whose rounded white cliffs overlook the Dead Sea, was once the home of an Essene (q.v.) monastery. In 1947 Bedouin discovered in the caves which honeycomb the upper levels the Dead Sea Scrolls (q.v.). *Courtesy of the Jordan Embassy.*

Dead Sea is 1,292 ft. below sea-level. In the S. is the semi-desert Negev.

The climate varies from the semi-tropical to the sub-alpine. The summer is hot and dry, and most of the heavy winter rains percolate through the limestone rock, so that artificial irrigation is essential for cultivation. Citrus and other fruits, and olives, are grown. Potash and other chemicals come from the Dead Sea area.

History. P.'s position on the main route connecting Egypt with the Euphrates valley, and with Asia Minor,

he set out to reorganize the country on western lines; the army was modernized, a fleet was built, the admin. and the legal system were remodelled, educ. was encouraged, and the Church was brought under state control. In order to secure an outlet to the Baltic, P. undertook a war with Sweden (1700–21), which resulted in the acquisition of Estonia and part of Latvia and Finland. On the Baltic coast P. built his new capital, St. Petersburg. A war with Persia (1722–3) added Baku to Russia.

Peter's eldest son Alexius (1690–1718) had d. in prison for opposition to his father's reforms, and the son of Alexius later Peter II (1715–30) was passed over in the succession to the throne in favour of Peter I's consort Catherine I (q.v.). However, the boy did succeed Catherine in 1727, but d. of smallpox. Peter III (1728–62) was the son of Peter I's eldest dau., Anne, wife of the duke of Holstein-Gottorp. In 1741 he was adopted by his aunt, Elizabeth (q.v.), on her succession to the throne and at her behest m. in 1745 the future Catherine II (q.v.). He was deposed in 1762 and d. at the castle of Ropsha, probably murdered by Alexius Orlov.

PETER I (1844–1921). King of Serbia. He was the son of Prince Alexander Karageorgevich, and was elected king when the last Obrenovich king was murdered in 1903. He took part in the retreat of the Serbian Army in 1915, and in 1918 was proclaimed first king of the Serbs, Croats, and Slovenes.

PETER II (1923–). King of Yugoslavia. He succeeded his father, King Alexander, in 1934, and assumed the royal power after the overthrow of the regency in 1941. He escaped to England following the German invasion, and m. Princess Alexandra of Greece in 1944. He was dethroned in 1945.

PETERBOROUGH. Bor. in the co. of Huntingdon and P. on the W. edge of the Fen country. The cathedral is 12–16th cent. Industries incl. engineering. Pop. (1961) 62,031. The *Soke of P.* ceased to be an admin. co. in 1965.

PETRA. Glimpsed through a cleft in the towering rocks, the Khazneh or treasury of the city. Courtesy of the Jordan Embassy.

PETERHEAD. Seaport and burgh in E. Aberdeenshire, Scotland, 33 m. N.N.E. of Aberdeen. Industries incl. fishing, shipbuilding, light engineering, whisky distilling, making of woollen textiles. The Old Pretender landed at P. in 1715. Peterhead Bay harbour of refuge, built 1886–1921 by convicts, was extended by convicts 1958. Pop. (1961) 12,497.

PETERLEE. Mining town in Durham, England, founded 1950 and named after Peter Lee, first Labour chairman of a county council. Pop. (1961) 13,792.

PETER LOMBARD (c. 1100–60). Italian theologian. B. at Novara, he lectured on theology in Paris, and became bishop of Paris in 1159. His *Sententiarum libri* considerably influenced Catholic doctrine.

PETER LOO. Name given, in reference to Waterloo, to the 'massacre' in St. Peter's Fields, Manchester, England, on 16 Aug. 1819, when an open-air meeting in support of parliamentary reform was charged by yeomanry and hussars.

PETER'S PENCE. Voluntary annual contribution to the cost of papal administration, originally a compulsory levy of one penny per household.

PETER THE HERMIT (fl. 1095–9). French preacher. He was a priest of Amiens, who by his eloquence in preaching the 1st Crusade induced thousands of peasants to march against the Turks. They were cut

to pieces in Asia Minor, but P. escaped and accompanied the main body of crusaders to Jerusalem.

PETHICK-LAWRENCE, Frederick William, baron (1871–1961). British Labour statesman. Prominent with his first wife Emmeline Pethick (1867–1954, whose name he added to his own) in the woman's suffrage movement, he was imprisoned for his activities in 1912. He stood firm on the pacifist viewpoint in the F.W.W., and having entered parliament in 1923 was created a baron on his appointment by Attlee as Sec. of State for India (1945–7). In 1946 he led the cabinet mission which negotiated Indian independence.

PETITION OF RIGHT. The procedure whereby, before the passing of the Crown Proceedings Act (1947), a subject petitioned for legal relief against the Crown, whether for money due under a contract, or for property of which the Crown had taken possession. Also the petition of parliament accepted by Charles I in 1628, declaring illegal taxation without parliamentary consent, imprisonment without trial, billeting of soldiers on private persons, and use of martial law.

PETŐFI (pet'őfi), Sándor (1823–49). Hungarian national poet. B. at Kiskörös, he pub. his first vol. of poems in 1844, and settled in Pest. He expressed his revolutionary ideas in the semi-autobiographical poem 'The Apostle', and fell fighting the Austrians in the battle of Segesvár.

PETRA. Ruined city carved out of the red rock at a site in modern Jordan, on the E. slopes of the Wadi el Araba, 56 m. S. of the Dead Sea. An Edomite stronghold, later cap. of the Nabataeans, it was captured by Trajan A.D. 106 and wrecked in the 7th cent. by the Saracens. It was lost to knowledge until re-discovered in 1812 by the Swiss traveller J. L. Burckhardt.

PETRARCH (It. Petrarca), Francesco (1304–74). Italian poet and scholar. B. at Arezzo, he was taken to Avignon in 1313, studied law, was ordained in 1326, and entered the service of the Colonnas. In 1341 he was crowned poet in Rome. Later he lived in Milan with the Viscontis, and died at Arquà, near Padua. An ardent patriot, he was inspired by the greatness of ancient Rome. He wrote *Il canzoniere*, sonnets in praise of 'Laura'; *I trionfi*, a moral allegory in *terze rime*; *Africa*, a Lat. epic on Scipio the Elder; and philosophical treatises, etc.

PETREL. Two families of seabirds (Procellariidae and Oceanitidae) so called from their skimming the water surface as St. Peter did. Most familiar is the stormy P. of the N. Atlantic (*Hydrobates pelagicus*), also known as Mother Carey's chicken. Seldom coming to land except to breed, the Ps. lay a single egg in holes among the rocks. They are sooty-black with a white patch on the tail.

STORMY PETREL

PÉTRIE, Sir William Matthew Flinders (1853–1942). British Egyptologist. Grandson of Matthew Flinders (q.v.), he surveyed such British sites as Stonehenge, but is remembered for his work in Egypt (Tanis, the Pyramids, Tell el Amarna, Abydos, etc.) 1880–1926 and as 1st Edwards prof. of Egyptology, Univ. Coll., London, where his collections are still used for teaching purposes. He d. at Jerusalem, having spent his later years working in S. Palestine.

PETROGRAD. Name 1914–24 of LENINGRAD.

PETROLEUM or Mineral Oil. A thick greenish-brown liquid occurring underground in permeable rocks into which it has probably been forced by pressure, and accumulated in anticlines and other 'traps'

PANAMA CANAL. Canal across the Panama isthmus in Central America, connecting the Pacific and Atlantic oceans, and 50 m. long. The original construction company, headed by the French engineer Ferdinand de Lesseps, began construction in 1879, but collapsed in 1889 owing to financial scandals and yellow fever. The work was taken over by the U.S.A. in 1904, and the canal was opened 1914, formally 1920.

The P.C. runs S.E. through the Canal Zone from Cristobal at the Atlantic end to Balboa on the Pacific. It contains 12 locks. In 1968 the canal was used by c. 1,500 ocean-going vessels. Nationalist feeling in Panama and a desire for a greater share in the revenue led to anti-American riots in 1964. In 1967 new treaties were agreed, though not finally ratified, providing for relinquishment of American sovereignty and operation of the P.C. by a binational authority; a larger share of the revenues for Panama; and a U.S. option to build a larger, sea-level canal to the E., so dispensing with the costly lock-system. However, the U.S.A. also has alternative sites in N. Colombia and on the Nicaragua/Costa Rica border under study.

The *Canal Zone* extends for 5 m. on either side of the P.C.; it was leased in perpetuity to the U.S.A. in 1903, ratified 1904. Land area 553 sq. m.; pop. (1967) 55,600.

PAN-AMERICAN HIGHWAY. Roadway, a large part of it suitable for all-weather motoring, linking the U.S.A. with Central and South America. It was suggested at the 5th International Conference of American States, 1923. Starting from Nuevo Laredo, Texas, it runs through Mexico City to Panama City, then down the W. side of S. America to Valparaiso, Chile, where it crosses the Andes and goes to Buenos Aires, Argentina. Total length 15,700 m., most of it completed by 1960.

PAN-AMERICAN UNION. See ORGANIZATION OF AMERICAN STATES.

PANAY (pahn'ī). One of the Philippine Islands, lying between Mindoro and Negros. The cap. is Iloilo. P. is mountainous, reaching 7,265 ft. in Madiña. The chief occupation is agriculture; rice, sugar, pineapples, bananas, and copra are important products. Copper is mined. The Spaniard Legaspi took P. in 1569; it was occupied by the Japanese 1942–5. Area 4,446 sq. m.; pop. (1960) 1,491,000.

PANCHEN LAMA, 10th Incarnation (1935–). Tibetan spiritual leader, 2nd in importance to the Dalai L. (q.v.). A protégé of the Chinese since childhood, he is not indisputably recognized. On the flight of the Dalai L. in 1959, he was deputed by the Chinese to take over, but stripped of power for subversion 1964, and said to be deported to China 1965.

PANCREAS (pang'krē-as). A gland which secretes ferments necessary for the digestion of starch, protein, and fat. It is about 7 in. long and lies behind and below the stomach. It contains groups of cells called the islets of Langerhans, which secrete insulin. See INSULIN and DIABETES.

PANDA. Herbivorous mammal (*Ailuropus fulgens*) of the family Ailuridae, found in the region of the Himalayas. Similar to a bear, it is about 1½ ft. long with a bushy tail of equal length. The rich chestnut fur darkens on the underside and the legs are black; there are light-coloured rings on the tail and white markings on the face. The rare giant P. (*Ailuropus melanoleucus*), with striking black and white fur, also a native of N.W. China and Tibet, seldom survives

HIMALAYAN PANDA

in zoos since it needs a diet of special bamboo shoots, etc.

PANDIT, Vijaya Lakshmi (1900–). Indian stateswoman. The sister of J. Nehru, q.v., she m. in 1921 Ranjit S. Pandit, and was India's 1st woman minister (Local Govt. and Health 1937–9). She was ambassador to Russia 1947–9, to U.S.A. 1949–51, High Commissioner in London 1954–61, and Gov. of Maharashtra 1962–4.

PANDORA. The first woman, according to Greek mythology. Zeus sent her on earth with a box filled with evils, to counteract the blessings brought to man by Prometheus's gift of fire. When her box was opened the evils flew out, only Hope remaining.

PANGO'LIN or Scaly Anteater. Family of scale-covered, toothless mammals (Manidae), resembling large lizards, and up to 3 ft. long. Nocturnal in habit, they are found in Africa and S. Asia.

PANIPA'T. Town in Punjab, Rep. of India. Scene of 3 decisive battles: 1526, when Babar was the victor; 1556, won by Akbar; 1761, when the Mahrattas were defeated by Ahmad Shah of Afghanistan. Pop. (1961) 65,000.

PANKHURST, Emmeline (1858–1928). British suffragette, née Goulden. Founder of the Women's Social and Political Union in 1903, she launched in 1906 the militant suffragette campaign, and was several times imprisoned and then released after hunger-strikes. She was supported by her daus. DAME CHRISTABEL P. (1880–1958) the political leader of the movement and SYLVIA P. (1882–1960) who suffered 9 times under the 'Cat and Mouse Act', was a pacifist in the F.W.W., and a staunch supporter of the Ethiopian cause against Italy.

PANSY. Perennial garden flower, also known as heart's ease, derived from the European wild P. (*Viola tricolor*), and known as *V. tricolor hortensis*. The flowers are usually yellow, cream or purple, or a mixture, and there are many highly developed varieties bred for size, colour or special markings.

PANTELLERIA (pahnteller'ah). Volcanic island in the Mediterranean, 62 m. S.W. of Sicily, part of Trapani prov. P. was inhabited in prehistoric times, colonized by the Phoenicians in the 7th cent. B.C., taken by the Romans 217 B.C., by the Arabs c. A.D. 700. Formerly an Italian naval base, it was demilitarized under the peace treaty of 1947. Pop. (1961) 10,000.

PANTHEISM (pan'thē-izm) (Gk. *pan*, all; *theos*, God). A mode of thought which regards God as a pervading presence immanent in the universe. It is expressed in Egyptian religion and Brahmanism, while Stoicism, Neo-Platonism, Judaism, Christianity, and Islam can be interpreted in pantheistic terms. Modern pantheist philosophers incl. Bruno, Spinoza, Fichte, Schelling, and Hegel. A strong pantheistic element is found in the work of many modern poets.

PANTHEON. A temple for the worship of all the gods. The Roman P., begun in 27 B.C. and rebuilt by Hadrian, is still used as a church. The term P. also denotes a building in which many great men are buried, e.g. the Panthéon at Paris.

PANTHER. Name given in India to the leopard.

PANTOMIME. Among the Romans P. signified a masked actor who performed by means of dumb show, and the tradition continued, notable being the 19th cent. pantomimist Debureau, whose techniques have been revived in the 20th by Marcel Marceau and Jean-Louis Barrault (who played the role of Debureau in the film *Les Enfants du Paradis*). In England P. is a species of dramatic Christmas entertainment, diversified with songs, dances and comedy which, from beginnings connected with the 18th cent. harlequin spectacles, developed in the 19th cent. on fairy-tale and folk-tale themes. After Grimaldi, the clown predominated over the harlequinade. Later in the cent. came the era of music-hall P. with stars such as Dan

origin, application and effect of chemical substances on animals and man. These products of the pharmaceutical industry range from aspirin to anti-cancer agents, and about 3 per cent of gross sales in the U.K. are devoted to research, which in some fields, e.g. chemotherapeutics, is both costly and complex — 4,000 new substances may have to be synthesized to find one or two useful products. Well-proven formulations are listed in the official pharmacopoeia.

PHARYNX (far'ings). The interior of the throat, the cavity at the back of the mouth. Its walls are made of muscle strengthened with a fibrous layer and lined with mucous membrane. It has an opening into the back of each nostril (choanae) and downwards into the gullet and (through the epiglottis) into the windpipe. On each side the Eustachian tube leads from it to the middle ear. The upper part (nasopharynx) is an airway, but the remainder is a passage for food. Inflammation of the P. is pharyngitis.

PHASMIDA (fas'mida). An order of insects comprising the Stick Insects and Leaf Insects (qq.v.).

PHEASANT (fez'ant). Genus of game birds (*Phasianus*) incl. with the peacock and guinea fowl in the family Phasianidae. The common P. (*P. colchicus*) was introduced from Asia to Europe, according to legend, by the Argonauts who brought it from the banks of the r. Phasis. The plumage of the male is richly tinted with brownish green and yellow and red markings, but the female, like other hens of the genus, is a camouflaged brownish colour: the nest is made in the ground, and the P. is polygamous. In England Ps. are semi-domesticated and the shooting season is Oct. to 31 Jan.; the P. is naturalized in N. America.

Among the more exotically beautiful Ps. of other genera, often kept as ornamental birds, are the golden P. (*Chrysolophus pictus*) from China and the argus pheasant of Malaya (*Argusiana argus*) which has metallic spots or 'eyes' on the wings.

PHENOL. See CARBOLIC ACID.

PHIDIAS (fid'ias). Greek sculptor. B. at Athens c. 500 B.C., he was a friend of Pericles who made him superintendent of public works. He constructed the Propylaea and the Parthenon, and executed the colossal statue of Zeus at Olympia which was one of the seven wonders of the world.

PHILADELPHIA. City of the U.S.A., in Pennsylvania, 79 m. S.W. of New York. The Delaware connects it with the Atlantic 100 m. downstream through Delaware Bay. Wm. Penn founded the city in 1682 as a Quaker settlement; its name means brotherly love. Notable buildings incl. the grave of Franklin; Independence Hall (1732–59) in which the Declaration of Independence was adopted, 1776; City Hall (1872) with a tower surmounted by a statue of Penn., total height 548 ft.; and the U.S. Mint, estab. 1792. P. was temporarily capital of the U.S.A. 1790–1800, and attained high eminence in culture. There are the Franklin Institute for applied science (1824), and the Univ. of P. (1740); the P. orchestra (1900); the library and the Museum of Art. The port facilities are extensive. The leading products of P. are textiles, chemicals, machinery; other activities are petroleum refining, food processing, printing and publishing. Pop. (1960) 2,002,512.

PHILAE (fīl'e). Is. in the Nile, Egypt, above the first cataract, with ruins of temples of Isis and Hathor and an unfinished Roman hall. After the completion of the first Aswan dam in 1902 it was

PHILAE. The completion of the High Dam will once more leave the islet permanently above water, and the Temple of Isis (first founded c. 350 B.C. and in use till the 6th century) will regain its former beautiful setting of palm trees.

Courtesy of the Egyptian State Tourist Administration.

submerged except during July–Oct. each year; plans for dams to protect it from inundation, to be completed c. 1968, were made in connection with the construction, begun in 1960, of the new High Dam. (See ASWAN.)

PHILATELY. The collection and study of postage stamps. Originating in France c. 1860, it became popular throughout the world, London being the world centre. The world's largest collection is in the British Museum, the runner-up being in Smithsonian Institution, Washington: probably the world's finest private collection is that of Queen Elizabeth II. Many countries earn extra revenue and cater for the philatelist by issuing special sets of stamps to commemorate special events, anniversaries, etc., and there are many specialized fields of collection from particular countries to specimens which have some defect, e.g. contemporary issues which are accidentally unperforated.

PHILBY (fīl'bi), Harry St. John Bridger (1885–1960). British explorer. As chief of the British political mission to central Arabia, 1917–18, he carried out extensive exploration and was the first European to visit the southern provs. of Najd; and in 1932 crossed the Rub 'al Khali desert. He wrote *The Empty Quarter* (1933), *Forty Years in the Wilderness* (1957), etc. His son Harold P. (1912–), known as Kim P., entered the Foreign Service, but became a Soviet agent and was asked in 1951 to resign: in 1963 he was named as having warned Guy Burgess and Donald Maclean of govt. investigations into their activities in 1951, and took Soviet citizenship.

PHILHARMONIC SOCIETY. The Royal P.S. was founded in London in 1813 by the pianist Johann Baptist Cramer (1771–1858) for the purpose of improving musical standards by means of orchestral concerts organized on a subscription basis. Another P.S. was founded in New York in 1842.

PHILIP. One of the 12 Apostles. He was an inhabitant of Bethsaida, and is said to have worked as a missionary in Asia Minor.

PHILIP (382–336 B.C.). King of Macedonia. After ruling as regent for his nephew, he seized the throne in 359, conquered the Greek cities on the Macedonian coast, Thessaly and Phocis, and defeated the Athenians and Thebans at Chaeronea in 338. He formed the Greek states into a league, and prepared for war with Persia, but was assassinated. He was succeeded by his son, Alexander the Great.

PHILIP. Name of 6 kings of France. Philip II, (1165–1223), called AUGUSTUS, succeeded in 1180, took part in the 3rd Crusade, conquered Normandy, and defeated a powerful alliance at Bouvines in 1214.

PHILIP IV (1268–1314). King of France. Called the

PARACELSUS (1493–1541). Swiss physician and theosophic philosopher, whose real name was Theophrastus Bombastus von Hohenheim. In 1526 he became lecturer in medicine at Basle, and revolutionized the theoretic basis of medicine. From 1529 onwards he wandered Europe, and he d. at Salzburg.

PARACHUTE (par'ashoot). Umbrella-shaped device consisting of some 2 dozen panels of silk or nylon, each with shroud lines to a harness, used to slow down the descent of human being, supplies, etc., from a plane or missile to a safe speed for landing, or sometimes to aid the landing of a plane or missile itself. *See* FREE-FALLING. Leonardo da Vinci sketched a P. design, but the first descent (from a balloon) was made by Garnerin in 1797, and the first drop from an aircraft by Berry in 1912.

PARADISE. Persian word for a park or pleasure garden, and hence applied to the Garden of Eden, the Messianic kingdom, and the heaven of after life.

PARAFFIN. A hydrocarbon (or mixture of hydrocarbons) of the P. series, general formula C_nH_{2n+2} . The lower members are gases, e.g. methane (marsh gas). The middle ones (mainly liquid) form the basis of petrol (gasoline), kerosene (q.v.), lubricating oils, and the higher ones (P. waxes) are used in ointment and cosmetic bases. *See* KEROSENE.

PARAGUAY (pa'ragwi). Inland republic of S. America, bounded by Bolivia to the N., Brazil to the N.E., and Argentina to the S.W. and S. The chief rivers are the Paraná and its tributary, the P., which divides the country in two. The climate is tropical to sub-tropical, with an abundance of summer rain. For the most part, P. lies below 500 ft. a.s.l.; hills in the E. rise to something over 1,500 ft. Much of the land is forested, timber, quebracho (used in tanning), and yerba maté being natural products important commercially. Crops for home consumption incl. maize, mandioca, beans, sugar cane, rice; cotton (for export) and tobacco are also grown, and yerba maté plantations have been estab. Hides and meat are other exports. Minerals found but little worked incl. iron, manganese, and copper.

Under the constitution of 1967 there is a pres. elected for 5 yrs. and a senate and chamber of deputies, also popularly elected. The cap. is Asunción. Both Spanish and Guarani, the language of the Indian inhabitants at the time of the Spanish conquest, are commonly spoken by Paraguayans, the races having mixed. Area 157,000 sq. m.; pop. (1962) 1,819,103.

P. was discovered by Sebastian Cabot in 1526, and Asunción was founded by Spanish settlers in 1537. From c. 1600 until 1767, when they were expelled, Jesuit missionaries administered much of the country as a semi-theocratic state. At first a prov. subordinate to the Spanish viceroyalty of Peru, then from 1776 part of the viceroyalty of Buenos Aires, P. in 1811 declared its independence from Spain. J. G. R. Francia, an able lawyer, established himself as despotic president, 1816–40; he was followed by his nephew, C. A. López, and he in turn (1862) by his son, F. S. López, who involved P. in a war with Brazil, Argentina, and Uruguay. After 5 years of war P. was invaded and López killed at Aquidaban in 1870. When hostilities ceased the Paraguayan people consisted mainly of women and children. Recovery was slow with many revolutions; and continuing disputes over the frontier with Bolivia in the torrid Chaco zone of the N. flared up into war, 1932–5; arbitration by the U.S.A. and 5 S. American reps. brought a frontier settlement and a peace-treaty 1938. Under Pres. Alfredo Stroessner, who achieved power by a military coup in 1954, there was a liberalisation of regime from 1968.

PARAKEET. *See* PARROT.

PARALDEHYDE. A colourless liquid (C_4H_8O), formed from acetaldehyde. It is soluble in water and is a safe hypnotic.

PARALYSIS. Failure of action of muscle, due to injury or disease of the nerves supplying it. Paresis is partial P. *See* POLIOMYELITIS; and SLEEPY SICKNESS. In hysterical P. the nerves are sound and the disorder is in the emotions and will.

PARAMARIBO. Port and cap. of Surinam, 15 m. from the sea on the Surinam r., an important trading and commercial centre with an airport at Zanderij 25 m. to the S. Pop. (1967) 123,000.

PARANA (pahrahnah'). River of S. America, formed by the confluence of the Rio Grande and Paranaíba. It is joined by the Paraguay at Corrientes, and flows into the Rio de la Plata with the Uruguay. It is about 2,500 m. long.

PARANA. River port in Argentina, cap. of Entre Rios prov., 350 m. N.W. of Buenos Aires. It has a handsome cathedral; also flour mills and meat canneries. P. was cap. of Argentina 1853–62. Pop. (1960) 174,000.

PARANOIA. Monomania; a serious form of mental disorder in which the patient believes himself to be an especially superior person menaced by a conspiracy. Around this belief he builds up an elaborate delusional system embracing the whole of his life. Occasionally he will realize that the ideas are false and remain sane, but usually he is possessed by them and may attack one of his 'persecutors'.

PARASITE. A creature depending on another for the necessities of life, e.g. lice, fleas, the acarus that causes scabies, tape-worms, and the microscopic organisms that cause syphilis and malaria. Plants, too, may be parasitic.

PARATHYROID (-thi'roid-). Two pairs of small endocrine glands situated in the neck above and beside the thyroid. They control the use of lime (calcium) by the body.

PARATYPHOID (-ti'foid) FEVER. An infective fever like typhoid but milder and less dangerous caused by one of three similar paratyphoid bacilli, A, B, and C. These are common in India, western Europe, and the Balkans respectively. These three varieties are known as the enteric group of fevers.

PARENTIS-EN-BORN (pahrenté'). Lumbertown in Landes dept., France, 40 m. S.S.W. of Bordeaux, centre of an oilfield. Pop. (1962) 2,493.

PARIS Henri d'Orléans, comte de (1909–). Head of the House of Bourbon: *see* BOURBON TABLE. He served in the Foreign Legion under an assumed name 1939–40, and in 1950 on the abrogation of the *loi d'exil* (1886) banning pretenders to the French throne, returned to live in France.

PARIS, Matthew (d. 1259). English chronicler. He entered St. Albans Abbey in 1217, and wrote a valuable history of England down to 1259.

PARIS. Cap. of France in a fertile plain at the confluence of the Marne with the Seine. Formerly it was cap. of Seine dept., but from 1964 the *Ville de Paris* (City of Paris) itself became a dept., and, although Seine-et-Marne was unchanged, the other 2 depts. of the Paris region were reorganised in 7 new depts.: *see* table p. 443.

HISTORY. P., the Roman *Lutetia*, cap. of the Parisii, a Gaulish tribe, was occupied by Julius Caesar, 53 B.C. Clovis made it his cap. c. 508, but it attained importance only under the Capetian kings (987–1328). P. was occupied by the English 1420–36, strongly supported the Catholics during the Religious Wars, and was besieged by Henry IV, 1590–4. The Bourbon kings did much to beautify the city. Napoleon adorned it with new boulevards, bridges, and triumphal arches, as did Napoleon III. P. was the centre of the revolutions of 1789–94, 1830, and 1848. It was besieged by the Prussians 1870–1, and by gov't. troops under the Commune, and during the F.W.W. suffered from air raids and bombardment. In the S.W.W. it was occupied by the Germans June 1940–Aug. 1944.

overcoming a fierce resistance by American and Filipino troops under General MacArthur.

PHILIPPOLIS. Greek name of Plovdiv.

PHILISTINE (fil'istin). Originally a contemptuous term applied by German students to non-members of the univ.; hence a person with no interest in intellectual or artistic matters.

PHILISTINES. A people who inhabited the coastal plain of Palestine from the 12th cent. B.C., forming a league of city-states. Coming probably from Asia Minor, they adopted a Semitic language and religion, struggled with the Israelites in the 11th–10th cents. B.C., were temporarily subdued by David, and later passed under Assyrian supremacy.

PHILLIP, Arthur (1738–1814). British founder of New South Wales. He entered the navy in 1755 and rose to vice-admiral. He founded the convict settlement at Sydney in 1788, and was governor until 1792.

PHILLIPS, John Bertram (1906–). British churchman. Ordained in the C. of E. in 1930, he held livings in London and Surrey before becoming prebendary of Chichester Cathedral (1957–60). His colloquial *The New Testament in Modern English* (1958) is outstanding among recent versions: other books incl. *God our Contemporary* (1960).

PHILLPOTTS, Eden (1862–1960). British author. B. in India, son of an army captain, he spent ten years as an insurance clerk before settling in Devon to write. He had a great love of the Dartmoor region, which forms the background of his best work, e.g. the novels *Children of the Mist* (1898), *Sons of the Morning* (1900), *The Secret Woman* (1905; dramatized 1912), and *The Thief of Virtue* (1910); and the plays *The Farmer's Wife* (1917) and *Yellow Sands* (1926), the latter written with his dau. Mary Adelaide Eden P., also a novelist. His prolific output damaged his standing, but at his imaginative best he is a more 'human' Hardy.

PHILO JUDAEUS (fī'lō joodē'-us) (fl. 1st cent. A.D.). Jewish philosopher of Alexandria, who in A.D. 40 undertook a mission to Caligula to protest against the emperor's claim to divine honours. In his writings P. attempts to reconcile Judaism with Platonic and Stoic ideas.

PHILOLOGY. A Greek term, originally meaning 'love of learning and literature'. It is often used in the sense of linguistics (q.v.), but more often defines the critical study of the literary remains of the past, esp. of Gk. and Roman antiquity. In this sense the scholars of Alexandria, who e.g. edited Homer, were philologists. The Renaissance gave great impetus to this kind of study. Dutch scholars took the lead in the 17th cent. whilst Richard Bentley in England held a place of his own. From the study of Sanskrit arose at the beginning of the 19th cent., under Bopp's leadership, what is called comparative P., mainly concerned with the Indo-European (q.v.) family of languages, whilst the Romantic movement greatly inspired the establishment of national Ps. – Germanic and German (Grimm), Romance (Diez), Celtic (Zeuss), etc.

PHILOSOPHY (Gk. love of knowledge). The field of theoretical studies which incl. metaphysics, epistemology (theory of knowledge), ethics and aesthetics, but which continually contracts as specific studies acquire their own estab. disciplines, e.g. mathematics, physics, chemistry, biology and (until this cent.) psychology were formerly incl. in P., and logic is in process of separation. Oldest of all philosophical systems is the Vedic c. 2,500 B.C., but like many other eastern systems it rests on a primarily mystic basis. The first scientific system originated in Greece in the 6th cent. B.C. with the Milesian school (Thales, Anaximander and Anaximenes). Both they and later pre-Socratics (Pythagoras, Xenophanes, Parmenides, Zeno of Elea, Empedocles, Anaxagoras, Heraclitus and Democritus) were lively theoreticians, and ideas such as atomism, developed by Democritus, crop up in

later schemes of thought. In the 5th cent. among the teachers known as the sophists there emerged in Socrates the apostle of the ideal of reason, and Plato and Aristotle complete the trinity of the golden age of Greek P. Later schools incl. the epicureans (Epicurus), stoics (Zeno) and sceptics (Pyrrho); the eclectics – not a school, but selecting what appealed to them from various systems (Cicero and Seneca) – and the neo-Platonists, infusing a mystic element into the system of Plato (Philo, Plotinus and, as disciple, Julian the Apostate). The close of the Athenian schools of P. by Justinian in A.D. 529 marks the end of ancient P., though many of its teachers moved eastwards and Greek thought emerges in Moslem philosophers such as Avicenna and Averroes, and the Jewish Maimonides. For the West the work of Aristotle was transmitted through Boethius, and the roll of medieval scholastic philosophers, mainly concerned with the reconciliation of ancient P. with Christian belief, begins in the 9th cent. with John Scotus Erigena, and incl. Anselm, Abelard, Albertus Magnus, Thomas Aquinas (greatest of them all), his opponent Duns Scotus, and William of Ockham.

In the 17th cent. Descartes, with his rationalist determination to doubt, and faith in mathematical proof, marks the beginning of modern P., and was followed by Spinoza, Leibniz and Hobbes, but the empiricists, principally an 18th cent. English school (Locke, Berkeley and Hume), turned rather to physics as indicating what can be known and how, and led up to the transcendental criticism of Kant. In the early 19th cent. classical German idealism (Fichte, Schelling, Hegel) repudiated Kant's limitation of human knowledge; and in France Comte developed the positivist thought which attracted Mill and Spencer. Notable also in the cent. are the pessimistic atheism of Schopenhauer; the dialectical materialism of Marx and Engels; the work of Nietzsche and Kierkegaard, which led towards 20th cent. existentialism; the pragmatism of William James and Dewey; and the absolute idealism at the turn of the cent. of the neo-Hegelians (Bradley, Bosanquet, McTaggart, Royce, Blanshard and Creighton). Among 20th cent. movements are the logical positivism of the Vienna circle (Carnap, Popper, Ayer); the creative evolution of Bergson; neo-Thomism, the revival of the medieval philosophy of Aquinas (Gilson, Maritain); existentialism (Heidegger, Jaspers, Sartre, Marcel); the phenomenology of Husserl, who influenced Ryle; realism (Russell, Moore, Broad and Wittgenstein), and the isolated genius of Whitehead.

PHIZ. Pseudonym of British artist, Hublot Knight Browne (1815–82). B. at Lambeth, he illustrated the greater part of Dickens' *Pickwick Papers*, and others of Dickens' works, as well as novels by Lever and Harrison Ainsworth.

PHLEBITIS (flēb'itis). Inflammation of the lining of a vein. It causes the blood in the neighbourhood to clot (thrombosis). Simple or non-infective P. may be caused by an injury or pressure, and is common in the main thigh veins of women after childbirth. The blood clots and obstructs the circulation (white leg). Septic P. is caused by infection, e.g. in the lateral sinus and the jugular vein by infection from the middle ear. Fragments of the clot may carry infection to the lungs and cause an abscess.

PHLOX. Genus of plants native to Siberia and N. America. The British varieties are half-hardy annuals cultivated from *Phlox drummondii*. They have lanceolate, opposite leaves, and the flowers, borne in panicles, are red, white or mauve.

PHNÔM-PENH (nompēn'). Cap. of Cambodia, on the Mekong, 130 m. W.N.W. of Saigon. It is an important trade centre with handsome buildings in European style, built while Cambodia was under French protection, as well as Buddhist temples, a pagoda, and a Buddhist univ. There is regular steamer

24 of the bps. (London, Durham and Winchester by right, and the rest by date). See PEERAGE. Since the P. Act of 1911 the powers of the Lords have been restricted, in that they may delay a bill passed by the Commons for a limited period but not reject it.

Under the Parliament Bill (1968) introduced by Wilson a 2-tier system of voting and non-voting peers would have been estab., salaried, voting members being those c. 150 life peers able to attend regularly, supplemented by c. 80 newly-created life peers chosen chiefly from existing hereditary peers: the govt. would have been entitled to a 10% majority. The measure gave way to an industrial relations bill.

The Lords are presided over by the Lord Chancellor, and the Commons by the Speaker. A public

PARLIAMENT. The Houses of Parliament look down on the Thames. To the far right is the clock tower containing 'Big Ben' and to the left, high above Westminster Abbey, the Victoria Tower where parliamentary archives are housed.

Photo: J. Allan Cash.

bill is given a preliminary 1st reading and discussed in detail at the 2nd reading; it is then referred to a standing committee, after which it is considered by a committee of the whole House. After the 3rd reading it is sent to the Lords, whose procedure is similar. If it passes both houses, it receives the royal assent and so becomes law.

PARLIAMENT, Houses of. The present H.P. were designed by Sir C. Barry, and built in 1840-60, the previous building having been burnt down in 1834. It incorporates portions of the medieval Palace of Westminster. The Commons debating chamber was destroyed by incendiary bombs in 1941: the rebuilt chamber (opened 1950) is the work of Sir G. G. Scott, and preserves its former character.

PARMA (pahr'mah). Ancient Italian city, cap. of P. prov., Emilia region. It has a 12th cent. Romanesque cathedral and a univ. (1502). Parmesan cheese is exported, and it makes agricultural machinery, shoes, paper, canned goods, etc. On an Etruscan site colonized by the Romans in 183 B.C., P. was the seat of a bishopric by 378. Pop. (1961) 140,844.

PARMIGIANO (pahrmējah'nō). Name assumed by the Italian painter Francesco Mazzola (1504-40). B. at Parma, he was influenced by Correggio and Raphael.

PARNASSIENS (pahrnahsi-eh). Les. School of French poets incl. Leconte de Lisle, Mallarmé, and Verlaine, which flourished 1866-76. Named from the review *Parnasse Contemporain*, it advocated 'Art for art's sake' in opposition to the ideas of the Romantics.

PARNASSUS. Mountain in central Greece, 8,062 ft., revered by the ancient Greeks as the abode of Apollo and the Muses. Delphi lies on its S. flank.

PARNELL (pah'rnel), Charles Stewart (1846-91).

Irish politician. B. in co. Wicklow, he was elected M.P. for Meath in 1875. P. supported a policy of obstruction and violence, and became the president of the Nationalist Party in 1877. In 1879 he approved the Land League, and his attitude led in 1881 to his imprisonment. He welcomed Gladstone's Home Rule Bill, and continued his agitation after its defeat in 1886. In 1887 *The Times* failed to prove P.'s complicity in the Phoenix Park murders, but in 1889 Captain O'Shea petitioned for divorce on the grounds of his wife's adultery with P.; in 1891 Parnell m. Mrs. O'Shea. For fear of losing the support of Gladstone, his party deposed him in Nov. 1890.

PARR, Catherine (1512-48). 6th wife of Henry VIII. She had already lost 2 husbands when in 1543 she m. Henry VIII. She survived him, and in 1547 m. Lord Seymour of Sudeley.

PARRAMATTA. River, W. arm of Port Jackson, New South Wales, Australia. It is 15 m. long and is lined with industrial suburbs of Sydney: Balmain, Drummoyne, Concord on the left bank, P., Ermington and Rydalmere, Ryde, and Hunter's Hill on the right.

PARROT. Order of birds, Psittaci, abundant in the tropics, espec. in Australia and S. America: the smaller species are commonly referred to as parakeets. They are vegetarian, except for the New Zealand kea (*Nestor notabilis*) which has become carnivorous since the settlement of white farmers. Their strong, hooked bills cope easily with fruit and seeds, which they characteristically clasp in their claws while feeding. The plumage is generally very colourful, although the call is commonly a harsh screech: the talent for imitating human speech is most marked in the comparatively sober grey P. (*Psitticus erithacus*) of Africa. The white eggs are usually laid in holes in trees, but the grey-breasted parakeet - though remaining monogamous - combines with the rest of the flock to build enormous nests of twigs in trees, rather like a block of flats. See BUDGERIGAR and COCKATOO.

PARRY, Sir Charles Hubert Hastings (1848-1918). British composer. B. at Bournemouth, from 1883 he taught at the R.C.M., becoming director in 1894, and was prof. of music at Oxford 1900-8. He was created a baronet in 1902. His works incl. songs, motets, and the setting of Milton's 'Blest Pair of Sirens'.

PARRY, Sir William Edward (1790-1855). British explorer. In 1819-20 he led an expedition described in his *Journal of a Voyage to Discover a North-West Passage*, and similar explorations in 1821-3 and 1824-5. In 1827 P. attempted to reach the North Pole, attaining a latitude of 82° 45'.

PARSEES. The followers of Zoroaster (q.v.) who fled from Persia after its conquest by the Arabs, and settled in India in the 8th cent. A.D. They now live mainly in Bombay state, maintaining their cult of the sacred fire and the exposure of their dead. They are proverbial for their business ability and philanthropy. They number about 100,000.

PARSLEY. Biennial herb (*Petroselinum hortense*), cultivated for flavouring: 9-18 in. high, it has bipinnate, aromatic leaves and yellow umbelliferous flowers.

PARSNIP. Biennial plant (*Pastinaca sativa*), 2-4 ft. high, cultivated for its edible tap-root. The leaves are ovate, serrated, and downy beneath, and the flower umbels yellow.

PARSONS, Sir Charles Algernon (1854-1931). British engineer, inventor of the P. steam turbine,

THICK-BILLED PARROT

then fell under Lydian rule. From P. the cult of Cybele was introduced into Greece and Rome.

PHRYNE (frī'nē) (4th cent. B.C.). Athenian courtesan famous for her beauty.

PHYLLOXERA. Genus of insects in the order Hemiptera similar to aphides. The species *P. vastatrix*, a native of N. America, attacks grape vines, laying its eggs under the bark. European vines are especially susceptible and many French vineyards suffered terribly on the arrival of the pest in Europe in the 19th cent. The insects may be destroyed by spraying with carbon disulphide or petroleum.

PHYSICS. P. (sometimes called 'natural philosophy') is a branch of science which is concerned with the ultimate laws which govern the structure of the universe and forms of matter and energy and their interactions. For convenience P. is often divided into branches such as nuclear or atomic P., solid and liquid state P., electricity, electronics and magnetism, optics, acoustics, heat and thermodynamics. P. is applied on a vast scale, especially in engineering and in measurements. British physicists have included Newton, Cavendish, Faraday, Young, Maxwell, Kelvin, Rutherford and Thomson (qq.v.). In the U.K. the body concerned with the promotion of the advancement and dissemination of a knowledge of P. pure and applied and the elevation of the profession of P. is The Institute of P. and The Physical Society (the amalgamation of The Institute and Society having taken place in 1960). There is a British National Committee for P., the secretariat of which is held by The Royal Society, which is the British adhering body for international work in science.

PHYSIOLOGY. That branch of medicine and biology that deals with the functioning of the healthy human body. See HUMAN BODY.

PHYSIOTHERAPY. Use of heat (infra-red lamps, hot water, etc.), electrical stimulation (low-voltage currents), massage and exercise to treat patients suffering from rheumatic conditions, leprosy, poliomyelitis, lung complaints, accidental injuries, war wounds, etc. Qualified practitioners are registered with the Chartered Soc. of P. (England and Wales) and Faculty of Physiotherapists (Scotland); in the U.S.A., where they are more commonly called physical therapists, the central body is the American P. Association.

PIACENZA (pē-ahchen'za). City of Emilia, Italy, the cap. of P. province, nr. the Po, 40 m. S.E. of Milan; it has a 12th cent. cathedral and makes iron and brass goods, textiles, pottery; it also has flour mills and printing works. The Roman Placentia, P. dates from 218 B.C. Pop. (1961) 87,930.

PIANOFORTE. A stringed musical instrument, whose keyed hammers make it percussive and capable of soft or strong tones—hence its name. The clavichord and the 16th cent. virginal were forerunners of the design evolved in 1709 by Bartolommeo Cristofori, a Paduan harpsichord-maker. Subsequent improvement has been closely linked with the names of famous P. makers, such as Broadwood and Stodart, Pleyel, Erard, Collard, Steinway, Blüthner, and Bechstein. The practice of some designers building the strings vertically has prevailed in the modified form of the upright P. The horizontally strung grand P. is recognized as superior in tone and is used for concert performance. The Player Piano for mechanical reproduction of music was invented in 1842, though much improved in this century.

PICARDY. Former province of France; it covered all the Somme department and parts of Pas de Calais, Aisne, and Oise.

PICASSO (RUIZ), Pablo (1881–). Spanish artist. Son of an art teacher José Ruiz Blasco, and an Andalusian mother Maria Picasso López, he discontinued use of the name Ruiz in 1898. B. at Malaga, he was a mature artist at 10, and at 16 was holding

his first exhibition. In 1900 he made an initial visit to Paris, where he was to settle, and during his Blue Period 1901–4 painted mystic distorted figures in blue tones; a brief, more supple, Rose Period 1905–6 followed, but in 1907 he completed the revolutionary 'Les Femmes d'Alger' by which Cubism was fully launched. His subsequent development has been kaleidoscopic, rather than moving along any one path, incl. by turns Classicism, Romanticism, Realism, Expressionism, Abstractionism and Naturalism, and ranging through ceramics, sculpture, sets for ballet (e.g. *Parade* in 1917 for Diaghilev), book illustrations (e.g. Ovid's *Metamorphoses*), portraits (Stravinsky, Valéry, etc.), to his generally acknowledged masterpiece 'Guernica' (1937) a nightmare mural interpretation of the agony of the Civil War in Spain. He is unique in the fertile vigour of his invention, and in his appeal to the amateur as well as the expert, his exhibitions attracting a large popular following.

PICCARD. Launched at Toulon in 1961, the bathyscaphe *L'Archimède* (B-11000) reached depths of more than 31,350 ft. in the Japan Trench in 1962. Built of steel alloy (with nickel and molybdenum chrome), she weighs 60 tons and can withstand pressures of 180,000 tons. She is the latest development of the original Piccard invention.

Courtesy of Établissement Cinématographique des Armées.

PICCARD, August (1884–1962). Swiss scientist. B. in Basle, he became prof. of physics at the Univ. of Brussels in 1922. In 1931–2 he made record ascents to 55,000 ft. in a balloon of his own design, resulting in important discoveries concerning such stratospheric phenomena as cosmic rays. Subsequently he built and used bathyscaphes for undersea research, notably the *Trieste*, designed in collaboration with his son Jacques P. (1922–), who in 1960 descended in it to 37,800 ft. in the Challenger Deep, W. Pacific. Jean P. (1884–1963), twin brother of August, made a remarkable balloon ascent from Detroit in 1934 with his wife, and was prof. of aeronautical engineering, Univ. of Minnesota. See SUBMARINE.

PICKFORD, Mary (1893–). American actress, née Smith. B. in Toronto, she became the first star of the silent screen to be known by name, and on her marriage—her second—to Douglas Fairbanks senior in 1920, they were called 'the world's sweethearts'. She later became one of the biggest names in film production, and following her divorce in 1935 m. in 1937 Buddy Rogers.

PICO DELLA MIRANDOLA (pēkō-dellah-mērāhn'dōlah), Giovanni (1463–94). Italian mystic philosopher. B. at Mirandola, of which his father was prince, he studied Hebrew, Chaldean, and Arabic, showing particular interest in the Kabbala.

PICRIC ACID. Yellow crystalline solid $C_6H_2(NO_2)_4OH$, 2, 4, 6-trinitrophenol. It is a strong acid, dyes wool and silks yellow, is used to treat burns and in the manufacture of explosives.

2 main features are a family feast eaten at home on the first evening of the festival, and abstinence from leaven throughout the 7 days which it lasts. Formerly a lamb was eaten at the feast, but a shank bone is now substituted.

PASSPORT. Document issued by the foreign office of any country authorizing the bearer to go abroad and guaranteeing him the state's protection. A British P. is generally available for travel to all countries, but some countries require the intending visitor to obtain a special endorsement or *visa*. For the citizen of the U.K. and Colonies a cheaper, simplified travel document is available for short visits to certain countries.

PASTERNAK, Boris Leonidovich (1890–1960). Russian author. B. in Moscow of Jewish parentage, he remained in Russia when his artist father Leonid P. (1862–1945) emigrated to Germany, dying in Oxford. His reputation as his country's chief lyric poet mounted from his first vol. *A Twin Cloud* (1914), through *Life is My Sister* (1922), and *On Early Trains* (1941) to the pub. of his selected poems (1945), and he produced excellent translations of Shakespeare's tragedies and Goethe's *Faust*. A Nobel prize followed the pub. in the W. in 1958 of his novel *Dr. Zhivago*, which had been banned in the U.S.S.R. as a 'hostile political act'. His work had previously suffered indirect attack and now, although he refused the prize, he was expelled from the Union of Soviet Writers for his portrayal of the degeneration of a scientist who passes from support of the Revolution to increasing disillusion.

PASTEUR (pahstör), Louis (1822–95). French chemist. B. at Dôle, he became director of scientific studies at the École Normale in 1857, where he announced his discovery of the causes of fermentation in alcohol and milk. His proof that the organisms stimulating it were contained in the atmosphere inspired Lister's work in antiseptic surgery. P. was prof. of chemistry at the Sorbonne 1867–89. Among his later researches were those on silkworm disease, anthrax, and hydrophobia; the Institut Pasteur was founded in 1888. See PASTEURIZATION.

PASTEURIZATION. Treatment of milk to reduce the number of micro-organisms it contains, and so protect consumers from disease. A temperature of between 62–8° and 65–5°C is maintained for at least 30 min., then the milk is rapidly cooled to 10°C or lower. The harmful bacteria are killed and the development of the others is delayed.

PASTON LETTERS. A collection of letters and documents, written by or to members of the Norfolk family of P. during 1422–1509.

PASTORAL STAFF. A staff shaped like a shepherd's crook carried by cardinals and bishops on certain formal occasions as a sign of office.

PATAGONIA. Geographical area S. of lat. 40° S. and extending westward through Chile to the Pacific. Argentinian P. is divided into the provs. of Chubut, Río Negro, Santa Cruz, and Tierra del Fuego; Chilean P. into the provs. of Chiloé and Magallanes (which incl. Chilean Tierra del Fuego). Magellan sighted P. in 1520. Both Chile and Argentina claimed the whole area (over 400,000 sq. m.), but agreed to a division in 1881, Chile receiving 72,000 sq. m. Most of Argentinian P. is sterile with a chilly climate and frequent high winds; Chilean P. is cold and damp with dense forest on the lower slopes of the Andes. Sheep rearing is the principal occupation throughout P.; minerals incl. coal and petroleum.

PATCH, Alexander MacCarroll (1889–1945). American general. B. in Arizona, he served in the F.W.W., and commanded all Allied Forces in New Caledonia, 1942, later being in charge of operations on Guadalcanal. In 1944 he led the 7th Corps from Italy through France to Germany. He d. of pneumonia.

PATEN. Flat dish of gold or silver used for hold-

ing the consecrated bread at Holy Communion.

PATENTS. Letters patent, more usually called P., are documents conferring upon a person the exclusive right to make, use, and sell an invention for a limited period, i.e. 16 years. It is not possible to patent an *idea* nor anything which is not *new*. An International Convention (1883) safeguards rights outside the original country of patent, but 16 yrs. is inadequate for inventions arising from modern science and technology and in 1967 the draft patent convention of E.E.C. proposed a term of 20 yrs. The Patent Office in Holborn, London, not only grants patents but registers designs and trade marks.

PATER, Walter Horatio (1839–94). British critic. B. in London, he became a fellow of Brasenose Coll., Oxon., in 1864. A noted stylist and supporter of 'art for art's sake', he pub. *Studies in the History of the Renaissance* (1873); *Marius the Epicurean* (1885); *Imaginary Portraits* (1887), etc.

PATERNO'STER. Name for the Lord's Prayer, from the opening words of the Latin version.

PATERSON, Andrew Barton (1864–1941). Australian journalist, known as 'Banjo' P., author of vols. of light verse and the nationally popular 'Waltzing Matilda' adapted from a traditional song.

PATHAN (patahn'). Warrior tribesman of Afghanistan and N.W. Pakistan. See N.-W. FRONTIER.

PATMORE, Coventry (1823–96). British poet and critic. He was a librarian at the British Museum 1846–66, and as one of the pre-Raphaelites achieved fame with the poem *The Angel in the House* (1854–63), and the collection of odes *The Unknown Eros* (1877).

PATMOS. Greek is. of the Dodecanese. St. John is said to have written Revelation while in exile here. Area 13 sq. m.; pop. (1961) 2,400.

PATNA. The cap. of Bihar state, Rep. of India, on the Ganges. It has remains of a hall built by Asoka in the 3rd cent. B.C., and is the seat of a univ. (1917). Pop. (1961) 363,700.

PATON, Alan (1903–). S. African writer. B. at Pietermaritzburg, he became first a schoolmaster, and in 1935 principal of a reformatory nr. Johannesburg, which he ran on enlightened lines. His novel *Cry, the Beloved Country* (1948) touched the heart of S. Africa's problems; later books incl. the study *Land and People of South Africa* (1956), *The Long View* (1968).

PATRAI (pat're). Port of Greece, on P. Gulf, 45 m. W. of Corinth, cap. of Achaia (Akhaia) nome. The ancient Patrae, it is the only one of the 12 cities of Achaia to survive. Destroyed 1821 during the Greek war of independence, it was rebuilt. It has hydro-electric installations, and textiles and paper are made. Pop. (1961) 95,364.

PATRIARCH (Gk. 'ruler of a family'). The mythical ancestors of the human race and of the Jews, from Adam to the sons of Jacob. In the Orthodox Church the term is used for the primates of 7 of the 10 national Churches.

PATRICIANS. Privileged class in ancient Rome, descended from the original citizens. After the 4th cent. B.C. the rights formerly exercised by the Ps. alone were thrown open to the plebeians, and patrician descent became only a matter of prestige.

PATRICK, St. (c. 389–461 or 493). The patron saint of Ireland. B. in Britain, probably in S. Wales, he was carried off by pirates to 6 years' slavery in Antrim before escaping either to Britain or Gaul – his poor Latinity suggests the former – to train as a missionary. He is variously said to have landed again in Ireland in 432 or 456, and is credited with founding the diocese of Armagh, though this was probably the work of a 'lost apostle' (Palladius or Secundinus), of which he was bp. The later, traditional date of death is probably correct. His work was a vital factor in the spread of Irish Christian influence. Of his writings only his *Confessio* and an *Epistola* survive.

PATTI (pat'te), Adellina (1843–1919). British

Rome, the tomb of St. James of Compostella in Spain, the shrine of Becket at Canterbury, and the holy places at La Salette and Lourdes in France.

PILGRIMAGE OF GRACE. The rebellion of 1536-7 in Lincs and Yorks. In character it was both a movement of the feudal nobility and clergy against the dissolution of the monasteries and Henry VIII's centralizing policy, and a peasant revolt against the enclosure of common lands. The rebels were dispersed by promises, and then executed in large numbers.

PILGRIM FATHERS. Name given to the emigrants who sailed from Plymouth in the *Mayflower* in 1620, and founded the colony of New Plymouth, Mass. Not a quarter of them were Puritan refugees. See also DARTMOUTH.

PILGRIMS' WAY. Track running from Winchester to Canterbury, England, which was the route of medieval pilgrims visiting the shrine of Thomas à Becket. Some 120 m. long, the P.W. can still be traced for more than half its length.

PILGRIM TRUST. See HARKNESS, EDWARD.

PILLORY. Instrument of punishment consisting of a wooden frame set on a post, with holes in which the prisoner's head and hands were secured. Its use was abolished in England in 1837.

PILLORY

PILSEN. German form of PLZEN.

PILSUDSKI (piłsood'ski), Joseph (1867-1935). Polish statesman. B. in Russian Poland, he founded the Polish Socialist Party in 1892, and was twice imprisoned for anti-Russian activities. During the F.W.W. he commanded a Polish force to fight for Germany, but fell under suspicion of intriguing with the Allies, and in 1917-18 was imprisoned by the Germans. When Poland became independent he was elected Chief of State, and led the unsuccessful Polish attack on Russia in 1920. He retired in 1923, but in 1926 led a military coup which estab. his dictatorship until his death.

PILTDOWN MAN. Fossilized, fragmentary skull which Charles Dawson (d. 1916) 'discovered' at Piltdown in Sussex in 1912. Long believed to represent the oldest human species found in Europe, it was proved a hoax in 1953. The jaw was that of an orangutan, and the cranial bones (though both human and ancient) could not have come from this site.

PIMENTO. Genus of trees found in tropical America. The dried fruits of the species *Pimenta officinalis* are used as spice.

PIMPERNEL. Genus of plants (*Anagallis*) in the family Primulaceae. The Scarlet P. (*A. arvensis*) grows in cornfields and is easy to overlook, since the flowers open only in full sunshine. It is naturalized in N. America.

PINDAR. (c. 522 B.C.-442 B.C.). Greek lyric poet. B. near Thebes, he excelled in the choral lyric.

PINDLING. (Lynden) Oscar (1930-). Bahamas statesman. After studying law in London, he returned to the is. to join the newly-formed Progressive Liberal Party, and then became the first Negro Prime

PINEAPPLE. Originally a native of South and Central America, the pineapple is now one of Queensland's most important crops, as at this farm on the coast. Other producing areas are the Philippines, Hawaii, and Malaya.

Courtesy of the Agent-General for Queensland.

Minister of the Bahamas in 1967.

PINE. Genus (*Pinus*) of some 70 species of evergreen coniferous trees, of which the Scots P. (*P. sylvestris*) is grown commercially for soft timber (deal) and its yield of turpentine, tar, pitch, etc. The oldest living thing is probably the bristlecone P. (*P. aristata*), native to California, of which some specimens are said to be c. 4,600 years old.

PINEAPPLE. Plant (*Ananas comosus*) native to S. and Central America, now cultivated in many other tropical areas, e.g. Queensland. The mauvish flowers are produced midway in the 2nd year, and subsequently consolidate with their bracts into a fleshy fruit. For export to world markets the fruits are cut unripe and lack the sweet juiciness typical of the tinned P. (usually the smoother-skinned Cayenne variety) which is allowed to mature fully.

PINERO. Sir Arthur Wing (1855-1934). British dramatist. B. in London, of Jewish extraction, he became an actor, beginning to write for the stage in 1877. He wrote farces such as *Dandy Dick* (1887), the sentimental *Sweet Lavender*; and the problem plays *The Second Mrs. Tanqueray* (1893), *The Notorious Mrs. Ebbsmith* (1895), and *Mid-Channel* (1909); and *Trelawny of the Wells* (1898).

PINK. See CARNATION.

PINKERTON. Allan (1819-84). American detective. B. in Glasgow, he emigrated to the U.S.A. in 1842, where in 1852 he founded P.'s National Detective Agency. In 1861 he prevented a plot to assassinate Lincoln, and from his espionage system, built up in the Civil War, created the Federal secret service.

PINKIANG. Japanese form of HARBIN.

PINKIE. Spot near Musselburgh, Midlothian, Scotland, which was the scene of a defeat of the Scots by the English in 1547.

PINT. Liquid measure of capacity, $\frac{1}{4}$ of a quart, $\frac{1}{2}$ of a gallon; equivalent to 20 fluid oz. in U.K., and 16 fluid oz. in U.S.A.

PINTER. Harold (1930-). British dramatist. Of Jewish stock, he had a rigorous training as an actor in provincial repertory 1949-57. *The Caretaker* (1960) brought him success as a playwright, but *The Birthday Party*, produced in 1958, while he was actually working as a caretaker, was a dismal failure. Always concerned with the breakdown of communication between individuals, he essayed a sophisticated sexual level in the acid *The Lover* (1962). He writes also for radio and television.

PINTURICCHIO (pintoorik'kēō) (1454-1513). Italian painter whose real name was Bernardino di Betti. B. at Perugia, he assisted Perugino in decorating the Sistine Chapel, Rome.

PAWPAW. The trees are so rapid in growth that they produce their delicious fruit within a year of the seed being planted. Unfortunately ripe fruit bruises too easily to be transported undamaged and, if packed green, does not ripen properly, so that it is little seen outside the tropics.

Courtesy of the Agent General for Queensland.

building of 1851 (see **CRYSTAL PALACE**), which was revolutionary in its structural use of glass.

P.A.Y.E. (Pay As You Earn). System whereby a proportionate amount of Income Tax is deducted by the employer and handed over to the Inland Revenue before wages are paid, reliefs due being notified to him by a code no. for each employee. Introduced in Britain in 1944 to spread the tax burden over the year for the increasing no. of wage-earners becoming liable, it was devised by Sir Paul Chambers (q.v.).

PAYMASTER-GENERAL. Head of the P.-G.'s Office, the British govt. dept. (estab. 1835) which acts as paying agent for most other depts.

PAYSANDU'. Second city of Uruguay, cap. of P. dept., situated on the r. Uruguay c. 210 m. N.W. of Montevideo. Tinned meat is the main product. It dates from 1772. Pop. (1968) 65,000.

PAZ (pahth), Octavio (1914–). Mexican poet. B. in Mexico City, his *Piedra de Sol* (1957, *Sun Stone*) is a personal statement comparable with Hart Crane's *The Bridge*, and takes as its basic symbol the Aztec Calendar Stone. He has also pub. a study of Mexican culture *The Labyrinth of Solitude* and ed. anthologies.

PEA. Two allied genera in the family Leguminosae, both climbing plants. The garden P. (*Pisum sativum*) has white, lipped flowers, and has been cultivated since ancient times for its seeds, gathered unripe; it grows at its best in England. Cultivated for their flowers are the fragrant sweet P. (*Lathyrus odoratus*), and the scentless everlasting P. (*L. latifolius*).

PEABODY, George (1795–1869). American merchant, banker, and philanthropist. B. in Massachusetts, he came to England in 1837, and in 1862 he founded the P. Trust, to build homes known as P. Buildings for the poor of London.

PEABODY. Town of Mass., U.S.A. Formerly South Danvers, birthplace of George Peabody, it was renamed in his honour in 1868; it is noted for its tanneries, started in the early 18th cent. Pop. (1960) 32,202.

PEACE, Charles (1832–79). British criminal. He

carried out many burglaries around Manchester, and in 1876 murdered a policeman during a robbery, another man being sentenced to death, though afterwards reprieved for the crime. After killing Arthur

Dyson in a quarrel he removed to London, and continued his burglaries, until he was arrested, tried, and hanged.

PEACE. Canadian river formed in British Columbia by the union at Finlay Forks of the Finlay and Parsnip rivers and flowing through the Rockies and across Alberta to join the Slave r. just N. of Lake Athabasca; length 1,000 m. Discovered c. 1780 and explored 1792–3 by Sir Alexander Mackenzie (c. 1755–1820), it was used as

a means of transport by fur traders. A dam, with 4 times the hydroelectric potential of Hoover Dam, was begun 12 m. E. of Finlay Forks in 1962.

PEACE CORPS. A body of trained men and women, first estab. in the U.S. by Pres. Kennedy in 1961, providing the necessary skilled manpower required in developing countries, especially in the fields of teaching, agriculture and health. Living among, and at the same level as, the country's

inhabitants, volunteers are paid only a small allowance covering their basic needs and maintaining health. The P.C. was inspired by Voluntary Service Overseas (see **BRITISH VOLUNTEER PROGRAMME**), and similar corps have since been formed in other countries.

PEACH. A tree (*Prunus persica*) in the family *Rosaceae*. It has ovate leaves and small white flowers. The yellowish edible fruits have thick velvety skins; the nectarine is a smooth-skinned variety.

PEACOCK, Thomas Love (1785–1866). British satirist. B. at Weymouth, he worked for the East India Company 1819–56. He pub. several books of verse, and the satiric novels *Headlong Hall* (1815), *Melincourt*, *Nightmare Abbey*, and *Crotchet Castle* (1831).

PEACOCK. Genus of gallinaceous birds, native to India and Ceylon. The common P. (*Pavo cristatus*) is rather larger than a pheasant and has a large fan-shaped tail, brightly coloured with blue, green, and purple 'eyes' on a chestnut ground. The female is brown with only a small tail.

PEAK DISTRICT. Tableland of the S. Pennines in N.W. Derbyshire, England. It is a popular tourist region and a National Park. The highest point is Kinder Scout (2,088 ft.).

PEALE, Charles Wilson (1741–1827). American artist. B. in Pennsylvania, and a student with Benjamin West in England 1766–9, he was noted for his portraits of Washington, etc., and also his miniatures.

PEANUT. See **GROUND-NUT.**

PEAR. Tree (*Pyrus communis*), closely related to the apple (to which it is second in importance as a fruit producer in

PEACOCK

OCTAVIO PAZ

Courtesy of Grove Press, Inc.

PEALE. During his years in England, in 1766–9, Peale studied under Benjamin West, and the master made this pleasant portrait-study of his pupil.

Courtesy of the New York Historical Society, N.Y. City.

PITCAIRN. The safe arrival of stores is vital, and here oil drums are being carried up the beach after being ferried ashore from the tanker in one of the island 'whole' boats—seen under the thatched roof to the left.

Courtesy of British Petroleum.

countries, but with others the revolver remained in favour.

PITCAIRN. Island in the Pacific, c. 3,300 m. E.N.E. of New Zealand. Discovered in 1767, it was uninhabited until occupied in 1790 by the *Bounty* mutineers, whose presence was discovered in 1808; the present inhabitants are descended from them. Area 2 sq. m.; pop. (1969) 74. The uninhabited islands of Henderson, Ducie, and Oeno, annexed in 1902, were attached to P., which is a British colony.

PITCH (Acoustics). The position of a note in the musical scale; this depends on the frequency of the predominant sound wave. A standard P. was agreed at an international conference in 1939, A above middle C having a frequency of 440.

P. has many other meanings, e.g. the ratio of the rise to the span of a roof, the distance between adjacent turns of a screw thread, the distance an aeroplane advances along its flight path for one revolution of the propeller, the distance between the centre lines of rivets in rows parallel to the seam of a riveted joint, the distance between perforations on the edges of cinema films, etc.

PITCHBLEND, or Uranite. An ore consisting mainly of uranium oxide U_3O_8 , but also containing radioactive salt of radium $RaBr_2$, first separated by the Curies in 1898 from P. from N. Bohemia, in which it occurs in about 1 part in 3 million.

PITMAN, Sir Isaac (1813–97). British phonographer. B. in Wilts, he became a teacher, and after studying Samuel Taylor's scheme for shorthand writing, pub. in 1837 his own system, *Stenographic Soundhand*, which is widely used for its combination of speed and accuracy; it has been adapted for use in many languages. His grandson Sir (Isaac) James P. (1901–) devised the 44-letter Initial Teaching Alphabet adopted on a wide scale in the 1960s to teach children to read with less difficulty.

PITT, William (1759–1806). British Tory statesman. The son of Lord Chatham (q.v.) he entered parliament

in 1781 as a 'Chathamite' Whig, and took office as Chancellor of the Exchequer in Shelburne's govt. of 1782–3. He became P.M., with the support of the Tories and 'king's friends', in 1783. His main achievements were his reorganization of the national finances and his commercial treaty with France for reciprocal reduction of tariffs. He allowed the country to drift into war with France in 1793 and had little success in his conduct of the war. After 1792 he conducted a policy of repression of all advocates of reform, which in Ireland provoked a rebellion in 1798. To solve the Irish question he carried through the Act of Union in 1800, but resigned in 1801 when George III refused to accept Catholic emancipation. He returned to office in 1804, and set himself to build up a coalition with Austria and Russia against Napoleon. The news of the defeat of Austerlitz destroyed his hopes; he d. broken-hearted, and was buried in Westminster Abbey.

PITT-RIVERS, Augustus Henry (1827–1900). British archaeologist, *né* Lane-Fox, who assumed the surname P.-R. on succeeding to the estates of his great uncle, the 2nd Lord Rivers. Entering the Grenadiers, he later became a lieutenant-gen., and his earliest interests were in firearms, but on his accession to lands rich in archaeological sites he commenced a series of model excavations recorded in *Excavations in Cranbourne Chase* pub. privately from 1887. He was remarkable for his brilliant pioneer recording methods, use of stratification, and recognition of the importance of humble objects. The P.-R. Museum at Oxford houses 1,000,000 ethnographic items, and a new extended complex is planned.

PITTSBURGH. Second city of Pennsylvania, U.S.A., at the confluence of the Allegheny and Monongahela to form the Ohio. It is a great port, at the centre of a region producing coal, natural gas, and petroleum. Steel is the main product, but P.'s many industries also incl. shipbuilding; making of glass, aluminium, bricks, pottery; and nuclear energy. P., on the site of Fort Duquesne estab. by the French in 1754, was substantially reconstructed during the 1940s and 1950s. P. univ. (1787) rises to a height of 535 ft. (42 storeys). Pop. (1960) 604,332.

PITUITARY GLAND The most important of the endocrine or ductless glands. About the size of a pea, it is attached to the base of the brain in the 'Turkish saddle', and is divided into 2 distinct lobes. From the

PITTSBURGH. At the point where the Allegheny (left) and Monongahela (right) meet to form the Ohio river is the 'golden triangle', one of the world's most concentrated business centres. Its apex (lower left), formerly a conglomeration of buildings, etc., has been planned as a well-laid-out pleasure ground.

Courtesy of the Chamber of Commerce of Greater Pittsburgh

ft.) and Hart Fell, and the vales are watered by the Tweed and its tributaries. Coal is mined and woollens manufactured. Peebles is the co. town. Area 347 sq. m.; pop. (1961) 14,117.

PEEL, Sir Robert (1788–1850). British Cons. statesman. B. in Lancs, he entered parliament as a Tory in 1809. As Home Sec. 1822–7 and 1828–30, he founded the modern police force and in 1829 introduced R.C. emancipation. After the passing of the Reform Bill (1832), which he had resisted, he reformed the Tory Party under the name of 'Conservatives', on a basis of accepting necessary reforms and seeking middle-class support. He was Premier 1834–5 and 1841–6; he fell owing to his repeal of the Corn Laws (1846) which was opposed by the majority of his party. He and his followers then formed a 3rd party standing between the Liberals and Conservatives; the majority of the Peelites, including Gladstone, joined the Liberals.

PEEL. Seaport in the Isle of Man, 12 m. W.N.W.

PEEL. On St. Patrick's Isle, at the entrance to the harbour, the saint is said to have founded the first church on Man. The ruined 12–16th cent. castle incorporates (right) St. German's cathedral, of the same period.

Courtesy of the Isle of Man Tourist Board.

of Douglas. The principal occupation is fishing. Pop. (1961) 2,487.

PEELE, George (c. 1558–97). English dramatist. B. in London, he wrote a pastoral, *The Arraignment of Paris*; a fantastic comedy, *The Old Wives' Tale*; and a tragedy, *David and Bethsabe*.

PEEPUL. See BO-TREE.

PEERAGE. In the U.K. the body of nobility holding the hereditary temporal dignities of duke, marquess, earl, viscount and baron: certain hereditary Ps. may be held by a woman in default of a male heir. To these were added in the later 19th cent. the Lords of Appeal in Ordinary, who are life peers, as well as from 1958 a number of specially created life peers of either sex. Since 1963 it has been possible for a peer to disclaim his title (see HOME, SIR ALEC DOUGLAS, and HOGG, QUINTIN), usually to enable him to be elected to the Commons, and in 1964 it was ruled that his children need not discontinue use of their courtesy titles. See PARLIAMENT.

PE'GASUS. In Greek mythology, a winged horse which sprang from the blood of Medusa. Hippocrene, the spring of the Muses on Mt. Helicon, is said to have sprung from a blow of his hoof. He was transformed to a constellation.

PEGU (pə'gō). Town of Burma, on the river P., 45 m. N.E. of Rangoon, founded A.D. 573. It is famous for the Shwe-mawdaw pagoda. Pop. c. 47,000.

PÉGUY (pə'gwe). Charles (1873–1914). French author and poet. B. at Orléans, he estab. a socialist publishing house in Paris, and from 1900 pub. *Les Cahiers de la Quinzaine*, which aimed at regenerating

French republicanism. His works incl. *Notre Patrie* (1905) and *Mystère de la Charité de Jeanne d'Arc*.

PEIPING. Name, meaning northern peace, 1928–49 of PEKING.

PEKINESE. Toy dog of Oriental origin. Long-haired, they are variously coloured, tan being the most common.

PEKING. Cap. of China, in Hopei prov. It covers the site of Yenking, cap. of the 10th cent. Liao dynasty, and the 13th cent. cap. of Kublai Khan, called by the Mongols Khanbaligh (Marco Polo's Cambaluc), by the Chinese Taitu. The first emperor of the Ming dynasty made Nanking (southern capital) his cap., but in 1421 Peking (northern capital) once more became cap. of the Chinese Empire, and remained so except for 1928–49 when P. was renamed Peiping (northern peace) and the cap. was once more removed to Nanking. P. has iron and steel works, railway repair shops, cotton mills, and factories making agricultural implements and other machinery. It has an airport. Pop. (1965) 7,300,000 in an area of 3,386 sq. m.

PEKING MAN. A skull found near P. in 1927, belonging to the same period as *Pithecanthropus* (See JAVA), but with a more developed brain.

PELAGIUS (pēlāji-us) (c. 360–c. 420). British theologian. He went to Rome c. 400, and there taught that every man possesses free will, denying Augustine's doctrines of pre-destination and original sin. Cleared of heresy by a synod at Jerusalem in 415, he was later condemned by the Pope and the emperor.

PELÉE (pelā'), Mont. Volcano in Martinique, French West Indies, famous for the violent eruption of 1902 which destroyed the town of St. Pierre and killed 30,000 people. Eruptions 1929–32 threw up masses of lava which increased the height of the mountain to 4,500 ft.

PELHAM, Henry (1696–1754). British Whig statesman. He held a succession of offices in Walpole's cabinet 1721–42, and was P.M. 1743–54.

PELICAN. Genus of water-fowl, remarkable for the pouch beneath the bill used to store its catches of fish, and incl. the pinkish common P. (*Pelecanus onocrotalus*) of Europe, Asia and Africa; the Australian black-backed P. (*P. constrictillatus*); and the American brown P. (*P. occidentalis*), which is marine.

PELLA'GRA. A disease of sub-tropical countries in which the staple food is maize, due to deficiency of nicotinic acid (vitamin B), which is contained in protein foods and yeast.

PELOPONNESE (pel'ōponēz). Peninsula forming the S. part of Greece. It is joined to the mainland by the narrow isthmus of Corinth, and is divided into the nomes of Argolis, Arcadia, Achaea (Akkaia), Elia, Corinth, Lakonia, and Massenia, representing its 7 ancient states. Area 8,320 sq. m.; pop. (1961) 1,096,390.

PELOPONNESIAN WAR. See GREEK HISTORY.

PE'MBA. Coral island in the Indian Ocean, 30 m. N.E. of Zanzibar, of which it forms part. Cloves and copra are the chief products; it has a small airfield. Area 380 sq. m.; pop. (1958) 133,858.

PEMBROKE. Seaport (bor.) and engineering centre in S. Pembrokeshire, Wales. Its castle was begun in 1200; and Henry VII was born at P. Pop. (1961) 12,737.

PEMBROKESHIRE. Extreme S.W. county of

AUSTRALIAN BLACK-BACKED PELICAN

TABLE OF THE PLANETS

Name	Mean dist. (millions of m. from Sun)	Period of sidereal revolu- tion In years	Mean diam. In miles	Axial rotation (sidereal)
Mercury	36.0	0.24	3,000	88 days
Venus	67.2	0.62	7,600	225 "
Earth	92.9	1.00	7,927	23 h. 56 m.
Mars	141.6	1.88	4,200	24 h. 37 m. 23 s.
Jupiter	483.3	11.86	88,700	9 h. 55 m.
Saturn	886.0	29.46	74,100	10 h. 14 m.
Uranus	1,782.8	84.02	29,300	c. 11 h.
Neptune	2,793.5	164.8	30,500	c. 16 h.
Pluto	c. 3,666	248	c. 3,650	—

PLANETS. Non-luminous globes revolving around the Sun at various distances and in various periods. Nine Ps. are known; in order of distance from the Sun, they are Mercury, Venus, the Earth, Mars, Jupiter, Saturn, Uranus, Neptune and Pluto. Of these, the first 4, and Pluto, are relatively small, solid bodies; the rest are giants, much larger than the Earth, and with gaseous surfaces. Five planets were known from very ancient times: Uranus was discovered in 1781, Neptune in 1846 and Pluto in 1930.

PLANIMETER. A simple integrating instrument for measuring the area of a plane surface. It consists of 2 hinged arms; one is kept fixed and the other is traced round the boundary of the area. This actuates a small graduated wheel and the area is found from its change in position.

PLANKTON. A term used first by Victor Hensen to denote those small forms of animal and plant life which float or drift in water.

PLANT. Many of the lower plants consist of a single body or thallus upon which the organs of reproduction are borne. Simplest of all are the thread-like waterplants, e.g. *Spirogyra*, which consist of a chain of cells containing chloroplasts, which are responsible for the green colour of the P. and for the provision of its food. The seaweeds and mosses possess a further development of the simple chain of cells in their multi-cellular, simple bodies which have specially modified areas in which the reproductive organs are carried. Higher in the morphological scale are the ferns, which produce leaf-like fronds bearing on their under-surface incrustations in which the spores are carried. The spores are freed and germinate to produce small independent bodies carrying the sexual organs; thus the fern has 2 generations in its life cycle.

The flowering Ps. are by far the largest group, and structurally the most complex. The flowering P. is

divided into 3 parts, root, stem, and leaves. Roots may be scattered and fibrous, as in the majority of garden annuals, or developed into a swollen food reserve such as the carrot, turnip, or sugar beet. Stems grow above or below ground. Their cellular structure is designed to carry water and salts in solution from the roots, which have obtained the nourishment from the soil, to the leaves, where they are manufactured into P. food. Underground stems sometimes bear tubers, e.g. potatoes, or fruits, e.g. ground-nuts, while some are prized as economic products, e.g. ginger. Aerial stems occasionally develop food reserves as in the sugar cane, but are more usually merely a means of support for the leaves. The leaves, which are often highly modified, manufacture the food of the P. by means of the chlorophyll which they contain. Flowers are modified leaves arranged in groups and enclosing the reproductive organs from which the fruits and seeds result.

Classification. The classification of Ps. is based on a number of characters. Ps. are grouped by their similarities of constitution into species, within which minor differences are marked as strains and varieties. Species bearing a resemblance to one another are grouped into genera, and similar genera into families. These are classed in the larger divisions cohorts and classes. The principal groups are shown in the Table. See also BOTANY; BREEDING; FLOWER.

PLANTA' GENET. Name commonly applied to the royal house of England reigning 1154–1399. It was originally a nickname of Geoffrey, count of Anjou, father of Henry II, who usually wore a sprig of broom (*planta genista*) in his hat, and it was revived c. 1450 as a surname by Richard, duke of York, to emphasize the superiority of his claim to the throne to that of Henry VI.

PLANTAIN. Genus of plants (*Plantago*) which are troublesome weeds in lawns, etc., e.g. the great P. (*P. major*) with oval leaves, grooved stalks and a spike of green flowers with purple anthers followed by seeds liked by cage-birds. The name is also given to the genus *Musa* in the tropics: see BANANA.

PLANTIN (ploñtah'), Christophe (1514–89). French printer. B. near Tours, he set up his printing house at Antwerp in 1555. The P. type which he designed is still in use.

PLASSEY (plas'ē). Village in W. Bengal, India, on the Bhagirathi r., 31 m. N.N.W. of Krishnagar; it has sugar mills and produces rice, jute, and linseed. It gave its name to Clive's victory in 1757 over Suraj-ud-Dowlah, but the site of the battle had by 1801 been eaten away by the river.

PLASTER OF PARIS. Calcined gypsum which is mixed with water (1 part gypsum, 2½ parts water) to form a thin paste which later hardens. It is used for taking casts, moulds, etc., and in orthopaedic surgery for setting fractured bones. It is manufactured near Paris: hence the name.

PLASTICS. Synthetic materials which are normally stable, but are plastic at some period during their manufacture. Formerly plastic materials were derived from coal, but since the 1950s the basic materials, espec. for thermoplastics, come from petroleum (q.v.) derivatives. Fast replacing metal and wood in many fields, Ps. (mostly polymers) are used particularly in household equipment, the construction of houses, ships, aircraft (notably the lightweight carbon-fibre-reinforced Ps. developed in the 1960s), and cars, and the electrical industry. They are processed by extrusion, injection moulding, vacuum forming and compression, and can be formed with different consistencies, ranging from hard and rigid, to soft and rubbery. See POLYMERIZATION.

PLASTIC SURGERY. The surgical repair of seriously damaged tissues. During the 2 wars a wide variety of methods have been developed whereby surgeons can restore faces that have been almost

CLASSIFICATION OF PLANTS

Class	Phylum I: Thallophyta
1 Algae	Algae, diatoms, etc.
2 Charophyta	Stoneworts.
3 Myxomycetes	Slime fungi.
4 Bacteria	
5 Fungi	Moulds toadstools, puff-balls, lichens, etc.
	Phylum II: Archegoniatae
1 Bryophyta	Liverworts, mosses.
2 Pteridophyta	Ferns, fossils, horsetails, club mosses.
	Phylum III: Spermatophyta
1 Pteridospermeae	Fossils.
2 Gymnospermeae	Cycads, fossils, maidenhair tree, cone-bearing trees.
3 Angiosperms	Flowering plants: (i) Monocotyledons—orchids, grasses, sedges, lilies. (ii) Dicotyledons—families of daisy, pea, coffee, spurge, carrot and sage.

PENNINES. System of mountains which has been called 'the backbone of England'. The chain is broken in the centre by a gap through which flow the Aire to the E. and Ribble to the W. The P. stretch from the Scottish border to the Peak in Derbyshire. The section N. of the gap is broader and higher than the S., with Cross Fell (2,930 ft.) the highest of several peaks. Britain's first long-distance footpath was the 250-mile *Pennine Way* (1965: Edale, Derbyshire to Kirk Yetholm, Roxburghshire).

PENNSYLVANIA. One of the original 13 states of the U.S.A. Crossed by the Alleghenies, P. is drained by the Ohio, Susquehanna and Delaware. Lumbering and agriculture are important, but P. has a vast bituminous and anthracite coal output, and is the largest steel-producing state, Pittsburgh being the great centre for its manufacture. Other mineral products incl. petroleum and natural gas. Among agricultural products are cigar leaf tobacco, buckwheat, maize, wheat, potatoes, fruits. P. was founded and named in 1682 by the Quaker William Penn who had been granted land by Charles II in 1681. The chief towns are Philadelphia, Pittsburgh, Erie, Scranton, Allentown and Harrisburg, the cap. Area 45,333 sq. m.; pop. (1960) 11,319,366.

PENNYROYAL. Perennial moorland plant (*Mentha pulegium*). It has ovate leaves, whorls of purplish flowers, and the characteristic scent of mint.

PENNINES. Typical Pennine country: In the distance is Penryghent. Photo: W. R. Mitchell.

PENRHYN (pen'rin). District of Caernarvonshire, Wales, famous for the P. slate quarries. P. Castle, formerly seat of the Lord P., became National Trust property in 1951 and was opened to the public in 1952.

PENRITH. English market town (U.D.) in Cumberland, 18 m. S.E. of Carlisle. Pop. (1961) 10,931.

PENSACOLA. Seaport of Florida, U.S.A., on the Gulf of Mexico. There is a large naval air-training station. P. was founded by the Spanish in 1696. Pop. (1960) 56,752.

PENTATEUCH (pen'tatük) (Gk. 5 books). The first 5 books of the O.T., ascribed to Moses.

PENTECOST (Gk. fiftieth). Jewish festival marking the close of the wheat harvest in Palestine, celebrated on the 50th day after the Passover. It was at P. that the Holy Spirit descended on the Christian Church, an event commemorated on Whit Sunday.

PENTLAND FIRTH. The channel separating the Orkney Islands from N. Scotland, about 14 m. long and 7 m. wide.

PENZA. Town in the R.S.F.S.R., cap. of P. region, 350 m. S.E. of Moscow, at the junction of the P. and Sura rivers. Founded as a fort in 1663, it has saw mills, and factories making bicycles, watches, calculating machines, and textiles; also an airport. Pop. (1967) 324,000.

PENZANCE. English seaport and resort (bor.) in

Cornwall, on Mount's Bay, the most westerly town in England. It has a mild climate in which palm trees flourish. Pop. (1961) 19,433.

PE'ONY. Genus of perennial plants in the family Ranunculaceae, remarkable for their brilliant and showy flowers. Most popular are the common P. (*Paeonia officinalis*) and the white P. (*P. albiflora*).

BLACK PEPPER

PEORIA (pē-ōr'ia). City in Illinois, U.S.A., on the Illinois r. It is a transport, mining, and agricultural centre, seat of Bradley Univ. (1897). Fort Crève Cœur was built about here by La Salle in 1680, and became a trading centre; the first American settlers arrived in 1818. Pop. (1960) 103,162.

P.E.P. (Political and Economic Planning). Non-political association publishing reports on aspects of British life, e.g. the press and the health services. Sir Gerald Barry (q.v.) was one of the founders.

PEPIN (d. 768). King of the Franks. The son of Charles Martel, he acted as mayor of the palace to the last Merovingian king, Childeric III, until in 751 he deposed him and himself assumed the royal title, founding the Carolingian line.

PEPPER. Climbing plant (*Piper nigrum*) native to the E. Indies. When gathered green, the berries are crushed to produce the condiment black P.; when ripening and turning red, the berries produce white P. Cayenne P. is a much hotter variety made from the fruits of *Capsicum fastigiatum*, indigenous to tropical America.

PEPPERMINT. Perennial herb (*Mentha piperita*), with ovate aromatic leaves, and purple flowers. Oil of P. is used medicinally and in confectionery.

PEPUSCH (pā'poosh), Johann Christopher (1667-1752). German composer. B. in Berlin, he settled in England c. 1700 and is best remembered for the anthem 'Rejoice in the Lord', and music for *The Beggar's Opera* and *Polly*.

PEPYS (pēps), Samuel (1633-1703). British diarist. B. in London, he entered the navy office in 1660 a few months after beginning his diary. He was appointed secretary to the Admiralty in 1672, imprisoned with loss of office in 1679 on suspicion of being connected with the Popish Plot, reinstated in 1684, and finally deprived at the 1688 Revolution, when he retired to Clapham. His diary, in a personal version of Shelton's shorthand undeciphered until 1825, and discontinued in 1669 owing to failing sight, is unrivalled for its intimacy and the human picture it presents of daily life in the 17th cent.

SAMUEL PEPYS. A lover of music, he is portrayed by John Hayls in the act of studying a piece. Photo: N.P.G.

PERAK (pē'ra). State of the Federation of Malaysia

PLEIADES. The stars of the Pleiades cluster (the 'Seven Sisters') together with the nebula in which the stars are immersed. The 'spikes' emanating from the stars are, of course, purely photographic effects, since the bright stars had to be somewhat over-exposed in order to record the excessively faint nebula. The nebula shines purely by reflection. Courtesy of Lick Observatory, Univ. of California.

P. occurs in pneumonia and tuberculosis, but may also be a consequence of scarlet fever or rheumatism.

PLEVEN. Bulgarian town, cap. of P. prov. In the Russo-Turkish war of 1877 Osman Pasha was forced by starvation to surrender P. to the Russians after a siege of 5 months. Pop. (1965) 79,234.

PLEVNA. Russian form of PLEVEN.

PLIMSOLL, Samuel (1824-98). British social reformer. B. in Bristol, he sat in parliament as a Radical 1868-80, and through his efforts the Merchant Shipping Act was passed in 1876, providing for Board of Trade inspection of ships, and the compulsory painting of a load line, or P.'s mark, to show the limit to which a ship may be loaded.

PLINLIMMON or **Plynlimon.** Mountain in Montgomery, Wales, with 3 summits, the highest 2,468 ft.

PLINY. Name of 2 Roman writers. **GAIUS PLINIUS SECUNDUS**, or **P. the Elder** (c. A.D. 23-79), b. in N. Italy, held political and military posts, and was killed during the eruption of Vesuvius. Besides histories now lost, he wrote a *Natural History* dealing with astronomy, geography, zoology, and mineralogy. His nephew, **GAIUS PLINIUS CAECILIUS SECUNDUS**, or **P. the Younger** (c. 61-113), was gov. of Bithynia, c. 111-13, and carried on a correspondence of great historical interest.

PLISETSKAYA, Maiya (1925-). Russian ballerina. Educ. at the Moscow Choreographic School, she succeeded Ulanova as prima ballerina to the Bolshoi Ballet.

PLEOSTI (plō'yesh'ti). Town of Rumania, cap. of P. region, 35 m. N. of Bucharest; it is the centre of the country's petroleum wells. Pop. (1966) 146,973.

PLOMER (plō'mer), William (1903-). S. African author and poet. B. at Pietersburg, N. Transvaal, he joined Roy Campbell in editing the literary journal *Voorslag*. His books incl. the novel *The Invaders*, the verse *The Dorking Thigh* (1945) and *Collected Poems* (1960); and the autobiography *Double Lives* (1943).

PLOTINUS (c. A.D. 204-70). Greek philosopher. B. in Egypt, he settled in Rome in 244, and opened a school of philosophy. His lectures were ed. by his follower Porphyry, who also wrote his life. P. was the founder of the Neoplatonic system, which profoundly influenced early Christian thought.

PLOUGH. The agricultural implement most normally used in tilling the soil. The hand P. consists essen-

tially of a continuous beam, the front of which is attached to the horse, and the rear branches made into guiding handles. In the central depression are the blades designed to cut the soil, first vertically, and then to turn over the subsoil. The P. is of iron, and cuts to a depth of about 7 in., but there are many variants for special uses. The steam P. was patented in 1855. The 20th cent. has brought tractor and multi-furrow Ps.

PLOVDIV (plovdif). Second town of Bulgaria, cap. of P. prov., on the Maritsa. It makes textiles and leather goods and has tobacco factories. It was founded by Philip of Macedon, to whom it owes its Greek name of Philippopolis (Philip's city). Pop. (1965) 222,737.

PLOVER. Bird in the family Charadriidae, about 10 in. long and with a short bill. The golden P. (*Charadrius pluvialis*), common on British moor-

RINGED PLOVER

lands, has almost black plumage with yellow spots, the underparts being white in winter and black in summer: there are 2 allied American species. Theringed P. (*Aegialitis hiaticula*) with a black and white face, and black band on the throat, is found on British shores, but largest of the ringed Ps. is the killdeer of N. America (*Oxyechus vociferus*), so called because of its cry.

PLUM. A tree (*Prunus domestica*), bearing an edible drupe. There are many varieties, including the greengage, damson, and sloe. The dried P. is a prune.

PLUMBAGO. See GRAPHITE.

PLUTARCH (plo'o'tahrk) (c. A.D. 46-120). Greek biographer. B. at Chaeronea, he lectured on philosophy at Rome, and was appointed procurator of Greece by Hadrian. His *Parallel Lives* consist of pairings of biographies of Greek and Roman soldiers and statesmen followed by comparisons between the two. North's translation inspired Shakespeare's Roman plays. P. also wrote essays, known as the *Moralia*.

PLUTO (plō'tō). In Roman mythology, the lord of Hades. He was the brother of Jupiter and Neptune.

PLUTO. The outermost planet. Its average distance from the Sun is 3,666,000,000 miles, but its orbit is decidedly eccentric, and when at its nearest to the Sun it may be closer in than Neptune. It was discovered in 1930 by C. Tombaugh, at the Flagstaff Observatory, as a result of earlier calculations made by Percival Lowell. P. seems to be a small planet, with a diameter of less than 4,000 miles, and is too faint to be seen except with large telescopes. Very little is known about it, but the surface temperature must be below -200°C, and from P. the Sun would appear only as an intensely bright star.

PLUTONIUM. Element discovered in 1940 by Seaborg and his co-workers at the Univ. of Calif. by bombarding uranium with deuterons: symbol Pu, at wt. 242, at. no. 94. Its most stable isotope Pu-239 (discovered 1941) has a half-life of 24,000 years, is fissile, and usually made in reactors by bombarding U-238 with neutrons. It is used in atom bombs, as a fissionable material in reactors, and for enriching the abundant U-238, but has awkward physical properties, and is very poisonous to animals, being absorbed in bone.

PLYMOUTH. English seaport, city (1928), and co. bor. in Devon, at the mouth of the Plym. Hawkins, Drake and the Pilgrim Fathers sailed from P. Sound. The 'Three Towns' of P., Devonport, and Stonehouse were amalgamated in 1914. The city rises N. from the Hoe headland. Devonport has a dockyard, barracks, and large establishments of the Royal Navy; P. is also an important port for civilian shipping. Its chief magistrate was made lord mayor in 1935.

at issue. In Britain it is punishable by a fine, imprisonment up to 7 years, or both.

PERKIN, Sir William Henry (1838–1907). British chemist. B. in London, he discovered in 1856 the mauve dye which originated the aniline dye industry.

PERLIS. Most northerly state of W. Malaysia, Fed. of Malaysia. Transferred by Siam to Britain in 1909, it is ruled by a raja. Kangar is the cap. Its products are rubber, rice, coconuts, and tin. Area 310 sq. m.; pop. (1966) 116,393.

PERM. Town of the R.S.F.S.R., cap. of P. region, on the Kama near the Urals. It has shipbuilding yards, aircraft and chemical factories, saw mills, etc., and is a centre of petroleum production. It was called Molotov 1940–57. Pop. (1967) 785,000.

PERNAMBUCO (pernahmboo'kō). A N.E. state of Brazil on the Atlantic. The cap. is Recife. Area 37,460 sq. m.; pop. (1967) 4,706,000.

PERNAMBUCO. Another name for RECIFE.

PERON, Juan Domingo (1895–). Argentine politician. With a group of pro-Fascist army officers, he seized power in 1943 and was elected pres. in 1946. His popular following fell away, espec. after the death of his wife Eva (1922–52), and he was deposed in 1955. He retired to Spain.

PERPENDICULAR. Name given to a period of English Gothic architecture lasting from the end of the 14th to the middle of the 16th cent. The chief characteristics of the style are: window tracery consisting chiefly of vertical members; arches which are either 'four centred' – i.e. consisting of 4 arcs – or of 2 arcs forming a blunt point; vaults which are lavishly decorated; and wall surfaces covered with traceried panels. Good examples of the style are the choir and cloister of Gloucester cathedral, and King's College chapel, Cambridge.

PERPIGNAN (perpēnyōn'). Cap. of the Pyrénées-Orientales dept. of France, on the Têt, 40 m. S. of Narbonne. Overlooking P. is the castle of the counts of Roussillon; the cathedral was founded 1324 by Sancho II, king of Majorca, in whose dominions P. then was. Pop. (1962) 86,156.

PERRAULT (pārō'), Charles (1628–1703). French author, chiefly remembered for his prose *Histoires ou Contes du Temps Passé* (1697), which incl. Sleeping Beauty, Red Riding Hood, Blue Beard, Puss in Boots, and Cinderella.

PERRY, Matthew Calbraith (1794–1858). U.S. naval officer, who commanded the expedition which in 1853 reopened communication between Japan and the outside world after 250 years' isolation. In 1854 he negotiated the first U.S.-Japanese treaty.

PERRY. An alcoholic liquor made from pears, mainly in the W. Country of England and Normandy.

PERSE, Saint-John. Pseudonym of the French poet Alexis Saint-Léger Léger (1887–). His 1st book of verse *Éloges* (1911) reflects the colour of the West Indies, where he was b. and raised. Entering the Foreign Service in 1914, he was Sec.-Gen. 1933–40. He then emigrated permanently to the U.S.A., and was deprived of French citizenship by the Vichy govt. His later works incl. *Anabase* (1924), a long poem of epic sweep trans. by T. S. Eliot in 1930; *Exil* (1942), and *Amers* (1957), which celebrates the sea. He was awarded a Nobel prize in 1960.

PERSEPHONE. Greek goddess, the dau. of Zeus and Demeter. She was carried off to the underworld by Pluto, who later agreed that she should spend 6 months of the year with her mother. The story is a myth for the growth and decay of vegetation.

PERSEPOLIS. Ancient cap. of the Persian Empire, about 40 m. N.E. of Shiraz. It was burned down, by accident or design, after its capture in 331 B.C. by Alexander. Impressive ruins of the royal city have been excavated by the Oriental Institute of Chicago.

PERSEUS (per'sūs). Mythical Greek hero, the son of Zeus and Danae. He slew Medusa, the Gorgon,

PERSEPOLIS. Planned by Darius the Great, and a royal capital, Persepolis is the principal site of Achaemenian Persia and still influences architecture today. The fluted shafts of these tapering 60 ft. columns helped to inspire the design of the modern university of Shiraz.

Courtesy of the Iranian Embassy

saved Andromeda from a sea-monster, and became king of Tiryns.

PERSHING, John Joseph (1860–1948). American gen. B. in Missouri, he served in the Spanish War of 1898, the Philippines 1899–1903, and Mexico 1916–17. He commanded the American Expeditionary Force sent to France 1917–18.

PERSIA. A kingdom of S.W. Asia, lying between the Caspian Sea to the N. and the Persian Gulf to the S. Central Persia is occupied by an extensive plateau crossed by mountain ranges, with semi-desert to the E., but some fertile areas produce cereals, cotton, date, olives, opium and tobacco. Climatic conditions are variable, a general dryness being combined with extremes of heat and cold. The mountain herds of sheep provide wool for the carpets which are P.'s oldest manufacture. P.'s greatest wealth lies in the petroleum wells of the S. developed by British enterprise until the industry was nationalized in 1951. A pipeline links the oilfields with refineries at Abadan at the head of the Persian Gulf. Other industries, much encouraged by the Shah, incl. pharmaceuticals, fertilizers, textiles, cars, and a steelworks nr. Ahwaz estab. 1969. Minerals, not yet fully exploited, also incl. iron, copper, lead, zinc, and chromite. Road and rail networks are rapidly improving, and there is an internat. airport at Tehran. The chief towns are the cap. Tehran, Tabriz, Isfahan, Meshed, Abadan, Shiraz, and Kermanshah.

P. is ruled by a shah and has a parliament of 2

PERSIA. The Shahanshah of Iran and Queen Farah.

Courtesy of the Iranian Embassy.

small greenish-yellow flowers. Named after its discoverer, J. R. Poinsett, in 1836, it has recently become a Christmas symbol in the U.S.A. and Canada, although in Mexico it had been known as the Flower of the Holy Night for many years.

POINTILLISM (pwañ'tilizm). Technique in oil painting in which dabs of pure colour are applied to the canvas, and arranged in such a way that when viewed from a distance they would blend into harmonious tones. This technique, also known as Neo-Impressionism, was adopted by Seurat, Signac, and others.

POISONS. Substances which when introduced into or applied to the body are capable of injuring health or destroying life, irrespective of temperature or mechanical action. They may be divided into *corrosives*, e.g. sulphuric, nitric, hydrochloric acids, caustic soda, and corrosive sublimate, which burn and destroy the parts with which they come into contact; *irritants* such as arsenic, copper sulphate, zinc chloride, silver nitrate, and green vitriol, which have an irritating effect on the stomach and bowels; *narcotics*, e.g. opium, prussic acid, potassium cyanide, chloroform, carbon monoxide, sewer gases, etc., which affect the brain and spinal cord, inducing a stupor; *narcotico-irritants* which combine intense irritations and finally act as narcotics, e.g. carbolic acid, foxglove, henbane, deadly nightshade (belladonna), tobacco, and many other substances drawn from the vegetable kingdom. In non-corrosive poisoning every effort is made to remove the P. from the system as soon as possible, e.g. usually by vomiting induced by tickling the back of the throat with a feather or administering an emetic. For some corrosive and irritant Ps. there are chemical antidotes. When the P. is unknown, tepid water and an emetic may be administered. In most countries the sale of P. is carefully controlled by law, and, in general, only qualified and registered pharmacists and medical practitioners may dispense them.

POITIERS (pwahtyā'). Town in the Loire basin, cap. of Vienne dept., France. In 507, Alaric II was defeated by Clovis nr. P. and here Charles Martel stemmed the advance of the Saracens in 732. At P. in 1356 Edward the Black Prince defeated the French King John. The cathedral was commenced in 1162. There is a univ. (1431). Pop. (1962) 26,222.

POKER. Universally played card game, originating in 19th cent. America. It has numerous variations. The object is to win stakes, which are almost invariably played for, by obtaining a hand of 5 cards which rank higher than those of opponents. 2 to 8 players participate, bet on their hands, and exchange cards from the pack in turn, until everyone has exactly called the last bet, which is levied for each turn by each player, or has dropped out. The player with the best scoring hand wins the central pool of money. The combinations are as follows: royal flush, ace to ten of one suit; straight flush, 5 of one suit in sequence; 4 of a kind; full house, 3 of a kind, and 2 of a kind; flush, 5 of one suit; straight, 5 cards in sequence; 3 of a kind; 2 pairs; 1 pair.

POLA. Italian form of PULA.

POLAND. A rep. of E. Europe, bounded on the W. by Germany, on the S. by Czechoslovakia, on the N. by the Baltic and Kaliningrad region of the R.S.F.S.R., on the E. by the Lithuanian, White Russian, and Ukrainian S.S.Rs. For the most part undulating, P. is part of the great plain of central Europe, though in the S. it rises, through hills stretching E. from near Wrocław to the Ukrainian border, into the heights of the Sudeten, Tatra, and Carpathian Mountains on the southern frontier. Of the many rivers, the most important are the Vistula and its chief tributary the W. Bug and the Warta, tributary of the Oder, the lower course of which and its tributary the Neisse form the W. frontier set up in 1945.

ECONOMIC LIFE. P., as it existed before the S.W.W.,

POLAND. In the distance the Vistula flows unchanged, but the Polish parliament building in Warsaw, first built on the country becoming independent in 1918, was completely rebuilt after its destruction in the Second World War.

Courtesy of the Polish Travel Office 'Orbis'

was predominantly agrarian, but changes in its physical structure, particularly the acquisition of almost the whole of the 2 German provs. of Upper and Lower Silesia (a small part of former German Silesia had been allotted to P. after the F.W.W.), and the introduction of govt. planning, enhanced its industrial potential, and by 1960 about one third the pop. was dependent on agriculture. Minerals incl. coal and brown coal, iron, lead, zinc, silver, petroleum and natural gas; cement, fertilizers, steel, textiles, shoes, soap are the chief manufactured products. Potatoes, sugar beet, rye, oats, wheat are the heaviest crops; cattle, pigs, sheep, and horses are reared. Fishing is important.

Chief towns are Warsaw, the cap., Lodz, centre of the textile industry, Krakow (coal and salt mining), Wrocław, Poznan, Katowice, Lublin, and the ports of Gdansk, Szczecin, and Gdynia.

AREA AND POPULATION. Within the boundaries set up in 1945, the area of P. is 120,330 sq. m.; pop. (1967) 32,065,000. The great majority of those professing a religion are R.C.; the pre-war Jewish pop. of c. 3,500,000 has been virtually wiped out, having shrunk to c. 30,000.

GOVERNMENT. Under the constitution of 1952 the former pres. was replaced by a 15-member Council of State elected by the Sjem (parliament), itself elected by all citizens over 18. A Council of Ministers is also chosen by the Sjem; but real power rested with the Politbureau (Communist Party Committee).

History. In the 10th cent. the Polish tribes were first united under one ruler, and Christianity was introduced. Under the Jagellon dynasty (1386–1572) P. was united with Lithuania, and became a great power, being the largest and most tolerant country in Europe at the death of Sigismund, last Jagellon, in 1572. Elected kings followed and P.'s strength declined. But Stephen Bathory defeated Ivan the Terrible of Russia in 1581 and in 1683 John III Sobieski vanquished the Turks and forced them to raise their siege of Vienna. In the 18th cent. P. was subjected to pressure by Prussia, Russia, and Austria, ending with the first partition, 1772, which left a much-reduced P. still in existence. A second partition followed in 1793, Prussia and Russia seizing further areas, and, after defeating Tadeusz Kosciuszko who led a patriotic rising, they occupied the rest of the country in 1795 and P. ceased to figure on the map of Europe though it lived on in the spirit of the Polish people. Risings in Russian P. in 1830 and 1863 led to intensified repression and an increased attempt to Russianize the pop.

P. was revived as an independent rep. in 1918, under the leadership of Pilsudski, and was recognized by the Treaty of Versailles, 1919. P. took advantage of Russia's weakness at that time, through war and revolution, to advance into Lithuania and the

PERU. The magnificent Baroque facade of the church of San Lorenzo, Lima.
Photo: Mike Andrews (Bell Howarth Ltd.)

It falls into 3 main physical divisions: an infertile coastal belt about 80 m. wide; the mountainous Cordillera de los Andes, rising to 20,000 ft., crowned with perpetual snow and ice; and the forested Montaña region in the E. in which rise the head-streams of the Amazon. Lake Titicaca lies partly in P., partly in Bolivia; other Ls. are Junin and Parinacochas. Agriculture is the principal occupation.

Cotton, sugar, rice, coffee, wool, hides and skins are the chief products. Sheep, cattle, llamas, alpacas, horses, mules, goats, and swine are raised; the wool of the alpaca and the llama is of importance. The forests of the Montaña supply cedar, mahogany, wild rubber, quinine, and vegetable ivory. Petroleum is worked in the N.W. Cerro de Pasco is famed for its copper mines; and silver, vanadium, bismuth, gold, lead, zinc, antimony and coal are worked. Manufactures incl. cotton, rayon, wool, and other textiles; tyres, cement, soap, fertilizers, and plastics. P. is traversed by the Pan-American Highway. The principal towns are Lima (the cap.), Arequipa, Callao, Cuzco, Trujillo, and Iquitos. There is a univ. at Lima, founded by Charles V in 1551, and 22 other state univs.

The constitution adopted in 1933 and modified in 1936 and 1945 provided for a president elected for 6 years, 2 vice-presidents elected simultaneously, and a Congress consisting of a Chamber of Deputies and a Senate. Area 514,060 sq. m.; pop. (1967) 12,400,000, excl. nomadic Indians and Mestizos in the E. region, c. 1,000,000. Spanish is the official language, but Quechua and Aymara are used by the Indian population.

History. P., together with present-day Bolivia and Ecuador, was the site of the Inca civilization which reached the peak of its power in the early years of the 16th cent. Civil war enabled the Spanish conqueror Francisco Pizarro to seize most of the country before his assassination in 1541, and Spanish rule was firmly estab. An Indian revolt in 1780 failed, and during the successful rebellions in other Spanish possessions in S. America, 1810–22, P. remained the Spanish H.Q., being the last to achieve independence, 1824. Since then the main events in P.'s history have been the abortive union with Bolivia (1836–9), the naval war against Spain (1864–6), the War of the Pacific (1879–83) over the nitrate fields of the Atacama Desert, in which P. was defeated and lost 3 provs. (one, Tacna, was returned in 1929). Other boundary disputes were settled by arbitration in 1902 (with Bolivia), 1927 (with Colombia), 1942 (with Ecuador). P. declared war on Germany and Japan 12 Feb. 1945. American interests predominate in the oil industry and a bloodless military coup followed dissatisfaction with an oil agreement in 1968.

PERU CURRENT. See HUMMOLDT CURRENT.

PERUGIA (pehroō'jah). City of Umbria, Italy, cap.

of P. prov., lying 1,700 ft. above the Tiber, c. 85 m. N. of Rome. A trade centre, it makes silk and woollen textiles and liqueurs. One of the 12 cities of Etruria, it surrendered to Rome 309 B.C. It has a univ. (1276), a 15th cent. cathedral, a municipal palace begun in 1281, and other fine buildings with many art treasures. The Univ. for Foreigners (1925) teaches Italian culture and language. Pop. (1961) 109,596.

PERUGINO (pehroojē'nō), Pietro (1446–1524). Italian painter whose real name was Vanucci. He worked chiefly in Perugia, and helped to decorate the Sistine Chapel, Rome. Raphael was his pupil.

PESCARA (peskah'rah). Italian town, cap. of P. prov., in Abruzzi e Molise, at the mouth of the P. r. on the Adriatic, the birthplace of d'Annunzio. Hydro-electric installations here supply Rome with electricity. Pop. (1961) 87,076.

PESHAWAR (peshow'r). City in W. Pakistan, 11 m. E. of the Khyber Pass. A place of great strategic value, it has been important since the 2nd cent. It was acquired by the British 1849 and was made cap. of the N.W. Frontier Prov. (abolished 1951). Pop. (1961) 218,691.

PESTALOZZI (pestahlots'ē), Johann Heinrich (1746–1827). Swiss educationist. B. at Zürich, he estab. an experimental school at Burgdorf in 1799, and moved it to Yverdon in 1805. Among his writings are *How Gertrude Teaches her Children*, etc.

PETAÏN (pehtañ'), Henri Philippe (1856–1951). French soldier. After studying at St. Cyr, he was commissioned in 1878, and was promoted to general in 1915. His defence of Verdun in 1916 during the F.W.W. made him a national hero, and in 1917 he was created French C.-in-C., although he became subordinate to Foch in 1918. He suppressed a rebellion in Morocco in 1925–6. As a member of the Higher Council of National Defence he advocated a purely defensive military policy, and was strongly cons. in politics. He became P.M. in June 1940, following the disastrous Battle of France, and immediately signed an armistice with Germany. Removing the seat of govt. to Vichy, he estab. a repressive régime on the Fascist model. On the Allied invasion in 1944 he fled to Germany, but returned in 1945 and was sentenced to death for treason, the sentence being commuted to life imprisonment.

PETER, St. One of the 12 Apostles. Originally called Simeon or Simon, he was given the nickname of Cephas (a rock; Gk. *petros*) by Jesus. He was a fisherman of Capernaum, and may have been a follower of John the Baptist. It was he who first acknowledged Jesus as the Messiah, and his force of character made him a leader among the Apostles. According to tradition, he settled in Rome in later life, and was crucified there during Nero's persecution in A.D. 64; he is regarded at the first bishop of Rome. Excavations under the Basilica of St. Peter's revealed bones, accepted as those of the Apostle by Pope Paul 1968. Of the Epistles attributed to him, the 1st is probably spurious, and the 2nd certainly is.

PETER I (1672–1725). Tsar of Russia; called the Great. He succeeded to the throne in 1682 on the death of his brother Tsar Feodor, and assumed control of the govt. in 1689. After a successful campaign against the Turks in 1696, he visited Holland and England to study western techniques, and himself worked in Dutch and English shipyards. On his return to Russia

JOHANN HEINRICH
PESTALOZZI

Street Runners, introduced by Henry Fielding (q.v.) when he was J.P. for Westminster; elsewhere constabulary duties were discharged by individual constables and watchmen commissioned by their local area. In 1829 Peel's govt. passed an act setting up a P. force in London (hence the popular appellation 'peelers'). Bor. watch committees empowered to appoint constables were set up under an act of 1835, co. P. by one of 1839. An act of 1856 made the provision of P. forces compulsory in England and Wales; acts of 1857 and 1892 regulated the provision of P. in Scotland. The whistle was introduced 1884, women police in 1920, motor-cycle patrols 1921, mobile patrols with two-way radio cars 1927, and the 'man on the beat' began to be equipped with radio from 1965 and might use a 'panda' car—named from its stripe marking—from 1967. Admin. is by the Home Office in England and Wales, except for the City of London police controlled by the City Corporation, and by the Scottish Office in Scotland. Although there is no central control, Scotland Yard (q.v.) acting only on the invitation of local forces, the number of these was being reduced by half to approx. 50 in England and Wales from 1966. See INTERPOL.

In the U.S.A. there are local, county, and state law-enforcement agencies, plus the F.B.I. (q.v.), subordinate to the Dept. of Justice, which can act directly only in offences against Federal law, though it co-operates with other P. forces when called upon to do so. Some states have no state force, and state governors as a rule have no control over local P.

British P. carry no weapon except a truncheon in normal circumstances, but are armed on occasion; some though not all U.S. police are armed, as are the Royal Canadian Mounted P., the Carabinieri in Italy, the Civil Guards in Spain, some sections of the rather complicated P. forces in France, etc.

POLIGNAC (pōlēnyahk'), Jules de, prince (1780–1847). French statesman. He was appointed Pres. of the Council in 1829, and pursued an ultra-royalist policy which provoked the revolution of 1830, after which he was imprisoned until 1836.

POLIOMYELITIS (pol'iōmi-elī'tis). Inflammation of the anterior horn cells of the spinal cord, those governing muscle action, producing paralysis. The cause is a filtrable virus carried in the spray of sneezing or coughing and entering the nervous system by the nerve endings in the lining of the upper part of the nose. Infection comes from a carrier, never a patient. Babies are immune up to six months; children of two and three are most susceptible, but no age is free. Incubation is from 10–20 days; then there is a stage of general infection and fever. The second stage might affect the meninges, with pains in the back, neck and limbs. In the third stage paralysis of one or more limbs, or of certain muscle groups, appears. Some of the paralysis is usually permanent. The acute attack is practically never fatal. The methods introduced and developed by Sister Kenny, an Australian nurse, at first excited great opposition by their insistence on active exercises, but are now accepted. In 1954 3 U.S. doctors (J. F. Enders, F. C. Robins, and T. H. Weller) were awarded a Nobel prize for their joint discovery that the P. virus can grow in cultures of various tissues. The injected vaccine developed by Jonas Salk, and the oral vaccine of A. B. Sabin, are widely used in U.S.A. and Europe.

POLISH. A member of the western branch of the Slavonic family of languages. P. literature begins in the 14th cent., but the golden age came in the 16th when Mikolaj Rej of Naglowice developed the language in prose and verse, and the poet Jan Kochanowski flourished. A decline followed until the partial revival under French influence in the 18th cent., and the great Romantic period in the 19th with the poets Adam Mickiewicz, Juliusz Slowacki and Zygmunt Krasinski (1812–59), and the comic dramatist

Aleksander Fredro (1795–1876). To the later 19th cent. belong the historical novelist Henryk Sienkiewicz, the realists Boleslaw Prus (1847–1912) and Wladyslaw S. Remont (1868–1925), and the dramatist Stanislaw Przybyszewski (1867–1927); and the poets Kazimierz Tetmajer (1865–1940) and Jan Kasprzewicz (1860–1926). Among more recent writers are the poets Julian Tuwim (1894–1954), Kazimierz Wierzyński (1894–), Wladyslaw Broniewski (1898–1962), and Julian Przybos (1901–); the novelists Juliusz Kaden-Bandrowski (1901–) and Ferdynand Goetel (1890–); and the poet, novelist and playwright Adam Wazyk.

POLISH CORRIDOR. A strip of territory connecting Poland with the Baltic, and dividing E. Prussia from the rest of Germany, allotted to Poland by the Treaty of Versailles, 1919. With the inclusion of the S. part of E. Prussia in Poland in 1945, the P.C. ceased to exist.

POLITBUREAU. A contraction for 'political bureau', a sub-committee of the Central Committee of the Communist Party of the U.S.S.R., responsible for laying down the lines of party policy. It was known 1952–66 as the presidium, and the gen. sec. was then known as the first sec. See R.S.F.S.R.

POLITIAN or Angelo Poliziano. Literary name for the Italian poet and scholar Angelo Ambrogini (1454–94). He became tutor to the family of Lorenzo de' Medici and prof. at the Univ. of Florence, and wrote commentaries on classical authors, essays on philology and criticism, and Latin, Greek, and Italian verse.

POLK, James Knox (1795–1849). 11th President of the U.S.A. B. in N. Carolina, he was elected President as a Democrat in 1844, admitted Texas to the Union, and forced the war on Mexico which resulted in the annexation of California and New Mexico.

POLKA. A dance in lively 2/4 time, originating c. 1830 in Bohemia.

POLLAIUOLO (pollahyoo-ō'lo), Antonio (1429–98). Italian artist. B. at Florence, he produced many objects of art such as crosses, chasubles, etc., and executed frescoes and paintings incl. the 'Martyrdom of St. Sebastian' in the National Gallery, London.

POLLARD, Albert Frederick (1869–1948). British historian. Prof. of constitutional history at London 1903–31, and first director of the Inst. of Historical Research, which he helped to create, he wrote *The Evolution of Parliament* (1920) and lives of Henry VIII and Cranmer.

POLLOCK, Jackson (1912–56). American artist. Of Scots-Irish origin, he was the son of a Wyoming farmer. From 1943, following the drive of the unconscious, he adopted increasingly unconventional techniques, e.g. paint thrown or dribbled on to a surface, and became the recognized exponent of 'action painting'. His death – in a Long Is. car crash – echoed the violence of his art, in which he used jewel colours, metal paints, and great abstract freedom.

POLO. Outdoor game played between teams of 4 on horseback. Persia was the home of P. and modern P. was introduced to England in 1869 from India by the military. A code of rules was set out by the Hurlingham club in 1875. The Westchester cup, initiated in 1886, was

below impervious rock layers. Flowing wells are due to gas pressure from above, or water pressure from below the oil, which causes it to rise up the borehole; many wells require artificial aids to bring the oil to the surface. The origin of P. is uncertain, but it is thought to be derived from organic material which has been converted by bacterial action, followed by the effects of heat and pressure.

From the crude P. or rock oil various products are made by distillation and other processes, e.g. fuel oil, gasoline (petrol), kerosine, Diesel or gas oil, lubricating oil, paraffin wax, petroleum jelly. Aviation spirit is a very volatile form of petrol.

The occurrence of mineral oil was known in ancient times, but the exploitation from oil-fields is a modern industry, the first flowing oil-well having been operated in 1859 in Pennsylvania. The earliest oil-fields to be exploited on a large scale were those of the U.S.A., the Caucasus and Mexico, but the pattern of oil production is continually changing. In the 1950s the U.S.A. held the lead, in the 1960s the Near East, and in the next decade fields in Africa, Alaska, Canada, Siberia and Australasia may be among the chief producers. Total world production is c. 2,000,000,000 metric tons annually. From inland fields oil may be carried by pipeline for hundreds of miles, and sea-going tankers may be vessels of more than 200,000 tons. This increase in tanker size in recent years has involved the danger of massive shore pollution and destruction of marine and bird life in case of accidental or deliberate discharge of cargo or residue. Following the loss of the *Torrey Canyon* (1967) off Cornwall, agreement was reached by the major international oil cos. in 1968 to pay compensation in such cases.

P. products and chemicals serve as raw materials for widely different industries and are used in large quantities in the manufacture of detergents, man-made fibres, plastics, insecticides, fertilizers, pharmaceuticals, toilet requisites, synthetic rubber, etc. Techniques are also being developed, notably in Japan, whereby micro-organisms, such as bacteria and yeast, are fed on the paraffin contained in petroleum. The protein is then extracted from their cells with the initial aim of producing animal fodder, but eventually human food.

PETRONIUS ARBITER, Gaius (d. A.D. 65). Roman author, the companion of Nero, and supervisor of his licentious pleasures. He committed suicide. His *Satyricon* is a satiric, licentious romance.

PETROPAVLOVSK. Town in the Kazakh S.S.R., U.S.S.R., on the Ishim, the Trans-Siberian railway,

and the Transkazakh line, opened 1953. A former caravan station, it was founded as a Russian fortress, 1782: it produces flour, agricultural machinery, leather. Pop. (1967) 162,000.

PETROPAVLOVSK-KAMCHATSKI. Russian port and naval base on the S.E. Kamchatka peninsula. Pop. (1967) 119,000.

PETROPOLIS. Hill resort in Brazil, 27 m. N. of Rio de Janeiro, with textile, chemical, ceramic, and tobacco factories, diamond-cutting works, and a trade in flowers, vegetables, and dairy products. Founded 1845 by immigrants from Bavaria, it was named after Pedro II of Brazil whose favourite summer residence it became. Pop. (1960) 85,000.

PETROSIAN, Tigran (1930–). Russian chess-player. An Armenian, he defeated Botvinnik in the world contest of 1963, and his emergence as champion was symptomatic of modern defensive strategy.

PETROVSK. See MAKHACHKALA.

PETROZAVODSK. Cap. of Karelia A.S.S.R., R.S.F.S.R., on the W. shore of Lake Onega. It makes metal goods, cement, prefabricated houses, etc., and has saw mills. Peter the Great estab. the township in 1703 as an iron-working centre; it was named P. in 1777. Pop. (1967) 171,000.

PETSAMO. See PECHENGA.

PEVENSEY. English village in Sussex, 5 m. N.E. of Eastbourne, the site of William the Conqueror's landing in 1066. The walls remain of the Roman fortress of Anderida.

PEWTER. An alloy of lead and tin, much used formerly for ornaments and domestic utensils.

PFALZ. German name of the PALATINATE.

PFORZHEIM (pforts'him). Town of Baden-Württemberg, W. Germany, 16 m. S.E. of Karlsruhe. Gold and silver ware and jewellery are made. It was a Roman settlement, and the residence of margraves of Baden 1300–1565. Pop. (1960) 80,000.

PHAETHON. In Greek mythology, the son of Helios, who was allowed for one day to drive the chariot of the sun. Losing control of the horses, he almost set the earth on fire, and was killed by Zeus with a thunderbolt.

PHAGOCYTES (fag'osits). White blood cells having the property of devouring bacteria. They are lymphocytes and polynuclear cells, and one of the body's chief defences against infection.

PHALARIS (fl. 570–554 B.C.). Tyrant of Agrigentum, Sicily. He is said to have built a brazen bull in which victims were roasted alive. He was killed in a popular revolt. The letters attributed to him were proved by Bentley (q.v.) to be a later forgery.

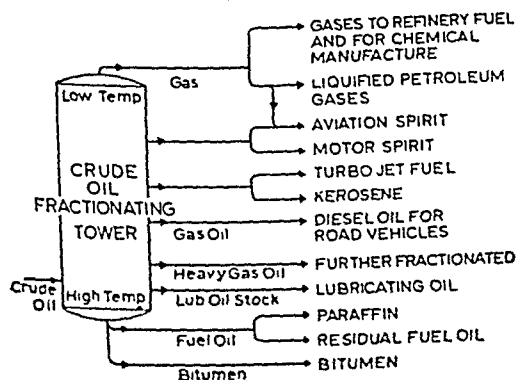

PHALAROPE. Genus of seabirds. Of the 3 species the red-necked (*Phalaropus hyperboreus*) and grey (*P. fulicarius*) visit Britain from the Arctic and *P. wilsoni* is exclusively American. The male is courted by the female and hatches the eggs.

PHALLUS. A model of the male sexual organ, used in fertility rituals in ancient Greece and Asia Minor, in India, and in many other parts of the world.

PHARAOH (fā'rō). Hebrew form of the Egyptian royal title Per'o. This term, meaning 'great house', was originally applied to the royal household, and after c. 950 B.C. to the king.

PHARISEES (far'izēz) ('separated'). Jewish sect which arose in the 2nd cent. B.C., in protest against all movements towards compromise with Hellenistic culture. Their main emphasis was on strict observance of the law, rather than on ritual; hence they came into conflict with the priestly caste, or Sadducees. Although they believed in a coming Messiah, they rejected political action, and in the 1st cent. A.D. the left wing of their followers, the Zealots, broke away to pursue a revolutionary nationalist policy. After the fall of Jerusalem, P. ideas became the basis of orthodox Judaism.

PHARMACOLOGY (farmako'lōjē). Study of the

PETROLEUM. A scheme of the basic elements of refining, omitting all the complex mixing and purifying stages. In the fractionating tower a temperature gradient is maintained—highest at the bottom, and lowest at the top. 'Fractions', boiling at various temperatures, are tapped off the column at intervals; from the low-boiling-point gases passing out of the top of the column, to the heavy tar-like substances drained out of the bottom.

POMORZE. Polish form of POMERANIA.

POMPADOUR, Jeanne Antoinette Poisson, marquise de (1721–64). Mistress of Louis XV. B. in Paris, she became the king's mistress in 1744, and largely dictated the government's policy procuring the

MADAME DE POMPADOUR. By Boucher.

Courtesy of the Trustees of the Wallace Collection.

reversal of France's anti-Austrian for an anti-Prussian policy. She acted as the patroness of Voltaire and the *philosophes*.

POMPEII (pompā'yē). Ancient city in Italy, near Vesuvius, 13 m. E.S.E. of Naples. In A.D. 63 an earthquake destroyed much of the city which had been a Roman port and pleasure resort; it was completely buried beneath lava when Vesuvius erupted in A.D. 79. Over 2,000 people were killed. P. was rediscovered in 1748 and the systematic excavation begun in 1763 still continues. The small modern town of P. lies just to the E.; it makes macaroni and packing boxes, and caters for tourists. Pop. (1960) 6,000.

POMPEY (Gnaeus Pompeius Magnus) (106–48 B.C.). Roman soldier and statesman, known as 'the Great'. In early life he supported Sulla and the aristocratic party, but as consul with Crassus in 70 joined the democrats. He conquered Mithradates of Pontus, and annexed Syria and Palestine. In 60 he formed the 1st Triumvirate with Caesar and Crassus. When it broke down after 53, P. returned to the aristocratic party. On the outbreak of civil war in 49 he withdrew to Greece, was defeated by Caesar at Pharsalia in 48, and was murdered in Egypt.

POMPIDOU (pompédōō'), Georges (1911–). French statesman and scholar. An adviser on De Gaulle's staff 1944–6, he held admin. posts until he became director-general of the French House of Rothschild in 1954, and even then continued in close association with De Gaulle. In 1962 he became P.M., but resigned after the Gaullist victory in the elections of 1968, and was elected to the presidency in 1969 as the Gaullist candidate on De Gaulle's resignation.

PONCE (pón'thā), Manuel (1882–1948). Mexican composer and conductor. Like Chavez he was an ardent nationalist, and made use of folk songs.

PONCE DE LEÓN, Juan (c. 1460–1521). Spanish soldier and explorer, discoverer of Florida (1513). He is believed to have sailed with Columbus in 1493, and served 1502–4 in Hispaniola whence in 1508 he conquered Puerto Rico, of which he was made gov. in 1509. He returned to Spain in 1514 to report his discovery of Florida (which he thought was an is.), and was given permission by King Ferdinand to colonize it. In the attempt (1521), he received a severe arrow wound of which he d. in Cuba.

PONDICHERRY (Fr. pondéshārē'). Port on the E. coast of India, 85 m. S. of Madras, cap. of the centrally administered state of P. It was founded by the French in 1674 and changed hands several times between French, Dutch, and British before being returned to France in 1814 at the close of the Napoleonic wars. With Karikal, Yanam, and Mahé it formed a French colony until 1956 when all were transferred to the government of India and made into a centrally administered state pending a decision as to their ultimate fate. French remained the official language. Area 185 sq. m.; pop. (1961) 369,079.

PONDWEED. Genus of aquatic plants (*Potamogeton*) either floating or submerged. The leaves are leathery and elliptical; the flowers grow in green spikes.

PONIATOŲSKI, Joseph Anthony (1763–1813). Polish general. He took part in Kosciuszko's rising of 1794. When in 1807 Napoleon founded the Grand Duchy of Warsaw, P. became War Min. He served in the 1812 campaign, was created a marshal of France, and was killed in action in Germany.

PONTA DELGADA (delgah'dah). Resort and port on the S. coast, also cap., of S. Miguel is. in the Azores, Portugal. Pop. (1966) 22,448.

PONTEFRACCT. English market town (bor.) in the W. Riding of Yorks, 21 m. S.W. of York. There are remains of a Norman castle where Richard II d. P. liquorice 'cakes' are noted. Pop. (1961) 27,114.

PONTORMO, Jacopo Carucci da (1494–1557). Italian artist.

Supreme master of the Florentine Mannerists, he was b. at Pontormo and became apprentice to da Vinci and later worked under Andrea del Sarto. Few of his major works survive, but these incl. 'Joseph and his Kindred in Egypt' in the National Gallery; frescoes for the Certosa di Val d'Erna, now in poor condition, and a 'Madonna and Child with St. John' in the Uffizi. His

PONTORMO. The colouring of this 'Madonna and Child with Two Angels', of which there exist two variants, suggests that it belongs to the period of the Certosa di Val d'Erna frescoes, c. 1523.

Courtesy of the M. H. de Young Memorial Museum, San Francisco.

later work is markedly influenced by Michelangelo.

PONTUS. Ancient kingdom of N.E. Asia Minor, bordering the Black Sea, founded c. 300 B.C. Under Mithradates VI (120–63 B.C.) it became a great power, but it was conquered by Pompey in 65 B.C.

H.R.H. THE PRINCE PHILIP, Duke of Edinburgh.
Photo: Baron Studios.

Fair, he engaged in a feud with pope Boniface VIII, whom in 1303 he made a prisoner. Clement V, elected Pope through P.'s influence, transferred his residence to Avignon, and collaborated with P. to suppress the Templars. P. allied with the Scots against England, and attempted to conquer Flanders. Philip VI (1293-1350), the first king of the house of Valois, was elected by the barons on the death of his cousin, Charles IV, in 1328. His claim was challenged by Edward III of England, who in 1346 defeated him at Crécy.

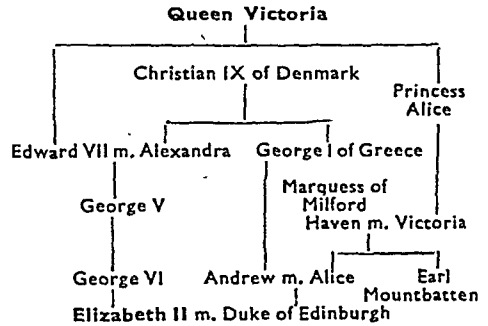

PHILIP II (1527-98). King of Spain. The son of the emperor Charles V, he was b. at Valladolid, and in 1554 m. Queen Mary of England. On his father's abdication in 1556 he inherited Spain, the Netherlands, and the Spanish possessions in Italy and America, and in 1580 he annexed Portugal. His intolerance and lack of understanding of the Netherlanders drove them into revolt. Political and religious reasons combined to involve him in war with England, and after 1589 with France. The defeat of the Armada marked the beginning of the decline of Spanish power. P. was buried in the Escorial, which he founded.

PHILIP V (1683-1746). King of Spain. A grandson of Louis XIV of France, he inherited the Spanish crown in 1700, but was not recognized by the Powers until 1713.

PHILIP (1396-1467), known as the Good. Duke of Burgundy from 1419. He engaged in the Hundred Years War as an ally of England and made the Netherlands a centre of art and learning.

PHILIP (1921-). Prince of the U.K. A grandson of George I of Greece and a great-great-grandson of Queen Victoria, he was b. in Corfu but raised in England and ed. at Gordonstoun and Dartmouth Naval Coll. During the S.W.W. he served in the Mediterranean, taking part in the battle of Matapan, and in the Pacific. A naturalized British subject, taking the surname Mountbatten, in March 1947, he m. Princess Elizabeth (from 1952 Elizabeth II) in Westminster Abbey on 20 Nov. 1947, having the previous day received the title Duke of Edinburgh. In 1956 he founded the Duke of Edinburgh's Award Scheme to encourage creative achievement among

DESCENT OF THE PRINCE PHILIP

young people, and is also greatly interested in the Commonwealth. He was created a prince of the U.K. in 1957, and awarded the J.M. in 1968. Vols. of his speeches appeared in 1957 and 1960.

PHILIPPEVILLE (fêlêpvêl'). Town, trade centre, and Mediterranean port of Algeria in the dept. of Constantine, founded by the French 1838, and renamed Skikda after independence. Pop. (1967) 85,000.

PHILIPPI. Ancient city of Macedonia, founded by Philip of Macedon, 358 B.C. Near P. Antony and Octavius defeated Brutus and Cassius in 42 B.C. It was the first European town where St. Paul preached (c. A.D. 53), founding the congregation to which he addressed the Epistle to the Philippians.

PHILIPPINES, Republic of the. Independent country consisting of more than 7,000 is. lying N. of the equator, between the Pacific Ocean to the E. and the S. China Sea to the W. The main islands are Luzon in the N. and Mindanao in the S.; others incl. Mindoro, Masbate, Samar, Panay, Leyte, Cebu, Negros, Bohol, and Palawan. The is. of the main chain are traversed from N to S by mountain ranges, and there are several volcanoes. Forests cover more than half the land surface and timber, gums and resins, bamboo, vegetable oils, dye woods are important products. The main crops are coconuts (copra and desiccated coconut), cane sugar, rice, maize, tobacco, and hemp. Mineral wealth incl. gold and silver, copper, lead, iron ore, coal, chromite, and quicksilver.

The P. Republic has a president elected for 4 years and eligible to stand for a second term, an elected Senate and House of Representatives.

Area 115,700 sq. m.; pop. (1967) 34,656,000, most of them of Malay stock; aboriginal Negritos number c. 30,000, and Chinese c. 140,000. Eighty per cent are Roman Catholics. The nat. language (from 1946) is Filipino (based on the Malayan dialect, Tagalog), but English (spoken by a third of the people) and Spanish are also official languages. Quezon City, a N.E. suburb of Manila, was proclaimed the cap. in 1948, but many govt. offices remain in Manila, the former cap., pending completion, other towns are Cebu, Davao, and Iloilo.

History. The P. were visited by Magellan in 1521, and Spanish rule and Catholicism were estab. in the 1560s, during the reign of Philip II, in whose honour the islands were named. During the 19th cent. a series of armed revolts occurred. On the conclusion of the Spanish-American War the P. were ceded to the U.S.A., 1898. In 1935 a semi-independent Commonwealth of the P. was estab., and in 1946 an independent republic was set up; the U.S.A. was in 1947 granted the use of a number of military bases in the is. The Japanese occupied the P. 1942-5 after

and opium Ps. (see *OPIMUM*), found in parts of Europe and Asia. Closely related are the California P. (*Eschscholtzia californica*) and the yellow horned or sea P. (*Glaucium flavum*). A large number of cultivated varieties have been developed.

POPSKI'S PRIVATE ARMY. In the S.W.W. a unit of the Long Range Desert Group consisting of 195 picked men under the command of Lt.-Col. Vladimir Peniakov (1897–1951). They worked behind enemy lines in N. Africa and Italy. Peniakov was a naturalized Belgian of Russian parentage, and joined the *British Army in Alexandria in 1940*.

POPULAR FRONT. A political alliance of Liberals, Socialists, Communists, and other centre and left-wing parties against Fascism. This policy was proposed by the Communist International in 1935, and was adopted in France and Spain, where P.F. governments were elected in 1936; that in France was overthrown in 1938, and in Spain in 1939. In Britain a P.F. policy was advocated by Sir Stafford Cripps and others, but rejected by the Labour Party. The resistance movements in the occupied countries during the S.W.W. represented a revival of the P.F. idea.

PORCELAIN. Derby biscuit-ware dated c. 1780. The secret of producing porcelain of this softly translucent, waxen texture has been lost. Photo: Lady Lever Collection.

P. belong to the late 6th–early 7th cent. A.D., when it may have been discovered by chance in the attempt to copy imported Indian glassware. It was at its finest under the Sung Dynasty, e.g. the blue-green Celadon ware, and the Ming Dynasty, when colouring was particularly brilliant. During the 17th cent., when the Chinese art had begun to lose its inspiration, though technique continued to improve until the 20th, Portuguese trade contacts with Canton led to the 1st importation of P. to western Europe. A 'soft paste P.'—actually a mixture of clay and finely ground glass—was first made in Italy as an imitation, but reached great beauty in its own right in France at St. Cloud and Sèvres. True P. of the Chinese type was first rediscovered by John Böttger of Meissen, nr. Dresden c. 1709, and 'Dresden' as the type of delicacy in china became of world-wide fame: German technicians are still in the forefront of the field. In England, Chelsea, Bow and Derby were noted for their soft paste, but in 1768 true P. was first manufactured at Plymouth, and just as in France P. of Limoges had ousted Sèvres soft paste, so in England the 18th cent. saw the triumphs in P. of the Staffordshire potters Thomas Minton and Josiah Spode (famous for his bone china), and beautiful work at Coalport, Lowestoft, Nantgarw, etc. The individual quality was lost during the 19th cent. to a large extent under the impact of mass-production techniques, but the 20th has seen a fresh approach.

PORCUPINE. Family of large rodents. True Ps., in the family *Hystriidae*, are found only in the Old

PORCUPINE

World and are terrestrial in habit. They are characterized by long spines in the coat. The colouring is brown with black and white quills. American Ps. constitute the family *Erethizontidae* and differ from the European varieties in being arboreal, having a prehensile tail, and much shorter spines.

PORDENONE (pōrdānō'ne), Il. Assumed name of the Italian painter Giovanni Antonio de Sacchi (1483–1539). B. near Pordenone, he painted in fresco.

PORI. Town on the Gulf of Bothnia at the mouth of the r. Kokemäki, Finland, kept ice-free all the year. It has saw mills, nickel and copper refineries, and paper, textiles, matches are made. Pop. (1967) 69,885.

PORPHYRIA (porfir'ia). Rare metabolic disorder, known as the 'royal disease' (Gk. *porphyra* purple) found in the houses of Stuart, Hanover and Prussia. Sufferers have incl. Mary Queen of Scots, James I, and George III.

PORPHYRY (porfir'i) (A.D. 233–c. 304). Greek Neo-Platonic philosopher. B. at Tyre or in Syria, he settled at Rome in 262, and became a disciple of Plotinus. He wrote numerous philosophical works.

PORPHYRY. A red volcanic rock, of Egyptian origin, much used in Roman ornamentation. It occurs as a thick dyke rediscovered at Jebel Dokhan.

PORPOISE (por'pus). Genus (*Phocaena*) of Cetaceans found in the Atlantic and Pacific. The common P. (*P. communis*) is blue-black above, and whitish below, measures up to 6 ft. and feeds on fish. Schools of Ps. leaping together on the surface often foretell stormy weather. In the U.S.A. the dolphin (q.v.) is commonly referred to as the P.

PORSON, Richard (1759–1808). British scholar. B. in Norfolk of poor parents, he was sent to Cambridge by a patron, and became prof. of Greek there in 1792. His editions of Aeschylus and Euripides are outstanding achievements of Greek scholarship.

POTAL OF HUNGERFORD, Charles Frederick Algernon, 1st visct. (1893–). British airman, Marshal of the R.A.F. He served in the F.W.W., and became director of organization at the Air Ministry 1937–8, A.O.C.-in-C. Bomber Command, March–Oct. 1940, and Chief of Air Staff 1940–5, he received a barony in 1945, and a viscounty in 1946.

POT ARTHUR. Canadian lake port on Thunder Bay, N.W. shore of Lake Superior, Ontario, a grain and iron shipping centre with saw mills and paper and pulp mills. Pop. (1966) 38,000.

POT ARTHUR. Deep-water port in Texas, U.S.A., 15 m. S.E. of Beaumont. Founded 1895, it has petroleum refineries, shipyards, brass foundries, chemical factories. It rose to importance with the discovery of petroleum near Beaumont in 1901. Pop. (1960) 66,676.

POT ARTHUR. Port and naval base in Liaoning prov., China, at the tip of Liaotung peninsula. P.A. was in 1898 leased to Russia, and during the Russo-Japanese War surrendered to the Japanese only after a prolonged siege, June 1904–Jan. 1905. The lease was then transferred to Japan. After the S.W.W., P.A. was occupied by Russian airborne troops 22 Aug. 1945, and by a treaty between the U.S.S.R. and China, 1945, was to be used by them jointly as a naval base for 30 years; a treaty of 1950 provided for its return to China when China and the U.S.S.R. made peace with Japan, but in fact it was returned in 1955. P.A. is important because it is ice-free all the year round. P.A. and Dairen (q.v.), under their Chinese name Lushun-Talien, form the municipality of Luta: pop. (1965) 3,600,000.

POT-AU-PRINCE (-ō-prins'). Port and cap. of Haiti, W. Indies. It has an iron foundry, a tannery, a flour mill, and a factory making plastics; also an airport. Pop. (1961) 250,000.

POT DARWIN. See *DARWIN*.

POT ELIZABETH. Port in Cape prov., S. Africa,

connection with Saigon, and an airport at Pochentong nearby. Pop. (1967) 600,000.

PHOENICIA (fēn'ish'a). Ancient Greek name for the seaboard of Lebanon and Syria, N. of Mt. Carmel, inhabited in ancient times by a people who called themselves Canaanites. See CANAAN. They were seafaring traders and craftsmen, who visited the Scillies (and possibly Cornwall) and are said to have circumnavigated Africa, and their cities (Tyre and Sidon being the chief) were independent states ruled by hereditary kings, but dominated by merchant oligarchies. Documents found at Ugarit in 1929 give much information on their civilization, and their deities incl. El, Baal, Anat, Astarte or Ashtaroth, and Melkart or Moloch. Their colonies were estab. in Cyprus, N. Africa (e.g. Carthage), Malta, Sicily and Spain, and competition from these combined with the attacks of the Sea Peoples, the Assyrians and Greeks, on the cities in P. led to their ultimate decline: the fall of Tyre to Alexander in 332 B.C. ended the separate history of P. Their exports incl. Tyrian purple cloth, furniture (from the timber of Lebanon), and jewellery: Solomon brought workmen from P. to construct and decorate the Temple at Jerusalem.

PHOENIX (fē'niks). Miraculous Egyptian bird which, according to legend, burnt itself to death on a pyre of aromatic woods after 500 years of life, to arise rejuvenated from the ashes.

PHOENIX. City of the U.S.A., cap. of Arizona. It handles dairy products and citrus fruits and because of its dry climate is a popular health resort. Pop. (1960) 439,170.

PHOENIX ISLANDS. Group of 8 is. in the S. Pacific, incl. in the British colony of Gilbert and Ellice Is. in 1937. Hull, Sydney, and Gardner were colonized by Gilbertese 1938-40, until by 1964 droughts had driven them away; Phoenix, Birnie and McKean are also uninhabited; and Canton and Enderbury are claimed by U.S.A., so that in 1939 joint control for aviation and communications was agreed for 50 years, but long-range jets rendered Canton's airport obsolete, and British and Americans left 1967-8. Total land area 11 sq. m.

PHONETICS. The science which deals with the identification, description, and classification of sounds used in articulate speech. P. owes its origin in large measure to A. M. Bell (1819-1905), and much of the pioneer work was done in England. As the letters of the Rom. alphabet are a quite inadequate means of fixing the definite value of speech sound, special phonetic alphabets have been invented of which the International Phonetic Script is best known.

PHONOGRAPH. See RADIOGRAM.

PHOSPHATES. Salts of phosphoric acid. They combine with water in 3 proportions to form metaphosphoric acid, pyrophosphoric acid, and ordinary phosphoric acid. Each of these acids gives origin to other series of salts, of which ordinary phosphoric acid is of the greatest importance.

PHOSPHORUS (Gk. *phosphoros*, light-bearing). Element essential to life, discovered by Brand in 1669: symbol P, at. wt. 30.975, at. no. 15. It occurs in several forms, the commonest being white P. (a waxy solid, emitting a greenish glow in air, burning spontaneously to P. pentoxide, and very poisonous) and red P. (neither igniting spontaneously nor poisonous). Production of P. and its compounds has greatly increased since the S.W.W., e.g. the use of soluble phosphates as fertilizers and of other P. compounds in detergents, prevention of scale and corrosion in pipes and boiler tubes, and in certain organic preparations.

PHOTOELECTRIC CELL or Photocell. A device for measuring or detecting light. There are 3 main types: in the *photoemissive* cell, radiant light energy causes electrons to be emitted, and a current to flow; in the *photovoltaic* cell, a semiconductor device, it

causes an electromotive force to be generated; and in the *photoconductive* cell it causes the resistance to vary.

PHOTOGRAPHY. Modern P. embraces all useful processes for producing images on sensitized materials by radiant energy which may be visible light, ultraviolet, infra-red or X-rays; radiation from radioactive substances, and beams of electrons.

PHOTOGRAPHY. The Polaroid Land Camera produces a finished black and white picture in 10 sec. and a colour picture in approx. 50 sec. Attached to a single paper leader are 2 rolls - one the light sensitive negative film, and the other a non-sensitive positive white paper, for the finished print. After taking a photograph, the paper leader is pulled, and an equal amount of exposed film and positive paper meet precisely to be pulled through 2 s. eel rollers, which rupture one of the sealed pods and spread a thin layer of developing reagent between the 2 papers. In a single step the negative is developed, and the positive print formed ready for viewing seconds later. Courtesy of Polaroid (U.K.) Ltd.

J. N. Niepce produced the first successful photograph in 1822 using silver chloride. Daguerre partnered him in 1829 and discovered that an image could be produced by fuming with mercury vapour an exposed iodized silver plate in a camera (1839), and Fox Talbot independently announced his calotype method also in 1839. From Scott Archer's collodion process (1851) research on emulsions and gelatine reduced the exposure time from 10 sec. to 1/100 sec. by 1900. Panchromatic plates covered the whole spectrum, glass plates were superseded by roll film and box cameras appeared. Colour P. was produced practically in 1891 by Lippman, but Maxwell's tri-colour separation process has prevailed as the basis of modern reproduction.

Enormous advances have been made in all branches of P., in equipment, processes and techniques necessitated by the dependence on photography of television, the cinema industry, news pictures, medical, scientific and research requirements, microfilm recording and new processes in the printing industry and for office copying machines.

The most recent developments in cameras incl. the introduction of automatic loading and the production of a colour print inside the camera 50 sec. after exposure.

PHOTOSYNTHESIS. The process in which the energy of sunlight is used by plants to assimilate carbon dioxide and water to form sugars and starches - their basic food. Great insight into this vital process was gained in the 1950s by means of radioisotopes - labelled carbon dioxide and heavy water have been used by M. Calvin (q.v.) et al., and shown to combine within one second of contact - and the pathways through to starches, amino acids, etc., have been followed. See LABELLED COMPOUND.

PHRENOLOGY. The theory, now discredited, that by examination of the skull a person's mental development can be measured. It was first propounded by Franz Joseph Gall, a Viennese physician, c. 1796.

PHRYGIA (frij'ia). Former kingdom of W. Asia covering the Anatolian tableland, inhabited in ancient times by an Indo-European people; it achieved great prosperity in the 8th cent. B.C. under a line of kings bearing in turn the names Gordius and Midas, but

skirts of Birkenhead. Cheshire, England, founded by 1st Lord Leverhulme in 1888 to include the Lever soap factory and houses for workers in it.

PORT TALBOT. Welsh port (bor.) in Glamorgan-shire, at the mouth of the Avon, 8 m. E.S.E. of Swansea. The bor. was formed in 1921 by the amalgamation of Aberavon and Margam. The steelworks at Margam were the largest in Europe when opened in 1951; tinsplate is made. Pop. (1961) 50,223.

PORTUGAL. Republic of Europe, situated between the Atlantic to the W. and S., and Spain to the E. and N. P. is an elongated area on the W. coast of the Iberian peninsula. It has a maximum length of 360 m. and a maximum breadth of 140 m., and is crossed from N.E. to S.W. by several parallel ranges of mountains between which pass the valleys of the main rivers, viz. the Minho, Douro, Tagus and Guadiana. The Serra da Estrela incl. the highest ground in P., 6,532 ft. The climate is temperate.

P. is still mainly agricultural. Wheat, maize, potatoes, rye, rice and olives are grown, and P. produces most of the world's cork. Wine, espec. port wine, and sardines are important exports. Minerals incl. coal, copper, iron, wolfram, etc., and the foundry industry, under the impetus of the S.W.W. and assisted by low wages and a disciplined work force, flourishes. Textiles, pottery, glass, leather goods, furniture, and chemicals are also growing manufactures.

The principal towns are Lisbon (the cap.), Oporto, Funchal (Madeira), Coimbra, Setubal, Braga, Evora, and Ponta Delgada (Azores).

Area (incl. the Azores and Madeira, which form an integral part of the country) 35,490 sq. m.; pop. (1966) 9,228,000, mainly R. Catholics. There are univs. at Coimbra (1290), Lisbon, and Oporto (both 1911).

Under the constitution of 1933, as amended 1959, P. is governed by a president elected for 7 years by an electoral college composed of the National Assembly (popularly elected for 4 years) and the Corporative Chamber with representatives of local and overseas authorities.

OVERSEAS POSSESSIONS. These incl. the overseas territories of the Cape Verde Is.; Portuguese Guinea; S. Tomé and Príncipe; Angola (Portuguese W. Africa); Mozambique (Portuguese E. Africa); Macao; and Portuguese Timor. (For former Portuguese India, see GOA.)

History. P. originated in the 11th cent. as a county subject to León, while the S. was ruled by the Moors. Alfonso I (1128–85) captured Lisbon (1147) and made the Tagus the frontier, assuming the title of king in 1140. Alfonso III (1248–79) finally expelled the Moors. During the 13th cent. the Cortes, representing nobles, clergy and cities, began to meet, and secured control of taxation. A commercial treaty with England was signed in 1294, and an alliance estab. in 1373. During the 15th cent. Portuguese mariners explored the African coast, opened the sea route to India, and discovered Brazil; as a result, in the 16th cent. P. founded colonies in Brazil, Africa, India, and the E. Indies. By the 16th cent. the Portuguese kings had become absolute, but when the royal family became extinct in the male line, in 1580, Philip II of Spain seized the crown. The Portuguese rebelled against Spanish rule in 1640, placed the house of Braganza on the throne, and after a long war forced the Spaniards to recognize their independence in 1668. P. fought as the ally of Britain in the War of the Spanish Succession. A period of decadence was ended by the sweeping reforms of Pombal, chief minister 1750–77.

The French invaded P. in 1807, and were not finally expelled by Wellington until 1811. A strong democratic movement developed, and after a civil war (1828–34) constitutional govt. was estab. King Carlos and the Crown Prince were assassinated in 1908; Carlos's younger son Manoel II was driven from the country by a revolution in 1910 and a rep. was pro-

claimed. It successfully faced armed opposition. In 1932 Dr. Salazar became P.M. and estab. a semi-Fascist dictatorship. During the F.W.W. P. declared war on Germany in 1916 and contributed troops in France and Africa; during the S.W.W. P. remained neutral, but under the treaty of 1373 gave the U.K. in 1943–6 facilities for air bases in the Azores. On the incapacity of Salazar in 1968, Caetano took office and the regime tended slightly more to liberalism.

PORTUGUESE. A member of the Romance family of languages, ultimately deriving from Latin, but later subjected to a considerable Arabic influence.

Under Provençal influence, medieval P. literature produced popular ballads and troubadour songs, as well as chronicles, saints' lives, etc., but the Renaissance stimulated the outstanding work of the dramatist Gil Vicente, the lyric poets Sá de Miranda and Antonio Ferreira, the lyric and epic poet Camões, the historian João de Barros, the romancer Francisco de Moraes, and innumerable travel writers e.g. Fernão M. Pinto. A decline came in the 17th cent. – though poetry is represented by Rodrigues Lobo, religious prose by the Jesuit António Vieira, and drama by Manuel de Melo – and continued in the 18th, despite poets such as António Diniz, Bocage, and Correia Garção. The Romantics incl. the poets Visc. Almeida Garrett and A. F. de Castilho; the historical novelist Alexandre Herculano; and the novelist of passion Camillo Castello Branco. To the Realist reaction belong the poets Antero de Quental, Teófilo Braga, and Guerra Junqueiro; the novelist Eça de Queiroz, and the historian Oliveira Martins. Among more recent writers are the poets Fernando Pessoa, António Nobre, Eugénio de Castro (a leading symbolist), Mário de Sá-Carneiro (a prominent futurist), and the novelists Aquilino Ribeiro and Ferreira de Castro. In Angola there is an interesting school of Portuguese-African poetry.

PORTUGUESE EAST AFRICA. See MOZAMBIQUE.

PORTUGUESE GUINEA. Overseas territory of Portugal in W. Africa, bounded N. by Senegal, S. and E. by the Republic of Guinea, W. by the Atlantic. It incl. the Bissagos archipelago and Bolama Is. Products incl. rice, hides, and palm oil. P.G. is ruled by a governor. The principal towns and ports are Bissau (made cap. in 1942) and Bolama. Nationalist guerrillas have been active since 1961. Area 13,948 sq. m.; pop. (1960) 519,229.

PORTUGUESE WEST AFRICA. See ANGOLA.

PORT WINE. A rich, sweet, dessert wine, red, tawny, or white, grown in the Douro basin of Portugal and exported from Oporto.

POSEIDON. See NEPTUNE.

POSEN. German form of POZNAN.

POSITIVISM. The philosophical system of Auguste Comte (q.v.) based on the idea that man has no knowledge of anything but phenomena, and such knowledge is relative not absolute. In every department of human knowledge 3 stages may be discerned: the theological, in which everything is referred to the gods; the metaphysical, in which abstract ideas are of supreme importance; and the positive, when science takes the place of metaphysics and philosophy. On the basis of P. Comte erected his 'Religion of Humanity', in which the object of adoration was the Great Being, i.e. the personification of humanity as a whole.

POSTGATE, Raymond William (1896–). British author. Son of the classical scholar John Percival P. (1853–1926), he was for some years a journalist, mainly on left-wing papers, and wrote the study of working-class history *The Common People* (1946; with G. D. H. Cole) and lives of Wilkes and Lansbury. He is a gourmet and author of books on food and wine.

POST-IMPRESSIONISM. Term applied to various styles of painting which followed Impressionism, and first used by Roger Fry to describe the works of

PICIS. An early people inhabiting Scotland, probably of pre-Celtic origin, and speaking a non-Celtic language. They were united with the Celtic Scots under the rule of Kenneth MacAlpin in 844.

PIDGIN ENGLISH. Business jargon ('pidgin' being the Chinese corruption of the English word business) used in dealing with Chinese and other Oriental and African traders, which utilizes debased English forms arranged according to Chinese idiom.

PIECK (pēk), Wilhelm (1876-1960). German Communist. A leader of the 1919 Spartacist revolt, he was a founder of the Socialist Unity Party in 1946 and from 1949 was pres. of the German Democratic Rep.; the office was abolished on his death.

PIEDMONT. A region of N. Italy, bordering Switzerland on the N. and France on the W. and surrounded, except on the E., by the Alps and the Apennines. The most fertile land is near the Po. The main towns are Turin (the capital), Alessandria, Asti, Vercelli, and Novara. From P., under the House of Savoy, the movement for the unification of Italy started in the 19th cent. Area 9,804 sq. m.; pop. (1961) 3,889,962.

PIERNÉ (pē-ārneh'), Gabriel (1863-1937). French composer and conductor. B. in Metz, he succeeded Franck as organist to Ste. Clothilde, Paris, and conducted the Colonne orchestra from 1903. His numerous compositions incl. the 'Entry of the Little Fauns'.

PIETERMARITZBURG (pētermār'itsboorg). Cap. of Natal, S. Africa, 41 m. W.N.W. of Durban, founded in 1838 by Boer trekkers from the Cape, and was named in 1839 in honour of their leaders, Piet Retief and Gert Maritz. Made cap. of Natal 1842, it is an industrial centre with breweries, and factories making boots and shoes, furniture, etc. Pop. (1960) 108,581 (39,770 whites).

P'ETISM. Movement within the German Lutheran Church originated by Philip Jacob Spener (1635-1705), and intended to revive practical Christianity as against increasing theological dogmatism.

PIEZOELECTRIC EFFECT. The property of some crystals of developing an electromotive force or voltage across opposite faces when subjected to a mechanical strain, and, conversely, of altering in size when subjected to an electromotive force. This effect is utilized in devices used for frequency control and measurement, crystal filters and transducers (q.v.).

PIG. Family of mammals (Suidae) in the order Ungulata. Domesticated Ps. are derived from the European wild boar (*Sus scrofa*), crossed with Asiatic breeds. The chief modification is the concave face, the wild swine having a long snout. The modern housewife's preference for lean meat has led to the development of a hybrid heavy P. combining the good qualities of the Landrace, Saddleback and Large White breeds.

PIGEON. General term for members of the family Columbidae, sometimes also called doves, distinguished by their large crops which, becoming glandular in the breeding season, secrete a milky fluid (so-called 'P.'s milk') which aids digestion of food for the young. There are many species, one of the most important being the blue rock-P. (*Columba livia*) from which the domesticated varieties derive (pouter, fantail, homer, etc.). Similar is the stock-dove (*C. oenas*), but the wood-P. (*C. palumbus*) is much larger and has white patches on the neck. The American species incl. the passenger-P. (*Ectopistes migratorius*), once millions strong but extinct from 1914, and the mourning-doves, which (like the European turtle-doves) live much on the ground. The painted Ps. and fruit Ps. of Australasia and the Malay regions are beautifully coloured.

P.-flying is a popular sport in many Continental countries, as well as Britain (where the National Homing Union dates from 1896 and Elizabeth II has a racing P. manager), and the U.S.A.

PIGOTT (pig'ot), Richard (1828-89). Irish forger, who sold *The Times* in 1886 a number of documents

PIGEON. All members of the family are noted for their noisy calls, but the mourning-dove (*Zenaidura macroura*) of North and Central America has a peculiarly low and melancholy note. Here the female broods its young on a flimsy nest of twigs and grasses. Photo: G. Ronald Austing

purporting to prove the complicity of Parnell and other Irish leaders in political murders. These were proved to be forgeries, and P. committed suicide.

PIGS, Bay of. Inlet on the S. coast of Cuba c. 90 m. S.W. of Havana, site of an unsuccessful invasion attempt by 1500 anti-Castro Cuban exiles 17-20 April 1961; 1173 were taken prisoner. The creation of this anti-revolutionary force in the U.S.A. by the C.I.A. had been authorized by the Eisenhower admin. and the project executed under that of J. F. Kennedy.

PIKE. Genus of freshwater fish (*Esox*). Found both in Europe and N. America the common P. (*E. lucius*) has a long body, and broad flattened head with a large mouth studded with backward-pointing teeth: grey-green mottled yellow above, it is white underneath. Sluggish in habit except when pursuing its prey, it is a voracious feeder and mature specimens may reach over 50 lb. Some of the smaller species of American P. are known as 'pickerel'.

PIKE-PERCH. Genus of freshwater fish (*Lucioperca*) of the order Percomorphi. The European P.-P. (*Lucioperca sandra*) reaches a length of 3 or 4 ft., is very voracious, and of some value as a food fish. Related species are found in N. America.

PILATE, Pontius. Roman procurator of Judaea A.D. 26-A.D. 36. Unsympathetic to the Jews, his actions several times provoked riots, and in A.D. 36 he was recalled to Rome to account for disorder in Samaria. Eusebius says he committed suicide.

PILÂTRE DE ROZIER, Jean François (1754-85). French balloonist, who was killed while attempting to fly the English Channel.

PILCHARD. Fish (*Sardina pilchardus*) of the herring family (*Clupeidae*). Bluish-green above and silvery beneath, it grows to c. 10 in. long: the chief P. fisheries are off Spain and Portugal.

PILES. Haemorrhoids; varicose veins of the anus. They may be external (covered with skin) or, more commonly, internal (covered with mucous membrane). The cause is increase of pressure in the abdomen, as in childbirth, or constipation. The veins often bleed on defecation; or are extruded from the anus. The remedy is either to remove the piles by cutting or cauterizing, or to harden and close the veins off by injection of a 'sclerosing' fluid.

PILGRIMAGE. Journey to sacred places inspired by religious devotion. For Hindus the holy places incl. Benares, on the banks of the Ganges; for Buddhists the spots connected with the crises of Buddha's career; for the ancient Greeks the shrines at Delphi, Ephesus, etc.; for the Jews, the sanctuary at Jerusalem; and for Mohammedans, Mecca. Among Christians, Ps. were common by the 2nd cent., and as a direct result of the estab. necessity of making Ps. there arose the numerous hospices catering for pilgrims, the religious orders of knighthood, and the Crusades. The great centres of Christian P. have been, or are, Jerusalem,

POTTER, Paul (1625–54). Dutch animal painter, the son and pupil of Pieter P., a landscape painter.

POTTER, Stephen (1900–). British author. A student of Coleridge, e.g. *Coleridge and S.T.C.* (1935), and a literary critic, he is best known for *Gamesmanship* (1947), *Lifemanship* (1950), and *One Upmanship* (1952), humorous studies in how to outwit and outshine the other fellow which have added new words to the language.

POTTERIES, The. The centre of the china and earthenware industry in England, lying in the upper Trent basin of N. Staffordshire. Wedgwood and Minton are famous names associated with the P., which covers the co. bor. of Stoke-on-Trent, formed in 1910 from the separate bors. of Burslem, Hanley, Longton, Fenton, Tunstall, and Stoke-upon-Trent.

POTTERY. Objects fashioned from clay and baked hard: see also CERAMICS and PORCELAIN. The earliest known pottery was made by the Egyptians c. 5,000 B.C., and they also developed the potter's wheel, but the making of P. is one of the most widespread ancient crafts and its remains are invaluable to the archaeologist, since each culture usually develops its own types which can be dated and so date objects found in association with them, etc. The Greeks were producing P. by the 8th cent. B.C., derived from Egyptian examples, but most typical of their work were the black and red figured vases of c. 600–450 B.C. Roman P. was largely imitative of Greek, but particularly

POTTERY. Scandinavian pottery is famous: these pieces are Finnish. Courtesy of the Finnish Travel Information Centre.

notable is their Samian ware, made by a special process involving firing in the moulds. After the fall of Rome there was a hiatus until the conquering Arabs, in their movement westward, brought to Spain in the 8th cent. A.D. the lustrous blue and green glazes used in Persia in the previous cent., but which trace their origin to the brilliant colour oxides developed long before and the skills of Babylon and Nineveh. Especially striking in this period is majolica, ware with an opaque tin-oxide glaze which was exported from Majorca – hence the name. Italy at first merely copied

such exports, but in the Renaissance developed her own style of P., notably the coloured relief work executed by the Della Robbia family. Faience, a glazed porous ware, owes its name to an Italian P. town (Faenza), but is peculiarly associated with France, cf. Bernard de Palissy, though later spreading to centres such as Delft in Holland and Nuremberg in Germany. In England there is an honestly utilitarian medieval P. with green and yellow glazes, more highly decorated Cistercian ware in the 16th cent., and attractive slip ware in 17th, but the 18th cent. saw a remarkable flowering with the cream and jasper ware of Wedgwood and the stoneware – a type of P. which had reached its height on the Continent in 15th cent. Germany – of John Dwight of Fulham, continued into the 19th by Sir Henry Doulton. The mass manufacture of porcelain as the 19th cent. continued tended to eclipse P., but in the 20th cent. it has regained artistic standing, e.g. the work of Bernard Leach, Hans Coper, and Lucie Rie.

POULENCE (pooloŋk'), Francis (1899–1963). French composer. B. in Paris, he became a member of *Les Six*. His works have a light-hearted vitality and incl. songs, *Rapsodie Nègre* (1916) for piano, wind, strings and voices, and the operas *Les mamelles de Tirésias* and *Les Dialogues des Carmélites* (1937).

POULTRY. 1, Ancona hen; 2, Duckwing game cock; 3, White Wyandotte cock.

POULTRY. Term applied to domestic birds in the order Gallinae, incl. ducks, geese, turkeys (q.v.) and fowls. Good egg-laying breeds of chicken are Leghorns, Minorcas, and Anconas; varieties most suitable for the table are Dorkings and Indian Game; those useful for both purposes are Orpingtons, Rhode Island Reds, Wyandottes and Plymouth Rocks. Since the S.W.W. the development of battery-produced eggs and intensive breeding of broiler fowls for the table introduced into Britain and other countries from the U.S., have roused a public outcry against these 'animal factories'.

POUND, Sir (Alfred) Dudley Pickman Rogers (1877–1943). British admiral of the Fleet. As First Sea Lord and Chief of the British Naval Staff 1939–43, he was responsible for the effective measures taken against the U-boats, and was awarded the O.M. shortly before his death.

POUND, Ezra (1885–). American poet. B. at Hayley, Idaho, he studied the Romance languages and in 1907 was briefly lecturer in French and Spanish at Wabash Coll., Crawfordsville. Going to Europe, he made his home in London for some 13 years, influenced T. S. Eliot, Yeats, and Joyce, and by his first 2 vols. of verse *Personae* and *Exultations* (1909) estab. the lines of the Imagist movement. During 1921–5 he lived in Paris, his friends incl. Gertrude Stein and Hemingway, and then settled in Rapallo. His sympathy with Mussolini's régime and his anti-Semitism aroused resentment in the U.S.A. and U.K., and his broadcasts from Italy in the S.W.W. led to his arrest by American troops in 1945. On the eve of his Washington trial he was found unfit to plead and confined in a mental hospital until, in 1958, the treason charges were dismissed on the ground that he was never likely to be so. On his release, he returned to Italy. His first completely 'modern' poem, and for some his best, was *Hugh Selwyn Mauberley* (1920), but his biggest is the series of *Cantos* intended to reach a 100, which comprise a selective view of history: beginning in 1919 they incl. *The Pisan Cantos* (1949), *Section Rock-Drill* (1956) and *Thrones* (1960). Scholars often disapprove his versions from Old English, Provençal, Chinese, ancient Egyptian, etc., but they have definite value as poetry.

POUND. (1) The standard unit of weight avoirdupois in the U.K., U.S.A. and Canada, composed of 7,000 grains or 16 oz. and equal to 0.45359237 kg. (2) The British standard of currency, equivalent to 240 pence (from 1971 to 100 new pence), formerly

EZRA POUND on his return to Italy in 1958. Photo: Keystone Press Agency.

PIOZZI, Hester Lynch (1741–1821). British author. B. in Caernarvonshire, *née* Salisbury, she m. Henry Thrale in 1763, and in 1765 was introduced to Samuel Johnson, whose friendship she retained until after 3 years' widowhood she m. the musician Gabriele P. in 1784. In 1786 she pub. *Anecdotes of the late S. Johnson*, and in 1788 her correspondence with him.

PIPER, John (1903–). British artist. B. at Epsom, the son of a solicitor, he studied at the R.C.A. and the Slade. From early landscapes of southern England, he went on in the thirties to two-dimensional abstracts; to pictures of air-raid destruction in the S.W.W., such as the House of Commons and Bath; then to architectural compositions against romantic backgrounds; theatrical settings, e.g. for the operas of Britten; and a window for Coventry Cathedral and panels for the lantern at Liverpool R.C. Cathedral.

PIPIT. Several genera of birds in the family Motacillidae allied to the wagtails, but looking like larks. The European meadow P. (*A. pratensis*) is about the size of a sparrow and streaky brown.

PIRACY. The taking of a ship, or any of its contents, from lawful ownership while on the high seas, punishable under international law by the court of any country where the pirate may be found or taken. Algiers (*see* CORSAIRS), the West Indies (*see* BUECCANERS), the coast of Trucial Oman (the Pirate Coast), Chinese and Malay waters, and such hideouts as Lundy Is., were long pirate haunts, but modern communications and the complexities of supplying and servicing modern vessels tend to eliminate P. On land similar techniques, known as hijacking, have been applied to long-distance lorries or trucks, and also to aircraft.

PIRAEUS (pīrē'us). Port of both ancient and modern Athens and first port of Greece, on the Gulf of Aegina. Constructed as the port of Athens, c. 493 B.C., it was linked with that city by the Long Walls (built c. 460 B.C.). After the sack by Sulla in 86 B.C., P. declined. Modern P. is an industrial suburb of Athens, to which it is joined administratively; a fiscal-free zone covering 70 sq. m. was estab. at P. in 1932.

PIRAN, St. (fl. 500). Patron saint of tinminers, and so of Cornwall and the Cornish nationalist movement. He was sent as a missionary by St. Patrick, and there are remains of his oratory at Perranzabuloe: feast day 5th March.

PIRANDELLO (pērahndel'ō), Luigi (1867–1936). Italian writer. B. in Sicily, he settled as a teacher in Rome, and won fame with the novel *The Late Mattia Pascal* (1904) and with numerous short stories. His first venture in the field of drama was *La Morsa* (1912), which was followed by *Six Characters in Search of an Author* (1921), *Henry IV* (1922), etc. In 1934 he received the Nobel prize for literature.

PIRANHA (pirah'nyā). S. American fresh-water fish (*Serrasalmo piraya*) found in the Amazon. About 1 ft. long and with razor-edge teeth, they rapidly devour men or animals, espec. if attracted by blood.

PISA (pē'sah). City in Tuscany, Italy, cap. of P. province, on the Arno, 7 m. from the sea. It has an 11th–12th cent. cathedral, the Leaning Tower or campanile, and a univ. (1338). Cotton and silk are manufactured. Founded by Greek colonists, then an Etruscan and a Roman city, P. was in the 11th–14th cents. an independent naval rep. Gombo, off which Shelley was drowned in 1822, is 1½ m. W. Pop. (1961) 91,108.

PISANO (pēzah'nō), Andrea. Assumed name of the Italian sculptor Andrea da Pontaderra (1270–1348), whose works incl. one of the doors of the Florentine baptistry and sculptures in the campanile.

PISANO, Niccolò (c. 1225–c. 1278). Italian sculptor who produced pulpits at Siena and Pisa, and the shrine of St. Dominic at Bologna. His son, Giovanni P. (1250–1317), was also a sculptor, and designed pulpits.

PISANO, Vittore (1397–1455). Italian artist, called Pisanello, chiefly celebrated as a medallist.

PISISTRATUS (c. 605–527 B.C.). Athenian statesman. Although of noble family, he assumed the leadership of the peasant party, and seized power in 561. He was twice expelled, but recovered power from 541 till his death. Ruling as a dictator under constitutional forms, he first had the Homeric poems written down, and founded Greek drama by introducing the Dionysiac peasant festivals into Athens.

PISSARRO, Camille (1830–1903). French painter. B. in the West Indies, he studied under Corot, and became a leader of the Impressionist movement. His son Lucien P. (1863–1944), a landscape painter and engraver, came to England in 1890 and in 1916 became a naturalized Englishman.

PISTOIA (pistō'yah). Italian city, cap. of P. prov., 10 m. N.W. of Florence. It is surrounded by walls (1302) and has a cathedral dating from the 12th cent. Steel and small arms, paper, macaroni, and olive oil are produced. P. was the site of Catiline's defeat, 62 c. Pop. (1961) 82,401.

PISTOL. Small firearm (q.v.) designed for one-hand use. Ps. were in use from the early 15th cent. and their evolution closely parallels that of the corresponding shoulder arm. Throughout its history the P. has appealed to the ingenuity of untold numbers of inventors who succeeded in combining it with battle axes, holy-water sprinklers, daggers, bicycle handles, fountain pens, etc. The problem of firing more than once without reloading was tackled by using many combinations of multiple barrels, both stationary and revolving, and although a breech-loading, multi-chambered revolver of 1650 still survives, the first practical solution was Samuel Colt's six-gun (1847). Behind a single barrel, a short 6-chambered cylinder was rotated by cocking the hammer, and a fresh round brought into place. The automatic pistol, operated by gas or recoil, was preferred by the military in many

PISA. On the north-west of the town are the cathedral and famous leaning tower. Weighing 14,000 tons and 179 ft. high, and with foundations only about 10 ft. deep, the tower slopes more each year – about one-eighth of a millimetre – and is nearly 17 ft. from perpendicular, so that the problem of how to prevent it from falling is urgent. Galileo did not make experiments, as legend claims, from the tower's summit.
Photo: A. W. Kerr.

1947-8. Several times imprisoned, for his part in the Civil Disobedience Movement incl. 1942-5; he became Pres. of the Constituent Assembly in 1946 and in 1950 1st Pres. of the Rep. of India.

PRAWN

PRAWN. Crustacean in the family Palaemonidae, allied to the shrimp. The common P. (*Leander serratus*), translucently colourless, and 2-3 in. long, is found in shoals in shallow off-shore water in the temperate zone, and is good eating. In tropical rivers, e.g. in the W. Indies and Central America, there are Ps. approaching the size of lobsters.

PRAXITELES. Greek sculptor who lived in Athens during the 4th cent. B.C. The works credited to him incl. the statue of Hermes carrying Dionysus and the bas-relief of Aphrodite of Cnidus.

PRAYER. Address to a divine power, whether of supplication, adoration, confession, or thankfulness. Among primitive peoples, P. is often merely a magic formula, compelling the deity to perform the wishes of the worshipper, but with the advance of religion it develops towards disinterested communion with a higher power. The R.C. and Greek churches sanction prayer to the Virgin, angels, and saints, to secure their intercession for the devotee, but Protestant churches limit P. to God alone. Protestant churches also make no provision for prayer for the dead, since this implies belief in Purgatory.

PRAZ (prats), Mario (1896-). Italian scholar. Prof. of English language and literature at Rome from 1935, he is known for such studies as *The Romantic Agony* (1930) and *The Flaming Heart* (1958), a study of Anglo-Italian literary relationships, e.g. Crashaw, Machiavelli.

PREDESTINATION. In theology, the doctrine which asserts the foredetermination by God of all events, and of the ultimate election to glory or reprobation to perdition of the individual soul. The theory of P. was elucidated in the controversy between Augustine, who claimed the absolute determination of election by God, and Pelagius, who upheld the doctrine of freewill. Luther and Calvin adopted the Augustinian view at the Reformation, although in differing degrees, but Arminius adopted the Pelagian standpoint.

PREEDY, George R. See LONG, M. G.

PREFABRICATION. See HOUSING.

PREFECT (Fr. préfet, präfeh'). In France the govt.'s representative in each dept., the office being first estab. in 1800. In each *commune* (the unit of local govt.) a mayor is elected by the municipal council (themselves elected by universal suffrage), who is head of the local police, and acts with his assistants under the orders of the P. See LOCAL GOVT.

PREGNANCY. The condition in which a child is growing within the womb. It begins at conception and ends at birth, and the normal length is forty weeks, though abortion or premature birth may occur at any time, and the period may be much exceeded. Menstruation stops on conception. After the second month the breasts become tense and tender, the area round the nipple becomes dark brown. Enlargement of the womb can be felt about the end of the third month, and thereafter the abdomen enlarges progressively.

PREMINGER, Otto (Ludwig) (1906-). American producer-director. B. in Vienna, he was associated with the Josefsteater before going to the U.S.A., where he was prof. at Yale 1938-41. His films show a highly developed and intricate technique of story-telling, which clearly presents the issues, without judging

them; and a masterly use of the wide screen and the travelling camera: they incl. *Margin for Error* (1942), *River of No Return* (1953), *Anatomy of a Murder* (1959), *Advise and Consent* (1961), *Hurry Sundown* (1967) and *Skidoo* (1968).

PREMIUM SAVINGS BONDS. See LOTTERY and SAVING.

PREMONSTRATENSIS or White Canons. An R.C. monastic order founded by St. Norbert at Prémontré, France, in 1120. Their rule was a stricter version of that of the Augustinian Canons.

PREMPEH I (d. 1931). Ashanti chief. He became king in 1888, and later opposed British rule. He was deported and in 1900 the Ashanti were quelled. Converted to Christianity, he returned to Kumasi in 1924, being made head chief of the people. His nephew, Prempeh II (1892-), succeeded him in 1931.

PRE-RAPHAELITE BROTHERHOOD. A group of Victorian artists who abandoned the rules of art developed under Raphael, and painted biblical and literary subjects in a naturalistic style. The Brotherhood, founded in 1848, had only 3 members - Dante Gabriel Rossetti, John Everett Millais, and Holman Hunt - though many other artists came under their influence, notably Ford Madox Brown, Burne-Jones, Frederick Sandys, and Arthur Hughes. The Brotherhood broke up in 1853 when Millais became an A.R.A. and abandoned the Pre-Raphaelite technique.

PRESBYTERIANISM. That system of government of the Christian Church that is based on elders as distinguished from Episcopalianism with its rule by bishops. At the Reformation, P. was expounded by John Calvin, and from his teaching and influence derive the present Presbyterian churches in Scotland (where the estab. Church is Presbyterian), England, the Commonwealth, U.S.A., etc. Each congregation is governed by elders, clerical or lay, who are of equal rank; and congregations are grouped in presbyteries, synods, and general assemblies.

PRESCOTT, William Hickling (1796-1859). American historian. B. in Mass., he was almost completely blinded by an accident, but produced the popular *History of Ferdinand and Isabella, Conquest of Mexico* (1843), and *Conquest of Peru* (1847).

PRESCRIPTION. The legal acquisition of title or right by uninterrupted use or possession from time immemorial.

PRESCRIPTION. An order written in a recognized form by a practitioner of medicine, dentistry, or veterinary surgery to a pharmacist for a preparation of drugs to be used in treatment. By tradition it is written in Latin, except for the directions addressed to the patient. It consists of (1) the superscription *recipe* (take), contracted to *Rx*; (2) the inscription or body, containing the names and quantities of the drugs to be dispensed; (3) the subscription, or directions to the pharmacist; (4) the signature, consisting of the contraction *Signa*, followed by directions to the patient; and (5) the patient's name, the date and the practitioner's name.

PRESIDENT. The usual title of the head of state in countries without a monarch. The office may range from the equivalent of a constitutional monarch to the actual head of the govt. For presidents of the U.S. see UNITED STATES OF AMERICA.

PRESIDENTIAL MEDAL OF FREEDOM. Highest peacetime civilian award in the U.S.A., instituted in 1963, conferred annually on Independence Day by the Pres. on those making significant contributions to the 'quality of American life'. It replaced the Medal of Freedom (1945) awarded for acts and service aiding U.S. security.

PRESS. See NEWSPAPERS.

PRESSBURG. German name of BRATISLAVA.

PRESTER JOHN (John the Priest). Fabulous Christian prince who in the 12th-13th cents. was believed to rule a powerful empire in Asia. In the

anterior lobe hormones are obtained which control the activities of other glands (thyroid, gonads and adrenal cortex); and direct-acting hormones affecting milk secretion, and controlling growth. Secretions of the posterior lobe regulate body water balance, contraction of the uterus, etc. A highly complex gland, and 'Master of the Endocrine Orchestra'.

PIUS. Name of 12 popes. Pius II (1405–64) achieved fame in early life as an author under the name of Aeneas Silvius. As pope 1458–64 he attempted unsuccessfully to organize a crusade against the Turks. Pius IV (1499–1565), a member of the Medici family, became pope in 1559; he reassembled the Council of Trent, and completed its work in 1563. Pius V (1504–72), elected in 1566, excommunicated Queen Elizabeth, and organized the expedition against the Turks which won the victory of Lepanto. Pius VI (1717–99), elected in 1775, strongly opposed the French Revolution, and d. a prisoner in French hands. His successor in 1800, Pius VII (1740–1823), concluded a concordat with France in 1801, and took part in Napoleon's coronation, but was a prisoner 1809–14. After his return to Rome in 1814 he revived the Jesuit order. Pius IX (1792–1878) became pope in 1846. He never accepted the incorporation of the Papal States and of Rome in the kingdom of Italy, and proclaimed in 1854 the dogma of the immaculate conception of the Virgin and in 1870 that of papal infallibility. His pontificate was the longest in history. Pius X (1835–1914), pope from 1903, canonized 1954, condemned modernism in a manifesto of 1907. Pius XI (Achille Ratti, 1857–1939). Nuncio to Poland in 1919 and archbp. of Milan in 1921, he was elected pope in 1922. The Lateran Treaty with Italy was signed in 1929. In his encyclicals he condemned Nazism and anti-Semitism as well as Communism. Pius XII (Eugenio Pacelli, 1876–1958). After distinguishing himself as papal nuncio from 1917, he was appointed cardinal in 1929, and Papal Sec. of State in 1930. Elected pope in 1939, he opposed anti-Semitism during the S.W.W. (though his attitude has been the subject of controversy) and made many peace appeals. His proclamation of the new dogma of the bodily assumption of the Virgin Mary (1950) and his restatement of the doctrine that the life of an infant must not be sacrificed to save a mother in labour (1951) roused Protestant criticism. He was subject to visions.

PIZARRO (pēthahr'rō), Francisco (c. 1475–1541). Spanish conqueror of Peru. He took part in the expeditions of Balboa and others. In 1526–7 he explored the N.W. coast of S. America, and in 1530 with 180 followers conquered Peru. The Inca was treacherously seized and murdered. In 1535 P. founded Lima. A feud now began between the Spanish leaders, and P. was assassinated. His half-brother Gonzalo P. (c. 1505–48) explored the region E. of Quito 1541–2. He made himself governor in Peru 1544, but was defeated and executed.

PIZZETTI (pētset'tē), Ildebrando (1880–1968). Italian composer. B. at Parma, he became director of the conservatoire at Milan and in 1936 prof. at the Academy of St. Cecilia, Rome. One of the foremost contemporary Italian composers, he had his operatic version of T. S. Eliot's *Murder in the Cathedral* performed in Milan in 1958.

PLACE, Francis (1771–1854). British Radical. A tailor by trade, he showed great powers as a political organizer and made Westminster a centre of Radicalism. He secured the repeal of the Combination Acts in 1824.

PLAGUE (plāg). Severe infectious disease marked in the classic form by swelling of the buboes or lymphatic glands, hence 'bubonic' P. It is most common in the tropics, India, China, S. America, etc. In medieval Europe it was known as the Black Death (q.v.), but died out when the black rat, through whose fleas it was principally transmitted, was exterminated

by the brown: in the U.S. it has seldom occurred. Incubation is 2–5 days, followed by fever and a state like drunkenness, and death within a week in 25 per cent of cases. Even more virulent are the septicaemic and pneumonic forms, the latter being invariably fatal until the introduction of sulpha drugs and various antibiotics.

PLAICE. Food-fish (*Pleuronectes platessa*) belonging to the flat-fish group, abundant in N. European waters. It is white beneath and brownish with orange spots on the 'eyed' side.

PLANCK (plahnk), Max (1858–1947). German physicist and framer in 1900 of the Quantum Theory. B. at Kiel, he was appointed to the chair of physics at Kiel in 1885, and at Berlin in 1889, and 1930–7 was Pres. of the Kaiser Wilhelm Institute. His writings incl. *Prinzip der Erhaltung der Energie*, *Einleitung in die theoretische Physik*, and *Where is Science Going?*. An F.R.S. from 1926, he was awarded the Nobel prize for Physics in 1918.

PLANE. Genus of trees (*Platanus*). Species inc. the Oriental P. (*P. orientalis*), a favourite plantation tree of the Greeks and Romans; the London P. (*P. acerifolia*), with palmate 3-lobed (instead of 5-lobed) leaves, which throws off city smog by the smoothness of its foliage and shedding its bark annually in large flakes; and the American P. or buttonwood (*P. occidentalis*). All have pendulous burr-like fruit and are among the handsomest of trees, being capable of growth to 100 ft. high.

PLANETARIUM. Optical projection device by means of which the motions of the stars and planets are reproduced for educational purposes on a domed ceiling representing the sky as it appears from Earth.

PLANETARY PROBE. A vehicle sent near, or to, another planet. The guidance and launching techniques are much more complex than with lunar probes, owing to the distances involved; communication problems are also increased. The first really successful vehicle of this type was the U.S. Mariner II, which passed within 25,000 miles of Venus in 1962 (14 Dec.), and sent back information which caused a drastic revision about all previous ideas of Venus as a world. At the present stage of technical development, it seems that only Venus and Mars are within range of such probes.

PLANETARIUM. Three schoolchildren listen to an explanation of the complex mechanism of the Zeiss projector which took the German technicians two months to erect in London. Behind them can be seen a realistic 'skyline'.

Earl of Derby	(Con.)	1858			

flowers in spring. Related to it is the cowslip, and the oxlip may be a hybrid of the two.

PRINCE (Lat. *princeps*, 'first'). A royal or noble title. In Rome and medieval Italy it was used as the title of certain officials, e.g. *princeps senatus*, 'leader of the Senate'. The title was granted to the king's sons in 15th cent. France, and in England from Henry VII's time. The sovereign's eldest son is normally created P. of Wales, and the eldest dau. has often been created Princess Royal: the title is not held by 2 princesses at the same time.

PRINCE ALBERT. Canadian city in Saskatchewan, on the N. Saskatchewan r., 200 m. N. by W. of Regina, h.q. of the Royal Canadian Mounted Police for central and N. Saskatchewan. It has brickyards, flour and timber mills, and breweries. P.A. national park, 1,869 sq. m., opened 1928, lies 35 m. to the N.W. Pop. (1966) 23,560.

PRINCE EDWARD ISLAND. Island prov. of Canada, in a bay of the Gulf of St. Lawrence, separated from New Brunswick and Nova Scotia on the mainland by Northumberland Strait. It is mainly flat with a deeply indented coast. Dairying and fishing are the chief industries; silver-fox breeding is also important, and there are fish-canning factories and timber mills. Charlottetown is the cap. Area 2,184 sq. m.; pop. (1966) 108,535. Discovered by Cabot in 1497, it was claimed in 1603 by the French who called it Ile Saint-Jean; taken by the British in 1758 and made a separate colony in 1769, it was re-named P.E.I. in 1798 in honour of Edward, 4th son of George III, at that time serving as lieutenant-general in Canada, duke of Kent 1799 and later father of Queen Victoria. P.E.I. entered the confederation in 1873. In 1965 a 9-m. road and rail tunnel bridge and causeway was projected across Northumberland Strait to link P.E.I. with the New Brunswick coast.

PRINCE IMPERIAL. See NAPOLEON III.

PRINCE RUPERT. Canadian port at the mouth of the Skeena r., in Brit. Columbia, on Kaien Island, W. side of Tsimpsean peninsula. A fishing centre with dry dock and cold-storage facilities. Pop. (1966) 14,667.

PRINCESS ROYAL, Victoria Alexandra Alice Mary, dowager countess of Harewood (1897–1965).

Only dau. of George V, she m. the 6th earl of Harewood in 1922. See HAREWOOD, EARL OF.

PRINCETON. Borough in New Jersey, U.S.A., 50 m. S.W. of New York, the seat of Princeton Univ. founded in 1746 at Elizabethtown, moved to Newark 1784, to P. 1756. Pop. (1960) 11,890.

PRINCETOWN. English village on the W. of Dartmoor, Devon, containing Dartmoor prison, opened 1809.

PRINTED CIRCUIT. Method of making electrical contact between electronic components such as resistors, capacitors or transistors without the use of wire. It consists of a pattern of copper foil glued to an insulating board, the terminals of the components being pushed through holes in the board and soldered to the copper foil. The board thus acts as a means of holding the components in place whilst interconnecting them to make an electronic circuit.

PRINTING. The repeated transference of ink or paint from a single surface (the P. surface) to a succession of other

surfaces (the printed surfaces); for example, the P. of this encyclopedia has been carried out by the transference of ink from type (q.v.) and blocks (q.v. under PROCESS ENGRAVING) on to paper. In P. processes the ink is usually laid on the P. surface by rollers; these also cover the non-P. surface, which surrounds the P. surface but does not transfer ink to the paper. The principal techniques are: (1) Letterpress P., in which the P. surface stands up in relief from the non-P. surface; the ink rollers do not touch the non-P. surface, which does not touch the paper. This is the process most widely used for books and newspapers. (2) Lithographic P. in which the P. and non-P. surfaces lie in the same place, e.g. on a single flat plate of zinc, but differ from each other in that the P. surface is covered by a film of greasy ink which rejects water, and the non-P. surface is covered by a film of water which rejects greasy ink. These two films are maintained during P. by alternate applications of ink and water from rollers. Ink and water rollers and both P. and non-P. surfaces touch the whole printed surface. The process is used for some books and magazines and in particular for colour P. (3) Gravure P., in which the ink is contained

*If it plese only man spiritual as temporal to bpe only
ppes of two and the comemoracion of salubritas
enpyrind after the forme of this preter letter which
ben wel and truly correct late hym come to welcom
netter in to the almoner at the red pale and he shal

Supplicat first ordula
King, David Jack from the Devonshire
PRINTING. Printed by William Caxton (q.v.) c. 1478, this 6-inch wide poster, the first printed advertisement published in Britain, was intended to promote the sales of a service book *The Pyes of Salisbury Use at the Red Pole in Almonry, Westminster*. The Latin tag illustrates the hazards of poster advertising, then as now, and begs that it be not pulled down.
Courtesy of the John Rylands Library.

entirely destroyed, replace burnt skin, mend damaged nerves, and perform many other surgical marvels. These operations need careful planning and often take months or years to complete.

PLATA, Rio de la. Spanish name for the river PLATE.

PLATE, River. The estuary into which flow the Parana and Uruguay rivers, on the E. coast of S. America. It is 200 m. long and from 20 to 145 m. wide, and receives the waters draining much of Paraguay, Argentina, Uruguay, Bolivia, and Brazil: all 5 countries agreed 1968 to co-operate in developing the P. basin. Diaz de Solis discovered the estuary c. 1515. In Dec. 1939 the German 'pocket-battleship' *Admiral Graf Spee* (14,000 tons) was sunk here by the British cruisers H.M.S. *Exeter*, *Achilles*, and *Ajax*.

PLATINUM (Span. *platina*, little silver). Greyish-white, ductile and malleable metal, density 21.45, melting point 1773.5°C, untarnishable in air and very resistant to heat and strong acids: symbol A, at. wt. 195.09, at. no. 78. P. occurs as the metal, and alloyed with iridium, osmium and other metals of the same group, and with gold and iron, especially in the Urals, S. Africa, Canada and the U.S.A. Both pure and in alloy, it is used extensively in jewellery, dentistry and the chemical industry (in finely divided form, P. acts as a catalyst). It is employed for switch contacts because of its durability; and is valuable in scientific apparatus because P. wires can be sealed gas-tight, through glass.

PLATO (c. 428–c. 348 B.C.). Athenian philosopher. He early entered politics on the aristocratic side, and in philosophy became a follower of Socrates. He travelled widely, and on his return to Athens, c. 387, he founded his Academy, in order to train a new ruling class. He twice visited Syracuse in the hope of playing a part in politics, without success. Of P.'s works c. 30 dialogues survive, in which ethical and philosophical problems are discussed. Typical examples are the *Symposium*, on love; the *Ion*, on poetry; the *Phaedo*, on the immortality of the soul; and the *Apology* and *Crito*, on Socrates' trial and death. In many dialogues Socrates is the central figure, and it remains uncertain how far the views attributed to him are his, and how far they are P.'s. P.'s philosophy marks a reaction against the scientific rationalism of the Ionian philosophers. He maintained that mind, not matter, is fundamental, and that

material objects are merely imperfect copies of abstract and eternal 'ideas'; hence he rejected experiment as a scientific method in favour of argument. His political philosophy is expounded in the *Republic* and the *Laws*, both descriptions of ideal states.

PLATYPUS (plat'ipus). Small mammal (*Ornithorhynchus paradoxus*) of the order Monotremata, found in Tasmania and E. Australia. Semi-aquatic, it has naked jaws resembling a duck's beak, small eyes and no trace of an external ear. It lives in long burrows in banks of rivers, where it lays eggs in a rough nest. It feeds on water-worms, insects, etc., and when full-grown is c. 18 in. long.

PLAUTUS, Titus Maccius (d. 184 B.C.). Roman dramatist. B. in Umbria, he settled in Rome and worked in a bakery before achieving success as a dramatist. He wrote at least 56 comedies, freely adapted from Greek originals, of which 20 survive. Shakespeare based *The Comedy of Errors* on the *Menoecmi*.

PLAYING CARDS. They originated in China, India, or with the Arabs, and appeared in Europe at the end of the 14th cent. In the 15th cent. the pack was gradually simplified and reduced to the present 52. Among the chief card games are Whist, Bridge, Poker (qq.v.), and Rummy. Canasta, a variant of the last-named, was introduced to the U.S. from Argentina in 1949 and later became very popular in Britain.

PLEASENCE, Donald (1919–). British actor. B. in Yorks., he has been especially successful as Leone Gola in Pirandello's *The Rules of the Game*, Davies in Pinter's *The Caretaker*, and in the film *Dr. Crippen*, conveying the sinister aspect of the outcast from society.

PLEBEIANS. The unprivileged class in ancient Rome, composed of aliens and freedmen, and their descendants. During the 5th–4th cents. B.C. they waged a long struggle with the patricians, until they secured admission to the offices formerly reserved for the patricians.

PLEBISCITE (pleb'isit). A direct vote by all the electors of a country or district on a specific question. Since the 18th cent. it has been employed on many occasions to decide to what country a particular area should belong, e.g. in Upper Silesia and elsewhere after the F.W.W., and in the Saar in 1935.

PLÉIADE (plâyahd'), La. Group of 7 poets in 16th cent. France led by Ronsard, who were inspired by classical models to the improvement of French verse. They were so called from the 7 stars of the P. group.

PLEIADES (plî-adêz). The 7 daus. of Atlas, who on being pursued by Orion were changed by the gods at their own request to a cluster of stars. See illus. p. 856.

PLEKHANOV (plyekhah'nof), Georgy Valentinovich (1857–1918). Russian Socialist. He founded the first Russian Marxist organization in 1883, and pub. theoretical works. He collaborated for some years with Lenin.

PLEURISY (plôo'risi). Inflammation of the pleura – a secreting membrane which covers the lungs and also lines the space in which they rest; the 2 surfaces move easily on one another, being lubricated by small quantities of fluid. When it is inflamed the surfaces may dry up or stick together, making breathing difficult and painful. A large volume of fluid may collect in the 'pleural cavity', the space between the 2 surfaces. Pus in the pleural cavity is called empyema.

PLASTICS. A telephone exchange and offices are housed in plastics at the Bakelite factory, Birmingham. The sections are of sandwich construction with a phenolic foam core between two layers of polyester/glass, deriving their strength from a two-directional curve and sealed together by mastic strip. The steel frame rests on concrete footings, the only other site preparation being provision of a raised slab with a channel to drain off rainwater. Even with timber flooring it weighs one-fifth of a conventional building and is easily dismantled and moved.

Courtesy of Bakelite Ltd.

PRIVY PURSE. The amount set apart in the Civil List for the sovereign's personal use. For Queen Elizabeth II it has been fixed at £60,000 a year.

PRIVY SEAL. Lord. An English officer of state, through whose hands all letters-patent had to pass before the great seal was affixed. The title is now an honorary one, borne by a member of the cabinet entrusted with special non-departmental duties.

PROBATE. Formal proof of a will. If its validity is unquestioned, it is proved in 'common form'; the Executor, in the absence of other interested parties, obtains at a P. Registry a grant upon his own oath. Otherwise, it must be proved in 'solemn form': its validity estab. at a P. Court (in the P., Divorce and Admiralty division), those prejudiced under it being made parties to the action. In the U.S. the 'solemn form' is the more usual, although there may be no question as to validity, and P. is granted generally by courts of special jurisdiction.

PROBATION. A procedure adopted in lieu of prison sentence, in certain cases, e.g., first offenders and children, where the offender is placed under the supervision of a P. Officer appointed by the court, and undergoes certain restrictions. This method is used where it is believed that it will benefit the offender's future behaviour.

PROCESS ENGRAVING. The engraving by photo-mechanical means of a relief surface for the letterpress process of printing (q.v.). A photograph is taken of the image to be reproduced; the image is developed in an acid-resistant coating through the negative on a metal plate; and the non-printing part of the surface, unprotected by acid-resistant, is etched away. The finished plate is known as a block. A line-block can be made from any black and white original, and reproduces the original faithfully; if the original contains shades of grey, they must be reproduced from a half-tone (q.v.) block. A separate block must be made for each colour to be printed; but the full range of colours can be reproduced from a set of 4 half-tone blocks, made from successive photographs of the originals taken through coloured filters, and printed in yellow, cyan (blue-green), magenta (red-blue) and black. The term process engraving is also loosely applied to the photographic preparation of printing surfaces for processes other than letterpress.

PROCRUSTES ('the stretcher'). In Greek legend, a robber who tied his victims to a bed, and if they were longer than the bed, cut off their limbs, and if they were shorter, stretched them.

PROCURATOR-FISCAL. An officer attached to the sheriff's court in Scotland charged with the preliminary questioning of witnesses regarding crimes, and also inquiring into the circumstances of suspicious deaths.

PROFIT-SHARING. A system whereby an employer pays his workers a fixed share of his profits. It originated in France in the early 19th cent., and under the influence of the Christian Socialists was widely practised for a time within the co-operative movement.

PROGRESSION. A series of numbers each formed by a specific relationship to its predecessor. An *arithmetical P.* has numbers which increase or decrease by a common sum or difference, e.g. 2, 4, 6, 8 . . . A *geometric P.* has numbers each bearing a fixed ratio to its predecessor, e.g. 3, 6, 12, 24 . . . A *harmonic P.* is a series with numbers whose reciprocals are in arithmetical P., e.g. $\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5} \dots$

PROHIBITION. Laws making illegal the sale of intoxicating liquor, which originated in the U.S.A. Legislation was passed in Maine in 1846, and throughout many states thereafter, but later became a dead letter. Revival of the campaign at the end of the cent. led to a sustained agitation for legislation, which was nourished by the F.W.W. and need for cereals. In 1920 a P. amendment (known as the Volstead Act,

after Congressman V. who introduced it) to the U.S. constitution became operative. Apart from loss of revenue, it led to much smuggling and distilling, and public opinion insisted on its repeal in 1933.

PROKO'VIEV, Serge (1891–1953). Russian composer. B. nr. Ekaterinoslav, he studied at St. Petersburg under Rimsky-Korsakov and achieved fame as a pianist. For some time he lived in London, in the U.S.A., and in Paris, but returned to Moscow in 1934. He composed operas such as *The Love of Three Oranges*; ballets for Diaghileff; symphonies incl. the *Classical Symphony*; the *Scythian Suite*; music for films; piano concertos, of which the 3rd is best known; violin concertos; songs and cantatas, e.g. that for the 29th anniv. of the Oct. Revolution; *Peter and the Wolf*, a fairy tale, etc.

PROLETARIAT. Those classes which possess no property, and therefore depend upon the sale of their labour-power, as opposed to the capitalists or bourgeoisie, who own the means of production, and the petty bourgeoisie, or working small property-owners. They are usually divided into the industrial, the agricultural and the intellectual P. The term is derived from the Lat. *proletarii*, the class possessing no property, who served the state by producing offspring (*proles*).

PROME (prōm). Burmese town and tradé centre on the Irrawaddy r. 150 m. N.N.W. of Rangoon, cap. of P. dist. and terminus of a railway from Rangoon. The 180 ft. high Shivesandaw pagoda attracts many pilgrims; silk, lacquer, and paper are among merchandise handled. The E. India Company set up a factory at P. in 1612. In the S.W.W., P. was held by the Japanese 1942–5. Pop. (est.) 30,000.

PROMENADE CONCERTS ('Proms'). Originally, concerts during the performance of which audiences are allowed to walk about. The London P.Cs. (since 1895) are the premier musical activity of England. They were given in the Queen's Hall until it was destroyed by enemy action in 1941, and then in the Royal Albert Hall, and were conducted by Sir Henry Wood until his death. They have fostered the 20th cent. renaissance of music appreciation in England.

PROMETHEUS (promē'thūs). Greek hero, who stole fire from heaven to give to men, and taught them the useful arts. Zeus to punish him chained him to a rock in the Caucasus, where an eagle preyed on his liver, until he was rescued by Hercules.

PROMETHIUM. Element of the rare earth group, of which the existence in nature is unconfirmed: symbol Pm, at. wt. uncertain (probably 147), at. no. 61. Several isotopes, obtained by fission of uranium and by neutron bombardment of neodymium, have been reported by different groups of workers.

PROMISSORY NOTE. A written promise to pay on demand or at a fixed future time a specific sum of money to a named person or bearer. Like a cheque, it may be negotiated by endorsement by the payee.

PRONGBUCK or **Pronghorn**. Only surviving member of a family (*Antilocapridae*) between deer and cattle. The P. (*Antilocapra americana*) is 3 ft. high, sheds its horns annually, and is a swift runner. It inhabits the N. American plains.

PROPERTIUS (prōper'shius), **Sextus Aurelius** (fl. 30–15 B.C.). Roman poet. B. at Assisi, he settled in Rome, and became a member of the literary circle of Maecenas. The majority of his poems deal with his love for his mistress 'Cynthia'.

PROPHETS. Name given to the succession of Hebrew saints and seers who preached and prophesied in the Hebrew kingdoms in Palestine from the 8th cent. B.C. until the suppression of Jewish independence in 586 B.C. and possibly later. The chief were Elijah, Amos, Hosca, and Isaiah. The prophetic books of the O.T. constitute a division of the Hebrew Bible.

PROPORTIONAL REPRESENTATION. An electoral system designed to ensure that minority votes

Following heavy bombing in the S.W.W. the city centre was reconstructed, incl. shopping area, law courts, and municipal offices. The Tamar Bridge now gives P. a direct road link with Cornwall, and there has been major post-war industrial development. Pop. (1961) 204,279. See LADY ASTOR.

PLYMOUTH BRETHREN. Christian Protestant sect characterized by extreme simplicity of belief, founded in Dublin c. 1827 by the Rev. John Nelson Darby (1800-82). The movement gained strength and an assembly was held in Plymouth in 1831 (hence the name P.B.) to celebrate its arrival in England, but by 1848 the movement had split into 'Open' and 'Close' B. The latter refuse communion with all those not of their persuasion, and from 1959, under the leadership of 'Big Jim' Taylor of New York, achieved notoriety through such edicts as those forbidding members to belong to any organised body or to eat with unbelievers. The P.B. are found throughout the world, but notably in the fishing villages of N.E. Scotland: membership 80,000.

PLYNLIMON, PLYNLIMMON. See PLINLIMMON.
PLZEN (pil'sen). Old town in Czechoslovakia, cap. of W. Bohemia region, 52 m. S.W. of Prague. It is famous for its lager beer, and is the site also of the Skoda armament works. Pop (1958 est.) 135,000.

PNEUMONIA. Term is used to describe inflammation of the lung. Based on cause, Ps. are divided into the Specific Ps., which are caused by a specific pathogenic organism; and the Aspiration Ps., in which some abnormality of the lung respiratory system allows the lung to be attacked by non-specific bacteria of low virulence. Treatment of all forms of P. consists of testing the bacteria in sputum, for sensitivity to antibiotics when an appropriate one is applied. This form of treatment has 'wiped out' P. as a hitherto fatal disease.

PNEUMOTHORAX. Invasion of the pleural cavity by air. Normally this cavity contains only a very slight quantity of lubricating substance, so that a vacuum is complete, and when the chest expands the lungs also expand.

PNOM-PENH. See PHNOM-PENH.

PO. Longest river in Italy, which rises on the Cottian Alps and flows E. to enter the Adriatic through a wide delta. It irrigates the plains of Piedmont and Lombardy. Length c. 415 m. There are natural gas fields in the Po Valley.

POCAHONTAS (c. 1595-1617). Red Indian princess who is said to have saved the life of John Smith when he was captured by her father Powhatan; in fact Smith probably invented the story. P. became a Christian, m. an Englishman, and d. at Gravesend.

PŌ'CHARD. Genus of diving ducks incl. the common P. (*Nyroca ferina*) in which the male has a rich red head, black breast and whitish body and wings with black markings; the canvas-back (*Marila vallisneria*), a related species, is especially prized in America as a table bird.

PO CHU-I (772-846). Chinese poet. He held office as president of the Board of War. One of the greatest of the T'ang poets, he cultivated simplicity of style.

PODGORICA. Older name of TITOGRAĐ.

PODOLSK. Town in Moscow region, R.S.F.S.R., 25 m. S.W. of Moscow, an industrial centre with petroleum refineries and factories making machinery, sewing machines, cables, cement, ceramics, etc. It received its charter in 1781. Pop. (1967) 160,000.

POE (rō), Edgar Allan (1809-49). American author. B. at Boston, he was left an orphan in 1811, and brought up by a Mr. and Mrs. Allan, whose surname

he used as a middle name from 1824. After 3 years in the army 1827-31, he attempted to earn his living by writing, but continued poverty, his addiction to alcohol, and the death of his wife in 1847, seem to have unhinged his mind. His poems have a melancholy lyric beauty and influenced the French symbolist school. His popular reputation rests on his short stories, which specialize either in the creation of horrific atmosphere, e.g. 'The Fall of the House of Usher', or in displays of acute reasoning, e.g. 'The Gold Bug' and 'The Murders in the Rue Morgue', which with their investigators Legrand and Dupin laid the foundation of modern detective fiction.

POET LAUREATE. Poet attached to the royal household. Among the Greeks and Romans the pre-eminent poet or warrior was awarded a laurel wreath,

POETS LAUREATE

Ben Jonson	... 1617	Thomas Warton	... 1785
Sir Wm. Davenant	1638	Henry Pye	... 1790
John Dryden	... 1668	Robert Southey	... 1813

Wm. Whitehead	1757	John Masefield	... 1930
Cecil Day-Lewis	... 1968		

hence the modern title of P.L. Among early English poets who had an unofficial status as P.L. were Chaucer, Skelton, Spenser, and Daniel; Jonson had a more definite position, and with Dryden the post was officially estab. There is a stipend of £70 a year, with an extra £27 in lieu of the traditional butt of sack. Although such effusions are no longer obligatory, the P.L. still sometimes produces verses on great national occasions, and is chairman of a committee of 5 poets which awards (usually annually) the King's/Queen's Gold Medal for Poetry, instituted by George V at the suggestion of Masefield.

POETRY. The imaginative expression of emotion or thought, usually in metrical form. In all literatures P. develops to perfection much earlier than prose, largely because it offers greater aids to accurate memorizing before the appearance of writing materials. Most direct in its interpretation of the emotions is lyric P., which incl. such forms as the song, sonnet, ode, elegy, and pastoral. Halfway between lyric and the narrative of the ballad, lay, and epic, is the use of verse in drama. Appealing largely to the intellect on the other hand are moral and didactic P., which incl. satire, parody, and those expositions of philosophical theory, religious doctrine, and practical subjects, which in England have for the most part been confined to prose since the 18th cent.

POGRO M. Russian term, lit. meaning 'devastation', applied to unprovoked attacks on the Jews, especially those carried out with official connivance. The Russian Ps. began in 1881, and were common throughout the country down to the Revolution.

POINCARÉ (pwahnkahré'), Jules Henri (1854-1912). French mathematician. B. at Nancy, he lectured at Caen and Paris. He developed the fields of pure mathematics, astronomy, and physics.

POINCARÉ, Raymond (Nancy) Landry (1860-1934). French statesman, a cousin of Jules Henri P. (a.v.). He became P.M. in 1912, was pres. 1913-20, and again P.M. 1922-4, when he carried out the occupation of the Ruhr, and 1926-9.

POINSETTIA. Winter flowering shrub (*Euphorbia pulcherrima*, also known as Mexican Flame-leaf and Christmas-flower), with large red leaves encircling

POCHARD

Bertran de Born. The Albigenian War in the 13th cent. destroyed the troubadours, and P. disappears as a literary medium from the 14th until the 19th cent. when Jacques Jasmin (1798–1864) and others paved the way for the *Félibrige* group of poets, of whom the greatest are Joseph Roumanille (1818–91), Frédéric Mistral (1830–1914), and Félix Gras (1844–1901).

PROVENCE (prōvōns'). Ancient prov. of France, on the Mediterranean. Already a Roman *provincia* (hence its name), it varied in size through its history and for a short time c. A.D. 900 was a kingdom. Later it was a county held by Alphonso, king of Aragon, Charles of Anjou, king of Naples, and others. The last count bequeathed it in 1482 to Louis XI of France, and his son Charles VIII secured control of it. In 1790 it was divided into the depts. of Basses-Alpes, Var, and Bouches-du-Rhône and part of Vaucluse and Alpes-Maritimes; the name P. is still used for the region, which has its own tongue.

PROVERB. A short familiar expression of a well-established, ethical or practical truth. The most notable collection of Ps. is in the O.T. book of that name, which forms part of the Wisdom Literature of the ancient Hebrews. Solomon is said (on slender grounds) to have been the author of some of them.

PROVIDENCE. Cap., port and trade centre of Rhode Is. state, U.S.A., on Providence r., 27 m. from the Atlantic. Jewellery, silverware, textiles and textile machinery, watches, chemicals, etc., are manufactured, and meat packing is carried on. P. was settled by Roger Williams in 1636. The 1st Baptist chapel in the American colonies was built in 1638 at P., which is the seat of Brown Univ. (1764). Pop. (1960) 207,498.

PROVINCE WELLESLEY. Territory on the W. coast of the Malay peninsula, part of Penang in W. Malaysia. It was settled by the British in 1800. Crops incl. rice, rubber, tobacco and spices. Area 290 sq. m.; pop (est.) 180,000.

PROXY. A person legally authorized to stand in another's place; also the instrument of conferment thereof. The term usually refers to voting at meetings, but there may be marriages by P.

PRUDHOE BAY. Site on the coast of N. Alaska where oil was struck beneath the frozen tundra in 1968. The field is rich, but the difficulties of working in low temperatures complicate exploitation. See NORTH-WEST PASSAGE.

PRUD'HON (prūdon'), Pierre Paul (1758–1823). French historical and portrait painter. B. at Cluny, he studied in Paris and later in Rome, where he was so influenced by Correggio, that he became known as the 'French Correggio'. His works incl. 'Vengeance and Justice Pursuing Crime', 'Diana and Jupiter' and a portrait of the Empress Josephine.

PRUNUS. Genus of trees in the family Rosaceae. The white or pink flowers are followed by drupes, often edible. Plums, peaches, apricots, almonds, and cherries all belong to this genus.

PRUSSIA. Former state of Germany, bordering the Baltic, and formed out of a union in 1618 of the Mark of Brandenburg and the Prussian state of the Teutonic Order. The Mark of Brandenburg originated in the 12th cent. under the Ascanians, who were followed by the Wittelsbachs, and in 1415 by the Hohenzollerns. John Sigmund (1608–19) m. Anna, dau. of Albert Frederick, duke of Prussia and last grand-master of the Teutonic Order, and so united the territories. Frederick William (1640–88), known as the Great Elector, laid the foundations of P.'s military power. Frederick III (1688–1713) assumed the title of King Frederick I of Prussia in 1701. Frederick William I (1713–40) concentrated his energies on the development of P.'s military might and commerce. During the reign of his son Frederick the Great (1740–86) Silesia, E. Frisia, and W. Prussia were annexed. The reign of

Frederick William III (1797–1840) was marked by the disaster of Jena (1806); his possessions were reduced, but after the Congress of Vienna (1815) P. regained its lost territories and also acquired lands in the Rhineland and Saxony. The year 1848 was marked by revolutionary outbreaks. In 1864 war with Denmark, resulted in the acquisition of Schleswig and Holstein, while after the defeat of Austria in 1866 Hanover, Nassau, Frankfurt-am-Main, and Hesse-Cassel were annexed to P. which became the head of the N. German Confederation. In 1871 William I of P. became emperor of all Germany. In 1918 P. became a rep. and a democratic constitution was adopted in 1920. In 1932 the Prussian govt. was removed from office by the Reich govt. of von Papen, and after 1933 P. lost its local independence. The Allies abolished the state of P. in 1946.

PRUSSIC ACID. See HYDROCYANIC ACID.

PRYNNE, William (1600–69). English puritan. He pub. in 1632 *Histriomastix*, a work attacking stage-plays, and containing aspersions on the queen for which he was pilloried and lost his ears. In 1637 he was again pilloried and branded for an attack on the bishops. He opposed the execution of Charles I, and actively supported the Restoration.

PRZEMYSL (pzhem'isl). Town of Poland, 60 m. W. of Lvov, on the San. Industrial establishments incl. flour and timber mills, tanneries, distilleries, and factories making ceramics and canning food. Dating according to tradition from the 8th cent., it belonged alternately to Poland and Kiev from the 10th to 14th cents. Austrian 1722–1919, it was a frontier fortress, besieged by the Russians, except for a brief respite, from Sept. 1914 to March 1915. It was in German occupation June 1941 to July 1944. Pop. (1960) 46,000.

PSALMS. Book of the O.T. consisting of 150 poems, the majority of which are songs of praise and were intended to be sung to a musical accompaniment. The Psalter was probably completed in its present form in the 1st cent. B.C., and is divided in 5 books, containing Ps. 1–41, 42–72, 73–89, 90–106, and 107–150. The authorship of many of the Ps. is ascribed to David, but no absolute evidence for this exists.

PSKOV. Town in the R.S.F.S.R., U.S.S.R., on the Velikaya, 9 m. S.E. of Lake P. and 160 m. S.S.W. of Leningrad., cap. of P. region, famous for leather and atrade centre for hemp, flax and timber. It dates from A.D. 965 and was independent 1348–1510, when it became Russian. In the S.W.W. it was in German hands 1941–4. Pop. (1967) 81,000.

PSORIASIS (sori'asis). An inflammation of the skin marked by raised red patches, usually on the arms and legs, covered with whitish scales. The 1st attack usually takes place in childhood and attacks recur at irregular intervals.

PSYCHE (sī'kē). The personification of the soul in later Gk. literature and art, generally represented as a winged girl. The love story of Cupid and P. is told in Apuleius's 'Golden Ass'.

PSYCHIATRY and PSYCHOTHERAPY. The part of medicine which deals with the diagnosis, treatment and care of the mentally ill. All or any of the disciplines of psychological thought may be involved in treatment, from different viewpoints, and many of the therapists may not be doctors, but highly skilled experts in their particular fields. Many physical methods are available, incl. electric-shock treatment for cases of depression; and an increasing use is made of drugs which produce specific changes in mood and subjective emotional tension. They consist of (1) the tranquilizers (q.v.); (2) anti-excitement and anti-confusional agents; (3) the symptomatic anti-depressants, and (4) the more basic anti-depressants. These physical methods are generally used in conjunction with psychotherapy to achieve long-term and real improvement.

PSYCHIC RESEARCH. The investigation of

Ukraine, the Red Army stopping the Poles before Kiev and driving them back inside P. where in its turn it was defeated by Pilsudski. Russia and P. agreed on a frontier some 150 m. E. of the 'Curzon Line' (q.v.); and Pilsudski remained semi-dictator of P. from 1926 until his death in 1935. In April 1939 the U.K. and France concluded a pact with P. to come to its assistance with military aid if it was attacked. Germany invaded P. from the W. on 1 Sept. and the U.K. and France declared war on Germany on 3 Sept. Russia invaded P. from the E. on 17 Sept.; and by the end of the month Polish resistance was at an end and the country was occupied by Germany and Russia. A govt. in exile was estab. in France, then moved to London in June 1940, and free Polish forces did much to assist the Allied cause.

The Russians drove the Germans from P. 1944-5, and after taking Lublin, 24 July 1944, set up there a national liberation committee which they recognised in Jan. 1945 as the provisional govt. At the Potsdam Conference 1945 the Allies agreed that the part of Germany E. of the Oder-Neisse line and the S. part of E. Prussia should be placed under Polish admin. Nearly half the German pop. of c. 4½ million had fled from these regions before the advancing Russians; the rest were expelled 1946-7. A treaty between Russia and P. in 1945 (ratified 1946) gave P. as E. frontier the Curzon Line with slight modifications in P.'s favour.

By 1947 the Communists, with Russian backing, had gained control of the country, and moderates fled or were imprisoned. Under Gomulka (q.v.) P. took a more liberal independent line after 1956, but nationalist 'Partisans' demonstrated 1968 against low living standards and renewed intellectual restrictions, and attacked 'Zionists' and 'Revisionists'. Pre-war party members (incl. some Jews) had returned from Russian exile in 1945 to fill many high posts, and retained an unpopular Muscovite allegiance. In 1969 Gomulka intervened to halt 'Anti-Zionism', and achieve a compromise allowing increased 'Partisan' influence.

POLAR BEAR. See BEAR.

POLARIZED LIGHT. Ordinary light can be regarded as electromagnetic vibrations at right angles to the line of propagation but in different planes. Light is said to be P. when the vibrations are oriented in a particular direction. Ordinary L. may be plane P. by reflection from a polished surface or by passing it through a Nicol prism or a synthetic polarizing film such as Polaroid. P.L. is used to test the strength of sugar solutions, in the measurement of stresses in transparent materials, for the prevention of glare, etc.

POLDHU (poldh). Point overlooking Mount's Bay in Cornwall, England, site of Marconi's wireless station (designed by J. A. Fleming, q.v.), from which the first transatlantic signal - 's' in the Morse code - was transmitted to Signal Hill, Newfoundland, on 12 Dec. 1901. A commercial station from 1905, P. maintained vital links with Atlantic convoys during the F.W.W., and its programme broadcasting in 1920 led to the formation of the B.B.C. in 1922. Public transmission ceased in 1922, complete closure following in 1934; the cleared site is now preserved by the National Trust.

POLE, Reginald (1500-58). English churchman. The grandson of the duke of Clarence, brother of Edward IV, he enjoyed the favour of Henry VIII until he opposed his divorce and the royal supremacy. In 1536 he was created a cardinal and settled in Rome. After Mary's accession he returned to England as papal-legate, re-admitted England to the R.C. Church, and succeeded Cranmer as archbp. of Canterbury in 1556.

POLECAT. Species of weasel (*Putorius foetidus*) with light-coloured back and dark belly. The body is about 18 in. long and they have a strong smell.

POLIAKOFF. The perfect balance of his angular forms is enhanced by a use of colour which has invited comparison with that of the early Venetian masters. The artist is seen here at work in his Parisian studio.

Courtesy of the Whitechapel Art Gallery.

POLES. The geographic N. and S. points of penetration of the earth's surface by the axis about which it revolves. The magnetic Ps. are in directions N. and S. at angles of declination to the geographic P. They are the directions towards which a freely suspended magnetic needle will point, and vary continually, both in relation to the geographical poles and according to the point at which the magnetic needle is held.

POLE STAR. The star which is nearest to the celestial N. pole, about 1° distant. It is the brightest of the Ursa Minor constellation, and varies in position slowly. Its position is indicated by the 'pointers' in Ursa Major.

POLIAKOFF, Serge (1906-69). Russian artist. B. in Moscow, he was originally a guitarist, settled in France in 1923, and in 1930 took up painting. His work is remarkable for its interlocked shapes and colour harmonies.

POLICE. Force entrusted with the protection of life and property, the preservation of law and order, and the apprehension of offenders. In addition, the P. are responsible for control of traffic. Forces of this type were known in anc. Egypt, Greece, and Rome. In England the first organized P. force was the Bow

POLICE. The information room at New Scotland Yard: the communications traffic includes almost half a million '999' emergency calls each year.

Phot. Comm. of Police of the Metropolis

PUBLIC SCHOOLS. Term used in a specialized sense in Britain to denote the independent schools which developed principally during the 18th and early 19th cents., although some, such as Eton and Harrow, are ancient foundations originally intended for poor scholars. P.S. are predominantly boarding schools for boys of 12–18 years, which are divided into houses, each in the care of a housemaster. Much of the discipline, incl. sometimes a degree of corporal punishment, is entrusted to senior boys or prefects, though the worst aspects of this system and the once prevalent stress on classical subjects, sports and games, have been modified in recent years. The heads are members of the Headmasters' Conference. The Wilson govt. regarded P.S. as 'socially divisive', and in 1965 estab. a commission to advise on their integration into the State system.

PUBLISHING. The production of books for sale. The publisher arranges for the printing, binding and distribution, to booksellers or through direct mail – the latter being a growing field – but may also share in the creative aspect of book production by commissioning books, by editing otherwise unpublishable work, e.g. Thomas Wolfe, but exercise of this function is controversial, etc. Although all rights in a book may be purchased by the publisher for a single outright fee, it is more usual and generally more fair to publisher and author if a fixed 'royalty' is paid on every copy sold, in return for the exclusive right to pub. in an agreed territory. Rising costs in book production have tended to discourage worthwhile books with a relatively small sale in favour of the best-seller, most markedly in the U.S.A.; other features of modern P. are the growth of non-fiction titles, and the great increase of paper-backs. In Britain most leading publishers are members of the Publishers' Association.

PUCCHINI, Giacomo (1858–1924). Italian composer. B. at Lucca, he achieved success with the opera *Manon Lescaut* (1893), which was followed by *La Bohème*, *Madame Butterfly*, *Tosca*, and the unfinished *Turandot*.

PUDOVKIN, Vsevolod Illationovich (1893–1953). Soviet film director. His films incl. *Mother*, *Storm Over Asia*, and *Suvorov*. One of the fathers of Soviet cinema, he wrote *Film Technique* and *Film Acting*.

PUEBLA (pū'e'blah). Mexican town, cap. of P. state, on the Pan-American Highway, 65 m. S.E. of Mexico City, noted for cotton weaving, pottery, and sugar refining; it is a market for livestock, fruit, vegetables, etc., and has an airfield. Founded c. 1535 as P. de los Angeles, it was re-named P. de Zaragoza in honour of General Zaragoza who defeated the French there in 1862. There is a univ. (1537) and a cathedral begun in 1552. Nearby are pre-Columbian remains. Pop. (1967) 360,600.

PUEBLO (poo-e'blō), U.S.S. American intelligence vessel captured without resistance by the N. Koreans Jan. 1968, allegedly within their territorial waters: the crew, but not the ship, were released Dec. 1968. A naval court recommended no disciplinary action.

PUERPERAL FEVER. Infection by pus-producing cocci, which enter raw surfaces of the womb and genital tract left by the passage of the child. The mortality used to be severe, but the sulpha drugs and penicillin have made mortality almost negligible.

PUERTO RICO. Is. territory of the U.S.A., in the W. Indies. A mountain range runs E.–W. The chief export crops are sugar, tobacco, pineapples, coffee and coconuts: the chief industries are sugar refining and rum making; textiles, clothing, chemicals, electric and electronic equipment are among manufactures. The cap. is San Juan. Area 3,435 sq. m.; pop. (1967) 2,600,000, mostly white and of Spanish descent, the remainder Negroes and mulattos. Spanish is the official language, but English is widely known. P.R. is administered by a governor (popularly elected for 4 years) and a senate and house of repre-

sentatives. P.R. was discovered by Columbus in 1493, annexed to Spain in 1508, and ceded to the U.S.A. by a treaty of 1898 (ratified 1899), achieving commonwealth status in 1952. A plebiscite 1967 resulted in a majority for retention of this status. There are about 1,000,000 Puerto Ricans in the U.S.A., but greater prosperity means that more return to P.R. than emigrate, in contrast to the depression of the 1940s. For Americans P.R. is a winter holiday resort.

PUFF ADDER. A venomous reptile (*Bitis arietans*) in the family Viperidae. Native to Africa and S. Arabia, it is about 5 ft. long, and yellowish-brown.

PUFFIN. Sea-bird (*Fratercula arctica*), of the auk family, found on the coasts of the northernmost

countries of the Atlantic. About 13 in. long, the P. has orange legs, black plumage above and white underparts. In the breeding season the large beak is increased in size, and coloured red, yellow, and blue. One dirty-white egg is laid in a burrow in the soil.

PUG DOG. Toy dog resembling a small bulldog. Sandy or silvery-fawn in colour, it was introduced into England, from China, by the Dutch East India Co. in the 16th cent.

PUFFIN

PUGIN (pū'jin), Augustus Welby Northmore (1812–52). British architect. A convert to R. Catholicism, he was a pioneer of the Gothic revival, assisting Barry (q.v.) with the Houses of Parliament.

PUGLIA. Ital. form of APULIA.

PULA (pōō'lah). Yugoslav city and port with both commercial and naval harbours. Already in Roman days a naval port, Colonia Pietas Julia, it was taken by the Venetians in 1148. It passed to Austria in 1815, to Italy in 1919, to Yugoslavia in 1947. It has a Roman theatre, a temple of Augustus (19 B.C.), and a castle and cathedral constructed under Venetian rule. Pop. (1961) 37,403.

PULITZER, Joseph (1847–1911). American newspaper proprietor. B. in Hungary, he in 1883 became proprietor of the *New York World*. In 1903 he estab. the school of journalism at Columbia Univ. which awards the annual P. prizes in journalism and letters.

PULSAR. Oscillating radio star sending out precisely regular radio pulses, although with wide variation in individual frequency, first discovered by Cambridge astronomers 1967.

PULSE. The impulse transmitted by the heart-beat throughout the arterial system. When the heart muscle contracts it forces blood into the aorta; because the arteries are elastic, the sudden rise of pressure causes a throb or sudden swelling through them all. It can be felt at points where an artery is near the surface of the body, as in the wrist, and is a good indicator of the strength and rate of the heartbeat. The P. is distinct from the actual flow of the blood, which continues more or less uniformly at about 60 cc. a sec. The P. rate is generally about 70 per minute.

PUMA. Carnivorous mammal (*Felis concolor*) of the cat family, found in America. Tawny in colour, the young have black spots and ringed tails. In S. America it is known as the cougar or mountain lion.

PUMA

competed for by representative English and U.S. teams. The present code of rules was adopted in 1939. The ground is not to exceed 300 yds. by 200 yds. or 160 yds. if boarded. The goals are to be at least 250 yds. apart, each 8 yds. wide. The playing time is roughly one hour, divided into suitable periods. The players, whose positions are fairly elastic, use sticks c. 52 in. long to hit a ball $3\frac{1}{2}$ in. diam. and $4\frac{1}{2}$ to $4\frac{3}{4}$ oz. The Hurlingham and Ranelagh grounds no longer exist, but those at Roehampton, Cowdray Park, and elsewhere, flourish.

POLO, Marco (c. 1254–1324). Venetian traveller. His father and uncle, Nicolo and Maffeo P., travelled overland to China in 1260–9, and returned there in 1271–5, taking with them M.P., who entered the imperial service, and was employed on official missions. They returned to Venice in 1292–5. P. was captured while serving against the Genoese in 1298, and while in prison dictated an account of his travels which gives the earliest European description of the Far East.

OLONAISE (polonā'z). A Polish dance, in stately $3/4$ time, which dated from the 16th cent. Chopin developed the P. as a musical form.

POLONIUM. The first radioactive element discovered by the Curies in 1898 (in pitchblende residues) and named after Mme Curie's native Poland: symbol Po, at. wt. 210, at. no. 84. There are some 19 known isotopes, both natural (the most stable being radium F with a half-life of 138.3 days, which emits 5 MeV alpha-particles and is radioactively useful) and man-made.

POLPERRO. Picturesque fishing village and holiday resort in Cornwall, England, 16 m. W. of Plymouth, much frequented by artists.

POLTAVA (pol'tah'vah). Town in the Ukrainian S.S.R., cap of P. region, on the Vorskla. It is in an agricultural area growing grain, sugar, and fruit. Peter the Great here defeated Charles XII of Sweden in 1709. Pop. (1967) 177,000.

POLTERGEIST (Ger. noisy ghost). In psychic research, name given to the unseen agent, believed by many to be a mischievous spirit or ghost, by means of which objects are moved or hurled through the air. Famous P. phenomena that occurred at Borley rectory, Suffolk, were described by Harry Price.

POLTORATSKY. Old name for ASHKHABAD.

POLYANDRY. The system whereby a woman is the wife of several men at the same time. It is found in many parts of the world, e.g. in Madagascar, Malaya, and certain Pacific isles, and among certain Eskimo and S. American Indian tribes. In Tibet and certain parts of India P. takes the form of the marriage of one woman to several brothers.

POLYANTHUS. Garden flower in the family Primulaceae, thought to be a cross between the primrose and cowslip. It occurs in many shades from cream to dark red.

POLYBIUS (polib'ius) (c. 201–120 B.C.). Greek historian. B. in Arcadia, he was taken as a prisoner to Rome in 168, but returned to Greece in 151. He was present at the capture of Carthage by his friend Scipio in 146. His history of Rome in 40 books, covering the years 220–146, has largely disappeared.

POLYCARP (c. A.D. 69–155). Christian martyr. As bishop of Smyrna for over 40 years he carried on a vigorous struggle against various heresies, and was burned alive at a public festival.

POLYGAMY or Polygyny. The system whereby a man may marry several women at the same time. It is found among many primitive hunting, pastoral and agricultural peoples, especially in Africa. Normally it is confined to chiefs and nobles, as in ancient Egypt and among the primitive Teutons, Irish, and Slavs. Among the Hebrews a man could have any number of wives, but Islam limits a man's legal wives to 4. Certain Christian sects, e.g. the Anabaptists of

Münster and the Mormons, have practised polygamy.

POLYGON. A plane figure bounded by straight lines. Although incl. a triangle and quadrilateral, it is normally restricted to those figures having more than 4 sides, regular or irregular.

POLYMERIZATION. The chemical union of 2 or more (usually small) molecules to form a new compound of larger molecular wt. There are 3 types: *addition* P., simple multiples of the same compound; *condensation* P. in which molecules are joined together by the elimination of water; and *co-P.* in which the polymer is built up from 2 or more different molecules. There are many important polymers, both natural (e.g. cellulose) and synthetic, e.g. polythene, nylon, etc. See PLASTICS.

POLYNÉSIA. Easternmost of the 3 ethnic divisions of Pacific Ocean isls., of which the other 2 are Micronesia and Melanesia. It comprises all Oceania lying E. of approx. 170° E. lat., incl. Hawaii and the Gilbert, Ellice, Fiji, Tonga, Phoenix, Tokelau, Samoan, Line, Cook, Society, Tubuai, Marquesas, and Tuamotu Is. The Maori of New Zealand are also Polynesian. Polynesians are probably of Asiatic origin, and distinct from the Negroid Melanesians with whom there has been a degree of mixture. They are tall and possess fine physique. Their skin is brown, and their hair wavy. They are skilled in house- and shipbuilding, carving and fishing.

FRENCH POLYNESIA is an overseas terr. of France, admin. by a governor, but demands for autonomy developed from 1958. It consists of the Society, Tuamotu, and Marquesas Is. (qq.v.). Total land area c. 1,500 sq. m.: total pop. 100,000.

POLYPUS. A small benign tumour of the skin due to local overgrowth of cells.

POLYTECHNICS. Institutions providing comprehensive degree and non-degree courses in art and technology, both full and part-time. Most famous is the Regent Street P., London, founded by Quintin Hogg (q.v.) in 1882. In 1966 the Labour Govt. in Britain planned a new 'top tier' in education to rival the univs. with 30 new Ps.: the first 3, at Hatfield, Sheffield and Sunderland, opened 1969.

POLYTHEISM. The worship of many gods, as opposed to monotheism. Examples are the religions of ancient Egypt, Babylon, Greece and Rome, Mexico, and modern Hinduism.

POMBAL (poñbahl'), Sebastião José de Carvalho e Mello, marquess of (1699–1782). Portuguese statesman. As For. Sec. and War Min. 1749–77 he introduced valuable reforms, but he was dismissed after the death of his patron, King Joseph, in 1777.

POMEGRANATE. The fruit of a deciduous tree (*Punica granatum*) found in W. Asia and N. Africa. The edible seeds of the reddish-yellow fruit can be made into wine.

POMERĀ'NIA. District, formerly a prov. of Germany, along the S. shore of the Baltic Sea. The area of the prov. was 11,680 sq. m. and it stretched W. to E. roughly from just W. of Stralsund to Stolp (Pol. Slupsk); it incl. the is. of Rügen, Usedom (Uznam), and Wollin (Wolin). By the Potsdam agreement, 1945, the part of P. E. of the Oder-Neisse line was placed under Polish administration. The Ger.

form of P. is Pommern, the Pol. Pomorze.

POMERANIAN. Breed of dog resembling a small chow. Claimed to be of German origin, it may be black or white or light brown.

POMFRET. Another form of PONTFRACT.

POMMIERN. German form of POMERANIA.

POMONA. Roman goddess of fruit trees.

POMERANIAN

American military award for distinguished service beyond the call of duty, estab. by Washington in 1782, when it was the equivalent of the modern Congressional Medal of Honour. Of purple cloth bound at the edges and measuring 2½ in. from top to bottom, it was worn on the facings over the left breast: our illus. shows the only extant P.H. of this period, awarded to Sgt. Elijah Churchill of the 2nd Regt. Light Dragoons (Connecticut) in 1783. After the American Revolution it lapsed until revived by Pres. Hoover in 1932, when it was issued to those wounded in the F.W.W. and subsequently; the modern P.H. is of bronze and enamel.

PURPLE HEART
Courtesy of Washington's
H.Q. and Museum, N.Y.

Also current slang parlance for a stimulant P.H.-shaped pill, widely sought after by junior drug-addicts.

PURPURA (per'pūra). Spontaneous bleeding below the skin. The condition is like bruising, but the blood is localized in spots which may be as large as a coin. They occur in smallpox and kidney disease, but are also the main symptoms of certain recognized ailments.

PUS. Thick, yellowish fluid formed by the bodies of white blood cells killed in conflict with invading bacteria, and of superficial cells of granulation or mucous membrane which die and are shed off. P. is formed wherever infection exists, and an enclosed collection of P. is an abscess.

PUSAN. The chief port of S. Korea, nearest point to Japan on the Asiatic mainland, a railway and industrial centre (textiles, rubber, salt and, at nearby Pohang, iron and steel); fishing also is important. P. was invaded by the Japanese in 1592, opened to foreign trade in 1883. It was a U.N. supply port during the Korean War of 1950-2. Pop. (1966) 1,429,726.

PUSEY, Edward Bouvier (1800-82). British churchman. Ed. at Eton and Christ Church, Oxford, he was ordained in 1828 when he became Regius prof. of Hebrew at the univ., and in 1835 joined J. H. Newman (q.v.) in issuing the *Tracts for the Times*. After Newman's secession to Rome, P. became leader of the High Church Party or Puseyites, striving until his death to keep them from final conversion. His work is continued through P. House at Oxford, founded in his memory, which contains his library.

PUSHKIN (poosh'-), Alexander Sergeievich (1799-1837). Russian poet. B. at Moscow, he held administrative posts, was exiled several times for his liberal views, and d. of wounds he received in a duel. At first influenced by Byron, the study of Shakespeare later led him towards realism. The great national poet of Russia, P. was a supreme lyricist, and wrote verse novels such as *Robber Brothers*, *The Gypsies*, etc., and the great verse romance *Eugene Onegin* (1822-33); the novel *The Captain's Daughter* (1836), and the tragedy *Boris Godunov* (1825).

PUSHKIN. Town in Leningrad region, R.S.F.S.R., 16 m. S. of Leningrad. P. was founded by Peter the Great as Tsarskoe Selo (tsar's village); it became the imperial summer residence under Elizabeth and Catherine the Great, and both Catherine and Alexander I (1792-6) built palaces there. The 1st railway in Russia linked Tsarskoe Selo with St. Petersburg (Leningrad), 1837. In the 1920s the place was re-named Detskoe Selo (children's village), in 1937 Pushkin in honour of the poet; there are large parks, the P. literature research institute; paper, clothing, and chemicals are made. P. was held 1941-4 by the Germans who devastated it before retreating; it was subsequently restored. Pop. (est.) 55,000.

PUSHTU. The language of the Afghans, belonging to the E. Iranian group.

PUTREFACTION (pū-). Decomposition of organic matter through the action of a large variety of micro-organisms. The P. in a human corpse will often give reliable information on the time and cause of death.

PUTTING THE WEIGHT. An ancient sport which has survived in the form of putting a 16 lb. shot from a 7 ft. circle boarded 4 in. high.

PUVIS DE CHAVANNES (püvès' de shahvahn'), Pierre Cécile (1824-98). French painter. B. at Lyons, he first exhibited in the Salon in 1850, and subsequently estab. a reputation as a decorative painter.

PUY, Le or Le-Puy-en-Velay (le-pü-é'-on-velá'). Cap. of Haute-Loire dept., S.E. France, 90 m. S.W. of Lyons. It lies on a plateau of Mt. Anis, pinnacles of rock rising abruptly from which make it unique. The cathedral, 11th-12th cents., stands on one of these. Le P. was a place of pilgrimage in the Middle Ages. It is noted for its hand-made lace. Pop. (1962) 28,007.

PUY-DE-DÔME (pü-é'-de-dôm'). Extinct volcano in the Auvergne Mountains, central France, 4,806 ft. high. It lies 6 m. W. of Clermont-Ferrand and on its slopes are ruins of a temple of Mercury. Pascal carried out experiments on air pressure in 1648 on the P.-de-D., which gives its name to a dept. of France.

PU YI, Henry (1906-67). Emperor of China and Manchukuo. He succeeded to the Chinese throne in 1908 under the name Hsuan Tung, and was deposed in 1912, but restored for a week in 1917. In 1932 he became pres. of the Japanese puppet state of Manchukuo, assumed the title of emperor in 1934 and was captured by the Russians in 1945 and taken to Siberia. In 1949 he was handed over to Mao Tse-tung, was freed in 1959, and became in 1964 a deputy in the Chinese Parliament.

PYELITIS (pi-eli'tis). Inflammation of the pelvis of the kidney, a hollow chamber in which the urine is collected before discharge.

PYGMALION (pig'mā'liön). In Greek legend, a king of Cyprus who fell in love with an ivory statue he had made. Aphrodite breathed life into the statue, which he married.

PYGMY (pig'mi). A member of a race of diminutive humans. There are African and Asiatic Ps., Negrillos and Negritos respectively.

PYLOS. Greek name of NAVARINO.

PYM, John (1584-1643). English statesman. B. in Som., he first entered parliament in 1614, and was largely responsible for the Petition of Right. As leader of the Puritan opposition in the Long Parliament, he moved the impeachment of Strafford and Laud, and drew up the Grand Remonstrance. He was the chief of the 5 members whom Charles I attempted to arrest in 1642. Shortly before his death he negotiated the alliance between parliament and the Scots.

PYONGYANG. Chief city of N. Korea, on the Taedong with ancient walls. Pop. (1967) 653,100.

PYORRHOEA (pi-oré'a). Discharge of pus from tissues between the tooth substance and the gum.

PYRAMID. A massive building of pyramidal shape erected as a royal tomb to protect the body and thereby to preserve the spirit. Such Ps. are found only in Egypt and the most famous at Gizeh, nr. Cairo, incl. the Great P. of Khufu (Gk. Cheops), the P. of Khafra (Gk. Chephren, see EGYPT illus.) and that of Menkaura (Gk. Mycerinus). As ritual centres of worship, Ps. were erected by the Aztecs and Mayas, e.g. Chichen Itza (q.v.) and Cholula, 70 m. from Mexico City, where in 1967 the world's largest P. in ground area (990 ft. base with a height of 195 ft.) was discovered, in the midst of 4 smaller Ps. and many other buildings.

PYRAMIDS. A game played on a billiard table, in which 15 coloured balls are arranged pyramidally, the apex-ball resting on the 'pyramid-spot'. The object of the game is to pocket more balls than one's opponent.

PONTYPOOL. English mining and market town (U.D.) in Monmouthshire, 9 m. N. of Newport. Industries besides coal mining incl. manufacture of iron and steel goods, tinplate and glass, and spinning of man-made fibres. Pop. (1961) 39,879.

PONTYPRIDD (pontap'rēdh'). Market town (U.D.) in Glamorganshire, Wales, on the Taff, 12 m. N.W. of Cardiff. Industries incl. coal mining, chain and cable works, and the Treforest trading estate (estab. 1937) with light industries. Pop. (1961) 35,536.

PONY. Small horse under 14.2 hands, i.e. 58 in. Although of Celtic origin, all the P. breeds have been crossed with thoroughbred and Arab stock, except for the smallest – the hardy Shetland – which is below 42 in. Other British breeds incl. the small Exmoor and Dartmoor, the slightly larger New Forest, and the large Welsh cob, and similar native breeds are found elsewhere in Europe and the East. Often ridden by adults, e.g. in polo, or used to pull carts, Ps. are favourites with children, and in 1929 the *P. Club* was estab. to encourage good horsemanship among the young. Now spread throughout the world, it holds instructional rallies and inter-branch championships. Since the S.W.W. pony trekking – following routes of scenic beauty, etc. – has been popular for holidays.

POODLE. A highly intelligent breed of dog, incl. the standard (above 15 in. at shoulder); miniature (below 15 in.) and toy (below 11 in.) types.

The P. probably originated in Russia, was naturalized in Germany, where it was used as a sporting dog and gained its name from *Puddler* (one who splashes around in water), and finally became a luxury dog in France, whence it has spread around the world. Their long curly coats, usually cut into elaborate styles, are mostly either black or white (the only colours acceptable in France), although greys and browns are also bred.

POOLE. English seaport (bor.) in Dorset, 5 m. W. of Bournemouth. Pottery is made from local clay; and chemicals, confectionery, agricultural implements are produced. P. harbour, in which is Brownsea Is. where the first Boy Scout camp was held in 1907, was formerly a flying-boat base. Pop. (1961) 88,088.

POONA. Hill city in Maharashtra state, Republic of India, 119 m. S.E. of Bombay. Cotton, paper and jewellery are made, and rice and sugar milled. P. has a univ. and an airport; and at Khadakvasla, 11 m. away, is the National Defence Academy. Pop. (1961) 597,562.

POOR LAW. In England, law for the relief of the destitute poor. The first act for the levy of a compulsory poor rate was passed in 1572, and under the consolidating act of 1601 parish overseers were empowered to provide materials on which to set the unemployed to work, to raise money to relieve the aged, to apprentice pauper children and to build poorhouses. The P.L. of 1834 reorganized the system with boards of guardians elected by the ratepayers, and forbade the relief of the able-bodied except within a workhouse, where conditions were deliberately made repellent: there was violent popular opposition, but the basis of administration remained the same until responsibility was transferred in 1929 to the Min. of Health operating through co. and co. bor. councils. The P.L. system was replaced 1947 by a single relief service admin. by the Nat. Assistance Board, and in 1966 the sharp distinction between contributory and non-contributory benefits was ended by the merger of the board with the Min. of Pensions and Nat. Insurance as the Min. of Social Security.

POPE. See **PAPACY.**

POPE, Alexander (1688–1744). British poet. B. in London, son of an R.C. linen-draper, he was embittered by his personal deformity which made him the butt of his opponents. He attained a rapid reputation with his precocious *Pastorals* (1709), and *Essay on Criticism* (1711), which were followed by the mock-

KARL POPPER

ridicule of Theobald, and P. revenged himself by making him the hero of his satire on dullness, the *Dunciad* (1728), which was revised in 1743 with Colley Cibber as the chief victim. The *Essay on Man* (1733–4) and *Moral Essays* (1731–5), each consisting of 4 epistles, were shallowly brilliant expositions of philosophy largely influenced by his friend Bolingbroke. The greatest productions of his mature years are the *Imitations of the Satires of Horace* (1733–38). In 1735 also P. manœuvred the publisher Curll into issuing an unauthorized edition of his personal letters, and after denouncing the publication brought out his own version in which the text was judiciously 'improved'. The beloved friend of Swift, Arbuthnot, Gay, and Atterbury, he is outstanding for his workmanship, especially as the creator of the perfectly balanced heroic couplet. See illus. p. 394.

PO'PERINGHE. Ancient town in the prov. of W. Flanders, Belgium, 8 m. W. of Ypres. It was British H.Q. on the Flanders front during the F.W.W. The Toc H movement originated here in 1915. Pop. (est.) 17,500.

POPLAR. District of the Greater London bor. of Tower Hamlets, bounded on the S. by the Thames. It contains Blackwall and the Isle of Dogs, and the Millwall and E. and W. India Docks.

POPLAR. Genus of deciduous trees (*Populus*), with broad leaves. The White P. (*P. alba*) has a smooth grey trunk and the leaves are white below. Other varieties are the aspen (*P. tremula*), grey P. (*P. canescens*), Lombardy P. (*P. nigra* var. *italica*).

POPLIN. A fabric with a warp of silk and a weft of worsted giving it a corded surface; it is made chiefly in Dublin.

POPOCATEPETL (pōpōkatā'petl: Aztec, 'smoking mountain'). Volcano, 40 m. S.E. of Mexico City, Mexico. Its 17,520 ft. summit is snow-clad.

POPPER, Sir Karl (1902–). British philosopher. B. in Austria and educ. at Vienna univ., he became prof. of logic and scientific method at London in 1949. His best-known work is *Logik der Forschung* (1934: *The Logic of Scientific Discovery*), maintaining that the growth of science depends on intellectual daring and rational criticism. *The Open Society and Its Enemies* (1944) and *Conjectures and Refutations* (1963).

POPPY. Genus of plants (*Papaver*) having a milky sap, and incl. the crimson field (*P. rhoeas*)

heroic *Rape of the Lock* (1712: enlarged 1714), *Windsor Forest* (1713), and the 'Elegy to the Memory of an Unfortunate Lady' and 'Eloisa to Abelard'. He estab. his financial position for life with the great success of his translation of the *Iliad* (1715–20) and the *Odyssey* (1725–6), and in 1719 settled on his estate at Twickenham which he developed as a miniature compendium of landscape gardening. His edition of Shakespeare (1725) roused the scholarly

POPPY

zebrat Excessive hunting caused its dying out after 1858, when the last one was sent to the London Zoo from Cape Colony. Reddish-brown, with darker stripes on the fore-parts, it was whitish beneath.

QUAI D'ORSAY (kā-dorsā'). Part of the left bank of the Seine in Paris, where the French Foreign Office and other government buildings are situated.

QUAIL. Smallest species of the partridge family. The common Q. (*Coturnix coturnix*) is reddish brown, and is found in Europe, Asia, and Africa. They are highly valued as food, and are netted while migrating to and from N. Africa.

QUAKERS. Popular name for the Religious Society of Friends; the name Q. was applied to the Society's founder George Fox when he was before the magistrates at Derby in 1650, because he bade Judge Bennet to quake at the name of the Lord. In practical Christian living Qs. broke with many conventions and suffered fierce persecution. They dressed simply, refused to take oaths and to take off their hats in the presence of social superiors, and abandoned all titles. They still refuse to take any part in war. They have no professional ministry, and are guided by the 'inner light'. The meetings for worship begin with a period of silence, which continues until a member (of either sex) is guided to utter a word of exhortation or teaching, of prayer or praise. The Qs. are organized in 'meetings' composed of representatives of the congregations; the Yearly Meeting carries greatest weight. H.Q. is Friends' House, Euston Road, London.

QUANTRILL (kwon'tril), William Clarke (1837-65). American guerrilla. B. in Ohio, he had been a teacher, gambler and horse thief before commanding a unit on the Confederate side in the Civil War, said to have incl. Jesse and Frank James. He assisted in the capture of Independence, Mo., in 1862 and in Kansas in 1863 led the sack of Lawrence and put to death 17 captives after defeating a Union cavalry force at Baxter Springs. Wounded in a skirmish with Union troops in Kentucky in 1865, he probably d. there shortly after, but ballad legend (which also converts him to a kindly hero) maintains he returned to teach school in Texas.

QUANTUM THEORY. In physics, a theory advanced by Max Planck (q.v.) in 1900 to account for the phenomena of the distribution of the radiant energy from a 'black body' (one whose surface absorbs all the radiation of any wavelength that falls upon it) between the various wavelengths in the spectrum of the radiation. Planck assumed that the energy emitted consisted of separate multiples of a fundamental unit or *quantum* of energy. The theory was eventually supported by research into X-rays and the theory of spectra, and was applied in photo-electricity. Attention was then directed to its reconciliation with the wave-theory of light. The development of modern physics and its applications particularly in nuclear power and electronics is largely based on the Q.T. and developments from it.

QUARANTINE (kwo'rāntēn). A term derived from the Fr. *quarantaine* (40 days), and applied to any period during which persons, animals, and vessels suspected of carrying disease are detained and isolated.

QUARLES, Francis (1592-1644). English religious poet, remembered for his *Emblems* (1635), poems based on the sacred text, and quaintly illustrated.

QUARRYING. The commercial exploitation of rock deposits, e.g. marble, slate, granite. Machine cutting is used to minimize damage when dimension stone, i.e. blocks or slabs of definite size, is required for ornamental or specialized uses (paving, wall finishes, roofing, etc.); for the broken or crushed stone used in concrete, road beds, etc., and which in modern times forms the greater part of the Q. industry, explosives are the most frequent method.

QUART. A capacity measure consisting of 2 pints, or a $\frac{1}{4}$ of a gallon.

QUARTER. A measure of avoirdupois weight, named for its proportion of a cwt., equivalent to 28 lb. As a grain measure it contains 8 bushels.

QUARTER DAYS. The appointed dates on which quarterly rents, etc., become due. These are 25 March, 24 June, 29 Sept., and 25 Dec., or Lady, Midsummer, Michaelmas, and Christmas Days respectively.

QUARTZ. Rock occurring most frequently in the oldest geological strata. As a mineral it is one of the most common of the earth's crust and consists of silica (SiO_2), sometimes with oxides. There are numerous different forms and colours incl. rock crystal, amethyst, rose Q., yellow Q., smoky Q., etc., tourmaline, agate, bloodstone, cornelian, jasper, onyx, sard, chalcedony, calcite, fluorite, granites, granite porphyries, felsites, gneisses, schists, quartzite and sand. Generally hard and crystalline, it is used for jewellery and ornamental purposes, and extensively in the ceramic arts, in optical and scientific instruments, and electronics in which Q. crystals are used for frequency standards.

QUASAR (kwā'zar). Very brilliant, very distant, astronomical object (quasi-stellar radio source), emitting an enormous quantity of energy in light and radio waves. Qs. are thinly scattered in the universe, and light from the most distant will have taken 10,000,000 years to reach us, so that its life may well have ended in the interval. Qs. were first discovered 1964-5, and their existence supports the 'big bang' theory of the universe (q.v.).

QUASIMODO (kwahsimō'dō), Salvatore (1901-68). Italian poet. He first became known with *Acque e terre* (1930), and his later books, e.g. *Nuove Poesie* (1942) and *Il falso e vero verde* (1956), reflect a growing preoccupation with contemporary political and social problems. He won a Nobel prize 1959.

QUASSIA (kwās'ia). Tree (*Picrasma excelsa*) of the W. Indies: an infusion of the wood supplies a bitter tonic and a hop substitute.

QUATERNIONS. A form of calculus devised by Sir William Rowan Hamilton (1805-65), of Dublin. As a geometry it is primarily concerned with the operations whereby one quantity or vector is changed into another, direction being taken into account as well as magnitude. The method is of great use in geometrical and dynamical problems.

QUATHLAMBA. A name for the DRAKENSBURG.

QUATRE BRAS (kaht'rā-brāh). A hamlet in Brabant, Belgium, situated 20 m. S.E. of Brussels, where Wellington defeated Ney on 16 June 1815.

QUEBEC (kwebek'). Port of Canada, cap. of Q. province. It is situated on the N. bank of the St. Lawrence, c. 300 m. from its mouth, and is important as a railway terminus and manufacturing city (pulp and paper, machinery, steel, rope, musical instruments, textiles, etc.). Points of interest incl. Dufferin Terrace, the Château Frontenac hotel, the citadel, Roman Catholic and Anglican cathedrals, the church of Notre Dame des Victoires, Laval Univ., the provincial parliament buildings, and the Quebec bridge. There are excellent harbour facilities. Q. was founded in 1608 by Samuel de Champlain, and in 1759 was captured from the French, under Montcalm, by the British, under Wolfe, after a battle on the Plains of Abraham nearby in which both commanders were killed. Q. was cap. of Canada 1763-1841. It remains a chief centre of French-Canadian culture. At the Q. Conference (1943) Roosevelt, Churchill, Mackenzie King and Tse-ven Soong approved Mountbatten as supreme Allied commander S.E. Asia and plans for the invasion of France. Pop. of met. area (1966) 413,397.

QUEBEC. Eastern province of Canada, bounded by the U.S.A. to the S., Ontario to the S.W., Hudson Bay and Strait to the W. and N., and Newfoundland (Labrador) to the N.E. The lowlands of the St. Lawrence, which flows N.E. to the Gulf of St. Lawrence, are bounded to the S. by the Notre Dame

c. 440 m. E. of Capetown on Algoa Bay. It was founded in 1820 by British settlers and named after the wife of Sir Rufane Donkin, then gov. of the Cape. It exports wool, fruit, ostrich feathers, and makes boots, flour, and jam. There is a bilingual univ. (1964). Pop. (1960) 270,815 (94,085 white).

PORTEOUS, John (d. 1736). Captain of the Edinburgh city guard, who was condemned to death for firing on the crowd during a riot, but reprieved. Resenting this, the mob dragged P. from prison and hanged him.

PORTER, Cole (1893–1964). American composer. B. in Indiana, he wrote the music and lyrics for musical comedies, incl. *Gay Divorce*, *Around the World in Eighty Days* and *Kiss Me, Kate*, and the film *High Society*. 'Night and Day' is his best-known song.

PORTER, Katherine Anne (1890–). American writer. B. at Indian Creek, Texas, she leapt to fame with a vol. of short stories *Flowering Judas* (1930), her reputation for economy and power being maintained in *Pale Horse, Pale Rider* (1939).

PORTLAND, William Bentinck, 1st earl of (c. 1649–1709). Dutch statesman. A friend of William of Orange, he took part in the invasion of England in 1688, and received the earldom of P. in 1689. He served in William's campaigns, and negotiated the Treaty of Ryswick and the Partition Treaties.

PORTLAND, William Henry Cavendish Bentinck, 3rd duke of (1738–1809). British statesman. He began his political career as a Whig, and in 1783 became P.M. in the Fox-North coalition govt. During the French Revolution he joined the Tories, becoming P.M. (1807–9).

PORTLAND. (1) Largest city in Oregon, U.S.A., on the Columbia, 108 m. from the sea, at its confluence with the Willamette. Ocean-going vessels can reach P. which has excellent harbour facilities and road, rail and air links. Industries incl. metal processing, espec. aluminium; paper, timber, and lumber machinery; clothing, and electronics. Pop. (1960) 372,676. (2) Port and largest city of Maine, U.S.A., on Casco Bay. It has shipbuilding and other industries; the chief export is timber. A first settlement was made on the site in 1633, but wiped out by Indians and French in 1690; re-settlement began in 1718, the place being called Falmouth until 1786. Longfellow was born at P. Pop. (1960) 72,566.

PORTLAND, Isle of. A rocky 'island' off the Dorset coast, England, opposite Weymouth, joined to the mainland by the Chesil Bank (q.v.). It has a 14th cent. castle; a prison, opened 1848, converted into a Borstal 1921; and a naval harbour of refuge. P. stone is quarried. Area 4½ sq. m.

PORT LAOIGHIS (-lè'sh). Co. town of Laoighis Rep. of Ireland, founded 1560 as Maryborough. Pop. (1961) 3,133.

PORT MAHON. See MAHON.

PORTMAN, Eric (1903–). British film and stage actor. B. in Bradford, he is at his best in modern roles, conveying much by understatement, e.g. Rattigan's *The Browning Version* (1948) and *Separate Tables* (1956); and Fielding in *A Passage to India* (1962).

PORT MORESBY. Port on the S. coast of Papua, administrative centre of the Australian Trust territory of Papua-New Guinea. It dates from 1873. The Univ. of Papua-New Guinea was estab. here 1965. Pop. (1966) 14,000.

PORTO ALEGRE. See RIO GRANDE DO SUL.

PORT-OF-SPAIN. Port and cap. of Trinidad, West Indies. There are 2 cathedrals, and it exports cocoa, sugar, asphalt, copra, rum, petroleum, and angostura bitters. Pop. (1960) 93,954.

PORTON DOWN. Site of the Microbiological Research and Chemical Defence Experimental Establishment of the Min. of Defence in Wilts; as a 'germ warfare' centre it came under attack in the 1960s.

PORTO RICO. Another form of PUERTO RICO.

PORT ROYAL. See JAMAICA.

PORT ROYAL DES CHAMPS. A former Cistercian convent, S.W. of Paris, founded in 1204. In 1626 its inmates were moved to Paris, and the buildings were taken over by a male community which became a centre of Jansenist teaching and was in 1638 compelled to vacate the premises; the buildings were destroyed in 1710 by order of Louis XIV.

PORT SAID (sah-éd'). Port of Egypt, on reclaimed land at the N. end of the Suez Canal. Founded in 1859, it is a fuelling station. Pop. (1960) 244,000.

PORTSMOUTH, Louise de Kéroualle, duchess of (1649–1734). Mistress of Charles II. B. in Brittany, she came to England in 1670. She was acting as Louis XIV's agent, and was generally hated. On Charles's death she returned to France.

PORTSMOUTH. English city and naval port (co. bor.) of Hampshire, 74 m. S.W. of London. It covers Portssea Is., which lies between P. and Langstone harbours, and spreads on to the mainland. The Royal Dockyard and naval station occupy the S.W. area of the is., and the R.N. barracks bear the name of Nelson's flagship, H.M.S. *Victory*, preserved in dry dock nearby. P. harbour opens through a bottleneck with Gosport on its W. side and P. on the E. side. Southsea is a seaside resort with fine views of shipping in the Solent, and the castle is used as a museum of military history. P. was already a port in the days of King Alfred, and in the reign of Henry VIII a French attempt to take it led to the capsizing in battle of the warship *Mary Rose* in 1545: in 1969 there were plans to raise the wrecked vessel for preservation. In the S.W.W. German air raids caused heavy damage and P. was an important mounting base for the Allied invasion of France in 1944. Charles Dickens was born in P. and his birthplace in Commercial Road is a museum. Pop. (1961) 215,918.

PORTSMOUTH. (1) Port of New Hampshire, U.S.A., on the estuary of the Piscataqua. Founded in 1623, P. was the state cap. 1679–1775. The treaty which ended the Russo-Japanese war of 1904–5 was signed here. Pop. (1960) 25,833. (2) City in Ohio, at the junction of the Ohio and Scioto rivers. Founded in 1803, it is a mining centre with boot and shoe, furniture, and other factories. Pop. (1960) 33,637. (3) City and port in Virginia, on Elizabeth r., seat of an important U.S. navy yard and training centre, descended from a navy yard set up by the British in 1752. It also makes textiles and raises oysters. Pop. (1960) 114,773.

PORT SUNLIGHT. Garden village on the out-

PORT SUNLIGHT. The Lady Lever Art Gallery, opened in 1922 and designed by William Segar Owen, was given to the nation by Lord Leverhulme in memory of his wife, Lady Elizabeth Ellen Lever, who died in 1913. Items from the collection illustrate entries on Chippendale, Porcelain, Regold and Sir Walter Scott.

Courtesy of the Lady Lever Collection.

QUEMOY (kimoi'). Group of isls. off Fukien prov., China, held by the Nationalist Govt. in Formosa. Area 60 sq. m.; pop. (est.) 40,000. Though not specifically committed to their protection, after they had been shelled from the mainland the U.S. govt. announced in 1960 that it would defend them in the event of an actual attack.

QUENEAU (kenoh'), Raymond (1903-). French author. His poetry bears the enduring impress of his early Surrealist associations, and he is most accessible to the English reader in his humorous novels, e.g. *Zazie dans le Métro* (1959), portraying a precocious little Parisienne.

QUENNETT, Peter (1905-). British author. Son of Marjorie and C. H. B. Quennell, joint authors of the historical series incl. *Everyday Things in England*, he has edited *History Today* since its foundation in 1951. He is an authority on the 18th cent., e.g. his edition of *The Memoirs of William Hickey* (1960), and Byron, e.g. *Byron, the Years of Fame*.

QUESNAY (kānā), François (1694-1774). French economist and physician. B. near Paris, he became physician to Louis XV, and c. 1750 founded the group of *Économistes* with Jean de Gournay. His chief work *Tableau Économique* (1758) advocated physiocracy, government according to natural order.

QUETTA (kwet'tah). Town of W. Pakistan, near the Afghanistan border, cap. of Q. division. There is a military staff college (1907). Coal is mined nearby. Pop. (1961) 106,633.

QUETZALCOATL (kätzahlkōwah'tl'). Mexican god. He was said to have reigned on earth during a golden age and to have disappeared after promising to return. Cortez was thought by the Mexican Indians to have been Q. when he invaded their land.

QUEVEDO Y VILLEGAS (kāvā'dō-ē-vēlyā'-gahs), Francisco Gomez de (1580-1645). Spanish satirical writer. B. at Madrid, he fled to Sicily in 1611 after killing his opponent in a duel, was recalled to Spain in 1621, and imprisoned 1639-43 for his political writings. Q. wrote much of passing brilliance, such as *Vida del Buscon Pablos* (1626), and *Las Visiones* (1627).

QUEZON CITY (káz'on'). City in the Philippine Republic, built on a site 10 m. N.E. of Manila chosen by Pres. Quezon, in whose honour it was named. It became the formal cap. of the rep. in 1948, though pending completion Manila was still the seat of much of the administration. Pop. (1967) 482,400.

QUIBERON (kēbrōn'). Coast town in the Morbihan dept., France. In 1759 Q. Bay saw the defeat of the French fleet under Conflans by Hawke. Pop. (1960) 4,540.

QUICKSILVER. See MERCURY.

QUIETISM (kwī-etism). A religious attitude, dis-

played periodically in the history of Christianity, consisting of passive contemplation and meditation to achieve union with the Divine. The founder of modern Q. was the Spanish priest Molinos who pub. a *Guída Spirituale* in 1675.

QUILIMANE (kēlēmah'nā) or Quelimane. Port of Mozambique on the Q. river. Pop. c. 10,000.

QUILLER-COUCH (-kooch), Sir Arthur Thomas (1863-1944). British author. B. at Bodmin, he was prof. of English literature at Cambridge from 1912, and besides editing *The Oxford Book of English Verse* (1900), etc., made a name as a novelist, e.g. *The Splendid Spur* (1889) under the pseudonym 'Q'.

QUILTER, Roger (1877-1953). British composer. B. at Brighton, he was educ. at Eton, and studied under Knorr at Frankfurt Conservatoire. He is best known for song settings from Dowson, Shakespeare, etc., incl. 'Now Sleeps the Crimson Petal' and 'To Daisies', and for his 'Children's Overture' and music for *Where the Rainbow Ends*.

QUIMPER (kañpār'). Cap. and port of Finistère dept., France. The cathedral dating from the 15th cent. is a fine example of Gothic architecture. Pop. (1962) 50,670.

QUINCE. A spreading tree (*Cydonia vulgaris*), bearing a bitter, yellow, pear-shaped fruit, used as a preserve, either individually or with apples.

QUINCEY, de. See DE QUINCEY.

QUININE (kwīnēn'). Chief alkaloid in cinchona bark, introduced to Europe from Peru (1639) for treating the ague. Later it was used to kill the blood parasites causing malaria, but has been supplanted by the

QUINCE

less toxic and more powerful synthetics.

QUINQUAGESIMA (kwīnkwaġēs'ima). The Sunday before Lent. The name is probably due to Q. being 50 days before Easter.

QUINSY. Old name for acute tonsillitis, particularly the type where a tonsillar abscess forms.

QUINTERO (kintār'o), Serafin Alvarez (1871-1938) and Joaquin Alvarez (1873-1945). Spanish dramatists. B. near Seville, these brothers always worked together and from 1897 they produced some 200 successful plays, principally dealing with Andalusia. Among them are *Papá Juan: Centenario* (1909) and *Los Mosquitos* (1928).

QUINTILIAN (Marcus Fabius Quintilianus) (c. A.D. 35-95). Roman rhetorician. B. at Calagurris, Spain, he taught rhetoric in Rome from 68 and later composed the *Institutio Oratoria*, in which he advocated a simple and sincere style of public speaking.

QUIPUS. A system of knotted cords of one or several colours used by the Incas of ancient Peru for conveying messages and making computations. The art of interpreting it has been lost.

QUIRINAL. One of the 7 hills on which ancient Rome was built. Its summit is occupied by a palace built in 1574 as a summer residence for the Pope and occupied 1870-1946 by the kings of Italy. The name Q. is derived from that of the god Quirinus.

QUI'SLING, Vidkun (1887-1945). Norwegian politician. Leader from 1933 of the Norwegian Fascist Party, he aided the Nazi invasion in 1940 by delaying mobilization and urging non-resistance. Made premier by Hitler in 1942, he was arrested and shot as a traitor by his countrymen in 1945. His name became used to stigmatize all guilty of his type of treason.

QUITO (kē'tō). Cap. of Ecuador, already a town before the Incas took it c. 1470. The Spaniards captured it in 1534. It lies at an altitude of 9,350 ft. in

QUEENSLAND. Coconut palms, hibiscus, frangipani, jacaranda, etc., grow to the sea's edge in this holiday paradise on the beautiful coast near Proserpine.

Courtesy of Dr. F. J. Giles.

Cézanne, van Gogh, and Gauguin in 1911. Post-Impressionists often distorted natural appearance for the sake of design or to express their own emotions.

POST OFFICE. Organization originally concerned solely with the conveyance of written communications. Since every centrally organized state depends on a speedy flow of information and instructions, early and efficient systems were devised by the rulers of Assyria, China, Rome, etc. In medieval Europe royal couriers and private messengers were frequently used, but major permanent systems waited on the establishment of the nation state. In England in 1516 Henry VIII appointed Sir Brian Tuke as his Master of the Posts with the task of maintaining not only a constant link between the mobile monarch and his capital, but of maintaining a regular service along the main roads from London: postmasters (usually innkeepers) were appointed, with the duty of passing on mail to the next post and of providing horses for royal couriers. Private persons wishing to send letters (both within the kingdom and across to the Continent) or to travel 'post haste' were permitted to use these services: private posts were consistently discouraged as involving loss of revenue for the state service and facilitating treasonable activities.

In 1635 Charles I briefly appointed Thomas Witherings, already a successful 'Postmaster General for Foreign Parts', to improve the domestic services, public correspondence being accepted for the first time for conveyance by messengers at fixed rates. After the Civil War an ordinance of 1654 reaffirmed the repeatedly challenged concept of state monopoly, e.g. the London penny post organized in 1680-2 (when legal action compelled him to desist) by William Dockwra, which was so successful it was continued as part of the official service, Dockwra eventually being appointed comptroller. The uniform penny post advocated by Rowland Hill was instituted in 1840 to replace the former charge varied according to distance - the rate remained unchanged until 1918 - and pre-paid adhesive stamps were introduced.

In the 19th and 20th cents. the P.O. greatly extended its services: money orders (1838), savings bank (1861), telegraphs (1870), postal orders (1881) parcels post (1883), telephone service (1912), overseas telegraph service (1950), transatlantic telephone cable (1956), facilities for data processing by computer (1967), and giro (q.v., 1968). The P.O. acts as agent for government depts. in the collection of certain revenue, disbursement of pensions and allowances, issue of some licences, etc., and is responsible for radio and television broadcasting. The 620 ft. London P.O. Tower (1966) is the highest building in Britain, and has micro-wave equipment capable of handling 150,000 simultaneous telephone conversations and 40 television channels. In 1969 the General P.O. ceased to be a govt. dept. and became the P.O., a public corporation headed by a board and chairman: the office of Postmaster General disappeared, but there is a Min. of Posts and Telecommunications.

In America the first postal service was estab. in Massachusetts in 1639, and in 1692 Thomas Neale opened a P.O. at Philadelphia to convey mail to other colonies, but in 1707 his patent was acquired by the govt. and the service gradually expanded. Benjamin Franklin was P.M.G. 1753-74 (deputy 1736-53), becoming in 1775 first P.M.G. of the newly formed P.O. Dept., which became a branch of the Treasury from 1739 until it regained independence in 1872.

International co-operation is ensured through the Universal Postal Union estab. at Berne in 1875.

POTASSIUM (Eng. *potash*, Lat. *kalium*). Soft, silvery-bright, highly reactive metal of the alkali group, symbol K, at. wt. 39.1, at. no. 19. Discovered in 1807 by Sir Humphry Davy by electrolysis of caustic potash (KOH) - the 1st instance of a metal being isolated by an electric current - it reacts violently

with water, forming potassium hydroxide and hydrogen which ignites and burns spontaneously with a violet flame due to the volatilized P. It is, therefore, kept under kerosene or naphtha. Widely distributed in nature in combination with other elements, it is found in salt deposits (carnallite and kainite) and minerals (feldspar, greensand, alunite, leucite), and forms c. 2.9 per cent of the earth's solid crust. The salts are important, especially as essential constituents of fertilizers. Alloyed with sodium, it may be used as a coolant in nuclear reactors.

POTATO. Perennial plant (*Solanum tuberosum*) of the Solanaceae, native to S. America, traditionally introduced to Ireland c. 1588 by Sir Walter Raleigh but known rather earlier in Spain. The tuberous roots are used as a vegetable, and are also an important commercial source of alcohol, the residue of the process being useful as cattle food. The sweet P. (*Ipomoea batatas*) of the family Convolvulaceae, is a perennial native to tropical America, difficult of cultivation in adverse conditions. The flesh of the tuberous roots is usually white to orange, and like that of the common P. is used as a source of starch and alcohol, as well as for food. 'Potteen' is an illicit Irish alcoholic liquor made from the common P. or barley and sugar. It is so potent that the drinker may remain drunk after a session for days, though drinking only water.

POTCHEFSTROOM. S. African town, on the r. Mooi, oldest town in Transvaal, founded in 1838 by Boers trekking from the Cape. Pop. (1960) 41,701 (20,520 white).

POTE'MKIN (Russ. *potyom'kim*) Grigory Aleksandrovich, Prince (1739-91). Russian statesman. B. near Smolensk, he entered the army and attracted the notice of Catherine II, whose favourite he was for some years, never losing her friendship throughout his life. His activities as administrator, army commander (introducing reforms), builder of the Black Sea Fleet, conqueror of the Crimea, developer of S. Russia, founder of the Kherson arsenal, etc., compel admiration.

POTOMAC. River of the U.S.A., rising in the Allegheny mountains, and flowing S.E. through Washington, D.C., into Chesapeake Bay. It is formed by the junction of the N.P. (c. 95 m.) and S.P. (c. 130 m.), and is itself 285 m. long.

POTOSÍ (pōtōsē). Town in S.W. Bolivia. Standing on the Cerro de P. slopes at 13,189 ft., it is among the highest situated towns in the world. It is famed for its tin and silver mines. Pop. (1965) 65,690.

POTSDAM. Cap. of Potsdam district, East Germany, on the Havel, 16 m. S.W. of Berlin. Its notable buildings include the New Palace (1763-70), and Sans Souci, both built by Frederick the Great. The Third Reich (Hitler's régime) was proclaimed in P. garrison church on 21 March 1933. Pop. (1966) 110,693. At P. was held in July 1945 a conference of representatives of Britain, the Soviet Union, and the U.S.A., which laid down the political and economic principles governing the treatment of Germany in the initial period of Allied control. From the P. conference also went out the ultimatum to Japan demanding unconditional surrender on pain of utter destruction.

POTTER, Beatrix (1866-1943). British writer and illustrator of children's books, beginning with *Peter Rabbit* (1900); her code diaries were pub. 1966. She m. solicitor William Heelis 1913, and bequeathed her Lake District property to the Nat. Trust.

means 'colour') system probably developed from the conquest of the (darker) aborigines by the advancing Aryan peoples; the Untouchables are the darkest Indians. Discrimination against the Negro is largely the aftermath of the European slave trade, but is also practised by Indians and others; and American light-skinned Negroes tend to look down on the darker. On the other hand, anti-White feelings are manifested by the Black Muslims in the U.S., and by some newly emergent African nations. Even within Israel there are complaints of discrimination by the European Jews against the darker-skinned, less-educated Jews of the Middle Eastern countries.

As a result of the 'Yellow Peril' scare of the late 19th and early 20th cents. there is general prejudice by Caucasian peoples against Mongolian as well as Negroid peoples. Traditional race hatred between many countries is the result of wars, occupation, etc., for example in the U.K. there is still prejudice against Irish, Welsh, etc., and vice versa. Expression of R.D. may range from complete segregation of races as in e.g. S. Africa, through unofficial but effective discrimination, which defies the law, to the hard-to-isolate, mainly social disabilities. As a rule, R.D., where recognized, is generally regarded as harmful on practical as well as on moral grounds and may be combated by legislation, e.g. in the U.K. the Race Relations Acts of 1965, prohibiting R.D. in places of public resort and creating the new offence of incitement to R.D. in a public meeting, and 1968, prohibiting D. in employment, housing, and provision of goods and services; and in the U.S.A. the Civil Rights Acts of 1964 and 1968, and the Voting Rights Act of 1965. A United Nations convention on the elimination of R.D. came into force 1969.

RACINE (rahsén'), Jean (1639-99). French dramatist. B. at La Ferté-Milon, he became the friend of Boileau, La Fontaine, and Molière. His earlier tragedies incl. *Andromaque* (1667), *Britannicus* (1669), *Bajazet* (1672), *Mithridate* (1673), *Iphigénie* (1674), and *Phédre* (1677). After the failure of the last-named he no longer wrote for the secular stage, but influenced by Mme de Maintenon produced the 2 religious dramas, *Esther* (1689) and *Athalie* (1691).

RACKETS or **Raquets**. A game played in an enclosed court usually 60 ft. long and 30 ft. wide, by 2 or 4 persons each with a racket about 2½ ft. long weighing 9 oz. The ball has a diameter of 1 in. and weighs 1 oz. Play begins from a service box, one of which is marked at each side of mid-court, and the ball must be hit above a 9 ft. line on the endwall. After service it may be played anywhere above a 27 in. high line on the endwall, the general rules of tennis applying thereafter. Scoring is similar to badminton. Squash R. is played on a smaller court.

RACCOON or **Raccoon**. American carnivorous mammal (*Procyon lotor*) of the family Procyonidae. Some 2 ft. long, with a grey-

ish brown body, and black and white ringed tail, the R. is an omnivorous feeder, and is nocturnal in habit.

RADAR. A process of locating the position of an object in space, of direction finding and navigation by short radio waves. The name 'radar', standing for the phrase *Radio Direction and Range*, was adopted from U.S.A. All solids and liquids reflect radio waves, which are uninfluenced by darkness, clouds or fog. To detect any reflecting object it is necessary to send out a beam of small-wavelength (1 cm.-100 cm.) short-pulse radio waves and to use receivers to pick up the reflected beam. It is then possible to determine the direction of arrival of the reflected waves and thus the direction of the object with respect to the receiving station. The distance (range) may be determined by timing the journey of the radio waves to the reflecting object and back. Radio waves travel with a speed of approximately 186,000 m./sec.; they therefore travel to and from an object 100 m. away in about 1/1,000 sec. Accurate and speedy measurements of time intervals of this order is the second basic principle of R.

Some of the first experiments on distance measurement by radio location were carried out by E. V. (later Sir Edward) Appleton who located the Heaviside layer 60 m. up in the sky, as did Breit and Tuve (1928) in the U.S.A.

The application of radio location to military purposes was begun in 1935 by a group of British scientists led by R. A. Watson Watt (later Sir Robert), and when war broke out in 1939, Britain was already provided with radio-location sentinels for the detection of aircraft. During S.W.W. the technique was considerably developed and new apparatus was constantly evolved. Apart from military uses, R. is now fitted to numerous ships and aircraft to increase safety of navigation in darkness, cloud and fog; and is also used for air traffic control, the production of aerial maps, the study of meteorological conditions, and complete marine and aerial navigation systems.

RADAR ASTRONOMY. The application of radar principles to astronomical research. The Moon was contacted by radar more than 20 years ago, and echoes have also been obtained from the Sun, Mars, Venus and Mercury. Timing the delay in receiving echoes from Venus has led to an improved determination for the distance of that planet, and has hence enabled astronomers to measure the 'astronomical unit', or Earth-Sun distance, with greater precision.

RADCLIFFE, Anne (1764-1823). British novelist (née Ward), the chief exponent of the Gothic novel, or

RADAR. A ship makes her way into harbour.

RACCOON

issued in gold-sovereign (q.v.) form, but since 1914 as a note. After the abandonment of the gold standard in 1931, its international exchange value has been regulated by the Treasury.

POUSSIN (poosañ), Nicolas (1594–1665). French artist. B. at Les Andelys, he went to Rome in 1624, spending the rest of his life there apart from a brief period as court painter to Louis XIII, 1640–3. His landscapes, historical and religious subjects are some of the finest works of the classical tradition and were immensely influential in his native country. His brother-in-law and pupil Gaspard Dughet (1613–75), also a landscape painter, adopted the name Gaspard P.

POWELL, Adam Clayton (1908–). American Democrat politician. Grandson of a Negro slave, he was a min. of the Abyssinian Baptist Church 1937–60. Member of the House of Reps. from 1945, he was excluded 1967 because of alleged misuse of public funds, but re-elected the same year.

POWELL, Anthony (1905–). Brit. novelist. His projected 12-vol. Proustian *Musée of Time* series, portraying Nicholas Jenkins and his circle of upper class friends began with *A Question of Upbringing* (1951). Its sequels incl. *At Lady Molly's* (1957) and *The Military Philosophers* (1968).

POWELL, Cecil Frank (1903–69). British physicist. In 1948–63 he was prof. at Bristol univ., and in 1950 received a Nobel prize for his development of a new photographic method for the study of nuclear particles. He was chairman scientific policy committee of the European Organization for Nuclear Research (CERN) 1961–3, and director H. H. Wills Physics Laboratory, Bristol, from 1964.

POWELL, Enoch (1912–). Brit. Cons. politician. Prof. of Greek at Sydney 1937–9, he became M.P. for Wolverhampton 1950, was Min. of Health 1960–3, and stood for the party leadership in 1965. His views on defence, nationalisation, and taxation are controversial, and a Birmingham speech on immigration 1968 led to his dismissal from the shadow cabinet.

POWER. The rate of doing work or consuming energy expressed in units of work per unit time, e.g. ft. lb./sec. (1 horse power = 550 ft. lb./sec.) or erg./sec. (1 watt = 10⁷ erg./sec.).

POWER OF ATTORNEY. A formal instrument, executed under seal, and attested by 2 witnesses, whereby a person gives another authority to act on his behalf, either in a specified number or class of transactions, or generally for a limited period.

POWYS (poo'is), John Cowper (1872–1963). British author. B. at Shirley, Derbyshire, he was the brother of the versatile writers Theodore Francis P. (1875–1953) and Llewelyn P. (1884–1939). His verse incl. *Wolfsbane*, *Mandragora* and *Samphire*—titles which, with those of his critical and philosophical works (e.g. *The Religion of a Sceptic*, *In Defence of Sensuality*, and *The Meaning of Culture*), and his interest in Rabelais (of whom he pub. a study in 1947), indicate the mystical fantasy and lusty richness of his novels, which incl. *Wolf Solent* (1929) and *A Glastonbury Romance* (1933).

POYNTER, Sir Edward John (1836–1919). British painter. B. in Paris, son of the architect Ambrose P. (1796–1886), he became first head of the Slade School (1871–5), was elected R.A. in 1876 and became principal (1876–81) of the art training schools in S. Kensington (later Royal Coll. of Art). He was director of the National Gallery 1894–1905 and, on Millais' death in 1896, was elected P.R.A. Noted for his decorous nudes, he also designed mosaic panels in Westminster Palace (1870), and painted 'Israel in Egypt', 'The Golden Age' and 'Atlantia's Race'.

POZNAN. Polish city, cap. of P. voivodship, on the Warta, 170 m. W. of Warsaw, the seat of a univ. (1919). Manufactures incl. locomotives and farming machinery, precision instruments, bicycles, aircraft, beer. Settled by German immigrants in 1253, it was a

residence of the dukes of Poland from 1296; it passed to Prussia in 1793 and was restored to Poland in 1919. Hindenburg was born at P. Pop. (1966) 441,000.

PRADO. A famous thoroughfare of Madrid, Spain, which gave its name to the picture gallery *Real Museo de Pintura del Prado*, containing the national collection of pictures founded by Charles III in 1785.

PRAETOR (prê'tor). A Roman magistrate, elected annually, who assisted the consuls and presided over the civil courts. The number of Ps. was finally increased to 8, who after a year of office acted as provincial governors for a further year.

PRAGMATISM. Name given to the philosophical doctrine advanced by the American philosopher William James (q.v.) that the truth of a conception may be judged from its bearing upon human conduct. James derived the idea from C. S. Pierce (1839–1914) who introduced the term and the principle into philosophy in 1878.

PRAGUE (prahg). French form of Praha, cap. of Czechoslovakia, on the Vltava. Germans were settled here in the 13th cent. when the kings of Bohemia made it their cap. It was a residence of the Holy Roman Emperors during the 14th to 17th cents. Hitler occupied P. in 1939. The city, which is exceptionally pleasing, rises in terraces from the river. On

PRAGUE. Hradčany Castle, originally the fortified palace of the Bohemian kings, is now the presidential residence and government headquarters. It crowns the Hradčany Hill on the western bank of the r. Vltava, and encloses the cathedral of St. Vitus, founded by King Wenceslas in the 10th cent., rebuilt by Charles IV, and restored in modern times.

Courtesy of the Czechoslovak Travel Bureau.

the left bank is the Hradčany with the castle, and the old town has a profusion of palaces, bridges, and churches. P. is the financial and manufacturing centre of the country, its products incl. flour, sugar, smoked meats, furniture, clothing, gloves, motor-cars, and heavy machinery. Brewing, tanning, and the chemical industries also thrive. The univ. was founded by the Emperor Charles IV in 1348. Pop. (1961) 1,000,000.

PRAIRIE. The central N. American plains, formerly grass-covered, extending over most of the region between the Rockies on the W. and the Great Lakes and Ohio river on the E., and extending northward into Canada.

PRĀKRIT (prah'krit). The popular languages of ancient India, as opposed to Sanskrit. The best-known P. is Māhārāstri, used for the later Jain sacred books. The Ps. were also used in lyric poetry and for certain characters in Sanskrit drama.

PRASAD, Rajendra (1884–1963). Indian statesman. Prof. of law at Calcutta univ., he joined Gandhi's non-co-operation movement, later pub. biographies of Gandhi with whom he became closely associated, and was pres. of the Congress Party 1934, 1939 and

paraboloid erected at Jodrell Bank, in Cheshire. See *illus.* p. 599.

Radio sources incl. the Sun; various objects inside our Galaxy, thought to be the gas-clouds produced by old supernovae; and certain external galaxies. It is believed that some of the remote sources represent collisions between galaxies, so that the 2 systems concerned are passing through each other; the individual stars seldom or never collide, but the interstellar material spread between the stars is violently agitated, and produces the radio waves picked up on Earth. It must be added, however, that some Russian authorities reject this explanation, and believe that the radio emission is produced by a galaxy which is in the process of separating into 2 systems.

R.A. has become one of the most important branches of A., and a *radio-heliograph* (specialized radio-telescope for sun research invented by Englishman Paul Wild) was built 1966 at Narrabri, 310 m. N. of Sydney, Australia; it will forecast for American astronauts on moon flights when dangerous solar and cosmic radiation is to be expected. See *GALAXY* *illus.* p. 457.

RADIO BEACON. A radio transmitter whose radiations enable a craft to determine its direction or position relative to the beacon by means of a communications receiver or direction finder.

RADIO FREQUENCIES AND WAVELENGTHS. Classification of. In order to name them it is convenient to group frequencies and wavelengths together in bands, each band referring to waves having similar propagation characteristics, and for which similar techniques are used in the radio terminal equipment. According to the British Standards Institution the arbitrary verbal classification is:

Very low frequency (v.l.f.)	below 30	kc/s
Low frequency (l.f.)	30 to 300	kc/s
Medium frequency (m.f.)	300 to 3,000	kc/s
High frequency (h.f.)	3 to 30	Mc/s
Very high frequency (v.h.f.)	30 to 300	Mc/s
Ultra-high frequency (u.h.f.)	300 to 3,000	Mc/s
Super-high frequency (s.h.f.)	3,000 to 30,000	Mc/s
Extra-high frequency (e.h.f.)	30,000 to 300,000	Mc/s

RADIOGRAM. The 'stereogram', devised to give the special effects of space and depth which can be achieved by the stereophonic records developed in the 1950s, has a special pick-up (1), radio and twin amplifiers (2), and loud-speakers (3 and 4), and is two radiograms in one. Controls (5) are placed well forward and there is space for record storage (6).

Courtesy of Ultra Radio and Television Ltd.

RADIOGRAM. Combined unit containing a radio receiver and sound amplifier, single or automatic gramophone turntable and pick-up, loudspeaker and record storage; housed in a single cabinet. Provision is often made for the use of an extension loud-speaker, and feeding in the output from a tape recorder. The name 'phonograph', obsolete in British usage, is still preferred in the U.S.

RADIOGRAPHY. The production of shadows on

sensitized film by X-rays. They are produced when a high unidirectional voltage is applied to the electrodes in a vacuum tube—giving rise to a stream of electrons from the cathode—which when stopped at the anode produce X-rays. These penetrate matter according to its atomic weight, density and thickness. In doing so they cast shadows on the film and are used to examine the internal parts of the body, or in industry to examine solid materials, e.g. weld seams, pipelines, etc.

RADIOTHERAPY. The treatment of disease by radiation obtained from X-ray machines or radioactive sources. The effect of the radiation is to reduce the activity of dividing cells and is of especial value for its effect on certain malignant tissues, certain non-malignant tumours and some diseases of the skin. Generally speaking the rays of the ordinary diagnostic X-ray machine are not penetrating enough to be very efficient in treatment, and for this purpose more powerful machines are required operating from 10,000 to over 30 million volts. The lower-voltage machines are similar to conventional X-ray machines, the higher-voltage ones may be of special design, e.g. linear accelerators and betatrons.

Much R. is now given using artificially produced radio isotopes (q.v.). Radioactive cobalt (symbol Co) is the most useful, as this produces gamma rays (very penetrating), and machines with sources of this material are used instead of very high-energy X-ray machines. Similarly certain radioactive substances may be used by actual administration to patients, e.g. radioactive iodine for thyroid disease.

In the past much use was made of radium, but this has now been largely supplanted by artificially produced radioactive substances, which are more easily obtainable. Small sources may actually be implanted into the tissue being treated, in an attempt to localize the irradiation.

RADISH. Cultivated biennial herbs (*Raphanus sativus*) of the Cruciferae family, with fleshy, edible roots. The latter may vary in colour through white, red, and black, and have a pungent taste.

RADIUM (Lat. *radius* ray). A brilliant white radioactive metal, symbol Ra, at. wt. 226, at. no. 88. The salt R. bromide was first separated by M. and Mme Curie in 1898 from Bohemian pitchblende, but R. itself was not isolated until 1911 (by Mme Curie and Debierne). More volatile than barium, which it resembles chemically, its m.p. is 700°C. It is obtained commercially as bromide or chloride from pitchblende (q.v.), which occurs in Czechoslovakia, E. Africa and Colorado. R. disintegrates spontaneously with the emission of alpha particles and forms the radioactive chemically inert gas radon (q.v.). Both were used for cancer therapy, but have been replaced by radioactive Co. 60. Both R. and Co. 60 are used extensively in industrial radiography.

RADNORSHIRE. Border co. of Wales. Part of the high central plateau of Wales, R. is famed for its sheep breeding, and rises to its greatest height in the wild Forest of Radnor. The chief rivers are the Wye and Teme. Presteigne is the co. town. Area 471 sq. m.; pop. (1961) 18,431.

RADOM (rah'döm). Town of Poland, 60 m. S. of Warsaw. There are iron works and tanneries, and bicycles, machinery, boots and shoes, beer, flour, and tobacco are manufactured. R.'s first church was begun in 1187. R. went to Austria in 1795, to Russia in 1825, and was returned to Poland in 1919. Pop. (1966) 145,000.

RADON. Radioactive gas formed by the disintegration of radium (q.v.), formerly called radium emanation, then niton (Lat. *nitens* shining) and from 1923 radon: symbol Rn, at. wt. 222, at. no. 86. Discovered in 1900 by Dorn, it was isolated by Ramsay and Gray 8 years later.

RAEBURN (rä-), Sir Henry (1756–1823). Scottish

14th–16th cents. P. J. was identified with the king of Ethiopia.

PRESTON. English seaport (co. bor.) in Lancs, on the Ribble near its mouth, 21 m. S. of Lancaster. At P. in 1648 Cromwell defeated the Royalists. Industries incl. textiles, chemicals, electrical goods, aircraft and shipbuilding. Pop. (1961) 113,208.

PRESTONPANS. A Scottish burgh on the Firth of Forth, E. Lothian, 9 m. E. of Edinburgh. Nearby in 1745 the royal troops were routed by the Jacobites. Pop. (1961) 3,104.

PRESTWICK (prest'wik). Scottish burgh on the Firth of Clyde, Ayrshire, 3 m. N. of Ayr, known for its championship golf course, and as an airport for transatlantic services. Pop. (1961) 12,564.

PRETORIA. Administrative capital of the Rep. of S. Africa, and cap. of Transvaal prov. Founded in 1855, and called after the Boer leader A. Pretorius (1799–1853), it became cap. of Transvaal in 1860, and administrative cap. of the Union in 1910. The government buildings overlook the town, laid out with many parks and gardens. P. univ. was founded in 1930; P. is also the seat of the Univ. of South Africa (1873). Pop. (1960) 415,989 (202,664 white).

PRÉVOST D'EXILES (prāvō' degzēl'), Antoine François (1697–1763). French author, known as Abbé P. He was a monk, an army officer, lived in England and Holland (1728–33), and in 1754 became prior of St.-Georges-de-Gesnes. Of his sentimental novels, *Manon Lescaut* (1731) is best remembered.

PRIAPUS (pri-ā'pus). Greek god of fertility, usually represented as a grotesquely ugly man with an exaggerated phallus. He was also a god of gardens, where his image was frequently placed as a scarecrow.

PRETORIA. The statue of General Louis Botha, unveiled in 1946, overlooks the beautiful terraced gardens which surround the republic's government buildings (erected 1910–13) on Meintje's Kop. Courtesy of South Africa Information Service.

PRI'BILOF ISLANDS. Group of 4 islands in the Bering Sea, of volcanic origin, 200 m. S.W. of Bristol Bay, Alaska, U.S.A.; named after Gerasim Pribilof who discovered them in 1786, they were sold by Russia to the U.S.A. in 1867 with Alaska, of which they form part. They were made a fur-seal reservation in 1868.

PRICES AND INCOMES. Nat. Board for. Estab. in the U.K. 1965 to examine and report on particular cases of rises in prices or wages which would endanger the stability of the economy.

PRICKLY HEAT. Inflammation of the sweat glands; a minor disorder of hot, wet climates, due to excessive sweating. Small vesicles are formed, but quickly dry up and heal.

PRICKLY PEAR. Genus of cacti (*Opuntia*) native to America, especially Mexico and Chile, but naturalized in southern Europe, northern Africa, and Australia, where they are a pest (see *CACTOBLASTIS*). The common P.P. (*O. vulgaris*) is low-growing, with red

or white flowers, and has pleasant-tasting oval fruit. See also illus. under *CACTUS*.

PRIDE, Thomas (d. 1658). A London drayman or brewer, he rose to be a colonel in the Parliamentary Army in the Civil War, and on Cromwell's orders executed in 1648 'Pride's Purge' of the House of Commons of its Presbyterian and Royalist members.

PRIESTLEY, John Boynton (1894–). British author. B. in Bradford, son of a schoolmaster, he was educ. at Trinity Hall, Cambridge, and served in the F.W.W. He estab. his reputation as a novelist with *The Good Companions* (1929), which he dramatized with E. Knoblock in 1931, and reinforced it with *Angel Pavement* (1930) and later books. As a playwright he has often been preoccupied with theories of time, as in *Dangerous Corner* (1932), *Time and the Conways* (1937), *Johnson over Jordan* (1939) and *An Inspector Calls* (1945), but has also a gift for family comedy, e.g. *Laburnum Grove* (1933) and *When We Are Married* (1938), and in 1962 made a stage adaptation with the author of the novel by Iris Murdoch *A Severed Head*. He is also noted for his broadcasts, especially those in wartime, and for his excellent literary criticism, as in *Literature and Western Man* (1960). He m. in 1953 Jacquetta Hawkes (q.v.).

J. B. PRIESTLEY
Photo: Angus McBean

PRIESTLEY, Joseph (1733–1804). British chemist and Nonconformist divine. B. in Leeds, he became a Presbyterian (Unitarian) minister in 1755 and from 1767 was minister of a chapel in Leeds. About 1774 he discovered oxygen, and was elected F.R.S. in 1766. In 1780 he removed to Birmingham, and in 1791 his chapel and house were sacked by the mob because of his support of the French Revolution. In 1794 he emigrated to America.

PRIEST'S HOLE. In Britain, in the time of the penal laws against Roman Catholic priests, a secret room or hiding-place for them. Many still exist in old houses, and a good example is that at Speke Hall. See illus. under *Liverpool*.

PRIMATE. The official title of metropolitans in the Christian Church. The archbishop of Canterbury is the P. of all England, and the archbishop of York the P. of England.

PRIMATES. The highest order of mammals; it includes man, the apes, monkeys, tarsiers, and lemurs.

PRIME MINISTER or Premier. In Commonwealth countries, and other states with parliamentary constitutions, the head of the government. The first English P.M. is generally considered to have been Walpole (1721–42), but not until 1905 was the office officially recognized, P.M.s. up to then holding some other office in addition, generally that of First Lord of the Treasury. In the U.K. the P.M. is usually the leader of the largest party in the House of Commons. Since 1902 P.M.s. have invariably been commoners. The salary is £14,000 p.a. In certain Commonwealth countries, e.g. Australia, a distinction is drawn between the Fed. P.M. and the Premier of the individual states.

PRIMO DE RIVERA, Miguel (1870–1930). Spanish soldier and statesman. He was captain-general of Catalonia when in 1923, following the disaster of the Morocco campaign, he became in effect dictator of Spain with the support of Alfonso XIII. In 1925 he became premier, and effected some useful material reforms. He resigned in 1930.

PRIMROSE. Woodland plant (*Primula vulgaris*) common in Britain and Europe, bearing pale yellow

The Pythoness (1949) and reflect both the Northumberland landscape of her upbringing and the religious feeling which led her to the Roman Catholic Church in 1944. She was formerly m. to the poet and sociologist Charles Madge.

RAINIER III, Prince. See MONACO.

RAINIER. Mountain in the Cascade Range, Washington state, U.S.A., 14,408 ft., crowned by 14 glaciers and carrying dense forests on its slopes. It is a quiescent volcano. Mount R. national park, 377 sq. m., was dedicated in 1899.

RAIS (räs), or Retz, Gilles de (1404–40). French soldier. He played a distinguished part in the struggle for the expulsion of the English from France, and was closely associated with Joan of Arc. In 1440 he was accused of practising witchcraft and the sacrifice of children, and was hanged.

RAISIN. Dried grape; the chief kinds are the common R., the sultana or seedless R., and the currant. They are produced in the Mediterranean area, California, Australia, etc.

RAJAGOPALACHARYA, Chakravarti (1878–), Indian statesman. Prominent in the Congress Party leadership from 1919, he broke with them during the S.W.W. to advocate a peaceful settlement with Britain and recognition of the Moslem League's claim to separation. He succeeded Lord Mountbatten as Gov. Gen. (1948–50), was Home Minister for India (1950–1) and Chief Min., Govt. of Madras (1952–4).

RAJASTHAN (rah'jastahn). Union of princely states of Rajputana formed in 1948 and subsequently enlarged; one of the states of the Union of India. It incl. the famous former princely states of Jodhpur, Bikaner, Jaipur, and Udaipur. The cap. is Jaipur. Work on a 425 m. irrigation canal began in 1958. Area 132,150 sq. m.; pop. (1961) 20,155,602.

RAJPUT. High-caste Hindus of India, predominantly soldiers and landowners. They are widespread over N. India. The Rajput states of W. India are now merged in Rajasthan. The Rana family (ruling aristocracy of Nepal until 1951) is also Rajput.

RALEIGH or Ralegh (raw'li), Sir Walter (c. 1552–1618). English adventurer. B. in Devon, he served in early life in France and Ireland, and at sea against the Spaniards. He won Elizabeth I's favour, and in 1584 was knighted. He made several unsuccessful attempts 1584–7 to establish a colony in 'Virginia' (now N. Carolina). He led an exploring expedition to S. America in 1595, which he described in his

Discovery of Guiana, and distinguished himself in the expeditions to Cadiz in 1596 and the Azores in 1597. After James I's accession in 1603 he was condemned to death on a charge of conspiracy, but reprieved and imprisoned in the Tower, where he wrote his unfinished *History of the World*. Released in 1616, he led a gold-seeking expedition to the Orinoco, which failed disastrously, and on his return was beheaded under his former sentence.

RALEIGH, Sir Walter (1861–1922). British scholar. Prof. of English literature at Oxford from 1904,

SIR WALTER RALEIGH
and his little son.
Photo: N.P.G.

he was a gifted teacher: his books incl. *The English Novel* (1894) and studies of Milton, Wordsworth, and Shakespeare.

RAMADA'N or Ramazan. The 9th month of the Moslem year, throughout which a strict fast is observed during the hours of daylight.

RAMADIER (rahmah-dyā'), Paul (1888–1961). French Socialist. Entering the Chamber in 1928, he subsequently held many ministerial posts and was premier Jan.–Nov. 1947. It was during these months that Communist participation in post-war govts. ended.

RAMAN (rah'man), Sir Venkata (1888–). Indian physicist. Awarded a Nobel prize in 1930 for his discovery in 1928 of the *R. Effect*: the scattering of monochromatic light when passed through a transparent substance. He became in 1948 director of the R. Research Institute and national research prof. of physics.

RAMAYANA (rahmah'yana). A Sanskrit epic poem of the 6th–4th cents. B.C. Consisting of 48,000 lines, it describes the adventures of the hero Rama, later identified with the god Vishnu, and incorporates both mythical and historical elements.

RAMBERT (ronbār'), Dame Marie (1888–). British ballet dancer and teacher. B. in Warsaw, she danced with the Diaghileff ballet 1912–13, opened the R. School in 1920, and in 1926 founded the *Ballet R.* which she directs. She m. in 1918 Ashley Dukes

RAILWAY. Sectional drawing of an express electric passenger locomotive on the Manchester-Sheffield-Wath line, the first all-electric main line in Britain, which was inaugurated in January 1955.

in cells engraved into a P. plate; the whole plate is inked, the ink is cleaned off the upper or non-P. surface which touches the paper, and on contact between paper and plate the ink is drawn out of the cells on to the paper. This process is used for many magazines and for colour P. in particular. (4) Collo-type P., in which the whole surface of the P. plate, which touches the ink rollers and the paper, may contain and transfer ink. As in lithographic P., the process is based on the antipathy of grease and water; that part of the plate which is to print the darkest tones is rendered the least absorbent to water, that part which is to print the lightest tones is rendered the most absorbent, and the tones in between depend on the amount of water absorbed and the extent of its consequent rejection of greasy ink. The process is used only for small editions of illustrations, whether in black only or in colour. (5) Silk-screen P., in which ink or paint is pressed through a stencil, supported by an open-mesh screen, on to the printed surface; the stencil excludes ink from the non-printed area, while over the printed area the ink passes through the screen. This process is used mainly for posters and similar forms of advertising in which bright colours are needed; for example, luminous inks can be used. In letterpress P., P. surfaces are mainly produced by metal casting, but engraving is also used (see PROCESS ENGRAVING); in the other processes the P. surfaces are nearly always photographically produced.

P. is believed to have begun in China in the 6th cent. A.D., and it was the Chinese who in the 11th cent. first used movable types. P. did not begin in Europe for another 3 cents.; the European invention of movable types took place in the mid-15th cent., and is usually ascribed to Johann Gutenberg of Mainz. The first book to be printed in Britain was *Dictes and Sayenges of the Phylosophers* by Lord Rivers, printed by William Caxton at Westminster in 1477.

PRIOR. The viceregent of an abbot, who was responsible for monastic discipline, or in certain R.C. monastic orders the principal of a monastery.

PRIOR, Matthew (1664–1721). British poet-diplomat. B. in E. Dorset, he was associated under the Whigs with the negotiation of the treaty of Ryswick and under the Tories with that of Utrecht ('Matt's Peace'), but on the return of the Whigs to power was imprisoned by Walpole 1715–17. His greatest gift as a poet was for light occasional verses.

PRIPET (prĕ'pet). River of W. Russia, a tributary of the Dnieper which it joins 50 m. above Kiev, Ukrainian S.S.R., after a course c. 500 m. The P. marshes near Pinsk were of strategic importance in both world wars.

PRISHVIN (prĕsh'vin), Mikhail Mikhailovich (1873–1954). Russian writer. A student of agriculture, he was a close student of nature, e.g. *In the Land of Unfrightened Birds* (1907) and his autobiographical novel *Kashchei's Chain* (1924–8).

PRISM. In mathematics, a solid figure (polyhedron) with two equal polygonal faces (bases) in parallel planes; the other faces being parallelograms, of the same number as there are sides to one of the bases. In optics triangular Ps. are widely used in a variety of instruments incl. spectroscopes, binoculars, periscopes, and rangefinders, their properties depending on the refractive index of the material of which they are made and the angles at which they are cut.

PRISON. Place of confinement for those contravening the laws of the state. Until the late 18th cent. criminals were commonly sentenced to death, mutilation or transportation rather than imprisonment, so that the growth of criminal Ps. as opposed to places of detention for those awaiting trial, confined for political reasons, etc., was a late development. One of the greatest reformers in Britain was John Howard (q.v.), whose P. Act of 1778 estab. the principle of separate confinement combined with

work in an attempt at reform, though long a dead letter, was carried out when Pentonville was built in 1842. Penal servitude was introduced in 1857, as an additional deterrent, after the refusal of the colonies to accept transported convicts, but this and hard labour were finally abolished in Britain by the Criminal Justice Act of 1948, so that there is only one form of prison sentence, viz. imprisonment. Under the Criminal Justice Act of 1967 courts may suspend P. sentences of 2 years or less, and, unless the offender has previously been in prison or borstal (q.v.), will normally do so, i.e. sentence only comes into effect if another offence is committed. Persistent offenders may receive an extended sentence for the protection of the public. After serving one-third of their sentence (minimum 12 months), selected prisoners may be released on licence.

It was hoped that the act would relieve the strain on P. services by reducing the large number of short-term prisoners who threatened security, interfered with the treatment of long-term offenders, and formed a 'recruiting ground' for lifelong criminals: the increase in the P. population had been from 11,000 in 1938 to 35,000 in 1968.

All enlightened countries aim at rehabilitation and in Russia, for example, great stress is laid on constructive work and the assimilation of the prisoner to a normal life, e.g. wives may be allowed to live with good-conduct men. Notable experiments have also been made in Britain and elsewhere in 'open Ps.' without bars, release of prisoners to work in ordinary jobs outside the P. in the final stages of their sentence, and after-care on release. See PROBATION.

PRISONERS OF WAR. By international convention P.o.W. are entitled to food on the same scale as the captor country's rear-line troops; supply of clothing and footwear; medical attendance; and the right to send and receive letters, and to receive food parcels and reading matter. P.o.W. who are seriously wounded or ill may be repatriated if a medical board, on which 2 doctors out of 3 are neutrals, certifies they are permanently incapacitated as fighting men. These rights are safeguarded by the International Red Cross Committee at Geneva, representatives of which inspect prison-camps.

PRITCHETT, Victor Sardon (1900–). British novelist, short-story writer and critic. His works incl. *You Make Your Own Life*, and *It May Never Happen*, collections of his short stories, and *The Living Novel* (1946) criticism. As a critic he is associated with the *New Statesman*.

PRIVATE ENTERPRISE. System whereby economic activities are in private hands and are carried on for private profit, as opposed to national, municipal, or co-operative ownership.

PRIVET. Genus of shrubs. The common P. (*Ligustrum vulgare*) hardy, quick-growing and responding well to clipping, is much used for hedges. It has lanceolate leaves and small spikes of white flowers followed by black berries.

PRIVY COUNCIL. A body of royal advisers. It originated in England in Norman times as the council of the chief royal officials, and under the Tudors and early Stuarts became the chief governing body. After 1688 it was replaced by the cabinet, which originated as a committee of the P.C. Its powers are now formal, e.g. royal proclamations and orders-in-council, and membership is an honour granted automatically to Cabinet Ministers—who for the most part comprise the acting council—and to others who have held high political, ecclesiastical or judicial offices in Britain and the Commonwealth. It is presided over by the Lord President of the Council. The *Judicial Committee of the P.C.*, which incl. Commonwealth judges, still acts as a final court of appeal for some members of the Commonwealth, e.g. New Zealand, Ceylon and Malta.

George, the Three Hesperides, and the Coronation of the Virgin. In 1504-8 he was in Florence, where he studied the works of Leonardo da Vinci, Michelangelo, Massaccio, and Fra Bartolommeo. Paintings of this period incl. the 'St. Catherine' and the 'Ansidei Madonna' in the National Gallery. In 1508 he went to Rome where he was employed by pope Julius II to redecorate a number of rooms in the Vatican. Thenceforward he painted a great many works - frescoes, easel pictures, etc. - of which some of the most famous incl. 'St. Cecilia', the 'Disputa', 'School of Athens', and the 'Sistine Madonna' at Dresden. His works are distinguished for their beauty of form and colour, and he ranks as one of the greatest figures in the history of art.

RARE EARTHS. The oxides of metals found in certain rare minerals. The elements incl. under the heading of R.E. are those nos. 21, 39, and 57-71: see table under Inorganic Chemistry.

RARE GASES. The name applied to the elements helium, neon, argon, krypton, xenon, and radon, characterized by their lack of chemical affinity.

RASMUSSEN (rahs'moosen), Knud Johan Victor (1879-1933). Danish explorer, of Eskimo descent. He travelled in Lapland, Greenland, Baffin Island, and Siberia, and estab. that the Eskimos are of Red Indian origin.

RASPBERRY. A prickly cane-plant (*Rubus idaeus*) of the Rosaceae family with white flowers followed by white or red fruits. These are used for jam and wine.

RASPŪTIN, Gregory Efimovich (1871-1916). Russian monk. The illiterate son of a poor peasant, he claimed divine powers, and in 1907 was presented at court, where he acquired great influence over the Tsarina because of her belief that he could cure her son, the Tsarevitch, of haemophilia. The control he exercised through her over political and ecclesiastical appointments, and his notorious debauchery, created a scandal which did much to discredit the monarchy. He was murdered by a group of nobles.

RAT. Name given to the larger members of the family Muridae. The Brown R. (*Mus norvegicus*) is about 8 in. long with a tail of almost equal length. It frequents sewers, docks, and warehouses, and in the country hedges, ricks, granaries, and other food stores. Brown Rs. also infest ships, by which they have been spread over the world. The Black or Long-tailed R. (*Mus rattus*) is smaller than the Brown R., by which it has largely been replaced. Some Black Rs. are still found in docks and on ships. They do not interbreed with the Brown Rs. See PLAGUE.

RATES and RATING. Rates are a form of local taxation imposed by local authorities to finance their various activities. In England and Wales a 'General Rate' is levied to cover expenditure on all purposes in urban districts, and in rural districts is supplemented by 'Special Rates' to cover expenditure on activities not common to the whole of the area. Water Rates are in the nature of a specific charge for the supply of water, and are usually based on local rating assessments. General and Special Rates are levied at an appropriate figure in the £ on the assessment of all rateable property, agricultural land and buildings being exempt. Increased expenditure on education, etc. has led to mounting R., and in 1966 rebates were introduced for lower income groups.

RATHBONE, Eleanor (1873-1946). British politician. B. in Liverpool, she became a member of the Liverpool City Council (1909-34), and Independent M.P. for the Combined English Univs., 1929-46. She was an ardent advocate of women's suffrage, widows' pensions, and in particular family allowances.

RATHENAU (rah tenow), Walter (1867-1922). German statesman. A leading industrialist, he was appointed economic director during the F.W.W. After the war he founded the Democratic Party, and became For. Min., 1922. He signed the Rapallo

Treaty of friendship with Russia in 1922, and soon after was murdered by right-wing fanatics.

RATHLIN. An is. 4 m. off the N. coast of N. Ireland and included in the county of Antrim. St. Columba founded a church on R. in the 6th cent.; and Robert Bruce went into hiding there after his defeat by the English at Methven in 1306.

TERENCE RATTIGAN

Photo: Angus McBean

RATIBOR (rah'tēbōr). German form of RACIBORZ.

RATIONALISM. In the history of human thought, the belief that reason is the most important, if not the only, means of ascertaining truth. The name is usually applied to the system of thought which interprets religious doctrines by the light of reason, questioning traditional and rejecting supernatural authority. The Rationalist movement

arose in Germany in the 18th cent., and in the 19th it extended to Britain and U.S.A.

RATISBON. French name of REGENSBURG.

RATITAE (rā'tī'tē). One of the 2 main divisions of birds. It is represented by the ostrich, rhea, emu, cassowary, and kiwi. See BIRDS.

RATTIGAN, Terence (1911-). British playwright. B. in London, he writes naturalistic plays of the English middle class, believing that a play stands or falls artistically as well as commercially by the judgment of the wider audience. They incl. the comedy *French Without Tears* (1936); *The Winslow Boy* (1945) based on a real-life incident of a naval cadet wrongly accused of theft; *The Browning Version* (1948), study of a schoolmaster; *Separate Tables* (1954), set in a Bournemouth hotel; and *Ross* (1960) dealing with T. E. Lawrence.

RATTLESNAKE. A snake of the N. American genus *Crotalus*, distinguished by the horny flat rings of the tail, which 'rattle' when vibrated. The venom injected by the R. is fatal.

RATTLESNAKE

RAVEN

RAVEL (rahvel'), Maurice (1875-1937). French composer. B. at Ciboure, he achieved a reputation with the piano pieces *Pavane pour une Infante défunte* (1899), and *Jeux d'eau* (1901). Among his later works are the sensational *Boléro*; the ballet *Daphnis et Chloé*; the operas *L'Heure espagnole* and *L'Enfant et les sortilèges*; and the piano compositions *Gaspard de la nuit*, *Miroirs*, etc.

RAVEN. Bird (*Corvus corax*) in the crow family. About 2 ft. long, the R. has black and lustrous plumage. Found only in the northern hemisphere, it is rare in Britain, breeding chiefly in N. Scotland.

RAVENNA. City of Emilia, Italy, cap. of R. prov. It lies in a marshy plain and is famous for its Byzantine churches. R. was a Roman port and naval station, and 404-93 was the cap. of the W. Roman emperors, 493-526 of Theodoric, and later of the Byzantine exarchs 539-750. Byron lived for some months at R., home of the Countess Guiccioli, during the years 1819-21. Pop. (1961) 115,205.

are not lost, and that the distribution of seats corresponds to that of votes. It should not be confused with (a) the second ballot (used in France from 1928 until the S.W.W.), whereby, if no one candidate receives an absolute majority, a second vote is taken to decide between the top candidates; (b) the alternative vote (widely used in Australia), which achieves the same end in one ballot: the voter numbers the candidates in the order of his preference, the bottom candidates are eliminated in turn, and their votes are transferred to their supporters' next preferences. These methods merely ensure that the majority elects the winner in a particular constituency.

True P.R. requires that constituencies should each return 3 or more members, and has 2 main forms: (a) the party list (common on the Continent), whereby the seats are allotted to each party in proportion to the number of votes cast for it; (b) the single transferable vote (used for example in the Rep. of Ireland since 1922), whereby the voters mark the candidates in order of preference. Votes received by candidates in excess of the number required to win a seat, and those for the bottom candidates who are successively eliminated, are distributed according to the next choice of the voter.

PROPYL ALCOHOL (C_3H_7OH). Two compounds, normal P.A., and isopropyl A. The former is also known as ethyl carbinol. It is a colourless liquid, hygroscopic, has density 0.8, and is miscible with water. P.A. is used in perfumery preparations.

PROSE. The expression of thought in written language without attempt at metrical form. English P. first appeared in the 8th cent., reached a simple perfection under Alfred in the 9th, suffered eclipse following the Conquest, revived by the 14th cent., and attained flexibility and precision with Dryden.

PROSTITUTION. A prostitute is a woman who offers her body in return for payment. Although admitted by civilized societies as an evil ideally to be eradicated, P. is in some countries recognized by the licensing of brothels and the registration of prostitutes—the latter being used as a means of combating the spread of venereal diseases by enforced medical examination and treatment. In England there is a compromise by which, although it is not an offence to be or become a prostitute, fines (with imprisonment for the third offence onwards) are imposed on women convicted of soliciting in a public place: there are also penalties for procuring a woman not a prostitute for purposes of P. and for anyone living on the earnings of a prostitute, and for keeping a brothel.

PROTACTINIUM (Gk. *protos* first). The 1st element of the actinium series of radioactive elements, symbol Pa, at. wt. 231, at. no. 91: found in nature in all uranium ores, and discovered by Soddy and Cranston (independently by Hahn and Meitner) in 1917. It forms actinium by the loss of an alpha-particle.

PROTECTION. The discouragement by heavy duties of the import of foreign goods likely to compete with home products. The opposite practice is Free Trade (q.v.).

PROTECTORATE. In international law, the relationship between a large state and a small or backward one, over which the former exercises a direct or indirect control. Ps. within the Commonwealth incl. the Solomon Is. P. In English history, the term the P. is applied to the rule of Oliver and Richard Cromwell 1653-9.

PROTEINS (prō'tē-īnz). Organic substances containing carbon, hydrogen, oxygen, and nitrogen. They constitute an important part of living cells, and are essential in animal diet. The most common examples are egg-albumen, casein in milk, haemoglobin in blood, and ossein in bone.

PROTESTANTISM. One of the main divisions of Christianity, the others being Roman Catholicism and

the Eastern Orthodox Church. Its name is usually derived from the protest made by Luther and his supporters at the Diet of Spire in 1529 against the decision to reaffirm the Edict of the Diet of Worms against the Reformation. The Protestant Churches incl. the Church of England and the Nonconformist or Free Churches in Britain, the Lutheran and Reformed (Calvinist) Churches on the Continent and the great majority of Christians other than Roman Catholics in the Commonwealth, U.S.A., etc.

PROTEUS (prō'tūs). In Gk. mythology an old man, the warden of the sea beasts of Poseidon, who possessed the gift of prophecy, but could transform himself to any form he chose to evade questioning. Also the eel-like, white, eyeless amphibian (*P. anguinus*) found in the caves of Dalmatia, which has 4 rudimentary legs and external gills; on exposure to light it develops dark pigmentation and becomes fully eyed.

PROTOCOLS OF ZION. An anti-Semitic falsification, purporting to be the notes of a plan for the Jewish world conquest submitted by Herzl in 1897 to the 1st Zionist Congress at Basle, and 1st pub. in Russia in 1905. In 1921 the London *Times* conclusively proved that the Ps. are a plagiarism of an attack on Napoleon III, pub. in Geneva in 1864.

PROTOPLASM. Greyish, translucent, jelly-like material within and incl. the plasma membrane of a cell, the basis of all living things. Always containing carbon, oxygen, hydrogen, nitrogen and a large proportion of water, it may also comprise sulphur, iron, phosphorus, calcium and iodine, as well as such complex chemical compounds as proteins and fats in colloidal form. Chemical interactions constantly take place in all living matter, and P. is capable of repeatedly reproducing itself.

PRŌTOZŌ'A. Group of unicellular animals. Each cell is capable of individual existence, but many types live in colonies. The body is composed of protoplasm, and in the Foraminifera and Radiolaria a skeleton of calcium carbonate or silica is deposited.

PROUDHON (proodōn'), Pierre Joseph (1809-65). French anarchist. B. at Besançon, he sat in the Constituent Assembly of 1848, was imprisoned for 3 years, and had to go into exile in Brussels. His ideas, which envisaged a highly decentralized society of small property owners, greatly influenced French Socialist thought. He pub. *What is Property?* (1840) and *Philosophy of Poverty*.

PROUST (proost), Marcel (1871-1922). French author. B. at Auteuil, son of a wealthy doctor, he was a martyr to asthma from the age of 9. Mixing in society, he gained a reputation as a dilettante, but following the deaths of his father and mother (in 1904 and 1905 respectively) he retired to devote himself to his mammoth autobiographical study, reflecting also the life of his time, which appeared as *A la recherche du temps perdu* (1913-27; *Remembrance of Things Past*). A cork-lined workroom for absolute isolation from the world and various other eccentricities, besides his homosexuality, have made him as much written about as writer. A fragmentary early novel *Jean Santeuil* (written 1899) was pub. in reconstructed form in 1951.

PROUT, Samuel (1783-1852). British water-colour painter. B. at Plymouth, he became famous for his pictures of Continental cities.

PROVENÇAL. A Romance language, also known as *langue d'oc*, in use in S. France from the early Middle Ages until the 16th cent., when it was replaced by French, although individual dialects survived. P. resembles the Catalan dialect of Spanish, and is closer than French to the original Latin forms.

P. literature originated in the 10th cent., and flowered in the 12th cent. with the work of the troubadours (q.v.), e.g. Bernard de Ventadorn, Arnaut Daniel, Giraud de Bornel, Raimbaut d'Orange, and

REAL PRESENCE. The belief that there are present in the properly consecrated Eucharist the body and blood of Jesus Christ. It is held by Roman Catholics, and in some sense by Anglo-Catholics.

REÂMUR (râ-ômür'), René Antoine Ferchault de (1683-1757). French scientist. B. at La Rochelle, his researches assisted the development of French industry, and included a method of tinning iron. He invented the R. thermometer scale, in which freezing point is 0° and boiling point 80°.

RECALL. A political device providing for the immediate recall of an elected delegate if he acts contrary to the wishes of his constituents. It originated in Switzerland, and since 1903 has been adopted in a number of states of U.S.A. A certain percentage of the electorate must sign an application for a fresh election.

RECAMIER (rehkahmyā'), Jeanne Françoise (1777-1849). French leader of society. B. at Lyons, née Bernard, she m. at 15 Jacques R., an elderly banker. She was the 'queen' of a salon of literary and political celebrities.

RECIFE (resê'fe). Seaport of Brazil, cap. of Pernambuco state, at the mouth of the r. Capibaribe. Its proximity to Europe and good harbour give it great commercial importance. It has an airport. Founded in 1504, R. is intersected by waterways. It is the seat of a univ. (1946) and is a naval base. Industries incl. sugar refining, fruit canning, and the making of cotton textiles and flour. Pop. (1960) 797,234.

RECKLINGHAUSEN (-howsen). Town in North Rhine-Westphalia, W. Germany, 15 m. N.W. of Dortmund. Coal mines and iron foundries are nearby and it has iron foundries, chemical and textile factories, engineering works, etc. R. is said to have been founded by Charlemagne. Pop. (1966) 127,578.

RECORDER. Chief legal officer of an English city or borough having a court of quarter sessions. He must be a barrister of 5 years' standing, and sits as sole judge of the court of quarter sessions in his district. The Recorder of the City of London is the chief judge in the Mayor's Court, but elsewhere the post is often an honorary distinction.

Also, name applied generally to the flute family and in particular to the true Rs. of English origin.

RECORD OFFICE. Public. Estab. in 1838 in Chancery Lane, London, the P.R.O. contains the English national records since the Norman Conquest, brought together from Courts of Law and Govt. Depts., incl. Domesday Book, the Gunpowder Plot papers, and the log of H.M.S. *Victory* at Trafalgar. See ARCHIVES.

RECTIFIER. Device for obtaining unidirectional current from an alternating source of supply, either by inversion of or suppression of alternate half-waves. Rs. are necessary in the conversion of a.c. supply to d.c. The many different types all depend on being able to pass current in one direction and unable to pass it in the reverse direction.

RECTOR. Term applied to an Anglican clergyman who receives the whole of the tithes levied in his parish, as against a vicar who draws only part; also to the head of certain universities and colleges.

RED. Slang term for a revolutionary, Anarchist or Communist, which originated in the 19th cent. in the form 'red republican', meaning a republican who favoured a social as well as a political revolution, generally by armed violence.

RED ARMY. Title formerly borne by the army of the U.S.S.R. It developed from the Red Guards, or volunteers who carried out the Bolshevik revolution, and received its name because it fought under the red flag. The name R.A. was abolished in 1946, 'Soviet Army' being substituted.

REDCAR. English seaside resort in the N. Riding of Yorks, from 1968 a district of the C.B. of Tees-side.

RED CROSS. The International agency founded to assist wounded and prisoners in war. Prompted by war horrors described by the Swiss, Henri Dunant, the Geneva Convention of 1864 laid down the principles ensuring the safety of ambulances, hospitals, stores, and personnel distinguished by the emblem of the red Geneva Cross on a white ground. The British R.C. Society was founded in 1870, and incorporated in 1908. In addition to dealing with associated problems of war, e.g. refugees, and the care of the disabled, the R.C. is increasingly concerned with the disasters of peace—epidemics, floods, earthquakes, accidents, etc. The R.C. also works in close association with the St. John Ambulance Association. The American National R.C. was founded 1881.

RED DEER. Woodland deer (*Cervus elaphus*) of Europe and W. Asia which in Britain is kept ornamentally in parks, but is also hunted on Exmoor and 'stalked' in Scotland as 'sport'. The male is antlered, and reaches 4½ ft. at the shoulder: in the rutting season in autumn its 'bell' or roar is formidable. The young are spotted, but adults commonly lose these markings.

REDDITCH. English town in Worcs, 12 m. S. of Birmingham, famous for needles; fishing tackle, cycles and motor-cycles, motor and aeroplane parts, and electrical equipment are other products. Pop. (1961) 34,077.

RED DUSTER. Popular name for the Red Ensign, flag of the British mercantile marine. First used in 1674, it was shared with the R.N. until 1864, when it became the exclusive symbol of merchant ships.

RED FLAG. The international symbol of Socialism. In France it was used as a revolutionary emblem from 1792 onward, and was adopted officially as its flag by the Paris Commune of 1871. Since the revolution of Nov. 1917, it has been the national flag of the U.S.S.R.; as such it bears a golden hammer and sickle crossed (see frontispiece), symbolizing the unity of the industrial workers and peasants, under a gold-rimmed 5-pointed star, signifying peace between the 5 continents. 'The Red Flag', the Labour Party anthem, was written by Jim Connell during the 1889 London strike.

REDGRAVE, Sir Michael (Scudamore) (1908-). British actor. B. in Bristol, the son of an actor, he made a reputation for sensitive playing in *Thunder Rock* (1941: filmed 1942), is noted for his stylish, well-balanced Shakespearian performances, and has appeared with special distinction in his own stage adaptation of James's *The Aspern Papers* (1959) and in Chekhov's *Uncle Vanya* (1962-3). He was knighted in 1959. His dau. Vanessa R. (1937-), with whom he has sometimes appeared, became famous for her interpretation of Ophelia, and subsequently appeared as Nina in Chekhov's *The Seagull*, etc.

RED GUARDS. In the U.S.S.R. the armed workers who took part in the Bolshevik revolution 1917: in China from 1966 the school and college students with red armbands who furthered the Cultural Revolution by attacking old ideas, culture, habits and customs.

RED INDIANS. See INDIANS, AMERICAN.

REDL, Alfred. See SECRET SERVICE.

REDMOND, John Edward (1856-1918). Irish statesman, leader of the Nationalist Party from the death of Parnell until after the Easter Rebellion in 1916. He was elected an M.P. in 1881, and from 1900 was the acknowledged head of the Irish parliamentary party. After the general elections of 1910 he held the balance of power in the House of Commons, and was able to secure the introduction of a Home Rule bill. Strong opposition was encountered in Ulster, and in 1914 the Ulster Covenanters and R.'s Nationalist Volunteers seemed likely to come to open war. When the F.W.W. broke out, however, R. flung all his influence into the country's war effort, and in recognition of his patriotism the Home Rule bill was

phenomena inexplicable by recognized scientific laws. Formerly this was limited to phenomena produced at séances—levitation, ectoplasm, telepathy and super-normal cognition in trance and clairvoyant mediums, activities of apparitions and poltergeists—and useful work was done by the British Society for Psychical Research (1882). Between the wars, however, the study of extra-sensory perception in particular emerged from the séance room to the science laboratory and famous centres are the Parapsychology Laboratory of Duke Univ., N. Carolina (see RHINE, J. B.) and the Psychophysical Research Unit at Oxford.

PSYCHOLOGY AND SCHOOLS OF ANALYTIC THOUGHT. The science of the mind (q.v.), and the study of mental life. The mind may be defined as the non-material basis of conscious and unconscious thought, functioning in the brain, and an intimate and integral part of the biological entity that is man.

GENERAL P. in which fundamental methods of all sciences are used—observation and experiment—with due allowance for the participation of the observer, in the study of the basic nature of the fundamental processes.

COMPARATIVE P. embraces the similarities and differences between groups such as animals and children; due to race, nationality, sex, class, etc., and between individuals in any group.

APPLIED P. is concerned with the practical application of knowledge to particular problems, incl. child and vocational guidance, intelligence testing, personnel and management selection, efficiency studies, etc.

PATHOLOGICAL P. deals with the classification of mental abnormalities: a necessary prerequisite to treatment. Just as in other aspects of human life, it is seldom possible to place an individual in a 'hard and fast' category, since there is a great deal of overlapping into adjacent groups.

PSYCHOANALYSIS is the school of P. derived in origin and development to the work of Sigmund Freud (q.v.). The essential technique involves free association of thoughts, in the waking state, and analysis of the contents of dreams, as a means of revealing the unconscious—ideas and emotions existing beneath the realm of consciousness. There are 4 postulates which are generally accepted by most schools of analytic thought: 1, The existence of psychic determinism; 2, the role of the unconscious; 3, the goal-directed nature of behaviour, and 4, the developmental or historical approach. For a comprehensive account, the reader is referred to Freud's *Introductory Lectures on Psychoanalysis*. The major division between Freudians and those of other schools is concerned with biological orientation and the *libido* theory, which consider that personality is based on biological drives, principally sexual, that are part of the body's heritage, and must pass through certain stages of development during the 1st five years of life; after completion of which they continue to influence behaviour throughout life.

The *non-libido* schools of Horney, Fromm, Adler, Sullivan, *et al.* consider that personality is a social product using biological energy, but suitably modified according to circumstances, strongly influenced but not confined by constitutional or developmental factors, which, in the main, are less important than cultural ones; and possessing needs which arise as much from the individual's society as from his biological make-up.

A difference in outlook exists in the older, more traditional countries, with their emphasis that the source of man's troubles lies deep within himself—biological justifications of original sin and predestination—and the strongly held views of new countries, that men are naturally good, are born free and equal

with nearly infinite potentialities; so that whatever troubles they encounter must be due to social or environmental factors. It is therefore interesting to see that the U.S.A. and the U.S.S.R. shared in the birth of Behaviourism (rejection of the concept of original sin in the form of innate ideas). Arising from the philosophies of John Locke and Rousseau, these ideas spread to the U.S.A. through Jeffersonian democracy; and to the U.S.S.R. by way of Karl Marx.

PTAH (tah). Ancient Egyptian god, one of the Memphis triad; he was the divine potter or artificer, the personification of creative force.

PTARMIGAN (tar'migan). The smallest grouse (*Lagopus mutus*) found in Britain. It also inhabits the Arctic, and its colour changes with its surroundings.

PTERIA. Classical name for BOGHAZKOI.

PTERODACTYL (terōdak'til). An extinct flying lizard, remains of which have been found in rocks of

PTERODACTYL

the Mesozoic age. Somewhat resembling a bat, it had a wing-spread varying from 1 ft. to about 20 ft. The head was bird-like, and the hind legs like those of a lizard, while the fore-legs bore long jointed fingers.

PTOLEMY (tol'emi). Name of a dynasty of Macedonian kings who ruled Egypt. Ptolemy I, one of Alexander's generals, seized Egypt in 323 B.C., and was succeeded by 12 kings of the same name. Ptolemy XIII was put to death in 47 B.C. by his sister Cleopatra, with whose death in 30 B.C. the dynasty ended.

PTOLEMY or **Claudius Ptolemaeus** (2nd cent. A.D.). Astronomer and geographer. A native of Egypt, he carried out observations in Alexandria, and pub. a *Geography*, which was a standard source of information until the 16th cent. The *Ptolemaic system*, which was not superseded by the Copernican until 1543, assumed that the earth was the fixed centre of the universe, with the sun, moon, and stars revolving round it.

PTOMAINES (tō'mā-in). A class of chemical substances produced by putrefaction. Ps. do not really play a part in food poisoning. 'P. poisoning' is, in fact, usually caused by bacteria of the *Salmonella* group.

PUBERTY (pū'-). The stage of human development in which the secondary sexual characteristics begin to appear and the individual becomes capable of reproduction. In boys it occurs at about 14; in girls usually a little earlier.

PUBES. The lowest part of the front of the trunk, the region where the external generative organs are situated. The underlying bony structure, the pubic arch, is formed by the union in the mid line of the two pubic bones, which are the front portions of the hip bones. In women it is more prominent than in men, to allow more room for the passage of a child's head at birth, and carries a pad of fat and connective tissue, the *mons veneris* (mountain of Venus), for its protection.

PUBLIC HOUSE. In England a house licensed for the consumption of intoxicating liquor, which may be either a 'free' or 'tied' house, according to whether supplies are bought from a particular co. owning the P.H. or whether the landlord has a free choice of suppliers.

the vapour compression cycle incl. carbon dioxide (used most in R. plants on ships), ammonia (generally in industrial and marine equipment), and Refrigerant-12 (dichlorodifluoromethane), the most useful fluid in domestic and small commercial plants such as are used in shops and markets.

REFUGEES. See **DISPLACED PERSONS**.

REGALIA or **Crown Jewels**. The symbols of royal authority. The British R. were broken up during the Commonwealth, with the exception of the ampulla and anointing spoon, and the present set mainly dates from after the Restoration. A daring attempt to steal them was made in 1671 by Colonel Blood, who was subsequently pardoned and pensioned by Charles II. Formerly kept in the Wakefield Tower, they were moved 1967 to the newly-built Crown Jewel House, in the Tower of London, and are elaborately guarded. Among the chief items are St. Edward's Crown; the Imperial State Crown; the jewelled Sword of State used only at the Coronation; the Sword of State used at the opening of Parliament and on other State occasions; the Curtana (Sword of Mercy); the Swords of Temporal and Spiritual Justice; the Orb; the Royal Sceptre or Sceptre with the Cross (containing the great Star of Africa, cut from the Cullinan diamond); the Rod with the Dove; St. Edward's Staff; the Spurs; the *Coronation Ring* (the 'Wedding Ring of England'); the Armlets (gold bracelets, given by the Commonwealth countries in 1953); the Ampulla (which contains the holy oil for the anointing); and the Anointing Spoon.

REGENCY STYLE. Style of architecture which prevailed in England during the latter part of the 18th cent. and the early part of the 19th cent. The style is characterized by its restrained simplicity, and its imitation of ancient classic architecture, especially Greek. The most famous architects of the period were Henry Holland, who designed many domestic buildings, John Nash (q.v.), and Decimus Burton, who designed the screen at Hyde Park Corner.

REGENSBURG (reh'gensboorg). City of Bavaria, W. Germany, on the Danube at its confluence with the Regen, 63 m. N.N.E. of Munich. Many fine medieval buildings remain. It is on the site of a Celtic settlement going back to 500 B.C., became the Roman *Castra Regina* in A.D. 179, a free city in 1245, and seat of the German Diet from the 16th cent. to 1806. It was incl. in Bavaria in 1810. Pop. (1966) 125,412.

REGENT. One who discharges the royal functions during the king's minority or incapacity. Since Henry VIII's reign a R. or council of regency has always been appointed by act of Parliament. The Prince of Wales, later George IV, acted as R. during George III's insanity, 1811-20; hence this period is usually referred to as 'the Regency'.

REGER (reh'ger), Max (1873-1916). German composer and pianist. He was b. in Bavaria, and became organist at Weiden. He taught at Munich, 1905-7, was professor at the Leipzig Conservatoire from 1907, and conductor of the Meiningen ducal orchestra 1911-13. He composed prolifically, but alcoholic excess led to his early death. His works incl. fine organ and piano music, chamber music and songs.

REGGIO (rej'ō). Port of Calabria, Italy, on the Straits of Messina, producing wine, oil, silk and perfumery. Pop. (1966) 161,270. Also, a town of Emilia, at the foot of the Apennines. Pop. (1966) 124,950.

REGINA (rej'nā). Cap. of Saskatchewan prov., Canada, 357 m. W. of Winnipeg. It is the heart of a grain and oil producing region, and growth has been stimulated by the development of potash resources of the prov.: industries incl. oil refining, cement, steel, farm machinery, fertilizers, and flour. It was founded 1882 on a site where Indians had piled the bones of slain buffalo, hence nicknames such as Bone Creek, but was called Regina in honour of Victoria, and is known as Queen City of the Plains. The Mounties'

museum is a tourist attraction. Pop. (1966) 131,127.

RÉGNIER (rehnyā'), Henri François Joseph de (1864-1936). French symbolist writer. He won fame as a poet with *Les Médailles d'argile*, etc., but his realistic novels, such as *La Double Maîtresse* were also successful.

REICH (rikh). The German state. The Nazi régime was known as the 3rd R., the 1st generally being identified with the Holy Roman Empire, and the 2nd with the German Empire of 1871-1918.

REICHSTADT, Duke of. See **NAPOLEON II**.

REICHSTAG (rikhs'tahg) **FIRE**. The burning of the Reichstag building at Berlin on 27 Feb. 1933, which was probably organized by Nazis, led by Goering, and by them attributed to the Communists. Van der Lubbe, a half-witted Dutchman who was probably a Nazi tool, Torgler, a Communist deputy, and Dimitrov (q.v.), Popov, and Tanev, Bulgarian Communists, were tried at Leipzig. Dimitrov's defence forced the court to acquit all the prisoners except Van der Lubbe, who was executed.

REID, Sir George Houston (1845-1918). Australian statesman. B. in Renfrewshire, he was taken to Australia in 1852, and became Prime Minister of the Commonwealth 1904-5. After serving as High Commissioner in London 1910-16, he was elected a Cons. member of the *English House of Commons*.

REID, Thomas (1710-96). Scottish philosopher. B. in Kincardineshire, he became a Presbyterian minister, and in 1764 succeeded Adam Smith as prof. of moral philosophy at Glasgow. He wrote an *Enquiry into the Human Mind on the Principles of Common Sense* (1764), and other works in which he elaborated his 'common-sense philosophy'. There are certain self-evident things, he maintained, such as the material external world and the human soul, which are believed to exist by 'the consent of ages and nations, of the learned and unlearned'.

REID, Thomas Mayne (1818-83). Irish novelist, b. in co. Down, Ireland. After a dozen years of adventure in America, including active service in the Mexican War of 1846, he settled in England in 1850, and wrote books for boys, e.g. *The Rifle Rangers* (1850).

REIGATE (ri'gāt). English market town (bor.) in Surrey, 20 m. S. of London, at the foot of the N. Downs. R. grew up round a Norman castle, built by the Warenne family and destroyed during the Civil War. Pop. (1961) 53,710.

REIMARUS (rimah'roos), Hermann Samuel (1694-1768). German philosopher and scholar. B. at Hamburg, he was prof. of Hebrew there from 1727. In writings published posthumously by Lessing, he adopted an attitude towards Christianity that won him the title of the first of the biblical higher critics.

REIMS (rēmz; Fr. rañs). City in Marne dept., N.E. France, 80 m. E.N.E. of Paris on the Vesle, the Roman *Durocorturum*; from 987 all but six French kings were crowned at R. Ceded to England by the 1420 treaty of Troyes, the city was retaken by Joan of Arc, who in 1429 had Charles VII. consecrated in the cathedral built during the 13th cent. The Mars Gate dates from the 4th cent. R. is the seat of an archbishopric, and the centre of the great champagne industry. Woollen and other textiles are manufactured. Pop. (1962) 138,576.

REINACH (ri'nahkh), Joseph (1856-1921). French politician. He sat in the Chamber of Deputies 1889-98 and 1906-14, championed many social reforms, and strongly opposed Gen. Boulanger. Himself a Jew, he was among Dreyfus' (q.v.) most active supporters. His brother Salomon R. (1858-1932), a distinguished archaeologist, was appointed keeper of the national museums in 1902.

REINCARNATION. The doctrine that the soul after death may enter another human body or that of an animal. It has appeared in the teachings of many religions and philosophies, e.g. Buddhism, Hinduism,

PUMICE. A volcanic igneous rock. It is very porous and composed mostly of cavities, and has various commercial applications.

PUMPKIN. Genus of annual plants (*Cucurbita*) in the family Cucurbitaceae, probably native to the warmer regions of America and some of which are known in the U.S.A. as squashes, especially the more bushy kinds. The chief species are the common P. (*C. pepo*), of which the vegetable marrow is probably a variety, which has broad, lobed leaves on long trailing stems, and yellow flowers followed by an edible fruit which may weigh up to 100 lb.; the great gourd (*C. maxima*) which may have a fruit double this size; and the musk P. (*C. moschata*) with a musky smell and more elongated fruit: all are commercially important, and are also cultivated in warmer parts of Europe.

PUNCH. Alcoholic liquor compounded of spirits, fruit juice, sugar, spice, and hot water. P. originated in India.

PUNCH. Shortened form of the name Punchinello. The hero of the puppet play 'P. and Judy', in which he overcomes or outwits all opponents, P. has a hooked nose, hunched back, and a squeaky voice. The play is performed by means of glove puppets, manipulated by a single operator concealed in a portable canvas stage frame. P. originated in Italy, and was probably introduced to England at the Restoration.

PUNIC WARS (pū'-). The wars between Rome and Carthage. The 1st (264-241 B.C.) resulted in the cession of Sicily to Rome. During the 2nd (218-201 B.C.) Hannibal invaded Italy, but was finally defeated at Zama. The 3rd (149-146 B.C.) ended in the destruction of Carthage.

PUNJAB (punjabh'). Division of the Indian sub-continent in the N.W. P., meaning 'five rivers', so called from the tributaries of the Indus (Jhelum, Chenab, Ravi, Beas, Sutlej) flowing through it. The chief crops are cotton, sugar, wheat, rice.

Punjab was annexed by Britain in 1849, after the Sikh Wars of 1845-6 and 1848-9, and formed into a prov. with its cap. at Lahore, area 99,000 sq. m. West P., cap. Lahore, area 51,500 sq. m., was a prov. of Pakistan 1947-55 when it was merged in W. Pakistan. E. P., later called simply P., was a prov., then a state of the Union of India.

PUNJAB, state of India, was formed in 1956 from the E. part of the former British prov. of P. and a number of princely states within the area, the largest of which was Bahawalpur.

Violent agitation led in 1966 to P. being split on a linguistic basis into 2 new states (joint cap. Chandigarh), known as *Punjab* (Punjabi-speaking) area 29,205 sq. m., pop. 12,000,000, over half being Sikhs; and *Haryana* (Hindi-speaking) area 17,600 sq. m., pop. 7,000,000; with certain hill areas (pop. 1,500,000) being transferred to Himachal Pradesh. After its creation H. remained chronically unstable politically, and in 1968 president's rule was proclaimed.

PUNTA ARENAS (poon'tah ahra'nahs). Chilean seaport, cap. of Magallanes prov., on Magellan Strait, most southerly town on the American mainland. It is the centre for an area producing coal, copper, gold, timber, wool, meat, and other animal products. The name (Spanish) means sandy point. Pop. (1966) 45,000.

PUPPET. Human, animal, or fantasy figure manipulated on a miniature stage by an unseen operator, although in Japan (*bunraku*) 4 operators, dressed in black to convey invisibility, may combine to manipulate one large puppet, sharing body, head, arms and legs among them. Ps. are of great antiquity (10th cent. B.C. in China) and of world-wide distribution. The main forms are the glove Ps. (see *PUNCH*), string marionettes (q.v.), and rod-operated Ps. which may be seen only as shadows on a screen—the illustrated

shadow plays of Java being of this type.

PURANAS. Religious Sanskrit epics dealing with the mythology of the Hindus, and dating probably from the 8th cent. A.D.

PURBECK, Isle of. A peninsula in Dorset, England, between the English Channel, and Poole Harbour to the N. It is c. 8 m. N. to S., 12 m. E. to W. P. marble and china clay are obtained from the 'isle', which incl. Corfe Castle and Swanage.

PURCELL, Henry (1659-95). English composer. B. at Westminster, he became a chorister at the Chapel Royal, and subsequently was a pupil of Dr. John Blow. In 1677 he was appointed composer to the Chapel Royal, and in 1679 organist at Westminster Abbey. As composer to the king, P. set to music odes or anthems. *Dido and Aeneas* (1689) was a landmark in the history of opera. P. wrote music for Dryden's *King Arthur* (1691), and for *The Fairy Queen* (1693). The P. Society was formed in 1876.

PURCHAS, Samuel (c. 1575-1626). English compiler of travel books, rector of St. Martin's, Ludgate, 1614-26. His collection *P. his Pilgrimage* (1613), was followed by another in 1619, and in 1625 by *Hakluytus Posthumus, or P. his Pilgrimes*, largely based on MSS. left by Hakluyt.

PURGATIVES. Drugs which accelerate or make easier the emptying of the bowel. Laxatives (mild Ps.) incl. bran and agar (bulk laxatives), and liquid paraffin, or agar (lubricants). Saline Ps. incl. Epsom salts and sodium phosphate. Mild irritant Ps. are castor oil, cascara, aloes, rhubarb, and senna.

PURGATORY. Theological term for a state or place of purification of the souls after death. It is held by Roman Catholics, who also believe that its duration may be lessened by the prayers of the faithful.

PURI (poor'ē). Town in Orissa, India, on the Bay of Bengal. The shrine of Juggernaut (q.v.) is there, dating from c. A.D. 318; the annual festival attracts thousands of pilgrims. Pop. (est.) 50,000.

PURITANS. Term applied after 1564 to those members of the C. of E. who wished to eliminate Catholic survivals in its ritual, or who wished to substitute a presbyterian for the episcopal form of church govt. The term is used to cover also the Separatists, who withdrew from the Church altogether. Under James I and Charles I the Ps. came to be identified with the parliamentary opposition. After the Restoration they were driven out of the Church, and the term P. was replaced in general use by 'Dissenter' or 'Nonconformist'.

PURPLE HEART, Order of the. The earliest

PUPPET. Made of paper-thin leather, the puppets of this Wayang shadow play are manipulated against a white screen; women are allowed only on the darkened further side, but men and boys are permitted to watch the puppeteer at work. The traditional stories of the Hindu epics are still popular today. Courtesy of Indonesian Embassy.

provided nothing but naive tales and observations, and the Reformation had a narrowing influence. Really serious comparative work did not begin until the 17th cent., when the Jesuits in China produced some interesting studies. Towards the end of the 18th cent. a little body of English missionary scholars in Calcutta began to study the sacred books of India. An immense stimulus was given to the investigation of religious beliefs by the Darwinian theory of Evolution. Notable workers in the field incl. Max Müller, Sir James Frazer, Sir E. B. Tylor, Andrew Lang and R. C. Zaehner. Much of the raw material of the science has been provided by Christian missionaries. The more recent observers have been field anthropologists.

REMARQUE (rehmahrk'), Erich Maria (1898–). German novelist. B. at Osnabrück, he served as a soldier in the F.W.W., and his anti-war sentiments, expressed in his most famous book *All Quiet on the Western Front* (1929), led to his being deprived of his German nationality in 1938; he eventually settled in the U.S.A. in 1939, and later became an American citizen. Later books incl. *The Arch of Triumph* (1946) and *A Time to Live and a Time to Die* (1954).

REMBRANDT, Harmensz van Rijn (1606–69). Dutch painter and etcher. B. in Leyden, the son of a wealthy miller, he studied under Swaneburch, an architectural painter of Leyden, and for a short

REMBRANDT. One of more than 60 known self-portraits.
Courtesy of the Walker Art Gallery.

time under Peter Lastman in Amsterdam. The greatest painter of the Dutch school, he is famous for his masterly treatment of light and shade, his portraits of old people, and his great gift for depicting objects which are commonly regarded as ugly – e.g. 'Sirloin of Beef', and 'Slaughtered Ox' – as things of beauty. He is also the greatest of etchers. His earliest pictures – e.g. 'St. Paul in Prison' and 'St. Jerome' – were painted in Leyden, but most of his work was executed in Amsterdam, where he settled in 1631. He is said to have visited England about

1661–2. In 1656 he was declared bankrupt, and a collection of his etchings and drawings were sold for a fraction of their value. But he continued to work diligently, and in the closing years of his life he produced some of his best works. Besides those mentioned, his most famous works incl. 'Presentation in the Temple', the 'Anatomy Lesson', 'The Night Watch', 'Woman Taken in Adultery', 'The Good Samaritan', and a number of self-portraits.

REMEMBRANCE SUNDAY. National Day of Remembrance for both world wars. A 'two-minute silence' is observed at the actual time of the signature of the Armistice with Germany on 11 Nov. 1918 in the F.W.W., and services of commemoration are held, with wreaths of 'Flanders poppies' being laid at the Whitehall Cenotaph and elsewhere. The poppies are also worn by individuals and are made and sold by disabled members of the British Legion in aid of war invalids and their dependants. Observed 1919–45 as Armistice Day (always on 11 Nov.), it was then renamed R.S. and observed on the 1st or 2nd Sunday of the month: since 1956 it has been fixed as the 2nd Sunday.

REMINGTON, Philo (1816–89). American inventor. B. at Litchfield, New York, he is chiefly remembered as the inventor of the R. typewriter.

REMIZOV (reméz'of), Aleksei Mikhailovich (1877–

1957). Russian writer. B. in Moscow, he was expelled from the univ. there for political activities, and from 1921 lived in exile. His works are varied in form and remarkable for their verbal artistry which has influenced later writers: they incl. *Chasy* (1904; *The Clock*), *Pyataya yazva* (1912; *The Fifth Pestilence*) – both novels – and an autobiography which appeared in 1951.

RENAISSANCE (Fr. rebirth). The intellectual movement, which originated in 14th–16th cent. Italy, and spread over W. Europe in the 16th cent. Among its outstanding characteristics were an emphasis on the potentialities of the individual and this life; the belief in the power of education to produce the 'complete man', the man of action who is also master of all the culture of his age; the desire to enlarge the bounds of learning; the growth of scepticism and free thought; and the acceptance of Greek and Latin literature and art as models.

The beginning of the Italian R. is usually dated in the 14th cent. with the work of Dante, Petrarch, and Boccaccio; in the 16th it was almost extinguished by the Counter-Reformation. From Italy the humanists, such as Erasmus, spread the enthusiasm for classical learning through W. Europe, and during the 16th cent. the ideals of the R. came gradually to dominate French, Spanish, and English culture. The invention of printing and the geographical discoveries gave a further impetus to the new spirit. Biblical criticism of Erasmus and others contributed to the Reformation, and although the 2 movements often came into conflict, such writers as Spenser and Milton successfully reconciled their ideas. Apart from those named, typical figures of the R. were Machiavelli, Ariosto, da Vinci, Michelangelo, Tasso, Bruno, Galileo and Campanella in Italy; Rabelais and Montaigne in France; Cervantes in Spain; Camoens in Portugal; Copernicus in Poland; and More, Sidney, Marlowe, Shakespeare and Bacon in England.

RENAN (renon'), Joseph Ernest (1823–92). French philosopher and religious historian. B. at Tréguier, he at first studied for the priesthood, but devoted himself to independent researches into biblical history. His *Life of Jesus* (1863) was strongly criticized for its rationalizing tendencies. Later works are on Paul, Marcus Aurelius, and the history of Israel. *Souvenirs d'Enfance* (1883) is autobiography.

RENAULT, Mary. Pseudonym of novelist Mary Challans (1905–). Originally a nurse, she has made her name with her re-creations of the myths and history of ancient Greece, e.g. the trilogy dealing with Theseus: *The Last of the Wine* (1956), *The King Must Die* (1958), and *The Bull From the Sea* (1962).

RENFREW (-froo). Royal burgh and co. town of Renfrewshire, Scotland, near the Clyde, 5 m. W.N.W. of Glasgow. It has a shipbuilding industry. Pop. (1961) 17,946.

RENFREWSHIRE. W. country of central Scotland bordering the Firth of Clyde. Undulating country is drained by the Gryfe, White and Black Cart, and provides good pasture. Coal, iron, and ironclay are mined, granite quarried, and thread produced at Paisley. Cotton and flax spinning and woollen manufacturing are other staple occupations. Renfrew is the cap.; other towns incl. Paisley, Greenock, and Port Glasgow. Area 240 sq. m.; pop. (1961) 338,815.

RENAISSANCE. Incarnation of the ideal, many-gifted man, Leonardo da Vinci – a self-portrait drawn in chalk.

PYRAMUS AND THISBE. Babylonian lovers whose story is told by Ovid. T. lost her veil when pursued by a lion, which tore it to pieces. It was found covered with blood by P., who believing her to be dead stabbed himself. On finding his body she killed herself.

PYRENEES (pir'enēz). Mountain range of S.W. Europe, separating the Iberian peninsula from France. The Ps. extend c. 270 m. from the Bay of Biscay to the Mediterranean and vary in width from 25 m. to 90 m. The central P. incl. Aneto, Fr. Néthon (11,168 ft.), Posets (11,047 ft.), and Mont Perdu (Span. Perdido, 10,997 ft.). The range gives its name to three French depts., Basses-P., Hautes-P., and P.-Orientales.

Agreement was reached in 1962 between France and Spain for the construction of a tunnel nearly 2 m. long to link Aragnouet, S.E. of Tarbes, France, with Bielsa, Spain.

PYRETHRUM (pīrē'thrum). Sub-division of the genus *Chrysanthemum* in the family Compositae. The ornamental species *C. coccineum* is commonly grown in gardens, and feverfew (*C. parthenium*) is a British wild flower. P. powder is a powerful contact insecticide for aphids, mosquitoes, etc.

PYRIDINE (pīr'idin). A liquid base (C_4H_5N) occurring in coal tar and bone oil. It has a sickly odour, is soluble in water, and is used as a solvent.

PYRITES. See IRON PYRITES.

PYROGALLIC (pīrō-) ACID or Pyrogallol. An acid ($C_6H_3(OH)_3$) prepared from gallic acid. It is used in photographic developers and for the estimation of oxygen in gas analysis.

PYROMETER. Instrument for measuring high temperatures: 3 typical types are thermoelectric, optical, and radiation. Resistance thermometers are sometimes used as Ps.

PYROXENE (pī'roksēn). An important group of minerals, occurring as brown, green, or black rocks. They are silicates of calcium, magnesium, iron, etc.

PYRRHIO (pīr'ō) (c. 360–270 B.C.). Greek philosopher. B. at Elis, he maintained that as it was impossible to attain certainty, man should seek peace of mind by renouncing all claims to knowledge.

PYRRHIUS (pīr'us) (c. 318–272 B.C.). King of Epirus, who in 280 invaded Italy as the ally of the Tarentines against the Romans. Although he twice defeated them, he suffered heavy losses (hence 'a

Pyrrhic victory'). Defeated at Beneventum in 275, he returned to Greece.

PYTHAGORAS (pīthag'ōras) (c. 570–500 B.C.). Greek philosopher. B. in Samos, he settled in Croton in S. Italy, and there founded a religious brotherhood which exercised great influence in politics until it was suppressed in the 5th cent. Their doctrines incl. the immortality of the soul and its transmigration. They devoted much attention to mathematics, and anticipated much of Euclid's work in geometry. P.'s theorem states that in a right-angled triangle the square on the hypotenuse is equal to the sum of the squares on the other 2 sides.

PYTHAGORAS OF RHEGIUM (rē'ji-um). Greek sculptor of the 5th cent. B.C. B. at Samos, he settled in Rhegium, Italy, and estab. a reputation for his statues of athletes.

PYTHEAS (pīth'e-as)

(4th cent. B.C.). Greek navigator of Marseilles, who explored the W. coasts of Europe at least as far as Denmark, travelled through Britain, and visited 'Thule', probably the Shetlands.

PYTHIAN GAMES (pīth'ian). Ancient Greek festival in honour of Apollo, celebrated near Delphi every 4 years.

PYTHIAS. In Greek story, a Pythagorean whose friend Damon offered his own life as security when P. was condemned to death by a tyrant.

PYTHON (pī'thon). Genus of tropical snakes in the Boa family. They are non-poisonous, but kill

PYTHON

their prey by constriction. They grow to 30 ft. in length.

PYX. Vessel used in R.C. churches for the reservation of the blessed sacrament. The Trial of the P. is the test of the coinage by a goldsmith, at the hall of the Goldsmiths' Company, London, and is so called from the P. or box, in which specimens of each variety of coin minted are preserved.

Q 17th letter of the alphabet, representing *koppa* of the earliest Greek alphabet. In Latin, as in English, it is always followed by *u*: *qu*, pron. *kw*.

QATAR (kah'tahr). Sheikdom occupying Q. peninsula in eastern Arabia which stretches c. 130 m. into the Persian Gulf. Q. is in exclusive treaty relations with the U.K., agreed 1916. The discoveries of rich petroleum deposits soon after the S.W.W. gave its ruler great wealth, production is about 10,000,000 tons annually. The cap. is Doha (pop. 50,000) and the oil terminal at Umm Said is being developed as a port. Area c. 8,000 sq. m.; pop. (1967) 75,000.

QATTARA (kah'tah'rah). A tract of the W. Desert, Egypt. It lies up to 400 ft. below sea-level and consists of very soft sand and, being virtually impassable to vehicles, it afforded protection to the left flank of the Allied armies before and at the battle of Alamein in 1942. Area 7,500 sq. m.

QISARAYA. Small port in Israel, on the Mediterranean coast 32 m. N. of Tel Aviv-Jaffa. It is on the site of ancient Caesarea, founded by Herod 13 B.C., where Paul was imprisoned for two years.

QUAESTOR (kwē'-). A Roman magistrate whose duties were mainly concerned with public finances. The Qs. originated as assistants to the consuls. Both urban and military Qs. existed, the latter being attached to the commanding generals in the provinces.

QUAGGA. Extinct species of wild horse (*Equus quagga*), resembling the

QUAGGA

at the Accademia di Santa Cecilia in Rome. He composed operas, and orchestral works of a descriptive nature, e.g. *Fontane di Roma*, etc.

RESPIRATION. The process by which the blood gives up carbon dioxide and is charged with oxygen. Used blood is forced into the lungs by the contraction of the right ventricle of the heart; there it passes through fine capillary vessels with very thin walls in contact with the air cells. From these the blood takes up oxygen (about 4 per cent of the total volume of the air), giving up the same quantity of carbon dioxide, together with water and small quantities of ammonia and waste matter. The rate of R. at rest in the adult is about 18 to the minute; during sleep it becomes slower, and during exertion, emotion, or fever it may be much increased.

RESTIF DE LA BRETONNE (râtēs' de lah breton'), Nicolas Edmé (1734–1806). French author. B. at Sacy, he led an adventurous life and is remembered for the licentious novel *Le Paysan pervers* and the autobiography *Monsieur Nicolas*. His *Les Nuits de Paris*, an intimate record of the lower depths of the city 1786–93, is invaluable to the social historian.

RETRIEVER. Breed of sporting dog. The flat or wavy-coated R. was derived from the Labrador R. and the setter or collie. The head and neck are long, the body rather short, and the coat black or liver-coloured. The curly-coated R. is partly derived from the poodle and is usually black.

RETZ, Gilles de. See RAIS.

RETZ (räs), Jean François Paul de Gondi, Cardinal de (1614–79). French politician. A churchman with political ambitions, he stirred up and largely led the insurrection of the Fronde (q.v.). After a period of imprisonment and exile he was restored to favour in 1662 and created abbot of St. Denis. His *Memoirs* are of great historical interest.

REUNION (rä-ün-yoh'). French is. in the Indian Ocean, 420 m. E. of Madagascar. In Piton des Neiges it rises to over 10,000 ft. The climate is fairly good; sugar, rum, and manioc are produced. St. Denis is the cap. R. was discovered by a Portuguese navigator Pedro de Mascarenhas in 1513, annexed by Louis XIII (who named it Bourbon) in 1642, and remained French except for 1810–15 when it was in English hands. Area 970 sq. m.; pop. (1966) 408,541.

REUTER (rä-ü'ter), Paul Julius, baron de (1816–99). Founder of Reuters international news agency. B. at Cassel, Germany, he began a continental pigeon post in 1849, and, with improved telegraphic communications, he planned to estab. a news agency in Paris. Govt. restrictions there prevented this, and in 1851 he set up his office in London. Not until 1858, however, did he persuade the Press to use his news telegrams from the Continent, in which year the service also became world-wide. Under Sir Roderick Jones (1877–1962), Reuters became a private trust in 1916, and was taken over by the Newspaper Proprietors' Association 1926–41.

REVAL, REVEL. See TALLIN.

REVERE, Paul. See LEXINGTON.

REVOLVER. See FIREARMS.

REVUE. A stage presentation originating as a loosely constructed satire on current events. Although in some measure retaining this form the R. often implies merely a variety of scenes.

REYKJAVIK (rä'yahvik). Cap. and chief port of Iceland, on its S.W. coast. It has a univ. founded in 1911, and a cathedral. Many of the houses are wood. It is a modern city, heated by underground mains fed by the volcanic springs to the E. Pop. (1966) 79,202.

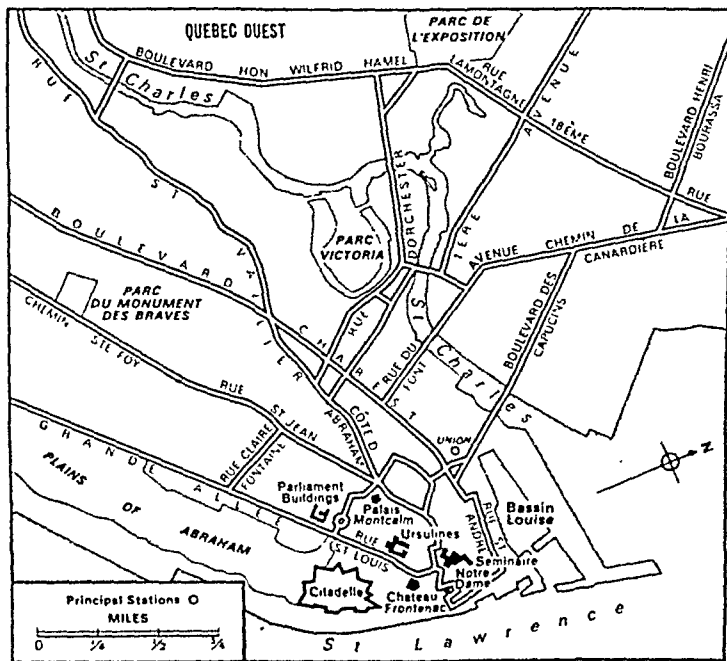

REYNOLDS. A study, dated 1765, of the wife and daughters of James Paine (1725–89), architect of Kedleston Hall and other country houses, in the grand manner of Vanbrugh. Polly, the younger daughter, later married Tilly Kettle (c. 1740–86), an artist whose portraits are so similar to those of Reynolds as to be mistaken for the work of the master. See portrait of Warren Hastings. Courtesy of the Lady Lever Collection.

REYNAUD (rānō'), Paul (1878–1966). French politician. He entered the Chamber of Deputies in 1928, and was Finance Min. 1938–40. He succeeded Daladier as P.M. in March 1940, but resigned in June, after the German break-through. He was held a prisoner until 1945, first in France, and later in Germany. In 1953–4 he was a deputy premier in the Laniel govt.

REYNOLDS, Sir Joshua (1723–92). British artist. B. near Plymouth, he went to London at the age of 17, and was apprenticed to Thomas Hudson, a mediocre portrait painter. From 1743 he was active as a portrait painter in London and Plymouth, but in 1749 went abroad to complete his studies. He spent over 2 years in Rome, visited other Italian cities, and settling in London in 1752 he became the most famous portrait painter of his day and the first president of the R.A. (1768). He was a life-long friend of Dr. Johnson, and at R.'s suggestion the 'Literary Club' was founded in 1764. He painted portraits of Johnson, Goldsmith, Garrick, and other famous people of his day, in a style synthesized from that of the old masters, but overlaid with his own inventiveness. He was knighted in 1768. His artistic theories are propounded in his *Discourses*.

RHE'A. Genus of birds, found only in S. America. They are incapable of flight, and differ from the ostrich in having a feathered neck and head and three-toed feet, and in their smaller size. There are 3 species, *R. americana*, *R. darwini*, and *R. macrorhyncha*.

RHEE, Syngman (1875–1965). Korean politician. A rebel under Chinese rule, he was imprisoned 1897–1904, during which time he became a Christian convert. After some years in America he went back to Korea in 1910 to agitate against the now prevailing Japanese control, and was expelled until his return in 1945. Pres. of the Korean Rep. from 1948 until riots forced him to resign and leave the country in

QUEBEC

mountains, an extension of the Appalachians, and to the N. by the Laurentian plateau, much of which is densely forested, and which forms the major portion of the province. The chief natural resources are abundant timber and water power, provided by the many rivers and lakes, vast iron deposits in Ungava region, asbestos, mica, copper, lead-graphite, and other mineral deposits. The climate is severe but healthy. Growing industries incl. pulp and paper, chemicals, non-ferrous metals, textiles, electrical goods, aircraft, railway rolling stock, and food processing. Agriculture remains important, with oats and other grain, fodder crops, dairy produce, maple sugar and fruit; and forestry, fishing, fur-trapping and fur-ranching are also carried on. The largest cities are

QUEBEC. Industrial development is rapidly dispelling the conception of the province as merely picturesque. The Arvida aluminum smelter, with a capacity of 373,000 short tons, is the world's largest and with ancillary buildings covers an area 1 1/2 miles long by 1 mile wide. In the background is the Saguenay river and the town of Chicoutimi.
Courtesy of the Aluminum Company of Canada Ltd.

Montreal, Q. (the cap.). Verdun, Three Rivers, Sherbrooke, and Hull. There are 4 R.C. univs., Laval (1852), Montreal (1920), Sherbrooke (1954) and Quebec (1969), and 3 Protestant, McGill (1821), Bishop's (1845) and Sir George Williams Univ. (1929). The educational system is organized throughout on a denominational basis. The Lieut.-Gov. is assisted by a Legislative Council, members appointed for life, and a Legislative Assembly, elected for 5 years. In the 1960s there was a resurgence of nationalism in Q., a renewal of cultural links with France, and a call for greater powers for member states under a revised Canadian constitution.

Area 594,860 sq. m.; pop. (1966) 5,780,845 (the majority Roman Catholics of French stock).

QUEBRACHO (kebrah'cho). The name of several S. American trees with very hard wood. The bark of the White Q. (*Aspidosperma* Q.) is used medicinally; the Red Q. (*Quebrachia Lorentzii*) is used in tanning.

QUEEN CHARLOTTE ISLANDS. Canadian group of is. lying c. 100 m. off the coast of British Columbia, to which it belongs politically. Graham and

Moresby are the largest is. Lumbering, fishing, and cattle raising are the chief industries. The Q.C.I. were visited by Juan Perez in 1774, by Cook in 1778.

Area 3,780 sq. m.; pop. (est.) 3,000.

QUEEN'S AWARD TO INDUSTRY. The Award made (from 1966) to organizations, not individuals, to recognize export and technological achievement: holders are entitled to display the special emblem for 5 yrs. Limited in no., they are granted annually on the birthday of Queen Elizabeth II (21st April).

QUEENSBERRY. John Sholto Douglas, 8th marquess of (1844-1900). British administrator and sportsman. He succeeded to the title in 1858, and 1872-80 served as a Scottish representative peer. In 1867 he drew up the Q. rules which govern boxing.

QUEEN'S COUNSEL. See **KING'S COUNSEL**.

QUEEN'S COUNTY. See **LAOIGHIS**.

QUEENSLAND. A state of the Commonwealth of Australia, comprising the whole N.E. portion of the continent. The Great Dividing Range runs parallel to the E. coast for 1,000 m. to the frontier with New South Wales in the S., the greatest height being Mt. Bartle Frere (5,438 ft.). The Great Barrier Reef (q.v.) lies off the N.E. coast. The main rivers are the Burdekin, Fitzroy, Flinders, and Mitchell. The climate of most of Q. is tropical but not unhealthy. Almost all land is state owned and leased. Cattle and sheep are reared; cereals, fruit, cotton, sugar and tobacco grown; and dairying and forestry are important. Minerals incl. bauxite, coal, gold, copper, lead, zinc, and oil and natural gas W. of Brisbane. Tourism is increasingly important. See illus. p. 884. There are factories for processing the primary products. The chief towns are Brisbane (the cap.), Townsville, Rockhampton, Toowoomba and Ipswich. Q. has a Gov., assisted by an Executive Council, and a single-chamber Legislative Assembly. Until 1859 Q. formed part of New South Wales. A no. of scattered is. beyond the Barrier Reef were created a Fed. Terr. 1969. Area 670,500 sq. m.; pop. (1966) 1,663,685.

QUEEN'S PROCTOR. See **KING'S PROCTOR**.

QUEENSTOWN. Former name of **CPHIL**.

RHODESIA. One of the country's most important products, tobacco is still reaped mainly by hand, as on this farm near Salisbury. Courtesy of the High Commissioner for Rhodesia.

responsible govt in 1923, was a member of the Federation of R. and Nyasaland 1953-63, and under the new constitution of 1961 incl. Africans for the first time in the enlarged Legislative Assembly. Southern R. became known as R. in 1964, after the creation of Zambia, and pressure mounted for full independence. The British govt. stipulated that the terms must be acceptable to all R.'s citizens, and 11 Nov. 1965 R. made a Unilateral Declaration of Independence (U.D.I.). The U.K. imposed trade restrictions and an oil embargo, and in 1966 (following a Commonwealth Conference) an attempted negotiated settlement on board H.M.S. *Tiger* with the Rhodesian Front regime, led by Ian Smith (q.v.), failed and mandatory sanctions were imposed by the U.N. Further discussions 1968 between Smith and Harold Wilson in H.M.S. *Fearless*, again off Gibraltar, were also abortive. A referendum held by Ian Smith in 1969 approved a republican constitution, under which there would be racial separation of the voters' rolls, but African representatives would continue to sit in Parliament: eventual African majority rule was precluded. See ZIMBABWE.

RHODIUM (Gk. *rhodon*, rose). Silvery-white metal of the platinum family, symbol Rh, at. wt. 102.91, at. no. 45, discovered in 1803 by Wollaston. Its salts form red solutions, and it is found native with platinum in river sands in the Urals and the Americas. Used in thermocouples and in electro-plating, it gives a corrosion-free highly polished surface, superior to that of chromium.

RHODODENDRON

RHODODENDRON. A genus of evergreen and deciduous shrubs in the family Ericaceae. The ovate leaves are often dark and leathery, and the large racemes of flowers occur in all colours except blue.

RHONDDA (ron'dha). Welsh coal-mining town (bor.) in Glamorganshire, comprising 2 main valleys in the E. of the S. Wales coal area; it also has many light industries. Pop. (1961) 100,314.

RHÔNE (rôn). Large river of S. Europe. It rises in Switzerland, flows through the Lake of Geneva to Lyons in France, where at its confluence with the Saône the upper limit of navigation is reached. The river turns due S., passes Vienne and Avignon, and

takes in the Isère and other tributaries. Near Arles it divides into the Grand and Petit R., flowing respectively S.E. and S.W. into the Mediterranean W. of Marseilles, and forming a two-armed delta; the area between the distributories is the Camargue, a desolate, mosquito-plagued marsh c. 300 sq. m. in extent, the haunt of flamingo and other birds. Drainage has brought parts of the Camargue under cultivation, especially for rice. The Rhône is harnessed for hydro-electricity, the chief dam being at Genissiat in the dept. of Ain, constructed 1938-48.

RHUBARB (rōb'-). Perennial plant (*Rheum hybridum*) grown for its edible leaf stalks. The leaves are poisonous. The roots of *R. palmatum* are used medicinally.

RHYME or **Rime**. A feature of verse which arises from identity in sound of the endings of certain words. Although avoided in Japanese verse as a blemish, it exists in most Asiatic and modern European languages. It was, however, unknown in classical Greek and Latin verse, and in Anglo-Saxon and other old Teutonic poetry its place was taken by alliteration. R. first appeared in W. Europe in late Latin poetry.

RHYS (rēs), Jean (1894-). British novelist. Dau. of a Creole (Dominica) mother and a Welshman, she pub. *Voyage in the Dark* (1934) and other books before the S.W.W., but made a wide reputation with *Wide Sargasso Sea* (1966), recreating the early life of the mad Creole wife of Rochester in *Jane Eyre*.

RIBBENTROP, Joachim von (1893-1946). German Nazi leader. B. in the Rhineland, he served in the F.W.W., and subsequently became a champagne-salesman. He joined the Nazi Party in 1932, acted as Hitler's adviser on foreign affairs, and was German ambassador to Britain 1936-8. As For. Min. 1938-45, he was largely responsible for Germany's aggressive foreign policy. He was tried at Nuremberg as a war criminal in 1946, and hanged.

RIBERA (rēbā'rah), Jusepe (1591-1656). Spanish painter and etcher. B. near Valencia, he went to Italy where he was known as *Spagnoletto* ('Little Spaniard'). He was a realistic painter, and was fond of depicting gruesome subjects, e.g. the 'Martyrdom of St. Bartholomew'. His etchings show great originality.

RIBS. Twelve curved bones with cartilage on each side of the chest. At the rear each pair is joined to one of the vertebrae of the spine. The upper 7 are 'true' ribs, because they are joined by cartilage directly to the breast bone (sternum); the 8th, 9th and 10th are each joined by cartilage to the rib above; the 11th and 12th ('floating ribs') are not attached in front at all. The Rs. protect the lungs and heart and at the same time allow the chest to expand and contract easily.

RICE. A crop that grows best on low river flats subject to frequent flooding, rice can also be planted - as is being done here in Java - on terraced hillsides which are specially irrigated. Courtesy of Indonesian Embassy.

the Cordillera, and although only 14' S. of the equator, has a climate of perpetual spring owing to its height. Notable are the cathedral, univ. (1787) and Jesuits' church. Q. is the principal textile centre of Ecuador; it also makes beer, flour, leather, ceramics, chemicals; soap; gold, silver and other metal articles. It is the seat of an archbishopric. Pop. (1955 est.) 237,103.

QUIXOTE, Don. See CERVANTES.

QUMRAN (koomrahn'), Khirbet. Ruined site, excavated from 1951, in the foothills on the N.W. shores of the Dead Sea. Originally an iron age fort (6th cent. B.C.) it was occupied in the late 2nd cent. B.C. by a monastic community, the Essenes (q.v.),

until the buildings were burnt down in A.D. 68. The Dead Sea Scrolls (q.v.) comprise their library, hidden for safekeeping and never reclaimed.

QUOITS (koits). Game in which a heavy, sharp-edged, iron ring or quoit is thrown, over or near to an iron 'hob' from 18 yards distance, where is placed a second hob. A circular clay area surrounds each hob, and play proceeds as in bowls, from end to end, 2 points being awarded for a 'ringer' and 1 for the quoit nearest the hob. The quoit weighs 7-9 lb., and has an 8 in. diameter.

QUORUM (kwō'rūm). A minimum number of members required for the validity of the proceedings of any assembly.

R Eighteenth letter of the alphabet, corresponding to the Semitic *resh* and Greek *rho*. A liquid, pronounced with the tip of the tongue on the palate, it is sometimes 'trilled' by vibration of the tongue, especially in Scotland, but in S. England is often weak when used medially and silent finally.

RA. Ancient Egyptian sun-god and king of the gods, later identified with the Theban sun-god Ammon. He was depicted with a hawk's head.

RAAB (rahb), Julius (1891-1964). Austrian statesman. A building contractor, he withdrew from political life when Hitler took over Austria, but in 1945 was a founder of the cons. Austrian People's Party, and as Chancellor (1953-61) negotiated the Peace Treaty (1955) which ended the occupation of Austria by the 4 powers.

RABA'T. Seaport on the Atlantic coast of Morocco, of which it is one of the caps. It is 110 m. W. of Fez. Textiles and carpets are manufactured and there is a univ. (1957). Pop. (1965) 261,450.

RABAUL (rahbowl'). Sea- and airport of New Britain, cap. of Australian-mandated New Guinea until 1937 when it was destroyed by an earthquake. It was restored, but was again destroyed by the R.A.F. after its occupation by the Japanese in 1942. Again rebuilt after the S.W.W., R. became a port handling chiefly copra. Pop. (est.) 4,000.

RABBI (ra'bi). Jewish doctor of the law, particularly one dealing with ecclesiastical affairs.

RABBIT. Rodent (*Oryctolagus cuniculus*) of the family Leporidae. Widely distributed in Europe and America, it has become a pest because of its destructive feeding and prolific breeding (several litters in a season), man having destroyed its natural enemies or introduced it to a country such as Australia where these are largely non-existent. Until the advent of myxomatosis (q.v.) the flesh was commonly eaten in Britain: the disease also modified the mode of life of surviving R., which tended to move from the ramified underground burrows or 'warrens', where they formed large colonies, to living and breeding in the open. The natural coat is grey, but this is treated and dyed commercially to imitate more costly furs. Many specialized forms are bred for show purposes, etc., e.g. the English lop-eared, and the long-haired Angora.

RABELAIS (rahbelā'), François (c. 1495-1553). French author. B. at Chinon, Touraine, he became a monk, and, having studied medicine, lectured on anatomy. His great works are *La Vie Inextricable de Gargantua* (1535) and *Faits et dits héroïques du grand*

Pantagruel (1533), satiric allegories laced with coarseness, broad humour, and philosophy, which tell the adventures of the 2 giants, Gargantua and Pantagruel, father and son.

RABI (rahbē), Isidore Isaac (1898-). American physicist. B. in Vienna, he was prof. at Columbia Univ. 1937-50, and Higgins prof. of physics, Columbia 1950-64. In 1940 he organized the Radiation Laboratory at the Mass. Institute of Technology for the development of radar for military purposes. He has written on electron spin resonance, and electrical and magnetic properties of the nucleus, and was awarded a Nobel prize in 1944 for precision measurements on neutrons.

RABIES (rā'bi-ēz). See HYDROPHOBIA.

RA'CHEL. Character of the O.T. A dau. of Laban, she was the favoured wife of Jacob, by whom she was the mother of Joseph and Benjamin.

RACHEL (rahshel'). Stage-name of the French tragedienne Elizabeth Félix (1821-58). B. in Switzerland, of Jewish extraction, she achieved success in Racine's *Phèdre* in 1843, and won a European reputation.

RACHMAN (rahk'man), Peter (1920-62). Polish immigrant to Britain. Buying up cheaply rented houses in London controlled under the 1957 Rent Act, he used blackmail and physical violence to evict the tenants, and sold the then decontrolled property at great profit, let it at exorbitant rates to prostitutes, etc. These tactics became known as Rachmanism.

RACHMANINOV (rahkhmahn'énof), Sergei Vassilievich (1873-1943). Russian composer. B. at Oneg, Novgorod, he studied at the St. Petersburg and Moscow conservatoires, and toured as a concert pianist. At the Revolution he went to the U.S.A. His dramatically emotional music has a strong melodic basis and incl. operas, e.g. *Francesca da Rimini* (1906) based on Pushkin's play; 3 symphonies; piano pieces and songs. Among his most familiar works are the 'Prelude in C sharp minor', the 2nd piano concerto in C minor, and 'Rhapsody on a Theme by Paganini' for piano and orchestra.

RACIAL DISCRIMINATION. National or personal prejudice due to differences of religion, colour or blood, or to historical enmity, and leading to unfavourable distinctions socially, politically, economically, or legally. R.D. on religious or intellectual grounds is found in e.g. anti-Semitism (q.v.); in the traditional Chinese contempt for European barbarism; in the Moslem wars against the infidel, etc. R.D. is usually automatically practised by stronger against weaker races, e.g. Indian Hindu caste 'varnas'

the 14th cent. palace where Elizabeth I died, but the riverside gardens and Richmond hill and park make it a favourite resort of Londoners. The bor. incl. Barnes and Twickenham (q.v.). Pop. (1967) 179,040.

RICHTER (rikh'ter), Johann Paul Friedrich (1763–1825). German author, commonly known as Jean Paul. B. in Bavaria, he created a series of comic eccentrics only rivalled by Dickens. His books incl. *Hesperus* (1794), a fictitious biography which estab. his fame; *Quintus Fixlein* (1796); *Siebenkäs* (1796–7); *Titan* (1800–3); *Die Fliegelfahre* (1804–5: *The Awkward Age*); and *Dr. Katzenbergers Badereise* (1809: *Dr. Katzenberger's Journey to the Watering-place*).

SVIATOSLAV RICHTER
Photo: Godfrey MacDonnic.

RICHTER, Sviatoslav (1915–). Russian pianist. He is noted for his remote detached approach, and is an outstanding interpreter of Schumann.

RICHTHOFEN (rikht'-höfen), Manfred, freiherr von (1892–1918). German airman. B. at Schweidnitz, Silesia, he commanded in the F.W.W. a crack fighter squadron known as the R. circus, and shot down 80 aircraft before being killed in action.

RICKETS. A vitamin D deficiency disease of young children, marked by softening of the bones. Formerly frequent in British slum children, it is sometimes seen in the children of Negro immigrants, since pigmentation of the skin lessens ability to make best use of the limited sunlight, which acts on fats to produce the vitamin D necessary to enable lime to be deposited in the bones, so hardening them.

RIDGEWAY, The. Grassy track dating from prehistoric times which runs along the Berkshire Downs in England from White Horse Hill to near Streatley.

RIDGWAY, Matthew Bunker (1895–). American gen. He served with distinction during the S.W.W. in the Sicilian, Italian, Normandy, and German campaigns. In April 1951 he succeeded MacArthur as commander of the U.N. and U.S. forces in the Far Eastern theatre, incl. Korea. He was Supreme Allied Commander, Europe, 1952–3, and U.S. Chief of Staff 1953–5.

RIDING, Laura (1901–). American poet. A member of the Fugitive Group of poets, which flourished in the Southern U.S. 1915–28, she went to England in 1926, remaining abroad until 1939, during which time she collaborated with Robert Graves (q.v.) on *A Survey of Modernist Poetry* (1927). She pub. her *Collected Poems* in 1938.

RIDLEY, Nicholas (c. 1500–55). English Protestant bishop. He became chaplain to Henry VIII in 1541, and bishop of London in 1550. He took an active part in the Reformation and supported Lady Jane Grey's claim to the throne. After Mary's accession he was arrested and burned as a heretic.

RIEL (rē-el'), Louis (1844–85). French-Canadian rebel. B. at St. Boniface, he championed the cause of the Métis (half-breeds), and in 1869–70 led an unsuccessful revolt and set up a provisional govt. at Winnipeg. After leading a second rising in Saskatchewan in 1885 he was hanged for treason.

RIEMANN (rē'mahn), Georg Friedrich Bernhard (1826–66). German mathematician. B. in Hanover prov., he studied theology at Göttingen, but soon turned to mathematics. He was prof. at Göttingen from 1857, and originated what is called Riemannian geometry – a non-Euclidean system.

RIENZI (rē-en'zē), Cola di (c. 1313–54). Roman political reformer. At a time when the Papacy was estab. at Avignon, he proclaimed in 1347 the restora-

tion of the ancient Roman republic. In a few months he was expelled from the city, and a second attempt was ended by his assassination.

RIESMAN (rēz'man), David (1909–). American sociologist. Educ. at Harvard, he was prof. of law at Buffalo 1937–41, of social sciences at Chicago 1946–58 and at Harvard from 1958. His best-known book is *The Lonely Crowd: A Study of the Changing American Character* (1950).

RIF, Er. Mountain range about 180 m. long on the Mediterranean seaboard of Morocco. The Rif, under Abdel Krim (q.v.), put up a prolonged resistance to Spaniards and French.

RIGA (rē'gah). Cap. and seaport of the Latvian S.S.R., U.S.S.R., on the Daugava (W. Dvina), 8 m. from the Gulf of R. It has Hanseatic League remains. There is a univ. (1919). A member of the Hanseatic League from 1282, R. has belonged in turn to Poland, 1582, Sweden 1621, and Russia, 1710. The name means 'tortuous'. Pop. (1967) 680,000.

RIGHT OF WAY. A public R. of W. is a right exercisable by any member of the public to pass over land. Such rights arise from the dedication of the land (e.g. a road) to public use. Also relevant to motorists approaching an intersection. There is rarely any clear-cut ruling as to who has priority, but in France, with certain exceptions, a motorist must give way to traffic entering the road from his right.

RIGHTS OF MAN AND THE CITIZEN, Declaration of the. Statement issued by the French National Assembly in 1789. It lists as fundamental rights: representation in the legislature; equality before the law, and of opportunity; freedom from arbitrary imprisonment; religious freedom, and freedom of speech and the Press; taxation in proportion to ability to pay; and security of property. The preamble to the French constitution of 1946 reaffirms these rights, and adds others, e.g. equal rights for women; the right to work, to join a trade union, to strike, and to social security, leisure, support in old age, and free education.

RIJEKA (riyāk'a), Yugoslav city and port on the E. coast of the peninsula of Istria, at the mouth of the Rečina r. It has petroleum refineries, distilleries, paper mills, chemical and tobacco factories, etc. Acquired by the Habsburg rulers of Austria in 1465, it was given to Croatia in 1776, incorporated in Hungary 1807, re-united with Croatia in 1848, seized by Gabriele d'Annunzio (q.v.) in 1919, annexed by Italy in 1924, ceded to Yugoslavia in 1947. Its Italian and historic name Fiume is derived from its original

RIJEKA. Behind the waterfront is one of the new blocks of flats and offices that rise on the heights, and in the foreground lies one of the many ships that crowd the deep-water quays of this ancient port. Courtesy Yugoslav National Tourist Office.

romance of terror. Her best-known work is *The Mysteries of Udolpho* (1794).

RADHAKRISHNAN, Sir Sarvepalli (1888–). Indian scholar. After holding univ. posts in India, he was Spalding prof. of eastern religions and ethics at Oxford 1936–52, was ambassador to Moscow 1949–52, and pres. of India 1962–7.

RADIC (rah'dich), Stjepan (1871–1928). Yugoslav politician. B. near Fiume, he led the Croato national movement within the Austro-Hungarian Empire, and supported union with Serbia in 1919. His opposition to Serbian supremacy within Yugoslavia led to his murder in the parliament house.

RADICAL. A chemical structure, formed by 2 or more elements, which partakes in reactions without disintegration, yet often cannot exist alone. The behaviour of compound Rs. forms a vital part of organic chemistry.

RADICALS. Before 1832 in Britain the supporters of parliamentary reform, and subsequently the advanced wing of the Liberal Party. During the 1860s the Rs., led by Cobden, Bright, and J. S. Mill, stood for extension of the franchise, free trade, and laissez-faire, but after 1870, under the leadership of J. Chamberlain, Dilke, and Bradlaugh, they adopted a republican and semi-Socialist programme. With the growth of Socialism in the later 19th cent. Radicalism lost its popular basis, and ceased to exist as an organized movement. In the U.S.A. the term R. is applied to any holder of left-wing opinion.

RADIGUET (rah'digh'), Raymond (1903–23). French author. An infant prodigy of poetry, he is best remembered for his novels *Le Diable au corps* (1923) and *Le Bal du Comte d'Orgel* (1924), sophisticated in their treatment of love and human relationships generally.

RADIO. The transmission and reception of radio waves. James Clerk Maxwell first developed the theory of electromagnetic waves in 1864, confirmed practically in the laboratory in 1888 by Heinrich Hertz. Marconi developed the work, in 1896 succeeding in establishing communication between Penarth and Weston-super-Mare; 5 years later he received a signal in Newfoundland transmitted from Poldhu in Cornwall. The phenomenon of waves moving round the curvature of the earth was simultaneously explained by Heaviside and Kennelly in their theories of a layer of upper atmosphere which acts as an electrical conductor instead of an insulator. The invention of the radio valve by Fleming (1904) laid open the way for broadcasting, which began in Britain in 1920. Later evolution has produced television in 1934, and radar (qq.v.).

When an electric charge is made to surge up and down a transmitting aerial, electric and magnetic 'strains' or waves are produced, which travel outwards at 186,000 m. (300,000,000 metres) per sec. One such wave is emitted for each oscillation of the charge, whose frequency is expressed by the number of these 'cycles' completed per sec. The wavelength is thus equal to the velocity (metres per sec.) divided by frequency (cycles per sec.), in terms of metres. Radio waves range in wavelength from 20 kilometres to less than a centimetre.

The ground waves radiated are weakened by loss of energy over the land. The sky waves (those which travel upward) traverse greater distances by rebounding from the ionosphere in 'hops'. Medium and long waves are used for restricted ranges, and short waves, which suffer greatest loss over ground, for long-distance telephony and broadcasting.

In modern transmitters the electrical oscillations are generated by means of a thermionic valve set in a circuit consisting of an inductance (usually a wire coil) and capacitance (usually a capacitor of sheets of metal with air between). To prevent the dying away of the oscillation when the energy is expended, a

valve is coupled which maintains them by injections of energy. They are then amplified further until powerful enough to transmit. The oscillations alone, however, are merely carrier waves and must be 'modulated' by the impression of the desired intelligence which is conveyed forth as part of the radiated wave. The aerial transmits the high-frequency oscillations into a relatively great volume of space; short waves are suited to 'beaming' or directive transmission. (See BROADCASTING.)

The receiving aerial intercepts some of the transmitted waves, which set up a minute current, conducted to the receiver, whose purpose is to separate from these high frequencies the low frequencies containing the transmitted intelligence, and reconvert them through a loud-speaker into sound. The receiver must be adjusted so that its electrical characteristics are similar to those of the transmitting circuits. It is set at the desired, or resonant, frequency, when it receives these oscillations much more violently than any others. As in transmission, the circuit consists of inductance coils and air or mica capacitors. Tuned circuits are devised to allow a small band only of frequencies to be received. The currents set up by the incoming wave are oscillating at high frequency, and to modulate the oscillations so that only low frequencies are applied to the loud-speaker, a detector—a one-way device—is used, consisting of one or more valves or transistors. The simple 'diode' suppresses the requisite frequencies, conveying the remainder on for conversion. To boost the current to the strength to enter the speaker, audio frequency amplifying valves or transistors are used.

The low-frequency impulses are finally applied to the loud-speaker, consisting of a coil of thin wire mounted on a 'former' rigidly attached to a paper cone. The coil is suspended in a powerful magnetic field and the whole left free to move. The currents fed to the coil produce a magnetic field which interacts with the permanent magnetic field to cause coil movement and vibrations in the cone. These are identical with the vibrations produced by the original sounds, and as they occur also in air are reproduced identically by the receiver.

RADIOACTIVITY. The phenomena exhibited by a small class of substances, e.g. uranium, thorium, radium, and actinium, which spontaneously emit radiations that penetrate substances opaque to normal light, affect a photographic plate in the dark, produce phosphorescence in certain minerals, and ionize gases. These same properties are exhibited by other radiations such as X-rays, but only when the exciting agent is external. The spontaneous emission is due to the disintegration of the actual atoms of the radioactive element, and may be accompanied by explosive violence which produces new atoms differing in properties from the parent element.

Röntgen discovered X-rays in 1895, and in 1896 Becquerel found that uranium radiations affected a photographic plate in darkness. The next year Mme Curie separated radium, beginning the search for the elements subsequently discovered. Rutherford investigated these radiations, and classified them into alpha, beta, and gamma rays. In atomic-bomb research great strides were made in the study of R. Since 1940 elements up to 103 have been produced from uranium, in addition to hundreds of artificial radioactive isotopes. See ATOM; ISOTOPE.

RADIOASTRONOMY. A new branch of astronomical science, dating from the pioneer work of K. Jansky in the 1930s. Celestial objects send out radiations of all kinds; the long-wavelength radiations ('radio waves') do not affect the human eye, and so cannot be seen, but they may be focused and studied by means of special instruments known as radio telescopes. These telescopes are of various designs; a very famous one is the 250 foot metal

RIVERA, Primo de. See **PRIMO DE RIVERA**.

RIVERINA. District of New South Wales, Australia, between the Lachlan and Murray rivers, through which runs the Murrumbidgee. On fertile land, artificially irrigated from the 3 rivers, wool, wheat, and fruit are produced.

RIVER PLATE. See **PLATE**.

RIVERS, William Halse Rivers (1864–1922). Anthropologist and psychologist. He founded the Cambridge school of experimental psychology, and made expeditions to the Torres Straits and the Todas of India from which proceeded his *Kinship* (1914) and *History of Melanesian Society* (1915). Influenced by Freud, he also wrote *Instinct and the Unconscious* and *Conflict and Dream* (1923).

RIVERSIDE. City in California, U.S.A., on the Santa Ana r. 58 m. E. by S. of Los Angeles. Founded in 1870, it is the centre of a citrus-growing district and has a citrus research station maintained by the Univ. of California. The seedless orange was developed at R. in 1873. Pop. (1960) 84,332.

RIVIERA (rêvê-à'rah). The Mediterranean coast of France and Italy, from about Toulon to Spezia. The Maritime Alps and the Apennines protect it from N. winds, and contribute to its subtropical aspect. The usually mild winter climate makes it a popular resort for the wealthy or invalid. The main towns are Toulon, Cannes, Nice, Monte Carlo, Menton, San Remo, Savona, Genoa, Rapallo, and Spezia.

RIYADH. One of the caps. of Saudi Arabia, cap. also of Nejd, connected by rail with Damman on the Persian Gulf and by road with Kuwait and Hail. It is surrounded by a high wall with six fortified gates, outside which are date gardens irrigated from deep wells. There is a large royal palace. Pop. (est.) 300,000.

RIZZIO (rê't'sê-ô), David (1533–66). Italian adventurer at the court of Mary Queen of Scots. After the queen's marriage to Darnley in 1565, his influence increased so as to arouse jealousies that ended in his murder by certain nobles.

R.N.A. See **NUCLEIC ACID**.

ROACH

ROACH. Freshwater fish (*Rutilus rutilus*) of N. Europe, dark green above, whitish below, and with reddish lower fins.

ROANOKE (rônôke). City in Virginia, U.S.A., on the R. r. 55 m. W. of Lynchburg. Founded in 1834 as Big Lick, it was a small village until 1881 when the repair shops of the Virginia Railway were set up

there, after which it developed rapidly. Besides doing railway repairs, it produces chemicals, steel goods, furniture, and textiles. The name is Indian and means shell money. Pop. (1960) 97,110.

ROBBERY. In English law, a variety of theft: stealing from the person, with force used to intimidate the victim: maximum penalty, life imprisonment.

ROBBE-GRIFFET (rôb grêyeh'), Alain (1922–). French author. B. at Brest, he qualified as an agronomist and worked in Africa and the West Indies as a research biologist before turning to writing. He is the leading theorist of *le nouveau roman*, e.g. his own *Les Gammes* (1953: *The Erasers*) and *Dans le Labyrinthe* (1959), which concentrates on detailed description of physical objects, etc. Other members of the school (for whom, as literary director of *Les Editions de Minuit*, he is publisher) incl. Butor and Sarraute. He also wrote the script for the film *L'Année Dernière à Marienbad* (1961).

ROBBIA (rob'bê-ah), Della. Family of Florentine architects and sculptors. Luca della R. (1400–82) executed a number of important works of sculpture in Florence, and produced some beautiful sculptured

ANDREA DELLA ROBBI. 'The Madonna adoring the Child'. Courtesy of Courtauld Institute Galleries, London.

work in terracotta, now known as D.R. ware. Andrea della R. (1435–1525), the nephew and pupil of Luca, also produced enamelled reliefs. Five of Andrea's sons carried on the family tradition; the most famous were Giovanni della R. (1469–1529), who equaled his father, and Girolamo della R. (1488–1566), also an architect and sculptor.

ROBBINS, Frederick C (happan) (1916–). American physician. B. in Alabama, he was prof. of pediatrics at Western Reserve Univ. Medical School from 1952, and with John F. Enders and Thomas H. Weller was awarded a Nobel prize in 1954 for their discovery of the ability of

a polio virus to grow in cultures of different tissues.

ROBBINS, Jerome (1918–). American dancer and choreographer. A chorus-boy on Broadway, and then soloist with the newly formed American Ballet Theatre 1941–6, he became in 1949 associate artistic director of the N.Y. City Ballet. Among his ballets are *Fancy Free* (1944; with Leonard Bernstein), *Facsimile* (1946), *The Age of Anxiety* (1950; again with Bernstein and based on Auden's poem). He also choreographed *The King and I* and *West Side Story* for both stage and screen.

ROBBINS, Lionel Charles, baron (1898–). British economist. Prof. at the London School of Economics 1929–61, and author of books on many aspects of his subject, he was chairman of a govt. committee on higher education, which in 1963 produced the *R. Report* recommending an emergency programme to increase the number of higher educ. places from 216,000 in 1963 to 560,000 in 1980.

ROBERT. Name of 3 kings of Scotland. For Robert I see **BRUCE, ROBERT**. Robert II (1316–90), the son of Walter, steward of Scotland, and Marjory, daughter of Robert I, became king in 1371. He was the founder of the house of Stuart. Robert III (c. 1340–1406) succeeded his father Robert II in 1390.

ROBERT. Name of 2 dukes of Normandy. Robert I, called the Devil (d. 1035), became duke in 1028, and was the father of William the Conqueror. He is the hero of several romances. Robert II (c. 1054–1134), eldest son of William the Conqueror, succeeded him as duke of Normandy, but not as king of England, in 1087, and took part in the 1st Crusade. He was deposed by his brother Henry I in 1106.

ROBERTI (robâr'ti), Ercole (c. 1450–96). Italian painter, who worked in Bologna in his middle years and later at Ferrara where he was in the service of the Este family. His works incl. 'A Concert' in the Nat. Gallery, London, and an altar-piece 'Madonna and Saints' in the Brera, Milan.

ROBERTS, Sir Charles George Douglas (1860–1943). Canadian poet and author. B. near Fredericton, he was prof. at King's College, Nova Scotia, 1885–95. He pub. books of lyric verse incl. *Orion* (1880), but was best known for his stories of animal life.

ROBERTS, Frederick Sleigh, 1st earl (1832–1914). British field marshal, known as 'Bobs'. B. at Cawnpore, he joined the Bengal Artillery in 1851, and served through the Indian Mutiny, receiving the V.C., and the Abyssinian campaign of 1867–8. During the Afghan War of 1878–80 he occupied Kabul, and subsequently made a famous march to Kandahar, where he won a complete victory. After serving as C.-in-C.

artist. B. in Edinburgh, he travelled in Italy, returning to his native city in 1787 as a portrait painter. In 1815 he was elected R.A., and in 1822 was knighted.

RAEDER (rā'der), Erich (1876–1960). German Admiral. Chief of Staff to Hipper in the F.W.W.,

he became head of the navy in 1928, but was dismissed by Hitler in 1943 because of his failure to prevent Allied Arctic convoys reaching Russia. Sentenced to life imprisonment at Nuremberg, he was released on grounds of ill-health in 1955.

RAFFLES, Sir Thomas Stamford (1781–1826). British administrator. He entered the E. India Co.'s service in early life, took part in the capture of Java from the Dutch in 1811, and while gov. of Sumatra 1818–23 was responsible for the acquisition and foundation of Singapore in 1819. He was a founder and first pres. of the Zoological Society.

SIR THOMAS RAFFLES.

By G. F. Joseph.
Photo: N.P.G.

RAGLAN, FitzRoy James Henry Somerset, 1st baron R. (1788–1855). British general. In the Peninsular War under Wellington, he was foremost in the storming of Badajoz, and at Waterloo lost his right arm. He commanded the British forces in the Crimea, being created field marshal after Inkerman, but the later losses and privations of his troops were said to have accelerated his death from dysentery. The R. sleeve, with no shoulder seam but cut right up to the neckline, is named after him. FitzRoy Richard Somerset, 4th baron R. (1885–1964), pub. anthropological works written from a diffusionist standpoint, e.g. *Jocasta's Crime* (1933) and *The Origins of Religion* (1949).

RAGTIME. The syncopation originated by American Negroes at the beginning of the cent. which came into fashion about 1910 and merged into jazz. It was characterized by a fast, ragged, rhythm.

RAGUSA (rahgōō'zah). Italian town in Sicily, cap. of R. prov., 34 m. W.S.W. of Syracuse. It stands over 1,500 ft. above the r. R. It makes cotton and woollen textiles, but chief interest is in the ancient tombs in caves nearby. Pop. (1961) 55,724; prov. 247,198. Also the Italian name of DUBROVNIK. The word argosy comes from this R. famed under Turkish rule in the 16th cent. for its trading fleets: at that time, R. was called in England Arrogosa.

RAGWORT. Perennial plant (*Senecio jacobaea*), of the Compositae. Some 3 or 4 ft. high, it produces brilliant yellow flowers, and is an abundant weed.

RAHIRE (d. 1144). Minstrel and favourite of Henry I, who in 1123 founded St. Bartholomew's priory, Smithfield, and St. Bartholomew's hospital, London.

RAHMAN PUTRA. Tunku (meaning 'prince') Abdul (1903–). Malayan statesman. A younger son of a former sultan of Kedah, he was ed. both in Malaya and at Cambridge and studied law at the

TUNKU ABDUL RAHMAN.

Courtesy of High Commission for Malaya.

Inner Temple. As leader of the Alliance Party he took part in the independence negotiations in 1955, became P.M. of Malaya in 1957, was returned to power in 1959, and was the prime mover in the creation of Malaysia 1963. In 1964 he was again returned to power by an overwhelming majority as P.M. of Malaysia, in face of the threat to the existence of the new federation from Sukarno. His successful play *Mahsuri* (1941) was filmed 1958.

RAIKES, Robert (1735–1811). British educationist. B. at Gloucester, where he ran a printing business, he started a Sunday school in 1780, the beginning of the Sunday-school movement.

WATER RAIL

RAIL. A general name for birds of the Rallidae family. The corncrake or Land-R. (*Crex crex*) has a grating cry, and is brown above and whitish below. Others are the coot, moorhen, and water R.

RAILWAYS. Track laid for the passage of trains conveying passengers and goods. The use of rails to reduce friction was recognized early, iron rails being utilized at collieries in the 18th cent. The imaginative

abilities of the English steam pioneers, Newcomen, Watt, *et al.*, led to the realization of self-propelled steam rail vehicles, by Trevithick (1804), Hedley (1813) and Stephenson (1825), whose 'Rocket' drew a coach along part of the Manchester-Liverpool line at 30 m.p.h. in 1829. The widespread and haphazard building which followed—at enormous cost in money and engineering skill—resulted in 250 separate companies; which resolved into 4 systems in 1921, and became the nationalized 'British Railways' in 1948, known as 'British Rail' from 1965, which has c. 14,090 m. of route. European Rs. developed quickly during the 19th cent., and in the U.S.A. and Canada the growth of Rs. was intimately tied to westward expansion, and made full exploitation of the central and western territories possible. With their present mileages of 225,000 (U.S.A.) and 43,000 (Canadian National and Canadian Pacific), they are vital for freight transport.

After the S.W.W. the Rs. suffered increasing competition from other forms of transport. In the U.S.A. the growth of internal air services cut the demand for passenger transport, and in the U.K. freight carriage passed increasingly to road haulage. Rationalization and adjustments are taking place in both countries, and recommendations of the controversial Beeching Report (1963) are being implemented on British Rail.

The era of steam supremacy is ending. In countries where electricity is cheap, e.g. Switzerland, the R. are totally electrified, since it is more efficient to centralize the power source than carry it around. Elsewhere diesel power is replacing steam as more efficient (lower fuel costs) and running more hours in the day. There are, however, many technical problems, varying according to operating conditions in different countries, still to be resolved. See illus. p. 890.

RAINU (rānu) (1883–1946). Stage-name of the French actor and comedian Jules Mireille. His films incl. *Marius* and *Un Carnet de Bal*.

RAINBOW. An arch formed in the sky showing the prismatic colours in their order. It is caused by the refraction of rays of light by rain globules. The colours of the R. are the same, and in the same order, as in the spectrum.

RAINE, Kathleen (1908–). British poet. Dau. of a schoolmaster, she was ed. at Girton Coll., Cambridge, and took her degree in Natural Sciences. Her vol. of poetry incl. *Silence* and *Flowers* (1943) and

ROMAN ART. On his return from Jerusalem, Titus and his father celebrated a triumph. The Arch of Titus, in the Roman Forum, has fine bas-reliefs of the procession.

the characteristic form of Roman temples, which was based on Etruscan models. Later, Greek influence dominated R.A.; after the conquests of the later Republic, Roman generals returned with examples of Greek art, and Greek craftsmen were employed in the decoration of Roman palaces. At the time of Augustus Greek influence was still dominant, but art was enlisted in the service of the State, and sculpture and other forms of art of this period show great technical skill. Roman painting was confined to interior decoration, e.g. the wall paintings of Pompeii and of the houses and tombs of Rome. The Romans were skilful mosaic artists, and mosaics were produced in most places in the Empire, especially in Africa, Gaul, and Antioch.

ARCHITECTURE. Architecture was the dominant Roman art. It had its rise in the last decades of the Republic; it developed during the Empire and attained ostentatious magnificence at the time of Augustus and Hadrian. The Romans derived the principle of arched construction from the Etruscans. From Greek art they acquired the classic orders, the generic type of circular buildings, the portico, the theatre, the monumental gateways, the circus, and the public place. In Rome the chief feature of planning was the variety of the Fora. These were the market places and were surrounded by shops, temples, and public buildings. Every provincial city had its forum, that at Pompeii being famous. Roman temples were of two types, rectangular and circular, the latter deriving from Etruscan and Greek precedent. The chief circular temple is the Pantheon of Agrippa in Rome. The basilica, which was adapted from Greek examples, became the most important of the Roman public buildings. It served as a general place of assembly for purposes of law and of exchange. The Roman theatre also followed Greek models, though there were certain modifications such as the more monumental treatment of the stage, and the use of a pit with seats reserved for senators in place of the ancient orchestra. The amphitheatre is essentially a Roman creation—the most famous example is the Colosseum in Rome. The triumphal arch was built to commemorate great victories—those erected in honour of Trajan and Marcus Aurelius are exceptionally fine. Among the Roman works of utility, which are great feats of engineering skill, are the aqueducts. Palaces, residences, and villas were highly developed, and attained to a splendour hitherto unknown.

ROMAN BRITAIN. Roman relations with Britain began with Caesar's invasions of 55 and 54 B.C., but the actual conquest was not begun until A.D. 43. England was rapidly Romanized, but N. of York

few remains of Roman civilization have been found. After several unsuccessful attempts to conquer Scotland the N. frontier was fixed at Hadrian's Wall (q.v.). During the 4th cent. Britain suffered from raids by the Saxons, Picts, and Scots. The Roman armies were finally withdrawn in 407. Roman towns incl. London, York, Chester, Caerleon, St. Albans, Colchester, Lincoln, Gloucester, and Bath. The most permanent remains of the occupation were the system of military roads radiating from London.

ROMAN CATHOLICISM. The largest Christian denomination; it is estimated that there are about 585 million Roman Catholics in the world today. They describe themselves not as Roman Catholics, but as Catholics, i.e. members of the Universal, One, Holy, Catholic, and Apostolic Church, founded by Jesus Christ. The doctrinal basis of the Church is the 3 creeds, the Bible (the officially approved version is the Vulgate in Latin made by St. Jerome), and Christian tradition. The Church claims to preach a set of doctrines that were revealed in the lifetime of the Apostles and have been preserved by continuous tradition ever since; but doctrine has developed in the sense that beliefs that were once implicit have been made explicit, e.g. the doctrine of the Immaculate Conception of the Virgin Mary, (1854) and of her Assumption (1950). The characteristic function of the Church is the offering of public prayer; the clergy are bound to recite certain prayers at fixed times daily. The central act of worship is the Mass—the representation to God of the Sacrifice made on the Cross. It is believed that when the priest repeats Christ's words spoken at the Last Supper, the bread and wine on the altar become Christ's body and blood, although no change takes place in their outward appearance. The Host, or Sacred Bread, is referred to as the Blessed Sacrament. There are 6 other sacraments, viz., baptism, confirmation, confession and penance, matrimony, holy orders, and the anointing of the sick, formerly extreme unction. The Church is intimately concerned with the preservation of the moral law; it is opposed to the remarriage of divorced persons, and certain forms of birth control. Great emphasis is laid on the ascetic tradition and on the religious life of retirement from the world; there are more than 300 different Orders of men, e.g. the Benedictine monks, the Franciscan and Dominican friars, the Jesuits, and many more Orders of women. From the earliest times high honours have been paid to those Christians who have proved themselves worthy of the name of saint; the process of official canonization was simplified in 1969. It is believed that miracles constitute one of the hallmarks of sanctity; and public prayers may be addressed to the saints asking them to intercede with God on the behalf of men. It is held that at death the soul passes into the intermediate state of Purgatory, where it is cleansed from the stain of sin. The eternal home of the blessed is Heaven, while the incorrigibly wicked are doomed to Hell. The head of the Church is the Pope, who is primarily the bishop of Rome; for many cents. he has been an Italian. Since 1870 it has been a Catholic dogma that the Pope as Christ's Vicar is infallible when he makes solemn pronouncements on matters of faith and morals. However, since the S.W.W. there has been a tendency to widen the source of authority (see PAPACY), and to co-operation in the oecumenical movement which has assisted a review of the tenets of R.C.: issues under discussion have incl. the form of church govt. and services, the rules and dress of monastic orders, the role of 'worker' priests, clerical celibacy, birth control and divorce. See VATICAN CITY.

ROMANCE. Term applied in modern usage to any highly coloured prose fiction remote from the conditions of everyday life, and in medieval times to the lengthy stories in verse and prose which became

(1885-1959), playwright and producer, and was created D.B.E. in 1962.

RAMÉE, Louise de la. See OUIDA.

RAMESSES (ram'esēz). Name of 11 ancient Egyptian kings. Rameses II (reigned c. 1300-1225 B.C.), the son of Seti I, successfully waged war on the Hittites, and carried out colossal works of art such as the rock temple at Abu Simbel. Rameses III (reigned c. 1200-1168 B.C.) won a naval victory over the Philistines and other barbarian peoples, and asserted his suzerainty over Palestine.

RAMILLIES (ram'ilēz, F. rahmēyē). Village in Brabant, Belgium, 13 m. N. of Namur, scene of Marlborough's victory over the French on 23 May 1706, during the War of the Spanish Succession.

RAM MOHUN ROY. See BRAHMA SAMAJ.

RAMSAY, Allan (1686-1758). Scottish poet. B. in Lanarkshire, he became a wig-maker and then a bookseller in Edinburgh. He pub. *The Tea-Table Miscellany*, and *The Evergreen*, collections of ancient and modern Scottish song.

RAMSAY, Sir William (1852-1916). British chemist. B. at Glasgow, he became prof. of chemistry at Bristol in 1880, and London (1887-1913). He became an F.R.S. in 1888, was knighted in 1902, and received a Nobel prize in 1904. Together with Lord Rayleigh he discovered argon in 1894. In 1895 R. manufactured helium, and in 1898, in co-operation with M. Travers, identified neon, krypton, and xenon. With F. Soddy he noted the transmutation of radium into helium in 1903. This discovery led in 1910 to that of the density and atomic weight of radium.

RAMSEY, Michael (1904-). Archbishop of Canterbury. Educ. at Repton and Cambridge, he was ordained in 1928. In 1940 he became prof. of divinity at the Univ. of Durham and in 1950 Regius prof. of divinity at Cambridge, until his appointment as bishop of Durham in 1952. He became archbishop of York in 1956 and in 1961 succeeded Dr. Fisher (q.v.), becoming the 100th archbishop of Canterbury and Primate of All England.

RAMSGATE. English port (bor.) and seaside resort in the Isle of Thanet, Kent. The 'royal harbour' (1795) was named by George IV. Pop. (1961) 36,906.

RAMUZ (rahmū'), Charles Ferdinand (1878-1947). Swiss novelist. B. nr. Lausanne, he lived largely in Paris until 1914, when he returned to Switzerland to inspire the new review *Les Cahiers Vaudois*. His works incl. the verse *Chansons* (1914); the lyric prose *Chant de Notre Rhône* (1920), *Passage du poète*, *La Beauté sur la terre* (1928), and a *Journal*.

RANCE (rāns). River in Brittany, France, flowing into the Channel between Dinard and St. Malo, where a dam built 1960-7 (with a lock for ships) uses the 44 ft. tides to feed the world's first successful tidal power station.

RAND. Dutch word for edge or brink. It is used as an abbreviation for the Witwatersrand, a gold-bearing ridge in Transvaal, S. Africa, extending for c. 40 m. W. and E. of Johannesburg. Gold was first found here in 1854, mining began in 1874: the average annual output is c. 16 million oz. The R. became the basic unit of S. Africa's new decimal currency in 1961.

RANGOON. Cap. of Burma on the R. river, 20 m. from the sea. It is a great commercial centre, exporting rice, teak, and petroleum. There is a univ. (1920). The golden Shwe Dagon pagoda, founded according to tradition in 585 B.C., is a centre of pilgrimage for Burmese Buddhists. A city called Dagon was founded on the site in 746; the name R. (meaning end of conflict) was given to it by Alaung-paya in 1755 when he made it his cap. The E. India Co. set up a factory in 1790 at R., which was captured by the British in 1852. Pop. (1967) 1,616,948.

RANJITSINGH, Kumar Shri (1872-1933). Maharajah of Nawanagar. A brilliant batsman, he

played cricket for Sussex, and in 1896, 1897-8, 1899, and 1902 played for England against Australia.

RANK, Joseph Arthur, baron (1888-). British business man. B. at Hull, he became chairman of Joseph R. Ltd., the flour-milling firm founded by his father, but through the R. Organization Ltd. (chairman 1941-62 and pres. from 1962) has extended his interests to film exhibition and production, television, tenpin bowling, xerography, etc. In 1957 he was raised to the peerage.

RANKE (rahn'ke), Leopold von (1795-1886). German historian. For 50 years a prof. at Berlin Univ. he laid the basis of modern historical research. His works incl. histories of *The Popes during the 16th and 17th cents.* (1834-6), *Prussia during the 17th and 18th cents.* (1847-8), and *England, principally in 17th cent.* (1859-68).

RANSOM, John Crowe (1888-). American poet. B. in Tennessee, he was a Rhodes scholar, and was prof. of English at Vanderbilt Univ. 1927-37 and then Carnegie prof. of poetry at Kenyon Coll. His vols. of romantic but anti-rhetorical verse incl. *Poems about God* (1919), and *Two Gentlemen in Bonds* (1926).

RANSOME, Arthur (1884-1967). British author. Once a journalist - he was correspondent in Russia for the *Daily News* during the F.W.W. and the Revolution - he was best known for his books for children, beginning with *Swallows and Amazons* (1930), and incl. in the series *Peter Duck* (1932) and *Great Northern?* (1947). These are marked by depth of characterization and technical accuracy, and for many of them the author was his own illustrator.

RANUNCULACEAE. A family of dicotyledonous plants, with distinctive flowers and divided leaves, which incl. the clematis, anemone, buttercup (*Ranunculus*), delphinium, and peony.

RAPALLO (rahpah'lō). A port and winter resort of Liguria, Italy, situated 15 m. E.S.E. of Genoa on the Gulf of R. A treaty signed here by Italy and Yugoslavia in 1920 settled their common frontier; and a treaty signed by Germany and Russia at R. in 1922 cancelled their claims on one another for war indemnities.

RAPANUI. Another name for EASTER ISLAND.

RAPE. Two plant species, *Brassica campestris* and *Brassica napus*, grown for their seeds, which yield the pungent mustard R. oil. The common turnip is a variety of the former, and the swede turnip of the latter.

RAPHAEL SANZIO (ra'fā-el sahn'zē-ō) (1483-1520). Italian painter. B. at Urbino, the son of Giovanni Santi, a court painter, he at first studied under his father, and in 1499 went to Perugia, where he entered the studio of Perugino. The influence of the latter is shown in R.'s paintings of St. Michael, St.

RANGOON. The Shwe Dagon pagoda, plated with pure gold and rising to 366 ft. Courtesy of Burmah O. Co.

A cent. of war and disorder followed Marcus Aurelius's death, during which a succession of generals were placed on the throne by their armies. A deep-rooted economic crisis sapped the empire's vitality, while the frontiers were threatened by Franks, Goths, and Parthians. Diocletian (284–305) reorganized the empire as a centralized autocracy ruling through an ubiquitous bureaucracy. Constantine I (324–37) recognized the political value of Christianity, which Diocletian had persecuted as subversive, and himself became a convert. He removed the capital to Constantinople, and from 364 the empire, as too large to administer, was divided between emperors at Constantinople and Rome. Reforms failed to check inner decay or aggression from without. The Goths overran Greece and Italy, sacked Rome in 410, and finally settled in Spain. The Vandals conquered Italy. Britain was abandoned in 407. The Huns raided Gaul and Italy in 451–2. When the last emperor was deposed, in 476, the western empire ceased to exist even in name.

ROMAN LAW. One of the 2 great European legal systems, English law being the other. It originated under the republic, was developed under the empire, and continued in use in the Byzantine Empire until 1453. The first codification was that of the 12 Tables (450 B.C.), of which only fragments survive. R.L. assumed its final form in the codification of Justinian (A.D. 528–34). An outstanding feature of R.L. was its system of international law (*jus gentium*), applied in disputes between Romans and foreigners or provincials, or between provincials of different states. During the Middle Ages R.L. was adopted, with local modifications, all over Europe, mainly through the Church's influence; its later diffusion was largely due to the influence of the French *Code Napoléon*, based on R.L., which was adopted in the 19th cent. by several states of E. Europe and Asia, and in Egypt. Inside the Commonwealth, R.L. forms the basis of the legal systems of Scotland and Quebec, and is also the basis of that of S. Africa, the 2 latter being of French and Dutch origin respectively.

ROMANOV (rōmahn'of). Name of the dynasty which ruled Russia from 1613 to the revolution of March 1917.

ROMAN RELIGION. In the religion of the ancient Romans, traces are found of fetishism, e.g. reverence paid to stones and trees, and totemism, e.g. the wolf-cult. Its strongest element was the domestic cults, e.g. of Janus, Vesta, and the Penates, deities of the threshold, hearth, and store-cupboard respectively. Agricultural elements were the spring fertility rites, the harvest and sowing festivals, and the worship of Jupiter, Mars, and Ceres, who were originally agricultural deities. Other cults were introduced from Etruria (Minerva, Juno), Latium (Diana), and Greece (Apollo), and native gods became identified with those of Greece. Under the empire the state religion was a purely political instrument, typified by the deification of dead emperors. While the educated classes turned to Stoicism or scepticism, the masses found solace in such Oriental mystery cults as that of Isis, in Mithraism, and in Christianity, which made their appeal to the senses, the mind, and conscience.

ROMANSH. A Romance language (q.v.), which in 1937 was added to French, German, and Italian, to become the 4th national language of Switzerland. It is spoken by some 50,000 people in the eastern cantons.

ROMANTICISM. Term applied in all arts to the tendency which puts imagination before reason, and abandons the classical ideals of absolute clarity and perfection of form. In literature R. emerged with increasing strength during the later 18th cent., reaching an open declaration with the publication of the *Lyrical Ballads* by Wordsworth and Coleridge in 1798, and inspired the work of Byron, Shelley, and Keats. In prose R. is represented by the 'terror'

romances of the Radcliffe school, and the historical novels of Scott. Among the great representatives of R. abroad are Arnim, Brentano, Novalis, Eichendorff, and Tieck in Germany; Chateaubriand, Lamartine, Musset, de Vigny, and Hugo in France; and Manzoni and Foscolo in Italy. In music R. may be found in Schubert, but is generally considered to begin with Weber, to incl. Schumann, Wagner, and Brahms, and to close with Mahler. In art R. especially denotes the movement which began in France in 1830 as a reaction against the classicism of David and his followers. Its chief exponents were Delacroix and Géricault.

ROMANY. See GYPSIES.

ROME (Roma). Cap. of the Italian Republic and R. prov. and Latium region, situated on the Tiber, 17 m. from the Tyrrhenian Sea. To the E. of the river lies the main part of the city, incl. the 7 hills (Quirinal, Aventine, Caelian, Esquiline, Viminal, Palatine, and Capitol) on which the ancient city stood; to the W. the popular quarter of Trastevere, the more modern residential quarters of the Prati, and the Vatican (q.v.). The Forum, Colosseum, Pantheon (at present a church), Castel Sant' Angelo (the mausoleum of the Emperor Hadrian), and baths of Caracalla are among the remains of ancient R., while the Lateran, Quirinal, Colonna, Borghese, Barberini, Doria Pamfili, and Farnese palaces date from the Renaissance period. Notable buildings of more recent times incl. the monument to Victor Emmanuel II on the Capitol hill, University City, Policlinico, Palace of Justice, Parliament, and Italian Forum. Apart from St. Peter's the main ecclesiastical edifices incl. St. John Lateran, St. Paul's, S. Lorenzo, S. Maria Maggiore, and S. Maria degli Angeli. Via dei Fori Imperiali (which traverses the Forum), Via Nazionale, Corso Vittorio Emanuele, and Corso Umberto are fine thoroughfares. Piazza Venezia (where is situated the Palazzo Venezia, c. 1455), Piazza del Popolo, Piazza Navona, Campo dei Fiori, Piazza Barberine, Piazza di Spagna, and Piazza Colonna are among the fine squares, many of which are adorned with beautiful fountains. The main open spaces are the Villa Borghese, which adjoins the Pincio terrace from which there is a good view of the Vatican and the heights of Monte Mario, and the Janiculum, which is the site of an immense statue of Garibaldi. Academic institutions incl. the univ. and British and French schools of art. R. has few industries but is an important road, rail and air centre. An underground railway 7 m. long, built 1938–55, runs from the central railway station, which was constructed 1938–50, to Laurentina, S.W.

ROME. The Castel Sant' Angelo, built as a mausoleum for the Emperor Hadrian, and for centuries the fortress of the city. In the foreground the bridge of Sant' Angelo spans the Tiber. Courtesy of the Italian State Tourist Office.

RAVI (rah'vē). River in the Indian sub-continent, a tributary of the Chenab which it joins 35 m. above Multan. It rises in India, forms the boundary between India and Pakistan for some 70 m., and enters Pakistan about 15 m. above Lahore, the chief town on its course of 450 m. It is an important source of water for the Punjab irrigation canal system.

RAWALPINDI. City of W. Pakistan, in the foothills of the Himalayas. It is a great military, road, and rail

RAWALPINDI. As well as Irrigation water, the Rawal Dam on the Kurang river (capacity 47,500 cu. ft.) supplies some 14 million gallons of drinking water to Islamabad and nearby Rawalpindi. Courtesy of the Pakistan High Commission.

centre and 1959–67 was cap. of Pakistan pending the construction of Islamabad immediately to the N.W. Pop. (1961) 340,175.

RAWLINSON, Sir Henry Creswicke (1810–95). British orientalist. B. in Oxfordshire, he became political agent in Baghdad in 1844, and translated Darius' cuneiform inscription at Behistun. He continued the work of excavation begun by Layard, and pub. a *History of Assyria*, etc.

RAWSTHORNE, Alan (1905–). British composer. B. in Lancs., he first became known by his 'Theme and Variations for Two Violins' (1938), which was followed by other tersely virile works incl. 'Symphonic Studies', the cantata *Kubla Khan*, the 'Concerto for String Orchestra', and a vigorously inventive 'Sonata for Violin and Piano' (1959).

RAY or **Wray**, John (1627–1705). British botanist, whose *Methodus plantarum* (1682) was the first to divide flowering plants into monocotyledons and dicotyledons, etc. The R. Society, founded in 1844, perpetuates his memory.

RAY, Satyajit (1921–). Indian film director. B. in Bengal, and a commercial artist before he turned to films, he is well known for his trilogy of Bengali life, *Pather Panchali*, 1955, *Aparajito* (1956: *The Unvanquished*), and *Apur Sansar* (1959: *The World of Apu*).

RAY. Name given to fish of the order Hypotremata, which incl. the electric Rs., saw-fish, sting Rs., devil-fish, and the 2 most common British species, the common skate and the thornback R.

THORNBARK RAY

Also the path along which a wave may be considered to travel, i.e. perpendicular to the wave front.

RAYLEIGH (rā'lē), John W. Strutt, 3rd baron R. (1842–1919). British physicist. He was prof. of experimental physics at Cambridge 1879–84, and of

natural philosophy at the Royal Institution 1887–1905. He wrote the standard *Treatise on Sound* and experimented in optics and microscopy. With Sir William Ramsay, R. discovered argon. He was awarded the O.M., and was president of the Royal Society 1905–8, when he became chancellor of Cambridge Univ. In 1904 he received a Nobel prize.

RAYON. The name which has superseded artificial silk for the filaments made from the solidification of solutions of modified cellulose. The 3 types of commercial importance are viscose, acetate, and copper R.

RAZORBILL. A resident British seabird (*Alca torda*), of the auk family, which breeds on cliffs. It has a curved beak, and is black above and white below.

RAZOR-SHELL or **Razor-Fish**. A genus (*Solen*) of bivalve molluscs, with narrow elongated shells, resembling a razor handle and delicately coloured. They are found in sand among rocks.

READ, Sir Herbert (1893–1968). British writer. Prof. of fine arts at Edinburgh 1931–3, he wrote widely on art, e.g. *The Meaning of Art* (1931) and *The Philosophy of Modern Art* (1952); pub. much verse, e.g. his *Collected Poems* (1946); and was a leading exponent of an anarchist thought.

READE, Charles (1814–84). British author. B. in Oxfordshire, he was called to the Bar in 1843, but devoted himself to writing in London. As a dramatist his great successes were *Masks and Faces* (1852; pub. in novel form as *Peg Woffington* in 1853), and *The Lyons Mail* (1854). Among his novels are *It's Never too Late to Mend* (1856); his historical masterpiece *The Cloister and the Hearth* (1861); and *Hard Cash* (1863). His nephew William Winwood R. (1838–75) wrote the extremely popular *Martyrdom of Man* (1872), a rationalistic survey of history.

READING, Rufus Daniel Isaacs, 1st marquess of (1860–1935). Liberal statesman. Son of a Jewish merchant, he was called to the Bar and entered parliament in 1904. He became Attorney-Gen. in 1910 and Lord Chief Justice in 1913. Raised to the peerage in 1914, he was Viceroy of India 1921–6. On his return to England he was made a marquess, and in the National govt. he was For. Sec. in 1931. His widow, Stella (1894–), dowager marchioness of R., was created a baroness (life peerage) in her own right in 1958, and was the founder (1938) of the Women's Voluntary Services for Civil Defence.

READING. English town (co. ber.), co. town of Berks, on the Thames at its junction with the Kennet. An important railway junction and agricultural centre, it is noted for biscuit manufacture. The univ. (1926), founded as a univ. coll. in 1892, specializes in agriculture and horticulture, but has also faculties in arts, science, music, etc. Oscar Wilde passed his 2 years' imprisonment at R. Pop. (1961) 119,870.

READING. City of Pa., U.S.A., important as a manufacturing centre. It was founded in 1748 by two sons of Wm Penn. Pop. (1960) 98,177.

REAGAN, Ronald (1911–). American actor and politician. Star from the thirties of 50 films and later also in television, he became Rep. gov. of California in 1967, his term being noted for battles against insurgent students of the Univ. of California. In 1968 he made a bid for the Rep. presidential nomination.

REALISM. In the medieval philosophy known as Scholasticism, the theory that the only truly real things are 'universals'; it is thus opposed both to Nominalism and to Conceptualism. In modern philosophy the term stands for the doctrine that there is an intuitively appreciated reality apart from what is presented to consciousness, that what is experienced through the senses has an independent existence. As such it is opposed to Idealism. Modern realists incl. G. D. Broad and (although their views were later modified) Russell and G. E. Moore; Wittgenstein has been an important later influence.

THE ROOSEVELTS. Eleanor Roosevelt was a distant cousin of F.D.R., as well as being his wife, and was his staunch supporter in all his campaigns. This photo was taken just before his re-election for a fourth term. *Courtesy of U.S.I.S.*

restored, and when the New Deal got under way, the gold standard was abandoned, and the dollar devalued. In 1935 R. introduced the Utilities Act, directed against abuses in the large holding companies, and the Social Security Act, providing for unemployment and old-age insurance.

The presidential election of 1936 was fought entirely on the record of the New Deal, and resulted in a sweeping victory for R. During 1935-6 he was involved in a long conflict with the Supreme Court, who declared several of his measures unconstitutional, until the retirement or death of certain of its members enabled him to secure the support of a liberal majority. In 1938 R. introduced measures for farm relief and the improvement of working conditions. In his foreign policy he endeavoured to use his influence to restrain Axis aggression, and to establish 'Good Neighbour' relations with the American countries.

Soon after the outbreak of war he launched a vast rearmament programme, introduced conscription, and provided for the supply of armaments to the Allies on a 'cash-and-carry' basis. In spite of strong isolationist opposition, and the fact that he was breaking a long-standing precedent in standing for a 3rd term, he was re-elected in 1940. He then introduced his 'lease-lend' plan for the supply of war materials to the Allies, announced that the U.S. would become the 'arsenal of democracy', and in 1941 drew up with Mr. Churchill the Atlantic Charter as a statement of Allied war aims. In that year he defined the 'Four Freedoms' (q.v.). From the Japanese attack on Pearl Harbor in Dec. 1941, he devoted himself solely to the conduct of the war. He participated in the Washington (1942) and Casablanca conferences (1943), to plan the Mediterranean assault, and in those at Quebec, Cairo, Tehran (1943), and Yalta (1945), at which the final preparations were made for the Allied victory. He was re-elected for a 4th term in 1944. His sudden death on 12 April 1945 was the cause of worldwide mourning. *See also NEW DEAL.*

His wife Eleanor R. (1884-1962) whom he m. in 1905, actively furthered his political career. A prominent social worker and lecturer, her newspaper column 'My Day' was widely syndicated, and she was a U.S. delegate to the U.N. general assembly, and later chairman of the U.N. commission on human rights 1946-51. Within the Democratic Party she formed the left-wing Americans for Democratic Action group in 1947. Her books incl. *This I Remember* (1950), and *You Learn By Living* (1960).

ROOSEVELT, Theodore (1858-1919). 26th President of the U.S.A. B. in New York, he was elected

to the state legislature as a Republican in 1881. He was Assistant Secretary of the Navy 1897-8, and during the Spanish War of 1898 commanded a volunteer force of 'rough riders'. After serving as Governor of N.Y. 1898-1900 he was elected Vice-President in 1900 to McKinley, whom he succeeded as President on his assassination in 1901, and was re-elected in 1904. In office he campaigned against the great trusts, and initiated measures for the conservation of national resources, while carrying on a jingoist foreign policy designed to enforce U.S. supremacy over Latin America. Alienated after his retirement in 1909 by the conservatism of his successor Taft, he formed the Progressive or 'Bull Moose' Party, as whose candidate he unsuccessfully ran for the presidency in 1912 against Taft and Wilson. During the F.W.W. he strongly advocated American intervention. He wrote historical and other works, incl. *The Naval War of 1812* (1882) and *The Winning of the West* (1889-96).

ROOT, Elihu (1845-1937). American statesman. After a successful legal career, he became War Minister 1899-1904, and Secretary of State 1905-9. He assisted in 1920 in drawing up the plan for the Permanent Court of International Justice.

ROOT. The underground extremities of plants. Rs. often form the storehouse of nutritious food substances, as well as absorbing moisture, etc., from the soil. The main R. is known as the tap-root, and has various qualifying names according to the form it assumes, e.g. conical, napiform (turnip-shaped), fusiform (spindle-shaped). The subsidiary Rs. are known as fibrous Rs. and may be divided as follows: (a) non-tuberous and (b) tuberous, including moniliform (necklace-shaped), nodulose (bearing knobs towards the extremities), and annulated (divided into rings).

ROPE. Stout cordage, or twisted fibres, over 1 in. diameter. It is made similarly to thread or twine, by twisting yarns together to form strands, which are then in turn twisted round each other in the direction opposite to that of the yarns. To form a hawser-laid R., three of these strands are twisted, while for a cable-laid R. three hawsers are used. A shroud-laid R. consists of a central strand surrounded by several others twisted. Although hemp is the commonest material used to make R., increasing use of nylon is made for specialized purposes.

ROPS, Félicien (1833-98). Belgian artist. B. at Namur, he painted in the manner of Courbet and executed many engravings, being particularly adept in the use of dry paint and soft varnish.

RORAIMA (rōr'i'ma), Mount. Plateau (Indian 'Mother of Rivers') some 20 m. sq. and 8,625 ft. above sea-level at the conjunction of British Guiana, Brazil and Venezuela. It is thought to have taken its present form 300 million years ago, and the isolation due to its sheer 1,000 ft. cliffs has ensured a largely unique fauna and flora. However, the inhospitable, eroded rock supports only some grasses, bushes, flowers, insects and small amphibians. Conan Doyle's *The Lost World*, inspired by reports of its strange character, was entirely fanciful in envisaging it still as it was in the palaeozoic period, with prehistoric monsters roaming primeval forest. *See illus. p. 163.*

RORQUAL (rōr'kwawl). A species of *Balaenoptera* - large, long, fin-whales. The blue whale (*B. sibbaldi*) is the largest of all animals, measuring 100 ft. and more. The common R. (*B. physalis*) is slate-colour and not quite so long.

RORSCHACH (rōr'shakh), Hermann (1884-1922). Swiss psychiatrist, influenced by Freud and Jung, whose methods of diagnosis incl. the *Formdeutversuch* or R. test consisting of 10 bilaterally symmetrical, amorphous, ink-blot patterns (5 black and white, 5 coloured) which the subject is asked to interpret, his answers revealing personality type, degree of intelligence and emotional stability.

passed, although its operation was to be suspended until the end of the war. The rise of Sinn Féin and the Easter Rebellion were bitter blows, and R. d. a disappointed man. His brother, William R. (1861–1917), also a prominent Nationalist M.P., joined the army in 1914, and d. of wounds in France.

REDOUTÉ (redootā'), Pierre Joseph (1759–1840). French artist, the 'Raphael of Flowers'. Patronized by the Empress Josephine and the Bourbon court, he produced superb volumes of flower paintings, the finest being *Les Roses* (1817–24). To delicacy of touch, he added a profound knowledge of plant structure.

RED RIVER SETTLEMENT. Colony of Scottish settlers founded in 1811–12 by Lord Selkirk in the basin of the Red river, near the site on which Winnipeg was later built. The Hudson's Bay Co. had acquired control by 1836; when its rights were transferred to the Dominion of Canada in 1869, Louis Riel (q.v.) raised a short-lived rebellion.

REDRUTH (-rooth). English market town, 17 m. N.E. of Penzance, Cornwall. Principal centre of the county's tin-mining industry. See CAMBORNE.

RED SEA. A strip of water, about 1,200 m. long, and varying in width from 100 to 200 m., running S.E. from Suez to the straits of Bab-el-Mandeb. Occupying part of the Great Rift Valley, it separates Egypt, the Sudan Republic, and Ethiopia in Africa from Arabia in Asia. The R.S. is referred to in the O.T., notably in Exodus, chap. 14, which relates the story of the escape of the Israelites across the R.S. from Pharaoh and his chariots. The sludge of its floor is said to be mineral-rich.

REDSHANK. Bird (*Tringa totanus*) of N. Europe and Asia, where it nests in swampy areas, although wintering farther south. Named from its long red legs, it is greyish, speckled black and c. 1 ft. long.

REDSTART. Bird (*Phoenicurus phoenicurus*) which winters in Africa and spends the summer in Europe. Named from its red tail, it has a dark grey head (with white mark on the forehead) and back, and brown wings with lighter underparts. The American R. (*Setophaga ruticilla*) belongs to a different family.

RED TAPE. Phrase descriptive of bureaucratic methods, derived from the 'pink' fastening for departmental bundles of documents in Britain.

REDWING. Member of the thrush species (*Turdus musica*), rather smaller than the song thrush, and with reddish wing and body markings. It breeds in the north of Europe and Asia, moving south in winter.

REDWOOD. See SQUOIA.

REED, Sir Carol (1906–). British film producer and director. He worked in the theatre before going into film production in 1930, and his films incl. *Odd Man Out* (1947); *The Fallen Idol* (1950) and *The Third Man* (1950), both written for him by Graham Greene; *Outcast of the Islands* (1953), and *The Running Man* (1962).

REED. Perennial aquatic grasses. The common R. (*Phragmites communis*) attains a height of 12 ft. or more, having stiff erect leaves, and straight stems bearing a plume of purplish flowers.

REED. In music, the sound-producing medium of various families of instruments, so called because its made from the outer layer of the R. (*Arundo donax*). The 'beating' R., which vibrates against the side of the instrument tube, is used in the organ (the R. in this

case being metal), clarinet, etc., and the 'free' R. which vibrates from side to side within the tube, in the mouth organ, harmonium, accordion, etc.

REEVES, William Pember (1857–1932). New Zealand statesman and writer. He was Minister of Education in N.Z. (1891–6), and director of the London School of Economics (1908–19). He wrote poetry and the classic description of his native country, *Long White Cloud* (1898).

REFEREE. An arbitrator. The term is most commonly used of the official in charge of a game, such as football, but may also be applied in law to members of the court of Rs. appointed by the House of Commons to give judgment on petitions against private bills, etc., and to the 3 official Rs. to whom cases before the High Court may be submitted.

REFERENDUM. The procedure whereby a decision on proposed legislation is referred to the electorate for settlement by direct popular vote. It is most frequently employed in Switzerland, but has also been used in Canada, Australia, New Zealand, and certain states of the U.S.A.

REFORMATION. The. The movement which in the 16th cent. ended the religious unity of W. Europe, and resulted in the establishment of the Protestant Churches. Reforming movements akin to Protestantism had existed since the 12th cent., e.g. the Waldensians in France and Germany, the Lollards in England, and the Hussites in Bohemia, but these had all been driven underground. The success of the R. in the 16th cent. was due partly to the rise of centralized absolute monarchies, which resented the political power of the papacy, and partly to the price revolution, which impelled kings and nobles to confiscate the Church's enormous wealth.

The R. began in Germany in 1517 with Luther's (q.v.) protest against the sale of indulgences; the title of 'Protestants' came into general use in 1529. The Peace of Augsburg (1555) left N. and W. Germany Protestant, and E. and S. Germany R.C. An offshoot of German Protestantism was the Anabaptist movement. Lutheranism was officially adopted by Sweden in 1527 and by Denmark in 1536. In Switzerland the R. was begun by Zwingli (q.v.) in 1518; it later came under the leadership of Calvin (q.v.). Calvinism found many followers in France, where the Huguenots (q.v.), although a minority, were strong enough to carry on a religious war, 1562–98. Both Calvinism and Anabaptism were strong in Holland, where resentment of religious persecution was a main cause of the war of independence (1568–1609). The English R. was begun under Henry VIII, who repudiated papal authority in 1534, and dissolved the monasteries. Under Edward VI Protestantism was established, and after a reaction under Mary, the process was completed by Elizabeth. The Scottish R., led by Knox (q.v.), triumphed in 1560. In Italy, Spain, and Portugal Protestantism was crushed by the Inquisition; in Bohemia, Poland, and Hungary it won considerable support, but was almost stamped out in the 17th cent.

REFRIGERATION. The process of absorbing heat at a low temperature and rejecting it at a higher temperature. R. is used in the food industries for the preservation of foodstuffs by chilling or freezing, the storage time which can be tolerated varying with the character of the foodstuff and, in general, increasing as the storage temperature is lowered. R. is also used in industrial processes and in air-conditioning (comfort cooling). See also DEEP FREEZING.

The R. process may be effected by gas expansion, by absorption cycles or most commonly by the vapour compression cycle. This is based on the fact that a fluid will absorb heat in changing from the liquid to the pascous state, and reject heat when changed from pascous to liquid state; absorption can take place at a low temperature and heat rejection can take place at a higher temperature. Fluids used as refrigerants in

COMMON REED

was made up of areas scattered over R., and the 2 were made one co. in 1899. Area 3,089 sq. m.; pop. (1961) 57,607.

ROSS DEPENDENCY. All the islands and territories between 160° E. and 150° W. long. S. of 60° S. lat.; it incl. Edward VII Land, Ross Sea and its islands, and parts of Victoria Land. It was placed under New Zealand jurisdiction by an Order in Council of 1923. Whaling is carried on, and there are a few scientific bases with c. 250 staff. Area 175,000 sq. m.

ROSSETTI, Christina Georgina (1830–94). British poet. The sister of Dante R., and a devout Anglican, she produced much popular lyric and religious verse, e.g. *Goblin Market* and other poems (1862).

ROSSETTI, Dante Gabriel (1828–82). British poet and artist whose full name was Gabriel Charles Dante R. B. in London, the son of the Italian patriot Gabriele R. (1783–1854), who settled in England in 1824, he studied at the R.A. schools and under Madox Brown, and in 1848 formed the Pre-Raphaelite brotherhood together with Millais and Hunt. He early began writing verse, and pub. *The Blessed Damozel* in 1850, but on the death in 1862 of the beautiful Elizabeth Siddal (whom he had m. in 1860) he buried his verse MSS. with her. These were recovered in 1869, and when pub. as *Poems* (1870) were attacked on the grounds of morality as belonging to the 'fleshy school of poetry'. *Ballads and Sonnets* appeared in 1881, and he also pub. translations from Dante, Villon, and others. His best-known paintings incl. 'Beata Beatrix', 'Monna Vanna', 'The Beloved', and 'Dante's Dream'. His brother, William Michael R. (1829–1919), was one of the later members of the Pre-Raphaelite Brotherhood, and pub. art and literary criticism.

ROSSINI (rossē'nē), Gioachino Antonio (1792–1868). Italian composer. B. at Pesaro, his first success was the opera *Tancredi* (1813). In 1816 his *Il Barbiere di Siviglia* was produced at Rome, and was at first a failure. During his fertile composition period, 1815–23, he produced 20 operas, but after *Guillaume Tell* (1829) gave up writing opera. His later years were spent in Bologna and Paris. Among the works of this period are the *Stabat Mater* (1831–41), and the piano music first pub. in 1919 and arranged for ballet by Respighi as *La Boutique fantasque*.

ROSS ISLAND. Name of 2 islands in Antarctica, one in Weddell Sea, discovered 1903 by Nordenskiöld, area c. 1,500 sq. m.; the other in Ross Sea discovered 1841 by Ross, area c. 2,500 sq. m. and incl. the volcanoes Mt. Erebus (13,202 ft.), active, and Mt. Terror (10,750 ft.), extinct.

ROSSLARE. Port of co. Wexford, Republic of Ireland, 9 m. S.E. of Wexford. Founded by the English in 1210, it was made the Irish terminus of the steamer route from Fishguard in 1906. Pop. (1961) 550.

ROSTAND (rostahā'), Edmond (1869–1918). French dramatist. B. at Marseilles, he achieved immediate success with *Les romanesques* (1894), which was followed by *La Princesse lointaine* (1895); *La Samaritaine* (1897); *Cyrano de Bergerac* (1897), his greatest triumph; *L'Aiglon* (1900), which provided Bernhardt with one of her greatest roles; and *Chantecler* (1910), in which Lucien Guitry appeared.

ROSTOCK (rō'stok). Port in E. Germany, on the Warnow, 8 m. S. of the Baltic. Founded in 1189 on a long-inhabited site, it became in the 14th cent. a powerful member of the Hanseatic League. It has a univ. (1419). Pop. (1966) 186,450.

ROSTOV-ON-DON (rostov'-). Seaport in the Russian S.F.S.R., cap. of R. region, on the Don, 14 m. E. of the Sea of Azov. R. has shipyards; tobacco, motor-car and locomotive, and textile factories. It dates from 1761, and is linked by river and canal with Volgograd on the Volga. Part of R. region is within the Donbas (q.v.). Pop. (1967) 737,000.

ROSTROPŔVICH, Mstislav Leopoldovich (1927–). Russian cellist. B. at Baku, he was first taught by his father. A soloist with the Moscow Philharmonia Orchestra from 1946, he became prof. in 1957 at the Moscow Conservatoire where he was once a student. His mastery of his instrument has prompted a number of composers to write for him, incl. Prokofiev (his unfinished 'Concerto for Cello' was completed by R.), Shostakovich, Khachaturian and Benjamin Britten.

ROSYTH (rōsith'). A naval base and dockyard in Scotland, built 1909, on the N. shore of the Firth of Forth, 2 m. S. of Dunfermline in which it was incorporated in 1911.

ROTARY CLUB. Society founded to foster the ideal of service to others and composed of business and professional men. The first R.C. (so called because the meetings were held at the offices of each member in rotation) was estab. by Paul Harris in 1905 in Chicago; the first British R.C. was founded in 1911. The R. International had in 1963 some 535,000 members in 8,405 clubs throughout the world.

ROTHAMSTED. English agricultural experimental station 4 m. N.W. of St. Albans, Herts, founded by Sir James Bennet Lawes (1816–1900) to carry out soil research. Its records go back to 1843. Lawes endowed the station in 1889, and in 1899 formed the Lawes Agricultural Trust to continue the work. When the Executive Council of Commonwealth Agricultural Bureaux was set up in 1929, the bureau dealing with soils was attached to R.

ROTHENBURG (rō'tenboorg) OB DER TAUBER (tow'ber). Town in Bavaria, W. Germany, 40 m. W. of Nuremberg, famous for its medieval buildings, churches, and walls. See illus. p. 472.

RÖTHENSTEIN, Sir William (1872–1945). British artist, son of a German immigrant who settled in Bradford. His work, now out of favour, incl. decorations for St. Stephen's Hall, Westminster, and portrait drawings. He was Principal of the Royal College of Art 1920–35, and helped Epstein, Paul Nash, and Henry Moore. His elder son Sir John R. (1901–) was Director of the Tate Gallery 1938–64, his younger son Michael R. (1908–) is an artist, noted as a print-maker.

ROTHERHAM. English market town (co. bor.) in the W.R. of Yorkshire, 5 m. N.E. of Sheffield, on the Don and Rother. Industries incl. iron and steel, pottery, glassworks, brewing. Pop. (1961) 85,346.

ROTHERHITHE. District in Southwark, London, England. On the S. bank of the Thames, it contains a considerable dock area, and is linked with the N. bank by R. Tunnel (1908), pedestrians and vehicles, to Stepney, and Thames Tunnel (1843), railway, to Wapping.

ROTHERMERE. See under NORTHCLIFFE.
ROTHERSAY (roth'si). Royal burgh (1400) and co. town of Butheshire, on the Isle of Bute, W. Scotland. It is a popular resort. Pop. (1961) 7,656.

ROTHSCHILD (roths'-child). The name of a Jewish family, famed for its activity in the financial world for 2 cents. Mayer Anselm (1744–1812) set up as a moneylender in Frankfurt-am-Main, and important houses were estab. throughout Europe by his 10 children. Nathan Mayer (1777–1836) settled in England, and his grandson Nathaniel (1840–1915) was created a baron in 1885. Lionel Walter (1868–1937) succeeded his father as 2nd baron R. and was a noted naturalist: his nephew Nathaniel (1910–), 3rd baron R., was chairman of the Agricultural Research Council 1948–58. James de R. (1878–1957), originally a member of the French branch, but who became a naturalized Briton, bequeathed to the nation Waddesdon Manor, near Aylesbury, and a magnificent family art collection.

ROTORUA. Town in North Island, New Zealand, in the Hot Spring District, near Lake R. There are medicinal springs, and active volcanoes, which, with

Jainism, the philosophies of Pythagoras and Plato, certain Christian heresies, and Theosophy.

REINDEER. Deer of the Arctic and sub-Arctic, common to both E. and W. hemispheres. About 4 ft. high at the shoulder, it has a very thick, brownish coat and broad hoofs well adapted to travel over snow. It is the only deer in which antlers are also present in the female: these are 4-5 ft. long and are shed in winter. The Scandinavian form (*Rangifer tarandus*) has been domesticated by the Lapps for cents., and has been introduced to Alaska and the Canadian Arctic. The American form (*R. caribou*), known as caribou, occurs in 2 forms - the large woodland caribou of the more southerly region and the barren-ground caribou of the north. R. migrate southward in winter, moving in large herds, and it is in Dec.-March that the Lapps round them up for sorting by their owners: a frilly greyish lichen (*Cladonia rangiferina*), popularly known as R. moss, is their main food.

REINHARDT (rīn'hahrt), Max (1873-1943). German theatrical producer. He acted and then produced at the Deutsches Theater, Berlin, 1895-1932, and the Kammerspielhaus, 1906-32. He produced Shakespeare, Molière, Ibsen, Shaw, etc., and 1911-12 *The Miracle* and *Oedipus Rex* in London. He initiated the Salzburg Festival where he produced *Everyman*. After 1933 he went to the U.S.A., becoming an American citizen in 1940, and produced films such as *A Midsummer Night's Dream*.

REITH, John Charles Walsham, 1st baron (1889-). British public servant. As 1st general manager (1922-7) and 1st director-general (1927-38) of the B.B.C., he supervised the creation and development of British radio services and of the world's first regular TV service (1936): the annual series of broadcast *R. Lectures* (1947), given by outstanding leaders of contemporary thought, were named in his honour. He was 1st chairman of B.O.A.C. 1939-40; headed the board reorganizing the Commonwealth cable and wireless system 1946-50, and the Colonial Development Corporation 1950-9. He was a pioneer advocate of the publicly owned but independently operated utility corporation.

REJANE (rāzhahn'), Gabrielle. Stage-name of the French actress G. Réju (1857-1920). B. in Paris, she scored her first success in 1883 in *Ma Camarade*. Later vehicles for her vital, emotional ability were *Madame Sans Gêne* (1893), *Zaza*, and *La Passerelle*.

RELATIVITY. Theory of physics, associated with the name of Albert Einstein (q.v.), based on the requirement that the laws of physics should be unaffected by the uniform motion of the observer. The need for such a theory became apparent in 1887, when Michelson and Morley performed an experiment to determine the velocity with which the earth moved through the hypothetical ether. No such velocity was, however, detected, and Lorenz and Fitzgerald suggested that this was because a measuring rod or body in motion suffers a contraction in length in the direction of its motion - a correction just sufficient to account for the negative result of the Michelson-Morley experiment. This suggestion was given rational justification by Einstein in the Special Theory of R. in 1905. It may be impossible to determine absolute motion by any experiment whatever, he said; the phenomena of nature will be the same to 2 unaccelerated observers moving with any uniform velocity relative to one another.

Ten years later Einstein advanced his General Theory of R., which was even more revolutionary in its impact on the world of physics. Newton's theory of gravitation had to be abandoned because it was incompatible with the Special Theory of R. Einstein now explained gravitation in terms of the properties of space and time, and not by the idea of a gravitational force of attraction. The idea of 'force of gravitation' is abandoned. The planets, stars, etc., move as they do, not because they are influenced by forces coming from other bodies in the universe, but because of the special nature of the world of space and time in the neighbourhood of matter. Einstein's theory, furthermore, led to the remarkable conclusion that light-rays are 'bent'. In the vast interstellar spaces unaffected by gravitating masses, light-rays travel in straight lines; but when they come within the field of influence of a star or other massive body they are deflected by the latter's gravitational field by an amount directly proportional to the body's mass.

The Einstein theory was carefully tested by expeditions despatched by the observatories of Greenwich and Cambridge to observe the eclipse of the sun of 1919, and the results were conclusively in its favour. The theory also predicts the 'shift' of certain lines in the solar spectrum, the precession in the orbit of Mercury, and the bending of light-rays in the neighbourhood of the sun, and these results admit of experimental verification.

RELAY, Electrical. Switching device operated by an electric current, causing abrupt changes, e.g. making or breaking the circuit, changing of the circuit connections, or variation in the circuit characteristics.

RELICS. Objects associated with Christ or a saint, or parts of a saint's body, preserved as objects of religious veneration. The cult of R. gave rise to many abuses in the Middle Ages, and it was condemned by the Protestant reformers but upheld by the Council of Trent. Relic-worship is widely practised in Lamaism, Mahayana Buddhism, etc.

RELIEF. In architecture, a term applied to carved figures and other forms which project from the background. The Italian terms *basso-relievo* (low relief), *mezzo-relievo* (middle relief), and *alto-relievo* (high relief) are used according to the thickness of the sculpture from the background. The French term *bas-relief* is commonly used for low relief.

RELIGION. Term usually derived from the Latin *religare*, to bind, that is used to describe man's attitude towards the gods or God. In original Buddhism, there is no Deity; yet Buddhism, like atheistic Jainism, and Confucianism, which is primarily a code of good behaviour, is always included in the list of the world's religions. E. B. Tylor gave as 'the minimum definition of religion, the belief in spiritual beings'. Matthew Arnold defined it as 'morality touched with emotion', but, as Prof. W. K. Clifford pointed out, some religious facts are immoral, e.g. human sacrifices to the gods, sacred prostitution, suttee, and thuggery. Prof. J. E. M. Taggart thought of R. as a feeling of harmony between oneself and the universe. Some modern theologians find the essence of R. to lie in a feeling of awe or reverence for the Unseen Power who or which is believed to be making for righteousness.

The chief religions are: (a) the Oriental faiths: Hinduism, Buddhism, Jainism, Sikhism, Parseeism, Confucianism and Taoism in China, Japanese Shinto; and (b) Judaism, Christianity, and Islam (Mohammedanism) - 'religions of a book'. Of Christianity the principal divisions are the Roman Catholic, the Eastern Orthodox, and the Protestant.

RELIGION, Comparative. The impartial study of the various religions of the world. The first-known surviving attempt of a kind of philosophy of religious beliefs is contained in fragments of the Greek thinker Xenophanes (6th cent. B.C.). Herodotus and Aristotle contributed to the study. The Middle Ages

the most notable being *La Doublure* (1897) in alexandrine couplets; and *Impressions d'Afrique* (1910): he adapted the latter for the stage and *L'Etoile au front* and *La Poussière de soleils* were written as plays – all having a hostile reception. A neurotic, he was treated by Janet (q.v.) who detailed his case history in *De l'Angoisse à l'extase*. In the posthumous *Comment j'ai écrit certains de mes livres* (1935) he explains his theory of writing, and is regarded as a precursor of the *nouveau roman*.

ROWAN. See MOUNTAIN ASH.

ROWE (rō), Nicholas (1674–1718). English dramatist and poet. He entered the Middle Temple in 1691, and inherited a fortune from his father. His most famous dramas are *The Fair Penitent* (1703), and *Jane Shore* (1714), in which Mrs. Siddons played. He ed. Shakespeare, and was Poet Laureate from 1715.

ROWING. Propulsion of a boat by successive strokes of oars. A rower may handle either 2 oars (sculling) or more commonly 1 oar, especially in racing boats, consisting of 2-, 4- or 8- man crews, with or without coxswain (steersman). The first recorded English race, still surviving, was Doggett's Coat and Badge, initiated in 1715 between Thames watermen: there were similar races between ferrymen of the Hudson river, New York, in 1811 and 1823. Amateur rowing as a sport, developing early in England (Leander club 1817) and later in the U.S.A. (Detroit boat club 1839), has become internationally popular. In the U.K. the chief annual events incl., the Oxford and Cambridge boat race, the Thames head of the river race, and the Henley Royal regatta, also a major international event. In the U.S.A. the Harvard-Yale boat race, held on the Thames at New London, and the Poughkeepsie regatta, are the premier events, while international contests in all classes are held during the Olympic Games.

ROWLANDSON, Thomas (1756–1827). British caricaturist. B. in London, he studied at the R.A. Schools and in Paris. Impoverished by gambling, he turned from portrait painting to caricature. His *Tour of Dr. Syntax in Search of the Picturesque*, and its 2 sequels, proved very popular. Other works incl. 'The Dance of Death', and illustrations for Smollett, Goldsmith, and Sterne.

ROWLEY, William (c. 1585–c. 1642). English dramatist. He became an actor, wrote *All's Lost by Lust*, and collaborated with Thomas Middleton in *The Changeling* and *The Spanish Gypsy*.

ROWSE, Alfred Leslie (1903–). British historian. A fellow of All Souls Coll., Oxford, he has made a popular as well as a scholarly reputation with *Sir Richard Grenville* (1937), *Tudor Cornwall* (1941) – he is himself a native of the co. – *The Use of History* (1946), *The England of Elizabeth* (1950) and a biography *William Shakespeare* (1963).

ROXBURGH (-buro). Border co. of Scotland. It is mainly upland, and incl. the fringes of the Cheviots. The Tweed enters R. for a few miles in the N., and its tributary the Teviot forms the largest dale of the co. Liddel Water in the S. drains to the Esk. There are numerous ancient remains, incl. Roman stations, the castles of Hermitage and Branhholm, and the monastic ruins at Melrose. Jedburgh is the co. town. R. is primarily a sheep-raising county, and tweed and hosiery are manufactured. Area 666 sq. m.; pop. (1961) 43,171.

ROY, Jamini (1887–). Indian artist. B. in W. Bengal, he was early influenced by European painting, but his later style is based on folk art – colourful, rhythmic, clearly outlined – with traditional themes used in a seemingly naive but instantly appealing manner.

ROYAL ACADEMY OF ARTS. An institution founded in London in 1768 by George III to encourage painting, sculpture, and architecture, the 1st pres. being Sir Joshua Reynolds. In 1771 the academy

was granted quarters in Somerset House, but in 1836 it moved to the National Gallery, and in 1867 was granted a lease of Old Burlington House. An annual summer exhibition is held at the academy for the works of contemporary artists. The R.A. Schools give instruction in painting, sculpture, and architecture free of charge.

ROYAL ACADEMY OF DRAMATIC ART. Founded by Herbert Beerbohm Tree in 1904, it is the foremost academy of its kind in Britain. Its headquarters have been in Gower Street, London, since 1905, and a Royal Charter was granted in 1920.

ROYAL ACADEMY OF MUSIC. The senior music school in the British Commonwealth (1822). It provides a full-time complete musical education, holds examinations (open) for the L.R.A.M. Diploma and offers scholarships for competition. Admission is by competitive entrance examination.

ROYAL AERONAUTICAL SOCIETY. The oldest aviation body, formed in 1866. Its members discussed and explored the possibilities of flight long before its successful achievement. Among members have been Lord Brabazon, Sir A. Verdon Roe, Sir F. Handley Page, and Sir G. de Havilland.

ROYAL AIR FORCE. See AIR FORCE.

ROYAL BALLET. Title under which the Sadler's Wells Ballet (the senior co. estab. at Covent Garden), Sadler's Wells Theatre Ballet (the junior co. at Sadler's Wells), and the Sadler's Wells School (Richmond, Surrey) were incorporated in 1957.

ROYAL COLLEGE OF MUSIC. A London college, opened in 1883, which combines with the Royal Academy of Music for local examinations.

ROYAL HORTICULTURAL SOCIETY. Instituted in 1804 for the improvement of horticulture, it holds a series of flower shows at Vincent Square, London, the great annual show at Chelsea being a social event, and has 300 acres of gardens, orchards and trial grounds at Wisley in Surrey. The Lindley Library is probably the world's finest horticultural collection, and the soc. itself pub. many books.

ROYAL HOUSEHOLD. Name given to those persons who are in the personal service of the sovereign. The chief officers of the R.H. are the Lord Chamberlain, the Lord Steward, and the Master of the Horse. Separate Hs. are maintained by other principal members of the Royal Family.

ROYAL INSTITUTION OF GREAT BRITAIN. An organization for the 'promotion, diffusion, and extension of science and useful knowledge', founded in London in 1799. Faraday and Davy are among distinguished scientists who have used the laboratories.

ROYAL MARINES. See MARINES.

ROYAL MILITARY ACADEMY. See SANDHURST.

ROYAL OPERA HOUSE. The leading English opera house, in Covent Garden, London. The original theatre was opened in 1732, a second in 1809, and the present one in 1858.

ROYAL SOCIETY. The oldest and premier scientific society of Britain. It originated in 1645 and its charter dates from 1660. The Copley and other medals are awarded periodically, and scientific papers are read at Burlington House, London. The Scottish counterpart is the R.S. of Edinburgh.

ROYAL SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS (R.S.P.C.A.). A society formed in 1824 to improve the conditions under which animals were kept and to abolish the gross cruelties which flourished on all sides. Since then further legislation has been initiated by the R.S.P.C.A. to strengthen the efforts of its inspectors and clinic workers.

ROYAL WARRANT HOLDERS. An association of business firms authorized to display the royal crest, signifying royal patronage by appointment.

ROYAN (rwahyon'). French resort, yachting and fishing port in Charente-Maritime dept., at the mouth

RENI (rā'nē), Guido (1575–1642). Italian painter of the Bolognese school. B. at Calvenzano, he was influenced by Caravaggio, and in c. 1602 settled in Rome where he painted his masterpiece, 'Phoebus and the Hours preceded by Aurora'. He eventually returned to Bologna where he founded a school.

RENNES (ren). Capital of Ille-et-Vilaine dept., W. France, at the confluence of the Ille and Vilaine, 35 m. S.S.E. of St. Malo. It has a univ. which pays particular attention to Breton culture, and is the seat of an archbishopric. It was originally the cap. of the Armorican tribe of the Redones. The 2nd Dreyfus trial, 1899, was held at R. Pop. (1962) 157,692.

RENNIE, John (1761–1821). Scottish engineer, b. at Phantassie, whose best-known structures were Southwark, Waterloo (q.v.), and London bridges.

RENO. City of Nevada, U.S.A., on the Truckee. It dates from 1868 and is best known as a place of temporary residence in order to take advantage of the state divorce laws, which require only 6 weeks' residence and provide extensive grounds on which to sue. R. is also the seat of the state univ. (1874), and has some industry, e.g. meat packing. Pop. (1960) 51,470.

RENOIR (renwahr'), Pierre Auguste (1841–1919). French painter. B. at Limoges, after serving as an apprentice to a porcelain manufacturer, he studied under Gleyre and was friendly with Sisley and Monet. He became one of the leading painters of the French Impressionist movement. His paintings show a sensitive touch, and a fine sense of colour; he is particularly noted for his nudes. Among his best-known works are 'Les Parapluies', 'The Bathers', and 'La Loge'. His son, Jean R. (1894–), is a film director. His films include *La Grande Illusion* (1936), *La Marseillaise*, and *La Bête Humaine*. See illus. p. 562.

REPARATIONS. Indemnities paid by countries defeated in war, as by Germany in both world wars.

REPRIEVE. The legal temporary suspension of the execution of a sentence pronounced after conviction of a capital offence. It is usually associated with the death penalty. In Britain it is made by the Crown on the advice of the Home Sec., and in the U.S.A. it is the prerogative of state govts.; the Pres. having this power in the case of federal offences, e.g. treason.

REPTILES. Class of vertebrates (Reptilia) including the snakes, lizards, crocodiles, turtles and tortoises. They are distinguished from the Amphibia by the absence of gills, breathing by means of lungs. They are cold-blooded, produced from eggs, and the skin is usually covered with scales.

Many extinct forms are known, including the orders Pterosauria, Rhynchocephalia (containing one living form, the tuatara), Plesiosauria, Ichthyosauria, and Dinosauria. The chief living orders are the Chelonina (tortoises and turtles), Crocodylia (alligators and crocodiles), and Squamata, divided into 3 sub-orders, Lacertilia (lizards), Rhinoptera (chameleons), Ophidia (snakes).

REPTILE. An extinct species - *Ichthyosaurus*.

RIPTON. English village in Derbyshire known for its public school, founded 1557, under the will of Sir John Port. Cap. of the kings of Mercia. R. has a 14th cent. church of St. Wystan which incorporates remains of a Saxon church. Pop. (est.) 2,000.

REPUBLICAN PARTY. One of America's 2 leading political parties, formed in 1854 by a coalition of opponents to slavery, who elected their 1st president, Abraham Lincoln in 1860. In the early years, the

R.P. supported protective tariffs; and preference for genuine settlers (homesteaders) over speculators for unsettled public land. Coupled with these liberal measures were conservative tendencies and an antagonism of the legislature to the executive, which were markedly expressed after Lincoln's assassination in the impeachment of Andrew Johnson, his Democratic and southern successor, and the election of Gen. Grant to the presidency in 1868 and 1872, which were both residues of civil-war bitterness – the party being divided into those who considered the South a beaten nation, and those who did not recognize the secession, and wished to reintegrate the South into the country as a whole. Towards the end of the century the R.P. was identified with U.S. imperialism, and industrial expansion. The era of President Theodore Roosevelt saw attempts at regulation and control of big business, and in forming the Progressive Party in 1912 he effectively removed the liberal influence from the R.P. until the 1940s. With few intermissions, the R.P. controlled the legislature from the 1860s until defeated by the 'New Deal' Democrats in 1932. The R.P. remained in eclipse until the election of Eisenhower in 1952, rather a personal triumph than that of the party which only narrowly managed to secure an initial control of Congress, soon lost and not regained even by the next R. pres., Richard Nixon, in 1968. After an isolationist period before the S.W.W., the R.P. became committed to an active foreign policy and Democratic and R. party platforms in 1968 were very close.

REDOS (rêr'dos). An ornamental screen or wall-facing at the back of the altar of a church. See illus. under **GOTHIC ARCHITECTURE** for the R. at Winchester.

RESIN. A substance exuded from pines, firs, and other trees, in gummy drops which harden in air. Varnishes are the commonest products of the hard resins, and ointments those of the soft resins. Rosin is the solid residue of distilled turpentine, a soft R.

RESISTANCE. Electrical. The property of a substance which restricts the flow of electricity through it, associated with conversion of electrical energy to heat; also the magnitude of this property. A *resistor* is an element whose principal characteristic is R., which depends on many factors which may include any or all of the following: the nature of the material, its temperature, dimensions, and thermal properties, degree of impurity, the nature and state of illumination of the surface and the frequency and magnitude of the current. The practical unit of R. is the ohm.

RESISTANCE MOVEMENTS. The opposition movements in Axis-occupied countries during the S.W.W. In E. Europe these took the form of guerrilla warfare, among the most successful being the partisan movement led by Tito in Yugoslavia, the guerrillas in Greece and Poland, and the partisan band behind the German lines in Russia. In more industrialized countries, such as France, Belgium, and Czechoslovakia, sabotage in war factories and on the railways, combined with underground propaganda and the assassination of particularly obnoxious Germans and collaborators, was more important. In these countries also, however, guerrilla activity was maintained, the groups affording a refuge for men resisting conscription for forced labour. Specialized forms of resistance were devised by particular sections of the community, such as the Norwegian clergy, who boycotted the Quisling-controlled State Church. Most of the R.Ms. were based on an alliance of all anti-Fascist parties, but in some countries, such as Yugoslavia and Greece, serious conflict arose between left- and right-wing movements.

RESPIGHI (respighi), Ottorino (1879–1936). Italian composer. B. at Bologna, he studied under Rimsky-Korsakov, and in 1913 became prof. of composition

RUBENS. In the house at Antwerp (left), built to his own design, Rubens lived from 1610 to 1644. Restoration was completed in 1946, and it now contains some of the best work of the master and his students, notably Jordaens. The vigorously natural treatment and delicate flesh tints in 'The Virgin and Child with St. Elizabeth and the Child Baptist' are typical.

Courtesy of Belgian National Tourist Office and the Walker Art Gallery.

Counterpoint (1960). His compositions incl. 7 symphonies, the opera *Bee-bee-bei*, chamber music, songs, etc.

RUBENS (roobenz), Peter Paul (1577–1640). Flemish painter. B. at Siegen, Westphalia, he was taken to Antwerp in 1587, and after studying under Verhaecht, Adam van Noort, and O. van Veen went to Italy in 1600. In 1605 he visited Spain, and at Madrid painted many portraits of the Spanish nobility. He settled in Antwerp in 1609, and became court painter to the Archduke Albert and his wife Isabella. His masterpiece, the 'Descent from the Cross', in the Antwerp cathedral, was painted in 1611–14. In 1620 he went to France at the invitation of Marie de' Medici, and painted a number of pictures commemorating her marriage to Henry IV. In 1628 he again went to Madrid where he met Velasquez. In 1629–30 he was in London as envoy to Charles I, and painted a portrait of the king and his queen, and the 'War and Peace', now in the National Gallery. He is noted as a fine colourist, and excelled in the use of the pencil.

RUBIACEAE (roobi-ā'sē-ē). Large family of plants mainly found in the tropics; its typical genus is *Rubia*, or madder.

RUBICON (roo'bikon). Ancient name of the small river flowing into the Adriatic which, under the Roman republic, marked the boundary between Italy proper and Cisalpine Gaul. When Caesar led his army across it in 49 B.C. he therefore declared war on the republic; hence to 'cross the R.' means to take an irrevocable step. Its identity is not certain, but the Fiumicino is officially recognized as the R.; it rises in the Etruscan Apennines 10 m. W.N.W. of San Marino and enters the Adriatic 10 m. N.W. of Rimini.

RUBIDIUM (Lat. *rubidius*, dark red). Soft white metal of the alkali group which tarnishes instantly in air and ignites spontaneously: symbol Rb, at. wt. 85.48, at. no. 37. Discovered spectroscopically by Bunsen and Kirchhoff in the mineral lepidolite, it is slightly radioactive, and is used as a photo-sensor, having the closest colour response to that of the eye.

RUBINSTEIN, Artur (1888–). Polish pianist, domiciled in U.S.A. He studied in Warsaw and Berlin,

and has appeared with the world's major symphony orchestras.

RUBUS (rōō'bus). Genus of shrubs or herbs, whose white or pink flowers are followed by edible fruits. It includes *R. idaeus*, the raspberry, and *R. fruticosus*, brambles and blackberries.

RUBY. With the emerald (q.v.) probably the most precious of gem stones, of red transparent corundum, crystallizing in the hexagonal system; it is without true cleavage. The true R. is found mainly in Burma, but Rs. have been produced artificially and are widely used in lasers (q.v.).

RUDD or Red-Eye. Freshwater fish, *Scardinius erythrophthalmus*, common in lakes and slow rivers of England and N. Europe. Coppery-coloured with red fins and eyes, it reaches a length of 18 in.

RUDOLPH. Name of 2 Holy Roman Emperors. Rudolph I (1218–91), originally count of Habsburg, was elected emperor in 1273. He was the first Habsburg emperor, and founded the greatness of his House by investing his sons with the duchies of Austria and Styria. Rudolph II (1552–1612) succeeded his father Maximilian II in 1576. His intolerant policy led to unrest in Hungary and Bohemia, which compelled R. to surrender Hungary to his brother Matthias in 1608, and to grant the Bohemians religious freedom.

RUDOLPH (1858–89). Crown Prince of Austria. The only son of the emperor Francis Joseph, he early showed progressive views which brought him into conflict with his father. In 1889 he and his mistress, Marie Vetsera, were found shot in his hunting lodge at Mayerling. The official verdict was suicide.

RUE. A shrubby herb (*Ruta*), of the family Rutaceae, native to S. Europe and temperate Asia. Common R., *R. graveolens*, formerly called Herb of Grace, was much used in medieval medicine.

RUFF. Bird (*Macchetes pugnax*) of the snipe family (Scolopaciidae). The name is taken from the frill of erectile feathers developed in breeding-time round the neck of the male. The R. no longer breeds in Britain, but is found across N. Europe and Asia, and migrates S. in winter.

RUGBY. English market town (bor.) in Warwickshire, near the Avon, 10 m. S.S.E. of Coventry. It is

1960, he estab. a repressive dictatorship and was an embarrassing ally for the U.S.A.

RHEIMS. See REIMS.

RHENIUM (Lat. *Rhenus*, Rhine). Hard grey metal; symbol Re, at. wt. 186.22, at. no. 75. Discovered in 1925 by Noddack, Tacke and Berg in the minerals columbite, tantalite and wolframite, it is used in thermocouples and as a catalyst for dehydrogenation.

RHESUS MONKEY. A species of macaque (*Macacus rhesus*), also known as the bandar, found in N. India. Brown, tinged with grey, the hair is long and straight; the face and buttocks are bare and red. The Rh factor is a substance found in the red blood cells of 85 per cent of human beings; is presumed similar to a substance found in the red blood cells of R.Ms.

RHEUMATISM. A term loosely applied to a large variety of ailments associated with inflammation of joints and muscles. Acute R., or rheumatic fever, is, however, a definite disease probably caused by a certain type of coccus. It is commonest between 15 and 30 and in cold, damp weather. It is marked by illness, high temperature, and inflammation of joints, which is apt to pass rapidly from one to another. It lasts about 2 weeks, and its chief danger is the damage it does to the heart muscle. There is a form of infective R. which attacks elderly patients, and may develop into osteo-arthritis, or severe muscular stiffness with signs of chronic infection.

RHINE. Joseph Banks (1895-). American expert on extra-sensory perception. He was director of the Parapsychology Laboratory, Duke Univ. from 1935, and of the Parapsychology Institute, Durham, N.C., from 1964. His controlled experiments in telepathy, clairvoyance, precognition and psychokinesis have estab. a scientific basis for belief in these phenomena.

RHINE. River of Europe. It rises in Switzerland, and forms the frontier between Switzerland and (i) Liechtenstein, (ii) Austria from Liechtenstein to Lake Constance, (iii) Germany from Lake Constance to Basle, and the Franco-German frontier from Basle to near Karlsruhe, where it enters Germany. It receives the Neckar, Main, Moselle, Ruhr. Crossing the Dutch border, it becomes a wide delta covering the S.W. of the Netherlands, and with many branches which link and divide and link again. One branch, the IJssel, runs N. from just E. of Arnhem to the IJsselmeer; the others, of which the chief are the Lek and the Waal, link eventually with the Maas (Meuse) and Scheldt (Escaut) to fall into the North Sea by a number of mouths, the most important being the canalized New Waterway and the Scheldt estuary. It is navigable for vessels up to 1,300 tons as far as Basle. Length c. 800 m.

RHINELAND-PALATINATE. Land of Germany formed in 1946 of the Rhenish Palatinate (see PALATINATE) and parts of Hessen, Rhine prov. and Hessen-Nassau. Much of it is wooded mountain country, and forestry is carried on, cattle, pigs and poultry are reared, wheat, rye, barley, oats and potatoes are grown and wine and tobacco are produced. The chief industries are chemicals, leather goods and machinery. The cap is Mainz. Area 7,656 sq. m. pop. (1966) 3,612,700.

RHINE PROVINCE. Former prov. of Prussia, in S.W. Germany. It incl. the Saar area (Saarland), part of the Ruhr, and the famous vineyards of the Rhine and Moselle valleys; Cologne was its chief city. It was divided in 1945 between the British and French occupation zones, and in 1946 the N. (British-occupied) part was incl. in the Land of North Rhine-Westphalia; the S. (French-occupied) part in the Land of Rhineland-Palatinate.

RHINOCEROS (rino'seros). Ungulate mammal of the family Rhinocerotidae. Best-known are the one-

horned Indian R. (*Rhinoceros unicornis*), 5 ft. at the shoulder and with a thick, tubercled skin, folded into shield-like pieces; the African black R. (*Diceros bicornis*), bad-tempered and with a prehensile upper lip for feeding on shrubs; and the docile broad-lipped or 'white' R. (*Ceratotherium simus*), actually slaty-grey and with a squarish mouth for browsing grass. Both the latter are smooth-skinned

AFRICAN RHINOCEROS

and two-horned, but the white is rare and at 6 ft. the largest living R.: an extinct species reached 15 ft.

RHODE ISLAND. Smallest state of the U.S.A., on the Atlantic coast. One of the original 13 states, R.I. was founded in 1636 by Roger Williams, who had been exiled from Massachusetts Bay Colony for religious dissent. The coastline is indented by Narragansett Bay, running 28 m. inland. Industries incl. textiles, formerly most important but declining after the S.W.W. and overtaken by varied manufactures, jewellery, silverware, machinery, rubber and plastics. Poultry (espec. R.I. reds) and dairying flourish; apples and potatoes are grown; and there are valuable fish and shellfish resources. The cap. is Providence, and Newport has been a noted seaside resort from the mid-19th cent. Area 1,214 sq. m.: pop. (1960) 859,488.

RHODES. Cecil John (1853-1902). S. African statesman. B. at Bishop's Stortford, Herts, he went to Natal in 1870. As head of De Beers Consolidated Mines and Goldfields of S. Africa, Ltd., he amassed a large fortune. He entered the Cape legislature in 1881, and became Prime Minister in 1890. Aiming at the formation of a S. African federation and of a block of British territory from the Cape to Cairo, he was largely responsible for the annexation of Bechuanaland in 1885, and formed the British S. Africa Co. in 1889, which occupied Mashonaland and Matabeleland, thus forming Rhodesia. The discovery of his complicity in the Jameson Raid forced him to resign the premiership in 1896. The R. Scholarships were founded at Oxford under his will, for students from the Commonwealth, U.S.A., and Germany.

RHODES. Largest of the Dodecanese, in the E. Aegean Sea. It was first settled by Greeks c. 1000 B.C., held by the Knights Hospitallers of St. John 1306-1522, taken from Turkish rule by the Italian occupation in 1912, and ceded to Greece in 1947. Grapes and olives are grown. R. is the cap., pop. (1961) 27,393. Area 545 sq. m.: pop. (est.) 60,000.

RHODESIA. Country of S. central Africa bounded by Zambia to the N., Mozambique to the W., and the Rep. of S. Africa to the S. It incl. the Great Dyke, a ridge of high veld 4-6,000 ft. high running for 350 m. S.W.-N.E. between Bulawayo and Salisbury (the cap.) and elsewhere slopes down to low veld, 1-2,000 ft. high; the climate of R. is modified by its altitude and is healthy for Europeans. Incl. in R. are the Matopo Hills, where Rhodes is buried, Victoria Falls, and Zimbabwe. Products incl. maize, groundnuts, kaffir corn, cotton and tobacco; cattle (except in the tree-belt along the Zambesi) and goats, and a wealth of minerals - asbestos, chromite, coal, copper, diamonds, gold, emeralds, nickel and platinum. Other towns beside Bulawayo and Salisbury, incl. Umtali, Gwelo, Wankie, and Que Que. Area 150,333 sq. m. pop. (1967) 4,530,000, incl. 225,000 whites.

The combined area occupied by Zambia (q.v.) and R. was incl. in the cession made to the Brit. S. Africa Co. in 1889, and the whole was named R. in 1895 in honour of Cecil Rhodes (q.v.). The portion S. of the Zambesi, then known as Southern R., was granted

Russian occupation forces remained in R. until 1958, but thereafter R. took a more independent attitude, e.g. condemnation of the Soviet invasion of Czechoslovakia, and forged closer trading links with the West, e.g. the 1960 agreement with U.K.

RUMANIAN. One of the Romance languages, it developed from the Popular Latin spoken by the Roman settlers of Dacia, but later was strongly influenced by Slav languages. Only in the 19th cent. was the Cyrillic alphabet abandoned in favour of the Roman. The most important dialect is Daco-R., spoken in Wallachia, Moldavia, Bessarabia, Transylvania, Bukhovina, and the Dobruja; Macedo-R. is spoken in Macedonia, Albania, Thessaly, and Epirus.

Rumanian Literature. It was not until the 16th cent. that Church Slavonic was replaced by R. in the translation of the Gospels (1560) issued by Diakonus Koresi: a complete Bible appeared in 1688. Of the chronicle writers and translators the best is Dmitrie Cantemir (1673–1723). The greater part of the 18th and early 19th cents. was dominated by Greek influences, and was a period of decline. Ion Radulescu (1802–72) brought the new 'romantic' inspiration to R.L., and a new interest in R. folk songs arose. Other writers of the time were Vasile Carlova (1809–31), the lyric poet; the historical novelist Dimitrie Bolintineanu (1826–73); and the versatile Vasile Alecsandri (1819–90). Typical of the new period following the achievement of national union was the critic Tito Maiorescu (1840–1917), who influenced the greatest R. poet Mihail Eminescu (1850–89). Other popular writers are the dramatist Ion Caragiale (1852–1912); the novelists Carmen Sylva (1843–1916), Duiliu Zamfirescu (1858–1922), and Mihail Sadoveanu; and the poets S. Josif (1877–1913) and P. Cerna (1881–1913).

RUMFORD, Benjamin Thompson, count R. (1753–1814). Scientist and administrator. B. in Mass., he served on the English side in the War of American Independence, and later was an official of the duke of Bavaria, for whom he effected civil and military reforms. He became a count of the Holy Roman Empire in 1791. Returning to England in 1798 he announced his theory that heat is a mode of motion and not a substance, and in 1799 helped found the Royal Institution. From 1804 he lived in France.

RUNCIMAN, Walter, 1st viscount (1870–1949). Liberal politician. The son of the 1st baron R., a prominent shipowner, he entered parliament in 1899, and was President of the Board of Education 1908–11; of Agriculture 1911–14; and of Trade 1914–16. He returned to the Board of Trade in 1931–7, and was Lord President of the Council 1938–9. In 1938 he undertook a mission to Czechoslovakia to persuade the Czechs to make concessions to Germany.

RUNCORN. English river port (U.D.) in Cheshire, on the Mersey, 12 m. S.E. of Liverpool. It is also on the Manchester Ship Canal, and has leather, chemical, and shipbuilding industries. Pop. (1961) 26,035.

RUNDSTEDT (roond'stet), Karl Rudolf Gerd von (1875–1953). German field marshal. He took part in the Polish campaign in 1939, and was largely responsible for the German break-through in France in 1940. Defeated on the Ukrainian front in 1941, he was appointed C.-in-C. in France in 1942. He stubbornly resisted the Allied invasion in 1944 and in Dec. launched a temporarily successful offensive in the Ardennes. He was captured, but in 1949 war-crime charges were dropped owing to his ill-health.

RUNEBERG (roo'neberg), Johan Ludwig (1804–77). Finnish poet who wrote in Swedish. B. at Jakobstad, Finland, his verse romance, *Grafven i Perrho* (1831), won the gold medal of the Swedish Academy. Although living in Finland he remains the most popular of Swedish poets. His works incl. *Nadeschda* (1841), the patriotic poems *Fänrik Ståls Sägner* (1848 and 1860), and the legend cycle *King Fjalara*.

RUNES. The oldest Germanic script, chiefly adapted from the Lat. alphabet. Rs. were scratched in wood, metal, stone, or bones. The earliest runic inscriptions date from the 3rd cent. and were found in Denmark. Rs. were used in England in Anglo-Saxon times, and the Bewcastle and Ruthwell crosses are among the most notable runic monuments. Several 11th cent. Norse runestones are claimed to have been found in the U.S.A.

RUNNYMEDE. A meadow on the S. bank of the Thames near Egham, Surrey, England, where on 15 June 1215 King John put his seal to Magna Carta. An acre of land at R. was dedicated as memorial to J. F. Kennedy in 1964, in combination with a scholarship scheme for sending students to American univs. Overlooking R., on Cooper's Hill, is a memorial to 20,455 men and women of Commonwealth air forces who died during the S.W.W. and have no known grave. A new bridge across the Thames was completed at R. in 1961.

RUNYON, Damon (1884–1946). American writer. B. in Manhattan, Kansas, he was a war correspondent in Mexico and Europe, and a sports and crime reporter in New York. His collection of short stories, *Guys and Dolls* (1932), was an immediate success, and was followed by others. Dealing with the seamy side of New York life, the stories are told with wry humour in the racy, specialized argot developed by R. for the purpose.

RUPERT, Prince (1619–82). English general and admiral. Son of the Elector Palatine and James I's dau. Elizabeth, he came to England in 1642, to fight for his uncle Charles I, and proved a dashing cavalry leader. Defeated by Cromwell at Marston Moor and Naseby, he commanded a royalist privateering fleet 1649–52 until driven from the seas by Blake. He returned to England in 1660, and distinguished himself as an admiral in the Dutch Wars.

RUPERT'S LAND Name given in honour of Prince Rupert (q.v.) to a large area of N. Canada granted to the Hudson's Bay Company in 1670, sold by the company to the Dominion of Canada in 1869, and subsequently divided between Quebec, Ontario, Manitoba, and the Northwest Territories, when the name disappeared, except as the territorial title of one of Canada's Protestant archbishops.

RUPTURE. See **HERNIA**.

RUSE (roo'se). Bulgarian river port on the right bank of the Danube, cap. of R. prov. It is familiar historically by its Anglicized Turkish name, Rustchuk. The Turks built a great fortress here. R. has an airport and is linked with Giurgiu, Rumania, on the opposite bank of the Danube by a railway and road bridge opened in 1954. Pop. (1965) 128,400.

RUSH. Genus of plants (*Juncus*) in the family Juncaceae (q.v.), found in wet places in cold and temperate regions. The common R. has hollow stems which have been used for mat-making and basket work since ancient times.

RUSK, Dean (1909–). American statesman. B. in Georgia, the s. of a post-office worker, he was ed. at Davidson College, N. Carolina, and the univs. of Oxford and Berlin. During the S.W.W. he fought in the U.S. Army in the Burma-China area and became Deputy Chief of Staff of U.S. Forces. After the war he was Sec. of State for U.N. affairs until 1950 when, as Asst. Sec. of State for Far Eastern Affairs, he played a prominent part in dealing with the Korean War problems. In 1952 he became Pres. of the Rockefeller (q.v.) Foundation and 1961–8, as a Democrat, was Sec. of State.

RUSKIN, John (1819–1900). British writer. B. in London, only child of a prosperous wine-merchant, he was able to travel widely and was ed. at Oxford. The first vol. of his *Modern Painters* appeared in 1843. Many works followed, incl. *The Seven Lamps of Architecture* (1849) in which he stated his philosophy

RICARDO, David (1772–1823). British economist. After making a fortune on the London Stock Exchange, he pub. in 1817 *Principles of Political Economy*, in which 'laws' of rent, value, and wages, long generally accepted, were clearly enunciated.

RICE, Elmer (1892–1967). American playwright. B. in New York City, he was best known for the Expressionist *The Adding Machine* (1923) and *Street Scene* (1929), which was made into an opera by Kurt Weill.

RICE. The principal cereal of the wet regions of the tropics; the yield is very large, and R. is said to be the staple food of one-third of mankind. It is derived from grass of the genus *Oryza*, which is probably native to India and S.E. Asia. It has been cultivated since prehistoric days in the East, and has now been introduced into suitable lands in other parts of the world. It is a crop that matures quickly, taking 150–200 days in warm, very wet conditions. During its growing period it needs to be flooded either by the heavy monsoon rains or by adequate irrigation. This restricts the cultivation of swamp rice, the usual kind, to level land and terraces. A poorer variety, known as hill rice, is grown on hillsides. Paddy, or unhusked R., has valuable vitamins which are lost in husking or polishing, but it is only in the polished state that R. enters into European trade. Outside Asia there is some R. production in the Po valley of Italy, and in the United States in Louisiana, Carolina, and in California. New varieties with greatly increased protein content are being developed by gamma radiation for commercial cultivation from 1975.

RICHIARD I. called Coeur-de-Lion (1157–99). King of England. The 3rd son of Henry II, against whom he twice rebelled, he succeeded to the crown in 1189. In the 3rd Crusade 1191–2 he showed courage and generalship, although he failed to recover Jerusalem. While returning overland he was captured by the duke of Austria, who handed him over to the Emperor Henry VI, and he was held prisoner until a large ransom was raised. His later years were spent in warfare in France, and he was killed while besieging Châlons. Himself a poet, he became a hero of romances after his death.

RICARD II (1367–1400). King of England. B. at Bordeaux, the son of Edward the Black Prince, he succeeded his grandfather Edward III in 1377, the govt. being in the hands of a council of regency. During the Peasants' Revolt in 1381 he showed much courage. His fondness for favourites resulted in conflicts with parliament, and in 1388 the baronial party headed by the duke of Gloucester had many of his friends executed. R. recovered control in 1389, and ruled moderately until 1397, when he had Gloucester murdered, and his leading opponents executed or banished, and made himself absolute. In 1399 his cousin the duke of Hereford (later Henry IV) returned from exile to lead a revolt; R. was deposed by parliament and imprisoned in Pontefract Castle, where he d. mysteriously.

RICARD III (1452–85). King of England. The son of Richard, duke of York, he was created duke of Gloucester by his brother Edward IV, and distinguished himself in the Wars of the Roses. On Edward's death in 1483 he was created protector to his nephew Edward V, and soon secured the crown on the plea that Edward IV's sons were illegitimate. He proved a capable ruler, but the suspicion that he had murdered Edward V and his brother undermined his popularity. In 1485 Henry, earl of Richmond, raised a rebellion, and R. was defeated and killed at Bosworth. Modern scholars tend to minimize the evidence for his crimes as Tudor propaganda.

RICHARDS, Frank. Pseudonym of British author Charles Hamilton (1875–1961). Writing for the boys' papers *Mugger* and *Gem*, he invented the Greyfriars public school at which the most famous pupil was the

immortal fat boy, always in trouble, Billy Bunter.

RICHARDS, Sir Gordon (1905–). British jockey. First riding in 1920, he had 21,834 mounts and 4,870 winners before his retirement in 1954. He was 26 times champion jockey, and was knighted in 1953, the year he won the Derby with Pinza.

RICHARDSON, Henry Handel. Pseudonym of Australian author Ethel Henrietta R. (1880–1946). B. in Melbourne, she left Australia at the age of 18, and never returned, although her books have a predominantly Australian outlook. Her best-known books are *Maurice Guest* (1908), *The Fortunes of Richard Mahony* (1917–29), and the *Young Costina* (1939).

RICHARDSON, Sir Ralph David (1902–). British actor. In an extensive career on stage from 1921 and in films from 1933, he achieved success as actor-director of the Old Vic 1944–7, with plays incl. *Peer Gynt* and *Cyrano de Bergerac*. Some later performances were in *Flowering Cherry* (1958) and *The Rivals* (1966). His films incl. *Anna Karenina* (1948) and *The Looking-Glass War* (1968).

RICHARDSON, Samuel (1689–1761). British novelist. B. in Derbyshire, he was apprenticed to a printer, setting up his own business in London in 1719, and becoming printer to the House of Commons. His *Pamela* (1740–1), written in letter form, achieved a sensational vogue both in England and on the Continent, and was followed by *Clarissa* (1747–8), and *Sir Charles Grandison* (1753–4). Remarkable for his analysis of the feminine mind, R. exercised great influence on the development of the novel.

RICHARDSON, Tony (1928–). British director and producer. With George Devine he estab. the 'English Stage Co.' in 1955 at the Royal Court Theatre, London, and has been artistic dir. there since 1956; his productions incl. *Look Back in Anger* (1956). In 1958, he founded with John Osborne (q.v.) Woodfall Films, and has produced or directed *A Taste of Honey* (1961), *Saturday Night and Sunday Morning* (1960), and *The Charge of the Light Brigade* (1968). He was m. to actress Vanessa Redgrave 1962–7.

RICHBOROUGH. English seaport in Kent, at the mouth of the Stour r. The Roman Rutupiae, it was in Roman times and for some centuries after an important port and military base, H.Q. of the count of the Saxon Shore. The retreat of the sea left R. in the midst of salt marshes, but during the world wars it was brought into use again as a military port.

RICHELIEU (rêshlyô'), Armand Jean du Plessis de (1585–1642). French cardinal and statesman. B. at Paris of a noble family, he entered the Church, and was created bishop of Luçon in 1606, and a cardinal in 1622. Through the influence of Marie de' Medici he became Louis XIII's chief minister in 1624, a position he retained until his death. At home he aimed to make the monarchy absolute; he ruthlessly crushed opposition by the nobility, and destroyed the political power of the Huguenots, while leaving them religious freedom. Abroad he sought to establish French supremacy by breaking the power of the Habsburgs; he therefore supported Gustavus Adolphus and the German Protestant princes against Austria, and in 1635 brought France into the 30 Years War. See illus. p. 449.

RICHMOND. (1) English town (bor.) in the N. Riding of Yorks. 12 m. S.W. of Darlington, on the Swale. The castle remains date from 1071, and there is a restored Georgian theatre. Henry VII took his earlier title, earl of R., from this town. Pop. (1974) 5,764. (2) Cap. of Virginia, U.S.A., on the r. James, c. 70 m. from the Atlantic. R. is the centre of the vast Virginian tobacco trade and manufactures immense quantities of cigarettes. It was the Confederate cap. 1861–5, a museum commemorates Genl. Allan Poe's association with R. Pop. (1974) 219,158.

RICHMOND-UPON-THAMES. Bor. in the S.W. of Greater London. Little remains in Richmond of

St. Petersburg. For 2 cents. the art of Russia reflected tendencies in Italy, France, Germany, and England. In the Soviet Union art has been enlisted in the service of the State. Extreme forms of modern art are not encouraged, though they were in the early days of the Soviet régime, when the Russians sought to free art from all traditional slavery, and replaced the Imperial Academy by a Free College of Art.

RUSSIAN HISTORY. The southern steppes of R. were originally inhabited by nomadic peoples, and the northern forests by Slavonic tribes, who slowly spread southward. Viking chieftains in the 9th–10th cents. estab. their own rule in Novgorod, Kiev, and other cities, and in the 10th–12th Kiev temporarily united the Russian tribes into an empire. Christianity was introduced from Constantinople in 988. In the 13th cent. the Mongols (the Golden Horde) overran the southern steppes, compelling the Russian princes to pay tribute, while in the 14th Byelorussia and the Ukraine came under Polish rule. Ivan III, prince of Moscow (1462–1505), threw off the Mongol yoke, and in the 16th W., while Ivan IV (1547–84) assumed the title of czar, and conquered Kazan and Astrakhan. Peter the Great (1689–1725) modernized the administration, founded a navy, introduced western science, and wrested the Baltic seaboard from Sweden. Catherine II (1762–96) annexed the Crimea and Poland, and recovered the W. Ukraine. The Russo-Napoleonic Wars (1798–1801, 1805–7), and the repelling Napoleon's invasion took part in the Rev. of 1812. During the 19th cent. revolutionary ideas steadily spread, in spite of harsh repression. A rapid development of industry followed the abolition of serfdom (1861); a working-class movement developed, and in 1898 the Social Democratic Party was founded. A revolution in 1905, although suppressed, compelled the tsar to accept a parliament with limited powers. Abroad, Russian attempts to dominate the Balkans led to wars with Turkey in 1827–9, 1853–6, and 1877–8, and provoked the hostility of Britain, France, and Austria. Russian expansion in central Asia also aroused British suspicions, while in the Far East the treaties of Aigun (1858) and Peking (1860) were imposed on China, annexing territories N. of the Amur and E. of the Ussuri rivers, and the occupation of Manchuria resulted in war with Japan in 1904–5. Russo-German rivalries in the Balkans nevertheless brought Russia into an alliance with France (1895) and Britain (1907), and were a main cause of the F.W.W. in 1914.

A revolution in March 1917 estab. a republic, but the provisional govt.'s failure to make peace rallied popular support to the Bolsheviks, led by Lenin, who in Nov. seized power. Peace was concluded with Germany at Brest-Litovsk in March, 1918. During 1918–21 British, French, U.S., and Japanese forces invaded Russia, while 'White' armies carried on civil war; Poland, Lithuania, Latvia, Estonia, and Finland became independent, Rumania occupied Bessarabia, and Poland seized the W. Ukraine and White Russia. A federal constitution was adopted in 1923. The 'war' was replaced in 1921 by the 'New Economic Policy' of tolerating some private business. Inner party controversies followed Lenin's death, ending with the adoption of Stalin's policy of 'Socialism in one country' and the inauguration of the 1st 5-year plan. During 1928–39 heavy and light industries were developed, and agriculture collectivized.

From 1933 Russia put forward a policy of collective resistance to aggression. In 1939 she concluded a

ALEXEI KOSYGIN

ed his de-Stalinization campaign, begun in 1956. His policy of 'peaceful co-existence in competition with capitalism' led to the Sino-Soviet ideological rift which from 1960 worsened, with Russian opposition to China's Cultural Revolution and bloodshed on the frontier (notably on the Ussuri, q.v.) accompanied by demands for revision of the Aigun/Peking treaties. Relations with the West remained uneasy, e.g. the Cuban crisis of 1962, but the nuclear test-ban agreement of 1963 marked some amelioration. At home there were splendid achievements in space research (q.v.), and improvement in supplies of consumer goods. Khrushchev's fall in 1964 marked a return to Cold War attitudes under Brezhnev and Kosygin (qq.v.). The naked military expediency of the invasion of Czechoslovakia in 1968 was strongly condemned even by many Communist parties abroad. Soviet ideological leadership being particularly assailed by the Italian party, and emergent Africa alienated.

RUSSIAN LITERATURE. The earliest production of R.L. are the sermons and chronicles and the unique prose poem 'Tale of the Armament of Igor', belonging to the period in 11th and 12th cents. when the centre of literary culture was Kiev. By the close of the 14th cent. leadership had passed to Moscow, which was completely divorced from developments in the West until the 18th century: most noteworthy in

this period are the political letters of Ivan the Terrible, the religious writings of the priest Avvakum (1620–81), who was the first to use vernacular Slavonic in literature, and the traditional oral folk-poems dealing with legendary and historical heroes which were collected in the 18th and 19th cents. Modern Russian literature begins with Mikhail Lomonosov (c. 1711–65), who fused

non-aggression pact with Germany, and after the German conquest of Poland reoccupied the W. Ukraine and White Russia. There was a short Russo-Finnish War in 1939–40. During 1940 Bessarabia, Lithuania, Latvia and Estonia entered the Soviet Union. For events 1941–4 see SECOND WORLD WAR.

Russia was startled by the Hungarian Revolution of 1956 into savage repression that antagonized the West and embittered relations with Yugoslavia until 1961 but on becoming P.M. in 1958, Khrushchev extended

name, St. Vitus in Flumine. Pop. (1961), with the suburb of Sušak on the other side of the river, 100,339.

RILKE (rêl'ke), Rainer Maria (1875–1926). Austrian poet. B. at Prague of Carinthian stock, he was intended for a military career, but soon turned to literature. He travelled widely, especially in Russia, and was for a time Rodin's secretary. His prose works incl. the semi-autobiographical *Notebook of Malte Laurids Brigge*, and his poetical works the *Sonnets to Orpheus* and the *Duino Elegies*. His verse is characterized by a form of mystic pantheism which seeks to achieve a state of ecstasy in which existence can be apprehended as a whole. He d. in Switzerland.

RIMBAUD (rahbô'), Jean Nicolas Arthur (1854–91). French Symbolist poet. B. at Charleville, he went to Paris where he became the friend of Verlaine, who tried to murder him when they quarrelled. He then wandered Europe, travelled to the E. Indies and Abyssinia, and d. at Marseilles. His verse is often obscure, but it has exerted an enormous influence on 20th cent. poets. His best-known vol. is *Illuminations* (1886).

RIMINI (rê'mênê). Seaport and popular bathing resort of Emilia, Italy, on the Adriatic 69 m. S.E. of Bologna. Macaroni, shoes, furniture, textiles, ships are made. As the Roman Ariminum, it was the terminus of the Flaminian and Aemilian Ways. Francesca da Rimini was assassinated there in 1285. R. was very badly damaged in Sept. 1944: it formed the eastern strongpoint of the German 'Gothic' defence line, and was taken by the Allies only after severe fighting. Pop. (1966) 109,000.

RIMSKY-KORSAKOV (rimz'ki korsahkof'), Nikolai Andreievich (1844–1908). Russian composer. B. at Tikhvin, Novgorod, he served in the navy some years. In 1872 he finished his first opera, but previously he had written the symphonic poem *Sadko* (1867) and the programme symphony *Antar* (1868). He often utilized Russian folk idioms and rhythms, and may be regarded as a nationalist composer. His operas incl. *The Maid of Pskov*, *The Snow Maiden*, and *The Golden Cockerel*.

RINEANNA. See SHANNON AIRPORT.

RING. A circlet, usually of precious metal, sometimes set with gems, worn on a finger as a decoration or token. The origin of the wedding R. is uncertain, but in Roman times betrothal Rs. were bestowed. Rs. were used for money in ancient Egypt and elsewhere, and their connection with the Church still survives in instances such as the English Coronation.

RINGWORM or Tinea. The results of infestation by one of a group of parasitic microscopic fungi. In R. of the scalp the fungus (trichophyton) produces round patches of slight inflammation from which the hair falls out or breaks off. The treatment is by X-rays and drugs aimed at destroying the fungus. R. of the skin, commonly called athlete's foot, starts in the cracks between the little and the 4th toes, and may spread over the foot and other parts of the body, to produce a weeping eczema and an intolerable itch.

RINTELEN, Fritz von (d. 1949). German spy. He led a spy ring in U.S.A. during the F.W.W., sabotaging the shipment of Allied munitions until captured in 1915. He later settled in England and pub. the reminiscence *Dark Invader*.

RIO DE JANEIRO (rê'dê zhahnâ'rô). City and seaport of Brazil, cap. of Guanabara state, situated on the W. of a fine natural harbour. The name commemorates its discovery on 1 Jan. 1502, though there is in fact no river. Portuguese and French settlers strove for supremacy in the 16th cent., the former prevailing. R. de J. became cap. of independent Brazil in 1822, and remained cap. until replaced by Brasília (q.v.) in 1960. The harbour, with the impressive Sugar Loaf mt. at its entrance, is ringed by a 20 m. boulevard. The older parts of the city contain the commercial section, modern development pro-

ducing such spacious thoroughfares as the Avenida Rio Branco. Some buildings of the colonial period and some 17th cent. Jesuit churches survive. The docks deal with the produce of large parts of Brazil including coffee, sugar, hides, etc. The city's own products are of the domestic-consumer type. It has 3 univs. and an airport, and is a naval base. Pop. (1960) 3,307,163.

RIO DE LA PLATA. Spanish name for the r. PLATE.

RIO DE ORO. District of the overseas prov. of Spanish Sahara (q.v.) on the Atlantic coast of N. Africa from Cape Blanco to Cape Bojador. It is mainly desert. The cap. is Villa Cisneros (pop. 6,000). The people are almost entirely nomadic, regularly crossing the frontiers with Morocco, Algeria and Mauretania. Area c. 73,000 sq. m.; pop. c. 50,000.

RIO GRANDE DO SUL (rê'ô grahn'dâ doo sool). South-east state of Brazil. Its cap. is Porto Alegre (pop. 640,000), also formerly known as Rio Grande do Sul, which lies at the head of the Lagoa dos Patos, a tidewater lake. The city's industries incl. meat-packing, tanning, and textiles, and there are 2 univs. founded in 1934 and 1948. Area 105,088 sq. m.; pop. (1967) 6,500,000.

RIOM (ryon'). Town in the Puy-de-Dôme dept. of central France on the Ambène. A pleasant town with many handsome 15th and 16th cent. houses, it was the scene in 1942 of a 'war guilt' trial of several prominent Frenchmen, incl. Blum, Daladier, and Gamelin (qq.v.), organized by the Vichy govt. at the instigation of Hitler. Instead of a trial of the accused men, the proceedings developed into an argument as to the reasons for France's unpreparedness, and, again at Hitler's instigation, the court was adjourned, then dissolved. The defendants were kept in prison until released by the Allies in 1945. Pop. (1962) 15,416.

RIO MUNI. Another name for SPANISH GUINEA.

RIOT ACT. Act passed in 1714 to suppress Jacobite disorders. Under it, if 12 or more persons assemble unlawfully to the disturbance of the public peace, a magistrate may read a proclamation ordering them to disperse; if the rioters nevertheless continue together for an hour after the reading of the proclamation they are guilty of felony, and may be dispersed by force.

RIPON (rip'on). George Frederick Samuel Robinson, 1st Marquess of (1827–1909). British Liberal statesman. After some years as an M.P., he succeeded to the title of earl of R. in 1859, and received a marquessate in 1871. He was War Minister 1863–6. Sec. for India 1866–8, viceroy of India 1880–4, Col. Sec. 1892–5, and Lord Privy Seal 1905–8.

RIPON. English cathedral city and market town (bor.) in the W. Riding of Yorks, 25 m. N. of Leeds, on the Ure. The cathedral was built 1154 to 1520. Pop. (1961) 10,490.

RISORGIMENTO (rê'sôrjêmen'tô) (Ital. resurrection). The movement for Italian national unity and independence which began after 1815. The risings of 1848–9 failed, but the Austrian War of 1859 was followed by the foundation of the Italian kingdom in 1861. The addition of Venetia to Italy in 1866, and of Rome in 1870, completed the R.

RITCHIE, Sir Lewis Anselmo (1856–1947). British author of books about the sea under the pseudonym Bartimeus. He rose to the rank of captain in the R.N., and on his retirement in 1944 was press sec. to George VI until 1947. His *The Turn of the Ford* (1946) dealt with N. Africa in 1942.

RITCHIE-CALDER, Baron. See CALDER.

RIVERA (rê'ar ah), Diego (1886–1957). Mexican artist. A convinced Communist, he executed his best work in the vast and vivid fresco murals he executed in Mexico and the U.S.A., making this form widely popular.

Govt. is by the presidium of the elected Supreme Soviet; the pres. of the presidium is pres. also of the R.S.F.S.R.; there is also a council of ministers and a political bureau of the central committee of the Communist Party.

AREA AND POPULATION. The R.S.F.S.R. covers 6,570,400 sq. m.; pop. at the census of 1959 was 117,500,000; (1967 est.) 127,300,000, the great majority Russians but incl. Tartars, Mordovians, Chuvashis, Bashkirs, Poles, Chechens, and others. In spite of strong official discouragement of religion, a number of Russians still profess the Russian Orthodox faith, and there are many Moslems in N. Caucasasia and parts of Asia. The Jewish pop., considerable before the S.W.W., was much reduced during the German occupation of W. European Russia.

EDUCATION. This is free and compulsory from 7 to 15 or 16, and in large towns up to 17. Of the many univs. those of Moscow, Leningrad, Odessa, Gorki, and Sverdlovsk are notable; there are also numerous institutes of higher technical and scientific instruction.

HISTORY. The All-Russian Congress of Soviets was set up by a coup d'état of the Bolsheviks on 7 Nov. 1917 (25 Oct. O.S. — hence the 'October Revolution'), and a govt. consisting of a council of people's commissars was formed, led by Lenin. In elections held later in Nov. the Bolsheviks were defeated — only 215 Bolsheviks and supporters were returned out of 707 deputies; but the Bolsheviks knew their own minds and early in 1918 they dispersed the constituent assembly, made peace with Germany, and proceeded, in the face of famine, civil war, and foreign attack, to estab. a strong Communist govt. With the agreement for the formation of the U.S.S.R., reached in 1922, ratified 1924, the history of the R.S.F.S.R. becomes part of that of the U.S.S.R. See SOVIET UNION.

RUSSO-JAPANESE WAR. This struggle was brought about by Russian penetration in Manchuria, culminating in the lease of Port Arthur in 1896, and the occupation of the Amur prov. in 1900. In 1904 diplomatic relations were broken off by the Japanese, who then without warning attacked the Russian fleet at Port Arthur. The outstanding events of the subsequent fighting were the siege and surrender of the Russian garrison in Port Arthur (May 1904–Jan. 1905) and the destruction of the Russian Baltic fleet in the Tsushima Straits (May 1905). Peace was concluded at Portsmouth, U.S.A., in 1905. Russian rights in Port Arthur passed to Japan, together with the Manchurian railway; Korea became a Japanese sphere of influence, and Sakhalin was divided between Russia and Japan.

RUST. Common name for the minute parasitic plants of the order Uredinales, which appear on the leaves of their hosts as orange-red spots, later becoming darker, when they are known as mildew. The best-known is the Wheat R. (*Puccinia graminis*).

RUST. Reddish deposit formed on iron by the action of water, oxygen, and 'impurities', i.e. carbon dioxide in the air, or carbon, sulphur, etc., in the metal. The impurity forms a conducting solution with the water; causing an electrolytic effect by which salts of iron are formed and then decomposed by the oxygen. Oil painting provides protection.

RUTH. George Herman (1895–1948). American

BABE RUTH. In the uniform of the New York Yankees.
Courtesy of The U.S. National Baseball Hall of Fame.

baseball player, known as 'Babe' R. B. at Baltimore, he joined the Boston Braves in 1914, becoming one of the best left-hand pitchers of all time, and in 1920 was sold to the N.Y. Yankees. He returned to Boston in 1934 but left the team the same year. A baseball 'idol', he played in 10 world series and made 714 home runs (60 in one season in 1927).

RUTH. Character of the O.T. whose story is told in the Book of R. The daughter-in-law of Naomi, she m. Boaz, and became the ancestress of David.

RUTHENIA. Region in central Europe, home of the Ruthenes or Russniaks. Before the F.W.W. it was within Austria-Hungary. After the dual monarchy split up in 1918, part of R. was incl. in Czechoslovakia (as the autonomous prov. of R.), part in Poland, part in Rumania. All 3 were ceded to Russia after the S.W.W., Czech and Polish R. in 1945, Rumanian R. in 1947, and were incorporated in the Ukrainian S.S.R.; Czech R. (sometimes called Transcarpathian R.) became Zakarpatskay (= transcarpathian) region, cap. Uzhgorod. The Ruthenian (Uniat) Church, to which most Ruthenes belonged, was suppressed in Russian Poland in 1873; abolished in 1948.

RUTHENIUM. Metallic element discovered in 1843 in platinum ore. Its symbol is Ru, atomic no. 44, atomic weight 101.1.

RUTHERFORD, Ernest (1871–1937). N. Zealand physicist. He was prof. at Montreal 1898–1907, at Manchester 1907–19, and at Cambridge 1919–37, where he was also director of the Cavendish Laboratory. He was awarded the Nobel prize in 1908 and knighted in 1914, and became a fellow of Trinity College, Cambridge, in 1919. In 1925 he received the O.M., and became pres. of the Royal Society, of which he had been a fellow since 1903, and in 1931 was created Baron R. of Nelson, N.Z. A pioneer of modern atomic science, his main researches were in the field of radioactivity, and he was the first to recognize the nuclear nature of the atom.

RUTHERFORD, Dame Margaret (1892–). Brit. actress. Specializing in formidable yet jovially eccentric females, she incl. among her best roles Mme Arcati in *Blithe Spirit*, Miss Prism (1939) and Lady Bracknell (1947) in *The Importance of Being Earnest*, and is at home on stage or screen. D.B.E. 1967.

RUTHERFORD, Mark. Pen-name of British novelist William Hale White (1831–1913). B. at Bedford, he was ed. for the Congregationalist ministry, which he abandoned for conscientious reasons. His spiritual struggle is described in *The Autobiography of M.F.* (1881) and *M.R.'s Deliverance* (1885). His novels incl. *Catherine Furze* (1893).

RUTILE (rōōt'īl). Mineral, a native form of titanium dioxide, TiO₂. Formerly of little economic value, it is now greatly sought after for producing white pigments used to give brilliant whiteness to paint, paper, and plastics, and for making titanium (q.v.). The sands of Australia's E. and W. coasts are a major world source.

RUTLAND. The smallest county of England, lying between Leicestershire and Northants. The centre is occupied by the Vale of Catmose, and elsewhere low hills are found. The Welland, which marks the S.E. boundary of the county, is the main river. Part of the area is under grass and sheep and cattle are raised, and barley, wheat, oats, and root crops are cultivated. Stilton cheese is made. Oakham is the co. town, and Uppingham is known for its school. Plans put forward in 1960 for the abolition of R. as a separate co. were strongly opposed by its inhabitants. Area 152 sq. m.; pop. (1967) 29,110.

RUWENZORI (roo-). Mountain mass near the equator in central Africa; it is 65 m. long and upwards of 30 m. wide. The highest peak is Marghanita (16,763 ft.) in the Stanley group. R. was discovered by Stanley in his 1887–9 journey of exploration. The name means cloud king.

in India 1885-93, and Ireland 1895-9, he received the command in S. Africa, where during 1900 he forced Cronje to surrender at Paardeberg, and by his occupation of Bloemfontein and Pretoria made possible the annexation of the Transvaal and Orange Free State. On returning to England he received an earldom, and was C.-in-C. 1900-5. In later life he strongly advocated conscription. Early in the F.W.W. he d. at St. Omer while visiting the trenches.

ROBERTS, Tom (Thomas William) (1856-1931). Australian artist, introducer to Australia of plein-air impressionism. B. in England; he arrived in Australia in 1869, returning to Europe to study in 1881 (see RUSSELL, J.P.). He painted the official picture of the opening of the first Federal parliament.

ROBERTSON OF OAKRIDGE, Brian Hubert Robertson, 1st baron (1896-). British general. The son of Sir William R. (1860-1933), who rose from private in 1877 to field marshal in 1920. Active in the F.W.W. he also served during the S.W.W. in the Middle East and Italy. After being Military Gov. British zone of Germany 1947-9 (U.K. High Commissioner 1949-50), he was C.-in-C. Middle East 1950-3. On retirement from the army he became chairman of the British Transport Commission (1953-61).

ROBERTSON, Thomas William (1829-71). British dramatist. At first an actor, in his family tradition, he had his first success as a dramatist with *David Garrick* (1864), which set a new, realistic trend in English drama of the time; later plays, in many of which the Bancrofts acted, incl. *Society* (1865) and *Castle* (1867).

ROBESON, Paul (1898-). American Negro bass singer and actor. Admitted to the Bar in New York, he turned to acting in 1921; his N.Y. stage successes incl. *All God's Chillun Got Wings* (1924) and *Othello* (1944), and he has also appeared in stage and film versions of *The Emperor Jones* and *Show Boat*. His career has been in eclipse, and he was denied a U.S. passport 1950-8, because of his association with left-wing movements; he is an advocate of Negro rights.

ROBESPIERRE (rôbe-spyär). Maximilien François Marie Isidore de (1758-94). French statesman. B. at Arras, he had a distinguished legal career, and was elected to the National Assembly of 1789-91. His defence of democratic principles made him widely popular in Paris, while his disinterestedness won him the nickname of 'the Incorruptible'. As leader of the Jacobins in the National Convention he supported the execution of Louis XVI and the overthrow of the

Girondins,

and in July

1793 was

elected to the

Committee

of Public

Safety. His

zeal for social

reform, his

attacks on the

anti-religious

and other excesses

of the terrorists,

made him enemies

on both right

and left, a

conspiracy

was formed

against him, and in July

1794 he was

overthrown

and guillotined.

ROBERTI. This 'Fictal' shows excellently the artist's use of linear modelling and powerful exploitation of light and dark to convey a realistic effect.

Photo: Walker Art Gallery, Liverpool.

RÖBEY, Sir George. Stage-name of British comedian George Edward Wade (1869-1954), the 'Prime Minister of Mirth'. Dressed in close-buttoned frock coat and semi-clerical bowler, he sang such songs as 'Tempt Me Not' and - in the F.W.W. Bing Boys show - 'In Other Words' and was a master of significant gesture and voice inflection. He was also renowned as an amateur violin maker, and was knighted in 1954.

ROBIN. Song-bird (*Erithacus rubecula*) in the thrush family. It is found in Europe, W. Asia, Africa, and the Azores. Both sexes are olive-brown, with a red breast. The nest is constructed in a sheltered place, and from 5 to 7 white freckled eggs are laid.

ROBIN HOOD. Legendary outlaw, who from the 14th cent. on became the hero of many popular ballads. It is doubtful whether his story has any historical basis; in their anti-clericalism and defiance of authority the ballads reflect the revolutionary spirit of the peasantry in the years preceding the rebellion of 1381. R.H. was also the hero of folk-plays, customarily performed on May Day, and was sometimes identified with the May King.

ROBINSON, Edwin Arlington (1869-1935). American poet. B. in Maine, he dealt mainly with psychological themes in the manner of Browning. Among his publications are *The Children of the Night* (1897), which estab. his reputation, *The Man Against the Sky*, *Tristram*, *The Man Who Died Twice*, and *King Jasper* (1935).

ROBINSON, Henry Crabb (1775-1867). British writer, whose diaries, journals, and letters are a valuable source of information on his friends Lamb, Coleridge, Wordsworth, and Southey.

ROBINSON, John Arthur Thomas (1919-). British Anglican churchman. Son of a clergyman, he lectured in divinity at Cambridge 1954-9 and became bp. of Woolwich in 1959. A Modernist, he has written several books incl. the controversial *Honest to God* (1963), which was interpreted as denying a personal God.

ROBINSON, Lennox (1886-1958). Irish playwright. B. nr. Cork, he became manager of the Abbey Theatre in 1910 and made it the home of realism rather than poetic folklore. His own plays incl. *The Whiteheaded Boy* (1916) and *The White Blackbird* (1925).

ROBINSON, Sir Robert (1886-). British scientist. Waynflete prof. of chemistry at Oxford in 1939-55, he was pres. of the Royal Society 1945-50, and won a Nobel prize for researches in plant biology, especially in the structure of alkaloids (1947), receiving the O.M. in 1949. He was knighted in 1939.

ROBINSON, William Heath (1872-1944). British black-and-white artist, famous for his humorous drawings of fantastically complex machinery for performing simple operations, e.g. raising one's hat.

RÖBOT. Term derived from the Czech word meaning 'work', and signifying an automaton in human form. It was first coined by Karel Capek (q.v.) in his play *R.U.R.* (1921).

ROB ROY MACGREGOR (1671-1734). Scottish Highland outlaw, nominally a grazier who lived for years by cattle-lifting and blackmail.

ROBSART, Amy (c. 1532-60). The 1st wife of Robert Dudley, earl of Leicester (q.v.), whom she m. in 1550. She d. mysteriously at Comoor Hall, Oxon. It was widely believed Leicester had had her murdered because he hoped to marry Elizabeth I.

ROBSON, Dame Flora (1902-). British actress. B. at S. Shields, she made her debut in 1921, and her many deeply sensitive interpretations incl. *Miss Truitt* in *The Aspern Papers* (1959). She was created D.B.E. in 1960.

ROCHDALE. English industrial town (see text) in Lancashire on the Roch 10 m. N.E. of Macclesfield. The 'R. Pioneer' founded the first Co-operative Society in England, in Tens Lane, Rochdale, in 1844.

It is heavily industrialized in the S., but about half its area is cultivated for wheat, rye, oats, potatoes, etc.; cattle, pigs, poultry are reared. One-third of the area is forested. Area 990 sq. m.; pop. (1966) 1,132,100.

After the F.W.W. the Saargebiet (Saar district) was placed under French administration for 15 years by the Treaty of Versailles; following a plebiscite it was returned to Germany in 1935. Hitler gave it the name S. At the end of the S.W.W. it was in the French zone of occupation and following elections in 1947 was in 1948 given autonomous status but linked economically with France. A referendum in 1955 went against the proposed 'Europeanization' of the area, and in 1957 it became a Land of W. Germany.

SABAH (sab'a). State of the Fed. of Mayalsia, occupying the N.E. corner of Borneo and forming (with Sarawak) E. Malaysia. Admin. by the Brit. N. Borneo Co. from 1881 (which took over rights ceded to a British syndicate by the Sultan of Sulu in 1878), it became a Brit. protectorate in 1888, and with the is. of Labuan was the crown colony of N. Borneo from 1946 until accession to Malaysia in 1963 under the name Sabah. The Philippines have advanced territorial claims on S. (1962 and 1968) on the ground that the original cession by the Sultan was illegal, Spain having then been sovereign in the area. Most of S. is mountainous and forested (highest peak Mt. Kinabalu 13,445 ft., where copper was discovered 1968), supplying $\frac{1}{3}$ of the world's hardwood. Other products incl. rubber, hemp, copra and cocoa, and there are unexploited mineral resources. The chief towns are the cap. Kota Kinabalu (formerly called Jesselton, pop. 21,500) and Sandakan. Area 29,000 sq. m.; pop. (1968) 600,000, the largest groups being the Kadazans (30%), the farmers of the W., and the Chinese (25%).

SABATINI (-tē'nē), Rafael (1875–1950). British novelist. B. in Italy of Italian and British parents, he pub. many popular historical novels, such as *Scaramouche* (1921) and *Captain Blood* (1922).

SABBATH. The 7th day of the week, celebrated by the Jews as a sacred day of rest. It is reckoned from sunset Friday to sunset Saturday.

SABINES (sa'binz). People of ancient Italy, who dwelt in the mountains beyond the Tiber. They were subjugated by the Romans, and amalgamated with them in the 3rd cent. a.c. The legendary 'Rape of the S. Women' is famous in Roman history.

SABLE. See MARTEN.

SACCHARIN (sa'karin); (ortho-sulpho benzimide, $C_6H_4SO_2NHCO$). An intensely sweet, white crystalline solid, obtained from toluene: it is 300 times as sweet as sugar.

SACCO-VANZETTI CASE (sahk'kō-vahnzet'tē). Murder trial in Massachusetts, U.S.A., 1920–7, ending with the execution for murder of Nicola Sacco and Bartolomeo Vanzetti, Italian immigrants. Radical bodies claimed that the trial was unjust, and that the accused were the victims of prejudice because of their anarchist views.

SACHEVERELL (sashev'erel), Henry (c. 1674–1724). Anglican churchman. B. at Marlborough, he became chaplain in 1705 of St. Saviour's, Southwark, and was suspended in 1710 for his violently Tory sermons and pamphlets. Whereupon popular riots caused the downfall of the Whig govt.

SACHS (sahks), Hans (1494–1576). German poet and dramatist. B. at Nuremberg, he became a master shoemaker, and a prominent Meistersinger, composing no fewer than 4,275 *Meisterlieder*.

SACHS, Nelly (1892–). Swedish/Jewish poet. B. in Berlin, she escaped from Germany in 1940, aided by Selma Lagerlöf (q.v.). She wrote expressionist lyrics and poetic dramas such as *Eli*, and shared a Nobel prize with Agnōn (q.v.) in 1966.

SACHSEN. German form of SAXONY.

SACKBUT. Musical instrument, in essentials the modern trombone, common from the 14th cent.

SAC KVILLE, Thomas, 1st earl of Dorset (1536–1608). English poet. He collaborated with Thomas Norton in *Gorboduc* (1561), the first English tragedy, and the first English play in blank verse; became Lord Treasurer in 1599, and earl of Dorset in 1604.

SACKVILLE-WEST, Victoria (1892–1962). British author. Dau. of the 3rd baron Sackville, she is remembered for her novels *The Edwardians* (1930) and *All Passion Spent*, and the pastoral poem *The Land* (1927). She m. in 1913 Sir Harold Nicolson (q.v.).

SACRAMENT. In Christian usage, a holy ordinance instituted by Christ as an outward and visible sign of an inward and spiritual grace. In the R.C. Church 7 sacraments are recognized, viz. baptism, Holy Communion (Eucharist or mass), confirmation, confession and penance, holy orders, matrimony, and the anointing of the sick. Of these the first 2 only are held by the C. of E. to be generally necessary to salvation.

SACRAMENTO. Capital city of California, U.S.A., 80 m. N.E. of San Francisco, and on the S. river. It dates from 1839, was made state cap. 1854. Fast-growing, its manufactures incl. food-processing, detergents, and jet aircraft. There is a modern Metropolitan Airport and the newly-constructed Port of S. affords a deepwater channel to the Pacific. Pop. (1960) 191,667.

SADDUCEES (sad'ūsēz). A Jewish sect of N.T. times opposed to the Pharisees. They denied the immortality of the soul and maintained the religious Law in all its strictness.

SADE (sahd), Marquis de (1740–1814). French writer. B. in Paris, he became a soldier. Condemned to death for an unnatural offence, he twice escaped from prison, and was committed to an asylum, where he wrote obscene plays and novels. 'Sadism', a form of sexual perversion that delights in the infliction of cruelty, is named after him.

S'ADI or **Saadi**. Assumed name of the Persian poet Sheikh Moslih Addin (c. 1184–1291). B. at Shiraz, he travelled widely before settling there finally c. 1256. *Bustan* (Tree-garden) and *Gulistan* (Flower-garden) are the most celebrated of his works.

SADLER'S WELLS. Mineral springs in Finsbury, N. London, England, known in medieval times, but rediscovered by a man called Sadler in 1683 and developed in connection with a music-hall. This was replaced in 1765 by a theatre, popular in Victorian days, then in decline till revived by Lillian Baylis as a northern annexe to the 'Old Vic'. Eventually it concentrated on opera in English and ballet, and was rebuilt 1931. See ROYAL BALLET.

SADOVA (sah'dōvah). Village in Czechoslovakia, 8 m. N.W. of Hradec Kralove (Ger. Königgrätz), better known in its German form Sadowa (sah'dōvah) for the battle fought nearby on 3 July 1866, in which the Prussians defeated the Austrians.

SAFETY LAMP. A portable L. designed for use in places where inflammable gases may be encountered, e.g. coal mines. The electric cap L. used as a miner's working light has the bulb and contacts in specially protected enclosures while the flame S.L., now used primarily for gas detection, has the wick enclosed within a strong glass cylinder surmounted by wire gauzes. Sir Humphry Davy in 1815 and George Stephenson each invented flame S.L.s.

SAFFRON. Plant (*Crocus sativus*) native to Asia Minor. Similar to a purple crocus, S. flowers in late autumn. It yields an extract used for orange colouring and flavouring.

SAGA. Prose narrative written down in the 11th–13th cents. in Norway and Iceland. They vary from family chronicles, e.g. the *Landnamabók* of Ari (1067–1148), the *Heimskringla* of Snorri Sturlason (1178–1241), and the *Sturlunga* of Sturla Thordsson (1214–84), to the legendary and anonymous *Njala*, *Laxdaela*, and *Grettla*.

popular in France c. 1200, and spread throughout Europe. The Rs. usually dealt with the adventures of Charlemagne and his heroes, King Arthur and his knights, or the classical themes of Troy, Thebes, etc.

ROMANCE LANGUAGES. A group of languages all of which descend directly from Popular (Vulgar) Latin, the spoken language of the Roman Empire. They incl. Italian, Spanish, Portuguese, Provençal (and Catalan), French, Rumanian, and Romansh (Rhaeto-Romanic).

ROMANESQUE. Style of architecture which prevailed in western Europe from the 9th to the 13th cent. The style varied in different countries, but everywhere the round arch was employed. In planning, different methods of subdivision were favoured to accord with experiments in vaulting. Arches were introduced to spring directly from the capitals of columns, and a system of arcading was devised. The basilican plan was in general use for the early buildings, but in the 12th cent. the cruciform found acceptance. For towers square, octagonal, and circular plans were followed.

ROMAN HISTORY. According to tradition Rome was founded in 753 B.C., and was ruled in succession by 7 kings. The Etruscan dynasty of the Tarquins was expelled in 510, and a republic was estab., governed by 2 chief magistrates, or consuls, who were elected annually by the popular assembly, and a council of elders, or Senate. The concentration of power in the hands of the patrician aristocracy, who monopolized the magistracies and membership of the Senate, aroused the opposition of the plebeian masses. By a long struggle they secured the right to elect tribunes to defend their interests, the codification of the laws, and the right to marry patricians; in 367 it was enacted that one consul must be a plebeian, and by 300 all the magistracies were thrown open to them.

Meanwhile Rome was extending her power over her neighbours. The cities of Latium were formed into a league, under Roman suzerainty. The temporary occupation of Rome by the Gauls in 390 failed to check her advance. The Etruscans to the N. were subdued during the 5th–4th cents., and the Samnites to the S.E. during 343–290. The Greek cities of the S., in spite of the assistance granted them by King Ptolemy of Egypt, were conquered in 280–272. With the conquest of Cisalpine Gaul (Lombardy) in 226–222, Rome became mistress of Italy.

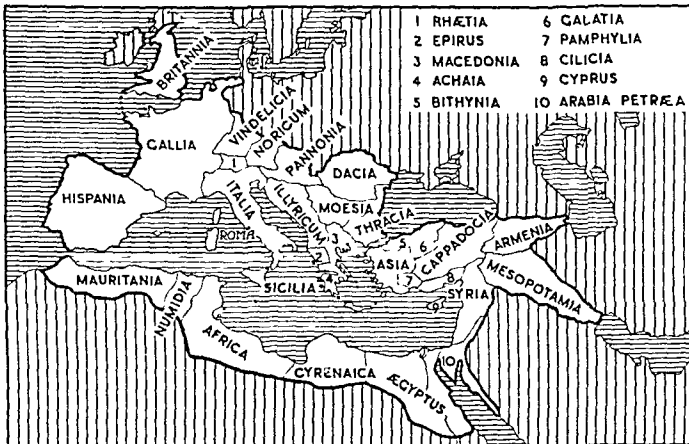

Inevitably she now came into conflict with Carthage, which was attempting to conquer Sicily. The 1st Punic War (264–241), during which the Roman navy was founded, ended in a Roman victory and the annexation of Sicily, to which in 238 Sardinia was

added. These new possessions were treated, not as self-governing 'allies', but as provinces ruled by Roman governors. The Carthaginian attempt to found a new empire in S.E. Spain aroused Roman suspicions, and in 218 war was renewed. Hannibal invaded Italy and won a brilliant series of victories, until a Roman invasion of Africa forced him to withdraw. The victory of Zama in 202 was followed by Carthage's surrender and the cession of her Spanish colonies. By 133 most of Spain had been subdued. Rome now became drawn into Greek and Asiatic politics. Three wars with Macedon were followed by its conversion into a province in 148, while after a revolt in 146 Greece also became in effect a Roman province. In the same year Carthage was destroyed and its territory annexed. On the death of the king of Pergamum in 133, Rome succeeded to his kingdom, which incl. half Asia Minor.

The continual wars had ruined the Italian farmer class while enriching the aristocracy, who built up huge estates cultivated by slave labour. In 133 Tiberius Gracchus, to meet this evil, put forward proposals for agrarian reforms, and was murdered by the senatorial party. His policy was taken up in 123 by his brother Gaius Gracchus, who added proposals for limiting the powers of the senatorial oligarchy, and was likewise murdered. The leadership of the democrats passed to Marius, who had conquered Numidia in 109–106 and saved Italy from a German invasion in 102, while the senate found a champion in Sulla. A revolt of the Italian cities in 91–88 compelled Rome to grant them the franchise. While Sulla was repelling an invasion of Greece by Mithradates of Pontus (87–84) Marius seized power; on his return in 82 Sulla launched a reign of terror and revised the constitution in the Senate's interests.

His changes were reversed in 70 by Pompey and Crassus, but the social struggle continued; Spartacus led a dangerous slave revolt in 73–71, and the democratic extremists, led by Catiline, rebelled in 63. Having crushed Mithradates and annexed Syria and the rest of Asia Minor during 66–62, Pompey returned to form an alliance in 60 with the democratic leaders Crassus and Caesar. The latter received the command in S.E. Gaul, annexed in 121, and by 51 had conquered Gaul as far as the Rhine. During his absence, Pompey drifted into the senatorial party, and Caesar's return to Italy in 49 was the signal for civil war, from which Caesar emerged as master of Rome. His programme of social and political reform was interrupted by his assassination in 44. The empire was now divided between his nephew Octavian, who ruled the W., and Antony, who as Cleopatra's lover ruled the E. from Egypt; war between them began in 32, and with the deaths of Antony and Cleopatra in 30 Egypt was annexed.

Octavian, henceforward known as Augustus, was now absolute, although in theory he was only *princeps* (first citizen), and republican forms were retained. The establishment of an efficient centralized govt., in place of that of the corrupt senatorial oligarchy, proved an immense gain to the empire. Augustus made the Rhine and the Danube its frontiers; Claudius in A.D. 43 added Britain. The dynasty founded by Augustus held power until A.D. 68, and was succeeded by the Flavian house (69–96). Under Nerva, Trajan, Hadrian, Antoninus Pius, and Marcus Aurelius (96–180) the empire enjoyed a golden age of peace and prosperity. Trajan added Dacia and Mesopotamia to the empire, the latter was abandoned by Hadrian, and thereafter expansion ceased.

The Roman Empire in A.D. 117, the time of its greatest expansion.

ST. DENIS. Town in Seine-St. Denis dept., France, 4 m. N. of Paris. The abbey church, founded in 626, is Gothic and contains the tombs of many of the kings of France. Abelard was a monk in the abbey of St. D. Pop. (1962) 95,072.

ST. DUNSTAN'S. Welfare organization, founded in 1915 by Sir Arthur Pearson, for British servicemen blinded through the F.W.W. or subsequent military operations. It is dependent upon voluntary aid, and trains men in occupations, besides providing pensions and allowances.

SAINT-BEUVE (sah-böuv'), Charles Augustin (1804-69). French critic. B. at Boulogne-sur-Mer, he contributed to the *Revue des deux mondes* from 1831. In 1840 he was appointed a keeper of the Mazarin library, and was elected to the French Academy in 1844. His chief work was *L'Histoire de Port Royal* (1840-8); his *Causeries du lundi* are masterpieces of criticism.

ST. ÉTIENNE (sant-ät-yen'). Cap. town of the Loire dept., France. It has an important silk industry; coal and iron-ore are mined, and there are heavy manufactures. Pop. (1962) 203,633.

SAINT-EXUPÉRY (sant-äksüperé'), Antoine de (1900-44). French airman and author. He served in the S.W.W. with the French Air Force, and disappeared on a mission over France from Corsica. His works incl. the autobiographical *Vol de Nuit*, and *Lettre à un Otago*.

ST. GALL. Cap. of St. G. canton, Switzerland. It grew up about a Benedictine abbey built round a cell inhabited by an Irish hermit, Gall, 614-640, and was famous as a centre of learning in the 8th-10th cents. The library of its ancient abbey is renowned for early MSS. Pop. (1966) 78,000.

SAINT-GAUDENS, Augustus (1848-1907). American sculptor. B. in Dublin, Ireland, he was taken to America when a child. His principal works incl. statues of Lincoln (Chicago), and R. L. Stevenson (Edinburgh).

ST. GERMAIN-EN-LAYE (sah-zherman'-on-lä). Town 13 m. W. of Paris, France. Pop. (1962) 37,391. The Treaty of St. G. (1919) concluded the war between Austria and the Allies. Representatives of the U.S.A. (an associated power) signed it, but after the Senate failed to ratify the Treaty of Versailles, the Treaty of St. G. was not submitted to it. The U.S.A. made a separate peace with Austria in 1921.

ST. GOTTHARD PASS. A famous road and rail route from N. Europe to Italy, connecting the lakes Lucerne and Maggiore. The hospice on the pass (6,929 ft.) dates from 1331. The rail tunnel (1872-82) rises to 3,786 ft. and is 9½ m. long; a road tunnel at an average height of 3,760 ft. was begun 1969.

ST. HELENA. An is. in the S. Atlantic, 1,200 m. W. of Africa. It became a British possession in 1673. Napoleon d. in exile there in 1821; his body was taken to France in 1840. The cap. is Jamestown. Area 47 sq. m.; pop. (1966) 4,650. Ascension and Tristan da Cunha are dependencies.

ST. HELENS. English industrial town (co. bor.) in Lancs, 12 m. N.E. of Liverpool, connected to the Mersey by canal. It is the chief English centre of crown, plate, and sheet glass manufacture. Pop. (1961) 108,348.

ST. HELIER (hel'yer). Seaside resort and cap. of Jersey, Channel Islands. The Jersey legislature sits in the *salle des états* here. Pop. (est.) 28,000.

ST. IVES. (1) English fishing port and holiday resort (bor.) with an artists' colony, in Cornwall, on St. I. Bay. It took its name from an Irish princess called Ia (5th cent.). Pop. (1961) 9,337. (2) English market town (bor.) in Hunts on the Ouse, 5 m. E. of Huntingdon. Cromwell lived at St. I. 1631-6; it took its name from a 6th cent. missionary. Pop. (1961) 15,361.

ST. JAMES'S PALACE. Situated in Pall Mall,

London, this was a royal residence from 1698 to 1837, and royal levées are still held there. Foreign ambassadors are accredited to the Court of St. James's.

SAINT JOHN. Largest city of New Brunswick, Canada, on the St. J. r. It is an important fishing centre and port for an agricultural and lumbering area. Founded by the French as Saint-Jean in 1635, it was taken by the British in 1758. Pop. (1966) 90,000.

ST. JOHN OF JERUSALEM, Knights Hospitallers of. An Order of Christian chivalry named after the hospital founded at Jerusalem about 1048 for the benefit of pilgrims. In 1291, the knights were forced to leave Palestine, and went first to Cyprus and then to Rhodes, when secular matters, military and economic, were added to their activities. From 1530 they were estab. at Malta until their virtual dissolution in 1798. The Order still continues in Rome. A Protestant English offshoot, chartered in 1888, works mainly through the St. John Ambulance Association (instruction in first-aid, etc.), and Brigade (hospital work and first aid), whose numbers in 1962 were 150,900 adults and 98,000 cadets.

ST. JOHN'S. Cap. city and chief port of Newfoundland, on the E. coast, in the peninsula of Avalon. Its main industries depend on the whale, seal, and cod fisheries. Sir Humphrey Gilbert founded St. J. in 1582. Pop. (1966) 100,851.

SAINT-JUST (sah-zhüst), Louis Antoine Léon Florelle de (1767-94). French revolutionary. A close associate of Robespierre, he became a member of the Committee of Public Safety in 1793, and was guillotined with Robespierre.

ST. KILDA. Group of small islands 50 m. W. of Harris and westernmost of the Outer Hebrides, Scotland. The last 35 inhabitants were moved to the mainland in 1930, but in 1957 a missile tracking station was established here in connection with the S. Uist rocket range; the same year, under the will of the 5th Marquess of Bute (1907-56), St. K. was acquired by the National Trust for Scotland, under whose auspices summer working parties visit the is.

ST. KITTS. See under LEEWARD ISLANDS.
ST. LAURENT (löron'), Louis Stephen (1882-). Canadian Liberal politician. Called to the Quebec Bar in 1905, he became Min. of Justice in 1941, took over the additional post of For. Min. in 1946, and was P.M. from 1948 to his defeat in 1957, when he was succeeded in the party leadership in 1958 by Lester Pearson.

ST. LAWRENCE. River of N. America which, with the Great Lakes at its head, forms one of the world's great river highways. Leaving Lake Ontario, it marks the U.S.A.-Canadian frontier for nearly 100 m.; the rest of its course to the Gulf of St. L. lies in Canada. Montreal is built on a large island near the confluence of the Ottawa r. The St. L. is ice-bound for 5 months of the year. Length c. 650 m. The St. L. Seaway, 135 m. long, constructed 1954-9, made it possible for sea-going ships to reach the ports on the Great Lakes; it also added immensely to the hydro-electric capacity of the r. The cost of the works, est. at \$600 million, was met as to two-thirds by Canada one-third by the U.S.A. It was formally opened by Elizabeth II and Pres. Eisenhower 26 June 1959, but the first ships—c. 40—had passed up it behind the Canadian govt. ice-breaker *D'Iberville* on 25 April.

ST. LEGER (le'jer). One of the 5 classic British horse races. It was instituted by Colonel St. Leger in 1776, and is run at Doncaster in Sept. The distance is 1½ m. 132 yds.

ST. LEONARDS. See HASTINGS.

ST. LÖ (sah löh). Cap. of Manche dept., France, on the Vire. An important agricultural and road centre, it was destroyed 10-18 July 1944, when U.S. forces captured it from the Germans in the S.W.W. The

of the city. A new international airport was opened at Fiumicino in 1961. A large section of the pop. finds employment in govt. offices. Pop. (1961) 2,160,773.

HISTORY. For the early history of R. see ROMAN HISTORY. After the deposition of the last emperor, Romulus Augustulus, in 476 the papacy (q.v.) became the real ruler of R., and from the 8th cent. was recognized as such, although attempts were made, e.g. by Arnold of Brescia (1143–55) and Rienzi (1347–54), to revive the rep. As a result of the French Revolution R. temporarily became a republic in 1798–9, and was annexed to the French Empire 1808–14, until the Pope returned on Napoleon's fall. During the 1848–9 revolution, a republic was estab. under Mazzini's leadership, but in spite of Garibaldi's defence was overthrown by French troops. In 1870 R. became the cap. of Italy, the Pope retiring into the Vatican until 1929 when the Vatican City was recognized as a sovereign state. The occupation of R. by the Fascists in 1922 marked the beginning of Mussolini's rule. After his fall in 1943 R. was occupied by the Germans, but was captured by the Allies in 1944.

ROME, Treaties of. After discussions at Messina, Sicily, in 1955, two treaties were signed at Rome in March, 1957 which estab. the European Economic and Atomic Energy Communities. See EUROPEAN UNION.

ROMILLY (rom'ili), Sir Samuel (1757–1818). British reformer. B. in London, the son of a watch-maker, he became a barrister, and in 1806 was appointed Solicitor-General and knighted. As an M.P. he devoted himself to the reform of the criminal law.

ROMMEL, Erwin (1891–1944). German field marshal. B. in Swabia, he served in the F.W.W., later joining the Nazi Party. He was prominent in the annexations of central Europe, the fall of France, the N. African war (when he earned the nickname 'desert fox'), and the 1944 operations.

ROMNEY, George (1734–1802). British artist. B. near Dalton-in-Furness, Lancs, the son of a carpenter and cabinet-maker, he was practically self-taught. He set up as a portrait painter in 1757, and deserting his wife and children in 1762 he went to London where he became one of the most successful portrait painters of his day. His most famous sitter was Lady Hamilton.

ROMNEY MARSH. A stretch of drained marshland on the Kent coast, England, between Hythe and Rye, used for sheep pasture. The seaward point is Dungeness. R.M. was reclaimed in Roman times, and is famed for its churches. New Romney, a borough formed by the amalgamation of R., one of the Cinque Ports (q.v.), with Littlestone and Greatstone, is now more than a mile from the sea. Pop. (1961) 2,556.

ROMSEY (rum'zi). English market town (bor.) in Hampshire, on the Test, 8 m. N.W. of Southampton. R. Abbey was founded by Edward the elder; the main surviving feature is the fine Norman church. The mansion of Broadlands nearby, seat of Earl Mountbatten, was formerly the seat of Lord Palmerston. Pop. (1961) 6,229.

ROMULUS. The legendary founder and first king of Rome, the son of Mars by Rhea Silvia. R. and his twin brother Remus were exposed by their great-uncle Amulius, but were suckled by a she-wolf and rescued by a shepherd. On reaching manhood they killed Amulius and founded Rome. Having murdered Remus, R. reigned alone until he disappeared in a storm, and thereafter was worshipped as a god under the name of Quirinus.

ROMULUS AUGUSTUS (c. A.D. 461–?). Last Roman emperor in the West. When about 14 he was made emperor by his soldier father Orestes in 475, but compelled to abdicate in 476 by Odoacer, leader of the barbarian mercenaries, who nicknamed him Augustulus. Orestes was executed and R. confined to a Neapolitan villa where he d. at an unknown date.

RONCESVALLES (ronthesvahl'y'es). Village of N.

Spain, in the Pyrenees 5 m. S. of the French frontier, celebrated as the scene of the defeat of the rearguard of Charlemagne's army under Roland, who with the 12 peers was slain.

RONSARD (ronsahr'), Pierre de (1524–85). French poet. B. near Couture, he was a page at the French court and spent some years in Britain. His intended diplomatic career was cut short by deafness, and he retired to study the classical writers, emerging in 1550 as the leader of the Pléiade (q.v.). An original and lightly sensitive stylist, he pub. *Odes* (1550), *Amours*, and *Abrégé de l'art poétique français*. He was patronized by Charles IX, but was bitterly opposed by the followers of Marot.

RÖNTGEN, Wilhelm Konrad (1845–1923). German physicist. B. at Lennep, he became in 1879 director of the Physical Institute at Giessen, and in 1885 at Würzburg, where he conducted his experiments which resulted in the discovery of the rays named after him, in 1895. While investigating the passage of electricity through gases, he noticed the fluorescence of a barium-platinocyanide screen. This radiation R. found would pass through some substances opaque to light, and affect a photographic plate. As the X-ray, the development of this invention has revolutionized surgery. He received the Nobel prize in 1901, and the international unit for the measurement of X or gamma radiation, is named after him.

ROOD. Alternative name for the Cross of Christ specially applied to the large crucifix which was placed above the R.-screen in medieval churches. Also a surface measure, denoting a quarter of an acre.

ROODEPOORT-MARAISBURG (rûdepûrt-marit'zörkh). Town in Transvaal, South Africa, 9 m. W. of Johannesburg. It lies at a height of 5,725 ft. and is a gold-mining and residential place. Leander Starr Jameson (q.v.) and his followers surrendered here in 1896. Pop. (1960) 94,740 (40,711 white).

ROOK. Bird (*Corvus frugilegus*) of the crow family. The plumage is black and lustrous, and the face bare. Rs. live in colonies at the tops of trees, usually near human habitation.

ROOKE, Sir George (1650–1709). British admiral. He took part in the actions off Beachy Head, 1690, and La Hogue, 1692, and in 1702 destroyed the French and Spanish fleet at Vigo. Together with Sir Cloudisley Shovell, he captured Gibraltar and defeated the French at Malaga in 1704.

ROON (rôn), Albrecht Theodor Emil, count von (1803–79). Prussian field marshal. B. near Kolberg, he was War Minister from 1859 and reorganized the army so thoroughly that the 1866 and 1870–1 victories were made possible.

ROOSEVELT, Franklin Delano (1882–1945). 32nd president of the U.S.A. B. at Hyde Park, New York, of a landowning family, he was educ. in Europe and at Harvard and Columbia univs. In 1905 he m. Anna Eleanor R. In 1907 R. was admitted to the Bar and began practising in New York. He entered politics in 1910, when he was elected to the state senate as a Democrat. He held the Assistant Secretaryship of the navy in Wilson's govts. 1913–21, and did much to increase the efficiency of the navy during the F.W.W. He was nominated for the vice-presidency in 1920, but with the Democratic defeat returned to his legal practice. The infantile paralysis from which he suffered till his death afflicted him in 1921, but extensive treatment lessened its effect. He served as Governor of New York 1929–33.

He was nominated as Democratic candidate for the presidency in 1932, and won a decisive victory. Amid a grave economic depression he took office in 1933, and at once displayed determined leadership. Surrounding himself by a 'brains trust' of experts, he launched a carefully spaced legislative programme, which Congress had to accept. Banks, which he closed during the crisis, were reopened; Federal credit was

Front. He produced a number of ingeniously witty short stories set in the Edwardian fashionable world and the brilliant novel *The Unbearable Bassington* (1912), with its playboy hero Cornus Bassington.

SAKHALIN. Island in the N. Pacific, 600 m. long from N.-S. Two parallel mountain ranges, rising to over 5,000 ft., extend throughout its length. The N. is much colder than the S., where dairy farming is carried on and leguminous crops, oats, barley, sugar beet, etc. are grown, with rice and wheat in the central valley. Fishing is very important. S. also produces timber, petroleum in the N.E., coal in the W. centre. Area 29,000 sq. m.; pop. (est.) 500,000, incl. aboriginal Ainus and Gilyaks.

A Russian explorer Poyarkov visited S. in 1644 and subsequently it was colonized by Russians and Japanese. South S. was in 1875 ceded by Japan to Russia, which used the is. as a political convict settlement. Japan regained S.S. in 1905, but again ceded it to Russia in 1945. In 1947 the is. together with the Kuriles (q.v.) was formed into the S. region of the R.S.F.S.R., cap. Yuzhno-Sakhalinsk (Jap. Toyohara).

SAKKA'RA. A village of Egypt, 10 m. S. of Cairo, with 20 pyramids of which the oldest (3rd dynasty) is the 'Step Pyramid' designed by Imhotep (q.v.), whose own tomb here was the nucleus of the Aesklepieion, a famed centre of healing in the ancient world.

SALADIN or Sala-ud-din (1138-93). Sultan of Egypt. He entered the service of the atabeg of Mosul, on whose behalf he conquered Egypt in 1164-74, and after his death was proclaimed sultan in 1175. He conquered Syria in 1174-87, and in 1187 recovered Jerusalem from the Christians. The 3rd Crusade followed, led by Richard I of England, but it failed to capture Jerusalem, and in 1192 S. and Richard made peace.

SALAMANCA. Cap. of S. prov., W. Spain, on the Tormes, 160 m. N.W. of Madrid. It has a univ. (founded c. 1230) and a 12th cent. cruciform cathedral. Pop. (1965) 105,780. Wellington's most important victory against the French in the Peninsular campaign was won here on 22 July 1812.

SPOTTED
SALAMANDER

SALAMANDER. Genus of old-world amphibians. Best-known is the spotted or fire S. (*Salamandra maculosa*), black with bright yellow markings: the old legend that Ss. are unharmed by fire, or even extinguish it, is unfounded. Among the related species of America is the Axolotl (q.v.).

SALAMIS. Greek is. in the Gulf of Aegina. It was the scene in 480 B.C. of a naval battle in which the Persians were defeated by the Greeks. The town of S., on the W. coast, is a modern naval station. Area of is. 39 sq. m.; pop. (est.) 18,000.

SAL AMMO'NIAC. Another name for ammonium chloride (NH_4Cl). It occurs in mineral form as a white sublimation round the crater of a volcano and may be prepared synthetically. Its chief use is in 'dry-cell' batteries.

SALAZAR (-thahr'), Antonio de Oliveira (1889-) Portuguese dictator. He was P.M. 1932-68, exercising a virtual dictatorship. A corporative constitution on the Italian model was introduced in 1933, and until 1945 S.'s National Union, which he founded in 1930, remained the only legal party. S. was also For. Min. 1936-47, and during the S.W.W. maintained Portuguese neutrality. He was incapacitated 1968 by a cerebral stroke.

SALEM. City of Mass., U.S.A., 15 m. N.E. of Boston. It is an important manufacturing centre. Dating from 1626, in 1692 it was the scene of famous

SALEM. Cursed by Hawthorne's great-grandfather, a judge at the witchcraft trials, the House of Seven Gables (built in 1668) was used by the novelist as the setting for his great romance. Courtesy of House of Seven Gables.

witchcraft trials. Roger Williams (q.v.) was pastor here 1631 until expelled 1636. Hawthorne was b. at S. Pop. (1960) 39,211.

Another **SALEM**, in Oregon, U.S.A., was settled c. 1840, made state cap. 1860. It is a lumbering and fruit-packing centre, and has flourmills and woollen textile factories. Pop. (1960) 49,142.

SALE'NO. Seaport of Campania, Italy, cap. of S. prov., 30 m. S.E. of Naples. Founded by the Romans c. 194 B.C., S. was destroyed by Charlemagne, and sacked by the Emperor Henry VI in 1194. Both its school of medicine and its univ. (1150-1817, revived 1944) were famous in medieval times. On 9 Sept. 1943, the Allies made an important landing in the Gulf of S. To the S.E. are the ruins of Paestum (q.v.). Pop. (1961) 118,171.

SALFORD. English city (co. bor.) in Lancs., on the Irwell, adjoining Manchester. It forms part of the port of Manchester and the ship canal's largest docks are in S. Textiles and chemicals are manufactured and coal is mined. S. was given a charter in 1231, created a city 1926. Salford Univ. (1966) was founded 1896 as the Royal Tech. Inst. Pop. (1961) 154,963.

SALICYLIC ACID (Orthohydroxybenzoic acid, $\text{HO}_2\text{C}_6\text{H}_4\text{COOH}$). White solid, crystallizing into prismatic needles at 159°C. It is used as an antiseptic, in food preparation, dyestuffs and in the preparation of aspirin.

SALINGER (sāl'injer), J(erome) D(avid) (1919-). American writer. B. in New York he contributed to

SALERNO. The temples of Paestum form the greatest surviving gallery of Doric architecture. Largest of them - 79 ft. wide and 196 ft. long - and finely preserved, is the temple, originally dedicated to Hera c. 450 B.C., but later known as the temple of Poseidon.

Courtesy of the Italian Cultural Institute.

ROSA, Carl August Nikolaus (1842–89). German musician. A successful violinist and conductor, he founded with his wife, the singer Parepa (d. 1874), an opera co., with which they came to England in 1871. The C.R. Opera Co. was formed after a London season in 1875, and became well known for its presentation of opera in English, in London and the provinces, and for its encouragement of English operatic composers and singers. In 1958 the co. dissolved, and the majority of its members were eventually incorporated (1959) into the Sadler's Wells Opera Co., which was then able to maintain 2 cos. of equal status, one constantly on tour.

ROSA, Salvator (1615–73). Italian painter. B. near Naples, he spent much of his time when a youth travelling in southern Italy, where he copied from nature. He went to Rome in 1635, and estab. a great reputation as a landscape painter. He also wrote verse satires.

ROSACEAE (rōzā'sē-ē). A large family of seed-bearing plants which produce many temperate fruits e.g. the apple, pear, plum, cherry, peach, and almond, as well as the rose and other flowers.

ROSARIO (rōsah'rē-ō). River port of Argentina. Santa Fé prov., 175 m. N.W. of Buenos Aires, on the Parana. Founded in 1725, it has sugar refineries, meat-packing and maté-processing factories, etc. Wheat, flour, meat, etc., are exported. Pop. (1960) 672,000.

ROSARY. Form of prayer used by R.Cs. consisting of 150 Aves and 15 Paternosters and Glorias; also a string of 165 beads for keeping counts of the prayers.

ROSAY (rōsā'), Françoise. French actress. B. in Paris, she m. Jacques Feyder, film director. Her films incl. *La kermesse héroïque* (1936), *Un carnet de bal* (1938), *Johnny Frenchman* (1945), *Une femme disparaît*, and *The Naked Heart*.

ROSCCELLINUS (rosel'i'nus), Johannes (c. 1050–c. 1122). Medieval thinker; regarded as the founder of the Scholastic philosophy because of his defence of Nominalism against Anselm.

ROSCIUS (ros'h'ius) **GALLUS**, Quintus (c. 126–62 B.C.). Roman actor, originally a slave, who achieved fame and fortune by his acting ability. His name has become proverbial for a great actor.

ROSCOMMON. County of Rep. of Ireland in the prov. of Connacht, bounded on the E. by the Shannon. A number of lakes (e.g. Gara, Key, Allen) lie partly or wholly in R., which is noted for its pastures. The co. town, also R., has remains of a castle put up in the 13th cent. by English settlers. The name, originally Ros-Comain, means wood round a monastery. Pop. (1966) 56,228.

ROSE. Genus of flowering plants (family Rosaceae). Many cultivated forms have been derived from the sweet briar (*Rosa rubiginosa*) and the dog-rose (*R. canina*). There are many climbing varieties, but the more cultivated forms are bush roses and standards. These are cultivated roses grafted on to a briar stem.

ROSEBERY, Archibald Philip Primrose, 5th earl of (1847–1929). Liberal statesman. Educ. at Eton and Oxford, he succeeded to the title in 1868, and was appointed Commissioner of Works 1885, and For. Sec. 1886 and 1892–4. He succeeded Gladstone as P.M. in 1894, but his govt. survived less than a year. After 1896 his imperialist views gradually estranged him from the Liberal Party. He pub. several historical works, incl. *Napoleon: the Last Phase* (1900) and lives of Pitt, Chatham, Peel, and Cromwell. He was also a noted racehorse-owner, winning the Derby 3 times. His son Albert Edward, 6th earl of R. (1882–), was Regional Commissioner for Scotland 1941–5, and Sec. of State for Scotland in the 'caretaker' govt., 1945, and Pres. National Liberal Party 1945–7.

ROSEMARY. Evergreen shrub (*Rosmarinus officinalis*) bearing small scented leaves. An aromatic oil is extracted from the clusters of pale purple flowers.

ROSENBERG (rōzenberg), Alfred (1893–1946). German politician. B. at Tallinn, he became the chief Nazi ideologist. He supervised the training of the party, and 1941–4 was Reich Minister for eastern occupied territories. He was tried at Nuremberg in 1946 as a war criminal and hanged.

ROSENBERG, Julius and Ethel. See SECRET SERVICE.

ROSES, Wars of the. The civil wars fought between the adherents of the House of Lancaster, which ruled England 1399–1461, and the House of York, which claimed the throne. The two parties used the red and the white rose respectively as their badges. The first battle was fought at St. Albans in 1455. War was renewed in 1459–61, ending in the Yorkist claimant's accession as Edward IV, and the destruction of the Lancastrians at Towton. A Lancastrian rising in 1464 was crushed at Hexham. A temporary Lancastrian restoration took place in 1470–1, ended by the Yorkist victories at Barnet and Tewkesbury. Peace reigned until Henry of Richmond's victory at Bosworth in 1485 restored a branch of the House of Lancaster; as Henry VII he m. Elizabeth of York, and so united the two Houses. Yorkist rebellions continued, however, until 1497.

ROSETTA (Arab. Rashid). Town in Egypt, on the main W. arm (to which it gives its name) of the Nile delta, 110 m. N.W. of Cairo. Pop. (est.) 30,000. The Rosetta Stone with a trilingual inscription was found here in 1799 by one of Napoleon's officers, captured by the British in 1801, and in 1802 placed in the British Museum. See HIEROGLYPHIC.

ROSEWOOD. The name of several kinds of ornamental timber, produced and exported in large quantities from Rio de Janeiro, Bahia, Jamaica, and Honduras. It is a rich brown, and polishes well.

ROSICRUCIANS (rōzikroo'shianz). Name adopted by certain early 17th cent. philosophers, who claimed occult powers, and employed the terminology of alchemy to expound their mystical doctrines. The alleged founder was Christian Rosencreutz who flourished c. 1460. Several societies have been founded in Britain and the U.S.A. which claim to be their successors.

ROSS. English market town (U.D.) in Herefordshire, 12 m. S.E. of Hereford. Agricultural implements are manufactured. The philanthropist John Kyrle (1637–1724), who made his home at R. and was chosen sheriff in 1683, is called the Man of R. Pop. (1961) 5,643.

ROSS, Sir John (1777–1856). Scottish rear-admiral and explorer. He served in the wars with France and made voyages of Arctic exploration in 1818, 1829–33 and 1850. His nephew Sir James R. (1800–62) made several Arctic voyages with his uncle and with Parry (1819–27), determined the position of the magnetic north pole in 1831, and in 1839–43 commanded an Antarctic expedition. See ROSS ISLAND AND DEPENDENCY, named after him.

ROSS, Sir Ronald (1857–1932). British physician and bacteriologist. B. in India, he served 1881–99 in the Indian Medical Service, and 1895–8 discovered the malaria parasite and studied its life-history. He became prof. of tropical medicine at Liverpool, received a Nobel prize in 1902, and wrote poems, essays, memoirs, as well as scientific papers.

ROSS AND CROMARTY. Highland co. of Scotland which incl. Lewis in the Outer Hebrides and many small islands. The coast is indented by many sea-lochs. Several high peaks rise in the S. to more than 3,800 ft., and Ben Wyvis in the N.E. is 3,429 ft. There are extensive deer forests. The Glomach Falls (370 ft.) are the deepest in Britain, and Loch Maree is a renowned beauty spot. Sheep and cattle grazing are the main industries; oats are the chief crop. Dingwall is the co. town. R. and C., originally 2 earldoms, became cos., R. in 1661, C. in 1685; C.

Chief towns are the cap. San Salvador and Santa Ana; on the coast are the ports of La Union, La Libertad and Acajutla. The constitution of 1950 provided for the election by universal suffrage of a pres. for 6 years with a single chamber legislative assembly elected for 2 years. El S., part of the Central American Federation from 1821, became independent in 1839. The prevailing religion is R.C. Educ. is in theory free and compulsory, but more than half the pop. over 10 is illiterate. The language is Spanish and the people are of Spanish-Indian extraction, few pure-bred Indians surviving. Area 8,260 sq. m.; pop. (1966) 3,036,500.

There is long-standing tension between El S. and Honduras, many Salvadoreans having emigrated to their less densely populated neighbour. In 1969, following defeat of H. by El S. in a soccer match, open warfare with heavy casualties lasted some weeks.

SALVAGE. Saving for re-use, either as a whole or in part, of any property threatened with destruction, especially important at sea and against fire. Also the compensation payable to those who by voluntary effort have saved a ship and/or its cargo and passengers from complete loss through shipwreck, fire, or enemy action: in the U.K. this comes under the jurisdiction of the Admiralty Division of the High Court.

The fire insurance companies of Britain maintain S. Corps in London, Liverpool, and Glasgow which co-operate with the fire-fighting services in the salvaging of goods, etc., threatened by fire. The London S. Corps dates from 1866, before which date fire-fighting also was organized by fire insurance companies for those insured by them.

SALVARSAN. An organic compound; the first specific anti-bacterial agent, discovered by Paul Ehrlich in 1909; chemical formula $C_{12}H_{12}N_2O_6As_2 \cdot 2H_2O$ 3, 3'-diamino 4, 4'-dihydroxy-arsenobenzene dihydrochloride. Because of its destructive effect on *Spirochaeta pallida*, it was widely used in the treatment of syphilis, prior to the development of antibiotics (q.v.). Another name for it is 606, referring to the number of experiments performed by Ehrlich in its discovery.

SALVATION ARMY. Christian evangelical, social service, and social reform organization, originally British but later worldwide. It began with revivalist services in a tent in Whitechapel, London, in 1865 conducted by William Booth who, with his wife and other helpers, formed the Christian Revival Association, renamed the East London Christian Mission, extended to cover all London in 1870. Booth used the expression 'salvation army' in a leaflet pub. in 1878, and it was soon accepted as the name of the body, which adopted military titles for its officials, and called its weekly journal the *War Cry*. The organization is now world-wide.

SAL VOLATILE (vol-at'ilē). A mixture of ammonium carbonate, bicarbonate and carbamate; smelling salts. It is a strong reflex stimulant, and is of value in restoring consciousness after a fainting attack or narcotic poisoning.

SALZBURG (sahlts'-boorg). City in Austria, cap.

SALZBURG. The Getriedegasse and the still narrower passages running from it take the visitor straight back to the Middle Ages. At its end the early-gothic Blasiuskirche can be glimpsed, and above rise the massive ramparts built by Santino Solari in the days of Prince-Archbishop Paris Lodron.

Courtesy of Austrian State Tourist Department.

of S. prov. on the Salzach, seat of an archbishopric founded c. 700. There is a 17th cent. cathedral. As Mozart's birthplace, S. is the scene of an annual music festival. Pop. (1961) 106,892. The prov. of S. contains some beautiful mountain scenery and lakes. Pop. (1961) 345,713.

SAMARA. Name until 1935 of KUIBYSHEV.

SAMARIA. Cap. of the kingdom of Israel during the 10th-8th cents. B.C., renamed Sebaste by Herod the Great. Excavations by Harvard Univ., 1908-10, and a joint Anglo-U.S. expedition, 1931-5, revealed extensive remains.

SAMARITANS. The descendants of the colonists settled by the Assyrians in Samaria, after the destruction of the Israelite kingdom in 722 B.C. They adopted Judaism, but rejected all sacred books except the Pentateuch, and regarded their temple on Mt. Gerizim, not that at Jerusalem, as God's true sanctuary; hence much ill-feeling existed between Ss. and Jews. A very small community still exists at Nablus.

SAMARITANS. The. Voluntary organization to help those tempted to suicide or despair, founded in 1953 at St. Stephen's Church, Walbrook, London, by the Rector, Chad Varah (1911-), and subsequently extended throughout Britain and overseas. The S. consist of groups of trained lay people, each directed by a professional (usually a clergyman) in consultation with psychiatrists, psychotherapists and doctors. They offer friendship and counselling to 'clients' who may use their emergency telephone numbers by day or night.

SAMARIUM. A rare earth element, symbol Sm, at. no. 62, at. wt. 150.35. It is a hard, grey, brittle metal, found in cerite, samarskite, and gadolinite, and is slightly radioactive.

SAMARKAND. City of the Uzbek S.S.R., U.S.S.R., cap. of S. region, nr. the r. Zerafshan, 135 m. E. of Bukhara. From 1369 it was the cap. of the empire of Tamerlane (Timur) whose mausoleum and summer palace still exist, and it was then ruled by the Chinese and the emirs of Bukhara before the Russians occupied it in 1868. It remained a centre of Moslem culture until the Revolution. Cotton-ginning and silk manufacture are carried on. Pop. (1967) 240,000.

SAMARRA. Ancient town in Iraq, on the Tigris, 65 m. N.N.W. of Baghdad. Founded in 836 by the Abbasid Caliph Motassim, it was the Abbasid cap. until 876, and is a place of pilgrimage for Shia Moslems. A barrage built at S. 1951-5 controls the water of the Tigris and prevents the former annual flooding of Baghdad.

SAMO'A. Group of volcanic islands in the S.W. Pacific, c. 500 m. N.N.E. of Fiji. They are in 2 groups. (1) the rep. of S. to the W. which incl. Savaii and Upolu. The cap. is Apia, on Upolu. Copra, bananas, and cocoa are exported. The people are Christians. The islands were German before the F.W.W., after it under New Zealand League of Nations mandate, then U.N. trusteeship. It was given independence 1 Jan. 1962, and was treated as a continuing member of the Commonwealth pending a final decision. Area 1,133 sq. m.; pop. (1961) 113,567, of whom 101,288 were Samoans.

(2) U.S. Samoa to the E., incl. Tutuila, Tau, and (200 m. N.N.W. of Samoa) Swain's Island. It was acquired by the U.S.A. in 1899 by agreement with Britain and Germany. Pago Pago on Tutuila is the cap. Area 76 sq. m.; pop. (1960) 20,040, of U.S. nationality.

SAMOS. Greek island in the Aegean Sea, lying c. 1 m. off the W. coast of Asiatic Turkey. Mountainous but fertile, S. produces wine, olive oil, etc. Vathi is the cap., and Teganion is on the site of the ancient city of S. destroyed by Darius. Area 180 sq. m.; pop. (1961) 52,034.

hills and lakes, form a vast scenic attraction for many visitors. Pop. (1967) 27,000.

ROTTERDAM. Second city and chief port of the Netherlands, on the Rotte and the Maas mouth of the Rhine-Maas delta; the Nieuwe Waterweg (new waterway), constructed 1866-90, links R. with the North Sea for shipping. R. dates from the 12th cent. or earlier, and developed as a port threaded with waterways. There is a statue of Erasmus, who was born at R., in the market place; the Groote Kerk (great church) or Church of St. Lawrence, begun early in the 15th cent., was gutted in the German air attack of 14 May 1940, and subsequently restored. R.'s museums and art collections are notable. Industries incl. brewing, distilling, shipbuilding, sugar and petroleum refining, and the manufacture of margarine and tobacco. The city centre was destroyed by German

ROTTERDAM. Built in the city's yards, a newly completed nitric-acid tanker sails down the New Meuse. The acid is carried in eight separate tanks for greater safety. Courtesy of G. & J. Weir Holding Ltd., Glasgow.

air attack in 1940, but has been completely rebuilt, and an underground railway system constructed (opened 1968). The dockyards have been greatly extended, with modern container and bulk cargo handling facilities, and the R.-Europort complex is one of the premier ocean cargo ports of the world. Pop. (1967) 723,958.

ROUAULT (roo-ō), Georges (1871-1958). French artist. B. in Paris, the son of a cabinet-maker, he was apprenticed to a stained-glass maker - the influence of this craft being obvious in his later paintings - and studied under Gustave Moreau. His works incl. 'Aunt Sallies' and 'The Three Judges', both in the Tate, and moving religious subjects, e.g. 'The Holy Face' as imprinted on the veil of St. Veronica.

ROUBAIX (roobā'). Town in Nord dept., N. France, 6 m. N.E. of Lille, important centre of French woollen textile production. Pop. (1962) 113,163.

ROUBILLAC (roobēyahk'), Louis François (1695-1762). French sculptor. B. at Lyons, he went to England where he was patronized by Walpole, becoming the most popular sculptor of his day. His principal works incl. statues of Handel, Newton, and George I, and busts of Shakespeare and Pope (see illus. p. 394). His name is sometimes less correctly spelled Roubiliac.

ROUEN (roo-on'). French port, cap. of Seine-Maritime dept., on the Seine, 87 m. N.W. of Paris. It was also cap. of Normandy from 912. Lost by King John 1204, it was in English possession 1419-49; Joan of Arc was burned in the market place 1431. The cathedral (13th-16th cent.) is famous (its right-hand tower, Tour de Beurre, was paid for by the sale of indulgences to eat butter during Lent), and there are other notable buildings. R. is a centre of the wine trade. Industries incl. cotton spinning and weaving, distilling, and petroleum refining. Pop. (1962) 123,474.

ROUGET DE LISLE (roozhā' de lēl), Claude Joseph (1760-1836). French author and army officer. B. at Lons-le-Saunier, he composed, at Strasbourg, *La Marseillaise*, the French national anthem and song of the revolution.

ROULERS (roolā'). Town in W. Flanders prov., Belgium, 13 m. N.W. of Courtrai. Linen, jute, and other textiles are made. R. was an important German base during the F.W.W. Pop. (1966) 40,000.

ROULETTE (roolet'). A gambling game, associated with Monte Carlo, consisting of betting on the numbered divisions of a turning wheel into which an ivory ball will fall. They are coloured alternately black and red, with numbers from 0-36. The table, on which bets are laid, is designed in 3 columns of numbers corresponding to those of the wheel, and many methods of betting exist, with the odds appropriate to the chances against the number appearing. The play is under the control of a croupier.

ROUMANIA. See RUMANIA.

ROUNDHEADS. Nickname applied to the parliamentary party during the revolution of 1640-60. It had a sneering implication, since at the time only the lower classes wore their hair short.

ROUP. A contagious disease of poultry and game. Caused by unhealthy conditions, it is characterized by swelling of the face and purulent catarrh.

ROUSE, William Henry Denham (1863-1950). British educationist and classical scholar. He taught at Rugby 1896-1901, was headmaster of Perse School, Cambridge, 1902-28, and univ. teacher of Sanskrit 1903-39. His publications incl. *Greek Votive Offerings* (1902), and the renowned *Latin on the Direct Method* (1925).

ROUSSEAU (roosō'), Henri (1844-1910). French artist known as *Le Douanier* (customs official) because this was for a time his profession. B. in Laval, he exhibited at the *Salon des Indépendants* from 1886 to 1910, and was associated with the group which was led by Apollinaire and Picasso. He painted landscapes, animals and jungle scenes.

ROUSSEAU, Jean Jacques (1712-78). French philosopher. B. in Geneva, he was apprenticed in turn to a lawyer and engraver, but ran away and from 1728 led the wandering life described in his *Confessions*. The first of many ill-repaid patrons was Mme Warens, whose lover he became. On the breakdown of this relationship he went to Paris, where he took as his mistress the servant girl, Thérèse le Vasseur: their 5 children were deposited in the foundling hospital. In 1754 he pub. a *Discourse on the Origin of Inequality*, denouncing civilized society, which made him famous, but retired to country seclusion to produce the sentimental romance *La Nouvelle Héloïse* (1760); the revolutionary *Du Contrat social* (1762); and the educational treatise *Émile* (1762). The democratic political implications and the deistic viewpoint of the latter caused it to be condemned by Church and State, and R. fled abroad, living for a time in England under the patronage of Hume. He later returned to France, but suffered from an increasing persecution mania until his death. R. was buried in the Panthéon.

ROUSSEAU, Pierre Étienne Théodore (1812-67). French landscape painter of the Barbizon School. B. in Paris, he studied under Rémond and Guyon Lethière. He came under the influence of Constable and Bonington, sketched from nature in many parts of France, and settling in Barbizon in 1848 he became one of the pioneers of Romanticism.

ROUSSEL (roosel'), Albert (1869-1937). French composer. B. at Tourcoing, he entered upon a naval career, studied under d'Indy, and later was influenced by Stravinsky. He composed symphonies, operas, etc.

ROUSSEL, Raymond (1877-1933). French poet, novelist and playwright. A wealthy amateur of literature, he wrote his surrealist fiction in prose and verse

Victor Montagu (1906–), known as Visct. Hinchinbrooke till he succeeded his father as 10th earl of S. in 1962, disclaimed his peerages 1964. He was chairman of the Tory Reform Committee 1943–4, and has opposed U.K. entry to the Common Market.

SANDWICH. English market town (bor.) in Kent, one of the Cinque ports, on the r. Stour. An important port for cents. before the Norman Conquest, it lost its usefulness through the silting up of the harbour in the 16th cent. It has a number of medieval buildings. Pop. (1961) 4,234.

SANDWICH ISLANDS. Another name for HAWAII.

SANDYS (sands), Duncan (1908–). British Cons. politician. Entering Parliament in 1935, he was Min. of Works 1944–5, Min. of Supply 1951–4, Min. of Housing and Local Govt. 1954–7, Min. of Defence 1957–9, Min. of Aviation 1959–60, and was Sec. of State for Commonwealth Relations 1960–4 and also for the Colonies (1962), negotiating, amongst other things, the agreement (1963) on the Malaysian Federation. His first marriage in 1935 was to Diana, dau. of Sir Winston Churchill.

SANDYS, Oliver. Pseudonym of British novelist Mrs. Marguerite Evans (1894–1964), neé Jervis. She was first m. to Count Barcynska, and as Countess B. became known as the author of *Love Never Dies*, *We Lost Our Way*, etc. Her 2nd husband was Caradoc Evans, whose biography she pub. in 1948. Besides novels, she has also pub. her autobiography *Full and Frank* under the pseudonym S.

SAN FRANCISCO. Principal port on the Pacific coast of the U.S.A., in California, on S.F. Bay. The city stands on a peninsula S. of the Golden Gate, a strait 1 m. wide, 5 m. long, giving access to the Bay and crossed by the 2nd longest single-span bridge (4,200 ft.) in the world, completed 1937. In the bay is Alcatraz (q.v.) island. Industries incl. meat-packing, fruit canning, printing and publishing, and the manufacture of metal goods. There is a large international airport. S.F. dates from 1776; it was a trading post when captured by the U.S.A. in 1846 during the war with Mexico. An earthquake in 1906 almost completely destroyed the city and killed 452 people. Pop. (1960) 742,855.

The international conference which drew up the United Nations Charter was held at S.F. in 1945; and the peace treaty between the Western Allies and Japan, in force from 1952, was signed there in 1951.

SANGER, Frederick (1918–). British biochemist. He was Beit Memorial Fellow at Cambridge 1944–51, when he became a staff member of the Medical Research Council. He was made F.R.S. in 1954, and awarded a Nobel Prize in chemistry 1958 for his elucidation of the molecular structure of insulin – at that time the largest protein and most complex enzyme to be so investigated.

SANGER, John (1816–89). British circus proprietor. B. in Somerset, he and his brother 'Lord' George (1825–1911) toured the country with their circus, and in 1871 began to produce annual equestrian pantomimes at Astley's. The brothers later produced their own separate shows. 'Lord' George was shot by an employee at Finchley.

SANHEDRIN (san'edrin). The supreme Jewish court at Jerusalem during the 2nd cent. B.C.–1st cent. A.D. It consisted of members of the priestly aristocracy, and was presided over by the high priest.

SAN JOSE (san hōzā). A city of California, U.S.A., 50 m. S.S.E. of San Francisco; it has important fruit canneries, and after the S.W.W. grew industrially, notably as a centre for aerospace research and development. Pop. (1960) 204,196.

SAN JOSÉ. Cap. of Costa Rica; the main trade is in coffee, cacao, and sugar cane. The univ. of Costa Rica (1843) is near by. Pop. (1966) 185,640.

SAN JUAN (san hwan). Cap. of S.J. prov.,

Argentina, on the S.J. r., 97 m. N. of Mendoza. It is a centre of the wine industry, gold and copper are mined in the vicinity. S.J. was virtually destroyed by an earthquake in 1944. Pop. (1960) 82,000.

SAN JUAN. Cap. of the Commonwealth of Puerto Rico, on an is. off the N. coast. The fortresses of El Morro and San Cristóbal, the governor's palace Fortaleza, and the cathedral are of interest. Pop. (1960) 432,508.

SANKEY, Ira David (1840–1908). American evangelist, who toured Britain and America with D. L. Moody (q.v.). He compiled *Sacred Songs and Solos* (1873).

SANKT GÄLLEN. German form of St. GALL.

SAN MARINO (mahrē'nō). Independent republic bounded by Italian territory, lying some 12 m. S.W. of Rimini. It claims to be the oldest state in Europe, having been founded in the 4th cent. A.D., and is one of the world's smallest states (area 22½ sq. m.). S.M., the cap., stands on Mt. Titano (2,650 ft.), a spur of the Apennines. Govt. is by a Great and General Council of 60 elected members, two of whom are appointed biannually to act as regents (*Capitani reggenti*). Women may vote (from 1960) but not be elected. S.M., which entered into a customs union with Italy in 1862, is under Italian protection. Pop. (1967) 18,181.

SAN MARTÍN (mahr'tēn'), José de (1778–1850). S. American soldier. B. in Argentina, he served in the Spanish army during the Peninsular War, but after 1812 devoted himself to the S. American struggle for independence, playing a large part in the liberation of Argentina, Chile, and Peru.

SAN REMO (rā'mō). Seaport and popular winter resort on the Gulf of Genoa, Liguria, N. Italy. There is a casino; perfumes and mosaics are made. Pop. (1960) 55,000.

SAN SALVADOR. Cap. of the republic of El Salvador in Central America, 30 m. inland from the Pacific at the foot of the S.S. volcano (8,360 ft.) S.S. was founded in 1525; it has several times suffered badly from earthquakes. Pop. (1961) 255,744.

SANSCULO'TTES (French, without knee-breeches). Term applied during the French Revolution to the working classes, who wore trousers, as opposed to the aristocracy and bourgeoisie, who wore knee-breeches.

SAN SEBASTIÁN. Seaport and bathing resort, cap. of the prov. of Guipúzcoa, on the Bay of Biscay, Spain. It became fashionable after Queen Maria Christina, mother of the posthumous Alfonso XIII, made it the summer residence of the court in 1886. S.S., formerly a walled town, was besieged by Wellington in 1813; its walls were removed in 1863. Pop. (1965) 153,660.

SANSKRIT. The literary language of ancient India, belonging to the Indo-Iranian or Aryan branch of the Indo-European family of languages. The oldest form of S. is Vedic (c. 1500 B.C.), the medium in which the 4 Vedas (q.v.) and the associated Brahmanas, Aranyakas, and Upanishads were written. Classical S., with its fixed vocabulary and grammar, was the creation of the grammarians, notably Panini in the 4th cent. B.C., but Vedic also continued to be used for several cents. Works written in Classical S. incl. the national epics, the *Mahabharata* and *Ramayana* (qq.v.), and the later artificial epics, of which Kalidasa's *Family of Rama* and *Birth of the War God* are the most famous. In lyric poetry the names of Jayadeva and Bhartrihari, and in drama that of Bhavabhūti, are noteworthy, but in both fields Kalidasa is again considered to excel all others. Other interesting literary forms are the prose romance, represented by Dandin's *Adventures of the Ten Princes*; the beast fables of the *Panchatantra*; and Somadeva's collection of verse fairy tales in the *Kathasaritsagara*. There is practically no historical writing in S., but there are

of the Gironde, with fine sands. Devastated during the S.W.W., it was subsequently rebuilt in contemporary style under the direction of a group of architects incl. Simon, Ursault, and Gillet and the engineer-designer Sarger. Pop. (1962) 17,232.

ROYAT (rwahyah'). French spa in Puy-de-Dôme dept., 2 m. S.W. of Clermont-Ferrand. Nearly 1,500 ft. above the Tertiary, it has a fine fortress-church dating from the 10th cent. Its alkaline and arsenical warm springs, used in treating heart conditions, were known to the Romans. Pop. (1962) 4,210.

ROYCE, Sir Frederick Henry (1863–1933). British self-styled 'mechanic'. Originally a manufacturer of electric dynamos and cranes, he so impressed C. S. Rolls (q.v.) by the car he built for his own personal use in 1904 that the Rolls-Royce partnership was formed. Suffering in later life from ill-health he designed his most famous car the Phantom II Continental – remarkable for silence, speed and refinement – without ever visiting the factory, but his greatest achievement was the R-type engine which powered the Schneider Trophy-winning seaplane in 1929 and 1931, and was later developed into the Merlin engine which enabled the R.A.F. Hurricanes and Spitfires to defeat the Luftwaffe in the S.W.W.

ROYCE, Josiah (1855–1916). American philosopher. B. at Grass Valley, California, he became professor of philosophy at Harvard in 1892, and Alford professor in 1914. His writings reveal a deep consideration of human nature and its varied ideals.

RUANDA (rooan'da). Republic in central Africa, part of the former Belgian trust territory of Ruanda-Urundi. It became independent on 1 July 1962, and was admitted to membership of the United Nations on 26 July. R. lies between Tanganyika and Congo Republic (cap. Léopoldville), and produces coffee, cotton, and cattle. Following independence there was bitter conflict between the 2 chief ethnic groups, the Watutsi (the former feudal overlords) and the now predominant Bahutu. It is industrially undeveloped, but has reserves of tin, gold, and wolframite, and under Lake Kivu there is methane gas. Kagera Nat. Park has a wealth of untouched flora and fauna. The

SIR HENRY ROYCE
Courtesy of Rolls-Royce.

cap. is Kigali. Area 10,169 sq. m.; pop. (1968) 3,300,000.

RUANDA-URUNDI (-ooroon'di). Area which before the F.W.W. was part of German E. Africa. It was administered by Belgium under League of Nations mandate from 1920, under U.N. trusteeship from 1946. From 1925 it was linked administratively with the Belgian Congo (Congo Republic). The territory became independent in 1962 in two parts, Ruanda as a republic, Urundi as the kingdom of Burundi.

RUB' AL KHALI (roob-al-kha'le). Vast sandy desert in S. Arabia. Bertram Thomas was the first European to cross it, 1930–1. The name (Arabic) means empty quarter. Area 250,000 sq. m.

RUBBER. The coagulated latex of a great range of plants, mainly from the New World. Most important is Para R. (so called from its original place of export) which derives from the tree *Hevea brasiliensis*. It was introduced from Brazil to S.E. Asia, where most of the world supply is now produced, the chief exporting countries being Malaya, Indonesia, Ceylon, Cambodia, Siam, Sarawak, and Brunei. At about 7 years the tree, which may grow to 60 ft., is ready for 'tapping', small incisions being made in the trunk and the latex dropped into collecting cups. Other sources of R. are: *Manihot glaziovii*, another Brazilian tree, which supplies Ceara R., and *Koksagyz*, or Russian dandelion, which grows in temperate climates and can yield about 100 lb. of R. per ton of roots. In the 20th cent. world production of R. has increased a hundredfold, and the S.W.W. stimulated the production of synthetic R. to replace the supplies from Malayan sources overrun by the Japanese.

There are an infinite variety of synthetic Rs. adapted to special purposes, but overwhelmingly the most important economically is S.B.R. (styrene-butadiene rubber). Cheaper than natural R., it is preferable for some purposes (e.g. car tyre treads, where its higher abrasion-resistance is useful), and is either blended with natural R. or used alone for industrial moulding and extrusions, shoe soles, hosepipes, latex foam, etc.

RUBBRA, Edmund Duncan (1901–). British composer. B. at Northampton, he studied under Holst and is a master of contrapuntal writing, cf. his study

EDMUND RUBBRA

RUBBER. Smuggled from Brazil by Sir Henry Wickham (q.v.) some thousands of seeds of *Hevea brasiliensis* were carefully cultivated at Kew and sent out as seedlings to estab. the rubber plantations of the Far East. Malaya, whose plantations date from 1877, is the world's foremost producer of natural rubber, and on the left latex is seen being collected in the traditional way. Preliminary processing produces either sheet or crêpe rubber, and on the right crêpe is seen being machined through heavy rollers, after which the lengths are dried on racks.

Courtesy of Malaya House.

Leucadian rock, owing to her love for Phaon being unrequited. Her poems survive only fragmentarily.

SAPROPHYTE (sap'rōfīt). Plant feeding on organic compounds in solution, and wholly or partly lacking in chlorophyll. Ss. are generally fungi and live upon dead plants and animals. The moulds on foodstuffs and the dry-rot of timber are caused by saprophytic fungi. Ss. are useful scavengers, and in sewage farms and refuse dumps break down organic matter into nutrients easily assimilable by green plants. Many orchids, also, are incl. among Ss.

SA'RA'CE'NS (-s-). Greek and Roman term for the Arabs, hence used in medieval Europe for all Moslems.

SARAGO'SSA. City in N. Spain, on the Ebro, cap. of S. prov. It has 2 cathedrals, one dating from the 12th cent., and a univ. It makes leather and leather goods, textiles, machinery, glass, porcelain, beer, etc. Founded as Salduba in pre-Roman days, it was named S. after the Roman conqueror Caesar Augustus; later it was captured by Suebi, Visigoths, and Moors, and was taken in 1118 by Alfonso the Warrior, King of Navarre and Aragon, after a nine months' siege; it remained cap. of Aragon until the end of the 15th cent. S. held out against the French 1808-9 when Agustina (d. 1859) became a national heroine: her story is told in Byron's *Childe Harold*. Pop. (1965) 393,425.

SARAJEVO (-yā'vō). City of Yugoslavia, cap. of Bosnia-Herzegovina federal republic, on the Miljacka. The assassination at S. of Archduke Francis Ferdinand, heir apparent to the throne of Austria-Hungary, by Gavrilo Princip, a Bosnian, on 28 June 1914, precipitated the F.W.W. Pop. (1961) 142,423.

SARAJOGU (sah'rach-of'yoo), Shukri (1887-1953). Turkish statesman. A personal friend of Kemal Atatürk, he was For. Min. 1938-42, when he negotiated the Anglo-Turkish alliance of 1939, and was P.M. 1942-6.

SARATOGA SPRINGS. City and spa in New York State, U.S.A., 38 m. N. of Albany. Pop. (1960) 16,630.

Near by in 1777 Gen. John Burgoyne (q.v.) was defeated in 2 engagements by Horatio Gates to whom he surrendered. He and some 6,000 men remained prisoners until the end of the War of American Independence.

SARATOV (sahrah'tof). City of the R.S.F.S.R., on the Volga, cap. of S. region, 230 m. N.N.E. of Volgograd. The centre of a petroleum field with a 100 m. W., it has also 3 printing industries; 699,000.

SARAWAK (sarah'wak). State of the Fed. of Malaysia, occupying the N.W. sector of Borneo and forming (with Sabah) E. Malaysia. The coast is backed by a broad plain, but inland is broken, mountainous country. The climate is hot and wet. S. was ceded to Sir James ('Rajah') Brooke by the Sultan of Brunei in 1841 in return for his aid in a campaign against the Dayaks (q.v.), and was placed by his nephew Sir Charles under British protection in 1888. The Japanese occupied S. 1941-5 and following a period of military rule the Rajah, H.H. Sir Charles Vyner Brooke, was reinstated in 1946; five weeks later he ceded S. to the Crown. It was a Crown colony 1946-63, when it acceded to Malaysia. The cap. is Kuching, on the S. r.; Sibü is a port on the Rejang. The principal product is petroleum from the Miri oilfield: others are rubber, timber, bauxite, sago and pepper. Area c. 47,000 sq. m.; pop. (1966) 862,000 incl. 323,000 Dyaks, 282,000 Chinese, 2,000 Europeans.

SARD. and **SA'RDONYX**. See **ONYX**.

SARDINE. Term applied to various types of small fish (*Sardine pilchardus*) in the herring family, which are packed in oil in sealed tins. The name comes from Sardinia, as many of the fish are caught in the neighbourhood of that is. There are also extensive S.

fisheries off the coast of Brittany. In the U.K. the term is legally restricted to the young of the pilchard (q.v.) by a court ruling of 1915.

SARDINIA. Island in the Mediterranean to the S. of Corsica, made an autonomous region of Italy in 1948; the Italian form of the name is Sardegna. S. is mountainous and for the most part barren, but in the S.W. cereals, olives, and the vine are grown; cork is an important export; lead, zinc, coal, and lignite are mined. S. was inhabited already in the Bronze Age, from which remain many *nuraghi* (fortified dwellings). Ruled from the 15th cent. successively by Spain, Austria, and Savoy, S. was absorbed in Italy when Victor Emmanuel II became King of Italy in 1861. Area 9,298 sq. m.; pop. (1961) 1,413,289.

SARDOU (sahrdōō'), Victorien (1831-1908). French dramatist. His plays, many of which were written for such stars as Bernhardt and Irving, incl. *Fédora* (1882), *La Tosca* (1887) and *Robespierre* (1902).

SARGASSO SEA. That part of the N. Atlantic lying between 40° and 80°W. and 25° and 30°N. which is notorious for its floating seaweed (*Sargassum bacciferum*). Ocean currents sweep round the area clockwise leaving the centre virtually still.

SIR MALCOLM SARGENT. A night at the Proms: the soloist is Amy Shuard. Photo: Godfrey MacDonnell.

SARGENT, Sir (Harold) Malcolm (Watts) (1895-1967). British conductor. From 1923 he was prof. at the R.C.M., was chief conductor of the B.B.C. Symphony Orchestra 1950-7, and then continued as chief guest conductor and conductor-in-chief of the 'Proms'. He had an easy, polished style.

SARGENT, John Singer (1856-1925). American artist. B. in Florence of American parents, he studied there and in Paris. He settled in London, and was elected R.A. in 1897. His principal works incl. intimately perceptive portraits of the Wertheimer family, Lord Ribblesdale, T. Roosevelt, Rockefeller, and others and the F.W.W. picture 'Gassed'.

SAR'GON. Name of 2 Mesopotamian kings. Sargon I (c. 2700 B.C.), king of Akkad, founded the first Babylonian empire. Sargon II (reigned 722-705 B.C.), king of Assyria, carried the Israelites into captivity.

SARK. One of the Channel Islands, 6 m. E. of Guernsey. It is divided into Great S. and Little S. connected by an isthmus called the Coupée, and is of great natural beauty. The Seigneurie of S. was estab. by Elizabeth I, the ruler being known as Seigneur or Dame, and there is a parliament, the Chief Pleas. Dame Sybil Hathaway proposed in 1969 that S. should in future be admin. by Guernsey. Area 2 sq. m.; pop. (1961) 560.

SARO'YAN, William (1908-). American author.

an important rail junction and has engineering works. R. School, founded in 1567 under the will of Lawrence Sheriff, attained fame during the headmastership, 1824-42, of Thomas Arnold (q.v.); R. football originated at the school. Pop. (1961) 51,651.

RUHR (rōor). River of Germany, a right-bank tributary of the Rhine. It rises N. of Winterberg and flows N.W. then W. to Arnsberg and Neheim. Entering the R. coalfield about Hagen, it passes near Essen and through Mülheim to join the Rhine at Duisburg-Hamborn. The R. valley is famous as the centre of the German iron and steel industry. Length 142 m. The area was occupied by French and Belgian troops 1923-5 in an unsuccessful attempt to force Germany to pay reparations laid down in the Treaty of Versailles. During the S.W.W. the R. district was severely bombed from the air and was conquered by the Allies 1-18 April 1945, 325,000 German troops being taken prisoner. Allied control of the area came to an end with the setting up of the European Coal and Steel Community in 1952.

RUIZ (rōō-ēth'), Juan (c. 1283-c.1350). Spanish poet, archpriest of Hita. His *Libro de buen amor* has made him the most outstanding of medieval Spanish poets. The work contains parodies, satires, and an autobiography.

RULE OF THE ROAD. In Britain, this states that vehicles should be kept to the left of the road or be liable for any ensuing damage. The reverse procedure applies nearly everywhere else in the world, all traffic keeping to the right. This latter is the rule at sea, and for 2 ships crossing, the one having the other on her starboard must give way.

RUM. A mountainous island of the Inner Hebrides, Inverness-shire, Scotland, 15 m. N. of Ardnamurchan Point. Haskeval is 2,659 ft. high. It was made a nature reserve in 1957. Area, 42 sq. m.

RUM. Spirit fermented and distilled from sugar cane. Scummings from the sugar-pans produce the best R., molasses the lowest grade.

RUMANIA (roomā'nia). A republic of S.E. Europe, bounded by Bulgaria, the Black Sea, the U.S.S.R., Hungary, and Yugoslavia.

PHYSICAL FEATURES. R. is traversed from N. to S. by the Carpathians and from E. to W. by the Transylvanian Alps, the 2 ranges forming a great arc separating Transylvania to the N.W. from the plains of Wallachia and Moldavia. The main rivers are the Danube, which reaches the Black Sea through an extensive delta; its tributaries the Prut (which forms the boundary with the U.S.S.R.), Siret, Ialomita, Arges, Olt, and Jiu; and the Mures and Someşul in

Transylvania. There are numerous lakes in the vicinity of the lower Danube. The plains of the E. and S. are exposed to great extremes of climate.

ECONOMIC LIFE. Since the S.W.W. industry has rapidly overtaken agriculture in importance, with large-scale electrification; extension of iron and steel manufacture, and of light and heavy industry, aided by R.'s reserves of coal, lignite, manganese, copper, lead and zinc. Oil, formerly exploited only at Ploesti, and natural gas, have been discovered elsewhere, notably gas in Transylvania; and the chemical industry has a large output of fertilizers, synthetic yarns, and plastics. Following sweeping agrarian reforms, cattle, pigs and sheep are increasingly raised; wheat, maize, sunflower, sugar beet, and grapes are important crops; and forests (covering $\frac{1}{4}$ of the country) supply a large timber industry. There is a road and rail network, and an international airport at Bucharest, and river and maritime transport developed via the Danube and Black Sea, which also support a fishing industry. Tourism is encouraged by the scenery, and rich remains of earlier cultures: resorts incl. Mamaia and the spa Eforie, both on the Black Sea, and winter sports centres such as Sinaia.

AREA AND POPULATION. R. covers 61,700 sq. m.; pop. (1967) 19,287,245 (incl. Hungarian, German, Jewish, Russian, Turkish and other minorities). The main towns are Bucharest (the, cap.), Cluj, Iasi, Timisoara, Ploesti, Braila, Galati Oradea, Brasov, Arad and Constanta. Univs. exist at Bucharest, Iasi, Cluj, Timisoara, and Craiova. The majority of the pop. belong to the Rumanian Orthodox Church.

GOVERNMENT. Under the Constitution of 1965 (more liberal than the Soviet model of 1952) the Grand Nat. Assembly is elected for 4 yrs. by workers over 18, and the P.M. and other members of the Council of State are responsible to the assembly: there is a pres.

History. The Romans conquered Dacia, now R., in A.D. 101-7, and introduced colonists (who incl. Ovid); many of these inter-married with the native population. After the withdrawal of the Romans in 275, R. was occupied by the Goths, and during the 6th-12th cents. was overrun by Huns, Bulgars, Slavs, and other invaders. In the 14th cent. the principalities of Wallachia, in the S., and Moldavia, in the E., were founded. Wallachia fell under Turkish suzerainty in the course of the 15th cent., Moldavia early in the 16th. From 1829-56 Turkish suzerainty was exchanged for Russian protection. In 1859 both principalities elected as prince Alexander Cuza who proclaimed their union; he was deposed in 1866, and Prince Charles of Hohenzollern-Sigmaringen elected. After the Russo-Turkish War (1877-8), in which R. sided with Russia, the great powers recognized R.'s independence, and in 1881 Prince Charles assumed the royal title as Carol I.

R. fought against Bulgaria in the 2nd Balkan War (1913) and annexed S. Dobruja. It entered the F.W.W. on the Allied side in 1916, was occupied by the Germans 1917-18, and received Bessarabia and Transylvania under the peace settlement. During the 1930s the pro-Fascist Iron Guard became prominent; to counter them Carol II in 1938 estab. his own dictatorship, but when in 1940 he had to surrender Bessarabia, N. Transylvania, and S. Dobruja to Russia, Hungary, and Bulgaria respectively, the Iron Guard seized power, and forced him to abdicate in favour of his son Michael. R. was occupied by the Germans in 1940, and declared war on Russia in 1941. When the Germans were expelled by the Red Army in 1944 a coalition of left and centre parties took power, and R. declared war on Germany. By the peace treaty of 1947 between R. and the Allies, R. recovered Transylvania; Bessarabia and N. Bukhovina went to Russia, S. Dobruja to Bulgaria. Michael abdicated later that year, and a rep. was estab., of which the Communists rapidly gained control,

RUMANIA. Voronet Church near Suceava, the former capital of Moldavia, has exterior murals nearly five hundred years old.

Courtesy of the Rumanian Embassy.

several others radiate from Riyadh. The unrest in the Arab world was reflected in S.A., and reactionary King Saud ibn Abdul-Aziz was replaced in 1964 by his brother Faisal (q.v.). Area c. 800,000 sq. m.; pop. c. 6,000,000, the majority nomads.

SAUL. First king of Israel (d. about 1010 B.C.). The son of Kish, he was anointed by Samuel, and after his victory against the Ammonites was made king by the people at Gilgal. He lost the favour of God and committed suicide.

SAULT STE. MARIE (soo sânt mahrê). Twin cities on the U.S.-Canadian frontier, at the falls in St. Mary's river joining lakes Superior and Huron. S. Ste. M., Ontario, manufactures steel and paper. Pop. (1966) 74,594. S. Ste. M., Michigan, had a pop. of 18,722 in 1960. Two international canals bypass the falls, which were discovered by Etienne Brulé in 1612, *sault* (modern Fr. *saut*) meaning falls.

SAUMUR (sömür). Town in Maine-et-Loire dept., France, on the Loire, famous for its cavalry school (1768) and sparkling wines. Pop. (1962) 22,876.

SAUNA (saw'na). Finnish bath. Known for a thousand years and once a sacred cult, the S. bath is

SAUNA. Although modern fire regulations prohibit the use of wood in towns, the traditional bathhouse is built of wood. The majority of Finland's half million saunas are on the shores of her lakes, which provide the essential cold plunge.

Courtesy of the Finnish Travel Information Centre.

traditionally still taken on Saturday. Above a wood fire specially selected black cobblestones, about the size of a man's fist, are heated on an iron grate and water is thrown on them to produce a steam bath at c. 90°C (200°F). Perspiration begins in c. 10 mins. and, after a beating with whisks made of birch twigs, the bather cools off with a plunge into cold water.

SAUTERNES (sötärn). A village of Gironde dept., S.W. France, which has given its name to the sweet white table wines of the district. Pop. (1962) 640.

SAVAGE, Michael Joseph (1872-1940). New Zealand statesman. B. in Australia, he settled in New Zealand in 1907, and worked as a miner. He entered parliament in 1919, became leader of the Labour Party in 1933, and formed a govt. in 1935 in which he was P.M. and Min. for External Affairs and Native Affairs. His govt. introduced much social security legislation. He d. in office.

SAVANNAH. City of Georgia, U.S.A., on the S. river 18 m. from its mouth. Founded in 1733, it

exports cotton, and makes cottonseed oil, fertilizers, machinery, etc. The *Savannah*, first ship fitted with steam power to cross the Atlantic, was built at S.; she made most of the journey (1819), which took 25 days, under sail. Pop. (1960) 149,245.

SAVANNAH or *Savanna*. Term, perhaps of Carib origin, applied by the Spaniards to treeless plains of tropical American prairies, now denoting any extensive tropical grassland.

SAVING. The reservation of a portion of income for future needs, seldom in modern times the massing of a money hoard, because of dangers of fire and theft, but tending to be synonymous with investment. The purchase of precious stones, antiques, works of art, property, etc., for appreciation of value was hit 1965 by a capital gains tax (for values over £1,000) levied on realized gains at disposal or at death. Small-scale savers have an increasingly large field opening to them. Very frequent is the acquisition of a home by regular payments on a mortgage obtained through a building society or bank, the house passing to the mortgagor when the purchase price plus interest is paid off. Popular also are life insurance policies producing at the end of a specified time a lump sum or annuity; the majority now issued are 'with profits', i.e. the people insured benefit through profits from the investments of the company. Steady inflation has also led to the linking of policies and also of private enterprise pensions schemes, with unit trusts. These trusts offer the small saver an opportunity, formerly limited to the more wealthy man operating through a stockbroker, to invest in stocks and shares. The managers of the trusts spread their funds over a large number of these, and by his purchase of a 'unit' the saver gains a fractional share in each, so being safeguarded against substantial loss by the failure of any particular share. Apart from the costs of management, all profits are distributed: this is not usually the case with the similarly spread investment trusts.

For small savers who wish to have their money at ready call, but also to secure a modest interest, the most usual recourse is the Trustee Savings Banks (regulated by acts of Parliament) which date from the early 19th cent.; the Post Office Savings Bank (1861); or the Building Societies (q.v.). The govt., which makes certain tax concessions to people investing in these and in home ownership and insurance policies, also offers the small saver Premium Savings Bonds (1956) repayable at par, earning no interest, but eligible for prizes awarded monthly to holders in a draw made by ERNIE (q.v.). Nat. Savings Certificates (1916) which earn graduated tax-free interest payable only on ultimate encashment; British Savings Bonds carrying in addition to regular interest a tax-free bonus after a given number of years; and, introduced by Chancellor Roy Jenkins in the 1969 budget, a contractual Save As You Earn scheme with tax-free terminal bonuses after five years' subscription and again after seven years without withdrawal, early withdrawals being penalized by very low payment of interest.

Similar methods of saving are available in other countries incl. the U.S.A., where the govt. has issued a number of series of savings bonds.

SAVOIE (sahv'wah'), Combe de. Glacial valley c. 20 m. long through which the Isère r. runs, Savoie dept., France. It lies between the Bauges and Belledune ranges of the Alps. The road to Mont Cenis and the Little St. Bernard passes runs through it; and the depts. of Savoie and Haute-Savoie take their names from it.

SAVONAROLA, Girolamo (1452-98). Italian reformer. B. at Ferrara, he became a Dominican friar in 1474, and was elected prior of St. Mark's Convent at Florence in 1491. His eloquent preaching, and his reputation as a visionary and prophet won him

of art, and *The Stones of Venice* (1851–3). His writings hastened the appreciation of unorthodox painters such as Turner and the Pre-Raphaelites. In 1848 he m. Euphemia Chalmers Gray, but the marriage proved a failure; 6 years later Mrs. R. secured a decree of nullity and later m. Millais. The 5th and final vol. of *Modern Painters* appeared in 1860, and the remaining years of R.'s life were devoted to social and economic problems, in which he adopted a radical outlook. To this period belong a huge series of lectures, pamphlets, *Unto this Last* (1862), *Sesame and Lilies* (1865), *The Crown of Wild Olive* (1866), etc. From 1869 to 1879 R. was Slade prof. of Art at Oxford, and he made a number of social experiments, such as 'St. George's Guild', to which he contributed £7,000, for the establishment of an industry on socialist lines. His last years were spent at Brantwood, Coniston.

JOHN RUSKIN. Chalk drawing by George Richmond. Photo: N.P.G.

Ruskin College was founded in Oxford in 1899 by an American, Walter Vrooman, to provide education in the social sciences for working men. It is supported by contributions from trade unions, etc.

RUSSELL, Bertrand Arthur William, 3rd earl (1872–). British philosopher and mathematician. B. at Treleck, the grandson of the 1st earl, he was ed. at Trinity College, Cambridge, where he specialized in mathematics and became a lecturer. R.'s pacifist attitude in the F.W.W. lost him the lectureship, and he served 6 months' imprisonment for an article he wrote in a pacifist journal. His *Introduction to Mathematical Philosophy* (1919), was written in prison. After visits to U.S.S.R. and China, he went to U.S.A. in 1938 and taught at many univs. He later returned to England, and is a fellow of Trinity College, Cambridge. Among his most important works are *Principles of Mathematics* (1903); *Principia Mathematica* (1910; with A. Whitehead); *Problems of Philosophy* (1911); *Principles of Social Reconstruction* (1917); *Marriage and Morals* (1929); *An Enquiry into Meaning and Truth* (1940); *History of Western Philosophy* (1946), and *New Hopes for a Changing World* (1951). He succeeded his brother in the earldom in 1931, and was awarded the O.M. in 1949 and the Nobel literary prize for 1950. From 1949 he advocated nuclear disarmament, and until 1963 was on the Committee of 100, a militant branch of the Campaign for Nuclear Disarmament.

RUSSELL, Charles Taze. See **JEHOVAH'S WITNESSES.**

RUSSELL, Countess. See **ARNIM, Countess von.**

RUSSELL, George William (1867–1935). Irish poet and essayist. Editor of *The Irish Homestead* 1904–23, and *The Irish Statesman* 1923–30, he was an ardent nationalist and agricultural organizer. He helped found the Irish national theatre, and his poetry, pub. under the pseudonym 'AE', incl. *Gods of War* (1915) and reflects his interest in mysticism and theosophy.

RUSSELL, John, 1st earl (1792–1878). British Liberal statesman, known as Lord John Russell. The son of the 6th duke of Bedford, he entered the Commons in 1813, and supported Catholic Emancipation and the Reform Bill. He was Paymaster-General 1830–4, Home Sec. 1835–9, Colonial Sec. 1839–41, and P.M. 1846–52. He entered Aberdeen's cabinet as For. Sec. in 1852, and was Colonial Sec. in 1855. In Palmerston's 2nd govt. of 1859–65 he was For. Sec. and gave valuable assistance to Italy's struggle for unity, although his policies on Poland, Denmark and the American Civil War

provoked much criticism. He succeeded Palmerston as P.M. in 1865, but on the defeat of his Reform Bill in 1866 retired. He received an earldom in 1861.

RUSSELL, John Peter (1858–1931). Australian artist. B. in Sydney, he met Tom Roberts (q.v.) in 1881 on the voyage to England, and became a member of the French post-impressionist group. His portrait of Van Gogh is in the Stedelijk Museum, Amsterdam.

RUSSELL, Lord William (1639–83). British Whig statesman. The son of the 1st duke of Bedford he was among the founders of the Whig Party, and actively supported the Exclusion Bill in parliament. He was accused of complicity in the Rye House Plot, on dubious evidence, in 1683, and executed.

RUSSELL, Sir William Howard (1821–1907). British journalist. B. in Ireland, he acted as *The Times* correspondent during the Crimean War, and created a sensation by his exposure of the mismanagement of the campaign. He was knighted in 1895.

RUSSELL OF KILLOWEN, Charles, 1st baron (1832–1903). Lord Chief Justice of England. B. in Ireland, he was called to the Bar in 1859 and became a Liberal M.P. in 1880. He was Attorney-General in 1886 and 1892–4. In 1887 he appeared for Parnell before the commission investigating *The Times* allegations against the Irish leader, and in 1893 he represented Britain before the Behring Sea Commission. He was raised to the peerage in 1894 and in the same year appointed Lord Chief Justice.

RUSSELL OF LIVERPOOL, Edward Frederick Langley Russell, 2nd baron (1895–). British barrister. As Deputy Judge Advocate-General B.A.O.R. 1946–7 and 1948–51, he was responsible for all war-crime trials in the British Zone of Germany 1946–50, and has pub. *The Scourge of the Swastika* (1954), *The Trial of Adolf Eichmann* (1962), etc.

RUSSIA. Historic name for the European territories of the Union of Soviet Socialist Republics. See **SOVIET UNION.**

RUSSIAN. A member of the Slavonic branch of the Indo-European family of languages. It represents the eastern group

of Slavonic, and incl. Great Russian, the general literary idiom; Little R. or Ukrainian; and White R., centring round Vilna, Minsk, Vitebsk, and Smolensk.

RUSSIAN

ART. From the 10th cent., when Russia was organized as an independent state, until the time of Peter the Great, Russian architecture and painting followed the Byzantine style, and was dominated by the Greek Orthodox Church. Sculpture did not flourish because it was not allowed in churches. The Russians, however, displayed good taste in the art of icon-painting, for which they are famous, and the greatest master of this art was Andrea Rublyov (1370–1430). In the 17th cent. Peter the Great introduced western ideals into Russia, and foreign architects were employed to build his new cap. of

RUSSIAN ART. 'London – Beer is Good for You', an example of modern style by decorative artist Oscar Yitzakevitch Rabin (1930–). Courtesy of the Grosvenor Gallery.

1934, he co-operated in Hitler's rearmament plans. Differences on policy led to his resignation in 1937, although he remained Min. without Portfolio until 1943. Imprisoned in 1944, he was acquitted at Nuremberg, and successfully appealed against sentence by a German de-nazification court.

SCHAFFHAUSEN (shahf'howzen). A Swiss canton adjoining Germany and divided into three parts by German territory (area 115 sq. m.; pop. (1960) 65,981). Its cap., also S., pop. (est.) 27,000, lies near the falls in the Rhine and manufactures watches, chemicals and textiles; it was bombed in error by U.S. planes, 1 April 1944, when 37 people were killed.

SCHEER (shehr), Reinhard (1863-1928). German admiral. B. in Hesse-Nassau, he was appointed commander of the High Sea Fleet in 1916, and was in command at the battle of Jutland.

SCHELD (skelt). English name for the European r. called in Dutch Schelde, in French Escaut. It rises in Aisne dept., N. France, and flows for 250 m. N., N.E., then W., through Belgium and the Netherlands to enter the North Sea by the W. Scheldt S. of Walcheren, a wide estuary of great importance to shipping. Antwerp is the most important town on the S.

The East S., to the N. of Walcheren Island, was formerly an arm of the S., but was cut off from it in 1862 when S. Beveland was linked with the mainland by dykes to carry the railway to Flushing; it will eventually be cut off from the North Sea. (See under NETHERLANDS.)

SCHENECTADY (skenek'tadi). Cap. of S. county, New York, U.S.A., on the r. Mohawk. It dates from 1662 and is an industrial centre with well-known scientific research laboratories. Pop. (1960) 81,682.

SCHICK TEST. A means of ascertaining by the injection of a small dose of diphtheria toxin whether a person is immune to diphtheria or not. In a susceptible person a local flush appears.

SCHIEDAM (skhēdahm'). Town of S. Holland, Netherlands, 3 m. W. of Rotterdam, and famous for its gin. It received its charter in 1273 and about the turn of the 18th-19th cents. sent much gin to the U.S.A. Pop. (1967) 82,200.

SCHILLER (shi'ller), Johann Christoph Friedrich von (1759-1805). German author. B. at Marbach (Württemberg), he qualified as a doctor but, after the success of his drama *The Robbers*, devoted himself to literature and became theatrical director at Mannheim, where he produced his tragedies *Fiesco* and *Love and Intrigue*, and began the more mature drama *Don Carlos*. In 1789 he settled at Jena, where he was prof. of history and completed *The History of the Thirty Years War*, and in 1799 at Weimar, where he developed his close friendship with Goethe. His later works incl. the classical dramas *Wallenstein* (a trilogy), *Maria Stuart*, *The Maid of Orleans*, and *William Tell*, and *Naive and Sentimental Poetry*, an outstanding work of literary criticism. S., a high-minded idealist and lover of freedom, also attained great popularity with his shorter poems.

SCHIPPERKE (shi'perke). A tailless watchdog, bred in Belgium. It has black fur and erect ears.

SCHIRACH (shē'rakh), Baldur von (1907-). German Nazi leader. He acted as youth leader of Germany 1936-40, and as gauleiter of Vienna 1940-5, where he carried out the policy of deporting all Jews. He was tried at Nuremberg in 1945-6, and sentenced to 20 years imprisonment; released 1966.

SCHIST (shist). Foliated rock, crystalline in nature, which presents layers of various minerals easily

divisible into thin lenticular plates. The dominant mineral normally names each variety.

SCHIZOPHRENIA (sk-). 'Split personality', a psychological disorder which may be due to some biochemical abnormality in a brain structurally normal, and involves a fundamental inability to face life. Tranquillizers, such as reserpine, are used to relieve the symptoms (social withdrawal, delusions, hallucinations).

SCHLEGEL (shleh'gel), August Wilhelm von (1767-1845). German author. B. at Hanover, he was an important figure in the Romantic movement. His Vienna lectures on *Dramatic Art and Literature* were epoch-making, and he is also remembered for his translations of Shakespeare. His brother, Friedrich von S. (1772-1892), studied Greek and Sanskrit literature, and wrote extensively on literary history.

SCHLESWIG-HOLSTEIN (shlesvig hol'stin). Land of W. Germany, bounded by Denmark to the N. and traversed by the Kiel Canal. Cereals, potatoes and sugar-beet are grown, but S.-H. is predominantly industrial with most of her pop. engaged in ship-building, mechanical and electrical engineering and textiles. The largest towns are Kiel (the cap.), Lübeck, Flensburg, and Schleswig; the last has a fine cathedral. Area 6,054 sq. m.; pop. (1966) 2,473,000.

History. Schleswig (Danish Slesvig) and Holstein were 2 duchies held by the kings of Denmark from 1460, but were not part of the kingdom; a number of the inhabitants were German, and Holstein was a member of the German Confederation formed in 1815. Possession of the duchies had long been disputed by Prussia, and when Frederick VII of Denmark died without an heir in 1863, Prussia, supported by Austria, fought and defeated the Danes in 1864, and in 1866 annexed the two duchies. A plebiscite held in 1920 gave the N. part of Schleswig to Denmark which made it into the provs. of Haderslev and Aabenraa; the rest, with Holstein, remained part of Germany.

SCHLIEHMANN (shlē'mahn), Heinrich (1822-90). German archaeologist. Fascinated from an early age by the Homeric epics, he retired from business in 1863 to study archaeology, and in 1871 began excavating at Hissarlik, which he estab. as the site of Troy, although the 'palace and treasure of Priam' which he discovered belong to an earlier settlement on the site than the one which Homer describes. His most important later excavations were at Mycenae, where he thought he had discovered the grave of Agamemnon, though again the find was of an earlier period.

SCHNABEL (shnah'bel), Artur (1882-1951). American pianist. B. in Austria, he taught music at the Berlin State Academy 1926-31, but settled in the U.S.A. in 1939, and composed symphonies and other works. He excelled in Beethoven.

SCHNEIDER TROPHY (shnī'der). An aviation trophy presented by Jacques Schneider in 1913 for competition between seaplanes of any nation. From the first holder, M. Prévost in 1913, who averaged 45.75 m.p.h. the trophy changed hands several times before being won outright by Britain, after victories in 1927, 1929, and 1931, the last creating a world's record of 340.08 m.p.h.

SCHOENBERG (shōn'bärg), Arnold (1874-1951). Austro-American composer of Jewish descent. B. in Vienna, he developed the twelve-note system (see ATONALITY), and taught at the Berlin State Academy 1924-33. Driven from Germany by the Nazis, he settled in the U.S.A. in 1933. Among his works are the *Gurrelieder*, the opera *Moses and Aaron* and *Pierrot Lunaire* for voice and chamber orchestra.

SCHOLASTICISM (sk-). Name given to the theological and philosophical system of Christian Europe in the Middle Ages. John Scotus (Erigena) is sometimes regarded as the founder, but the succession of 'Schoolmen' definitely opened with Roscellinus at

SCHIPPERKE

elements of the elaborate Church Slavonic with colloquial Russian to create an effective written medium. Greatest of these earlier writers, working directly under French influence, were the fabulist Ivan Krylov (1768-1844) and the historian Nikolai Karamzin (1765-1826). Poetry reached its greatest height with Alexander Pushkin, and the tempestuously Byronic Mikhail Lermontov, while prose was dominated by Nikolai Gogol. Typical of the intellectual unrest of the mid-19th cent. is the prose writer Alexander Herzen, but to this generation also belong the great realist novelists Ivan Turgenev, Ivan Goncharov, Fyodor Dostoevsky, and Leo Tolstoy. Among their followers are the humorous Nikolai Leskov (1831-95), the morbid Vsevolod Garshin (1855-88), and Vladimir Korolenko (1853-1921), and in drama the isolated genius of Anton Chekhov. Rising from the pervading pessimism of the '80s came Maxim Gorky, and his followers Alexander Kuprin and Ivan Bunin; in contrast are the depressingly negative Leonid Andreyev and Mikhail Artsybashev. To the more mystic school of thought belong the novelist Dmitri Merezhkovsky and the poet philosopher Vladimir Soloviev, who moulded the thought of the greatest of the Symbolist poets, Alexander Blok.

Many writers left the country at the Revolution, but in the 1920s two groups emerged - the militantly Socialist L.E.F. led by the Futurist Mayakovsky (q.v.) and the fellow-travellers of N.E.P. incl. Pilnyak, Pasternak, Alexei Tolstoy, and Ehrenburg (qq.v.). Literary standards sank to a very low ebb during the first 5-year plan 1928-32, when facts were compulsorily falsified to present a rosy view of contemporary life in the effort to fortify Socialism, but the novelist Sholokhov and poets O. E. Mandelstam Anna Akhmatova (1888-1966) and Nikolai Tikhonov (1896-) were notable. More freedom was allowed by the subsequent Realism, e.g. Simonov (q.v.) and the work of the poet Tyudovsky (1910-) during the S.W.W. Censorship closed down again from 1946 until the thaw after Stalin's death, when the work of Dudintsev illustrates the new atmosphere of liberty, but political considerations still affect the official attitude to literature, e.g. the incident of Pasternak's Nobel prize and the public disclaimers made by such a writer as Yevtushenko. The situation deteriorated further from the mid-1960s, e.g. the imprisonment in 1966 of novelists Andrei Sinyavsky (1926-) and Yuli Daniel (1926-) for smuggling their works abroad for publication, and the request in 1969 of Anatoly Kuznetsov (1929-) to settle in Britain after attacks on his novel *The Fire* (1969) which obliquely criticized the regime. Beloved by all Russians, partly perhaps because so apart from politics, is the nonsense verse of Kornei Chukovsky.

RUSSIAN SOVIET FEDERAL SOCIALIST REPUBLIC (R.S.F.S.R.). A constituent republic of the U.S.S.R. It is by far the largest of the Soviet states, and reaches from the Gulf of Finland to the Pacific and from the Arctic to the Black and Caspian Seas. Its area accounts for about three-quarters of that of the U.S.S.R. Most of its surface is occupied by the great plain of E. Europe and Siberia. In Europe the Black Earth district to the S. and S.E. of Moscow is famed for its rich soil and is of great agricultural importance. Farther N. extensive forests provide the main economic resource of the area, though there are extensive mineral deposits, espec. in the Urals. The Volga rises in the Valdai Hills between Leningrad and Moscow, and later flows through a steppe-like area which incl. many manufacturing centres. Farther S., in the Kuban and the foothills of the Caucasus, is a warm temperate region of great fertility. The Caucasus rise to heights of over 16,000 ft.; the Urals, which form the geographical boundary between Europe and Asia and seldom exceed 5,000 ft., are the nucleus of a region of immense mineral wealth and industrial

* In Asia

activity. The Siberian portion of the R.S.F.S.R. has been much developed since the Revolution, especially during the S.W.W. and after, and has become of exceptional industrial importance. Agriculture and stock raising thrive in the S. half of the region; to the N. of this are forests, although the area under cultivation is extending every year; the far N. lies within the Arctic Circle. In the far east forestry, fishing and trapping are carried on; in the peninsula of Kamchatka fishing, and in the S. some agriculture. The Altai, Abakan, Tannu, Baikal, Yablonoi, Kolyma, and Anadyr ranges are the loftiest in Asiatic R.S.F.S.R. The main rivers are, in Europe: the Don, Volga, Moskva (or Moscow), N. Dvina, and Pechora; in Asia: the Ural, Kama, Ob, Tobol, Irtysh, Yenisei, Angara, Lena (famous for its goldfields), and Amur. A number of the rivers, in both Europe and Asia, have been harnessed for irrigation and power. The Gulf of Finland is linked by river and canal with the White Sea and the Volga and Don rivers.

The largest towns incl. Moscow, the cap. (cap. also of the U.S.S.R.), Kaliningrad, Leningrad, Gorki, Rostov-on-Don, Volgograd, Sverdlovsk, Novosibirsk, Kazan, Kuibyshev, Saratov, Voronezh, Yaroslavl, Ivanovo, Archangel, Omsk, Chelyabinsk, Tula, Perm, Astrakhan, Ufa, and Irkutsk.

POLITICAL STRUCTURE. The R.S.F.S.R. proper is made up of 6 territories and 49 regions; within it also are the A.S.S.R.s., autonomous regions, and national dists. shown in the table.

chamber music. His musical criticisms were pub. in his *Neue Zeitschrift für Musik*. From 1854 he was confined in an asylum near Bonn, following a suicide attempt, and there he died. His wife, the pianist Clara Josephine Wieck (1819-96), whom he m. in 1841, devoted herself to the popularization of his work, and appeared frequently in London 1865-88.

SCHUSCHNIGG (shoosh'nig), Kurt von (1897-). Austrian statesman. A lawyer, he was elected a Christian Social deputy in 1927, and succeeded Dollfuss as Chancellor in 1934, when he was confronted with the Nazi menace from within and without. In Feb. 1938 he was forced to accept a Nazi Min. of the Interior, and a month later Austria was invaded and annexed. S. was imprisoned in Germany until 1945, when he went to U.S.A.

SCHWARZKOPF (shvah'rtskopf), Elisabeth (1915-). German soprano. Educated at the Berlin High School of music, she is noted for her dramatic interpretation of operatic roles, such as Elvira in *Don Giovanni* and Marschallin in *Der Rosenkavalier*, and is also a concert singer.

ELISABETH
SCHWARZKOPF
Photo: Godfrey MacDonnic.

SCHWARZWALD (shvah'rtsvahl't) (Ger., black forest. See BLACK FOREST.

SCHWEITZER (shvit'-ser), Albert (1875-1965). French theologian, organist and missionary surgeon. He founded a hospital in 1913 at Lambaréné, Rep. of Gabon, where he afterwards remained, except for brief intervals spent giving recitals of organ music, mainly Bach, to raise funds for his medical work. His many books incl. a standard life of Bach (1905), *The Quest of the Historical Jesus* (1906), *On the Edge of the Primeval Forest* (1921), *My Life and Thought* (1931). He was awarded the Nobel peace prize in 1952. His nephew Pierre-Paul S. (1912-) became in 1963 managing director of the International Monetary fund.

SCHWERIN (shvären'). Cap. of S. dist., E. Germany, situated on Lake S., 32 m. S.E. of Lübeck. S. received its charter from Henry the Lion in 1161; once the cap. of Mecklenburg-S., it has the former grand-ducal palace and a 15th cent. cathedral. Pop. (1966) 94,000.

SCHWYZ (shvits). A canton of Switzerland, bordering lakes Lucerne, Zürich, and Zug. It is mountainous and forested. One of the 3 original cantons of the Swiss Confederation, it gave its name from c. 1450 to the whole country. Area 351 sq. m.; pop. (1960) 78,048. The cap. is S. Pop (est.) 11,000.

SCIATICA. Persistent pain felt along the course of the sciatic nerve. It is sometimes due to inflammation of the nerve itself (neuritis), but often to the effects of pressure or inflammation (rheumatism, gout, fibrositis, etc.) on one of the nerves leading out of the lower spine.

SCIENCE RESEARCH. In the U.K. there are 4 research councils: *Medical* (1913), *Agricultural* (1931), and (replacing the Dept. of Scientific and Industrial R. under the S. and Technology Act 1965) *Science Research* and *Natural Environment*. The S.R.C. deals with fundamental R. not allocated to the others and, like them, supports R. at the univs. and its own establishments, incl. Atlas Computer Laboratory and Rutherford High Energy Laboratory (Berks), Daresbury Nuclear Physics Laboratory (Lancs), Radio and Space R. Station (Bucks), and the Royal Observatories (Hurstmonceux and Edinburgh); N.E.R.C. deals with ecology and the earth sciences. The *Nat. R. Development Corporation* (1948) secures exploitation of inventions derived from publicly supported

research. In the U.S.A. a *Nat. R. Council* (1916) estab. by the privately organized Nat. Academy of Ss. is drawn from the univs., industry and govt.

SCIENTOLOGY (si-ent-). Religio-scientific cult founded c. 1950 in the U.S.A. by Lafayette Ronald Hubbard (1911-) as a 'mental health organisation', but from 1959 making its world H.Q. at Saint Hill Manor, East Grinstead, Sussex. It aims at the release of man's potential through subconscious 'drive' forces, the concomitant exercises incl. an element of confession and resembling psychoanalysis. There has been govt. opposition in Australia, and in 1968 an inquiry was set up into the practice of S. in Britain.

SCILLA (sil'a). Genus of bulbous plants of the Liliaceae family, bearing blue, pink, or white flowers; it incl. the wild hyacinth or bluebell.

SCILLY ISLANDS (sil'i). Group of islands, forming a rural dist. of Cornwall, England; they lie 25 m. S.W. of Land's End. Only 5 of the 140 islands and islets are inhabited, viz. St. Mary's, Treco, St. Martin, Bryher, and St. Agnes. Hugh Town on St. Mary's is the cap. The mild climate and rich soil enable early vegetables and spring flowers to be produced in abundance. Area 6.3 sq. m.; pop. (1961) 2,273.

SCIPIO (sip'io), Publius Cornelius (d. 211 B.C.). Roman general. Elected consul in 218, during the 2nd Punic War, he was defeated by Hannibal at Ticinus and killed by the Carthaginians in Spain.

SCIPIO, Publius Cornelius, known as Scipio Africanus Major (237-c. 183 B.C.). Roman general, who destroyed the Carthaginian armies in Spain during 210-206. He invaded Carthage in 204, and defeated Hannibal at Zama (202).

SCIPIO, Publius Cornelius (c. 185-129 B.C.), known as Scipio Africanus Minor. Roman general. Appointed supreme commander during the 3rd Punic War, he took Carthage in 146, and razed it to the ground. As Governor of Spain he subdued that country in 134.

SCONE (skoon). Scottish village in Perthshire, on the Tay 2 m. N. of Perth. In its ancient abbey and royal palace most of the Scottish kings were crowned on the 'stone of destiny', now in the Coronation Chair at Westminster. A modern palace now occupies the site. Pop. (1961) 2,977.

SCORPOLAMINE. See HYOSCINE.

SCORPION (skör'-). Order (Scorpiones) in the class Arachnida. Common in tropical and sub-tropical regions, they vary in size from $\frac{1}{2}$ in. to 6 in. in length, and are viviparous and nocturnal. The sting is poisonous, but not usually fatal to healthy persons.

SCOTLAND. That part of Great Britain lying N. of the border with England. In addition to the mainland, it comprises numerous islands, incl. Arran, Bute, in the Firth of Clyde, the Inner and Outer Hebrides off the W. coast; and the Orkneys and Shetlands to the N. The W. coast is very broken, with numerous sea lochs, but the E. coast is comparatively regular. Among the main rivers are the Spey, Don, Dec, Esk, Tay, Forth, and Tweed, flowing into the North Sea; the Annan, Nith, Cree, and Esk into Solway Firth; and the Ayr, Clyde, Carron, etc., flowing into the Atlantic. The largest inland lochs are the Lomond, Maree, Erich, Awe, Katrine, Tay, Rannoch, and Ness.

PHYSICAL. Most of the surface is highland except in the centre and extreme N.E. The Cheviot Hills lie on the border with England, and farther N. are the Lammermuir and other ranges of the Southern Uplands. These are bounded on the N. by the central Lowlands watered by the Clyde and Forth, and containing most of the country's population and industries. Farther N. still, rise the Ochil and Sidlaw Hills, and the Campsie Fells, while to the N.W. of a line running from the mouth of the Clyde to the mouth of the S. Esk lie the Highlands, a mountainous area which in turn is divided into S.E. and N.W. portions by Glen More traversed by the Caledonian Canal and

RUYSBROEK (rois'brook), Jan van (1293-1381). Flemish mystic. B. at Ruysbroek, in Brabant, he became prior of Groenendael monastery and was known as the *Doctor ecstaticus*. He wrote *De vera contemplatione* and *De septem gradibus amoris*.

RUYSDAEL (rois'dahl), Jacob (c. 1628-82). Dutch landscape painter. B. at Haarlem, he painted rural scenes near his native town and in Germany, and excelled with trees. The figures in his pictures were painted by other artists. His works are noted for their poetic feeling, and he is regarded as the greatest landscape painter of the Dutch school.

RUYTER (roi'ter), Michael Adrianszoon de (1607-76). Dutch admiral. B. at Flushing, he went to sea at the age of 11, and saw service against Spain in 1640-2, and the English in 1652-4. In the next war with England, he forced Rupert and Albemarle to retire into the Thames (1-4 June 1666), but on 25 July was heavily defeated off the N. Foreland. He had his revenge in 1667, when he suddenly sailed up the Medway, burnt 3 men-of-war at Chatham, and captured others. He was again given the command when France and England declared war in 1672. He was mortally wounded in an action against the French fleet off Messina, and d. at Syracuse.

RWANDA. See **RUANDA**.

RYAZAN (rē-ahzahn'). Town dating from the 13th cent., cap. of R. region, in the R.S.F.S.R., on the Oka. Agricultural machinery, leather, shoes, etc., are made. Pop. (1967) 297,000.

RYBINSK (rübënsk') **SEA**. Artificial lake on the upper Volga, R.S.F.S.R., completed in 1941 as part of the Mariinsk canal system. Area c. 2,000 sq. m. Fishing and shipbuilding are carried on. The town formerly called R. was renamed Shcherbakov (q.v.) in 1946.

RYDE (rid). English resort (bor.) on the N.E. coast of the Isle of Wight. It lies on the Solent opposite Portsmouth, with which there is steamer connection. Pop. (1961) 19,796.

RYE. English town (bor.) in Sussex, on the Rother, a member of the Cinque Port of Hastings. It was once a flourishing port, but silt brought down by the river has caused the sea to retreat 2 m. from the harbour. Henry James lived at R. for many years. Pop. (1961) 4,429. See illus. p. 590.

RYE. A grain cereal (*Secale cereale*), grown extensively in N. Europe. The flour is used to make black

bread, but in Britain R. is grown only as a forage crop.

RYE HOUSE PLOT. An alleged plot formed by the Whigs in 1683 to murder Charles II, and his brother James, duke of York, while passing the Rye House, Herts. Although the plot possibly never existed, Lord Russell, Algernon Sidney, and many others were executed on charges of complicity.

RYKOV, Alexei Ivanovich (1881-1938). Russian statesman. B. at Saratov, he early became an active Social Democrat. After the 1917 revolution he served as the president of the Supreme Economic Council and 1924-9 as pres. of the Council of People's Commissars. He supported Bukharin in his opposition to Stalin's policy of compulsory collectivization, and both were shot. In 1962 he was legally 'rehabilitated'.

RYLANDS, John (1801-88). British manufacturer-philanthropist. B. at St. Helens, he helped his brothers and father to found a cotton-manufacturing business at Wigan in 1819, and in 1847 became sole proprietor. He played a leading part in the financing of the Manchester Ship Canal, and is commemorated by the J.R. Library built at Manchester in 1899.

RYLE, Gilbert (1900-). British philosopher. Waynflete prof. of metaphysical philosophy at Oxford 1945-68, he is known for his influential *The Concept of Mind* (1949), which sets out to show that the distinction between the inner and the outer world that has haunted philosophy and psychology since Descartes cannot be sustained.

RYLE, Sir Martin (1918-). Brit. radioastronomer. During the S.W.W. he served in the Telecommunications Research Establishment and in 1959 became prof. of radio astronomy at Oxford, knighted 1956.

RYUKYU (rēyuk'yoo) **ISLANDS**. Chain of islands stretching between Formosa and Japan, and numbering c. 90. They were under Chinese suzerainty until 1874 when Japan seized them. After the S.W.W. they were occupied by the U.S.A. from 1945, the northernmost Oshima group (area c. 100 sq. m., pop. 120,000) being returned to Japan in 1953. Okinawa (q.v.) is the largest and contains Naha, centre of U.S. administration. There is a single-chamber legislature, and a Chief Executive, who was popularly elected for the first time in 1968, when there was a general demand for American evacuation and return of the R. Is. to Japan. Sugar, pineapples and other fruits, and marine products, are exported. Area under U.S. administration 848 sq. m.; pop. (1965) 934,176.

S 19th letter in the English alphabet, and its principal sibilant. It represents an unvoiced fricative which has become voiced in English when intervocalic. Its normal sound is the s in *this*.

S.A. (Ger. *Sturm Abteilung*). The 'storm troops' of the Nazi Party. Formed in 1922, the S.A. became the basis or the Nazi armed strength, but many of its leaders were killed in the 'purge' of 1934, and it was largely superseded by the S.S. At the Nuremberg trials it was acquitted of the charge of being a criminal organization.

SAARBRÜCKEN (sahrbrü'ken). Cap. of Saarland, W. Germany, on the Saar; on a large coalfield, it is a centre of heavy industry and has also tanneries, piano works, sugar refineries, electrical, cement, tobacco and other factories. Pop. (1966) 134,450.

SAARGEMUND. Ger. form of **SARREGUEMINES**.

SAARINEN, Eero (1910-61). American architect. B. in Finland, he was the son of the architect and town planner Eliel S. (1873-1950), who founded the Finnish Romantic school of architecture, especially with his design of Helsinki Railway Station (1905-14), and contributed greatly to American skyscraper design, turning later to Functionalism. S. was taken to the U.S. by his father in 1923 (becoming naturalized in 1940) and collaborated with him on a number of projects. His most outstanding works incl. the U.S. embassy in London, the Jefferson National Expansion Memorial, St. Louis, and the Trans-World Airlines Terminal at New York's Kennedy Airport. See illus. p. 57.

SAARLAND. Land of W. Germany, bordering Moselle dept. of France on the S.W. The R. Saar crosses it from N.W. to S. and it incl. one of the most important coalfields of Europe. Cap. is Saarbrücken.

SCOTLAND. Rising 340 ft. above the plain, Castle Hill at Stirling is a natural citadel and has been fortified since time out of mind. In the castle's Douglas Room James II stabbed the Earl of Douglas in 1452. Photo: George Outram & Co. Ltd.

England did not recognize Scottish independence until 1328. Anglo-Scottish relations continued unfriendly until the Reformation; Scottish foreign policy was based on a French alliance, which sometimes, as at Flodden (1513), resulted in disaster. The Scottish parliament, of one house, originating as a council of barons and clergy, assumed its final form with the admission of burgess representatives in the 14th cent. The Stuart dynasty, founded by Robert II who came to the throne in 1371 (N.S.), attempted with little success to control the turbulent nobles; several met violent deaths, and a succession of regencies weakened the monarchy. James IV (reigned 1488-1513) m. Margaret, dau. of Henry VII of England, in 1503.

Under Knox's leadership Calvinism was estab. as the national religion in 1560, and its victory was consolidated by Queen Mary's deposition in 1567. James VI, who, as a great-great-grandson of Henry VII inherited the English crown in 1603 from the childless Elizabeth I, and Charles I sought to bring the democratic Presbyterian Church under royal control by remodelling it on Anglican lines. The Scots

rebelled in 1638, and during the Civil War were allied with the English parliamentarians; after Charles's execution, however, they supported his son Charles II, and were conquered by Cromwell, who brought them under English rule 1651-60. Throughout the Restoration period the Presbyterians were persecuted, until the revolution of 1688 brought relief. The Scottish parliament was united with the English in 1707.

Dislike of the union was largely responsible for the Jacobite risings of 1715 and 1745. The latter was followed by the destruction of the clan system, and the eviction of many Highland farmers to make way for sheep-runs. The Union stimulated trade with America, while the coal, iron, shipbuilding and textile industries all expanded greatly during and after the Industrial Revolution. During the 18th cent. S.'s political representation was notoriously corrupt, and S. was prominent in the Radical movement from 1792 to the Reform Bill.

The later 19th cent. saw a new wave of 'clearances' in the Highlands, as sheep-farms gave way to deer forests. There has been a strong working-class movement in the industrial districts of S. since Chartist days; Glasgow in particular long remained an I.L.P. stronghold. During the 20th cent. a nationalist movement demanding the re-establishment of the Scottish parliament has developed. The first Scottish Nationalist M.P. was elected 1945, but it was not until the 1960s that the party gained strength.

SCOTLAND, Church of. The body of Christians recognized by the State as the established and national C. of S. Protestant in theology and presbyterian in organization, it was estab. in 1560 at the Reformation and after attempts to impose episcopacy, re-estab. in 1690. In 1929 the United Free C. of S., which was the result of a large secession in 1843, was re-united with the original body. The country is divided into some 2,400 parishes, in each of which there is a kirk session consisting of the minister and of several laymen called elders. Parishes are grouped into presbyteries; and these again into synods. The supreme court is the General Assembly of clergymen and laymen chosen by the presbyteries; it meets in May under a Moderator, and a Lord High Commissioner attends as the Queen's representative. The Bible is the supreme rule of faith and life, and a subordinate standard is the Westminster Confession of Faith. Worship is based on the Directory issued in 1645 and the Book of Common Order 1940. There are 1½ million members, and in 1968 the Gen. Assembly voted that women be admitted to the Ministry.

SOVEREIGNS OF SCOTLAND

(From the unification of Scotland to the union of the crowns of Scotland and England.)

Celtic Kings			
Malcolm II ...	1005	Edgar ...	1097
Duncan I ...	1034	Alexander I ...	1107
Macbeth ...	1040	David I ...	1124
Malcolm III Canmore	1057	Malcolm IV ...	1153
Donald Ban ...	1093	William the Lion	1165
Duncan II ...	1094	Alexander II ...	1214
Donald Ban (restored) ...	1095	Alexander III ...	1249

Margaret of Norway 1286-90

English Domination			
John Balliol ...	1292-6	Annexed to England	1296-1306

House of Bruce			
Robert I Bruce ...	1306	David II ...	1329

House of Stuart

SCOTLAND. This detail from Stanley Cursiter's painting 'The Conversation Piece' shows four of Scotland's literary figures, left to right, Edwin Muir, James Bridie, Neil Gunn and Eric Linklater. Photo: George Outram & Co.

SAGAN (sahgañ'), Françoise (1935–). French novelist, author of femininely psychological studies of love relationships incl. *Bonjour Tristesse* (1954), *Aimez-vous Brahms?* (1959). She has also ventured into ballet (*Le Rendezvous manqué*) and the drama (*Château en Suède*).

SAGE. Perennial herb (*Salvia officinalis*). The grey-green aromatic leaves are used in cookery as a seasoning: 2–4 ft. high, it has blue flowers.

SAGO. The starchy material obtained from the pith of the S. palm, which forms a nutritious food, and is used for manufacturing glucose.

SAHARA (sahah'rah). The largest desert in the world, covering 3½ million sq. m. of N. Africa, from the Atlantic to the Nile.

SAHARA. 'The Great Martian God', a painting 18 ft. high.

Courtesy of Henri Lhote.

Small tracts are below sea-level, but the Tibesti mountains rise to over 11,000 ft. Oases of natural springs from underground reservoirs punctuate and determine the beaten tracks. It covers the south of Morocco, Algeria, Tunisia, and Libya, W. Egypt, much of Mauritania, Mali, Niger, and Chad, and part of W. Sudan Republic. Discovery in the 1950s in the Algerian S. of considerable reserves of petroleum and natural gas greatly altered the economic aspect of the S. and its nomadic people.

In prehistoric times the S. was fertile, supporting rich animal and human life as illustrated by the rock paintings of the Tassili-n-Ajjer in the central S. discovered (1956) and recorded by Henri Lhote, pupil of the Abbé Breuil, in *The Tassili Frescoes*.

SAIDA. See SIDON.

SAIGON (sigon'). Cap. of S. Vietnam, on the S. river 34 m. from the sea. An important port and commercial centre, its industries incl. shipbuilding, textiles, rice, sugar, soap and rubber. There is a univ. With its mainly Chinese twin city of Cholon it has a pop. (1966) of 2,000,000. The *Battle of S.* 29 Jan.–23 Feb. 1968 involved the expulsion of 5,000 infiltrating Viet Cong by S. Vietnamese and U.S. forces.

SAINT. A man or woman eminent for piety, usually one who has been canonized by the Catholic Church. The lives of many thousands of Ss. have been collected by the Bollandists, and the number is added to by the process of canonization (q.v.). A new Calendar of Ss.' days was approved by Paul VI from 1970: among those excluded as probably never existing were Ss. Barbara, Catherine, Christopher and Ursula; Ss. George, Januarius, Nicholas (Santa Claus) and Vitus were among those listed only for optional veneration; and among new Ss. for obligatory veneration were St. Thomas More and the Uganda martyrs.

ST. ALBANS. English city (bor.) and seat of a bishopric in Herts, 20 m. N.W. of London; it grew up round an abbey founded by King Offa II in 793 in honour of St. Alban (q.v.). Near by are remains of the Roman city of Verulamium on Watling St. The battle of St. A. in 1455 opened the Wars of the Roses. Pop. (1961) 50,276.

ST. ANDREWS. Royal burgh and univ. town on the Fife shire coast of Scotland, 12 m. S.E. of Dundee. Ruins exist of the 12th cent. cathedral and 13th cent. castle. The city is the headquarters of golf and of the Royal and Ancient Club, founded in 1754. The univ., founded in 1411, is the oldest in Scotland. Pop. (1961) 9,888.

ST. ASAPH (az'af). Cathedral city of Flintshire, N. Wales, on the Elwy, 5 m. S.S.E. of Rhyl. The

ST. AUGUSTINE. The Castillo de San Marcos, outpost of the vast Spanish empire in the New World, was built 1672–96. The walls are 30 ft. high and up to 12 ft. thick, and it successfully withstood a 50-day siege by James Moore, Governor of S. Carolina, in 1702 and another in 1740 by James Oglethorpe, founder of Georgia. It was used as a prison in the 19th century, and it was from here that Wildcat led an escape in 1837 during the Seminole War.

Courtesy of Castillo de San Marcos National Monument.

cathedral dates from the 14th cent. Its Welsh name is Llanelwly. Pop. (est.) 1,800.

ST. AUGUSTINE. City in Florida, U.S.A., 37 m. S.S.E. of Jacksonville. A port and a holiday resort, it is the oldest town in the U.S.A., having been founded in 1565 by Pedro Menendez de Aviles near the site of Juan Ponce de Leon's landing place (1513). Drake burned it in 1586, Capt. John Davis burned it in 1665. It was ceded to the U.S.A., in 1821. St. A. incl. the oldest house (probably late 16th cent.) and the oldest masonry fort (1672) in the U.S.A. Pop. (1960) 14,734.

ST. AU'STELL. English market town (U.D.) in Cornwall, 14 m. N.E. of Truro, the centre of the china clay area which supplies the Staffordshire potteries. Pop. (1961) 25,027.

ST. BARTHOLOMEW, Massacre of. See BARTHOLOMEW.

ST. BERNARD. Name of 2 passes in the Alps. (1) Great St. B. Pass (8,110 ft.) is situated in the Pennine Alps between Piedmont, Italy, and Valais, Switzerland. Near the crest is the famous hospice founded in the 10th cent. for pilgrims. A road usable by pack-horses crossed it by A.D. 69; Napoleon I marched across the pass into Italy in 1800. A road tunnel 3.6 m. long under the Great St. B. was opened 1964. (2) Little St. B. Pass (7,179 ft.) crosses the Graian Alps, between Piedmont and Savoie, France. Hannibal is said to have invaded Italy by this route.

ST. BERNARD DOG. Large mastiff named after the monks of St. Bernard, who kept them for finding lost travellers and to act as guides. They are squarely built, with pendulous ears and lips and large feet.

ST. CHRISTOPHER. Another name for St. Kitts. See under LEEWARD ISLANDS.

ST. CLOUD (sañ klöö'). Town 2 m. W. of Paris on the Seine. The 17th cent. palace was the favourite residence of Napoleon, and he here m. Marie Louise: it was destroyed during the Siege of Paris in 1870. Within the beautiful park is the nat. Sèvres porcelain factory. Pop. (1962) 26,746.

ST. CYR (sañ sér). The military coll., founded by Napoleon in 1808 at the village of St. Cyr, nr. Versailles, was destroyed by bombing from the air during the S.W.W.; it was transferred to Coëtquidon in Morbihan dept. in 1946.

ST. DAVID'S. Cathedral city in Pemb., S. Wales. The cathedral, founded by St. David, the patron saint of Wales, was rebuilt between 1180 and 1522. It is the largest church in Wales. Pop. (est.) 1,580.

SCOTTISH TERRIER

Breed of dog, known also as Aberdeen terrier. A small rough-haired terrier, either black or white, it is a good hunter.

SCRAMBLING CIRCUIT. A transmitting circuit which renders signals unintelligible unless received by the corresponding unscrambling circuit.

SCREAMERS. Birds in family Palamedidae so named because of their harsh cries. The horned S. (*Palamedea cornuta*) has a horn-like growth on the head and black and grey plumage; *Chauna chavaria*, the crested S., also found in S. America, is often domesticated.

CRESTED SCREAMER

little profundity, incl. *Verre d'eau*, *Adrienne Lecouvreur*, and *Bertrand et Raton*.

SCRIBES. A Jewish group, incl. both priests and laymen, who devoted themselves to the study of the law of Moses, and who sat in the Sanhedrin. In the N.T. they are associated with the Pharisees.

SCULLIN, James Henry (1876-1953). Australian Labour statesman. B. at Ballarat, he sat in the House of Representatives 1910-13, and was re-elected in 1922. He was leader of the Federal Parliamentary Labour Party 1928-35, and P.M. and Min. of Industry 1929-31.

SCULPTURE. Traditionally the artistic shaping in relief or in the round of static materials such as wood, stone, metal and plastic. All the ancient civilizations - Assyrian, Egyptian, Indian, Chinese, Maya, etc. - have left examples of great sculpture, for the most part by unknown artists, and even in the case of the more recent masterpieces of European Gothic the craftsmen are un-named. Traditional European S. descends through that of Greece, Rome and Renaissance Italy, but particularly influential in the development of modern S. in the W. has been the work of Negroes of E. Africa, the natives of the South Sea Islands, and other 'primitive' peoples. An unusual departure in

William Livingstone (1808-70) kept alive the old nationalistic spirit in the 19th cent. Emergent during and after the S.W.W. was a new school impatient of tradition, incl. Somhairle MacGilleathain, George Campbell-Hay and Ruairidh MacThómais.

SCOTTISH TERRIER.

SCRIABIN (skrē-ahbin'), Alexander Nicolas (1871-1915). Russian composer. B. at Moscow, he wrote *Prometheus* and other tone-poems, employing a revolutionary system of harmony. He profoundly affected Russian music, and was also a pianist.

SCRIBE (skrēb), Augustin Eugène (1791-1861). French dramatist. B. in Paris, he achieved fame with the *Nuit de la Garde nationale*, and with numerous assistants produced many plays of technical merit but

the 20th cent. has been the invention by Alexander Calder (q.v.) of the *mobile* in which the suspended components move spontaneously with the currents of air. An extension is the *structure vivante*, of which the leading exponents are Bury, Soto and Takis. In this motion is achieved by some mechanism which follows a set pattern devised by the artist, the materials used incl. such unusual items as magnets, lenses and bubbles, and the artistic impression created incl. also a certain element of sound.

Among the world's most famous sculptors are: *Classical Greek*: Phidias, Praxiteles, and Scopas; *Renaissance*: Donatello, Verrocchio, Della Robbia, and Michelangelo; *Baroque*: Bernini, Girardon, and Houdon; *Neo-Classical*: Canova, Thorwaldsen, and Flaxman; and *20th cent.*: Rodin, Maillol, Gill, Epstein, Meštrović, Dobson, Reid Dick, Henry Moore, Hepworth, Ayrton, Brancusi, Lipchitz, Butler, Borglum, and Milles.

SCUNTHORPE. English industrial town (bor.) in Lincs, 24 m. W. of Grimsby. It has one of Europe's largest iron and steel works. Pop. (1961) 67,257.

SCURVY. A disease due to lack of vitamin C that is contained in fresh vegetables, fruit and milk. The symptoms are bleeding into the skin, swelling of the gums, and drying up of the skin and hair. Treatment is by giving the vitamin.

SCUTARI (skōō'tahrē). (1) Italian form of Üsküdar, Turkey; (2) Shkodër, Albania.

SCYLLA (sil'a) and **CHARYBDIS** (karib'dis). In classical mythology a sea-monster and a whirlpool, between which Odysseus had to sail. Later writers located them in the Straits of Messina.

SCYPHOZOA. Large group of jelly-fish in the phylum Coelenterata, some measuring over 6 ft. across.

SCYTHIA (sith'i-a). Regions N. of the Black Sea varying in extent from time to time, and between the Carpathians and the Don, inhabited by the Scythians from the 7th-1st cents. B.C. Darius I made an unsuccessful attempt to conquer the Scythians in the 6th cent. B.C.; from the middle of the 4th they were slowly superseded by the Sarmatians.

SEA-ANEMONE. A section of the class Anthozoa in the phylum Coelenterata. Tube-like, they are attached at one end to some substratum, the other end being open and fringed with tentacles. They feed on crustaceans and other minute organisms. S.-As. occur in many beautiful colours, especially in tropical waters.

SEABORG, Glenn T (heodore) (1912-). American nuclear chemist. While director of nuclear chemistry research at Berkeley (1946-58), he was awarded with E. M. McMillan (also of the Univ. of California) a Nobel prize in 1951 for discoveries of 3 transuranium elements; and the production of radio-isotope U-233. In 1961 he became chairman of the U.S. Atomic Energy Commission.

SEA CUCUMBER. Slug-like echinoderm of the class Holothuroidea. The cylindrical body may be several feet in length, and dried S.Cs. from N. Australia and the Pacific seaboard of the U.S.A. are esteemed for the table by the Chinese.

SEAGULL. See GULL.

SEAHAM. English seaport (U.D.) in Durham, 5 m. S. of Sunderland. A village until the opening of coal-mines in the vicinity in the early 19th cent., it grew rapidly thereafter. It gave its name to the parl. constituency of Seaham Harbour which J. R. MacDonald, the sitting member and former P.M., lost to Emanuel

SEA HORSE

SCULPTURE. In front of Helsinki Stadium Wäinö Aaltonen's statue of the runner Paavo Nurmi, holder in 1928 of 24 world records for distances varying from the mile to the marathon.

Courtesy of the Finnish Travel Information Centre

MONT ST.-MICHEL. From its dangerous quicksands Earl Harold rescued two Norman soldiers, as the future William the Conqueror watched, and in 1091 the future Henry I was besieged here by his brothers Robert and William Rufus. Courtesy of French National Tourist Office.

name comes from a bishop of Coutances who built a church on the site. Pop. (1962) 16,072.

ST. LOUIS (loo'-is). Chief city and river port of Missouri, U.S.A., on the Mississippi about 10 m. below its confluence with the Missouri. Founded as a trading post by the French in 1764, it passed to the U.S.A. in 1803 by the Louisiana Purchase, and has many important industries. The 630 ft. Gateway Arch (1965) is a memorial by Saarinen to the pioneers of the W. Industries incl. cars, steel, aerospace equipment, electrical goods, shoes, brewing and food processing. Pop. (1960) 750,026.

ST. LUCIA (loo'sha). One of the Windward Islands, West Indies. Discovered by Columbus 1502, settled by the French 1635, it became British 1803 and an assoc. state of the U.K. 1967. It produces bananas and other fruits, lime juice, sugar, coconuts. Castries is the cap. Area 233 sq. m.; pop. (1966) 110,142.

ST. MALO (sañ mahlō'). Seaport in the Ille-et-Vilaine dept., W. France, on the Rance estuary. The town is noted as a tourist resort. It took its name from a Welshman who was bishop there in the 6th cent. Pop. (1962) 17,800.

ST. MICHAEL AND ST. GEORGE. A British order of knighthood founded in 1818, and usually awarded for services rendered in the British Commonwealth countries overseas. The 3 grades are: Knight Grand Cross (G.C.M.G.), Knight Commander (K.C.M.G.), and Companion (C.M.G.).

ST. MICHAEL'S MOUNT. Is. in Mount's Bay, Cornwall, connected at low tide by a causeway to the mainland. A castle stands on the summit. It was presented by Lord St. Levan to the National Trust in 1954. Area 21 acres. Also, Mont St.-Michel (q.v.), off the N.W. coast of France, illus. above.

ST. MORITZ. Village and winter-sports centre in Grisons canton, Switzerland, on the St. M. lake. The Cresta Run dates from 1885. Pop. (est.) 2,500.

ST. NAZAIRE (sañ nahzār'). Seaport in Loire-Atlantique dept., France, at the mouth of the Loire on the Bay of Biscay. Used as a submarine base by the Germans during the S.W.W., it suffered heavily from air raids; it was the scene of a British Commando raid, 28 March 1942, in which 212 out of 353 taking part were lost (killed or missing). Pop. (1962) 59,181.

ST. OMER (sañt-ōmār'). A town in Pas-de-Calais dept., France, on the Aa, 26 m. S.E. of Calais. From 1914-16 the British G.H.Q. was located at St. O. Pop. (1962) 20,911.

ST. PAUL. Cap. city of Minnesota, U.S.A., on the Mississippi adjoining Minneapolis. A road, rail

and air centre, its industries incl. electronics, publishing and printing, petrochemicals, cosmetics, and meat-packing. Pop. (1960) 313,411.

ST. PAUL'S CATHEDRAL. The cathedral church of the City of London, and the largest Protestant church in England. A Saxon church on the site was replaced by a Norman by 1240, which was destroyed by the Great Fire in 1666. The present building was designed by Wren and built 1675-1710. Its length is 513 ft. Interior features are the whispering gallery, the Wellington monument, and the tombs of Wellington and Nelson in the crypt.

ST. PETER PORT. The chief town and port of Guernsey, Channel Is. Victor Hugo lived here 1855-70. Pop. (1961) 15,706.

ST. PETERSBURG. See LENINGRAD.

ST. PETERSBURG. Coast town of Florida, U.S.A. Nicknamed Sunshine City, it is a flourishing resort, and mushroomed industrially with the development of space industry in the 1950s. Pop. (1960) 181,298.

SAINT-PIERRE (sañ-pyar'), Jacques Henri Bernardin de (1737-1814). French writer. He is best known for his romantic *Paul et Virginie* (1789).

ST. PIERRE. Group of small barren is. off S.W. Newfoundland. Cod-fishing and cod-salting, drying, and canning are the main occupations. Area 10 sq. m.; pop. (1967) 4,614. With Miquelon (q.v.) it forms an overseas territory of France.

ST. QUENTIN (sañ koñtañ'). Town in Aisne dept., N. France, on the Somme 21 m. S. of Cambrai. The Prussians defeated the French in 1871 at St. Q. which suffered badly during the F.W.W. Pop. (1962) 62,579.

SAINT-SAËNS (sañ-sahñs'), Camille (1835-1921). French composer. B. in Paris, he studied at the Conservatoire and under Gounod, and in 1857 became organist at the Madeleine. He achieved success as a pianist, and estab. his reputation as a composer with the 4 symphonic poems *Le Rouet d'Omphale*, *La Danse Macabre*, *Phaëton*, and *La Jeunesse d'Hercule*. Among his other works are 3 symphonies, 5 piano concertos, and the opera *Samson et Dalila*.

SAINTSBURY, George Edward Bateman (1845-1933). British man of letters. B. at Southampton, he was prof. of rhetoric and English literature at Edinburgh, 1895-1915. He wrote *A Short History of English Literature* (1898), *The English Novel* (1913), etc.

SAINT-SIMON (sañ-sëmon'), Claude Henri, comte de (1760-1825). French Socialist. B. in Paris, he fought in the American War of Independence, and was imprisoned during the French Revolution. He wrote prolifically, e.g. *Du système industriel* (1821) and *Nouveau christianisme* (1825), advocating a state of society ruled by technicians and industrialists.

ST. SIMON, Louis de Rouvroy, duc de (1675-1755). French writer. B. in Paris, he served with the Household Corps, and in his *Mémoires* (1691-1723) gives an acute portrayal of the French court.

ST. VINCENT. See JERVIS, JOHN.

ST. VINCENT. One of the Windward Is., West Indies. It became a British possession in 1783 and, after some internal disagreements, became an assoc. state of the U.K. 1969. The cap. is Kingstown. Bananas, arrowroot, copra, sugar, rum, spices are produced. Area 150 sq. m.; pop. (1966) 87,000.

ST. VITUS' DANCE. Chorea; a disease of the nervous system associated with rheumatic fever. The chief symptoms are involuntary movements of the face and limbs, sometimes so violent as to interfere with sleep and feeding.

SAKE (sak'a). Japanese rice-wine; yellowish-tinted, with 15% alcohol content, it is drunk hot.

SAKI. Pseudonym of British author Hugh Hector Munro (1870-1916). B. in Burma, where he served an unhappy year with the Military Police, he became a journalist, was foreign correspondent to the *Morning Post* 1902-8, and was killed in action on the Western

2 days later Britain and France declared war. By 10 Sept. all the Dominions, except Eire, had also declared war.

The Conquest of Poland and the West 1939-40. Polish resistance speedily collapsed before the German blitzkrieg, although Warsaw held out gallantly until 27 Sept. After the Polish débâcle Russian forces reoccupied the W. Ukraine and Byelorussia, which had been annexed by Poland from Russia in 1920. On the W. front both sides remained almost completely inactive behind the Maginot and Siegfried lines until May 1940.

A new stage opened on 9 April 1940, with the German invasion of Denmark, which capitulated without resistance, and of Norway. British and French forces were landed to support Norway's resistance, but in June the invasion of France compelled their withdrawal. British dissatisfaction at the conduct of the campaign caused the fall of the Chamberlain govt., which was succeeded on 10 May by a coalition headed by Winston Churchill.

On the same day the Germans invaded the Netherlands, which surrendered on 15 May, and Belgium. German panzer divisions broke through the French line at Sedan and raced to the Channel, thus cutting off the Allied forces which had entered Belgium from the main French forces. The surrender of King Leopold of Belgium on 28 May compelled them to fall back on Dunkirk (q.v.), whence they were evacuated by a hurriedly collected rescue fleet. The French position was rendered hopeless by Italy's declaration of war on 10 June, and an armistice was signed on 22 June, whereby the Germans occupied N. France and the W. coast. Meanwhile in London the Free French movement was founded by Gen. de Gaulle.

Britain fights alone 1940-1. From Aug.-Oct. the Battle of Britain (q.v.) raged, as the Luftwaffe launched their mass daylight raids; when it ended they had lost nearly 2,000 aircraft destroyed in daylight. Night raids followed, directed first against London, and then against such provincial cities as Coventry, Birmingham, Bristol, Manchester, Liverpool, Plymouth, Glasgow and Hull. In May 1941 the attack subsided, having completely failed to break the resistance of the British people.

The Italians invaded Greece in Oct. 1940, only to be driven back far into Albania. Germany, in order to complete her control of the Balkans, attacked both Greece and Yugoslavia on 6 April 1941, and by 1 May had overrun both and compelled the British forces sent to the assistance of Greece to withdraw. A month later Crete had been invaded and occupied by German parachutists in spite of stubborn resistance by British and Commonwealth troops.

Russia and the U.S.A. enter the War 1941-2. A new stage opened on 22 June 1941 when Germany, in alliance with Finland, Hungary, and Rumania, attacked Russia. By Dec. the invaders, standing on a line from Lake Ladoga to the mouth of the Don, were within 25 m. of Moscow, and Leningrad was besieged. A Russian counter-offensive in Dec. 1941-March 1942 forced the Germans to retreat along their whole line, but in June they launched a new offensive designed to secure control of the Caucasian oilfields. Sevastopol was stormed, and by Aug. they had reached the Caucasus and were attacking Stalingrad.

Since the Battle of Britain American opinion had inclined ever more strongly, in spite of isolationist opposition, towards Roosevelt's policy of making the U.S.A. 'the arsenal of democracy', which was put into operation with the passage of the Lend-Lease Act in March 1941. On 7 Dec. Japan attacked the U.S. naval base at Pearl Harbor, and declared war on Britain and the U.S.A., and 4 days later Germany and Italy declared war on the U.S.A. The war in Europe, and the Sino-Japanese War which

had been in progress since 1937, now became 2 aspects of a single world-wide struggle.

Africa and the Near East, 1940-3. The long campaign in N. Africa opened in Sept. 1940, with an Italian drive from Libya into Egypt, which reached Sidi Barrani. Gen. Wavell counter-attacked during Dec. 1940-Feb. 1941, and advanced into Cyrenaica. The withdrawal of troops for the Balkan campaign then weakened his army, while German forces under Rommel were poured into Africa, and during March-April pushed the British back into Egypt. A new offensive by the 8th Army in Nov. 1941-Jan. 1942 drove into Libya, but was halted at Gazala, whence during May-July Rommel launched a counter-offensive which ended 70 m. from Alexandria. In

In July 1942, the Afrika Korps were at the frontier of Egypt; disaster was averted by Montgomery's great victory at Alamein in Oct. This remarkable photograph shows Australians advancing through a smoke-screen during the battle.

Oct.-Nov. Gen. Montgomery, commanding the 8th Army, won a resounding victory at El Alamein, and began a rapid advance westward, while on 8 Nov. large British and U.S. forces under Gen. Eisenhower landed in Morocco and Algeria. Caught between converging armies, the last Axis forces in Africa surrendered in May 1943.

In E. Africa the Italians had occupied British Somaliland in Aug. 1940. Forces from Kenya entered Italian Somaliland in Feb. 1941, while Eritrea was invaded from the Sudan. By May the Italian empire in E. Africa, incl. Ethiopia, was in British hands, and British Somaliland had been recovered.

The control of the Middle East was of vital importance to the British position in the Mediterranean, and vigorous measures proved necessary to counteract German intrigues in that area. Following the seizure of power by a pro-Axis premier in April 1941 British forces occupied Iraq, and in June Syria, where a pro-Vichy administration held power, was also occupied. In Aug. British and Russian troops entered Persia, where the shah was under German influence, and converted it into an important supply-line to Russia.

Italy 1943-5. Allied forces from N. Africa overran Sicily in July-Aug. 1943, and invaded the Italian mainland on 3 Sept. On 25 July Mussolini was overthrown; the new govt. signed an armistice on 8 Sept., and declared war on Germany on 13 Oct. Large German forces entered Italy, and put up a stubborn resistance, first on the Gustav Line, S. of Rome, and after it was broken in May 1944 on the Gothic Line, from Pisa to Rimini. This in turn was breached in Sept., and after a final Allied offensive in April 1945 the Germans surrendered on 29 April.

Victory in the East 1943-5. The failure of the

SALISBURY. Sketch in oils by Constable of the cathedral from the river meadows.

Courtesy of the National Gallery.

the *New Yorker* and estab. his reputation with the novel *The Catcher in the Rye* (1951), which was followed by a vol. of short stories, and *Franny & Zooey* which deals in 2 stories with members of the Jewish Glass family already introduced in earlier work. His key characters are often children and his adults psychologically complex.

SALISBURY, Robert Arthur Talbot Gascoyne-Cecil, 3rd marquess of (1830–1903). British cons. statesman. B. at Hatfield, he entered the Commons in 1853, and succeeded to the title in 1868. He was Indian Sec. 1866–7 and 1874–8; and as For. Sec. 1878–80 took part in the Congress of Berlin. As P.M. 1885–6, 1886–92, and 1895–1902 he gave his main attention to foreign policy and for most of the time was For. Sec. His son, James Edward Hubert Gascoyne-Cecil, 4th marquess (1861–1947) entered the Commons in 1885, and was Lord Privy Seal 1903–5 and Pres. of the B. of T. 1905–6. After the F.W.W. he was Pres. of the Council 1922–4 and Lord Privy Seal 1924–9. The latter's son Robert Arthur James Gascoyne-Cecil, 5th marquess (1893–) sat in the Commons 1929–41, when he was created Baron Cecil. He was Dominions Sec. 1940–2 and 1943–5, Colonial Sec. 1942, and Lord Privy Seal 1942–3 and 1951–2, and Lord Pres. of the Council 1952–7.

SALISBURY, Robert Cecil, 1st earl of. See **CECIL**, ROBERT.

SALISBURY. English cathedral city, co. town of Wilts, on the Avon, 84 m. S.W. of London. The cathedral of St. Mary, built 1220–66, is one of the finest specimens of Early English architecture; its decorated spire (404 ft.) is the highest in England. S. grew up round the cathedral and has many old and interesting buildings. It makes beer, hardware, carpets, etc., and is an agricultural centre. Another name for it is New Sarum, Sarum being a medieval Latin corruption of the ancient Romano-British name Sorbiodonum. Old Sarum, on a 300 ft. hill to the N., was deserted when New Sarum was founded in 1220, but was later again inhabited; it was brought within the city boundary in 1953. Pop. (1961) 35,471.

SALISBURY. Capital of Rhodesia, on the Mashonaland plateau nearly 5,000 ft. above sea-level. It is the centre of a rich farming area (tobacco and maize) with tobacco and other manufactures, and is a hub of communications. In 1953 a multiracial univ. was founded on a site overlooking the city. An international airport called New Sarum lies 7 m. from the city. The British occupied the site in 1890 and named it Fort S. in honour of Lord Salisbury, then P.M. of the U.K. It was made a city 1935, and was cap. of the Fed. of Rhodesia and Nyasaland 1953–63. Pop. (1967) 358,000, incl. 91,000 Europeans.

SALISBURY PLAIN. A 300 sq. m. area of open

downs in Wiltshire, England, between Salisbury and Devizes. For many years it has been a military training area. It rises to 770 ft. in Westbury Down, and incl. Stonehenge (q.v.).

SALK, Jonas Edward (1914–). American physician. B. and ed. in New York, he in 1963 became director of the S. Institute for Biological Studies, California. A specialist in poliomyelitis (q.v.), he developed the S. vaccine in 1954.

SALLUSTI, or Gaius Sallustius Crispus (86–34 B.C.). Roman historian. He had an active political career as a supporter of Caesar, and his histories of Catiline's conspiracy and the Jugurthine War are written in a condensed and epigrammatic style.

SALMON. Genus of food-fishes in the family Salmonidae. The normal colour is silvery, blue-grey above with a few dark spots, but the colour changes at the spawning season. S. spawn up rivers in fresh water where the eggs hatch, but most of their life is spent in the sea. The spawning season is between Sept. and Jan., although they occasionally spawn at other times. The orange-coloured eggs are about $\frac{1}{2}$ in. in diameter, are laid on the river bed, fertilized by the male, and then covered with gravel by the female. The incubation period is from 5 weeks to 5 months. On hatching from the egg the young fish are known as *alevins*, and when they begin feeding they are called *parr*. At about 2 years old the coat becomes silvery, and the young parr are then *smolts*. When the young fish return to the river to spawn between 3 and 3½ years of age they are *grilse*.

SALO'NIKA. Form often used in English for **THESSALONIKA**.

SALT. Sodium chloride (NaCl), found in sea water, as rock salt, in brine deposits, etc. In chemistry, salts are compounds comprised of an acid and a base united in definite proportions, e.g. hydrochloric acid and caustic soda unite to form the salt sodium chloride, and water.

SALT COATS. A burgh, holiday resort, and fishing port of Ayrshire, Scotland, on the Firth of Clyde, 25 m. S.W. of Glasgow. It was a centre of the salt industry 1600–1800. Pop. (1961) 14,187.

SALT LAKE CITY. Cap. of Utah, U.S.A., and H.Q. of the Mormons (q.v.), on the Jordan, 11 m. S.E. of the Great Salt Lake. In 1847 Brigham Young laid out the city as a Mormon settlement, and the great granite temple was built 1853–93. To the W. is a vast open pit copper mine and the city has smelters and refineries, meat-packing and printing plants, and salt and oil refineries. Pop. (1960) 189,454.

SALUKI (salōō'ki). Breed of dog, also called the Gazelle Hound, descended from the hound of the Bedouins of the African deserts. As bred today it resembles the greyhound, is from 24–28 in. high, and coloured fawn, cream, or white.

SALVADOR. Seaport in Brazil, cap. of Bahia state. Founded in 1510, it was cap. of Brazil 1549–1763. It is the seat of an archbishopric and of a univ. (1946), and is also a naval base. Pop. (1960) 655,735.

SALVADOR, EL. The smallest and most thickly populated Central American republic, bounded by Guatemala on the W., Honduras on the N., and the Pacific on the S. Inland from a narrow coast plain is a high, fertile plateau, with active volcanoes. El S. lies within the Tropics, but alt. moderates temps. over a large part of the country. Coffee, cotton, sugar and sisal are grown, and there are sugar refineries and textile factories. About one third of El S. is forested.

SECRET AGENT. See SECRET SERVICE.

SECRETARIES. Officials of public companies and societies, etc., whose chief professional organizations in Britain are the Chartered Institute of Ss. and the Corporation of Ss.

SECRETARY BIRD. Bird of prey (*Serpentarius secretarius*), native to S. Africa, whose erectile crest of feathers bears some fancied resemblance to a pen behind a clerk's ear—hence the name. Mainly grey, with black and white tail feathers, it stands about 4 ft. high, and is officially protected on account of the deadly way in which it hunts poisonous snakes.

SECRETARY BIRD

SECRETARY OF STATE. Originally the title given under Elizabeth I to 2 officials conducting the royal correspondence. It is now borne by a number of the more important ministries, e.g. the S. of S. for Foreign Affairs, etc. In the U.S. the Foreign Minister is called the Secretary of State.

SECRET SERVICE. Govt. organization maintained by most countries to keep a check on the activities of foreign agents (counter-espionage) and to secure information from foreign countries relating to activities considered likely to endanger the safety of the state (espionage). In the U.K. the service is divided into defence intelligence and political intelligence—working for the Foreign Office. This service is paid for by secret funds—until 1945 a nominal figure of £100 was incl. in the estimates to cover the S.S., but in 1946 parliament began to make an annual vote of £2,500,000 (£10,500,000 by 1969). In the U.S.A. the F.B.I. (q.v.) deals with espionage, treason, and other matters relating to security. See THOMPSON, SIR WILLIAM.

Spies may be (i) citizens sent abroad to work in the interests of their own country; (ii) citizens spying on their own country for the benefit of another; (iii) double spies working simultaneously for their own and another country. The first kind are usually persons of integrity (T. E. Lawrence was a famous British example who worked against the Turks in the Near East during the F.W.W.; another was the German naval capt. Franz von Rintelen (q.v.) who carried out sabotage in the U.S.A. on behalf of Germany and against the Allies in the same war); the second kind are traitors to their own country and often work for money but, especially in the 20th cent., may be actuated by a misplaced idealism (e.g. Karl Fuchs, a German refugee and brilliant scientist who became a British subject and gave the Russians the secret of the atom bomb, receiving only £100 for information which only he could have given); the third kind usually work for money, though not always for substantial amounts: the most notorious double spy was probably Colonel Alfred Redl, who while head of espionage in the Austro-Hungarian secret service before the F.W.W. (and very successful in his job) also spied on his own country for Russia, among other things passing to the Russians the Austro-Hungarian mobilization plans in the event of war.

In war-time spies are normally executed, generally after civil or military trial, though in the actual battle area they are likely to be shot out of hand. Among the most notorious war-time spies was Mata Hari, a woman of Dutch origin who had spent a number of years in Java and posed as a Javanese: she spied for the Germans and was caught and shot by the French in 1917. In peace-time the punishment of a convicted spy may vary from imprisonment (Fuchs was con-

demned to 14 years) to expulsion. Among the few spies executed in peace-time were Julius Rosenberg and his wife Ethel, who were executed at Sing Sing, N.Y., in 1953 for passing atom bomb secrets to Russia.

The operations of the S.S. depend on codes (in which groups of letters or numbers represent words, sentences, or a definite combination of word sequences) and ciphers, in which a letter (or number) represents another letter. The easier a cipher or code is to use, the easier it is to break, and vice versa. At the time of the Japanese attack on Pearl Harbor, the Americans had broken the code used by the Japanese who, because of the extreme difficulty of basing a code on the Japanese language, were in fact using one based on English. Invisible ink, microfilm records, secretly installed listening and recording apparatus are other adjuncts of the S.S. One method of counter-espionage is to plant false information on known agents of another country—and this false information, having gone the rounds, has been known to deceive the originator on its return home, at least momentarily.

Espionage in England and France dates from the 17th cent., in Germany from the mid-19th cent. Russia had an elaborate system of internal espionage long before the 1917 Revolution, and under the Soviet govt. both internal and external espionage services have been elaborated and made more effective.

SECUNDERABAD D. N. suburb of Hyderabad city, Andhra, India, formerly a separate town. It was founded as a British army cantonment, with a parade ground where 7,000 troops could be exercised. The Indian army took it over after independence, 1947. It was by experiments at S. that Sir Ronald Ross estab. that malaria is carried by the anopheles mosquito.

SEDAN (sədoŋ'). Frontier town on the Meuse, in Ardennes dept., France. In 1870 S. was the scene of Napoleon III's surrender to the Germans; in the S.W.W. S. was in German occupation 1940-4. It has textile mills, dyestuffs, and other industrial plants. Its prosperity dates from the days when it was a Huguenot centre. Turenne was b. at S. Pop. (1962) 21,766.

SEDAN CHAIR (sedan'). Portable vehicle accommodating one person, and carried on 2 poles by 2 bearers. It is said to have been invented at Sedan, was introduced into England during the reign of James I, and was in general use in the 18th cent.

SEDATIVES. Drugs and other measures which depress the function of the nerves and produce a soothing effect, e.g. bromides, aspirin, paraldehyde, barbitol and its derivatives. Since the S.W.W. many new drugs have come into use to replace and reinforce the older ones. Important among the *tranquillizers* are chlorpromazine, reserpine and meprobamate and among the *anti-depressants* Nardil and Marplan. These can act in some cases as very efficient Ss.

SEDDON, Richard John (1845-1906). New Zealand Liberal statesman. B. in Lanes, he emigrated to Australia, and in 1866 to New Zealand. He entered the legislature in 1879 and was P.M. 1893-1906.

SEDGE. Genus (*Carex*) of perennial grasslike plants, of the Cyperaceae family, that grow for the most part in wet and swampy ground, fens and marshes. Some are used in paper-making.

SEDEGMOOR. Tract of country, formerly marshy, 3 m. S.E. of Bridgwater, in Somerset, England, where in 1685 Monmouth's rebellion was crushed.

SEDITION. In the U.K., S. is an offence against the Crown and govt., differing from treason (q.v.) in that it is not capital. Attempts to bring into contempt or hatred the person of the reigning monarch, the govt. as lawfully estab., or either house of parl.; or to incite the sovereign's subjects to bring about a change of govt. other than by lawful means are Ss. The raising of discontent between different sections of those

SA'MOYED. Arctic breed of dog, similar to a chow, but with more pointed face and a white coat.

SAMPHIRE (sam'fir). Perennial plant (*Crithmum maritimum*) found on sea cliffs of Europe. The aromatic leaves are fleshy and sharply pointed; the flowers grow in yellow-green umbels. It is used in salads, etc.

SAMSON. A hero of the ancient Hebrews, one of the 'judges' who ruled Israel in Palestine before the establishment of the monarchy. His story is told in the O.T. book of Judges.

SAMUEL. The last of the 'judges' who ruled the Israelites before the establishment of the Hebrew kingdom in Palestine, and the first of the line of prophets. His story is told in the first book of the O.T. that bears his name; this, and 2 Sam., cover the reigns of Saul and David.

SAMUEL, Herbert Louis, 1st visct. (1870-1963). British Liberal statesman. Son of a Liverpool banker, he was educ. at Oxford and entered Parliament in 1902. He was the 1st Jewish cabinet min. (Chancellor of the Duchy of Lancaster, 1909) and as P.M.G. 1910-14 and 1915-16 he acquired the British telephone system for the G.P.O. He was knighted in 1920, and as High Commissioner of Palestine 1920-5 was the 1st Jew to govern the Holy Land for c. 2,000 years. He suggested the formation of the National Govt. set up in 1931, but resigned as a Free Trader in 1932, leading the Liberal Opposition until 1935. Created a visct. in 1937, he lead the Liberal Lords 1944-55, and was awarded the O.M. in 1958.

SAN'A (sahnah'). Cap. of Yemen, S.W. Arabia, 200 m. N. of Aden. A walled city, it has a fine mosque. Pop. about 50,000.

SANCROFT, William (1616-93). English churchman. B. in Suffolk, he became dean of York in 1663, archbishop of Canterbury in 1677, and was the chief of the 7 bishops tried for seditious libel in 1688. For refusing to take the oath of allegiance to William and Mary, he was deprived in 1691.

SANCTIONS. In international law, measures used to enforce the fulfilment of treaty obligations. The Covenant of the League of Nations provided for the use of the economic boycott against aggressors, but attempts to apply it against Italy during the Abyssinian War of 1935-6 proved ineffective. The U.N. Charter similarly provides for the application of economic and military Ss.

SAND (sond), George. Pseudonym of French authoress Armandine Lucile Aurore Dupin (1804-76), adopted from the name of Jules Sandeau, one of her early companions in Paris. She m. in 1822 Casimir Dudevant, but separated from him after 9 years and henceforth lived in Paris as a writer. Among her early liaisons were those with Alfred de Musset and Chopin. From 1848 she lived at the château of Nohant. Her novels reflect her own marital and intellectual experiences, and incl. *Valentine* (1832), *Consuelo* (1842), *Le Pêché de M. Antoine* (1847), and *La Mare au diable* (1846). She also pub. *Histoire de ma vie, Elle et lui* (which describes her love affair with de Musset) and 'Letters'.

SAND. The accumulation of fine-grained fragmentary mineral matter chiefly composed of quartz grains (impure silica SiO₂). It is derived from the rocks of the land surfaces, and is especially characteristic of shallow water and land deposits, to which it is carried by running water, wind or ice. The origin of the grains may be detected by their shape, e.g. sand deposited by running water has a sub-angular nature, while wind-blown Ss. are well-rounded. Ss. are classified into marine, freshwater glacial, and terrestrial.

SANDBURG, Carl August (1878-1967). American poet. B. in Illinois, he served an apprenticeship to realism as farm labourer, bricklayer, etc., and the open, factual construction of his poetry bears its asting impress from *Chicago Poems* (1916) onward to

Complete Poems (1950). A great admirer of Lincoln, of whom he pub. studies collected as *Abraham Lincoln* (1954), he produced an interesting autobiography *Always the Young Stranger* (1953).

SANDHURST. Small English town in Berks., lying c. 4½ m. S.S.E. of Wokingham. In the vicinity are the Royal Military Academy (for which S. is often used as a synonym) and Wellington Coll., a public school.

SAN DIEGO (dē-ā'gō). City of California, U.S.A., near the Mexican border. It has a fine natural harbour exporting the produce of Imperial Valley. It has fish canneries and a notable zoo, and is an important military and naval base with large aircraft missile plants. Pop. (1960) 573,224.

SAND PAINTING. A picture made by preparing an adhesive ground on which coloured sands are laid. In Japan, from at least the 18th cent., natural and artificially coloured sands have been used to depict all types of scene, and the technique has also been used by European artists. Very striking are the

S.Ps. used as temporary altars during certain phases of Navajo Indian ceremonial.

SANDPIPER. Group of birds in the snipe family Scolopacidae. The common S. (*Tringa hypoleucis*) is a small graceful bird with long slender bill and short tail, drab above and white below. In summer it breeds in Britain and most of the rest of Europe nr. water, and winters far south. Among many other species are a number of American Ss., e.g. the solitary S. (*Calidris solitarius*), a rare visitor to Britain.

SANDRINGHAM. English village in Norfolk, 6 m. N.E. of King's Lynn. S. House, a private residence of the British sovereign, was built by the Prince of Wales (afterwards Edward VII) 1869-71 on the estate which he had bought in 1863. George V died at S.; George VI, b. at York Cottage, S., died at S. House.

SANDSTONE. Rocks formed of the consolidation of former sands. The principal component is quartz, and Ss. are classified according to the materials that cement together the grains of quartz, etc., e.g. ferruginous, siliceous, calcareous, barytic, gypseous, and pyritic. In geology, the name Old Red S. is given to a series of strata below the Carboniferous system, while New Red S. lies above it.

SANDUSKY. City and resort in Ohio, U.S.A., on S. Bay, Lake Erie. It is an important grain-shipping port and makes chemicals, paper, agricultural machinery, etc. Founded as a trading post early in the 18th cent., S. was later made a fort destroyed by Indians 1763, but re-built. The present town was founded as Portland 1817, re-named 1844. Pop. (1960) 31,989.

SANDWICH, John Montagu, 4th earl of (1718-92). British politician. He was 1st Lord of the Admiralty 1771-82, and the Sandwich Is. are named after him, as are sandwiches, which he invented in order to eat without leaving the gaming-table.

SAND PAINTING

'Water Chant' shows the 4 water monsters. In the centre are water and moisture clouds, with four holy plants radiating from the circular pool of water. Rainbow Girl surrounds and protects the painting. Courtesy of the Museum of Navajo Ceremonial Art, Santa Fe, N.M.

COMMON SANDPIPER

Cadmus and mother of Dionysus by Zeus. At Hera's suggestion she demanded that Zeus should appear to her in all his glory, but when he did so she was consumed by lightning.

SEMICONDUCTOR. Crystalline material whose electrical conductivity lies between that of metals and insulators and increases with temperature over a certain range, and in some cases upon illumination. Some common Ss. are germanium, silicon, selenium, cuprous oxide, cadmium sulphide, boron, lead telluride; their most important applications are in transistors and light-sensitive cells.

SEMPALATINSK (semē-). Town in Kazakh S.S.R., cap. of S. region, on the Irtysh r. Founded 1718 as a Russian frontier post, it has meat packing factories, tanneries, and flourmills. The region produces nickel and chromium and includes the Kyzyl Kum atomic testing ground. Pop. (1967) 197,000.

SEMI'RAMIS (c. 800 B.C.). Assyrian queen, who was later identified with the goddess Ishtar.

SEMITES. Traditionally, the descendants of Shem, one of the sons of Noah, but in ethnology the name of a number of Caucasian peoples of the Near and Middle East. Most widely distributed are the Jews; closely related to them were the Ammonites, Moabites, and Edomites; also in the ancient world were the Babylonians, Assyrians, Chaldeans, Carthaginians, Phoenicians, and Canaanites, and in the modern world are the Arabs, Ethiopians, Syrians, etc. Typical features are a whitish skin, black hair, prominent nose, full lips, and dolichocephalic skull. From the Ss. have sprung the great world religions of Judaism, Christianity and Islam.

SEMITIC LANGUAGES. A family of languages consisting of 4 chief divisions: (1) the eastern, including Babylonian and Assyrian; (2) the northern, including Aramaic and its offsprings Palmyrene, Nabataean, Samaritan, etc.; (3) the western, mainly represented by Hebrew and Phoenician (whence Punic); and (4) the southern, with Arabic and its offsprings, also Ethiopic whence Amharic, Tigré, etc., and Sabaeen and Minaean.

SEMOLINA (-lē'na). Hard grains of wheat, too coarse to be sieved in the bolting of flour. The food is used in the form of puddings, and also is an integral part of macaroni, etc.

SENANA'YAKE, Don Stephen (1884-1952). Ceylonese statesman. He was first P.M. of the Dominion 1947-52, and was succeeded in the office by his son Dudley Shelton S. (1911-) 1952-3, 1960, and from 1965.

SENATE (sen'at). The Roman 'council of elders'. Originally consisting of the heads of patrician families, it was recruited from ex-magistrates and persons who had rendered notable public service, but was periodically purged by the censors. Although nominally advisory, it controlled finance and foreign policy. Under the empire it lost all real power.

The U.S. Senate consists of 100 members, 2 from each state, elected for a 6-year term. The Italian upper chamber is also known as the S., as is that of France under the 5th Republic. The name is also given to the governing bodies in the univs. of Cambridge and London.

SENECA, Lucius Annaeus (c. 4 B.C.-A.D. 65). Roman philosopher. B. at Cordova, he was the son of Seneca the Elder (d. A.D. 39), author of books on rhetoric. S. was Nero's tutor but after his accession fell into disfavour and committed suicide at Nero's order. He wrote essays on ethical subjects from the Stoic standpoint, and 9 tragedies which in 16th cent. England were accepted as classical models.

SENEFELDER (sā'ne-). Alois (1771-1834). German engraver. B. at Prague, he is famous for his discovery in 1796 of the art of lithography.

SENEGAL (senegawl). River of W. Africa, formed by the confluence of the Bafing and the Bakhoy and

flowing for 700 m. in a N.W. and W. direction to reach the Atlantic near St. Louis. In 1968 the Organization of Riparian States of the River S. (Guinea, Mali, Mauritania and S.) was formed to develop the river valley, incl. a dam for hydroelectric power and irrigation at Joira Falls in Mali: its H.Q. is in Dakar. The river gives its name to the Republic of Senegal which lies S. of the r. with a coastline on the Atlantic. Except on the coast, it surrounds Gambia. Cattle, sheep, goats, pigs, camels and horses are reared; groundnuts, millet, maize are grown. Minerals incl. phosphates, titanium, bauxite and iron ore. The cap. is Dakar. Area 76,000 sq. m.; pop. (1965) 3,500,000.

The French estab. themselves on the coast of S. early in the 17th cent. and gradually extended their authority inland. Made a colony 1895 and a territory 1946, S. became independent within the Fr. Community 1960: a Treaty of Assocn. was signed with Gambia 1967. The pres. is Léopold Senghor (1906-), also a poet and essayist, elected 1960; and there is an admin. govt. council and nat. assembly, elected by universal suffrage.

SENNA. See CASSIA.

SENNACHERIB (sena'kerib) (reigned 705-681 B.C.). King of Assyria. He crushed revolts in Tyre, Sidon and Babylon, but failed to capture Jerusalem, and was murdered by his sons.

SENNAR. Town of Sudan Republic on the Blue Nile, 160 m. S.E. of Khartoum. It is a railway junction, and nearby is the Sennar dam (1926), part of the Gezira irrigation scheme. Pop. c. 8,000.

SENS (sons). Cathedral town in Yonne dept., France, on the Yonne, famous for its cathedral and old walls. Manufactures incl. chemicals and cutlery. Pop. (1962) 21,742.

SENUSSI (senoo'sē), Sidi Mohammed ben Ali es (c. 1796-1860). Moslem religious reformer. B. in Algeria, he preached a return to the puritanism of early Islam and met with much success in Libya, where he made Jaghbub his centre and founded the sect called after him. The S., who attacked the British during the F.W.W., were subdued by the Italians in 1931, and in the S.W.W. they joined a Libyan Arab Force formed by Britain.

SEOUL (se-ool'). Cap. of S. Korea, nr. the Han r., and with its port at Incheon. There is a 14th cent. palace, univ., and engineering, textile, and food processing industries. Pop. (1967) 3,800,000.

SEPTICAEMIA (-sē-). Blood poisoning; the invasion of the circulating blood by bacteria, as may occur in bacterial endocarditis. The condition is serious, but made less so by the advent of antibiotics.

SEPT-ÎLES. Town in Quebec, Canada, on 6 islands and a spur of the mainland in a bay on the N. shore of the St. Lawrence, 350 m. E.N.E. of Quebec city. A trading post since 1650, it became the port for the iron ore deposits discovered in 1950 near Schefferville, Labrador, with which it is linked by a railway, completed 1954, 358 m. long. Pop. (1961) 14,196.

SEPTUAGESIMA. The 3rd Sunday before Lent; the 70th day before Easter.

SEPTUAGINT (Lat. *septuaginta*, seventy). Oldest Greek version of the O.T., traditionally made by 70 scholars.

SEQUOIA (sēkwoi'a). Genus of conifers in the family Taxodiaceae. There are 2 species, the redwood (*S. sempervirens*) of the Californian coast, and the bigtree (*S. gigantea*), also evergreen, which is the largest of living trees and, except for the bristlecone pine, the oldest, e.g. the General Sherman tree in the S. National Park (estab. in California in 1890) is 272 ft. high, has a diameter of 30 ft., and is more than 3,000 years old.

SERAING (serah'). Belgian town on the Meuse, 4 m. S.W. of Liège, famed for the locomotive and engineering works founded in 1817 by John Cockerill, an Englishman. Pop. (1966) 40,937.

many works dealing with philosophy, law, grammar, astronomy, algebra, and medicine.

SANSOM, William (1912-). English writer. *The Stories of W.S.* (1963) illustrate his development from the Kafkaesque *Fireman Flower* (1944) to a superb command of atmosphere and a genius for the tale of terror which reflects his admiration for Poe. Besides short stories, he has written novels such as *The Body* (1949), a study in jealousy, *The Cautious Heart* (1958) and *The Last Hours of Sandra Lee* (1961).

SANTA CLAU. See **NICHOLAS, ST.**

SANTA CRUZ DE LA SIERRA (sahnta krooth de lah sie'rah). Cap. of S.C. dept. in E. Bolivia. Sugar cane and cattle were the chief base of local industry until newly discovered oil and natural gas led to phenomenal growth. Pop. (1966) 99,000.

SANTA CRUZ DE TENERIFE (sahnta krooth de ten'erif). Cap. of Tenerife and of the Canary Is., it is a fuelling port and cable centre. S.C. was bombarded by Blake in 1657; by Nelson in 1797 – the action in which he lost his arm. Pop. (1965) 163,540.

SANTA FÉ (fā). Cap. of New Mexico, U.S.A. on the r. Santa Fé, about 40 m. W. of Las Vegas. It has a number of buildings from the Spanish period, incl. a palace (1609–10); the cathedral (1869) is on the site of a monastery built 1622. S.F. is noted for its

SANTIAGO. The city is built on the plain between the Andes mountains and the heights of Cuesta del Prado, around the rocky hill of Santa Lucía, once its citadel. Here is the residential district, looking towards San Cristóbal Hill, one of three hills to the north, and in the distance the Andes.

Courtesy of Anglo-Chilean Society.

SANTIAGO DE COMPOSTELA (kompostál'ah). Spanish city in Galicia, 33 m. S.S.W. of Corunna. It has a univ. and is an archiepiscopal see. The cathedral begun 1078) was built above the reputed grave of Sant Iago el Mayor (St. James the elder), patron saint of Spain. Pop. (1965) 64,780.

SANTO DOMÍNGO. Cap. city and chief seaport of the Dominican Republic, also formerly called S.D. It stands on the S. coast of the is., and was founded in 1496 by Bartholomew Columbus. Its cathedral was built 1514–40. It was called Ciudad Trujillo 1936–61. Pop. (1964) 529,400.

SA'NTOS. Seaport of Brazil, 200 m. S.E. of Rio de Janeiro. It is the world's greatest coffee port, and is free to Bolivia and Paraguay. Pop. (1960) 265,753.

SAÔNE (sôn). French r., 268 m. long, which rises in the Vosges and joins the Rhône at Lyons.

SAO PAULO (sow'n pow'lô). Brazilian city, 3,000 ft. a.s.l., 2° S. of the Tropic of Cancer and 45 m. N.W. of its port Santos, on the Atlantic, cap. of S.P. prov. Originating as a Jesuit mission in 1554, it is the centre of the coffee trade of Brazil and has meat-packing plants. Pop. (1960) 3,776,581.

SAPPER. Pseudonym of British author Cyril McNeile (1888–1937). Entering the Royal Engineers in 1907, he retired with the rank of lieut.-col. in 1919. In 1920 he pub. *Bulldog Drummond*, and continued the adventures of the hero in numerous sequels.

SAPPHIRE (saf'ir). Transparent blue precious stone, a variety of corundum, the less valuable forms being yellow, green and colourless. Ceylon and Burma provide the best stones, usually found in alluvial soil. Ss. are made artificially on a large scale for industry and used almost universally as points in gramophone record reproducing heads (pick-ups).

SAPPHO (b. c. 600 B.C.). Greek lyric poet. B. at Mytilene or Lesbos, she was the centre of a feminine literary coterie at Mytilene, and was the friend of Alcaeus. She is said to have thrown herself from the

SANTA FÉ. New Mexico was ruled successively by Spanish, Indian, Mexican and American Governors, who occupied this Palace of the Governors, Santa Fé, continuously from 1610 until 1909. The Palace – the oldest government building in the U.S.A. – now houses the Museum of New Mexico.

Courtesy of the Museum of New Mexico, Santa Fé.

Indian jewellery and textiles; tourism is its chief industry. Pop. (1960) 34,676, many Spanish-speaking.

SANTA FÉ (fā). Cap. of S.F. prov., Argentina, on the Salado 95 m. N. of Rosario. Founded in 1573, it has shipyards and exports timber, cattle, and wool. Pop. (1960) 260,000.

SANTANDER (-dār'). Spanish city on the Bay of Biscay, cap. of S. prov., which is traversed by the Cantabrian Mts. It is a port with shipyards, breweries, etc. S. was sacked by Soult in 1808. Hundreds died when a vessel carrying dynamite blew up in 1893; and a fire in 1941 swept away many old buildings and led to the re-planning of the town. Pop. (1965) 130,430.

SANTAYANA (-yah'na), George (1863–1952). Spanish philosopher. B. at Madrid, he graduated at Harvard, where he taught the history of philosophy, 1889–1911. His books incl. *The Life of Reason* (1905–6), *The Realm of Truth* (1937), *Background of my Life* (1945), vols. of poems, and the novel *The Last Puritan*.

SANTIAGO (santé-ah'gō). Cap. of Chile and of S. prov., about 60 m. S.E. of Valparaíso. Founded in 1541, it is a handsome city, well laid out with broad avenues, e.g. the Alameda, or Avenida de las Delicias, and fine public buildings and a cathedral. There are 2 univs. Pop. of Greater S. (1965) 2,450,000.

SÃO PAULO. As the centre of a rich coffee-growing district of the state, Campinas was the natural site for the foundation in 1887 of this beautifully set Agricultural Institute.

Courtesy of the Brazilian Information Service.

The Rise of Nationality in the Balkans, Britain and the Dictators, etc. His son George S.-W. (1916–), became prof. of Russian history at London in 1951, and has pub. *The New Imperialism* (1961), etc.

SETTER

SETTER. Breed of dogs, so called because they are trained in crouching or 'setting' on the sight of game to be pursued. The English S. may be black, tan, or liver and white; the Scottish S. is of a much heavier type; and the Irish S. is usually a rich red.

SETTLEMENT. Act of. Act passed in 1701 confirming the succession to the throne of Great Britain to Protestants, and settling the succession, after William III and Anne, on the house of Hanover.

SEURAT (sōrah'), Georges (1859–91). French artist. B. in Paris, he introduced with Signac the technique of Pointillism (q.v.), an outstanding example of his work being 'La Baignarde' (Tate Gallery). In our illus. 'A Young Woman holding a powder-puff' – the girl is the artist's mistress Mlle Madeleine Knobloch. The mirror on the wall once showed a self-portrait of Seurat – still visible under X-ray – but this was painted out for the sake of decorum before the work was exhibited and the pot of flowers substituted.

Courtesy of Courtauld Institute Galleries, London.

SEVASTOPOL (sēvast'opol). Port and fortress in the Crimea, Ukraine S.S.R., base of the Russian Black Sea fleet and a seaside resort, with shipbuilding yards and a wine-making industry. S. was founded by Catherine II in 1784. The fortress was besieged by the English and French Oct. 1854–Sept. 1855 before S. fell; the Germans took it after a siege from Nov. 1941–4 July 1942, and re-took it in 1944. Pop. (1967) 200,000.

SEVENOAKS. English market town (U.D.) in Kent, 20 m. S.S.E. of London. Nearby are the 17th cent. houses Knole, given to the Nat. Trust by 4th baron Sackville 1946, and Chevening, given to the nation by 7th earl Stanhope 1959, either as a home for the P.M. of the day or a member of the royal family. Pop. (1961) 17,604.

SEVENTH DAY ADVENTISTS. Religious sect having its main following in America, whose distinctive tenet is that Saturday is the Sabbath.

SEVEN WONDERS OF THE WORLD. In antiquity, the pyramids of Egypt; the hanging gardens at Babylon; the temple of Artemis at Ephesus; the statue of Zeus at Olympia; the mausoleum at Halicarnassus; the Colossus of Rhodes; and the Pharos (lighthouse) at Alexandria.

SEVEN YEARS WAR. The war of 1756–63 between Britain and Prussia on the one hand, and France, Austria, and Russia on the other. Its military interest centres on the successful struggle of Frederick II of Prussia against great odds. Britain's part in the war, under the direction of Chatham, was mainly confined to operations at sea, notably the victory of Quiberon Bay (1759), and in the colonies. The victories of Wolfe and Clive resulted in the conquest of Canada and the foundation of the Indian empire.

SEVERN. River of Wales and England, 210 m. long. It rises in N. Wales on the N.E. side of Plynlimon, and flows through Shrewsbury, Worcester and Gloucester to the Bristol Channel. It is famous for

its high bore (6 ft. tidal wave): S. England and S. Wales are linked nr. Chepstow by a rail tunnel (1873–85) and road bridge (1966). A barrage has been proposed (seaward of Cardiff and Weston-super-Mare) which would provide electric power, improve dock developments in Cardiff, Bristol, etc., and provide sailing facilities.

SEVERUS, Lucius Septimius (146–211). Roman emperor. B. in N. Africa, he held a command on the Danube when in 193 the emperor Pertinax was murdered. Proclaimed emperor by his troops, S. proved an able administrator. He d. at York while campaigning against the Caledonians.

SEVIGNÉ (sävēnyā'), Marie de Rabutin-Chantal, marquise de (1626–96), French letter-writer. B. in Paris, in her letters to her dau., the comtesse de Grignan, she gives a vivid picture of contemporary customs and events.

SEVILLE (sev'il). City of Spain, on the Guadalquivir 60 m. N. of Cadiz. Once the centre of a Moorish kingdom, it is famous for the Alcázar, 15th–16th cent. cathedral, church of La Caridad, univ. (1502), and museum. Machinery, spirits, porcelain, silk, and tobacco are manufactured. Pop. (1960) 442,890.

SEVRE. Name of 2 French rivers from which the dept. of Deux Sèvres takes its name. The S. Nantaise rises 10 m. W. of Parthenay and flows 85 m. to join the Loire at Nantes; the S. Niortaise rises 5 m. N.E. of Melle and flows 95 m. in a westerly direction to the Bay of Biscay. Niort, cap. of the dept., stands on the S. Niortaise.

SEVRES (sävr). See ST. CLOUD.

SEWAGE DISPOSAL. Sewage – the waste products and refuse from houses, factories, establishments of every kind, streets, etc. – is conveyed through sewers and subjected to purification before being discharged into rivers or the sea. S. works are the responsibility of local authorities. The sludge may be spread over fields attached to the works, or it may be processed and sold as a fertilizer. In places near the coast, raw S. may be flowed or dumped into the sea. In some countries, China in particular, S. is carefully conserved as manure.

SEWELL, Anna (1820–78). British author, known for her story of a horse, *Black Beauty* (1877).

SEWING MACHINE. Apparatus for the mechanical sewing of cloth, leather, etc., by a needle, powered by hand, treadle, or belted electric motor. Among early inventors was the Englishman Thomas Saint in 1790. The popular modern lockstitch machine, using a double thread, was invented independently in America by both Walter Hunt (1834) and Elias Howe (1846). Howe's machine was the basis of the machine patented in 1851 by the American Isaac Singer (1811–75). See also ULTRASONICS.

SEX and REPRODUCTION. S. may be defined as the distinction between male and female that forms the basis of sexual reproduction. Amongst the more lowly

SEVEN YEARS WAR. Built originally by the French in 1755, and in 1758 captured by the English and renamed Fort Ticonderoga ('place between two lakes'), this fort was on the line of water communication from Canada to the British colonies and hence of great strategic importance in the Seven Years War, and later in the War of American Independence. Restoration was begun in 1909. Courtesy of Fort Ticonderoga.

B. in California, he told of his childhood there in *The Bicycle Rider in Beverly Hills* (1950), and made his name as a short-story writer, e.g. *The Daring Young Man on the Flying Trapeze* (1934), idealizing the hopes and sentiments of the 'little man', and later collections. His work as a playwright incl. *The Time of Your Life* (1939) and *Talking to You* (1962).

SARRAUTE (sahrüt, Nathalie (1902–)). French novelist. B. in Ivanovo, N. of Moscow, she was taken to France when 2 yrs. old, and her education incl. a yr. at Oxford in 1922. Married to a French barrister, Raymond S., she lives in Paris. Her books try to give the live, half-conscious interactions of minds in contact with one another, and she is comparatively uninterested in plot, character and style: they incl. *Portrait of a Man Unknown*, *The Planetarium* and *The Golden Fruits* (1964). See illus. p. 450.

SARRELOUIS. French form of SAARLAUTERN.

SARSAPARILLA. A drink prepared from the long twisted roots of plants in the genus *Smilax*, native to Central America.

SARTHE (sahrtr). French r. which rises in the E. of Orne dept. and flows generally S.S.W. for 175 m. to join the Mayenne nr. Angers and form the Maine.

SARTRE (sahrtr), Jean-Paul (1905–). French author and philosopher. B. in Paris, he became a teacher, publishing his 1st novel *La Nausée* in 1937. In the S.W.W. he was taken prisoner for 9 months, but returned from Germany to work for the resistance. Founder of the philosophical school of Existentialism (q.v.), he edits its journal *Les Temps Modernes*, and its tenets are expressed in the novels – a trilogy – of *Les Chemins de la Liberté* (1944–5) and in his strongly dramatic plays, e.g. *Les Mouches* (1947: *The Flies*); *Huis Clos* (1945: *In Camera*), 2 women and 1 man confined in the hell they make for each other; *Le Putain respectueuse* (1947: *The Respectful Prostitute*), attacking racial discrimination in the South of the U.S.A.; *Crime Passionnel* (1948), an attack on certain aspects of Communism with which S. yet retains his general sympathy; and *Nekrassov* (1957). Awarded the Nobel prize for literature in 1964, he refused it in advance for 'personal reasons'.

SARUM. See under SALISBURY, Wilts, England.

SASKATCHEWAN (saskach'e-wan). Prairie prov. of Canada, between Alberta and Manitoba. The N. is an area of forest, lakes, and sub-arctic tundra. Minerals incl. oil, potash, cadmium, copper, gold silver, zinc, uranium, coal and salt, and there is natural gas incl. helium. Southern S. is Canada's greatest wheat-growing area: other crops are oats, barley, rye and flax. The Gardiner Dam (1967) on the South S. river, 60 m. S. of Saskatoon, provides irrigation and hydroelectricity. The towns incl. Regina (the cap.), Saskatoon, and Moose Jaw. The name comes from the Indian name Kis-is-ska-tche-wan (fast flowing) of the S. r. formed by the junction nr. Prince Albert of the North S. and South S., which rise in the Rockies, to flow into Lake Winnipeg. Area 251,700 sq. m.; pop. (1966) 955,344.

SASKATOO'N. City in Saskatchewan, Canada, on the S. Saskatchewan r., 150 m. N.W. of Regina. An important railway junction, it is the seat of the univ. of Saskatchewan (1907) and makes cement, chemicals, and metal goods. Pop. (1966) 113,074.

SASSOON, Siegfried (1886–1967). British poet. Ed. at Cambridge, he enlisted in 1915, serving in France and Palestine, and expressed in his *War Poems* (1919) the disillusion of his generation. He pub. his *Collected Poems 1908–56* (1961), and as a prose writer is known for his *Memoirs of a Foxhunting Man* (1928).

SATIE (sahtē), Erik (1866–1925). French composer. B. at Honfleur, he became a member of *Les Six*. His compositions incl. 'Limp preludes for a dog and 'Pieces in the shape of a pear'.

SATO, Eisaku (1901–). Japanese statesman. Son of a brewer of saké, he opposed the policies of

Ikeda in the Liberal-Democratic Party, and in 1964 succeeded him as P.M., pledged to a more independent foreign policy and avoidance of 'poverty within prosperity'. His brother Nobosuke Kishi (1896–), who changed his name from S. on adoption into the Kishi family when young, was P.M. 1957–60, being forced to resign after public demonstration against the revised security treaty he negotiated with the U.S.A.

SATURN. Roman god of agriculture, later identified with the Greek god Cronus. He was believed to be the father of Jupiter, Neptune, and Pluto, who dethroned him, and his reign was identified with the Golden Age of equality and plenty. At his festival, the Saturnalia, in Dec., gifts were exchanged, and slaves were treated as their masters' equals.

SATURN. The second of the giant planets. It has a mean distance from the Sun of 886,100,000 miles, and a revolution period of 29½ years. In size it is second only to Jupiter; the equatorial diameter is 74,100 m., and the mass 95 times that of the Earth. Like Jupiter, S. is appreciably flattened at the poles. This is a result of its rapid axial rotation period, which amounts to only 10½ hours.

SATURN. Taken with a 36-inch refractor, this photograph shows Saturn's ring system, together with the dark Cassini Division between the two bright rings.
Courtesy of Lick Observatory, Univ. of California.

Basically, S. resembles Jupiter; its surface is gaseous, and the temperature is extremely low (about –240°F.). Belts may be seen crossing its disk, and there are occasional short-lived spots, the best example of modern times being the conspicuous white spot discovered by the British amateur astronomer W. T. Hay in 1933. However, S. is unique in possessing a system of rings, composed of numerous small particles moving round the planet in the manner of dwarf satellites, and giving the impression of solid sheets. There are 3 rings, 2 of which are bright and the third (the Crêpe Ring) semi-transparent; between the 2 bright rings is a prominent gap, known as the Cassini Division in honour of its discoverer. It is possible that the ring system was produced as the result of the break-up of a former satellite.

Of S.'s 9 surviving satellites, one – Titan, discovered by C. Huygens in 1655 – is visible with a small telescope; it is over 3,000 miles in diameter, and has a tenuous atmosphere composed of methane. The remaining satellites are considerably smaller.

SATYAGRAHA. Term applied in India to non-violent resistance. It was first employed by Gandhi in 1918, and the idea owes much to Tolstoy.

SATYR. In Greek mythology, woodland beings characterized by pointed ears, 2 horns on the forehead, and a tail, who were supposed to attend Dionysus. In Roman writers they are confused with the goat-footed fauns.

SAUDI ARABIA (sow'di). Kingdom of S.W. Asia occupying the greater part of the Arabian peninsula. Most of the area is desert. Nejd in the interior and Hejaz on the Red Sea coast were in 1927 united under Ibn Saud, former Sultan of Nejd, who proclaimed himself king of both. His son Saud Ibn Abdul-Aziz (1902–69) succeeded him in 1953. The joint capitals are Mecca and Riyadh. Slavery was abolished 1963. Petroleum is worked at Damman, on the Persian Gulf, where it was discovered in 1936, Abqaiq, A'in Dar, and elsewhere. A railway, opened 1951, links Riyadh with the oilfields and the coast at Damman; there are airports at Jeddah, Dhahran, and Riyadh. A good road joins Jeddah with Mecca and Medina, and

He was involved in a violent feud with Dryden whom he attacked in 'The Medal of John Bayes' (1682) and succeeded as poet laureate.

S.H.A.E.F. Abbreviated form of the Supreme Headquarters Allied Expeditionary Force which came into being on 15 Feb. 1944, at Norfolk House, St. James's Square, London. In March 1944 it was moved to Bushy Park, near Kingston-on-Thames, where the final plans for the Allied invasion of Europe were worked out. The Supreme Commander was General Dwight D. Eisenhower.

SHAF'I (shahfē-ē) or **ASH-SHAFT'I** (767-820). Moslem jurist, founder of one of the 4 great schools of Islamic law, named Shafites after him.

SHAFTESBURY, Anthony Ashley Cooper, 1st earl of (1621-83). English Whig statesman. B. in Dorset, he served in the Civil War first on the royalist and later on the parliamentary side, supported the Restoration, and received a barony in 1661 and an earldom in 1672, when he became Lord Chancellor. In 1673, he went into opposition, and began to organize the Whig Party. He led the agitation for the exclusion of the duke of York from the succession, and in 1679 secured the passage of the Habeas Corpus Act. Accused of treason in 1681, he fled to Amsterdam, where he d.

SHAFTESBURY, Anthony Ashley Cooper, 3rd earl of (1671-1713). English philosopher, author of *Characteristics* (1711) and other ethical speculations.

SHAFTESBURY, Anthony Ashley Cooper, 7th earl of (1801-85). British philanthropist statesman. He entered parliament as a Tory in 1826, and succeeded to the title in 1851. He strongly supported the Ten-Hours' Act of 1847 and other factory legislation, and was largely responsible for the Act of 1842 forbidding the employment of women and children underground in mines. He was associated with the movement for the establishment of 'ragged' schools for the poor.

SHAFTESBURY. English market town (bor.) in Dorset, 19 m. S.W. of Salisbury. Alfred is said to have founded an abbey on the site in 880; Canute d. at S. in 1035. It is an important agricultural centre. Pop. (1961) 3,366.

SHAG. See CORMORANT.

SHAH (Persian, 'ruler'). Title borne by the king of Persia.

SHAH-JEHAN (1592-1666). Mogul emperor of India from 1627, when he succeeded his father Jehangir. He warred successfully in the Deccan, but was not so fortunate in his campaigns against the Persians. From 1658 he was a prisoner of his son Aurangzeb.

SHAHN, Ben (1898-). American artist. B. in Lithuania, he was taken to the U.S. as a child and became a commercial lithographer. His work has a sharp photographic realism, and shows an interest in social issues e.g. his series on Dreyfus, Sacco and Vanzetti and Prohibition; and as a mural artist he worked at Radio City (with Diego Rivera) and the Federal Security Building 1940-2.

SHAKESPEARE. A Portrait engraved by Martin Droeshout for the First Folio, 1623.

SHAKERS. Popular name for the Christian sect of the United Society of Believers in Christ's Second Appearing, founded by James and Jane Wardley in England about 1747, and carried into N. America in 1774 by Ann Lee (1736-84), the wife of a Manchester blacksmith. The name was applied because of the ecstatic shakings of the sectaries in their worship. The sect still exists in U.S.A.

SHAKESPEARE, William (1564-1616). English dramatist and poet. B. at Stratford-on-Avon, he was

the son of John S., a prosperous wool-dealer, and after an education at Stratford grammar school may have become a schoolmaster. In 1582 he m. Anne Hathaway, who bore him 3 children. Having joined a company of players, probably Leicester's, by 1589 he was estab. in London as a playwright. His earliest plays, written c. 1589-93, were the tragedy *Titus Andronicus*, the comedies *The Comedy of Errors*, *The Taming of the Shrew*, and *Two Gentlemen of Verona*, the 3 parts of *Henry VI*, and *Richard III*. The earl of Southampton became his patron c. 1593; S. dedicated to him his poems *Venus and Adonis* (1593) and *Lucrece* (1594), and wrote *Love's Labour's Lost*, satirizing Raleigh's circle, for his amusement. Southampton seems to be the man addressed in S.'s sonnets (written c. 1593-6).

SHAMYL
Courtesy of Col. C. H. Ellis.

From 1594 onwards S. was a member of the Chamberlain's (later the King's) company of players. During 1593-8 he had no serious rival as a dramatist, and prospered sufficiently to buy a coat of arms in 1596, and New Place, Stratford, in 1597. Three plays containing a strong lyrical element - *Romeo and Juliet*, *Midsummer Night's Dream*, and *Richard II* - appeared 1594-5, and were followed by *King John* and *The Merchant of Venice* in 1596. The Falstaff plays of 1597-9 - *Henry IV* (parts I and II), *Henry V*, and *The Merry Wives of Windsor* - brought his popularity to its height. About the same time he collaborated in *Sir Thomas More*, and wrote *Julius Caesar* (1599). Three romantic comedies, unparalleled in their combination of wit and lyricism - *Much Ado about Nothing*, *As You Like It*, and *Twelfth Night* (c. 1598-1601) - brought this predominantly comic period to an end.

The plays which followed, beginning in 1601 with *Hamlet*, show an obsession with the darker side of human nature. The 'dark' comedies *Twelfth Night* and *Cressida*, *All's Well that Ends Well*, and *Measure for Measure* (c. 1601-4) are bitter and cynical. *Othello*, *Macbeth*, and *King Lear* followed 1604-6, together with *Timon of Athens*, in which S.'s pessimism reaches its depths. The last 2 tragedies, *Antony and Cleopatra* and *Coriolanus* (c. 1607-8), show a striking reaction towards a calmer acceptance of life.

The final group of plays, *Pericles* (which is only partly S.'s), *Cymbeline*, *The Winter's Tale*, and *The Tempest* (c. 1608-11), have many features in common; all but the first are in Fletcher's manner, and were written for an aristocratic audience. During 1613 S. collaborated with Fletcher in *Henry VIII*, and probably in *Two Noble Kinsmen* and the lost *Cardenio*. His last years were spent in Stratford, where he d. on 23 April 1616, and was buried in the parish church. A collected edition of his plays (the 1st Folio) was pub. by 2 of his fellow-actors, Heminge and Condell, in 1623. The only authentic portraits are that in the 1st Folio and the bust on his tomb.

SHAKHTY (shah'khti). Town in the R.S.F.S.R., 50 m. N.E. of Rostov, centre of an important anthracite coal-mining area. It makes textiles, leather, metal goods, etc.; nearby are stone quarries. Pop. (1967) 208,000.

SHALLOT. A plant (*Allium asca, onicum*) allied to the onion. Its bulbous roots are used in pickles.

SHALMANESER. Name of 5 Assyrian kings. Shalmaneser III (reigned 859-824 B.C.) pursued an aggressive policy, and made Babylon and Israel tributary to Assyria.

SHAMANISM (shah'manizm). Name (possibly

immense popular influence, and in 1494 he led a revolt which expelled the Medicis and estab. a democratic republic. But his denunciations of Pope Alexander VI led to his excommunication in 1497, and in 1498 he was arrested, tortured, hanged, and burned for heresy.

SAVOY. Area, formerly a prov. of the kingdom of Sardinia which, with Nice, was ceded to France in 1860 by Victor Emmanuel II (king of Italy from 1861) in return for French assistance in driving the Austrians from Italy. It lies between the Alps, the Lake of Geneva, and the r. Rhône, and was formed into the depts. of Savoie and Haute-Savoie. *See also* SAVOIE, COMBE DE.

Turnip sawfly and larva.

SAWFLY. Family of insects in the order Hymenoptera. The name is derived from the saw-like edge of the female's ovipositor. There are about 2,000 species which damage plants either by feeding on them or by the larvae burrowing in the tissues.

SAXE, Maurice, comte de (1696–1750). Soldier.

The natural son of the elector of Saxony, he served under Marlborough and Eugène, and for his brilliant exploits in the War of the Austrian Succession was created a marshal of France in 1743.

SAXE. French form of SAXONY.

SAXE COBURG-GOTHA (gōta). A ducal title held by members of the Wettin family. Albert the Prince Consort was the son of Ernest, the 1st duke; and Alfred the duke of Edinburgh, succeeded his uncle in 1893. On his death in 1900, the title passed to his nephew, the duke of Albany, who abdicated in 1918.

SAXIFRAGE. Genus of plants (*Saxifraga*) in the family Saxifragaceae. They occur in rocky, mountainous, and alpine situations. London Pride (*S. umbrosa*) is a familiar example.

SAXONY. English form of Sachsen, a former kingdom, later state, of Germany. It lay between Prussia, Bavaria, and Bohemia; Dresden was the cap. It got its name from its Saxon inhabitants and originally reached as far W. as the Rhine, covering most of the Land of W. Germany formed in 1946 and named Lower Saxony. S. was conquered by Charlemagne, but when his empire broke up after his death became a dukedom. This itself was broken up in the 12th cent., and the area called S. subsequently underwent many fluctuations. The Reformation originated in S., Luther being a native. In the 16th cent. the ruler of S. became an Elector and later a king. S. supported Napoleon I and half the kingdom was given to Prussia by the Congress of Vienna, 1815, becoming the Prussian prov. of S. The remaining kingdom joined the German Empire, founded 1871. At the end of the F.W.W. the king abdicated and S. became one of the federal states of the German Republic. After the S.W.W., S. lay in E. Germany and in 1946 was, with part of Silesia, made a new Land of S., abolished in 1952.

SAXONY, Lower. *See* LOWER SAXONY.

SAXONY-ANHALT. Land of E. Germany, 1946–52. It consisted of Anhalt, a former duchy and state, and most of the former Prussian prov. of Saxony.

SAXOPHONE. A wind instrument made of brass and possessing

SAXOPHONE

woodwind characteristics. It was invented by Adolphe Sax (1814–94) as one of a series of such instruments which also included the saxhorn. Several varieties of S. exist, all having a conical brass tube, curved at each end and with 20 keys controlling notes.

SAYERS, Dorothy Leigh (1893–1957). British author. Ed. at Somerville Coll., Oxford, where she read history, she made her name with her creation of Lord Peter Wimsey, the dilettante detective with a taste in wines and 1st editions, who appeared initially in *Whose Bo y?* (1923); other crime stories incl. *The Nine Tailors* (1934) and *Busman's Honeymoon* (1937). She also wrote books on religious subjects and the radio series on the life of Christ *The Man Born to be King*.

SCABIOUS. Genus of European plants (*Scabiosa*) in the family Dipsacaceae. The field S. (*S. arvensis*) has lilac flowers and a bristly calyx; other species are the sea S. and the Devil's bit S.

SCAFELL (scawfell') **PIKE.** Highest mountain in England (3,210 ft.). It is in Cumberland, in the Lake District, and is separated from Scafell (3,162 ft.) by a scree-covered ridge called Mickledore. The summit of the pike is National Trust property, presented as a war memorial by the 3rd Lord Leconfield in 1919.

SCALAR QUANTITY. *See* VECTOR.

SCALLOP. Genus of bi-valve molluscs (*Pecten*) in the family Pectinidae found in all seas. The shell is fan-shaped with 2 ear-like projections near the hinge. The edible S. (*P. opercularis*) is sedentary but not fixed; *P. jacobaeus* was used as a badge by pilgrims from Compostela.

SCALLOP

SCANDINAVIA. Peninsula of N.W. Europe, comprising the kingdoms of Norway and Sweden. Politically and culturally it also includes Denmark and is sometimes considered to include Finland.

SCANDIUM. A scarce metal element of the rare metallic earth group; symbol Sc, at. wt. 44.96; at. no. 21. It was discovered in 1879 in the Scandinavian mineral euxenite.

SCAPA FLOW. Expanse of sea in the Orkney Islands, Scotland, formerly a base of the R.N. The main base of the Grand Fleet during the F.W.W., in 1919 it was the scene of the scuttling of 71 surrendered German warships. It remained the principal base of the home fleet until 1957.

SCARBOROUGH. English spa and seaside resort (bor.) in N. Riding of Yorks. Edith and Sacheverell Sitwell were b. at S. The remains of S. castle overlook the town, which was shelled by German submarines during the F.W.W. Pop. (1961) 42,587.

SCARLATTI (sahrlah'ttē), **Alessandro** (1659–1752). Italian musician. B. at Trapani, he became master of the chapel at the court of Naples and founded the Neapolitan school of opera, writing more than 100 operas himself and some notable church music. His eldest son, **Domenico S.** (1685–1757), was also a composer and is best remembered for his harpsichord sonatas.

SCARLET FEVER. Scarletina; an infective fever caused by a haemolytic streptococcus. It is transmitted usually by direct infection in spray from speaking or coughing. The incubation period is under a week. The rash is a uniform redness, with small bright red points. Earache due to inflammation is a common complication. Peeling of the skin occurs in convalescence. The disease is currently much less severe, and treatment is often assisted by antibiotics, e.g. penicillin.

SCHACHT (shahkht), **Hjalmar** (1877–). German financier and politician. As Economics Min. from

SHARK. Common in the Pacific, the grey shark (*Carcharhinus menisorrh*) grows to about 7 ft. and will attack man without provocation. Fortunately for the photographer, these specimens in a Marshall Island lagoon are merely inquisitive.

Courtesy of Edmund S. Hobson.

having no acuity of vision or sense of colour, are highly sensitive to light. Centres for shark study are the Lerner Marine Laboratory in the Bahamas, the Univ. of Hawaii, and the Oceanographic Research Institute, Durban. Ss. have potential importance as a source of leather, oil and protein.

SHARP, Cecil (1859–1924). British collector of folk song. B. in London, he travelled the country to record and so save from extinction the folk-song tradition, e.g. *English Folk Song* (1921: 2 vols.), and when in the U.S.A. tracked down survivals of English song in the Appalachians, etc. Cecil Sharp House, the H.Q. in London of the English Folk Song and Folk Dance Society, commemorates his work.

SHARP, Granville (1735–1813). British philanthropist. B. at Durham, he was prominent in the anti-slavery movement, and in 1772 secured a legal decision 'that as soon as any slave sets foot on English territory he becomes free'.

SHARP, William (1855–1905). Scottish author. B. in Paisley, he wrote literary criticism, poetry, and novels under his own name, but is best remembered for his mystic romances, e.g. *The Mountain Lovers* (1895); and plays, e.g. *The Immortal Hour* (1900), written under the pseudonym Fiona Macleod.

SHARPEVILLE. Town of the Rep. of S. Africa, 5 m. N. of Vereeniging. On 21 March 1960 a crowd of black S. Africans, variously est. at 5–20,000, was fired upon by police during a campaign launched by the Pan-Africanist Congress (P.A.C.) against the Pass Laws (first intro. in the 19th cent. to aid identification of Africans moving into settled areas: 'passes' are carried by all African males over 16 and incl. residential permit, employer's certificate, tax receipt, etc.). Casualties were 67 dead and 186 wounded.

SHASTON. See **SHAFESBURY**.

SHA'STRI, Lal Bahadur (1904–66). Indian politician. Several times imprisoned for civil disobedience before independence, he later held various ministerial posts, and in 1964 succeeded Nehru as P.M. He d. of a heart attack in Tashkent, following signature of a peace agreement with Pakistan. Small of stature, he was known as the 'Sparrow'.

SHATTI-EL-ARAB (river of Arabia). Estuary, c. 120 m. long, formed below Kurna, Iraq, by the junction of the Euphrates and the Tigris, and flowing into the Persian Gulf. It is c. 600 yds. wide, and for the last 50 m. forms the Iraqi boundary with Persia. Basra in Iraq, Abadan and Khorramshahr in Persia are on its banks.

SHAW, George Bernard (1856–1950). Irish dramatist. B. in Dublin, the son of a civil servant, he came to London in 1876, where he became a brilliant debater

among the Fabians. Of the 5 novels he wrote 1879–83, the least unsuccessful was *Cashel Byron's Profession* (1886). His alliance with the new thought in the theatre was illustrated by his *Quintessence of Ibsenism* (1891), and in 1892 his first play *Widowers' Houses* was produced. It was the first of the *Plays: Pleasant and Unpleasant* (1898), which incl. *The Philanderer*; *Mrs. Warren's Profession*, dealing with prostitution; and the pleasant comedies *Arms and the Man*, *Candida*, *You Never Can Tell*, and *Man of Destiny*, a Napoleonic incident. The *Three Plays for Puritans* of 1901 contained the witty *Devil's Disciple*; *Caesar and Cleopatra*; and *Captain Brassbound's Conversion*, written for Ellen Terry. The epic *Man and Superman* (1903), expanding his theme of Creative Evolution, was followed by *John Bull's Other Island* (1904), and *Major Barbara* (1905). *The Doctor's Dilemma*, *Getting Married*, and *The Shewing-up of Blanco Posnet* were pub. in 1911. His next vol. (1914) contained *The Dark Lady of the Sonnets*, touching the Shakespeare problem; *Misalliance*, and *Fanny's First Play*.

Androcles and the Lion was pub. in 1916 with the comedy *Pygmalion*, written for Mrs. Patrick Campbell. *Heartbreak House* (1917) symbolizes the breakdown of European civilization, and in *Back to Methuselah* (1921) S. once more faced the problems of social evolution. Latest of his great dramas is *St. Joan* (1924). Among the plays of the last years are *The Apple Cart* (1929), *Village Wooing*, *Geneva*, *In Good King Charles's Golden Days*, *Buoyant Billions*, and *Far-Fetched Fables*.

Important for the understanding of S.'s thought are the voluminous prefaces to the plays; *The Intelligent Woman's Guide to Socialism and Capitalism* (1928); *Adventures of a Black Girl in Search of God* (1932); *Sixty Years of Fabianism* (1947); and the vol. of music criticism *The Perfect Wagnerite* (1898). His letters to the actress Ellen Terry (pub. 1931) are also of great interest. In 1925 he received a Nobel prize. See illus. p. 395.

SHAWCROSS, Hartley William, baron (1902–). British Labour politician and lawyer. He was called to the Bar in 1925, entered parliament in 1945, and while Attorney-General 1945–51 was chief prosecutor for the U.K. at Nuremberg. He was pres. of the Board of Trade in 1951, and in 1959 was created a life peer, following his resignation in 1958 as M.P. for St. Helens from 1945, partly because of disagreement with Labour policy, e.g. the extension of nationalization of industry.

SHAZAR, Zalman (1889–). Israeli statesman. B. in Russia (né Rubashov), he settled in Palestine in 1924, and as Israeli's 1st Min. of Education (1949–50) introduced free education. In 1963 he succeeded Ben-Zvi as president.

SHCHERBAKOV. See **RYBINSK**.

SHEARWATER. Genus of birds related to the petrels. The Manx S. (*Puffinus anglorum*) is the only species which breeds in Britain.

SHE'BA. Biblical name for Sabaea, in modern Yemen, S.W. Arabia, formerly famous as a source of gold and spices. According to 1 Kings 10, its queen visited Solomon; Ethiopian tradition traces the royal house of Ethiopia to their union.

SHECHEM (shē'kem). Ancient town of Palestine, near Samaria, the traditional burial place of Joseph nearby is Jacob's well. S. was destroyed c. A.D. 67 by Vespasian; on its site stands Nablus (a corruption of Neapolis, built by Hadrian), pop. (est.) 25,000. Allenby's defeat of the Turks in 1918 in the battle of S. completed the conquest of Palestine.

SHEEN, Fulton (John) (1895–). American R.C. prelate. Aux. bp. of New York 1951–66, and bp. of Rochester, N.Y., from 1966, he achieved widespread influence by his radio Catholic Hour and television programmes.

the end of the 11th cent., when in his advocacy of Nominalism he was countered by Anselm, the champion of Realism. The controversy over 'Universals' thus begun continued for several cents. William of Champeaux, Abélard, Alexander of Hales, Albertus Magnus, and Peter Lombard played prominent parts, but the greatest names are those of Thomas Aquinas, whose writings became the classical textbooks of Catholic doctrine, and the Franciscan Duns Scotus. The last of the Schoolmen is usually reckoned to have been William of Occam, who, in the first half of the 14th cent., restated Nominalism. In the present cent. there has been a revival of interest in Scholasticism, as seen in the writings of Jacques Maritain and other Catholic scholars.

SCHOLES (skôlz), Percy Alfred (1877–1958). British musicologist, remembered as the editor of the *Oxford Companion to Music*.

SCHOOL. A place in which instruction is given to the young in preparation for life. Schooling is compulsory in the U.K. from 5–15 years (14 until 1947; 16 from 1972–3). In England and Wales under the Education (Butler) Act of 1944, Ss. run by local authorities with govt. aid, in which the majority of children are educated, are divided into (1) primary Ss., incl. nursery (below 5), infant (5–7), and junior Ss. (7–11); and (2) secondary Ss. for those over 11, incl. in 1970 grammar, technical, modern and comprehensive – eventually all to be reorganized as comprehensive, catering for all pupils, and incl. Direct Grant and state-aided Ss. There are about 200 semi-independent non-profit-making Direct Grant grammar or secondary technical who take mainly fee-paying pupils and over 25 per cent nominated by local authorities, and over 10,000 state-aided Ss. (mainly religious). Most independent Ss. (some 4,000) charge fees and incl. public Ss. (e.g. Eton, Harrow, Winchester, Rugby and Repton), many of which are old foundations set up originally for poor scholars, and private Ss. of varying excellence. All Ss. are subject to govt. inspection and inefficient independent Ss. may be closed. State Ss., except some specialized Ss. and a few others, are provided only for day pupils, but public and private Ss. may be day or boarding establishments, or both. In Scotland there are public Ss. managed by the L.E.A., grant-aided Ss. conducted by voluntary managers and a small no. of independent Ss. which receive no state grant.

In France S. attendance is compulsory 6–16 (as from 1967), and Ss. are divided at primary level into infant (*écoles maternelles*), primary (*écoles primaires élémentaires*) and secondary modern (*collèges d'enseignement général*) and at secondary level generally into 4 yr. technical colleges (*collèges d'enseignement technique*) and the academic *lycées* (7 yr. course in preparation for the *baccalauréat*). In W. Germany full-time S. attendance is compulsory from 6–14, as is part-time vocational study to 18 for those not attending the intermediate (*Mittelschule*) or grammar S. (*Gymnasium*). In the U.S.S.R. education is free and compulsory from 7–15 or 16, in the larger towns to 17; co-education, introduced after the 1917 revolution and abolished in 1943, was re-introduced in 1954. In China, following the Cultural Revolution of 1967, the period of S. has been shortened: 4 yrs. primary, 5 secondary and 2–4 at univ., with all senior students giving half their time to work in farm or factory.

In the U.S.A. S. attendance is compulsory from 6 until 16–18, but in larger centres kindergartens and nursery Ss. are provided for the under-6s. There is free access to the public Ss., i.e. those supported by public money and which are attended by 80 per cent of the pop., in all 50 states at 3 levels: elementary (6 grades or years), junior high (3 grades) and senior high (3 grades). The 6 grades of secondary education are comprehensive, and it is only at the 13th and 14th grades in the junior colleges which are being in-

creasingly provided for the group 18–20 that education is biased as general, vocational or as supplying 2 years of undergraduate college work.

SCHOPENHAUER (shō'penhow-er), Arthur (1788–1860). German philosopher. B. at Danzig, he graduated at Jena and pub. in 1813 his *Fourfold Root of the Principle of Sufficient Reason*; and in 1818 his chief work, *The World as Will and Idea*, in which his pessimistic philosophy is expounded.

SCHREINER (shrī'ner), Olive (1862–1920). S. African writer. B. in Basutoland, the dau. of a missionary, she was the sister of William Philip S. (1857–1910), who was P.M. of Cape Colony 1898–1900, and m. in 1894 S. C. Cronwright. In 1883 she pub. *The Story of an African Farm*, a powerful novel describing life on the S. African veldt.

SCHRÖDINGER (shrō'dinger), Erwin (1887–1961). Austrian physicist. B. at Vienna, he became in 1940 senior prof. at the Dublin Institute for Advanced Studies. He greatly advanced the study of wave mechanics, and was awarded a Nobel prize in 1933.

SCHUBERT (shōō'bärt), Franz Peter (1797–1828). Austrian musician. B. at Vienna, the son of a school-

SCHUBERT. A water colour, dated 1825, by W. A. Rieder in the Historical Museum, Vienna, the city where Franz Schubert composed the majority of his works.

Courtesy of the Historical Museum, Vienna.

teacher, he himself was a school-teacher for 3 years, but composed busily in his spare time. In 1816 he gave up teaching to compose, and in 1818 was appointed music teacher to the Esterházy family on their estate in W. Hungary. Very shortly he was back in Vienna, where he lived henceforth a Bohemian existence. He was only 31 when he died, but his musical output was prodigious. Greatest of the 9 known symphonies are the incomplete B minor and the C major. He contributed much to chamber and pianoforte music, including sonatas and fantasias, but his most treasured works are his songs, of which he wrote nearly 300, including 3 great cycles.

SCHUMAN (shoomah'), Robert (1886–1963). French statesman. He was P.M. 1947–8, and as Foreign Min. 1948–53 created the Coal and Steel Pool (the 'S. Plan' treaty of 1951) and prepared the basis of the Common Market.

SCHUMANN, Maurice (1911–). French politician. A war-time broadcaster from London, he was For. Min. 1951–4 and again from 1969 under Pompidou: he favoured Britain's entry to the Common Market.

SCHUMANN (shōō'mahn), Robert Alexander (1810–56). German musician. B. at Zwickau, Saxony, he taught at Leipzig conservatoire and was musical director at Düsseldorf 1850–3. As a composer he excelled in pianoforte compositions and in *Lieder*; his piano concerto Op. 54 and sonatas Opp. 11 and 22 are particularly famous. He wrote also much

aren 1905, of a terrible battle in which the Russians suffered defeat by the Japanese (Russian losses, 26,500 killed, 40,000 prisoners; Japanese, 41,000 killed and wounded). Pop. (1957 est.) 2,411,000.

SHEPHERD'S PURSE. Annual plant (*Capsella bursa-pastoris*) of the Cruciferae family, interesting for its world-wide distribution in the temperate zones. It is a persistent weed with white flowers followed by 2-valved seed pouches from which the name derives.

SHEPPARD, Hugh Richard Lawrie ('Dick') (1880-1937). British Anglican clergyman. He was vicar of St. Martin-in-the-Fields, 1914-27, and by his broadcast services made that church one of the most famous in London. He was dean of Canterbury 1929-31 and a canon of St. Paul's 1934-7, and founded the Peace Pledge Union in 1934.

SHEPPARD, Jack (1702-24). British criminal. B. in Stenney, he was an apprentice carpenter, but turned early to theft and by 4 escapes from prison became a popular hero. He was finally caught and hanged.

SHEPPEY. English island off the N. coast of Kent, at the mouth of the Medway. It is linked with the mainland by Kingsferry road and rail bridge over the Swale, completed 1960. See **SHEERNESS**.

SHEPSTONE, Sir Theophilus (1817-93). S. African statesman. B. near Bristol, he was appointed secretary for native affairs in Natal in 1856, and in 1877 carried out the annexation of the Transvaal.

SHERATON, Thomas (c. 1751-1806). English furniture designer. B. at Stockton-on-Tees, he went to London and pub. his *Cabinet-maker's and Upholsterer's Drawing Book* in 1791, and *The Cabinet Dictionary* in 1802. He was influenced by Hepplewhite and Chippendale and his work has grace and simplicity.

SHERBORNE. English market town (U.D.) in Dorset. on the Yeo, 19 m. N. of Dorchester. It has a 12th cent. castle, 15th cent. abbey church, and a public school, founded 1550. Pop. (1961) 6,062.

SHERIDAN, Philip Henry (1831-88). American general. B. at Albany, N.Y., of Irish parentage, he achieved distinction in the Civil War as a Federal cavalry leader. Grant gave him command of the cavalry in 1864, and soon after of the army in the Shenandoah valley, which he cleared of Confederates. He was appointed C.-in-C. in 1883.

SHERIDAN, Richard Brinsley (1751-1816). British dramatist. B. in Dublin, he was ed. at Harrow, and m. Elizabeth Linley, dau. of the composer, in 1773. Turning to the stage he wrote the brilliant social comedy *The Rivals* in 1775, and in 1776 became lessee of Drury Lane theatre, where he produced *The School for Scandal* (1777) and *The Critic* (1779). In 1780 he entered Parliament as an adherent of Fox, directed the impeachment of Warren Hastings, and was treasurer to the navy 1806-7. His last years were clouded by the burning down of his theatre in 1809, the loss of his parliamentary seat in 1812, and by complete financial ruin and mental breakdown.

SHERIFF ('shire-reeve'). The chief administrative officer of an English co. in Scotland the judicial duties of the office have survived with greater importance. The office (elective until Edward II) and name are of pre-Conquest origin. The S., who is appointed annually by royal patent, and is chosen from the leading landowners, acts as returning officer for parliamentary elections, and attends the judges on circuit. His duties of keeping prisoners in safe custody, preparing panels of jurors for assizes, executing writs and death sentences, are supervised by the Under-S. The City of London has 2 Ss. elected by the Liverymen. In the U.S.A. the S. of the co. is generally elected and combines some judicial authority with administrative duties.

SHERMAN, William Tecumseh (1820-91). American general. B. in Ohio, he received a command in the Federal army on the Mississippi front early in the Civil War, and collaborated with Grant in the

Vicksburg campaign. In 1864 he captured Atlanta, whence he marched to the sea, laying Georgia waste, and then drove the Confederates northwards. He was C.-in-C. 1869-83.

SHERIFF, Robert C (edric) (1896-). British playwright. B. at Kingston-on-Thames, he achieved fame with the anti-heroic war play *Journey's End* (1929). A later success was *Home at Seven* (1950).

SHERINGTON, Sir Charles Scott (1857-1952). British physiologist. B. in London, he was prof. at Liverpool 1895-1913 and Waynflete prof. of physiology at Oxford 1913-35. He wrote *The Integrative Action of the Nervous System* (1906), which formulated the principles of reflex action. He was also a poet. He received the O.M. in 1924, and was made G.B.E. in 1922.

SHERRY. A dry, white wine from the vineyards of S. Spain between the Guadalquivir and Guadelete. The name derives from the town of Xeres, or Jerez de la Frontera, the centre of the region.

SHERTOGENBOSCH. See **SHERTOGENBOSCH**.
SHERWOOD, Mrs. Mary Martha (1775-1851). British writer for children, née Butt. Her *History of the Fairchild Family* (1818-47) combined moral piety with sound characterization.

SHERWOOD, Robert (1896-1955). American dramatist. After fighting with the Canadian forces in France in the F.W.W., he became a journalist in New York, and achieved his first great success with *The Petrified Forest* (1934). Later plays incl. *Idiot's Delight* (1936), *Abe Lincoln in Illinois* (1938) and *There Shall Be No Night* (1940) - for each of which he received a Pulitzer prize. In the S.W.W. he did much to promote Britain's cause, and pub. the serious historical study *Roosevelt and Hopkins* (1949).

SHERWOOD FOREST. A hilly stretch of parkland in W. Nottinghamshire, England, formerly a royal forest, area c. 200 sq. m. It is associated with Robin Hood.

SHETLAND PONY

SHETLAND ISLES. A group of more than 100 islands, lying N.E. of the Orkneys and forming the most northerly Scottish county, officially called ZETLAND. Of the 19 inhabited, Mainland (378 sq. m.) and Yell (83 sq. m.) are the largest; Fair Isle and Unst are espec. famous for coloured hand-knit woollens, and Muckle Flugga (60° 51' 30" N. lat.) is the northernmost of the Brit. Isles. They were under Scandinavian rule 875-1468, and still have many affinities with Scandinavia. Lerwick (pop. 6,000), on Mainland, is the capital. Area 550 sq. m.; pop. (1961) 17,809.

SHIAHS (shē'ahz) or **SHITES**. One of the 2 great sects into which the Moslem world is divided, the other being the Sunnites. Their distinctive tenet is belief in Ali as the first true successor or caliph of Mohammed, whereas their rivals hold that Ali's 3 predecessors were legitimate caliphs. The Shiahs also reject the Sunna, or verbal utterances of the Prophet. The Shiah stronghold is Persia.

SHIELD. Any material used to reduce the amount of radiation (electrostatic, electromagnetic, heat, nuclear, etc.) reaching from one region of space to another, or any material used as a protection against falling debris, as in tunnelling, etc. Electrical conductors are used for electrostatic Ss., soft iron for electromagnetic Ss., and poor conductors of heat for heat Ss. Heavy materials such as lead and concrete are used for protection against X-ray and nuclear radiation. See **BIOLOGICAL S.**

SHIKOKU. One of the 4 main islands of Japan, S. of Honshu, E. of Kyushu. With a mild climate and rainfall up to 105 in. a year in the S., it rises in Mt.

COUNTIES OF SCOTLAND

County	Area in sq. m. (exclusive of inland water)	Pop. (1961 census)	County town

Lochs Ness and Lochy. The Grampians, in the S.E. portion, incl. Ben Nevis (4,406 ft.), highest mountain in the British Isles, and Ben Lomond, Ben Lawers, Ben Macdui, Cairngorm, and other heights.

ECONOMIC. The narrow, diagonal central belt between the Firths of Clyde and Forth contains some 4 out of the 5 million population, and it was here that prosperity arose in the Industrial Revolution with shipbuilding, and the iron and coal fields that supported Scotland's heavy industry. Since the S.W.W. and particularly from the 1960s there has been rationalization and modernization of the traditional industries, and an attempt to stem the continuing pop. decline through emigration by bringing in new industries such as aluminium smelting, petrochemicals and plastics, and – largely through American investment – electronics and business machines. Development of Tayside has been undertaken, and also promotion of a linear city from Tain to Inverness in the Moray Firth area. A break has been made with the tradition of cheap, rented tenements (originally built by 19th-cent. employers and now a millstone round the necks of local authorities), and a remarkable series of new towns has sprung up along the central belt – Cumbernauld (q.v.), East Kilbride, Glenrothes, Irvine and Livingston.

The Highlands, besides their commercial value as a source of hydroelectric power, are one of Europe's greatest tourist attractions for their scenery; their grouse, deer and salmon; and their winter sport facilities. Here, and in Aberdeenshire and Ayrshire, fine cattle are raised; miniature ponies come from the Shetlands; and sheep are widely grazed. The chief crops are oats, barley, wheat and roots, and there is dairy farming in the S.W. Forestry and fishing are important. Among specialized products which are valued exports are the tweeds of Harris and Scottish whisky. The road and rail systems are good – the bridges over the Forth and Tay being remarkable

feats of engineering – and there is a major airport at Prestwick. The chief towns are Edinburgh, the cap., and Glasgow (each with 2 univs.), and St. Andrews, Aberdeen, Dundee and Stirling are also univ. cities: the general standard of education is traditionally high.

POPULATION. Descendants of the original Celtic inhabitants form the majority of the population, though in the extreme N. and the Orkneys and Shetlands the Norse strain is marked. In 1961, 76,587 persons in the Highlands spoke Gaelic (see SCOTTISH GAELIC) of whom 1,079 spoke Gaelic only. During the 19th and 20th cents. there has been a strong current of emigration to England and other parts of the Commonwealth and to the U.S.A. At the same time many Irish settled in the industrial areas of the Lowlands. The majority of the people belong to the (Presbyterian) Church of S. (q.v.). Area (incl. 609 sq. m. of inland water) 30,411 sq. m.; pop. (1967) 5,186,600.

History. Before the Roman conquest of South Britain in the 1st cent. A.D., what is now S. was inhabited by Goidelic Celts, later called Picts. The Romans made some attempts at conquest, and during the 2nd cent. temporarily occupied the Lowlands. In the 6th cent. the Angles overran the S.E. up to the Firth of Forth; the Britons, driven northward, occupied the S.W., while Scots from Ireland settled in Argyllshire. Christianity was introduced from Ireland during the 5th–6th cents. The Picts and Scots were united by Kenneth MacAlpin in c. 844; the S.E. was conquered by Malcolm II in 1015, and in 1034 the Britons were brought into the Scottish kingdom. S. suffered during the 9th cent. from raids by the Norsemen, who held the Hebrides until the 13th cent., and the Orkneys and Shetlands until the 15th. From the 11th cent. many Englishmen and Normans settled in S.; the English language spread over the Lowlands, and the feudal system was estab. in the 12th cent.

Edward I's attempt to annex S. led to a series of revolts led by Wallace and Bruce (1296–1314), ending in the Scottish victory at Bannockburn, although

lation in big towns came the development of the department store, in effect a number of small specialist shops under one roof, and of the chain store, with many Ss. scattered in different towns or counties and able to buy wholesale in such quantities that prices could be lowered below those of smaller competitors. As a development of wholesale purchase came direct links with factories producing goods, often under the same ownership, which further cut costs and even the elimination of the S. itself by direct mail or mail order (q.v.). It was also unusual until the 20th cent. to enter a S. without a particular purchase in mind, then came the invitation to walk round 'without obligation', then the notion of self-service (made more general by shortage of staff after the S.W.W.) from a selection of goods on the shelves, and — on the way — press-button shopping, in which buttons are pressed beneath display samples of the goods required and the various requirements of the customer are delivered already packaged together with a bill at the shop exit. The leader in the development of most of these ideas has been the U.S.A., where such gimmicks as trading stamps (long known in Britain) have grown to a large-scale business and then been re-exported.

SHOP STEWARD. A trade union representative in a 'shop' or department of a factory, who recruits for the union, inspects contribution cards and reports grievances to the district committee. Originating in the engineering industry, this form of organization has spread to all large industrial undertakings.

SHOREHAM BY SEA. English seaport (U.D.) in Sussex, 6 m. W. of Brighton, near the mouth of the Adur. Pop. (1961) 17,391.

SHORTHAND. System of rapid writing specially adapted to recording the spoken word. The Greeks and Romans practised systems of abbreviated writing, but the earliest S. system to be based on the alphabet and to follow the spelling of words was that of John Willis pub. in 1602. Later orthographic systems were those of Thomas Shelton (pub. 1630), which was used by Pepys, and that of Thomas Gurney (pub. 1750), which was used by Dickens. Phonetic systems, based entirely on the sound of words, began to appear in the 18th cent., and were perfected by Isaac Pitman. The system of John Gregg rejects the geometric forms of Pitman S. for cursive forms based on those of ordinary script. Speeds of 280 words a minute are attainable by either system. Another well-known system is Dutton's.

SHOSTAKOVICH, Dmitry Dmitrievich (1906–). Russian composer. B. in Leningrad, where he studied the piano and composition at the Conservatoire, he has written 13 symphonies, the 1st in 1926 and the most famous of the others being the 5th (with its sub-title 'A Soviet Artist's Reply to Just Criticism') in 1937, the patriotic 7th or *Leningrad* (1941) which marked a temporary return to favour; and the moving 10th (1955). He has also written ballets and operas, most famous of the latter being *The Nose* and *A Lady Macbeth of Mzensk* (1936) which was found by authority too divorced from the proletariat, but after years of suppression was revived in 1963 as *Katerina Ismailova*. His appointment as First Sec. of the Soviet Union of Composers in 1960 illustrated reconciliation with officialdom.

SHOVELL (shuv'-), Sir Cloudestey (c. 1650–1707). English admiral. He took part with Rooke (q.v.) in the capture of Gibraltar in 1704, and as admiral and C.-in-C. of the fleet shared

SHOSTAKOVICH
Photo: Godfrey MacDominic.

in the destruction of the French Mediterranean naval forces. His flagship *Association*, with 4 other ships of the homeward bound fleet (some 2,000 men), was lost off the Scillies in 1707, the admiral himself coming safely ashore, where he was strangled by a woman of the is. for his rings. Cannon and treasure from *Association* were recovered 1967–8.

SHOVELLER. Fresh-water duck (*Spatula clypeata*), so named from its broad flattened beak, with green head and white and brown body plumage. Spending the summer in N. Europe or America, it winters farther S. and visits Britain.

SHOW JUMPING. Competitive horse jumping over a course of fences. In the post-S.W.W. years S.J. has become an important part of most horse shows, the winner usually being the competitor with fewest 'faults', i.e. penalty marks

given for knocking down or refusing fences, etc., but in time competitions is the competitor completing the course most quickly, additional seconds being added for such mistakes. Important international competitions are held in London, Dublin, Rotterdam, Aachen, Lucerne and Geneva (alternate years), Madrid, Lisbon, Rome, New York and Toronto. Notable riders incl. the British Col. Harry Llewellyn, Wilf White, Peter Robeson Pat Smythe, David Broome, David Barker, Harvey Smith and Anneli Drummond Hay; the German H. Winkler and Alwin Schockemöhle; the Italian Capt. P. d'Inzeo and Graziano Mancinelli; and the American Bill Steinkraus, Frank Chapot and George Morris.

SHOVELLER

SHRAPNEL, Henry (1761–1842). Inventor of the S. shell. He served in the R.A. and became a lieutenant in 1837. His shell was first used in 1804.

SHREW

SHREW. Insectivorous mammal of the family Soricidae, resembling a mouse and renowned for its insatiable appetite. The common S. (*Sorex araneus*) is c. 3 in. long. The pigmy shrewmouse (*S. minutus*) is the smallest British mam-

mal. There are many other species in the N. hemisphere and some are aquatic.

SHREWSBURY (shröz'buri), earl of. Title in the peerage of England, held by the family of Talbot since 1442. It is the premier earldom of England.

SHREWSBURY. Co. town (bor.) of Salop, England, on the Severn. A modernized Norman castle is used as council offices, and the abbey church has a Norman nave. S. School, founded by Edward VI in 1552, is a leading public school. As Pengwern, S. was c. the 5th cent. cap. of the kingdom of Powis, later part of Mercia. At the battle of S., 1403, Henry IV defeated the rebels led by Hotspur (Harry Percy, son of the earl of Northumberland), who was killed. Pop. (1961) 49,726.

SHRIKE. Family of birds (Laniidae), distinguished by a long-toothed bill, and incl. many species, e.g. the Great Grey S. (*Lanius excubitor*) and Lesser Grey S. (*L. minor*), the Woodchat S. (*L. senator*), the Red-backed S. (*L. collurio*), etc. They feed on insects, small birds, and other small animals which they impale on thorns — whence their popular name of butcher-birds.

SHRIMP. A salt-water crustacean of the family Crangonidae, closely allied to the prawns, and hunting for food at night. The edible Common S. of N.

SCOTLAND YARD. Headquarters of the Metropolitan Police, at Broadway, Westminster, London. Originally in S.Y. off Whitehall, it was removed to New S.Y. on the Embankment, close to the Houses of Parliament, in 1890, and in 1967 to the 21-storey building at Victoria which retained the same name. As the seat of the Criminal Investigation Dept., S.Y. is a synonym for the force of detectives.

SCOTS LAW. As compared with English law, Scottish law differs in particular in the extent to which actions involving large sums are initiated in the lower courts, and the absence of the separate system of Equity. In criminal law the principal distinguishing feature is the all-pervading system of public prosecution. The supreme civil court of Scotland is the House of Lords. Below this comes the Court of Session, possessing an original and an appellate jurisdiction; its judges have the honorary title of Lord, and a division of the Inner House, as the appeal court is called, is presided over by the Lord President, or by the Lord Justice-Clerk. Below the Court of Session is the Sheriff Court, one of which is found in every county. The supreme criminal court is the High Court of Justiciary. Other courts are the Burgh courts (criminal) where the bailies preside, and there are also justices' courts (civil and criminal). There are considerable differences in court procedure. The jury consists of 15 and may arrive at its verdict by a majority. A verdict of 'not proven' is competent. There is no coroner: the Procurator-Fiscal inquires into all suspicious deaths.

SCOTS PINE. see PINE.

SCOTT, Elisabeth Whitworth (1898-). British architect. She designed Newnham College, Cambridge, and (after winning a national competition) the Royal Shakespeare Theatre at Stratford.

SCOTT, Sir (George) Gilbert (1811-78). British architect. Largely responsible for the mid-19th-cent. Gothic revival in England, he renovated many churches incl. Ely cathedral and Westminster Abbey with debateable results; and designed the Albert Memorial, the Foreign Office and St. Pancras Station. His grandson Sir Giles Gilbert S. (1880-1960), also an architect, received as his first commission Liverpool Anglican cathedral, and besides many other churches, designed Cambridge Univ. Library, Waterloo Bridge, and with his brother Adrian Gilbert S. (1882-1963) rebuilt the House of Commons after the S.W.W. He was awarded the O.M. in 1944.

SCOTT, Robert Falcon (1868-1912). British Antarctic explorer. B. at Devonport, he entered the navy in 1882. He commanded 2 Antarctic expeditions, in the *Discovery*, 1901-4, and in the *Terra Nova*, 1910-12. On 18 Jan. 1912 he reached the S. Pole, shortly after Amundsen, but on the return journey he and his companions, Wilson, Oates, Bowers, and Evans, perished. His journal was recovered and pub. in 1913. His widow Kathleen (d. 1947), given rank as widow of a K.C.B. in recognition of his work, was herself a sculptor, e.g. her statue of her husband in Waterloo Place, London; in 1922 she m. the Cons. politician Edward Hilton Young, later Lord Kennet.

His son Peter S. (1909-) is well known as a naturalist, e.g. his television programme *Look*, his paintings of birds (especially geese), his position as founder director of the Wildfowl Trust, and his books which incl. the autobiography *The Eye of the Wind* (1961). He has also undertaken exploratory expeditions to the Canadian Arctic, Iceland, etc., often in pursuit of ornithological interests, is a keen yacht racer, and in 1963 became British national gliding champion.

SCOTT, Sir Walter (1771-1832). Scottish poet and novelist. B. in Edinburgh, the son of a lawyer, he was educ. at the high school and univ., and in 1792 qualified as an advocate. An early attack of infantile

SIR WALTER SCOTT

By Chantry, with his favourite dog, Malda.

Photo: Lady Lever Collection.

paralysislamed him slightly for life. His first literary works were translations of German ballads, and in 1797 he m. Charlotte Charpentier or Carpenter, of French origin. His *Minstrelsy of the Scottish Border* appeared in 1802, and henceforth he combined the practice of literature with legal appointments. *The Lay of the Last Minstrel* (1805) was an immediate success, and so too were *Marmion* (1808), *The Lady of the Lake* (1810), *Rokeby* (1813), and *Lord of the Isles* (1815). Out of the proceeds he purchased and rebuilt

the house of Abbotsford on the Tweed, but Byron had to some extent now captured the lead with a newer style of verse romance, and S. turned to prose fiction. *Waverley* was issued in 1814, and gave its name to a long series of historical novels, incl. *Guy Mannering*, *The Antiquary*, *Old Mortality*, *Rob Roy*, *The Heart of Midlothian* and *The Bride of Lammermoor*. *Ivanhoe* (1819) transferred the scene to England; *Kenilworth*, *Peveril of the Peak*, *The Talisman* (1825), and *The Fair Maid of Perth* (1828) followed. In 1820 S. was created a baronet, but in 1826 he was involved in financial ruin through the bankruptcy of Constable his chief publisher, with whom fell Ballantyne & Co., the firm of printers and publishers in which S. had been for many years a sleeping partner. Refusing to accept bankruptcy, he set himself to pay off the combined debts of over £120,000. *Woodstock* (1826), a life of Napoleon, and *Tales of a Grandfather*, are among the chief products of these last painful years. The last outstanding liabilities were cleared after his death on the security of copyrights. Continuous overwork ended in a nervous breakdown. He d. at Abbotsford on 21 Sept 1832. His *Journal* was issued in 1890, and his life by J. G. Lockhart, his son-in-law, in 1837. His finest works were the books dealing with the troubled times of the Covenanters, still in living memory in his boyhood, and he excels in depicting the speech and character of ordinary, fundamentally good, people.

SCOTTISH GAELIC. This forms with Irish Gaelic and Manx the Gaelic branch of the Celtic languages, and often agrees with Manx where it differs from Irish. S.G. was introduced to Scotland by warriors from Ireland at the end of the 5th cent. It attained its widest extent in the 11th cent. It has continuously declined until by 1961 the Gaelic-speaking population numbered 76,587, and was restricted to the Western Isles and the fringes of the N. and W.

LITERATURE. The earliest examples of S.G. prose belong to 1000-1150, but the most important early original composition is the history of the MacDonalds in the Red and Black Books at Clanranald. The first printed book in S.G. was a translation of Knox's Prayer Book in 1567. Prose Gaelic is at its best in the folk-tales, proverbs, and essays by writers such as Norman MacLeod in the 19th cent. and Donald Lamont at the present day.

S.G. poetry falls into 2 main categories. The older syllabic verse was composed by professional bards. The chief sources of our knowledge of this are the Book of the Dean of Lismore (16th cent.), which is also the main early source for the Ossianic ballads; the panegyrics in the Books of Clanranald; and the Fèrnaig MS. Modern S.G. stressed poetry began in the 17th cent. but reached its zenith during the Jacobite period with Alexander MacDonald, Duncan Macintyre, Rob Donn, and Dugald Buchanan. Only

Syracuse, and Marsala. Area 9,923 sq. m.; pop. (1961) 4,711,783.

The earliest recorded inhabitants of S. were the Sicans and Sicels. The Greeks first arrived in the 8th cent. B.C. and estab. a number of independent city states, among which Agrigento, Gela, and Syracuse were of great importance. After 400 B.C. the Carthaginians occupied the W. part of the island and 210 B.C.-A.D. 440 S. was a Roman prov. and an important granary for Rome. Goths and Byzantines conquered S. in turn; the period of Saracen rule 878-c. 1090 was one of great prosperity, maintained under subsequent Norman and Hohenstaufen rulers. From 1302 the Aragonese, then Spain, later the Bourbons of Naples, ruled S. which in 1815 was formed with Naples into the Kingdom of the Two Sicilies. In 1860 Garibaldi drove the Bourbons out of S. and in 1861 it became part of the new Kingdom of Italy. There was extensive emigration in the 19th and early 20th cents. owing to under-employment and over-population, and under the Fascist régime land-reclamation schemes were carried out. Invaded and conquered by the Allies 10 July to 8 Aug. 1943, S. was still faced with chronic unemployment after the S.W.W. since its resources, e.g. sulphur, could not be exploited without capital investment, and development projects such as the Brucia dam were impeded by the Mafia (q.v.), resurgent after being driven underground by Mussolini, and the strength of the separatist movement led to a measure of autonomy being granted by the Italian govt. in the new constitution of 1947. Social worker Danilo Dolci (1924-) has done much since the 1950s to combat the Mafia stranglehold and ameliorate the employment position.

SICKERT, Walter Richard (1860-1942). British artist. B. in Munich, the son of a Danish painter, he was taken to London and studied at the Slade School and under Whistler. He estab. a reputation as a painter of impressionistic pictures, his works incl. 'Mamma Mia Poareta', 'The Area Steps', 'The Evening Primrose', and 'Bath'. He became president of the Royal Society of British Artists, and was elected R.A. in 1934.

SIDDONS, Sarah (1755-1831). English actress. B. at Brecon, Wales, the dau. of Roger Kemble, she m. in 1773 William Siddons. Her first success in Otway's *Venice Preserved* in 1774 led to her engagement in 1775 to appear with Garrick at Drury Lane. The majesty of her presence made her a superb Lady Macbeth, and her other parts incl. Desdemona, Ophelia and Volunmia. She appeared with acclaim until her retirement in 1812, her admirers incl. Johnson and Walpole: Reynolds painted her as 'The Tragic Muse'.

SIDGWICK, Henry (1838-1900). British philosopher. Knightsbridge prof. of moral philosophy at Cambridge from 1883, he is remembered for his utilitarian *Methods of Ethics* (1874), a comparison of various schools, and *The Principles of Political Economy* (1883). He was a founder and 1st pres. of the Soc. for Psychical Research.

SIDI BARRĀNI (sid'ī barrā'nē). Coastal settlement of Egypt, about 230 m. W. of Alexandria, the scene of much fighting 1940-2, during the S.W.W.

SIDI-BEL ABBĒS. Town and trade centre in Algeria, 35 m. S. of Oran. When Algeria was French, it was the H.Q. of the Foreign Legion. Pop. (1967) 101,000.

SIDNEY, Algernon (1622-83). English Republican. The son of the 2nd earl of Leicester, he served in the parliamentary army during the Civil War, and after the Restoration lived in exile until 1677, when he returned to England and was a prominent Whig. Accused of complicity in the Rye House Plot, he was beheaded.

SIDNEY, Sir Philip (1554-86). English poet and soldier. B. at Penshurst, Kent, he entered Parliament

in 1581, and in 1583 was knighted. In 1585 he was made governor of Flushing, and was mortally wounded at Zutphen, fighting the Spaniards. Among his works are the sonnet sequence *Astrophel and Stella* (1591); the romance *Arcadia* (1590); and the *Apologie for Poetrie* (1595), the earliest work of English literary criticism.

SĪDON. Chief city of ancient Phoenicia, bitter rival of Tyre from c. 1400 B.C. until conquered by Sennacherib, 701 B.C. Later a Roman city, taken by the Arabs A.D. 637, fought over during the Crusades. On the W. part of it stands Saida, Lebanon.

SIEGFRIED (sē'frēd). Germanic hero. It is uncertain whether his story has a historical basis, but it was current about 700. In the poems of the Norse Elder Edda and in the prose *Völsunga Saga* S. appears under the name of Sigurd. The best-known version is in the German *Nibelungenlied*.

SIEMENS (sē'mēns). Family of 4 brothers, creators of a vast industrial empire: most famous were the eldest, Ernst Werner von S. (1818-92), who founded in 1847 the original electrical firm of Siemens und Halske and made many inventions in telegraphy; and Wilhelm (1823-83), who became in 1859 a British subject and was knighted in 1883 as Sir William S. He was manager of the firm S. Brothers, and was concerned with the development of the dynamo, etc.

SIENA (sē-ā'nah). City of Tuscany, Italy, cap. of S. prov., 31 m. S. of Florence. The city, which dates back to Roman times, is famous for its architecture, and for a school of painting which flourished from the 13th to the 16th cent. There is a univ. (1300), and a Gothic cathedral, completed 1243. Straw plaiting is carried on, chemicals, cork articles, sausage, etc., are made, and there is trade in wine and olive oil. An annual race on horseback, the Palio, has been held in the main square since the Middle Ages. Pop. (1961) 62,215.

SIENKIEWICZ (syenkye'vich), Henryk (1846-1916). Polish author. His books incl. the 17th cent. historical trilogy *With Fire and Sword*, *The Deluge* and *Pan Michael* (1890-3); *Quo Vadis?* (1895), set in Rome in the time of Nero, and *Without Dogma* (1891).

SIERRA LEONE (sē-er'ra lēōn' or lā-ōnā). Country of W. Africa, between Rep. of Guinea in the N. and Liberia in the S.E. It has a very hot and moist climate. Agriculture supports more than half the pop., main products being palm-kernels, ground-nuts, kolanuts, rice, cocoa, coffee, ginger, and cassava. There are vegetable-oil mills, furniture workshops, and various village industries incl. fishing and weaving. Diamonds (about half of gem quality), the most valuable export, iron-ore, and chromite are mined. S.L. is the former British colony, a small area acquired 1788 for repatriating homeless Africans from London and, later, rescued from slave ships, and protectorate (1896) over the hinterland, which achieved self-govt. 1958, and independence within the British Commonwealth 1961. After military govt. 1967-8, parliamentary rule was restored, but a state of emergency again ensued by the end of 1968. The cap. is Freetown. Area 27,925 sq. m.; pop. (1963) 2,183,000.

SIEYÈS (sē-āyās'), Emmanuel-Joseph (1748-1836). French statesman. Born at Fréjus, he entered the Church, and in 1788 achieved fame with his pamphlet *What is the Third Estate?* He sat in the National Assembly and the National Convention. Elected a Director in 1799, he supported Napoleon's coup d'état, and sat in the senate. He lived in exile 1815-30.

SIGNAC (sēnyahk'), Paul (1863-1935). French artist. Parisian-born, he was influenced by Monet, and in 1884 joined with Seurat in founding the Société des Artistes Indépendants. Fond of sailing, he expanded his brilliant water-colours made on the spot into large canvases instinct with colour and light, often composed of squarish 'mosaic' blobs.

Shinwell in 1935 by more than 20,000 votes. Byron married Anne Isabella Milbanke at S. Hall nearby, 1815. Pop. (1961) 26,048.

SEA-HORSE. Several genera of fishes of which *Hippocampus* is typical. They range from the Atlantic through the Mediterranean to Australia. The body is compressed and covered with bony plates raised into tubercles or spines. There is a crest on the head, and the tail is prehensile. See illus. p. 948.

SEA KALE. Perennial plant (*Crambe maritima*) of the family Cruciferae cultivated in Europe as a vegetable. The young shoots are forced and blanched.

SEAL. Group of carnivorous marine mammals which are subdivided into the eared fur Ss. or Otariidae, and the earless hair or true Ss., the Phocidae. The fur Ss. or sea lions are found chiefly in the N. Pacific and the Behring Sea, and have been ruthlessly persecuted for the sake of their skins. They have sharper muzzles than the true Ss., and use their hind limbs in moving on land. The hair or true Ss. belong to the N. Atlantic and the Arctic Oceans, and incl.

COMMON SEAL. Possibly origin of mermaid legends.

Photo: Ben Darby.

the 2 species known in Britain, the intelligent common S. (*Phoca vitulina*), and the grey S. (*Halichoerus grypus*); and the valuable Greenland S. (*Phoca groenlandica*). The streamlined body has the limbs converted to flippers, and in the hair Ss. the posterior limbs are joined with the tail. The rare elephant-S. or sea-elephant (*Mirunga*), so-named because of its enlarged proboscis, is the largest of all Ss., and is found in the S. Atlantic and Pacific. The male grows much larger than the female and may reach over 20 ft.

ELEPHANT SEAL. Tristan, so named because captured off Tristan da Cunha, is a popular inmate of Stuttgart Zoo. He is more than 12 ft. long, weighs about 1½ tons and has an appetite for fish in proportion.

Courtesy of Wilhelma, Stuttgart.

SEA LILY. Class (Crinoidea) of deep water echinoderms. Their rayed bodies are often borne on a stalk.

SEA LION. See SEAL.

SEALYHAM. Breed of terrier dog, named after the place in Pembrokeshire where it originated as a

cross of the Welsh and Jack Russell terriers.

SEAMAN, Sir Owen (1861–1936). British journalist and humorous poet. Ed. at Cambridge, he joined the staff of *Punch* in 1897, and was editor 1906–32. He was made a baronet in 1933. He pub. *The Battle of the Bays* (1896), *In Cap and Bells*, etc.

SEAPLANE. An aeroplane capable of taking off from, and alighting on, water. There are 2 classes, viz. float-planes and flying-boats. The float-plane is similar to a landplane but has floats in place of wheels; the flying-boat has a hull shaped like a boat, and may also have floats attached to the wing tips. Although Ss. have the advantage of needing no airfield, they depend on smooth water for a good landing and since the S.W.W. have not often been built.

SEARLE (serl), Ronald (1920–). British artist. A skilled draughtsman and cartoonist, he is well known for his sketches of places and people, e.g. *Paris Sketch Book* (1950), *Rake's Progress* (1955); and for the creation of the schoolgirls of St. Trinian's in 1941, whom he abandoned in 1953.

SEATTLE (sē-atl'). Port of the state of Washington, U.S.A., situated between Puget Sound and Lake Washington. First settled 1851, as the nearest port for Alaska, S. grew in the late 19th cent. under the impetus of the Gold Rush. In the 20th it has become a major centre for the manufacture of jet aircraft (Boeing), and also has shipbuilding, timber and paper industries. There are 2 univs., Washington (1861) and Seattle (1891). Pop. (1960) 557,087.

SEA URCHINS. Popular name for a class of Echinoderms, marine animals in which the rays are not free as in star fishes and brittle stars, but united to form a globular, heart-shaped, or shield-shaped and flattened body, enclosed with plates of lime and covered with spines. Sometimes the spines are holding organs, and they also assist in locomotion. S.Us. feed on seaweed and the animals frequenting them, and are edible.

SEAWEED. General name for a vast collection of lower plant-forms that belong to the Algae (q.v.) division of the Thallophyta. They grow from about high-water mark to a depth of 50 to 100 fathoms, and are green, blue-green, red or brown. Many species are used as human food, e.g. Purple Laver (*Porphyra vulgaris*), Green Laver (*Ulva latissima*), and Carageen Moss (*Chondrus crispus*). Ss. also enter into the production of iodine, soap, and glass, and some provide a valuable manure. See illus. p. 28.

SEBASTIAN, St. Christian martyr, first shot with arrows and then beaten to death c. 288.

SEBASTOPOL. See SEVASTOPOL.

SEBENKO. Ital. name of SIBENIK.

SECOND WORLD WAR. The war of 1939–45 between the United Nations, headed by Britain, the U.S.A., the U.S.S.R., France, and China, on the one side, and the Axis powers, Nazi Germany under Hitler, Fascist Italy under Mussolini, and Japan under Hirohito, with their satellites, on the other. The war was preceded by a long series of acts of aggression by the Axis powers: the Japanese conquest of Manchuria (1931), the Italian conquest of Ethiopia (1935–6), German and Italian intervention in the Spanish Civil War (1936–9), the Japanese invasion of China (1937), the German annexation of Austria (March 1938), Sudetenland (Sept. 1938), and Czechoslovakia (March 1939), and the Italian conquest of Albania (April 1939). Britain and France attempted to meet this menace with an 'appeasement' policy, culminating in the Munich agreement (Sept. 1938). The reaction of public opinion to the annexation of Czechoslovakia forced the British and French govts. to open negotiations with the U.S.S.R. for a peace bloc; these broke down in Aug. 1939, when the U.S.S.R. concluded a non-aggression pact with Germany. On 1 Sept. Germany invaded Poland and,

SILVER. The chalice on the left, depicting the life of Moses, is of German origin and dates from 1600 – it once belonged to the Rothschilds: the jug on the right was given to Nelson in 1795 by 'his friend Spencer [First Lord of the Admiralty] in recognition of services rendered at Leghorn and Genoa'.
Courtesy of Miss A. Mitchell-Hedges.

the silkworm moth, the most commonly cultivated species being *Bombyx mori*, and used in the manufacture of textiles. The 'worm' or larva attains maturity within a month of hatching from the egg, feeding on the leaves of white mulberry trees, and then 'spins' a protective cocoon of fine silk thread. Before it can emerge as the perfect insect, when it would in the natural state live for a few days (mating and egg-laying then taking place), the silk maker ensures its death by plunging the cocoon in hot water or in a hot oven. To allow it to emerge would damage the thread: from such damaged cocoons the inferior spun S. is made. The thread from a number of cocoons is then reeled together to form a strong filament of raw S.: one cocoon contains c. 300 yds. of thread. The introduction of synthetics originally harmed the S. industry, but S. has properties synthetics do not possess and rising standards of living have produced an increased demand for real S. Japan produces just over half the world's S. (mostly for domestic use in kimonos, etc.) followed by China (23 per cent) and the Soviet Union (9 per cent): Italy and France, as having climates best suited to the trees on which the larvae must feed and to the requirements of the insect's own development, are European producers.

SILLITOE, Alan (1928–). English novelist. Raised in Nottingham, he set there his first book, *Saturday Night and Sunday Morning* (1958), which reflected in its hero, Arthur Seaton, the complete transformation of working-class status in England since the S.W.W. Later books incl. *The Key to the Door* (1961), also set in Nottingham, and *The Rats* (1960) – poetry.

SILONE (selōn'ā), Ignazio (1900–). Italian novelist. Once Communist, he is a non-party socialist. His best-known novel, *Fontamara* (1933) – a simple, moving description of the hopes and disillusionment of a peasant village – was followed by others e.g. *A Handful of Blackberries* (1952), dealing with the problem of the individual in politics.

SILSOE, Arthur Malcolm Trustram Eve, baron S. (1894–). British lawyer. Chairman of the War Damage (1941–9) and Local Govt. Boundary (1945–9) commissions, he became First Church Estates Commissioner in 1954 and was First Crown Estate Commissioner 1955–62. He was created a baron in 1963.

SILVA, Antonio José da (1705–39). Portuguese dramatist. B. at Rio de Janeiro, he settled in Lisbon where he was burnt by the Inquisition. His comedies, such as *Don Quixote* (1733) and *Amphitruao* (1736), ridiculed 18th cent. society.

SILVĀNUS. A Roman woodland deity, identified in later times with Pan.

SILVER. A lustrous silvery metal, extremely malleable and ductile: symbol Ag (Lat. *argentum*), at. wt. 107.873, at. no. 47. Known since prehistoric times, S. occurs native in Peru, but the chief ores are sulphides, from which the metal is extracted by smelting with lead. It is the best metallic conductor of both heat and electricity, and its most important compounds are the chloride and bromide which darken on exposure to light, the basis of photographic emulsions. S. is used for tableware, jewellery, coinage, electrical contacts and electro-plating, and as a solder it makes good metallic joints at 720°C. The world's greatest producer of silver is Mexico (c. 40,000,000 troy oz. p.a.), followed by the U.S.A., Canada, Peru, the U.S.S.R., Australia and Japan.

SIMENON (sēmon'), Georges (1903–). Belgian author. B. in Liège, of Dutch and Breton blood, he is the son of an insurance salesman. On his father's death he had to cut short his education, but rebelled against being apprenticed to a baker, and became a bookstore assistant for a time before joining the staff of a local newspaper. At 20 he went to Paris and started writing pulp fiction, then at 30 began the realistic and psychologically sound series of detective novels built round the character of Inspector Maigret of the Paris Sûreté, and his loyal assistants. These have been translated, filmed, and televised the world over. He has also written numerous 'plain novels', as he terms them, without the prop of police detection, such as *A Wife at Sea*, *The Stain on the Snow*, and *The Woman in the Grey House*.

SIMEON STYLITES, St. (c. 390–459). Syrian Christian ascetic, who lived for 37 years on a pillar.

SIMFEROPOL (simfērō'poly). Town in the Crimea, Ukrainian S.S.R., 40 m. N.E. of Sevastopol, cap. of Crimea region. Soap, tobacco, etc., are manufactured. S. was occupied by the Germans Nov. 1941–April 1944. It is on the site of the Tartar town of Ak-Mechet, conquered by the Russians 1783 and renamed. Pop. (1967) 217,000.

SIMLA. Cap. of Himachal Pradesh, Rep. of India, 7,500 ft. a.s.l., in the Himalayan foothills, 170 m. N. of Delhi. The summer seat of govt. of British India, 1864–1947, it was made cap. of Himachal Pradesh on its formation in 1948. Pop. (1961) 42,597.

SIMON, John Alsebrook, visct. (1873–1954). British Liberal politician and lawyer. As Home Sec. in 1915 he resigned in protest against conscription in 1916 and served in the R.F.C. Entering the Nat. Govt. in 1931 as For. Sec., he was Home Sec. 1935–7, and Chancellor of the Exchequer 1937–40. His chief mark was made by his judgments as Lord Chancellor 1940–5.

SIMONOV (sēm'ōnov), Konstantin (1915–). Russian writer. Belonging to the generation which has grown up devoted to the interests of the Soviet State, he originally made his name as a playwright, and in the S.W.W. served as correspondent at the front for *Red Star*. His novel *Days and Nights* (1944) deals with the defence of Stalingrad on a purely military level, and his play *The Russian Question* (1946) is strongly anti-western on Stalinist lines, but *Victims and Heroes* (1959, U.S.), *The Living and the Dead* takes advantage of the new freedom under Khrushchev to make bold criticisms of the handling of the Soviet-German conflict.

SIMONSTOWN. Naval base in S. Africa, estab. 1814. It lies on False Bay, 23 m. S. of Capetown. The

GEORGES SIMENON

Germans to capture Stalingrad, together with the victory of El Alamein and the landings in N. Africa, marked the turning-point of the war. A Russian offensive in Nov. 1942–March 1943 cleared the Caucasus and drove the Germans back to the Donetz, while at Stalingrad 330,000 of the invaders were killed or captured. A new German drive in July was halted within a week; the Russians then opened an offensive which continued until Nov., and re-captured Kiev and Zhitomir. During Jan.–April 1944 they liberated the Ukraine and entered Rumania. A general offensive in June–Oct. expelled the invaders from Russian soil, forced Finland, Rumania, and Bulgaria out of the war, and entered E. Prussia, Poland and Yugoslavia. British forces entered Greece in Oct., and by the end of 1944 the Germans had been expelled from the greater part of the Balkans. Valuable assistance was rendered to the Allies by Tito's partisans, and by the Greek and Albanian resistance movements. A last Russian offensive in Jan.–May 1945 liberated Poland and Austria, entered Czechoslovakia, and reached Berlin.

Victory in the West 1944–5. The way had been prepared for the opening of the 'second front' in the W. by Allied mass bombing raids on Germany, which since 1940 had steadily increased in number and size. On 6 June 1944 the invasion was launched, under the supreme command of Gen. Eisenhower. A bridgehead was estab. in N.W. France between Cherbourg and Le Havre, and after much hard fighting the Americans broke through the German lines at St. Lô, and the British at Caen. On 15 Aug. U.S. and Free French troops landed on the Mediterranean coast and advanced rapidly northwards. The people of Paris rose, and compelled the Germans to surrender on 25 Aug. By the end of Sept. the Allies had liberated most of France, and entered Belgium and the Netherlands, but the airborne operation at Arnhem (q.v.) was a failure, and on the German frontier they were halted by the Siegfried Line. After a temporary set-back caused by Rundstedt's counter-offensive in the Ardennes in Dec., they launched a new offensive in Feb. 1945 which broke the Siegfried Line. In March the Rhine was crossed; the Canadians advanced through the Netherlands, the British into N. Germany, the Americans and French into Central and S. Germany. On 24 April the Russians entered Berlin, which surrendered on 2 May. On 7 May Germany surrendered unconditionally.

The War at Sea. In the Atlantic British merchant ships had to contend with German submarines and surface raiders, who from 1940 controlled the coast-line from Norway to France. Shipping losses reached their height in 1942; thereafter they declined, as more escort vessels and aircraft became available for convoys. Outstanding engagements in the Atlantic were the battle of the river Plate (13 Dec. 1939), when 3 cruisers badly damaged the *Admiral Graf Spee*; the engagements in Narvik harbour (10 and 13 April 1940); and the sinking of the *Hood* by the *Bismarck* (24 May 1941) and of the *Bismarck* by the *Dorsetshire* (27 May). Italy's entry into the war created a dangerous situation in the Mediterranean until 1943, and Malta, the chief British naval base, suffered continual bombing. A spectacular victory over the Italian fleet was won off Cape Matapan on 28 March 1941. The delivery of

vital supplies to Russia via the Arctic Ocean and the Barents Sea was maintained in face of heavy opposition and natural difficulty.

The Japanese War 1941–5. The attack on Pearl Harbor, which put the U.S. Pacific fleet out of action, air raids on the Philippines, and the sinking

In spite of tremendous difficulties in terrain and transportation the 14th army in Burma engaged and defeated the bulk of the Japanese land forces in the Far East. This painting by Leslie Cole shows an armed patrol of the Queen's Own (R.W.K.) in the flooded Sittang Bend. Courtesy of Imperial War Museum.

of the *Prince of Wales* and the *Repulse* on 10 Dec. 1941 temporarily gave the Japanese naval and air supremacy in the Pacific. They immediately overran Malaya from Thailand, where they had estab. bases, and captured Singapore with 60,000 British troops in Feb. 1942. Hong Kong had surrendered on 25 Dec. The conquest of the Philippines was completed by 6 May, when Corregidor fell, although guerrilla resistance continued, and that of the Dutch E. Indies by 10 March. Burma was also invaded from Thailand, and after the fall of Mandalay in May the British forces there were withdrawn to India. During Jan.–March Japanese troops were landed in New Britain, the Solomons, and New Guinea.

The first Allied successes against the Japanese were the naval victories in the Coral Sea (4–7 May) and off Midway (4–7 June), when U.S. aircraft inflicted heavy losses on Japanese fleets. Another victory followed on 2–5 March 1943, when a Japanese convoy was destroyed in the Bismarck Sea. A successful offensive was launched in New Guinea in Sept. 1942–Jan. 1943, while during Aug. 1942–Feb. 1943 U.S. marines expelled the Japanese from Guadalcanal, in the Solomons. After occupying certain of the Aleutian Is. in June 1942, the Japanese were forced to withdraw in May–Aug. 1943.

From 1943 the command against Japan was divided between Lord Mountbatten in Burma, Admiral Nimitz in the Central Pacific, and Gen. MacArthur in the S.W. Pacific. A threatened invasion of India was averted in March–June 1944; the reconquest of Burma was begun in Jan. 1945, and was practically completed with the fall of Rangoon in May. In the Central Pacific, the Gilbert, Marshall, and Mariana Islands were seized by the Allies in 1943–4, and in the S.W. New Guinea was slowly reconquered. In Oct. 1944 the reconquest of the Philippines began, and was completed by July 1945. The seizure of Iwo-Jima in Feb.–March 1945, and of Okinawa in April–June, supplied the necessary bases for the final attack on Japan.

The end came suddenly. An atom bomb was dropped on Hiroshima on 6 Aug., and another on Nagasaki on 9 Aug. Russia declared war on Japan, and invaded Manchuria on 8 Aug. Hirohito announced his acceptance of the Allied terms on 14 Aug., and the formal surrender was signed on 2 Sept.

'Loading tanks for Russia', by Leslie Cole. Courtesy of the Imperial War Museum.

SINO-JAPANESE WARS. The first war between China and Japan, in 1894-5, ended in a Japanese victory and the annexation of Formosa and the Pescadores. In 1931-2 the Japanese occupied Manchuria, which they formed into the puppet state of Manchukuo, and attacked Shanghai. War was renewed in 1937, when the Japanese overran N.E. China and seized Shanghai and Nanking. In 1938 they captured Hankow and Canton, and the Chinese cap. was transferred to Chungking. A period of stalemate followed. The Japanese attack on Britain and the U.S.A. in 1941 was followed by the extension of lease-lend aid to China, but the loss of Burma cut off a valuable source of supplies. A Japanese offensive in 1944 seriously threatened Chungking. The Chinese shared in the final offensive in 1945, and received the Japanese surrender at Nanking in Sept.

SIOUX (soo) CITY. City of Iowa, U.S.A., on the Missouri near its junction with the Big Sioux r. Founded 1849, it is an important livestock and dairy-products centre. Pop. (1960) 89,159.

SIOUX FALLS. Largest city in S. Dakota, U.S.A., on the Big Sioux r., near the 100 ft. high Sioux Falls which supply power for its industry. Pop. (1960) 65,466.

SIOUX INDIANS. Principal tribe of the Dakota family of N. American Indians, now confined to S. Dakota and Nebraska. Gen. George Custer (1839-76) was killed with 250 men when he moved against a S. camp at Little Bighorn, Montana (under chiefs Crazy Horse and Sitting Bull): the site of Custer's 'Last Stand' is a nat. monument.

SIRENS. In Greek mythology, sea nymphs who lured sailors on to the rocks by their singing. When Odysseus passed them he tied himself to the mast and stuffed his companions' ears with wax, while the Argonauts escaped them because Orpheus' singing surpassed theirs.

SIROCCO. A hot, normally dry and dust-laden wind which blows from the highland of Africa to N. Africa, Malta, Sicily, and Italy. It occurs mainly in the spring. The name S. has been applied to southerly winds in the E. of the U.S.A.

SISAL HEMP. See HEMP.

SISKIN

SI'SKIN. Bird (*Carduelis spinus*) in the finch family Fringillidae, found in the Old World from Britain to Japan: it is greenish yellow with an attractive song. The American S. is more accurately the pine-finch (*Spinus pinus*).

SISLEY (sis'li). Alfred (1840-99). French artist. B. in Paris, of English parents, he studied under Gleyre, and became associated with Monet and

Renoir. He met with little success in his lifetime, but he is now regarded as among the best of the Impressionists. A landscape painter, he painted the effects of light at different times of the day.

SISYPHUS (sis'ifus). A mythical king of Corinth, who was condemned in the underworld to roll uphill a huge stone which always rolled down again when it reached the top.

SITWELL, Sir Osbert (1892-1969). Brit. poet and author. B. in London, the son of Sir George S. (1860-1943), he went to Eton, and served in the Grenadier Guards 1912-19. He pub. his *Selected Poems* in 1943, and wrote art criticism, novels, e.g. *A Place of One's Own* (1941); and a series of autobiographical vols.: *Left Hand! Right Hand!*, *The Scarlet Tree*, *Great Morning*, *Laughter in the Next Room*, *Noble Essences* and *Tales My Father Taught Me* (1945-62). His brother, Sacheverell S. (1897-), was b. at

THE SITWELLS. Dame Edith, a magnificent romantic in her dress as in her poetry, and Sir Osbert.

Scarborough, and has pub. art criticism, e.g. *Southern Baroque Art* (1924), and *British Architects and Craftsmen* (1945); poetry; and prose miscellanies such as *Sacred and Profane Love*, and *Splendours and Miseries*. His sister Dame Edith S. (1887-1964), also b. in Scarborough, pub. *Collected Poems* (1930), and *Shadow of Cain* (1948); the prose *Life of Alexander Pope* (1930), and *Aspects of Modern Poetry* (1934); and the autobiography *Taken Care Of* (1965).

SIVA (sē'vah) or SHIVA (Skr. for 'propitious'). The 3rd person in the Hindu triad. As Mahadeva (great lord), he is the creator, symbolized by the phallic *linga*, who restores what as Mahakala he destroys. He is often sculptured as Nataraja, performing his fruitful cosmic dance. His consort or female principle (*sakti*), is Parvati, otherwise known as Durga or Kali.

SIXTUS. Name of 5 popes. Sixtus IV (1414-84), who became pope in 1471, built the Sistine Chapel, which is named after him. Sixtus V (1521-90), who became pope in 1585, supported the Spanish Armada and the Catholic League against Henry IV.

SJAELLAND. See SEELAND.

SKA'GERRAK. Arm of the North Sea between the S. coast of Norway and the N. coast of Denmark. In May 1916 it was the scene of a naval action called in Britain the battle of Jutland.

SKANE (skaw'ne). Densely peopled prov. of S. Sweden. A fertile agricultural region, Danish until ceded to Sweden in 1658, it comprises the counties of Malmöhus and Kristianstad; Malmö and Hålsingborg are important centres.

SKATE. The name of several species of flat fish of the ray family. The common S. (*Raja batis*) is from 2 to 4 ft. long, greyish in colour, with black specks. Found off the British coasts, it is eaten. The egg-cases ('mermaids' purses') are often thrown up by the tide.

SKATING. Self-propulsion on ice by means of bladed skates, or on some prepared surface (usually a poillite or masonite rink)

by means of skates with 4 small wooden (usually maple) rollers. Ice S. probably originated in Scandinavia, the first skates being animal bones, was popular on the canals of medieval Holland, and in the 17th and 18th cents. in England and on the Continent. The 1st English S. club was founded in London in 1842, followed in 1849 by one in Philadelphia, where the 1st all-iron skate was invented in

SKATE

subjects is also S. In the 18th and 19th cents it was eld by the courts that any criticism of the govt. was editious, and in 1758 John Shebbeare was imprisoned or libelling William III (d. 1702) and George I (d. 1727); this attitude has entirely changed, and it is accepted that any criticism of the govt. aimed at reform is allowable. In the U.S.A., under a wartime act of 1917, reinstated 1950, S. is (i) making a false report intended to interfere with the operations of U.S. armed forces or to assist the enemy; (ii) attempting to seduce the armed forces from their allegiance or to obstruct recruiting.

SEELAND. The main island of Denmark on which Copenhagen is situated. It is low-lying with an irregular coastline. Dairy farming is the main occupation. Area 2,700 sq. m.; pop. (1960 est.) 1,893,163.

SEELYE, Sir John Robert (1834–95). British historian. B. in London, he was ed. at Cambridge, where he became prof. of modern history in 1869. His *The Expansion of England* (1883) was a masterly study of the growth of the British Empire.

SEFERIS (sefā'ris), George. Pseudonym of the Greek poet and diplomat George Seferiades (1900–). B. in Smyrna, he was ed. at Athens Univ. and at the Sorbonne, and entered the diplomatic service, becoming ambassador to the Lebanon (1953–7) and then to the U.K. (1957–62), when he did much to help resolve the Cyprus crisis. He pub. his first vol. of lyrics in 1931 and his *Collected Poems* in 1950, his work having a deep feeling for the Hellenic world and showing the influence of the French symbolists and of T. S. Eliot, whose *The Waste Land* he trans. into modern Greek. He received a Nobel prize 1963.

SĒ'GAL, Arthur (1875–1944). Rumanian artist. Born in Rumania, he later worked in various Continental countries and in England. His art is an extension of Cubism, though he returned in his last period to naturalism, and was a remarkable pioneering force in modern art.

SEGÓ'VIA, Andrés (1894–). Spanish guitarist. Performing at concerts throughout the world from 1914, he has estab. the guitar as a serious instrument by his arrangements for it of classical works by Bach, Handel, Scarlatti, etc.

SEGÓ'VIA. Town of central Spain, cap. of S. prov., c. 40 m. N.W. of Madrid, and famous for its Moorish alcázar, 16th cent. cathedral, and Roman aqueduct. Textiles are made. Isabella of Castile was crowned at S. in 1474. Pop. (1960) 31,000.

SĒGÜR (seh'gür), Louis Philippe, comte de (1753–1830). French diplomat. B. in Paris, he was ambassador to St. Petersburg for 5 years, and served in the American War of Independence. He pub. historical works, and *Mémoires*.

SEINE (sān). River of France which rises N.W. of Dijon on the plateau of Langres and flows for 481 m., generally in a N.W. direction, to the English Channel near Le Havre, passing through Paris and Rouen and receiving the Yonne, Marne, Oise, etc.

SEISMOLOGY (sīz-). Study of earthquake phenomena. See EARTHQUAKE.

SEISMOGRAPH. Instrument for recording earth tremors.

SEKHMET. Egyptian goddess of heat and fire. She was represented with the head of a lioness, and worshipped at Memphis as the wife of Ptah.

SEKONDI (sek'undē). Port in Ghana, W. Africa, with a boatbuilding yard. Pop. (1960) 34,513

SELA'NGOR. State of the Fed. of Malaysia. It was under British protection from 1874, and a Federated State 1895–1946. Kuala Lumpur, on the Klang r., is the cap. of S. and of the Federation. Klang is the seat of the Sultan and a centre for rubber-growing and tin-mining. Port Swettenham exports tin. Area 3,167 sq. m.; pop. (1966) 1,386,251.

SELBORNE, Roundell Palmer, 1st earl of (1812–95). British lawyer and statesman. He was Lord

Chancellor in Gladstone's govts. of 1872–4 and 1880–5, and carried through the Judicature Act of 1873, which reorganized the law courts.

SELBORNE. English village in Hampshire, 5 m. S.S.E. of Alton, made famous by *The Natural History of S.* (1789) of Gilbert White (1720–93) who was b. here. The S. Society (founded 1885) promotes the study of wild life.

SELDEN, John (1584–1654). English jurist and statesman. B. in Sussex, he was an ardent Parliamentary and opponent of Divine Right, and wrote legal works. His *Table Talk* (1689) consists of short essays on political and religious questions.

SELĒ'NE. Greek moon-goddess, in later times identified with Artemis.

SELĒ'NIUM (Gk. *Selene* Moon). Element discovered in 1817 by Berzelius, associated with tellurium and the sulphur family, and existing in several allotropic forms, the grey being a conductor of electricity when illuminated and its conductivity increasing markedly with the brightness of the incident light: symbol Se, at. wt. 78.96, at. no. 34. It occurs as selenides and in many sulphide ores, and is used in making red glasses and enamels, and as a semiconductor used extensively in photocells and rectifiers.

SELFRIDGE, Harry Gordon (1857–1947). American business man. B. in Wisconsin, U.S.A., he became a member of the firm of Marshall Field & Co. of Chicago. Retiring in 1903, he then went to London, and in 1909 founded the Selfridge Store, the first mammoth department store in Britain.

SELKIRK, Alexander (1676–1721). Scottish sailor. While serving in 1704 as a privateer under Dampier he was marooned on Juan Fernandez island, where he remained until rescued in 1709. This episode suggested Defoe's *Robinson Crusoe*.

SELKIRK. Scottish market town (burgh), cap. of Selkirkshire, on the Ettrick, c. 5 m. S.W. of Galashiels. It manufactures woollens. Pop. (1961) 5,634.

SELKIRKSHIRE. Inland county of Scotland. The main rivers are the Tweed, Yarrow, and Ettrick. The county is mainly hilly and sheep are grazed extensively. Wool manufacture and tanning are the main industries. Selkirk is the cap. and Galashiels the largest town. Area 267 sq. m.; pop. (1961) 21,055.

SELOUS (selōō), Frederick Courtney (1851–1917). British explorer and big-game hunter. B. in London, he went to S. Africa in 1871, and led the British S. Africa Company's pioneer expedition to Mashonaland (1890–2), later fighting in the Matabele wars. He was killed in action at Beho Beho, E. Africa.

SELWYN, George Augustus (1809–78). British churchman. Appointed bp. of New Zealand and Melanesia in 1841, he preached in Maori and travelled throughout his enormous diocese. He reluctantly became bp. of Lichfield in 1868. In 1882 S. Coll., Cambridge, was founded in his memory.

SELZNICK, David Oliver (1902–1965). American film producer. B. at Pittsburgh, he produced for various companies before himself organizing Vanguard Films Inc., Selznick Studio, etc. His productions incl. *King Kong* and *Gone with the Wind*.

SEMA'NTICS. Branch of philology dealing with the changing meaning of words, also known as semasiology.

SEMAPHORE (sem'afor). A signalling apparatus consisting of a post with movable arms, the position of which conveys the message. By night lights are employed. In the army and navy signallers convey messages by their arms with or without the aid of flags.

SEMARANG. Indonesian town in Java, cap. of Central Java prov., 270 m. E.S.E. of Djakarta. Its exposed harbour is not safe in the time of the monsoon. There are shipbuilding yards; exports incl. coffee, teak, sugar, tobacco, kanok, and petroleum from nearby oilfields. Pop. (1967) 503,153.

SE'MELE. In Greek mythology, the daughter of

SKYDIVING. See **FREEFALLING.**

SKYE (ski). Largest island of the Inner Hebrides, part of Inverness-shire, Scotland, separated from the mainland by the Sound of Sleat. The principal port is Portree. Area 643 sq. m.; pop. (1961) 7,400. See illus. p. 520.

SKYE TERRIER. Variety of Scotch terrier. It is rather small with a long coat, varying from dark blue to light grey in colour.

SKYLARK. See **LARK.**

SKYROS (ski'ros). Greek island, one of the N. Sporades, in the Aegean Sea, rising to 2,608 ft. Wheat, figs, olive oil, fish, and cheese are produced, and there are deposits of marble, chromite, and iron. Rupert Brooke (1888–1915) is buried on S. Area 79 sq. m.; pop. (est.) 4,000. The cap. is also S., pop. 3,000.

SKYSCRAPER. See **UNITED STATES: ARCHITECTURE.**

SLADE, Felix (1790–1868). British art collector. B. in London, he bequeathed most of his art collection to the British Museum, and endowed Slade art professorships at Oxford, Cambridge, and University College, London. The Slade School is a branch of University College.

SLADEK (slah'dek), Josef Václav (1845–1912). Czech poet. He spent some time as a trapper in America and later became a lecturer at Prague. He produced lyrics and translations of English poets.

SLANDER. One variety of defamation, the other being libel (q.v.). Defamatory spoken words or gestures constitute S., but if broadcast, constitute a libel. Such Ss. as imputing incapacity to a person in his profession, or unchastity to a woman, are actionable without proof of pecuniary loss. As in the case of libel, the S. must be pub. to some person other than the person defamed for it to be actionable.

SLATE. Kind of fine-grained, bluish-purple rock which splits readily into thin slabs suitable for roofing. It is highly resistant to atmospheric conditions, and is also used for writing purposes with chalk. The N. Welsh kind is finest.

SLAVERY. The legal and economic status of being another's property. S. probably originated in early agricultural societies, the slaves being recruited from prisoners of war. In Greece and Rome S. formed the economic basis of society. From the 2nd cent. B.C. conquest flooded Rome with slaves, who in the 1st cent. A.D. outnumbered free men in Italy, and several slave revolts occurred. The economic crisis of the 2nd cent. A.D. onwards led to alleviation of the slaves' lot, and serfdom replaced S. It nevertheless died out slowly, surviving in England until the 11th cent. The colonization of America led to a revival of S. in the 16th cent., and to the establishment of a traffic in Negro slaves. Humanitarian agitation led to the prohibition of the slave trade in the British dominions in 1807 and of slave-holding itself in 1833. Leaders of the movement were Granville Sharp, Thomas Clarkson and Wilberforce. In the U.S.A. the Civil War turned largely on slavery, which was declared illegal by Lincoln in 1865. Although officially abolished, S. tends to linger in remoter areas of Africa.

SLAVKOV. Czech name of **AUSTERLITZ.**

SLAVS (slahvz). Indo-European race. They appear to have originated in the Carpathian regions, and by the 7th cent. had occupied an area lying between the Baltic, Elbe, Adriatic, and Black Sea. During the 9th cent. they embraced Christianity, and in the course of the Middle Ages they were expelled from what is now E. Germany. After the 16th cent. S. settled in Siberia on an increasingly large scale. The S. have for long been divided into well-defined national groups, among which the Russians (E. Slavs) are by far the largest. Others incl. the Poles, Czechs, Slovaks, and Wends (W. Slavs), and Serbo-Croats, Slovenes, and Bulgars (S. Slavs).

SLEEP. A state in which the whole organism is at

rest. Very little is known about its nature, but it is marked by unconsciousness, relaxation of muscles, slow pulse, and quiet breathing. The amount of sleep required by individuals varies; children and the sick require most and the aged least. The average is seven hours a day. Sleeplessness is largely due to anxiety.

SLEEPING SICKNESS. Trypanosomiasis; acute disease caused by blood parasites carried by the tsetse fly, etc. When the parasites enter the cerebrospinal fluid, the patient becomes apathetic, and sleeps continually until he dies. The chief symptoms are fever, rash, illness, and sensitivity of the bones to blows. Early cases may be cured with antimony, arsenic and more recently suramin.

SLEEPY SICKNESS. Encephalitis lethargica; acutely infectious disease chiefly affecting the central nervous system. Inflammation of the brain, caused by an unidentified virus, is followed by death in 40 per cent of cases and invalidism in a large proportion of others.

SLIDE RULE. A mathematical instrument used for rapid calculations; incl. multiplication, division, and the extraction of square-roots.

SLIGO. Maritime county of Connacht, Republic of Ireland. The Darty mountains in the N.E. rise to 2,113 ft., in Ben Bulbin. Loughs Arrow, Gill, and Gara are of striking beauty. Dairying and stock raising are the main occupations, but coal, lead, copper and iron are found. Area 694 sq. m.; pop. (1961) 53,558. The cap. is S., on the Garroge, which is famous for its cathedral (1870) and the abbey ruins. Pop. (1966) 51,263.

SLIM, William Joseph, 1st visct. (1891–). British field marshal. As commander of the 14th Army 1943–5, he was largely responsible for the victory in Burma, and was C.I.G.S. 1948–52. He was Gov.-Gen. of Australia from 1953 until 1960 when he was also created visct.

SLOANE (slōn), Sir Hans (1660–1753). British physician. B. in Co. Down, he settled in London, and in 1721 founded the Chelsea Physic Garden. He was president of the Royal College of Physicians 1719–35, and in 1727 succeeded Newton as president of the Royal Society. His library, etc., which he bequeathed to the nation, formed the nucleus of the British Museum.

SLOE. See **BLACKTHORN.**

SLOTH. Family (Brady-podidae) of mammals of the order Edentata, confined to S. America. They have small rounded heads, rudimentary tails, and prolonged forelimbs: each foot has long curved claws adapted to clinging upside down from trees. The fur is greyish-brown, and the diet vegetarian. The chief species are the 3-toed S. or ai (*Bradypus tridactylus*), and the 2-toed S. (*Choloepus didactylus*) of Brazil.

SLOUGH (slow). English industrial town (bor.) in Bucks, near Windsor. There is a large trading estate with numerous engineering and other factories. Sir William Herschel (q.v.) and his sister carried out much of their astronomical research at S. Pop. (1961) 80,503.

SLOVAKIA. Region in the E. of Czechoslovakia settled in the 5th–6th cents. by Slavonic tribes; occupied by the Magyars in the 10th cent.; part of the kingdom of Hungary until 1918 when it became a prov. of Czechoslovakia (q.v.). S. was a puppet state under German domination 1939–45, and was abolished as an administrative division in 1949. Its cap. and chief town was Bratislava.

SERAJEVO. See **SARAJEVO.**

SERAMPUR. Town of W. Bengal, Republic of India, on the Hooghli, c. 10 m. N.N.W. of Calcutta. A Danish settlement, it was bought by the British in 1845. Pop. (1961) 91,521.

SERANG. Alternative form of **CERAM.**

SERAPHIM (ser'afim). Celestial beings, of a high order of angelic hierarchy, mentioned in Isaiah.

SERAPIS. Graeco-Egyptian god, a combination of Hades and Osiris, invented by the Ptolemies; his finest temple was the Serapeum at Alexandria.

SERBIA. Federal republic of Yugoslavia, including the autonomous areas of Vojvodina and Kostovo-Metohija. It includes the federal cap., Belgrade. In the N. are fertile plains watered by the Danube but the S. is mountainous. Wheat, maize, fruit, flax, tobacco, and vines are cultivated. Mineral resources are being developed. Area 34,080 sq. m.; pop. (1961) 7,629,113.

History. The Serbs settled in the Balkans in the 7th cent., and accepted Christianity in the 9th. They were united into one kingdom c. 1169, and under Stephen Dushan (1331-55) founded an empire covering most of the Balkans. After their defeat at Kossovo (1389) they became tributary to the Turks, who in 1459 annexed S. Uprisings in 1804-16, led by Kara George and Milosh Obrenovich, forced the Turks to recognize S. as an autonomous principality under Milosh. The assassination of Kara George by his orders gave rise to a long feud between the 2 houses. After a war with Turkey in 1876-8 S. became an independent kingdom. On the assassination of the last Obrenovich in 1903 the Karageorgevich dynasty came to the throne. The Balkan Wars of 1912-13 greatly enlarged S.'s territory at the expense of Turkey and Bulgaria. S.'s designs on Bosnia and Herzegovina, backed by Russia, led to friction with Austria, culminating in the outbreak of war in 1914. S. was completely overrun in 1915-16, and was occupied until 1918, when it became the nucleus of the new kingdom of the Serbs, Croats and Slovenes, later Yugoslavia (q.v.).

SERFDOM. The legal and economic status of peasants under feudalism (q.v.). The serf was normally bound to the soil; while he could not be sold like a slave, he was not free to leave his lord's estate. He had to give a certain number of days' unpaid labour every week on his lord's land, in addition to extra labour at harvest time and other busy seasons, and to pay tribute in kind; in return he was allowed to cultivate a portion of the estate for his own benefit. In England S. died out during the 14th-17th cents., but it lingered on in France until 1789, in Russia until 1861, and in most European countries until the early 19th cent.

SERGIUS OF RADO-NEZH. St. (1314/19-1392). Russian saint, founder of the monastery of the Blessed Trinity in the forest near Radonezh. Prior from 1334, he personified the Russian monastic ideal, and besides acting as mediator among Russian feudal princes, inspired Dmitri's victory over the Tartars at Kulikovo.

SERIALISM. See **DUNNE, JOHN WILLIAM.**

SERINGAPATA. Town of Mysore state, Republic of India, 10 m. N. of Mysore city. It was the cap. of the state 1610-1799, when it was taken from

SERVICE TREE

rare precious S. is used for ornamentation. Fibrous varieties are known as asbestos (q.v.) and chrysotile.

SÉRUM. (1) The clear part of the blood left after clotting and removal of blood corpuscles and fibrin; and the exudate in blisters. It contains the substances which protect against disease (antibodies), and also other proteins; as well as the fats and sugars of the blood. (2) The fluid which lubricates the peritoneum, pleura and other body cavities not open to the air.

SERVETUS, Michael (1511-53). Spanish theologian. B. in Navarre, he practised medicine at Vienne. In his theological writings he put forward unitarian and Anabaptist views, for which he was persecuted by the Inquisition at Lyons, and burned alive by Calvin at Geneva.

SERVICE, Robert William (1874-1938). Anglo-Canadian author. B. in Preston, he emigrated to Canada at 20, and achieved great popularity with ballads of the Yukon in gold-rush days, e.g. 'The Shooting of Dan McGrew'.

SERVICE TREE. Tree *Sorbus domestica* of the Rosaceae, found in Europe and Asia. It has pinnate leaves and small oval fruit. The wild S.T. (*Pyrus sorbus*) is a native of Britain.

SERVO SYSTEM. An automatic control system in which the output follows the input in a desired way, and incorporating a feedback to the input derived from the difference between the actual and the desired output.

SESAME (ses'amē). Annual plant (*Sesamum indicum*) of the family Pedaliaceae, which originated in the East. The Indian variety (*S. orientale*) produces oily seeds used for food and soap making.

SESSION, Court of. See **COURT OF SESSION.**

SET. Egyptian god of night, the desert, and of all evils; he was the murderer of Osiris, and is portrayed as a grotesque animal.

SETE (set). Seaport on the Mediterranean coast of France, in Hérault dept., 18 m. S.W. of Montpellier. A fishing centre, it has sardine canneries and trades in wine, brandy, chemicals, etc. It was founded in 1666 as an outlet to the Canal du Midi. Pop. (1962) 36,816.

SETON, Ernest Thompson (1860-1946). British author, whose name was originally Ernest S. Thompson. B. in England, he was brought up in Canada, became noted for his animal drawings and books.

SETON-WATSON, Robert William (1879-1951). British historian. B. in Perthshire, he made a detailed study of central European problems, was prof. of Czechoslovak studies at Oxford 1945-9, and wrote

Tippoo Sahib (who d. of wounds) by Cornwallis. Pop. c. 12,000.

SEROWE (serō'wā) Capital town of the Bamangwato tribe, numbering about 200,000, in Botswana. Pop. (1964) 34,182.

SERPENT. See **SNAKE.**

SERPENTINE. A mineral, hydrated magnesium silicate, occurring usually in soft rocks. The green mottled appearance resembles that of a serpent. The

ST. SERGIUS. Even under the Soviet régime many thousands of pilgrims still visit the saint's tomb in the small Church of the Trinity and St. Sergius built at Zagorsk in 1422, some 40 miles from Moscow. The silver shrine containing the relics of the saint was the gift of Ivan the Terrible.

Constantin de Grunwald.

ERNEST THOMPSON SETON. A male ruffed grouse 'ready to drum' with outspread wings against the air in courtship display. Courtesy of New York State Museum and Science Service.

an authority on gypsy and circus life, and on ballet. Her books incl. *Red Wagon*, *Ballerina*, *The Man in Grey* and *Magic Lantern*.

SMITH, Sir Henry George Wakelyn (1787–1860). British gen. He served in the Peninsular War, and m. a Spanish lady. Subsequently he fought in S. Africa and India, and was governor of Cape Colony 1847–52. Ladysmith is named after his wife and Harrismith after himself.

SMITH, Ian Douglas (1919–). Rhodesian statesman. A farmer, b. at Selukwe, Rhodesia, he served in the R.A.F. during the S.W.W. In 1948 he became a member of the S. Rhodesia legislative assembly, was a foundation member of the Rhodesian Front 1962, and Min. of the Treasury under Winston Field (1962–4), whom he succeeded as P.M. In 1965 he made a unilateral declaration of Rhodesia's independence.

SMITH, John (1580–1631). English colonizer. After an adventurous early life, he took part in the colonization of Virginia, acting as president of the colony 1608–9. During an expedition among the Indians his life is said to have been saved by Pocahontas (q.v.). He explored New England in 1614, and pub. pamphlets on America and an autobiography.

SMITH, Joseph. See MORMONS.

SMITH, Sir Matthew (1879–1960). British artist, known for his exuberant treatment of nudes, luscious fruits and flowers, and landscapes.

SMITH, Sir Ross Macpherson (1892–1922), and Sir Keith Macpherson S. (1890–1955). Australian airmen. Brothers, they were the first to fly from England to Australia in 1919, and for this exploit were knighted.

SMITH, Sydney (1771–1845). British clergyman and author. B. in Essex, he took orders in 1794. While a tutor at Edinburgh, he was among the founders of the *Edinburgh Review* in 1802, and moved to London in 1803, where his brilliant conversational powers made him a leading figure in Whig society, and in 1831 became a canon of St. Paul's. The *Plymley Letters* (1807–8), a plea for Catholic emancipation, is his best-known work.

SMITH, William (1769–1839). British geologist. B. in Oxfordshire, he became a surveyor, and pub. a *Geological Map of England* (1815). He estab. the identification of strata by their fossils, and was often known as Strata S.

SMITH, William Robertson (1846–94). Scots theologian. The articles on the Bible which he contributed to the *Encyclopaedia Britannica* resulted in an unsuccessful prosecution for heresy. In 1883 he was appointed prof. of Arabic at Cambridge. His *Religion of the Semites* (1889) is a classic.

SMITHFIELD. Site of a meat market (1868) and poultry and provision market (1889), covering nearly 10 acres in the City of London, England. Formerly an open space, it was the scene of the execution of many Protestant martyrs in the 16th cent., and of the murder of Wat Tyler in 1381, while the annual Bartholomew Fair was held here from 1614 to 1855. A rocket bomb nearby on 8 March 1945 severely damaged the buildings which were occupied by the military during the S.W.W. The poultry section was destroyed by fire, 1958, re-opened 1963.

SMITHSON, James (1765–1829). British chemist and mineralogist. The Smithsonian Institution in Washington, D.C., was estab. in 1846, following his bequest of £100,000 for this purpose, and incl. a museum, art gallery, zoo park, and astrophysical observatory.

SMOG. Natural fog plus impurities (unburned carbon and sulphur dioxide) from domestic fires, industrial furnaces and internal combustion engines (petrol or diesel). The use of smokeless fuels, the treatment of effluent and penalties for excessive smoke from poorly maintained and operated vehicles have had some effect, but the great cities, notably London and Los Angeles, still frequently suffer and there is

even substantial loss of life, e.g. among chronic bronchitics.

SMOLENSK. City of the R.S.F.S.R., cap. of S. region, on the Dnieper, 230 m. W.S.W. of Moscow. Dating from 882, Russian from 1667, it is an educational centre with a 17th–18th cent. cathedral. Its many industries incl. textile and clothing factories, distilleries, and flour mills. Napoleon defeated the Russians at S. in 1812; and fierce fighting centred on the city in 1941 and 1943. Pop. (1967) 189,000.

SMOLLETT, Tobias George (1721–71). British novelist. B. in Dunbartonshire, he was apprenticed to a Glasgow surgeon, and sailed to the W. Indies in 1740 as a naval surgeon. Returning in 1744, he made his name by the picaresque novels *Roderick Random* (1748), *Peregrine Pickle* (1751), *Ferdinand Count Fathom* (1753), *Sir Lancelot Greaves* (1760–2), and *Humphrey Clinker* (1771). His methods and vivid characterization greatly influenced Dickens. Among his other works are a *History of England*; a translation of *Don Quixote*; *Travels through France and Italy* (1766), utilizing his experiences in search of health in 1763; and the satire, *Adventures of an Atom* (1769). He d. near Leghorn.

SMUGGLING. The illegal import or export of prohibited goods, or the evasion of customs duties on dutiable goods. Restrictions on imports, originally a means of preventing debasement of coinage (e.g. in 14th cent. England), were later used for raising revenue, mainly on luxury goods, and led to a flourishing period of S. during the 18th cent., in spirits, tobacco, lace, etc. Certain regions were famed for their activities – until the mid-19th cent. the islanders of Scilly, England, poor in natural resources, thought little of the 80-mile round trip to France in their long boats to bring back a half-ton of contraband – and even today the state of Andorra exists on its 2 principal industries of tourism and S. Modern S., on both the national and international scale, is concerned with such items as watches, diamonds, gold, and narcotics; and is punishable by fines, and in some cases by imprisonment. See COASTGUARD.

SMUT and BUNT. Parasitic fungi, of the order Ustilaginales, which infect flowering plants, especially cereals.

SMUTS, Jan Christian (1870–1950). S. African statesman and soldier. B. in Cape Colony, he studied at Cambridge, and was admitted to the Bar. Having settled in the Transvaal, he was appointed state attorney in 1898, and during the S. African War commanded the Boer forces in Cape Colony. He subsequently worked for reconciliation between Boers and British and became Min. of the Interior 1910–12 and Defence Min. 1910–20, on the establishment of the Union. He commanded the S. African forces in E. Africa 1916–17, and entered the imperial war cabinet in 1917. He was P.M. 1919–24, and Min. of Justice 1933–9, and on the outbreak of war succeeded Gen. Hertzog as Premier. He held office until defeated at the general election in 1948. He was created a field marshal in 1941, received the O.M. in 1947, and became chancellor of Cambridge univ. in 1948. His philosophical work *Holism and Evolution* was pub. in 1926.

SMYRNA (smer'nah). See IZMIR.

SMYTH (smldh), Dame Ethel (1858–1944). British composer. B. in London, she studied in Leipzig, and in 1893 her Mass in D was performed in London. Her works incl. the operas *Fantasio*, *The Wreckers*, *The Boatwain's Mate*, *Fête Galante*, and *Entente Cordiale*. She suffered imprisonment as an ardent suffragette. In 1922 she was made D.B.E. She wrote the autobiographical *Female Pippins in Eden* and *What Happened Next* (1940).

SMYTHE (smldh), Francis Sydney (1900–49). British mountaineer. B. in Maidstone, he took part in the Kangchenjunga (1930), Kamet (1931), and Everest

SEWING MACHINE. A masterpiece in versatility, the Singer 431 can blind hem, darn, embroider in two colours, pleat, gather, buttonhole and even sew on the buttons. And — the latest development — can be switched from normal lock-stitch to easily pulled-out chain-stitch in half a minute, so that hand tacking is dispensed with.

Courtesy of the Singer Sewing Machine Co.

organisms, and even in some insects, reproduction is a process in which S. may have no part. S. only appears as an essential to reproduction much higher up in the evolutionary scale, and sexual union may be looked upon as being a method of pooling the germ plasm of 2 different lines of descent, thus providing a far greater number of useful mutations. In the higher animals the sexual union of male and female is necessary for the appearance of new life.

Amongst mammals the ova, or egg-cells, are all alike, but the sperms are of 2 kinds, and the sex of the offspring will depend on which kind of sperm has fused with the egg-cell. Sexual characteristics may be divided into primary, i.e. the genital organs and the primary sexual glands, and secondary, which incl. in the woman the more roomy pelvis and the more even distribution of the subcutaneous fat, and differences in the quality and distribution of the hair. The development of the larynx is also greater in the male. At puberty there are marked physical and psychological changes in the body. The emotion of sexual love is aroused or accompanied by visual, auditory, olfactory, and tactile impressions.

Reproduction. The end to which the sexual act is directed is the production of a new individual through the union of an ovum and a spermatozoon. A spermatozoon is about $\frac{1}{800}$ in. long and consists of a rounded head, a tail by means of which it propels itself, and a middle or connecting piece. In a cubic centimetre of fertile human semen more than a hundred million spermatozoa may be present. The female gamete, or ovum, very much larger than the spermatozoon, is a spherical nucleated cell surrounded by a transparent capsule. The ova are developed in round collections of cells, known as Graffian follicles, which are scattered throughout the substance of the ovary. As these follicles become mature they slowly approach the surface of the ovary and each month one ruptures, discharging its contained ovum into the trumpet-shaped end of the Fallopian tube. This act of ovulation usually occurs about midway between 2 successive menstruations. If intercourse has taken place about the time of ovulation, one of the spermatozoa may succeed in reaching the ovum during its passage along the Fallopian tube. It burrows into the capsule of the ovum and its nucleus unites with that of the ovum. A single nucleus is thus formed, half of the chromosomes being derived from the mother and half from the father. The oosperm (the product of this fusion) then begins rapidly to divide, and by the end of the 5th week the rudiments of all the more important organs of the embryo have been laid down. When pregnancy has lasted approximately 280 days the act of parturition begins. See **CHILD BIRTH**.

The beginning of the reproductive life of a woman is marked by the first appearance of the menstrual flow, and its end by the menopause and the cessation of this flow between the ages of 35 and 55. A man may be able to beget children to a very advanced age.

SEXTANT. An instrument, invented by John Hadley in 1730, used in navigating and surveying, to measure the sun's altitude at noon and the angular distances between objects. It has 2 mirrors, one half-silvered, the other rotatable, to coincide the direct vision of an object with a reflected image, the angle being read on to a graduated vernier scale.

SEYCHELLES (sāshel'). Group of c. 100 islands in the Indian Ocean to the N.E. of Madagascar. Colonized by the French in mid-17th cent., it was seized by the British in 1794, made a dependency of Mauritius 1810, and a separate crown colony 1903. Under the constitution of 1967 there is a gov. and a single executive and legislative council, half elected by universal suffrage. The chief products are copra, vanilla, cinnamon, patchouli and guano. The cap. is Victoria, on the largest is. Mahé (pop. 12,000), which is used by the U.S.A. for tracking and telemetry facilities; the second largest is. is Praslin, famous for its double coconuts. English is the official language; Creole and French are also spoken. Area 89 sq. m. (over half being the is. of Mahé); pop. (1967) 48,730. See **BRITISH INDIAN OCEAN TERRITORY**.

SEYMOUR, Jane (c. 1509–37). Third wife of Henry VIII, whom she m. in 1536. She d. soon after the birth of her son (Edward VI).

SEYCHELLES. Peculiar to the islands is the coco de mer palm (*Lodoicea Maldivica*). The great double kernel, which takes 10 years to ripen, is the largest known fruit.

Courtesy of the Seychelles Government

SEYSS-INQUART (sis-in'kvahrt), Arthur (1892–1946). Austrian Nazi leader. He conspired against Austrian independence, and became governor of Austria in 1938. As commissioner for the Netherlands 1940–4 he ruthlessly suppressed all opposition. He was tried at Nuremberg as a war criminal and hanged.

SFAX (sfahks). A port of Tunisia, N. Africa, cap. of S. dist., situated on the Gulf of Gabès, c. 150 m. S.S.E. of Tunis. S. exports phosphates, olive oil, dates, almonds, esparto grass, and sponges. It has an airfield, and makes leather, soap, carpets, etc.; there are also salt works. A Phoenician and later a Roman colony, S. was occupied by French in 1881. It was taken by the British from the German and Italian occupiers in 1943 during the N. African campaign of the S.W.W. Pop. (1966) 250,000.

SFORZA. Name of a famous Italian family who held the duchy of Milan 1450–99 and 1522–35. Their court was a centre of Renaissance culture, Ludovico S. (1451–1508) being famous as the patron of Leonardo da Vinci and other artists. See illus. p. 733.

's **GRAVENHAGE.** See **HAGUE, THE**.

SHACKLETON, Sir Ernest (1874–1922). British Antarctic explorer. B. in co. Clare, Ireland, he was a member of Scott's Antarctic expedition of 1901–4. In 1907–9 he commanded an expedition which reached 88° 23' S. lat., and next commanded the expedition of 1914–16 when he had to abandon his ship, the *Endurance*, in the Weddell Sea. He d. on board the *Quest* on another expedition to the Antarctic.

SHAD. A food-fish (*Alosa*) of the herring family. *A. alosa*, the allice, and *A. finta*, the twaite, are the Brit. species.

SHADWELL, Thomas (1642–92). English dramatist and poet. His plays incl. *Epsom Wells* and *Bury Fair*,

LORD SNOW. On a visit to Russia he shares an uproarious joke with Mikhail Sholokhov (left).

Courtesy of Lord Snow.

received a life peerage. He m. in 1950 Pamela Hansford Johnson (1912–), also a fine novelist. B. in London she has a gift for subtly delineated character, as in *Too Dear for my Possessing* (1940), *An Avenue of Stone* (1947), *A Summer to Decide* (1948), and *The Impossible Marriage* (1954), and has also pub. studies of I. Compton Burnett and Proust, and the play *Corinth House* (1948).

SNOW. Flaked particles formed by the condensation in air of excess vapour below freezing point. Light reflecting in the crystals of the flake gives S. a white appearance.

SNOWDEN, Philip, 1st visct. (1864–1937). British Labour statesman. B. in Yorks, he worked as a civil servant, and entered parliament in 1906. He stood on the extreme right of the Labour Party, and as Chancellor of the Exchequer, 1924 and 1929–31, pursued a strongly orthodox financial policy. He entered the National Govt. in 1931 as Lord Privy Seal, but resigned in 1932. He received a viscounty in 1931. His wife, Ethel, viscountess S. (1881–1951), *née* Annakin, was prominent in the women's suffrage and temperance movements.

SNOWDON, Anthony Armstrong-Jones, earl of (1930–). British designer. The son of Ronald Armstrong-Jones, Q.C., and his 1st wife, later countess of Rosse, he was ed. at Eton and Cambridge. Becoming a professional photographer, he held a one-man exhibition in London in 1956, and achieved great success with his studies of the children of Queen Elizabeth II. In 1960 he m. H.R.H. Princess Margaret (q.v.), and was created earl of S. a few weeks before the birth of their son, visct. Linley, in 1961.

SNOWDON. Highest mountain in Wales, 3,560 ft. above sea-level. It consists of a cluster of five peaks. At the foot of S. are the Llanberis, Aberglaslyn, and

SNOWDONIA. Beyond Llyn Padarn lies Snowdonia, now a National Park, and visited every year by thousands of tourists. Photo: Roy J. Westlake.

Rhyd-ddu passes. A rack railway ascends to the summit from Llanberis. Snowdonia the surrounding mountain system, is a Nat. Park (1951).

SNOWDROP. Plant (*Galanthus nivalis*) of the Amaryllidaceae. A spring-blooming bulb, it bears single, white, bell-shaped flowers.

SNOWY. Australian river, 265 m. long, rising near Mt. Kosciuszko in N.S.W. and flowing across Victoria to Bass Strait. A project sanctioned by an act of the Commonwealth parliament in 1949 for diverting its upper waters through the S. mts. into the Murrumbidgee began to produce power in 1955. Its purpose was to provide irrigation water as well as electricity to Victoria and N.S.W.

SNUFF. Powdered tobacco inhaled as a stimulant or sedative. It was common in 17th cent. England, and became universal in the 18th.

SNYDERS (sni-), Frans (1579–1657). Flemish painter. B. at Antwerp, he studied under Breughel. At first he painted still-life, but turned to animal painting, his principal works incl. hunting subjects.

SOAMES (sōmz), Christopher (1920–). British Cons. politician. He served in the S.W.W. before entering parliament in 1950. He became Sec. of State for War (1958–60), and Min. of Agriculture, Fisheries and Food (1960–4), and in 1968 ambassador to Paris. He m. in 1947 Mary, dau. of Sir Winston Churchill.

SOANE (sōn), Sir John (1753–1837). British architect. B. near Reading, he rebuilt the Bank of England, and was elected R.A. in 1802. He presented his house in Lincoln's Inn Fields – now the Soane Museum – and his art treasures to the nation.

SOAP. A chemical compound, yielding a lather used in washing; a mixture of the sodium salts of palmitic, stearic, and oleic acids. Made by the action of caustic soda or caustic potash on fats, of animal and vegetable origin. Household Ss. are variously shaped, coloured and usually perfumed.

SOAPSTONE. See **STEATITE**.

SOBIESKI, John. See **JOHN III**, king of Poland.

SOCIAL CONTRACT. Term in political philosophy for the theory that civil society originated when men agreed to surrender the complete freedom they enjoyed in the state of nature. Hobbes used this theory to justify absolute monarchy, whereas Locke and Rousseau derived from it the inference that all government rests on the support of the governed.

SOCIAL CREDIT. Economic theory put forward by Major C. H. Douglas, which finds the cause of crises in the control of money by the banks, leading to a shortage of purchasing power. Suggested remedies are the payment of a 'national dividend', or that the retailer should sell his goods below cost, his losses, plus a commission, being credited to him by the bank. The British S.C. Party (founded in 1920, at first under the name Kibbo Kift, by John G. Hargrave) had little success, but in Canada, Alberta (since 1935) and Br. Columbia (since 1952) have had S.C. govts., though carrying out of S.C. theory has been vetoed by higher authority.

SOCIALISM. A movement aiming at the establishment of a classless society through the substitution of common for private ownership of the means of production, distribution, and exchange. The term is used both to cover all movements with this aim, e.g. Communism, Anarchism, Syndicalism, etc., and more narrowly for Evolutionary S., or Social Democracy.

Anticipations of S. can be found in the ideas of many religious sects, e.g. the Anabaptists and Diggers, and in such Utopias as those of Plato and More. Modern S. originated 1789–1848, in the revolutionary Communism of Babeuf, and the 'Utopian S.' of Owen, Saint-Simon, and Fourier, to which the term was first applied c. 1830. Marx and Engels placed S. on a scientific basis, and formed the 1st Socialist International (1864–72). The Paris Commune (1871) estab. a Socialist govt. for a few weeks.

derived from the Hindustani *shaman*, an idolater) applied to the religious beliefs and practices of the aboriginal tribes of N. Asia, and by extension to the very similar systems prevailing among the N. American Indians. The outstanding figure is the *shaman*, or medicine-man, a seer and sorcerer, who is believed to make contact with spirits of good and evil.

SHAMROCK. Name given to several trifoliate plants of family Leguminosae. One is said to have been used by St. Patrick to illustrate the doctrine of the Holy Trinity, and it was made the national badge of Ireland.

SHAMYL (shahmil') (c. 1797–1871). Caucasian soldier. He led the tribesmen of Daghestan in a fight for independence from Russia from 1834 until, when the Russians were able to deploy greater forces after the Crimean War, he was taken in 1859. His not-too-rigorous captivity in Russia ended with his death at Medina on pilgrimage to Mecca. The official Russian attitude to his campaigns varies according to whether local nationalism is at the moment being encouraged or repressed.

SHANGHAI. Great Western Road in the former International Settlement which reverted to the Chinese Government after the Second World War. Peasants bring in their farm produce for the street market. Photo: Camera Press.

SHANGHAI (shanghī'). Great port and city in Kiangsu prov., China, on the Hwang-pu 15 m. from its entry into the Yangtze-kiang estuary. A city from 1360, it became important only after 1842 when the treaty of Nanking opened it to foreign trade and an important international settlement developed which remained the commercial centre of the city after extra-territorial powers were given up by the powers, 1943–6. Industries incl. manufacture of textiles, paper, chemicals, steel, agricultural implements, precision instruments; shipbuilding, flour and vegetable-oil milling, petroleum refining. The port handles c. 50 per cent of China's imports and exports. S. 350 sq. m. in area, is the largest city in Asia and a 'special municipality'. Pop. (1966) 10,000,000.

SHANNON. Longest river in Ireland. Rising in co. Cavan, it flows through Loughs Allen and Ree and past Athlone, and reaches the Atlantic through an extensive estuary below Limerick. Famous for salmon, it is also the major source of electric power in the rep., works for which were constructed 1924–30 at and above Ardnacrusha, 3 m. N. of Limerick.

SHANNON AIRPORT. Transatlantic airport on the r. Shannon in co. Clare, Irish Republic. Its Irish name is Rineanna.

SHANS. Name given to tribesfolk who live in the mountainous borderlands between China, Siam, and Burma. They are akin to the Laos and the Siamese.

41 semi-dependent states in the N. of Burma are called the Shan States; they were annexed by Britain in 1885 and now form part of the Burmese Union. Area 57,816 sq. m.

SHANSI (shahnshē'). Inland prov. of China, partially surrounded by the older part of the Great Wall (246–209 B.C.). A loess-covered plateau rising in the N. to 5,000 ft., it grows cotton, tobacco, wheat, barley, and the vine; anthracite and bituminous coal, iron, and salt are produced. The cap. is Taiyuan. Area 60,700 sq. m. Pop. (1957 est.) 15,960,000, many of them Moslems.

SHANTUNG (shantoong'). Maritime prov. of N. China, incl. S. peninsula. Winter wheat, soya beans, ground-nuts, cotton, tobacco, and fruits are grown. S. silk, from wild silkworms, is spun and woven; minerals incl. coal, iron-ore, gold and kaolin. S. is traversed by the Hwang-ho and the Grand Canal. Tsinan is the cap. Area 59,200 sq. m.; pop. (1957 est.) 54,030,000.

SHAPIRŌ, Karl (1913–). American poet. B. at Baltimore, he first attracted attention in 1934 with 5 poems under the title 'Noun', and after service in the S.W.W. wrote the striking *Y Letter* (1945). He taught at Johns Hopkins 1947–50 and became prof. of writing at Nebraska 1956, and ed. *Poetry* (1950–5) and *Prairie Schooner* 1956–63.

SHARE. In finance, that part of the capital of a company held by a member (shareholder). Shares may be numbered and are issued as units of definite face value; shareholders are not always called on to pay the full face value of their shares, though they bind themselves to do so if called upon. Preference shares carry a fixed rate of dividend and have first claim on the profits of the company; ordinary shares have second claim, and if profits have been good may attract a higher dividend than the preference shares; deferred shares rank for dividend only after the rights of preference and ordinary shareholders have been satisfied. Fully paid-up shares can be converted by the company into stock (q.v.).

SHARKS. Name given to the bigger members of the order Pleurotremata, a large group of marine fish with cartilaginous skeletons. Distributed over the whole world, although more common in tropical seas, they vary from the 'smooth hound' (*Mustelus laevis*) of British waters, 4–6 ft. long, to the swift voracious man-eater (*Carcharodon carcharias*), often 40 ft. long, found in warmer waters. They have an acute sense of smell, and eyes which, although

SHANNON. At Limerick the river flows past King John's castle, a Norman fortress with walls ten feet thick and magnificent drum towers, and under Thomond Bridge. St. Munchin's church, in the background, was founded in the 7th century. Courtesy of the Irish Tourist Board.

primate of Sweden in 1914. He organized the Stockholm Occumenical Congress in 1925, and was awarded the Nobel peace prize in 1930.

SODIUM. A soft bright silvery reactive metal, tarnishing quickly on exposure to air and reacting violently with water to form S. hydroxide: symbol Na (Lat. *natrum*), at. wt. 22.991, at. no. 11. First isolated by Sir Humphry Davy in 1807, it is found abundantly in combination, the commonest form being S. chloride (NaCl—common salt). S. metal is used to a limited extent as a spectroscopic reference, in discharge lamps, and alloyed with potassium as a heat-transfer medium in nuclear reactors.

S. compounds are of the widest industrial importance and thousands of tons are manufactured annually. Among the more important are common salt, S. carbonate (Na_2CO_3 —washing soda), and bicarbonate (NaHCO_3 —baking powder), S. hydroxide or caustic soda (NaOH), S. nitrate or Chile saltpetre (NaNO_3 —fertilizer), S. thiosulphate or hypo ($\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ —photographic fixer).

An artificial isotope of S., with a half-life of 15 hr. is a valuable tracer in the human body.

SODOM AND GOMORRAH. 2 of the 5 'cities of the plain' in the Dead Sea area, which according to Genesis were destroyed by fire and brimstone for their wickedness.

SODOR AND MAN. Bishopric of the Church of England, at present comprising the Isle of Man only, but incl. 1154–1334 the Hebrides and other islands W. of Scotland. The bishop has an honorary seat in the House of Lords, and is a member of the Manx House of Keys. Peel is the centre of the diocese.

SOFIA (sōfē'ah). Cap. of Bulgaria since 1878. It lies at the foot of Vitosha Mts., about 80 m. N.W. of Plovdiv, and has many fine modern buildings, incl. the univ. (1880) and the 19th cent. cathedral. Industries incl. textile, rubber, leather, machinery, and electric-equipment making and food processing. There are 2 airports. Pop. (1967) 858,876.

SOHO (sō'hō). Quarter of W. London, between Charing Cross Rd. and Regent St. There are many foreign restaurants, night clubs, film co. offices (Wardour Street) and teenage fashion (Carnaby Street).

SOISSONS (swah'soh). French town, in Aisne dept., 65 m. N.E. of Paris. It has a 12–13th cent. cathedral and markets agricultural produce. Clovis defeated the Romans at S., 486, ending Roman rule in France. Pop. (1962) 24,359.

SO'KOL ('falcon'). Czech educational and athletic organization founded in 1862, which plays an important part in public life. The movement also flourishes in Poland, Bulgaria, Yugoslavia, and other Slav countries. Until 1948 it was non-political.

SOKOTO. Division of the N.-Western state of Nigeria, from early in the 19th cent. until 1903, when it was occupied by the British. S. was a Fula sultanate, with a cap. town also S., and an area of 40,000 sq. m.

SOLANACEAE. Family of dicotyledonous plants of the tropical and temperate zones, many being natives of the Americas, e.g. the potato, tobacco and tomato; best-known of the British species is deadly nightshade.

SOLAN-GOOSE. See GANNET.

SOLAR ENERGY. Direct Utilization of. Solar furnaces concentrate the sun's rays at the focus of a parabolic mirror, thus providing a small area of intense heat. In this way temperatures of up to 4,000°C. have been produced with a 60 in. parabolic mirror. S. cells which produce electric current directly from the sun's rays have been developed particularly for satellites and space research, and utilize semiconductor materials such as cadmium sulphide and silicon and boron interfaces. Storage of S.E. may have enormous potential for domestic heating, power for under-

developed countries and for sea-water-distillation plant in arid countries.

SOLAR SYSTEM. See PLANETS.

SOLAR WIND. Continuous outward projection from the inner corona of the sun of high-speed streams of low-density hot ionized gas or plasma. The velocity, temperature and density of the S.W. appear to be much higher when solar flares occur, and it is thought to be the cause of radio blackouts, geomagnetic storms, and auroral displays. First detailed information on the structure of the S.W. was obtained during the flight of the U.S. spacecraft *Mariner 2* in 1962.

SOLE. Genus (*Solea*) of flat fish in the family Pleuronectidae. The Common S. (*S. vulgaris*) is up to 2 ft. long, feeds at night on worms etc., and is a valued European food-dish, as is the rarer lemon S. (*S. lascaris*); the little American Ss., in the genus *Achirus*, have no food value.

SOLENT. The Strait between the Isle of Wight and the mainland of Hampshire, England. It is a famous yachting centre.

SOLE-FA (-fah), Tonic. System of musical notation, invented by John Spencer Curwen, c. 1840, and utilized by many choral singers as a simpler alternative to staff-notation. Both in its restriction to single parts and in its limited interpretation of the composer's intentions, the system possesses drawbacks. The notes are named *doh*, *ray*, *me*, *fah*, *soh*, *lah*, *te*, and the key is indicated so that the singers know how their keynote *doh* is to be interpreted. Time divisions are indicated by bar-lines.

SOLFERINO (-rē'nō). Village in Verona, N. Italy, 5 m S. of Lake Garda, site of the battle in which Napoleon III defeated the Austrians in 1859.

SOLICITOR. A member of one of the 2 branches of the English legal profession, the other being barristers (q.v.). A S. conducts legal work on behalf of clients, and has a right to represent him in all inferior courts (e.g. the county court for civil work, or the magistrate's court or quarter sessions for criminal work), but may not act as advocate on behalf of his client in superior courts. The fees he may charge are strictly regulated. The Solicitor-Gen. is a law officer of the Crown, acting as deputy to the Attorney-Gen.: he is a political appointee with ministerial rank. In the U.S.A. the term S. may be used for practitioners in the courts of equity, and, as in England, some public offices have special Ss., and there has been since 1870 a S-Gen.

SOLID CIRCUIT. Normally an electronic circuit is made by joining together by wire separately made electronic components. In a S.C. all the components (resistors, capacitors, transistors and diodes) and interconnections are made at the same time and by the same processes in or on one piece of single crystal silicon. The small size of this construction (an amplifier could have dimensions of 4 × 80 × 80 thousandths of an inch) accounts for its use in the electronics for space vehicles and aircraft.

SOLINGEN (zō'lingen). Town of North Rhine-Westphalia, Germany, 13 m. E. of Düsseldorf, noted in the Middle Ages for its sword blades and still famous for its high-quality steel used for razor blades, cutlery, etc. Pop. (1961) 170,917.

SOLOGUB (sol'ogoob), Fyodor. Pseudonym of Russian author Fyodor Kuzmich Teternikov (1863–1927). B. in St. Petersburg, where he was a schoolmaster 1887–1927, he was the earliest symbolist poet to gain recognition, pub. his 1st vol. of verse in 1897. In his satiric novel *Melki bes* (1907: *The Little Demon*) the chief character, Peredonov, has become proverbial for the meanly evil.

SOLOMON (reigned c. 974–c. 937 B.C.). King of Israel. The son of David by Bathsheba, he acquired great wealth by trade, which he employed in building the temple at Jerusalem. His heavy taxation and use of forced labour aroused discontent, and his kingdom

SHEEP. Ungulate mammals of the genus *Ovis*. Domesticated S. are derived from wild species native to the drier uplands of central Asia. They can be reared on many lands unfit for arable agriculture, and their use in rotation on arable land also helps to maintain its fertility. They do well in most temperate regions, especially on hilly land. Several well-known cheeses, such as Roquefort and Parmesan, are made from sheep's milk. Breeds are specialized either for wool or flesh production: most of these are of British origin, except the Merino of the Mediterranean, now raised in Australia, New Zealand, S. Africa, and the U.S.A. In Great Britain the best S. lands are in the

SHEEP. Left: top, Hampshire Down ewe; bottom, Suffolk ram. Right: top, Wiltshire Horn ram; bottom, Cheviot tup.

southern uplands, the Cheviots, the Welsh uplands, the Pennines, and the Cotswolds. Other S.-raising lands are the U.S.S.R., Argentine, and Spain.

SHEEPDOG. A rough-coated, tailless breed of dog, formerly much used by shepherds, farmers, and drovers in the S. of England and in Wales, but now mainly a show dog. In colour it is grey or blue-grey.

SHEERNESS. English seaport and holiday resort on the Isle of Sheppey, Kent, at the confluence of the Thames and the Medway. Originally a fortress (1660), captured and held for a brief while by the Dutch under Admiral Reuter in 1667, it was until 1960 the site of a royal dockyard. Pop. (1961) 14,123.

SHEFFIELD. English industrial city (co. bor.) in the W. Riding of Yorks, 18 m. S.W. of Doncaster. Iron smelting has been carried on since the 12th cent., and by the 14th cent. S. cutlery was famous. During the Industrial Revolution its iron and steel manufactures developed rapidly. Cutlery of all kinds, permanent magnets, drills, precision tools are among S.'s products. Other industries incl. electro-plating, type-founding, and the manufacture of optical glass. The parish church of SS. Peter and Paul (14th–15th cents.) is the cathedral of S. bishopric (1914). The fine City Hall was opened in 1932. Mary Queen of Scots was imprisoned at S. 1570–84, part of the time in the Norman castle, which was captured by the Parliamentarians 1644 and subsequently destroyed. Incorporated in 1843, S. was created a city in 1893, and has had a Lord Mayor since 1897. The univ. was chartered in 1905, and the colls. of art and technology were amalgamated to form Yorkshire's polytechnic (q.v.) 1969. Pop. (1961) 493,954.

SHEFFIELD PLATE. Articles produced by fusing copper with silver, giving a beautiful surface like that of standard silver. The process, invented by Thomas Boulsover (1704–88), a Sheffield cutler, in 1742–3, was displaced by electro-plating in the 1840s.

SHELBURNE, William Petty FitzMaurice, 2nd earl of (1737–1805). British Whig statesman. B. at Dublin, he entered the House of Lords in 1761 and became a follower of Chatham. He opposed George III's

American policy, and as P.M. 1783 concluded peace with the U.S.A. He was created marquess of Lansdowne in 1784.

SHELDRAKE. Duck (*Tadorna tadorna*) with dark green head and red bill and the rest of the plumage strikingly marked in black, white and chestnut. Of widespread distribution in the Old World, it lays its eggs in rabbit burrows in sandy coasts and may be protected for the sake of these and its down by the local people.

SHELLAC. See LAC.

SHELLEY, Mary Wollstonecraft (1797–1851). British author; dau. of William Godwin and his wife Mary Wollstonecraft, and 2nd wife of P. B. Shelley. She eloped with him in 1814 and was m. in 1816. Her *Frankenstein*, the story of a man who created a monster and gave it life, was pub. in 1818. She wrote other novels and ed. the poet's works.

SHELLEY, Percy Bysshe (1792–1822). British lyric poet. B. at Warnham, he was ed. at Eton and University Coll., Oxford, where his collaboration in a pamphlet on *The Necessity of Atheism* (1811) caused his expulsion. While living in London he fell in love with 16-year-old Harriet Westbrook whom he m. in 1811. He visited Ireland and Wales writing pamphlets defending vegetarianism and political freedom, and in 1813 pub. privately the revolutionary poem *Queen Mab*. Meanwhile he had become estranged from his wife and in 1814 left England with Mary Wollstonecraft Godwin, whom he m. in 1816 after Harriet had drowned herself. *Alastor*, written in 1815, was followed by the epic *The Revolt of Islam*, and by 1818 S. was living in Italy. Here he produced the tragedy *The Cenci*; the satire on Wordsworth, *Peter Bell the Third* (1819); and the lyric drama *Prometheus Unbound* (1820). Other works of the period are 'Ode to the West Wind', 'The Cloud', and 'The Skylark'; 'The Sensitive Plant' and 'The Witch of Atlas'; 'Epipsychidion'; 'Adonais' (1821) and the lyric drama *Hellas* (1822); and the prose *Defence of Poetry* (1821). In July 1822 S. was drowned while sailing near Spezia, and his ashes were buried in Rome. See *illus.* p. 394.

SHELLFISH. Popular name for edible molluscs and crustaceans, incl. the whelk and periwinkle, mussel, oyster, lobster, crab, shrimp, etc.

SHELL-SHOCK. An obsolete name for various forms of nervous disorder, chiefly hysterical (see HYSTERIA), seen in soldiers exposed to heavy explosions or buried, but not confined to them. Such 'war neuroses' are often an aggravation of a previous neurotic conflict. Skilled psychotherapy has been effective in their cure.

SHENANDO'AH. River in Virginia, U.S.A., a trib. of the Potomac which it joins at Harper's Ferry. The S. valley was the site, 1862–4, of important operations in the American Civil War.

SHENSI (shensé). A northern prov. of China, S. of the Great Wall. It is mountainous, and the Hwang-ho r. valley, forming the N.E. boundary of the prov., is an important commercial route; its trib. the Wei-ho crosses S. Coal, iron, salt, gold, nickel, and petroleum are found; grain, cotton are grown, livestock reared. Yen-an was the Communists' cap. 1936–47. An earthquake in 1556 is said to have killed 830,000 people. Sian is the cap. Area 75,600 sq. m.; pop. (1957 est.) 18,130,000, many of them Moslems.

SHENSTONE, William (1714–63). British poet. B. in Worcestershire, his most popular poem was the Spenserian *Schoolmistress* (1742). His country estate at the Leasowes was a famous example of landscape gardening.

SHENYANG. City in N.E. China, cap. of Liaoning prov., cradle of the Manchu dynasty whose members are buried in the vicinity. It is a centre of heavy industry. S. (then called Mukden) was opened to foreign trade in 1903, and was the scene, 20 Feb.–10

He has often partnered Fonteyn (q.v.). In 1964 he m. ballerina Antoinette Sibley (q.v.).

SOMME (som). River of N. France 150 m. long, which rises in Aisne dept. near St. Quentin, flows in a N. and W. direction past Amiens and Abbeville, and reaches the English Channel through a road estuary. It gives its name to a dept.

SOMME, Battle of the. Allied offensive in the F.W.W., on the western front, between Beaumont-Hamel and Chaulnes, in July–Nov. 1916, during which tanks were used for the first time. Comparatively slight gains were made, at very heavy cost. The German offensive around St. Quentin in March–April 1918 is sometimes called the 2nd battle of the S.

SONAR. In the F.W.W. an Allied Submarine Detection Investigation Committee was estab. and the apparatus perfected c. 1920 for detecting the presence of enemy U-boats beneath the sea-surface by the use of ultrasonic echoes was named from its initials ASDIC. In 1963 the name was changed, to accord with NATO practice, to *S. See ECHO SOUNDING*.

SONATA (sonah'ta). Term originally used to describe a composition for instruments, as opposed to the cantata, which is a composition for voices. The S. is usually played on one or two instruments, and consists of a series of related movements.

SONG. Musical setting of a poem for accompanied or unaccompanied single voice. Among the composers of Ss. are, English: Dowland, Lawes, Purcell, Arne, Sterndale-Bennett, Parry, Stanford, Quilter, Vaughan Williams, Delius, Moeran, Warlock, Ireland, Britten, Tippett, and Phyllis Tate; German: Mozart, Beethoven, Schubert, Schumann, Brahms, Wolf, Richard Strauss, Mahler, Hindemith and Webern; French: Gounod, Debussy, Duparc, Fauré, Poulenc and Ravel; Hungarian: Liszt; Russian: Moussorgsky, Tchaikovsky, Rachmaninoff, Glinka and A. S. Dargomizhsky (1813–69); and American: Edward MacDowell, Sidney Homer (1864–1953), Charles Ives, Ernst Bacon (1898–), Paul Nordoff (1909–), Theodore Chanler (1902–), David Diamond (1915–) and George Gershwin.

SONNET. Poetic form introduced from Italy to England by Sir Thomas Wyatt, who followed in principle the Petrarchan mode, which, strictly interpreted, has the rhyme scheme abba abba, cddcd, with a turn of thought at the close of the octave; Milton and Wordsworth are exponents of this type. The Elizabethan form, as used by Shakespeare, has the rhyme scheme abab, cdcd efef gg.

SOOCHOW. City of Kiangsu prov., China, on the Grand Canal 50 m. W. of Shanghai. The seat of a univ., it makes cotton and silk textiles, jade carvings and embroidery, and trades in rice. S. dates from c. 1000 n.c., the name S. from 7th cent. A.D. Marco Polo visited S. which was made a treaty port 1896. It was called Wuhhsien 1912–49. Pop. (est.) 450,000.

SOONG, T. V. or Sung Tsu-ven (1891–). Chinese statesman. He was Fr. Min 1941–4, and P.M. 1944–7. He is a brother of Mme. Chiang Kai-shek and of Mme Sun Yat-sen.

SOPER, Donald, baron (1903–). British Methodist Minister to the Central London Mission 1929–36, and supt. of the West London Mission, Kingsway Hall, from 1936, he is well known for his ready sincerity in debate and through television appearances. His books incl. *All His Grace* (1957) and *Aflame with Faith*, and as a speaker at Hyde Park Corner he has influenced many. In 1965 he became a life peer.

SOPHIA (1630–1714). Electress of Hanover. The dau. of the Elector Palatine and Elizabeth, dau. of James I of England, she m. the elector of Hanover. She was recognized as in the succession to the English throne in 1701. Her son, George I, founded the Hanoverian dynasty.

SOPHISTS (sof'ists). Greek teachers of the 5th

cent. B.C. who lectured on culture, rhetoric, and politics. Owing to the picture of them drawn by Plato, 'sophistry' now means dishonest reasoning.

SOPHOCLES (sof'oklēz) (495–406 B.C.). Athenian tragic poet. He produced his first plays in 468, when he won the prize in competition with Aeschylus, and wrote over 120 plays, of which only 7 survive; these are *Ajax*, *Electra*, *The Trachinian Maidens*, *Philocetes*, and the Theban tragedies *Antigone*, *King Oedipus*, and *Oedipus at Colonos*. He modified the form of tragedy by the introduction of a 3rd actor and speeded the action by lessening the role of the chorus. Whereas he said of Euripides 'He paints men as they are', he said of himself 'I paint men as they ought to be' and is noted for his noble grandeur and preservation of traditional values.

SOPWITH, Sir Thomas Octave Murdoch (1888–). British aviator. In 1910 he won a £4,000 prize for a flight from England to the Continent, and in 1912 founded the Sopwith Aviation Co. of which he was chairman 1925–7. He was chairman of the Hawker Siddeley Group 1935–63 and subsequently pres.: he was knighted in 1953.

SORBONNE (sorbon'). Alternative name for the Univ. of Paris. The S. was founded in 1253 by Robert de Sorbon, chaplain to Louis IX, as an institution for theological studies. Richelieu reconstructed the buildings in 1626, which were again rebuilt in 1885. In 1808 the S. became the seat of the Académie of Paris and of the Univ. of Paris.

SOREL, Albert (1842–1906). French historian. B. at Honfleur, he was at the Foreign Office 1866–75. His great work is *L'Europe et la Révolution Française*.

SOREL, Georges (1847–1922). French philosopher. B. at Cherbourg, he glorified violence in his writings, notably *Reflections on Violence* (1908), and taught that an élite must lead the people by means of myths. He championed the Syndicalist movement before 1914, and in later life showed Fascist sympathies.

SORGHUM (sor'gum). A genus of grasses – also called Indian millet, guinea-corn, or durra – grown in Africa, India, China, U.S.A., and S. Europe.

SORORITIES. See FRATERNITIES.

SORREL. Several species of plants in the genus *Rumex*, especially the garden S. (*R. acetosa*) native to N. Europe and Asia, and cultivated for its leaves, used in salads, etc.

SORRENTO. Coast resort on the Gulf of Naples, Italy, noted for its climate, scenery, and wine. Pop. (est.) 12,000.

S.O.S. International Morse distress signal, transmitted by any available means, e.g. flags, semaphore, radio: chosen because '3 short, 3 long, 3 short' is the most distinctive and easiest signal to transmit, it is popularly regarded in English as representing 'Save our Souls'. 'Mayday', corresponding to Fr. m'aider, is the distress code by radio telephone.

SOTO, Ferdinando de (c. 1496–1542). Spanish explorer, who in 1539 led an expedition which explored Florida, Georgia, and the Mississippi.

SOULT (söolt), Nicolas Jean de Dieu (1769–1851). Marshal of France. He entered the army in 1785, served in the Revolutionary Wars, and was created a marshal in 1804 and duke of Dalmatia in 1808. He held high commands in Spain throughout the Peninsular War, and was chief of staff at Waterloo. He was War Minister 1830–4 and 1840–4.

SOUND. A physiological sensation received by the ear, which originates in a vibration which communicates itself to the air, and travels in every direction, spreading out as an expanding sphere. All S. waves travel with a speed which depends on the temperature of the atmosphere, and is about 1,120 ft. per second under ordinary conditions. The pitch of the S. depends on the number of vibrations imposed on the air per second, but the speed is unaffected. The loudness of a S. is dependent primarily on the extent

Ishizuchi to 6,497 ft. Much of it is forested; rice, wheat, tobacco, soya beans, orchard fruits are grown; salt, copper, tobacco, lumber, and fruit exported. Area 6,869 sq. m.; pop. c. 4,500,000.

SHIMONOSEKI (shimōnōsek'ē). Japanese seaport in the extreme S.W. of Honshu, opened to foreign trade 1890. A treaty concluded at S. between China and Japan 1895 gave Japan Formosa and the Pescadores (lost 1935). Pop. (1965) 254,000.

SHINGLES. See HERPES.

SHINTO. The Chinese transliteration of the Japanese for Kami-no-Michi, the Way or Doctrine of

SHINTO. Shrine of the Sun-goddess at Ise, Japan.

the Gods, the indigenous religion of Japan. This is a mixture of nature-worship and loyalty to the reigning dynasty as descendants of the Sun-goddess, Amaterasu-Omikami. State S. is the national faith of Japan; its holiest shrine is at Ise, where in the temple of the Sun-goddess is preserved the mirror that she is supposed to have given to Jimmu, the 1st emperor, in the 7th cent. B.C. Sect. S. consists of 130 sects, each founded by an historical character; the sects are officially recognized, but are not State-supported, as was State S. until its disestablishment by Gen. MacArthur's decree after the S.W.W. Unquestioning obedience and devotion to the emperor is inculcated, but there is also an exemplary ethic.

SHINTY. A winter game popular in the Scottish Highlands, played between teams of 12 players with sticks and a ball. It resembles hockey and lacrosse.

SHINWELL, Emanuel (1884–). British Labour politician. B. in London, he spent his youth in Glasgow, and became national organizer of the Marine Workers' Union. He sat in parliament 1922–4 and 1928–31, was Sec. for Mines 1924 and 1930–1, and in 1935 won Seaham from Ramsay MacDonald. As Min. of Fuel and Power 1945–7 he carried through the nationalization of the mines. He was War Min. 1947–50, and Defence Min. 1950–1.

SHIP. Sea-going vessel of considerable size. Greeks and Phoenicians built wooden Ss., propelled by oar or sail. The Romans and Carthaginians fought in galleys equipped with rams and rowed by tiers of oarsmen. The oaken Ss. of the Norsemen were for rough seas, and the fleet of Richard Cœur de Lion was largely of sail. The compass was invented in the 14th cent. and the 15th cent. saw the beginnings of Britain's Royal Navy; Henry VIII built the *Great Harry*, the first double-decked English warship. In the 16th cent. Ss. were short and high-sterned, and despite Pett's 3-decker in the 17th cent. English Ss. did not bear comparison with Spanish and Dutch until the era of Sir Robert Seppings, a shipbuilding pioneer in the early 19th cent. By 1840 iron had largely replaced wood, but fast-sailing clippers survived, built with wooden planks on iron frames. America and Britain made steam experiments as the 19th cent. opened. The *Comet* appeared in 1812, the Canadian *Royal William* crossed the Atlantic in 1833, and the English *Great Western* steamed from Bristol to New York in 1838. Pettit Smith applied the screw to the *Archimedes* in 1839, and after 1850 the paddle-wheel became obsolete. The introduction of the compound engine and turbine, the latter in 1902, completed the revolution in pro-

pulsion until the advent of nuclear-powered vessels after the S.W.W., chiefly submarines, but incl. the merchant ship *N.S. Savannah* (U.S.A.) launched 1959. See NAVY.

SHIP MONEY. Tax for support of the navy, levied on the coastal districts of England in the Middle Ages. Charles I's attempts to levy it on the whole country in 1634–6, without parliamentary consent and in time of peace, aroused strong opposition, J. Hampden and others refusing to pay. S.M. was declared illegal by parliament in 1641.

SHIRAZ (shē'rahz). Ancient walled city of S. Persia, the cap. of Fars prov. It is noted for its wines, carpets, and silverwork, and for its many beautiful mosques. There is a univ. It has suffered from earthquakes. Pop. (1964) 206,000.

SHKODER

(shkō'drah). Albanian town, on the Bojana, S.E. of Lake S., 12 m. from the Adriatic. It makes woollens and cement, and trades in hides, salt, tobacco, etc. During the F.W.W. it was occupied by the Austrians

1916–18; during the Second by the Italians. Its Italian name is Scutari. Pop. (1967) 47,000.

SHOCK. A dangerous condition due to overstimulation of the sensory nerves by severe injury or operation, or to loss of blood or plasma (as in burning), or to overpowering emotion. The blood-vessels dilate and the pressure falls below that necessary to supply the tissues of the body, especially the vital nerve-centres of the brain. Treatment is by rest, and, in the case of blood loss, by restoration of the normal circulating volume.

SHOEBURYNES. Promontory on the Essex coast, England, N. of the Thames estuary, occupied by a school of gunnery.

SHOGUN. Formerly, the hereditary C.-in-C. of the Japanese Army. Though nominally subject to the emperor, he was the real ruler of Japan. In 1867 the emperor re-assumed power.

SHOLAPUR. Town in Maharashtra state, India, on the Deccan. It makes textiles, leather goods, chemicals, etc. Nearby is a large reservoir used for irrigation. Pop. (1961) 337,544.

SHOL'OKHOV, Mikhail Aleksandrovich (1905–). Russian novelist. B. at Kruzhilin, he had a variety of experience during the Civil War in various jobs, pub. a vol. of short stories in 1926, and then the great book that made his name, *Tikki Don* (4 vols. 1928–40: *And Quiet Flows the Don* and *The Don Flows Home to the Sea*), telling realistically of the Don Cossacks he had known in his boyhood in the Kuban and how their lives were affected by the Revolution and Civil War. His other famous work is *Podnyataya Tselina* (1932: *Virgin Soil Upturned*): 2nd vol. 1959. He was awarded a Nobel prize 1965. See illus. p. 976.

SHOP. Building for the retail sale of goods. Until the later 19th cent. S. development had been almost static since ancient times, but with the growth of manufactured goods and the concentration of popu-

SHIRAZ. A silversmith at work: such skills have been handed down through countless generations.

examining body with courses for external students only: its examinations are taken by students of 2 non-white univ. colleges and 3 Bantu univ. colleges. The churches (the largest is the Nederduits Gereformeerde Kerk, Dutch Reformed Church) separate their congregations into white and non-white.

Area (excl. S.W. Africa, q.v.) 472,733 sq. m. (incl. Walvis Bay, 434 sq. m., which is administered with S.W. Africa): pop. (1968) 19,167,000 (Whites 3,639,000; Coloured 1,912,000; Asian 574,000; Africans 13,042,000).

History. S.A. was discovered by Diaz who rounded the Cape in 1488. The Dutch E. India Co. occupied the site of Capetown in 1652 as a port of call on the way to the Indies. Occupied by the British 1795 when the Netherlands was occupied by French, restored 1802–6, Capetown and the hinterland were acquired by Britain in 1814 for a sum of £6,000,000. The first European settlers in Natal, on the coast near Durban, were British, 1824. In 1836 some 10,000 Dutch, wishing to escape from British rule, set out on the 'Great Trek' and founded the rep. of Transvaal and the Orange Free State; they also settled in N. Natal, which became part of Cape Colony in 1844, and a separate colony in 1856. The discovery of diamonds at Kimberley, in Cape Colony, and of gold in Transvaal, attracted numerous prospectors, between whom and the Dutch farmers (Boers), who had no interest in this mineral wealth, conflict developed. Britain attempted to occupy Transvaal, 1877–81, but withdrew after a severe defeat at Majuba (1881). Denial of citizenship rights to the temporary mining settlers (Uitlanders) in Transvaal, and the imperialist ambitions of Cecil Rhodes and others, led to the Jameson Raid (see L. S. JAMESON) and the S. African War (1899–1902). This opened with a series of British defeats, but in 1900 Lord Roberts forced Cronje to surrender at Paardeberg; Bloemfontein, Johannesburg, and Pretoria were captured; and Kimberley, Ladysmith, and Mafeking were relieved after long sieges. The Boers, led by Smuts and Botha, continued guerrilla resistance until 1902 when peace was made at Vereeniging, and Transvaal and the Orange Free State acknowledged British sovereignty. In 1910 the Union of S.A. was formed to incl. the provinces of Cape of Good Hope, Natal, Orange Free State, and Transvaal. The outbreak of the F.W.W. was marked by a Boer rebellion, speedily crushed by Smuts. German S.W. Africa was occupied, and Union forces served with distinction in E. Africa and in France. Between the wars the political life of the Union was marked by the alternating terms of office of the republican nationalists under Hertzog and the S. African Party under Smuts, who wished to maintain the Commonwealth connection.

On the outbreak of the S.W.W. in 1939, Smuts, having secured the defeat in the S.A. parl. of a motion for neutrality put forward by the P.M., Hertzog, took over the premiership. S.A. troops played a major part in the conquest of Ital. E. Africa and served with distinction in N. Africa and in Italy. The Nationalist Party (led by Dr. Malan, q.v.) returned to office in 1948 with a small majority, later increased. In 1959 the National Party, formed in 1951 by the union of the Nationalist and Afrikaner parties, secured 103 seats (out of 160). A referendum in 1960 resulted in a vote of 849,958 for, 775,878 against, S.A.'s becoming a republic; and in 1961 the govt., led by Dr. Hendrik Verwoerd, unable to accept Commonwealth opposition to *apartheid*, took S.A. out of the British Commonwealth. On Verwoerd's assassination 1966, his successor B. J. Vorster followed the same policy.

Art. S.A. can boast of a number of accomplished artists, incl. Gwelo Goodman, Rowarth, Naude, Volschenk, Neville Lewis, and Pieter Wenning, though no distinctive S. African school of painting has developed. There are fine collections of Euro-

pean paintings, e.g. at Capetown and Johannesburg.

The architecture of S.A. has remained under Dutch influence, early domestic buildings were similar in style to buildings in Amsterdam. After 1815 a sort of classic Renaissance took place, but architecture deteriorated in style after the discovery of diamonds in 1867, when many buildings were erected hastily and haphazardly. The most noteworthy individual contribution to the architecture of S.A. was made by Sir Herbert Baker, who was commissioned by Rhodes to reconstruct *Groote Schuur* (originally built in the 17th cent.), Dutch in style, and later designed Government House and Capital Buildings at Pretoria, the Rhodes Memorial on Table Mountain, and the cathedrals at Capetown and Johannesburg.

SOUTH AFRICA. Largest Christendom denomination of the Republic, the Dutch Reformed Church is enterprisingly original in the design of new buildings for worship, as in this church at Vanderbijl Park.

Courtesy of the South African Information Service.

Literature. Founder of S. African literature in English was Thomas Pringle (1789–1834), who pub. lyric poetry and the prose *Narrative of a Residence in S. Africa*. The missionary, Arthur S. Cripps, and the Scot, Charles Murray, also produced excellent verse,

but the finest of the more recent poets, Roy Campbell and Francis C. Slater, are S. African-born. The 1st work of S. African fiction to achieve fame outside the country was Olive Schreiner's *Story of an African Farm* (1883), later writers in English of international repute incl. Sara G. Millin, Pauline Smith (author of *The Little Karroo*), William Plomer, and Laurens van der Post. See also AFRIKAANS.

SOUTH AMERICA. Continent covering 14 per cent of the earth's land area, joined to Central and N. America by the Panama isthmus; it is almost entirely to the E. of the northern continent. The relief is divided into 3 longitudinal areas. The Andes in the W. run parallel to the Pacific coastline, and rise to more than 20,000 ft.; the great central plains, the Llanos, Selvas, Chaco, and Pampas, stretch from the Orinoco basin to Patagonia; and the Brazilian and Guiana highlands.

S. of the Orinoco basin the Amazon river system,

SIR CLOUDESLEY SHOVELL. Among the treasure recovered from the Association wreck site off the treacherous Gilstone Ledges was this solid silver plate bearing Sir Cloudeley's coat of arms, seen here filled with silver pieces of eight also found by Roland Morris and his team of divers.
Courtesy of Roland Morris.

Europe (*Crangon vulgaris*) is grey, changes its colour to brown when boiled, and is c. 2 in. long. In Japan and on the Atlantic coast of southern U.S.A. they form the basis of a large industry.

SHRIVER, Robert Sargent (1915–). American Democratic politician. Son of a Wall Street banker, he was ed. at Yale, was called to the N.Y. Bar in 1941, and in 1953 m. Eunice Mary, sister of J. F. Kennedy. In 1961–66 he was director of the Peace Corps, of the Office of Opportunity (anti-poverty agency) 1964–8, and ambassador in Paris from 1968.

SHROPSHIRE or **Salop.** An English county bordering Wales to the E. of Montgomery, and bisected N.W. to S.E. by the Severn. The N. is generally flat, but to the S.W. the Cleve Hills rise to 1,796 ft. (formerly to 1,805 ft., reduced by quarrying). Ellesmere is the largest of several lakes in the N.W. Coal and iron-ore are mined, but agriculture is the main occupation; cattle and sheep are reared, and cheese and other dairy produce made. Shrewsbury is the co. town. Area 1,348 sq. m.; pop. (1967) 326,010.

SHROVE TUESDAY. The day before Ash Wednesday. The name comes from the Anglo-Saxon *scrifan*, to shrive, and in olden days it was the time for confession before Lent. Another name for it is Pancake Tuesday; the pancakes are a survival of merrymaking in anticipation of Lenten abstinence.

SHRUB. Woody plant smaller than a tree and usually divided into separate stems near the ground.

SHUTE, Nevil. Pseudonym of British novelist N. S. Norway (1899–1960). B. in Ealing, son of a civil servant, he was ed. at Shrewsbury and Balliol and became an aircraft technician. He pub. his 1st novel in 1926, but it was not until during the S.W.W., in which he served in the R.N.V.R., that he became a best-seller. His always technically accurate books incl. *Pied Piper* (1942), *No Highway* (1948) and *A Town Like Alice* (1949). In 1950 he settled in Australia.

SIALKOT (sē-ahlkōt'). Town and trade centre of W. Pakistan, near the Chenab. Surgical and sports goods are produced on a large scale; also metal goods, leather goods, carpets, textiles. Pop. (1961) 164,346.

SIAN (sē-an'). Chinese city, cap. of Shensi prov., a great trade centre with cotton mills. S. was cap. of China under the Chou dynasty (c. 1100 B.C.); under the Han dynasty (206 B.C. to A.D. 220), when it was called Changan (long peace); under the Tang dynasty (618–906), as Siking (western cap.). The Manchus named it Sian (western peace); it reverted to the name Changan 1913–32; Siking 1932–43; Sian in 1943. The

imperial court retired to S. following the Boxer rising, 1900. Pop. (1957 est.) 1,310,000.

SIBELIUS (sēbā'le-us), Jean Christian (1865–1957). Finnish composer. Intended by his father for the law, he studied the violin and composition at Helsingfors and went on to Berlin and Vienna. Recognized as a major composer only in Britain and the U.S.A., he has a simple austerity in his work which incl. the orchestral *En Saga* and *Karelia*; the tone-poems *Finlandia* and *Night Ride and Sunrise*; the appealing *Valse Triste*; *Voces Intimae*, a string quartet; and 7 symphonies.

SIBERIA. Geographical name for Asiatic R.S.F.S.R., bordered on the N. by the Arctic Ocean; S. by China, the Mongolian People's Republic, and Kazakh S.S.R.; W. by the Urals; E. by the Pacific. Much of it is within the Arctic Circle. Overrun by Russia in the 17th cent., from the 18th it was used as a place of exile for both political and criminal prisoners. The building of the Trans-Siberian railway (1892–1905) led to considerable voluntary settlement. Under Soviet rule, many prisoners continued to be sent to S., but colonization, with industrial and agricultural development, was undertaken on a considerable scale, and in W. Siberia there are large nat. gas deposits. Novosibirsk (q.v.) is the largest city in S. Area c. 5,000,000 sq. m.; pop. c. 30,000,000.

SIBLEY, Antoinette (1939–). British dancer. Joining the Royal Ballet in 1956, she became senior

soloist in 1960. Her roles incl. Odette/Odile, Giselle, the betrayed girl in *The Rake's Progress*, and in 1964 she appeared in the première of Ashton's *The Dream*. In 1964 she m. Michael Somes (q.v.).

ANTOINETTE SIBLEY.
 As Titania in Ashton's
The Dream.
 Photo: Houston Rogers.

SIBYL. In classical mythology, a priestess of Apollo, who was supposed to prophesy under his inspiration. One Sibyl in particular, the Cumaean Sibyl, appears in Roman story as offering to sell to King Tarquin the Proud nine books of prophecies; the price was too high, but at length the king bought

the three books that she had not destroyed for the price originally demanded for the set. These Sibylline Books, kept at Rome, were consulted in state emergencies. The alleged cave of the Cumaean S. was discovered in 1932 on Monte Cuma, nr. Naples.

SICILY. The largest island in the Mediterranean, forming with Lipari, Egadi, Ustica, and Pantelleria islands an autonomous region (1946) of Italy. Separated from the mainland by the Strait of Messina, S. is roughly triangular, tapering towards the W. The N. and centre are mountainous incl. Etna (10,755 ft., but est. at 11,000 after recent eruptions); elsewhere undulating hills and river valleys are found. The Simeto, Platani, and Salso are the main rivers. However, failure to harness mountain streams, together with the hot climate, extensive deforestation and low rainfall, has resulted in a water shortage. Wheat, barley, oats, maize, beans, are grown in the interior; oranges, lemons, olives, vines, and almonds are intensely cultivated in smallholdings, which support over ½ of the pop., found mostly in the irrigated and fertile strips of land along the coast, and sheep and goats thrive, but there is little dairy produce apart from cheese. Tunny fishing is of importance; sulphur, salt, and asphalt are mined. Industries incl. shipbuilding, vegetable canning, and wine making. The road and rail networks are adequate between Palermo, the cap., and the ports of Catania, Messina,

SOUTH GEORGIA. A British whaling island in the S. Atlantic, 800 m. E. by S. of the Falkland Islands, of which it is a dependency. It was discovered by Cook in 1775. Area 1,600 sq. m.; pop. (1961) 561.

SOUTH ORKNEYS. A British island group (uninhabited) in the Southern Ocean, a dependency of the Falkland Islands, discovered in 1821 by George Powell. The 2 main islands are Laurie and Coronation.

SOUTHSEA. A district of Portsmouth (q.v.).

SOUTH SEA BUBBLE. The financial crisis of 1720. The South Sea Co., founded in 1711, which enjoyed a monopoly of trade with S. America, offered in 1719 to take over the national debt in return for further concessions. Its £100 shares rapidly rose to £1,000, and an orgy of speculation followed. When the 'bubble' burst, thousands were ruined. The discovery that cabinet ministers had been guilty of corruption led to a political crisis; Walpole became P.M., and restored financial confidence.

SOUTH SHETLANDS. A British archipelago of 12 uninhabited islands in the Southern Ocean, a dependency of the Falkland Islands (q.v.). Area 1,800 sq. m.

SOUTH SHIELDS. Seaport (co. bor.) in co. Durham, England, on the Tyne. Manufactures incl. cables and chemicals. Pop. (1961) 109,533.

SOUTH UIST. See under Uist.

SOUTHWARK (suth'ark). Inner bor. of Greater London - commonly called The Borough - and incorporating from 1965 Bermondsey and Camberwell. It is on the S. of the Thames opposite the City: St. Saviour's cathedral dates from the 12th cent. and the George Inn (1677) is London's last galleried inn. See GLOBE THEATRE. Pop. (1967) 300,720.

SOUTH WEST AFRICA. Territory of S. Africa, on the Atlantic S. of Angola, from which it is separated in the W. by the r. Kunene, N. of the Cape of Good Hope prov., from which it is separated by the Orange r. Most of the area is barren upland, and in the E. is the Kalahari Desert, but there is some good grazing. Cattle, sheep, and goats are raised, and there is an important trade in skins. Mineral wealth incl. diamonds, vanadium, tin, and copper. Windhoek is the cap., and the chief ports are Lüderitz and Walvis Bay (admin. with S.W.A. though part of Cape Prov.). Area 317,825 sq. m. (excl. Walvis Bay, 434 sq. m.); pop. (1960) 525,959 (73,460 white).

S.W.A. was annexed by Germany in 1884, and in 1904-7 it was the scene of the Herero rebellion, which was put down with great harshness. In the F.W.W. South African forces under Botha occupied all S.W.A. 1914-15. The terr. was mandated by the League of Nations to South Africa in 1920, and a declaration by the U.N. in 1966 that the mandate was terminated was rejected by South Africa: the U.N. declared 1968 that S.W.A. would in future be known as Namibia. Under a South African govt. act of 1968 legislative councils were to be estab. in 6 areas as a step to self-governing Bantu homelands, largest being Ovamboland, pop. 270,000, with cap. at Oshakati.

SOVEREIGN. British gold coin, introduced by Henry VII, worth 20 shillings. It became the standard monetary unit in 1817, but minting ceased for currency purposes in 1914. Although it is illegal for residents in the U.K. to hold gold coin, otherwise than in coin collections, the S. is still current in the Middle East and large quantities are struck.

SOVIET (Russian, council). The original Ss. were strike committees elected by the Russian workers during the 1905 revolution. After the deposition of the tsar in 1917 local Ss. were set up by peasants, soldiers, and industrial workers, and they selected delegates to an All-Russian Congress of Ss., which in Nov., under Bolshevik leadership, took over the govt. (See SOVIET UNION.) Ss. have been set up in many other countries during periods of crisis, e.g. in Germany in 1918 and Hungary in 1919, and the

Councils of Action during the British general strike in 1926. And at the present day similar systems exist in other Communist states.

SOVIET FAR EAST. Geographical (not admin. division of Asiatic R.S.F.S.R., on the Pacific coast. It covers the Amur, Lower Amur, Kamchatka, and Sakhalin regions, and Khabarovsk and Maritime terrs.

SOVIETSK (sovyetsk'). Town in Kaliningrad region, R.S.F.S.R., 60 m. N.E. of Kaliningrad city. Saw milling, paper and wood-pulp making, distilling, cheese making are among its industries. The former Tilsit (renamed S. in 1946), it was the site of a meeting in 1807 at which Napoleon made peace with Russia and Prussia. Pop. (est.) 60,000. See KALININGRAD.

SOVIET UNION. Abbreviation for the Union of Soviet Socialist Republics (U.S.S.R.). The Russian Soviet Federated Socialist Republic (R.S.F.S.R.; q.v.), was formed after the 1917 revolution, and in

UNION OF SOVIET SOCIALIST REPUBLICS

	Area in sq. m.	Population in 1,000s	Capital
R.S.F.S.R.	6,570,400	127,911	Moscow

Turkmen S.S.R.	187,000	2,029	Ashkhabad
Ukraine	222,600	46,381	Kiev
Uzbek S.S.R.	157,400	11,266	Tashkent
White Russia	80,500	8,820	Minsk
U.S.S.R.	8,566,300	236,689	Moscow

1924 the union with the Ukrainian and White Russian Republics and the Transcaucasian Soviet Federal Socialist Republic to form the U.S.S.R. was ratified. In 1963 there were 15 constituent republics (see table), and the est. pop. was 225,000,000. Under the 1936 constitution the central govt. at Moscow is responsible for defence, foreign policy, foreign trade, communications, and heavy industries, while the govts. of the constituent republics deal with all other subjects. National groups within several of the constituent republics have a measure of self-govt., the R.S.F.S.R. incl. the largest number of such autonomous units.

The highest organ of govt. is the Supreme Soviet of 2 chambers elected for 4 years - the Soviet of the Union (elected on a basis of 1 deputy for every 300,000 of the pop.) and the Soviet of Nationalities consisting of 25 deputies from each constituent rep., 11 from each autonomous rep., 5 from each autonomous region, and 1 from each national area. The Supreme Soviet elects its Presidium, which acts as an executive committee between its sessions, and the Council of Ministers, or Cabinet. Each constituent republic and autonomous republic has its own Supreme Soviet, of one chamber, and Council of Ministers. All citizens over 18 may vote by ballot. Deputies may be recalled by a majority of their constituents. Local govt. is in the hands of district, town, and village soviets.

All industries and means of communication are State-owned, and are normally organized under either an all-Union ministry or a ministry of a constituent republic. Local authorities often run industrial

SIGNALS. Method of communication using flags, light, radio telephony, radio telegraphy, etc. The International Code of S. used by shipping was drawn up by an international committee and pub. in 1931. The codes and abbreviations used by aircraft are dealt with by the International Civil Aviation Organization (1944). See MORSE CODE and SEMAPHORE.

SIKHISM (sē'kizm). The religion of between 4 and 5 million Indians living for the most part in the Punjab. It was founded by Nanak (1469–c.1539). Its basis is the Unity of God and the Brotherhood of Man, and in it caste plays a comparatively small part. On Nanak's death he was followed as Guru—chief priest—by a succession of rulers who converted the Sikhs—the word means disciple—into a military confraternity which established itself as a political power. Guru Gobind Singh instituted the Khanda-di-Pahul, the Baptism of the Sword, and established the Khalsa ('the pure'), the Brotherhood of the faithful, the Singhs. The Singhs wear the 5 Ks: *kes*, long hair; *kangha*, a comb; *kirpan*, a sword; *kachh*, long drawers; and *kara*, a steel bracelet. The last of the Gurus, Gobind Singh, was assassinated by a Moslem in 1708, and since then the Granth Sahib, the holy book of the Sikhs, has taken the place of a leader. On the partition of India many Sikhs migrated from W. to E. Punjab, and in 1966 the efforts of Sant Fateh Singh (c. 1911–) led to the creation of a separate Sikh state by partition of Punjab (q.v.).

SI-KIANG ('West River'). River of China, rising in Yunnan and flowing into the South China Sea. Canton lies on the N. arm of its delta. Hong Kong island lies off the mouth.

SIKKIM (sik'im). Small state in the Himalayas, bordering Nepal, Bhutan, and Tibet (China). Maize and rice are grown. S. is under the protection of the Rep. of India. The cap. is Gangtok. King (*Chogyal*) Palden Thondup Namgyal (1924–) succeeded his father as maharajah in 1963, but was crowned under the title of king in 1965: his wife, née Hope Cooke, is American-born. Area 2,745 sq. m.; pop. (1961) 162,189.

SIKO'RSKI, Wladyslaw (1881–1943). Polish gen. and statesman. B. in Galicia, he organized in 1909 the nationalist military organization, which during the F.W.W. fought for the central powers. He served in the Russian war of 1920, and was P.M. 1922–3 and War Min. 1923–5. He became P.M. in Sept. 1939 of the exiled Polish govt., which transferred to London in 1940. He was killed in an air crash.

SILAGE. Fodder preserved in a silo, an airtight structure for pressing green crops. It is now extended to refer to stacked crops which may be preserved indefinitely.

SILCHESTER. Archaeological site in Hants., England, 6 m. N. of Basingstoke. One of the most important towns in Britain in the Roman period. S. is the only town in the prov. known in such detail.

SILENUS. In Greek mythology, the son of Hermes, or Pan, and companion of Dionysus. He is portrayed as a jovial old man, usually drunk.

SILE'SIA. Region of central Europe. Before the F.W.W. all except a small part of S. had belonged to Germany since it was wrested from Austria (which had held it since 1675) by Frederick II of Prussia in 1745. In 1919, c. 1,700 sq. m. (most of the part in Austria) went to newly formed Czechoslovakia; c. 1,600 sq. m. to revived Poland; the rest, 13,000 sq. m., remained part of Germany. Following the S.W.W. all German S. lying E. of the Oder–W. Neisse line was transferred to Polish administration, 1945, and most of its German inhabitants were expelled, as were those of German origin in Czechoslovak S. The largest towns are Wrocław (Breslau), Katowice, Zabrze (Hindenburg), Chorzów (Königshütte), Gliwice (Gleiwitz), and Bytom (Beuthen) in Poland and Opava (Troppau) in Czechoslovakia.

SILHOUETTE (siloo-et'). A profile or shadow portrait filled in in black or a dark colour, named after Étienne de Silhouette (1709–67), a French finance minister whose economy led to his name being applied to cheap things. See illus. p. 482.

SILICON. A non-metallic chemical element, symbol Si (Lat. *silex*, flint), at. wt., 28.09, and at. no.

14. It is used in the making of glass and as a hardener in steel alloys.

Silicones are synthetic chemical products, characterized by their chemical inertness, good electrical properties, and ability to repel water. They are based on a chain of oxygen and silicon atoms, the latter having organic groups attached to them. These groups and the basic silicone structure can be varied to produce silicone rubber, longer-lasting electrical material, paints, industrial grease, domestic polishes, water-repellent fluids for treating masonry, stain-resistant fabric finishes, etc.

SILICŌ'SIS. A condition affecting workers who inhale flint dust, e.g. anthracite miners and stone cutters. The lung tissue becomes fibrous through constant small injury and repair, less capable of aerating the blood and less resistant to tuberculosis.

SILK. Fine, soft thread produced by the larva of

SILK. A fully grown silkworm (top left) surrounded by newly hatched worms: at maturity, the silkworm is 8,000 times heavier and 23 times larger than when first hatched. Just emerged from the

cocoon (bottom left) a silkmoth waits for its wings to dry and expand: in forcing its way out—the aperture is seen to the right—it broke the continuous filament of which the cocoon is composed. The leading threads of each cocoon are unravelled (right) and are ready for passing to the reeling-machine operator.

Courtesy of the Silk Centre.

Islands are incl. in S. The interior has extremes of temperature in summer and winter. The main plateau is very dry, but the N.W. enjoys an equable climate with much rain, while Andalusia is sub-tropical.

ECONOMIC. Two-thirds of the pop. depend on agriculture. Many fruits are cultivated, incl. grapes, oranges, dates, olives, and pomegranates; as well as wheat, barley, potatoes, and sugar beet. Sheep and cattle are raised. Lead and silver are found in Murcia in the S.E., and the Rio Tinto mines near Huelva have one of the largest copper deposits in the world. Mercury is obtained near Almaden, and iron ore in the Basque country. Coal is worked in the Asturias. Industry is little developed, though Barcelona has important metallurgical, textile, and paper industries and Oviedo and Bilbao specialize in the manufacture of metal goods. Madrid is the cap.; other large towns are Barcelona, Valencia, Seville, Malaga, Saragossa, Murcia, and Bilbao.

GOVERNMENT. Dictator of S. from 1939, Franco embodied in an Organic Law of 1966 his announcement of 1947 that S. was once more a monarchy, with himself acting as regent and Head of State (*Caudillo*) till death or incapacity. In 1969 he nominated Juan Carlos (*see* BOURBON TABLE) as the future King of Spain, formally declaring him Prince of Spain, as opposed to the traditional monarchist title for the heir to the throne. Prince of the Asturias: Juan Carlos had m. in 1962 Princess Sophia of Greece, dau. of King Paul of the Hellenes and Queen Frederika. The single party (Falange Española) is headed by Franco, though the 1966 law provided for delegation to a P.M. chosen by himself. The Cortes (re-estab. 1942) is composed on corporative lines (though from 1966 with 100 of its c. 500 members elected by heads of families and their wives), and approves of laws put before it.

AREA AND POPULATION. The area (incl. the Balearic and Canary Islands) is 194,232 sq. m. The inhabitants are mainly of Iberian stock, with a strong Moorish admixture in the S. Elementary education is free and compulsory. The country forms 12 educational regions, each with its own univ. Roman Catholicism is the official religion. The total pop. (incl. the Balearics and the Canaries) was 32,275,434 in 1968.

OVERSEAS POSSESSIONS. Of the once vast overseas empire little remains—the towns of Ceuta and Melilla, and Spanish Sahara; *see* also EQUATORIAL GUINEA and LINI.

History. Pre-Roman S. was inhabited by Iberians, Celts, and Celtiberians. The Phoenicians and Greeks early estab. colonies on the coast, and the Carthaginians attempted to found an empire in the S.E. This fell into Roman hands in c. 200 and after a long struggle all S. was absorbed into the Roman Empire. At the invitation of Rome the Visigoths entered S. in A.D. 414 and set up a kingdom there, c. 530–700. In 711 the country was overrun by the Moors. The Christians maintained their resistance from the northern mountains, and by 1250 had reconquered all S. except the kingdom of Granada. During this struggle a number of small Christian kingdoms were founded, all of which by the 13th cent. had been absorbed by Castile and Aragon. The marriage of Ferdinand of Aragon to Isabella of Castile, 1469, brought their domains together on their accession, 1479; and the conquest of Granada in 1492 completed the unification of S.

Under Ferdinand and Isabella, Charles I (*see* CHARLES V, Holy Roman Emperor), and Philip II, S. became the greatest power in Europe, and the mistress of a world-wide empire. Columbus's discoveries made on behalf of S. were followed by the conquest of most of Central and S. America; Naples and Sicily were annexed in 1503, Milan in 1535, and Portugal in 1580, while Charles I inherited the Netherlands. But with the revolt in the Netherlands and the defeat of the Armada (1588), S.'s power began

to decline; the loss of civil and religious freedom, constant wars, inflation, a corrupt bureaucracy, and the expulsion of the Jews and Moors undermined her economic life, and in the 17th cent. she ceased to be a great power. By the peace of Utrecht (1713) S. lost the S. Netherlands (the N. had been recognized as independent in 1648), Naples, Sicily, Milan, and Gibraltar. During the 18th cent. reforms were undertaken, and considerable economic progress was made. S. became involved in the Revolutionary and Napoleonic Wars, first as the ally, later as the opponent, of France; the French occupied S. in 1808, and it was not until 1814 that they were expelled, with British assistance.

Throughout the 19th cent. conflict raged between monarchists and Liberals; revolutions and civil wars occurred in 1820–3, 1833–9, and 1868, besides many minor revolts, and a republic was temporarily estab. in 1873–4. S. lost her American colonies during 1810–30, and after the war with the U.S.A. of 1898 ceded Cuba and the Philippines to the U.S.A. Republicanism, Socialism, and anarchism grew after 1900; Primo de Rivera's dictatorship (1923–30) failed to save the monarchy under Alfonso XIII, and in 1931 a republic was estab.

In 1936 the Popular Front, an alliance of centre and left parties, took office, and introduced agrarian and other reforms which aroused the opposition of the landlords and the Church. A military revolt followed, headed by Gen. Franco (q.v.); the insurgents or Nationalists seized power in the S. and N.W., but revolts in Madrid, Barcelona, and elsewhere were suppressed by the workers' militia. Madrid held out for 2½ years. Italian troops and German air forces fought on the Nationalist side, while the Republicans or loyalists received minimal assistance from Russia, and volunteers from many countries formed the International Brigade to fight for the govt. Bilbao and the Basque country were bombed into submission by the Nationalists in 1937, and in 1938 they cut off Catalonia from the main Republican territory. Barcelona fell in Jan. 1939, and the war ended with the surrender of Madrid in April. A Fascist dictatorship was estab., the only authorized party being the Falange. During the S.W.W., S. was nominally neutral, but inclined to the Axis. In the 1960s there was friction with Britain over Gibraltar.

SPALATO. Ital. form of SPILT.

SPALDING (spawld'-). English market town (U.D.) in Holland, Lincs, 14 m. S.S.W. of Boston. The neighbourhood is famous for its bulb farming. Pop. (1961) 14,821.

SPANIEL. A group of dogs, characterized by large, drooping ears and a long, silky coat. The Clumber S. takes its name from the estate of the duke of Newcastle, who imported them from France; it is lemon

SUSSEX SPANIEL

and white, and very silent when hunting. The Sussex S., believed to be the oldest variety, is a golden liver colour. The cocker is a small S., which varies in colour from liver or liver and white to black. Toy Ss., kept as pets, are divided into the black-and-tan King Charles, and the red and white Blenheim.

SPANISH. The S. language is of Latin origin, and also borrowed much from the Moors during their occupation of the peninsula. The dialect of Castile was adopted as the official language towards the end of the 13th cent., but it has never supplanted the other regional idioms, among which Catalan has achieved the status of an independent language, while Galician is very close to Portuguese. Basque, which is spoken in the extreme N.E. of Spain, is unrelated

site was settled by the Dutch in 1741, taken by the British 1795. Britain withdrew the C.-in-C. South Atlantic from S. 1967, but continues to use facilities there. Pop. c. 10,000.

SÍMONY. Name given to the buying and selling of presentation to an ecclesiastical benefice, preferment, etc. It is derived from Simon Magnus, who (as told in Acts viii) offered the Apostles money in return for the power of the Holy Ghost.

SIMPLON (sənploh'). Pass on the borders of Switzerland and Italy. It runs in a S.E. direction from Brig to Domodossola, rises to a height of 6,582 ft., and is followed by a road built by Napoleon I, 1800-5. Under it runs the S. tunnel, 1906-22, 12.3 m.

SIMPSON, Sir James Young (1811-70). British physician. He took his M.D. at Edinburgh in 1832, became pres. of the Royal Medical Soc. 1835, and prof. of midwifery 1839. He was largely instrumental in the introduction of chloroform as an anaesthetic in 1847. He was created a baronet in 1866.

SIMPSON, Norman Frederick (1919-). British dramatist. A lecturer in history and English for adult education, his plays *A Resounding Tinkle* (1957), *The Hole* (1958), and *One Way Pendulum* (1959) show the logical development of an abnormal situation, and belong to the 'Theatre of the Absurd'.

SINAI (sī'ni). Egyptian peninsula between the gulfs of Suez and Aqaba, at the head of the Red Sea. The Mount Sinai, on which Moses received from Jehovah the tables of the Law, has been variously identified. In St. Catherine's monastery Tischendorf discovered in 1844 the Codex Sinaiticus, purchased from Russia in 1923 and placed in the British Museum. It was occupied by Israel from 1967.

SINATRA, Frank (1917-). American singer. B. in Hoboken, N.J., the son of a former prizefighter, he achieved fame as a heart-throb singer - 'Night and Day', 'You'd Be So Nice to Come Home To', etc., and then estab. himself as an actor, as in *From Here to Eternity* (1953) which won him an Oscar.

SINCLAIR, Archibald. See LORD THURSO.

SINCLAIR, Upton (1878-1968). American novelist. B. in Baltimore, he attracted attention with *The Jungle* (1906), dealing with the Chicago stockyards. Among his later works are *Boston* (1928), and the Lanny Budd series, incl. *Presidential Agent* (1944).

SIND. Former prov. of British India and of Pakistan, merged 1955 in W. Pakistan. It had an area of 47,000 sq. m., most of it in the delta of the Indus, and had been annexed by Britain in 1843.

SIMONOV. He became chairman of the Soviet Writers' Union during the period when writers were being ruthlessly forced to toe the Stalinist line, and even in 1956, as editor of *Novy Mir*, was strongly criticised for his publication of Dudintsev's *Not by Bread Alone*.

SÝNDING, Christian (1856-1941). Norwegian composer. His works incl. 3 symphonies, piano pieces and songs. Otto (1842-1909) and Stephan (1846-1922),

SINGAPORE. Greeting the arrival of a ship in the traditional way, Chinese dancers perform the Lion Dance on the quay at Singapore for the passengers of the *Oriana*. Music is provided by a percussion band. Courtesy of P. & O. Orient Lines.

his brothers, were painter and sculptor respectively.

SINGAPORE. Island state of Asia, lying off the southern tip of Malaya and joined to the mainland by a causeway carrying road and railway across the Strait of Johore. Area 220 sq. m.; pop. (1967) 1,955,600, of whom 1,454,500 were Chinese, 18,900 European, 159,400 Indian and Pakistani, and 283,500 Malay. The cap., also S., lies on the S. coast; the airport is at Paya Lebar, 6½ m. from the city.

S. island, then a swampy jungle, was leased from the sultan of Johore, on the advice of Stamford Raffles, by the East India Co. in 1819, ceded to the Co. in 1824, and passed to the Crown in 1858. It was detached from India in 1867 and placed under the Colonial Office as part of the Straits Settlement crown colony, dissolved in 1946, S. then becoming a separate crown colony. Given independence 1959, S. was incl. in Malaysia, but seceded 1965, becoming a rep. within the Commonwealth.

During the S.W.W., S. was in Japanese occupation 15 Feb. 1942-12 Sept. 1945; the great naval base, constructed on the N. coast 1923-4 and 1934-8 at a cost of more than £11,000,000, proving useless in defence since its great guns were directed only southwards, its designers never having contemplated invasion from the N., which in the event happened.

S., the cap., founded by Raffles in 1819 on the site of an old town destroyed by the Javanese c. 1377, developed into a very important entrepôt and port, serving the whole of Malaya and exporting rubber, tin, copra, etc., in quantity. It is also a major international airport. Made a city in 1951, it has fine buildings, incl. Anglican and R.C. cathedrals, the Raffles museum, and S. univ. (1949). The naval dockyard was handed over to S. govt. for conversion to commercial use in 1968.

SING SING. Name until 1901 of the U.S. village of Ossining New York, famous as the site of a state prison (1825, rebuilt 1930).

SINKIANG-UIGHUR (sin'kyang' wē'goor). Auton. region of China, bordering Kazakh S.S.R. and the Mongolian People's Republic; Tibet lies to the S. The semi-desert depressions of Dzungaria and Tarim are separated by the Tien Shan mountain system. The people and army resisted the Maoist Cultural Revolution and in 1967 there were Sino-Soviet frontier clashes - China's nuclear testing ground is at Lop-Nor (q.v.). Urumchi is the cap. Area 635,800 sq. m.; pop. (1957) 6,640,000.

SINN FÉIN (shin fān) (Gaelic, 'We ourselves'). Irish nationalist party, founded by Arthur Griffith in 1905, with a policy of resistance to British rule. After 1917 it became under De Valera the centre of the republican movement, and ousted the old Home Rule Party in the 1918 elections. It survived only as a small extremist group after the creation of Fianna Fáil.

to any other European language. S. is the official language of all the Latin American republics except Brazil, and is also spoken in the Philippines and among Sephardic Jews in N. Africa, the Middle East, and the Balkans. An official language of the United Nations, S. is spoken by about 90 million persons.

Literature. Of the classical epics, the 12th cent. *El Cantar de Mio Cid* is the only complete example. The founder of Castilian prose was King Alfonso X, the Wise, who also wrote lyric poetry in the Galician dialect. The first true poet was the 14th cent. satirist, Juan Ruiz, archpriest of Hita. To the 15th cent. belong the marquis of Santillana (Íñigo López de Mendoza), poet, critic, and collector of proverbs; the chivalric romances, e.g. the *Amadis de Gaula*; the ballads dealing with the struggle against the Moors; and the *Celestina*, a novel in dramatic form. The flowering of the verse drama began with Lope de Rueda (d. 1565), and reached its height with Lope de Vega and Calderon de la Barca. In poetry the Golden Age of the 15th–16th cents. produced the lyrical Garcilaso de la Vega; the patriotic Fernando de Herrera (1534–97); the mystics Santa Teresa and Luis de León; Luis de Gongora (1561–1627), whose elaborate style popularized the decadent 'gongorism'; and the biting satire of Francisco de Quevedo. In fiction there developed the pastoral romance, e.g. Jorge de Montemayor's *Diana*; the picaresque novel, estab. by the anonymous *Lazarillo de Tormes*; and the work of Cervantes. In the 18th cent. the Benedictine Benito J. Feijóo introduced scientific thought to Spain, and French influence emerged in the comedies of Leandro F. de Moratín (1760–1828), etc. Typical of the romantic era were the poet-dramatists Angel de Saavedra (duque de Rivas) (1791–1865), and José Zorrilla; and the lyricist José de Espronceda (1810–42). Among 19th cent. novelists are Fernán Caballero, Pedro de Alarcón, Juan Valera (1824–1905), Emilia condesa de Pardo Bazán (1852–1921), José de Pereda, and Armando Palacio Valdés; a 19th cent. dramatist is José Echegaray.

The 'Generation of 1898' incl. the philosophers Miguel de Unamuno and José Ortega y Gasset; the novelists Pio Baroja, Benito Pérez Galdós (1843–1920), Ramón Pérez de Ayala (1880–1960), Ramón del Valle-Inclán, and Gabriel Miró; the prose writers 'Azorín' and Angel Ganivet (1865–98); and the poets Juan Ramón Jiménez, and the Nicaraguan Rubén Darío, who went to Europe and did much to revolutionize 20th cent. S. poetry, introducing new rhythms, vers libre, etc. The next generation of writers incl. the prose writers Salvador de Madariaga, Arturo Barea, and C. J. Cela (1916–); and the poets Miguel Hernández (1910–51), Antonio Machado, F. García Lorca, Jorge Guillén, Rafael Alberti, Pedro Salinas (1892–1951), Vicente Aleixandre (1898–), and Luis Cernuda (1904–); dramatists were Jacinto Benavente, the brothers Quintero, and – the most striking – F. García Lorca. The Civil War and the strict censorship of the Franco govt. to some extent disrupted the mid-cent. literary life, but writers of the younger generation, occasionally writing in exile, incl. the novelists Rafael Sánchez Ferlosio (1927–), Ana María Matute, Juan Goytisolo (1931–) and José María Gironella (1917–), and the poets Blas de Otero (1916–) and José Hierro (1922–).

In Central and S. America there is vigorous life and the growth of a new tradition, especially in poetry. Mexico has been particularly fertile in poetic talent, e.g. Salvador Díaz Mirón (1858–1928) who influenced Darío, Ramón López Velarde (1888–1921), Alfonso Reyes (1889–), Xavier Villaurrutia (1904–42), Alberto Quintero Álvarez (1914–44) and Octavio Paz. Other notable names incl. the Nobel prizewinner Gabriela Mistral and Pablo Neruda – both of Chile; the Argentinian Ricardo E. Molinari

(1898–); Julio Herrera y Reissig (1875–1910) of Uruguay; César Vallejo (1895–1937) of Peru; Jorge Carrera Andrade (1903–) of Ecuador; and Nicolás Guillén, a Cuban of Spanish and African descent.

SPANISH ARMADA. The fleet sent by Philip II of Spain against England in 1588. Consisting of 130 ships, it sailed from Lisbon, and carried on a running fight up-Channel with the English fleet of 197 small ships under Howard of Effingham and Drake. The A. anchored off Calais, but was forced to put to sea by fireships, and a general action followed off Gravelines. What remained of the A. escaped round the N. of Scotland and W. of Ireland, suffering many losses by storm and shipwreck on the way. Only about half the original fleet returned to Spain: see illus. p. 382.

SPANISH ART. Painting. Little pre-10th cent. painting still exists, but many examples of Romanesque art (10th–13th cent.), mainly brilliantly coloured

SPANISH ART. To the left, El Greco's 'Man with his hand on his breast' in the Prado, and, to the right, 'Magdalena' by Pedro de Mena (d. 1693) in the Museo de San Gregorio at Valladolid. Courtesy of the Spanish Ministry of Information.

church murals, survive. Gothic murals and altar panels (13th–15th cent.) are more freely natural.

Italian and Flemish influences contributed to Spanish Renaissance painting, and the great masters of this period (end of 15th–16th cent.) incl. Bartolomé Bermejo (c. 1440–95), Alonso Sánchez Coello (1515–90), Luis de Vargas (1502–68), Francisco de Herrera the Elder, Juan de Juanes (1523–79), Ribalta, Navarrete (1526–79), Luis de Morales (1509–86), and the greatest of all, El Greco.

Whereas previously there had been regional distinctions in style, in the 17th cent. a national school developed, of which the greatest names were Ribera, Zurbaran, Velasquez and Murillo.

The greatest Spanish artist of the 18th cent. was Goya, who exerted a great influence on European art of the following cent. Painters of the 20th cent. incl. the cubist Juan Gris (1887–1927), the surrealists Joan Miró and Salvador Dalí (qq.v.), the impressionist Joaquín Sorolla y Bastida (1863–1923) and, most notably, Pablo Picasso (q.v.). In Spanish America an important school of mural painting emerged in Mexico with the work of the 'Big Four' – José Orozco (1883–1949), Diego Rivera (q.v.), David Siqueiros (1898–), and Rufino Tamayo (1899–).

Architecture. The various styles of Spanish architecture are: *Roman* (3rd–5th cent., the period of Roman rule); *Asturian* (9th cent.), which takes its name from the district in N.W. Spain which was unconquered by the Moors; *Mozarabic* (9th–11th cent.), a style of Spanish Christian architecture, which shows the influence of Mohammedan architecture; *Romanesque* (11th and 12th cents.); *Gothic* (13th–16th cent.); *Renaissance* (15th–17th cent.), which is uninspired though based on Italian models; *Baroque* (17th–18th cent.), a style which the Spaniards delighted in, but carried to excess in the fantastic designs of Churriguera and his followers; *Neo-Classical*

1850 by E. W. Bushnell: the 1st artificial ice rink was opened in London in 1876. National bodies incl. the National S. Asscn. of Gt. Britain (1879), U.S. Figure S. Asscn. (1886) and the Canadian Figure S. Asscn. (1888), all subject to the International S. Union. Competitive S. events incl. figure (comprising compulsory figures and free S.) for men, women and pairs; dance - for pairs; speed - for men and women. Roller S. 1st developed in the 18th cent., but the modern 4-wheel skate was the invention of the American James L. Plympton who also opened the 1st rink at Newport, Rhode Island, in 1866. Events are as for ice S., and in Britain the N.S.A. is the governing body: international control is exercised by the Fédération Internationale de Patinage à Roulettes. See also ICE HOCKEY.

SKEGNESS. English holiday resort (U.D.) on the Lincolnshire coast. The first Butlin (q.v.) holiday camp was at S., 1936. Pop. (1961) 12,843.

SKELTON, John (c. 1460–1529). English poet. He became tutor to Prince Henry, later Henry VIII, and took orders in 1498. Among his poems are *Colyn Cloute*, *Phyllyp Sparowe*, and *The Tunning of Elynour Rumming*.

SKI'DDAW. Mountain (3,054 ft.) of Cumberland, England, in the Lake District, c. 7 m. N. of Keswick.

SKIING. Self-propulsion on snow by means of elongated wooden or metal skis, 3–5 in. wide, c. 7 ft. long and bent upward at the tip; usually with the assistance of ski poles held in the hands. Prehistoric types of ski date in Sweden to c. 3,000 B.C., but they were primarily a means of civil or military transport

SKIING. Ideal for the learner or the expert limbering up for winter sports is the plastic slope now installed in large stores or (as here) in the open air. Courtesy of Bakelite Ltd.

until the sport developed in Norway c. 1860. Competition events incl. slalom, in which flags (placed to make the turns as difficult as possible) mark out a course of varying gradient; cross-country racing; and ski jumping - over 300 ft. being achieved. The Fédération Internationale des Skieurs (1924) is linked with the Ski Club of Great Britain (1924), the Canadian Amateur Ski Asscn. (1920), the Nat. Ski Asscn. of America (1904), etc. Allied to the ski is the N. American Indian snow shoe, a broad framework covered with a thong web, and useful for travel in thick forest. In water S. the skis are wider and shorter than snow skis, and the skier is towed by a motorboat.

SKIKDA. See PHILIPPEVILLE.

SKIN. The covering of the body. Its outer layer, the epidermis, is insensitive and protective, and the cells of this are constantly being rubbed away and replaced from below; the lower layer, the true skin or corium, is full of blood-vessels and nerves of sensation, touch and temperature control. It contains the hair roots, and the sweat and sebaceous glands, and is supported by a network of fibrous and elastic cells. Skin diseases may be the result of infection, e.g. impetigo, herpes or rarely tuberculosis; tumours, e.g.

SKIPTON. The castle, of which the gateway is seen here, was built partly in the reign of Edward II and partly in that of Henry VIII, and was once the chief seat of the Cliffords. John, the 9th baron, was the murderer of the earl of Rutland in the battle of Wakefield in 1460. Photo: W. R. Mitchell

cancer; fungus invasion, e.g. ringworm; rashes from a multiplicity of common drugs, or contact or allergic dermatitis from furs, hair dyes and some detergents. Skin-grafting is the repair of injured skin by placing pieces of skin taken from elsewhere on the body so that the cells may multiply and cover it.

SKIPTON. English market town (U.D.) in the W. Riding, Yorks, about 22 m. N.E. of Leeds. It has a ruined castle and textile factories. Pop. (1961) 12,988.

SKITTLES. A game with the object of knocking down 9 wooden S. forming a square at one end of an alley by means of a ball hurled from the other. An angle of the square faces the alley. The game resembles tenpin bowling (q.v.).

SKOPJE (skop'ya). Cap. of Macedonia, Yugoslavia, on the Vardar. On the site of an ancient town destroyed by earthquake in the 5th cent., it was taken by the Serbian king Milutin in the 13th cent.; he made it his cap. Again destroyed by earthquake 1963, S. was rebuilt on a safer nearby site. There are chromium mines, iron and steelworks, and an airport. S. is a Moslem centre. Pop. (1961) 161,983.

SKUA (skioo'a). Genus of seabirds, of which the largest is the great S. (*Stercorarius skua*) of the N. Atlantic, 2 ft. long and dark brown on the upper parts. Very aggressive, the Ss. seldom fish for themselves and rely on forcing gulls to disgorge their catch.

SKULL. The collection of flat and irregularly shaped bones (22 in all) which enclose and protect the brain and form the face. The brain case (cranium) consists of plates of bone joined by sutures. The bones of the face carry the upper teeth and enclose some air spaces (sinuses) and form the framework for the eyes, nose and mouth. The lower jaw is hinged to the middle of the cranium at its lower edge. Inside, the cranium is hollowed into various shallow cavities into which fit different parts of the brain; the plate corresponding to the back of the head (occipital) is jointed at its lower edge with the upper section of the spine (atlas and axis). The floor of the skull is pierced by a great hole for the spinal cord and a number of apertures through which pass other nerves and blood-vessels.

SKUNK. N. American mammal of the family Mustelidae. The common S. (*Mephitis mephitis*) has a long, arched body, short legs, a bushy tail, and a black fur with white streaks on the back. In self-defence it discharges a foul-smelling fluid.

prism could be broken into a band of coloured light, ranging from violet through indigo, blue, green, yellow, and orange to red. Light can be regarded as electromagnetic waves and most sources emit waves of complex shape which can be broken up or 'dispersed' by suitable means, such as by a spectroscope, an instrument containing a collimator, a prism or diffraction grating, and a telescope, into a succession of individual waves arranged in order of wavelength.

There are many types of *S.*, both emission and absorption, for radiation and particles. A few common examples may be cited: an incandescent body gives rise to a *continuous S.* where the dispersed radiation is distributed uninterruptedly over a range of wavelengths. An element gives a *line S.*—one or more bright discrete lines at characteristic intervals. Molecular gases give *band S.* in which there are groups of close-packed lines shaded in one direction of wavelength. In an *absorption S.* dark lines or spaces replace the characteristic bright lines of the absorbing medium. The *mass S.* of an element is obtained from a mass spectrograph and shows the relative proportions of its isotopes. (See also SPECTROSCOPY.)

SPEE (shpā), Maximilian, count von (1861–1914). German admiral. B. in Copenhagen, he held North Sea and Far Eastern commands before the F.W.W. S. went down with his flagship in the 1914 battle of the Falkland Islands, and the *Graf Spee* battleship was named after him.

SPEEDO-METER. Indicating instrument attached to the gear-box of a vehicle by a flexible drive to give the speed of the vehicle in miles or kilometres per hour on a dial easily visible to the driver.

SPEED RECORDS. Among human beings, the 'fastest men alive', at 17,550 m.p.h., are astronauts Yuri N. Gagarin (1961) and Walter M. Schirra (1962). On the ground, Lt.-Col. Stapp engaged in medical tests achieved 632 m.p.h. on a rocket sled, at Alamogordo, U.S.A., in 1954. By human effort alone, ice-skater Eugenyi Grischin (U.S.S.R.) has reached 23.23 m.p.h.: on foot over 100 yds. R. Hays (U.S.A., 1963), 22.47 m.p.h.; and over one mile, P. G. Snell (N.Z., 1962), 15.36 m.p.h. Among animals, the swift—fastest creature in the world—is able to fly at 70–100 m.p.h., the cheetah can attain 65 m.p.h. for short periods; the Sei whale 35 knots on the surface of the water, and other species of whale can cruise at 20 m.p.h. for up to 1,000 m.

On rail: the steam-locomotive S.R. is held by Sir Nigel Gresley's Mallard at 126 m.p.h. in 1938, but the absolute S.R. belongs to 2 French (S.N.C.F.) electric locomotives (BB 9004 and CC 7107) which on successive days in 1955 attained 205.6 m.p.h. over 1½ m. at Morceur. Man's preoccupation with speed in motor-cars has shown itself from earliest times; Count Gaston de Chasseloup-Lanbat registering the first successful Land S.R. in 1898 near Paris, with his electric brougham, at 39.24 m.p.h. Many makes—notably Stanley, Ford, Napier, Sunbeam, Delage, Fiat—and many drivers, incl. Oldfield, Marriott, Segrave, the Campbells, Cobb and Eyston, have progressively raised speeds in the 20th cent. Until 1964, when the official world land S.R. rested with Donald Campbell at 403.1 m.p.h., conventional wheel-driven cars had to be used, but the Fédération Internationale de l'Automobile then decided to accept jet-propelled cars (though these must be steered by a driver through their wheels): Craig Breedlove (U.S.A.) reached 600.6 m.p.h. in Nov. 1965 at Bonneville, Utah, his aircraft-shaped, three-wheeled *Spirit of America* being powered by a J.47 jet engine developing over 4,000 lb. thrust.

Speed on water has claimed the lives of 3 eminent car drivers, Segrave, Cobb and Donald Campbell, and the record 285.2 m.p.h. was achieved on Lake Guntersville, Alabama, by Lee Taylor, jr. (U.S.A.) in 1967. Although earthbound vehicles and conven-

tional aircraft rely mainly on jet engines to reach highest speeds, fixed-wing aircraft have progressed to rocket power, and William Knight in the North American Aviation X-15 (illus. p. 431) wrested the absolute record for winged aircraft with 4,534 m.p.h. in 1967 nr. Edwards Air Force Base, Calif.

SPEENHAMLAND SYSTEM. Method of poor relief in England started by Berkshire magistrates in 1795, whereby wages were supplemented from the poor-rates. It encouraged farmers to pay low wages, however, and was superseded by the 1834 Poor Law.

SPEKE (spēk), John Hanning (1827–64). British explorer. B. in Somerset, he served with the Indian army and in the Crimea, and in 1856 joined Burton (whom he had previously accompanied to Somaliland) in an expedition to the African lakes. When Burton became ill, S. went on to discover the Victoria Nyanza, but his claim that it was the source of the Nile was disputed by Burton even after Speke and Grant made a 2nd expedition 1860–3 to confirm the point. He accidentally shot himself while shooting near Bath, where he was to have disputed publicly with Burton the next day.

SPELEOLOGY (Gr. spēlaion cave). The scientific study of caves, incl. their origin, development, physical structure, flora, fauna, folk-lore, exploration,

SPELEOLOGY. Adventuring underground sometimes has its glimpses of beauty as well as the spice of danger. This formation of stalactites and stalagmites is in the East Passage of the Gaping Gill system, Yorkshire. Photo: W. R. Mitchell.

surveying, photography, cave-diving, rescue work, etc. It first developed in France in the late 19th cent., where the Société de Spéléologie was founded in 1895, and in the form of 'pot-holing'—which involves following the course of underground rivers or streams—has in the 20th cent. become a popular sport. In 1963 a world underground depth record of 3,723 ft. was achieved by a British team exploring the Berger cave nr. Grenoble.

SPELLMAN, Francis Joseph (1889–1967). American R.C. churchman. B. in Mass., he was the 1st American priest to be called to service in the secretariat of state at the Vatican. In 1939 he became abp. of New York and U.S. military vicar, and cardinal 1946.

SPENBOROUGH. English manufacturing town (bor.) in the W. Riding of Yorks, 5 m. S.E. of Bradford. It makes textiles of all kinds, leather, chemicals machinery. Pop. (1961) 36,412.

SPENCE, Sir Basil (1907–). British architect. He was prof. of architecture at the Royal Academy 1961–68, and his works incl. the Univ. of Sussex, Coventry Cathedral, the British embassy in Rome, and buildings for the Festival of Britain in 1951. He was knighted in 1960 and received the O.M. in 1962.

SPENCER, Herbert (1820–1903). British philosopher. B. at Derby, he was an engineer before entering journalism. While sub-editor on *The Economist*, he wrote *Social Statist* (1851), expounding his *laissez-*

SLOVENES (slōvēnz'). Slav people, inhabiting Slovenia and parts of Styria, and Carinthia. They speak a language akin to Serbo-Croat, and number c. 1,600,000.

SLOVE'NIA. Federal rep. of Yugoslavia, lying between Austria to the N., and Croatia to the S. The surface is mountainous, and agriculture and forestry are important. Ljubljana is the cap. Before 1918 S. was the Austrian prov. of Carniola. Area 7,719 sq. m.; pop. (1961) 1,584,368.

SLOWACKI (slō'vaki), **Juljusz** (1809–49). Polish poet and dramatist. B. at Krzemieniec, he obtained a govt. post in Warsaw in 1829, but after 1831 lived mainly in France.

SLOW-WORM. See **BLINDWORM**.

SLUG. An air-breathing gastropod of the families Limacidae and Arionidae, and related families. The grey field S. (*Agriolimax agrestis*) is the commonest British species, and a pest to crops and garden plants.

SLUIS or **Sluys**. Town of Zeeland, Netherlands, 10 m. N.E. of Bruges, with which it is connected by canal. A naval battle in which the English defeated the French was fought here in 1340, but since then the sea has receded. Pop. (est.) 2,000.

SMALL ARMS. One of the 2 main divisions of firearms (q.v.). S.A. came into use in the late 14th cent. as portable hand-guns, supported on the ground and ignited by hand. The matchlock, evolved during the 15th cent., used a match of tow and saltpetre gripped by an S-shaped lever which was rocked towards the touch hole with one finger, enabling the gun to be held, aimed and fired in much the same way as today. Front and back sights, followed by a curved stock which could be held against the shoulder (in the hackbut or Hookgun), gave increased precision. The inherent difficulty involved in keeping a match alight in wet weather was overcome by the introduction of the wheel lock, c. 1515, in which a shower of sparks was produced by a spring-drawn steel wheel struck by iron pyrites. This cumbersome and expensive mechanism evolved into the simpler flintlock c. 1625, operated by flint striking steel and in general use for 200 years until a dramatic advance, the 'percussion cap', invented in 1810 by a sport-loving Scottish clergyman, Alexander Forsyth, removed the need for external igniters. Henceforth, weapons were fired by a small explosive detonator placed behind or within the base of the bullet, struck by a built-in hammer. The principles of rifling, breech loading and the repeater, although known since the 16th cent. were not successfully exploited until the 19th cent. It was known that imparting a spin made the bullet's flight truer, but the difficulty of making the bullet bite the grooves had until then prevented the use of rifling. The Baker rifle, issued to the Rifle Brigade in 1800, was loaded from the front of the barrel (muzzle), and had a mallet for hammering the bullets into the grooves. The first breech loader was Von Dreyse's 'needle gun', issued to the Prussian army in 1842, in which the detonator was incorporated with the cartridge. By 1870 breech loading was in general use, being quicker, and sweeping the barrel out after each firing. An early rifle with bolt action was the Lee-Metford (1888) followed by the Lee-Enfield, both having a 'magazine' beneath the breech, containing a number of cartridges. With modifications this model is still used by the British army. U.S. developments favoured the repeater (Winchester *et al.*) in which the fired case was extracted and ejected, the hammer cocked, and a new charge inserted into the chamber, all by one reciprocation of a finger lever. In the semi-automatic, part of the explosion energy performs the same operations: the Garand, used by the U.S. army, is of this type. Completely automatic weapons were increasingly adopted during the S.W.W. From 1954 the British army standardized upon the Belgian F.N.

30 which is gas operated and can fire shots singly or automatically at 650–700 rounds per min.

SMALLPOX. Variola; a specific infective fever, probably caused by a filtrable virus. It is highly infectious and contagious. Incubation is from 12 to 14 days. The first symptoms are headache, pain in the back, and fever; on the second day a preliminary rash appears, and on the third a thick eruption, mostly on the arms, legs, and face. Blisters form and become purulent, and begin to break and dry up about the 12th day. Permanent pitting and scarring result. The type of the disease marked by bleeding under the skin is usually fatal, and in cases where the pustules coalesce about half the patients die. The other types are less dangerous. Complications incl. bronchopneumonia, blindness due to inflammation of the eyes, middle-ear disease, and paralysis. Vaccination is a reliable preventive, at least of the severer types, and in civilized countries, S. is now rare.

SMART, Christopher (1722–71). British poet. He became a fellow of Pembroke Coll., Cambridge, but settled in London as a hack writer. He was confined in 1756 to an asylum, where he wrote his greatest poems, 'A Song to David' and 'Rejoice in the Lamb'.

SMELT. Small fish of the family Osmeridae and the genus *Osmerus*. The most common European S. is the sparring (*Osmerus eperlanus*), which is noted for its delicate flavour: related species occur on the coasts of the U.S.A.

SMELTING. The extraction of metal from ore by melting. The blast furnace is the commonest appliance for this process, consisting of a tall shaft which receives coke, flux, and ore at the top, and discharges the molten products at the bottom. The hot blast is about 500–800°C.

SMETANA (smet'ahnah), Friedrich (1824–84). Czech composer. B. at Litomyšl, he was largely ed. in Germany, and became conductor of the Gothenburg Philharmonic Society in 1856. He settled in Prague in 1863, where in 1866 he became conductor at the national theatre, and his music developed a national character. He became deaf in 1874, lost his reason in 1883, and d. in an asylum. His finest works are the operas *The Bartered Bride* (1866) and *Dalibor*, and the symphonic suite *My Country*.

SMETHWICK (smedh'ik). English industrial town part of the co. bor. of Warley, Worcs. Iron, glass, chemical products, and machinery are made. West Indian and Asian immigration was a controversial election issue in 1964. Pop. (1961) 68,372.

SMILES, Samuel (1812–1904). Scottish author. B. at Haddington, he became in turn a doctor, journalist, and sec. to railway companies. He achieved fame with a life of Stephenson (1857), and the popular didactic work, *Self Help* (1859).

SMIRKE (smerk), Sir Robert (1781–1867). British architect. B. in London, he designed the British Museum and Covent Garden Theatre. He was elected R.A. in 1811, and knighted in 1831.

SMITH, Adam (1723–90). Scottish economist. B. at Kirkcaldy, he was prof. of moral philosophy at Glasgow 1752–63, publishing his *Theory of Moral Sentiments* in 1759. In *The Wealth of Nations* (1776), the basic idea is of annual labour being the source of a nation's necessities, and the case is put for free trade in opposition to mercantilist theories; this originated the classical British school of political economy, and largely estab. economics as a separate science.

SMITH, Dodie. British dramatist, she wrote until 1935 under the pseudonym C. L. Anthony. B. in Lancs, she made her reputation with plays of middle-class life, e.g. *Autumn Crocus* (1931), *Call it a Day* (1935), and *Dear Octopus* (1938); she has also written novels and the children's book *The Hundred and One Dalmatians* (1956).

SMITH, Lady Eleanor (1902–45). British novelist. The elder dau. of the 1st earl of Birkenhead, she was

pathologist for 25 years, he was remarkable for his success in using modern scientific methods for the solution of murders, especially in poisoning cases.

SPINACH (spin'ej). Annual plant (*Spinacia oleracea*) in the family Chenopodiaceae. A native of Asia, it is cultivated for its leaves which are used as a vegetable, especially in the U.S.A.

SPINE. The backbone. It contains 26 bones called vertebrae, including the sacrum and coccyx. The vertebra has a semicircular, thick rounded body at the front to take weight, a bony ring behind through which passes the spinal cord, and 3 projections of bone (processes), one on each side and one to the rear. The lowest part of the S. is the sacrum, a broad triangular structure consisting of 5 rudimentary vertebrae fused together, jointed to the hip bones and ending in the tail bone (coccyx), which consists of 4 fused vertebrae. The S. in man has four curves (front to rear), which allow for increased size of chest and pelvic cavities; also permit springing, to minimize jolting of internal organs.

SPINEL. A group of minerals possessing cubic symmetry and consisting chiefly of magnesia and alumina. The alumina S. contain the gem varieties, such as the ruby, and occur in Ceylon and Burma.

SPINET. A keyboard instrument, smaller than a harpsichord, and distinguished from the larger instrument by having only one string for each note.

SPINNING. The art of drawing out and twisting fibres into threads, by hand or machinery. The simplest method of S. is by distaff (a stick holding the raw wool), and spindle (the wooden implement used in drawing out the thread): the S. wheel was a later

exposition of the Cartesian philosophy and *Tractatus Theologico-Politicus*, the first rationalist critique of the Bible, were pub. during his life, but his greatest work, the *Ethics*, appeared in 1677.

SPIRAEA. Genus of herbaceous plants and shrubs in the family Rosaceae which incl. meadow sweet (*S. salicifolia*): there are many cultivated species with ornamental cymes of flowers.

SPIRES. French form of **SPEYER**.

SPIRITS OF SALTS. See **HYDROCHLORIC ACID**.

SPIRITUALISM. A belief in the survival of the human personality and in communication between the living and those who have 'passed on'. The spiritualist movement originated in America in 1848. In England the Society for Psychical Research was founded in 1882 by W. H. Myers and Henry Sidgwick to investigate the claims of S. Famous spiritualists incl. D. D. Home, Sir William Crookes, Sir Oliver Lodge, Sir A. Conan Doyle, and Lord Dowding.

SPITHEAD. An anchorage in the Solent, off Portsmouth, England. The name is often applied to the whole of the eastern arm of the Solent (q.v.).

SPITSBERGEN. Group of Norwegian islands in the Arctic Ocean 300 m. E. of Greenland. The 4 main islands are West S., North East Land, Edge Island, and Barents Island; Hope Island and Bear Island are attached to S., which is heavily glaciated. Coal is mined by Norway and Russia. A telemetry station for tracking artificial satellites was estab. 1965. Area 24,000 sq. m.; pop. (1966) 3,000.

SPITTELER (shpit'eler), Carl Friedrich Georg (1845-1924). Swiss author. B. near Basle, he was a private tutor in Russia 1871-9, becoming a journalist on returning to Switzerland. In 1919 he was awarded the Nobel prize. His works incl. the prose epic *Prometheus and Epimetheus*, the epic poem *Der Olympische Frühling*, and the autobiography *Meine frühesten Erlebnisse*.

SPITZ DOG. See **POMERANIAN**.

SPLEEN. An organ about 5 in. by 3 in., situated under the diaphragm on the left of the body. Its function is not well known, but is in part concerned with the production and destruction of blood cells.

SPLIT. Yugoslav port and tourist centre, on the Adriatic, founded by Diocletian c. A.D. 300. It manufactures cement. Pop. (1961) 99,614.

SPOCK, Benjamin McLane (1903-). American child-care expert, prof. of child development at Western Reserve univ. 1955-67. Himself a father of 2 sons, he writes, as in *Problems of Parents* (1963) of the family as a balanced whole.

SPODE (spöd), Josiah (1754-1827). British potter. Son of Josiah S., who had been an apprentice of Thomas Whieldon, and started his own works at Stoke-on-Trent in 1770, he succeeded him in 1797. He was responsible for developing bone porcelain (bone ash, china stone and china clay) c. 1800, which was produced at all English factories in the 19th cent., and became potter to George III in 1806.

SPOHR (shpohr), Ludwig (1784-1859). German composer and violinist. B. at Brunswick, he was court choirmaster at Cassel 1822-57. His works incl. operas, symphonies, the oratorios *Calvary* and *The Last Judgment*, and chamber music.

SPOKANE (spökän'). City of Washington, U.S.A., at the falls of the S. river, which are harnessed for its many industries. It is the centre of a lumbering and mining region and the seat of Gonzaga univ. Pop. (1960) 181,608.

SPOLETO. Ancient town in Perugia, Umbria, Italy, of great architectural interest, a papal possession 1220-1860. Pop. (est.) 38,000.

SPONGES. Many-celled animals forming the subkingdom Porifera. A simple sponge is vase-shaped, supported by three-rayed spicules. There is a constant flow of water through the pores of the sponge, leaving again by the oscule, or opening at the top. The more

SPINNING. Traditionally spinning is women's work, but men cope very satisfactorily with the new ring frames installed at the Bee Hive Spinning Co. works at Bolton as part of the cotton industry's post-war modernization.

Courtesy of The Cotton Board, Manchester.

device which revolved the spindle, often by means of a treadle-operated flywheel. In the late 18th cent. mechanization of S. was effected. Hargreaves' S. jenny allowed many threads to be drawn at the same time; Arkwright used Lewis Paul's device for superseding the human hand by rollers in drawing out the thread; and Crompton combined the principles of Hargreaves and Arkwright in his mule-spinner.

SPINOZA (spinō'zah), Benedict (or Baruch) (1632-77). Dutch philosopher. B. at Amsterdam of Portuguese-Jewish stock, he abandoned Judaism for a rationalistic pantheism that owed much to Descartes. He taught that all that we know, mind and matter, is a manifestation of the all-embracing substance that is God. Persecuted by the Jews, he had to leave Amsterdam and finally settled at The Hague, where he made a living by polishing optical glasses. An

1933, 1936, and 1938) expeditions, and also wrote *Amet Conquered* (1932), and *Adventures of a Mountaineer* (1940).

SNAEFELL (snä-). Highest mountain in the Isle of Man, 2,034 ft. high.

SNAIL. Species of air-breathing gastropods, with spiral shells. The more typical Ss. of the genus *Helix*, and family Helicidae, embrace over 1,600 species. The common garden S. (*Helix aspersa*), is very destructive to plants; the Roman S. (*Helix pomatia*) is bred for food on the Continent.

SNAKE. A member of the reptilian order Ophidia, characterized by an elongated limbless body possibly evolved because it is advantageous in progression through dense vegetation: one of the most striking internal modifications is the absence or greatly reduced size of the left lung. There are some 3,000 species found in the tropic and temperate zones, but none in New Zealand, Ireland, Iceland, and near the poles. The skin is covered in scales which are markedly wider underneath where they form, in all except a few species, an essential aid to locomotion, e.g. a S. is helpless on glass where these scales can effect no 'grip' on the surface: progression may be undulant, 'concertina' or creeping, or a combination. Detailed vision is limited at a distance, though movement is immediately seen; hearing is restricted to ground vibrations (sound waves are not perceived); the sense of touch is acute; besides the sense of smell through the nasal passages, the flickering tongue picks up airborne particles which are then passed to special organs in the mouth for investigation; and some, e.g. rattlesnakes, have a cavity between eye and nostril which is sensitive to infra-red rays (useful in locating warm-blooded prey in the dark). All Ss. are carnivorous, and often camouflaged for better concealment in hunting as well as their own protection. Some are oviparous and others ovoviviparous, i.e. the eggs are retained in the oviducts until development is complete; in both cases the young are immediately self-sufficient.

The majority of Ss. belong to the Colubridae, chiefly harmless, e.g. the common grass snake of Europe, but incl. the deadly African boomslang

SNAKE. A king brown snake being 'milked' at the Commonwealth Serum Laboratories, Victoria. The venom - the clear fluid at the bottom of the glass - is used in making antivenins. Courtesy of Gary C. Lewis.

Dispholidus typus. The venomous families incl. the Elapidae comprising the true cobras (q.v.), the New World coral Ss., and the Australian taipan, copperhead and death adder; the Viperidae (see VIPER), and the Hydrophidae, aquatic sea Ss. Stocks of antivenins are maintained for emergency use by the Institut

Pasteur (Paris), Wyeth Laboratories (Philadelphia), Haffkine Institute (Bombay), etc. Among the more primitive Ss. are the Boidae, which still show links with the lizards and incl. the boa constrictor, anaconda and python: these kill by constriction but only comparatively small animals.

SNAPDRAGON See ANTIRRHINUM.

SNİPE. Seen here in its usual habitat among the tallish grasses of low, wet meadows, the snipe is marked by black bars on the tail and sides; the bill and legs are greenish-grey.

Photo: G. Ronald Austing.

SNİPE. Marsh bird (*Capella gallinago*) distinguished by its long straight bill, found throughout Europe and valued for the table. Wilson's S. (*C. delicata*) of N. America is almost identical. Other species are the rare great S. (*C. media*) and the small jack S. (*Limeryptes minimus*).

SNOEK (snōök). Fish (*Thyrstites atun*) of the family Trichiuridae, found at the Cape of Good Hope and in New Zealand and S. Australia, and used as food.

SNOOKER. Game played on a billiards table, a combination of billiards, pool, and pyramids. The game is played with 22 coloured balls.

SNORING. A loud rattling noise during sleep made by vibration of the soft palate caused by streams of air entering the nose and mouth at the same time.

SNORRI STURLASON (snor'rē stoor lāson) (1179-1241). Icelandic author of the *Heimskringla*, a saga chronicle of Norwegian kings until 1177, and the Prose Edda.

SNOW, Charles Percy, baron (1905-). British novelist. B. at Leicester, he was a fellow of Christ's Coll., Cambridge, 1930-5 (tutor 1935-45), and was chief of scientific personnel at the Min. of Labour in the S.W.W. His sequence of books under the title of 'Strangers and Brothers' ranges the English social scale from provincial lower-middle class to the aristocracy, from the 1920s. The 1st-person narrator in all of them is 'Lewis Eliot' who 'learns to know himself through other people, and other people through himself'; they incl. *Time of Hope* (1949); *The Masters* (1951), an analysis of the conflict over the election of the master of a Cambridge college, successfully dramatized in 1963; *The New Men* (1954), scientists facing the problems of nuclear fission; and *Corridors of Power* (1964). In 1957 he was knighted. In 1959 his Rede Lecture at Cambridge (pub. 1960 as *The Two Cultures and the Scientific Revolution*) added a phrase to the language and created something of a sensation by its discussion of the lack of communication in the West between literary and scientific intellectuals. In 1964-6 he was parliamentary sec. to the Min. of Technology and

grey S. (*S. carolinensis*) introduced from N. America, which has become a pest with a price on its head.

SRINAGAR (srinugger). Cap. of Jammu and Kashmir, on the Jhelum, a beautiful city and resort intersected by waterways. It makes carpets, papier mâché, leather goods, etc. Pop. (1961) 285,257.

S.S. (Ger. *Schutz-Staffel*, 'protective squadron'). Nazi élite corps, organized in 1928. Under Himmler's command it reached 500,000, incl. both full-time members (*Waffen-S.S.*, 'armed S.S.'), who fought in the S.W.W., and spare-time members. It carried out police duties, and became infamous for its share in the persecution of the Jews, the brutalities of the concentration camps, and the administration of occupied territories. The Nuremberg court condemned it in 1946.

STABILIZERS. Fins fitted to the sides of a ship and governed automatically by gyro mechanism, which can reduce a 30° side-to-side roll to 3°.

STABROEK. Dutch name of Georgetown, Brit. Guiana.

STAËL (stahl), Anne Louise Germaine de (1766–1817). French author. B. in Paris, the dau. of the financier Jacques Necker, she m. the baron de S. in 1786. An ardent advocate of political freedom, she was banished from Paris by Napoleon, but gathered round her at Coppet on Lake Geneva men such as A. W. von Schlegel, Byron, and Benjamin Constant. Her relationship with the last-named inspired her novels *Delphine* and *Corinne*. Her most influential work was *De l'Allemagne* (1810), which revealed to France the richness of German literature.

STAFFA. Uninhabited island of the Inner Hebrides, Argyllshire, Scotland, 54 m. W. of Oban, with remarkable caves.

STAFFORD. Co. town (bor.) of Staffs, England, 23 m. N.W. of Birmingham. Boots and shoes are manufactured. Pop. (1961) 47,814.

STAFFORDSHIRE. Midland county of England. Apart from hills in the extreme N. and S. it is flat, being the vale of the Trent and its tributaries. The North and South S. coalfields support 2 important industrial areas: in the S. the Black Country between Birmingham and Wolverhampton, with a variety of industries including iron and steel works; and in the N. the Potteries round Stoke-on-Trent. Stafford is the co. town. Area 1,157 sq. m.; pop. (1967) 1,820,890.

STAGHOUND. Breed of dog used for hunting stags. The old English S. was a type of bloodhound, but now a large foxhound is given the name.

STAINED GLASS. Term applied to the coloured transparent glass which is cut into various shapes and joined by lead strips to form a pictorial window design. The art is said to have originated in the Near East. At first it was usual for only one monumental figure to be represented on each window, but by the middle of the 12th cent. incidents in the life of Christ or of one of the saints were commonly depicted. Some of the most beautiful examples of medieval S.G. are to be found in the cathedrals of Canterbury, Lincoln, Chartres, Cologne, and Rouen. Modern designers incl. Morris, Burne-Jones, and James Hogan. Since the S.W.W. the 6th cent. use of thick, faceted glass joined by cement has been revived. See illus. p. 2.

SQUIRREL. The American grey squirrel, seen here, has almost caused the red squirrel to become extinct, and its raids on cereal crops and damage to tree bark have led to official control measures.

Photo: G. Ronald Austing.

STAINER, Sir John (1840–1901). British organist and composer. B. in London, he became organist of St. Paul's in 1872, receiving a knighthood on his resignation in 1888, was a prof. from 1876 (principal from 1881) at the National Training School for Music (now Royal Collège de Music), and prof. of music at Oxford 1889–99. Most notable among his religious choral works are *The Crucifixion*, an oratorio, and *The Daughter of Jairus*, a cantata.

STAIR, James Dalrymple, 1st visct. S. (1619–95). Scottish statesman. As president of the Court of Session his moderation brought him into disfavour, and in 1682 he fled to Holland, but returned to office with William of Orange, who created him visct. S. His *Institutions of the Law of Scotland* (1681) is a classic on jurisprudence.

STALACTITE and **STALAGMITE**. A deposit of lime formed in caves by the downward trickling of water containing carbonate of lime. Stalactites are those hanging from the roof, and stalagmites those accumulated on the floor. See illus. p. 990.

STALIN ('steel'). Adopted name of Soviet statesman Joseph Vissarionovich Djugashvili (1879–1953). B. at Gori, near Tiflis, the son of a Georgian shoemaker, he was ed. for the priesthood, but was expelled from his seminary for carrying on Marxist propaganda. He joined the Social Democratic Party in 1898, and was exiled to Siberia 5 times 1903–12, but on each occasion escaped and resumed his revolutionary activities. By 1913 he was editing *Pravda* and directing the Bolshevik group in the Duma, while his book, *The National and Colonial Question*, attracted Lenin's attention. From 1913 until the revolution of March 1917 he was an exile in Siberia. He then became a member of the Communist Party's political bureau, and sat on the committee which directed the Nov. revolution. Appointed Commissar for Nationalities in the Soviet govt. he was responsible for the decree granting equal rights to all peoples of the Russian Empire. During the civil wars he held various commands, and distinguished himself by his defence of Tsaritsin (now Volgograd) against the 'Whites'. He was appointed gen. sec. of the Communist Party in 1922. Lenin's death in 1924 was followed by prolonged controversies within the party between S., who advocated the industrialization of Russia and the construction of a fully Socialist society, and Trotsky, who denied the possibility of Socialism inside Russia until revolution had occurred in western Europe. S.'s policy was finally accepted in 1927, and was put into operation from 1928 onwards in the five-year plans. The constitution of 1936 was largely his work. S. held no govt. post until 1941, when he became chairman of the Council of People's

STAINED GLASS. A section of the concreted stained-glass panel designed by Pierre Fourmaintraux for the church of St. Raphael, Stalybridge. Tobias sets out on his journey (left), with his little dog, and under the guidance of a strange woman (the angel Raphael) catches the fish which brings him a bride and cures his father's blindness.

Courtesy of Whitefriars Stained Glass Studios.

In the later 19th cent. Socialist parties arose in most European countries, the strongest being the German Social Democratic Party; in Britain the Social Democratic Federation was founded in 1881, and the I.L.P. in 1893. This period witnessed a reaction against Marxism, typified by the Fabians and the German Revisionists, at the time when in Russia the Bolsheviks were reviving the original revolutionary significance of Marx's teachings. Weakened by these divisions, the 2nd International (founded in 1889) collapsed in 1914, right-wing Socialists in all countries supporting participation in the F.W.W. while the left opposed it. The Russian revolution removed S. from the sphere of theory to that of practice, and was followed in 1919 by the foundation of the 3rd International, which completed the division between right and left. This lack of unity, in spite of the temporary successes of the Popular Fronts in France and Spain in 1936-8, facilitated the rise of Fascism.

After the S.W.W. Socialist and Communist parties tended to formal union in E. Europe, subsequent Communist control later being modified, e.g. Poland and Rumania. Elsewhere in Europe there was no uniform pattern, e.g. the break in Labour rule in the U.K. (1945-51, 1964-) and the reverse to S. in Norway 1965. In Asia S. is very powerful.

SOCIAL SECURITY. Term for freedom from want through state provision, first used officially in the S.S. Act of the U.S. Congress (1935), passed to enable the Federal govt. to cope with the effects of the Great Depression of 1929. The principle involved is, however, a good deal older than that: in Germany compulsory social insurance was estab. in 1883; in Britain compulsory health and unemployment insurance in 1911, non-contributory old-age pensions in 1909.

The S.S. Act of 1935 dealt with old age, survivor's and unemployment insurance, maternal and child welfare, public assistance, and assistance to those suffering from economic distress; unemployment is dealt with by the Dept. of Labor, other S.S. services by the Dept. of Health, Education and Welfare. Increased social benefits and a 'medicare' scheme for the elderly were provided under the S.S. Act 1965.

The term S.S. was first used officially in Britain in 1944, and following the Beveridge (q.v.) Report in 1942, a series of acts was passed from 1945 to widen the scope of S.S. in covering unemployment, industrial injury, sickness, death (provision for widows and orphans), retirement, family allowances, and medical attention. The cost is partly covered by compulsory insurance paid by employers and employees, but to avoid the sharp distinction between contributory and non-contributory benefits the Nat. Assistance Board was merged in 1966 with the Min. of Pensions and Nat. Insurance as the Min. of S.S., and in 1968 with the Min. of Health as Dept. of Health and S. S.

SOCIETY ISLANDS. French archipelago in the S. Pacific, incl. the Leeward (Huahiné, Raiatéa, Tahaa, Borabora, and Maupiti) and Windward (Tahiti and Moorea) groups. Papeete on Tahiti is the cap. Discovered by the British 1767, the S.I. became a Fr. protectorate 1843 and were annexed by France 1880; they form part of Fr. Polynesia. Area 650 sq. m.; pop. (1962) 61,600.

SOCINUS (sōsī'nus). Latinized name of Lelio Francesco Maria Sozini (1525-62), Italian Protestant theologian. He adopted Unitarian views on the nature of Christ, which were developed by his nephew, Fausto Paolo Sozzini (1539-1604). The latter taught pacifist and anarchist doctrines akin to Tolstoy's; his beliefs are known as Socinianism.

SOCIOLOGY. The study of society, which is the network of human interactions and interrelations. Morris Ginsberg, prof. at London 1929-54, has listed the main areas as: (1) *Social morphology*, which incl. the investigation of the quantity and quality of the

population' and 'the description and classification of the principal types of social groups and institutions'. (2) *Social control*, 'the study of law, morals, religion, convention, fashion and other sustaining and regulating agencies'. (3) *Social processes*, meaning 'the study of the various modes of interaction between individuals or groups, incl. cooperation and conflict, social differentiation and integration, development, arrest and decay'. (4) *Social pathology*, 'the study of social maladjustments and disturbances'. S. (term invented by Comte in 1873) is closely related to economics, anthropology, psychology and statistics.

Some sociologists take a wide range, and try by deriving the present from the past, to discover general principles of development, e.g. Toynbee's *A Study of History*, in which are shown the same principles of rise and decline of civilization throughout the whole of human history; the concept of historicism, strongly challenged by K. Popper *et al.* Some consider large societies, e.g. G. D. H. Cole's *The Condition of Britain*, and Margaret Mead's *The American Character*; whereas others discuss communities, e.g. *A Chinese Village* by M. C. Yang and *Plainsville, U.S.A.* by James West; and some studies concentrate on the intimate detail of a single society either primitive or modern.

SOCOTRA (sōkō'trah). Island in the Indian Ocean 600 m. E. of Aden, formerly part of the Mahri sultanate of Qishn and S., but from 1967 merged in the rep. of Southern Yemen; the sultanate came under British protection in 1886. Livestock are reared. Area 1,400 sq. m.; pop. (est.) 8,000.

SOCRATES (sok'ratēz) (c. 469-399 B.C.). Athenian philosopher. He is said to have been a sculptor, and served as a soldier, but the greater part of his life he devoted to philosophical discussion. Our main

SOCRATES. A satyr-type portrait in the British Museum.

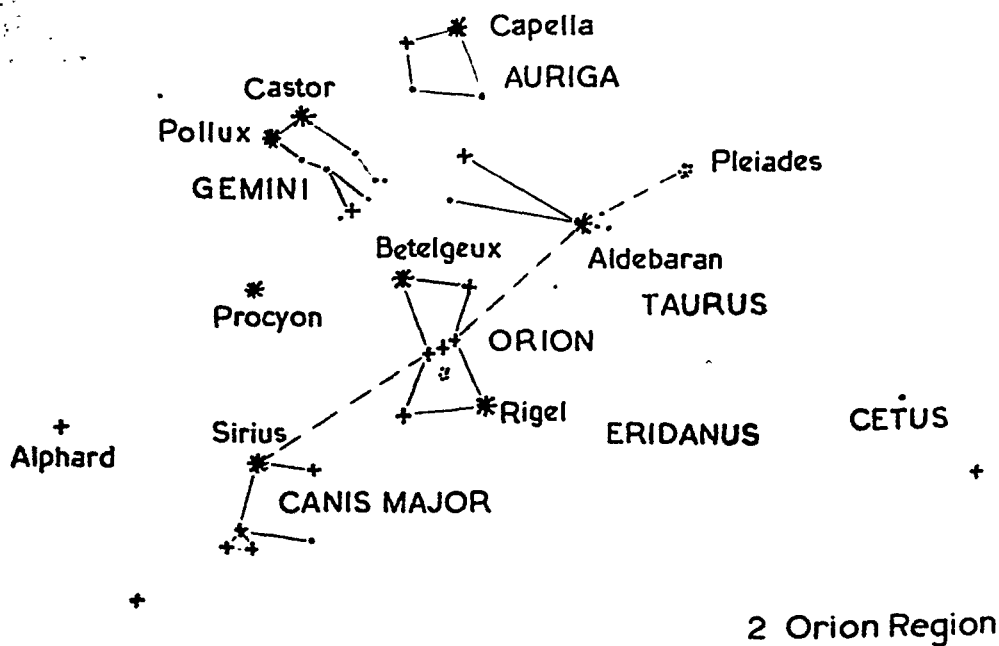

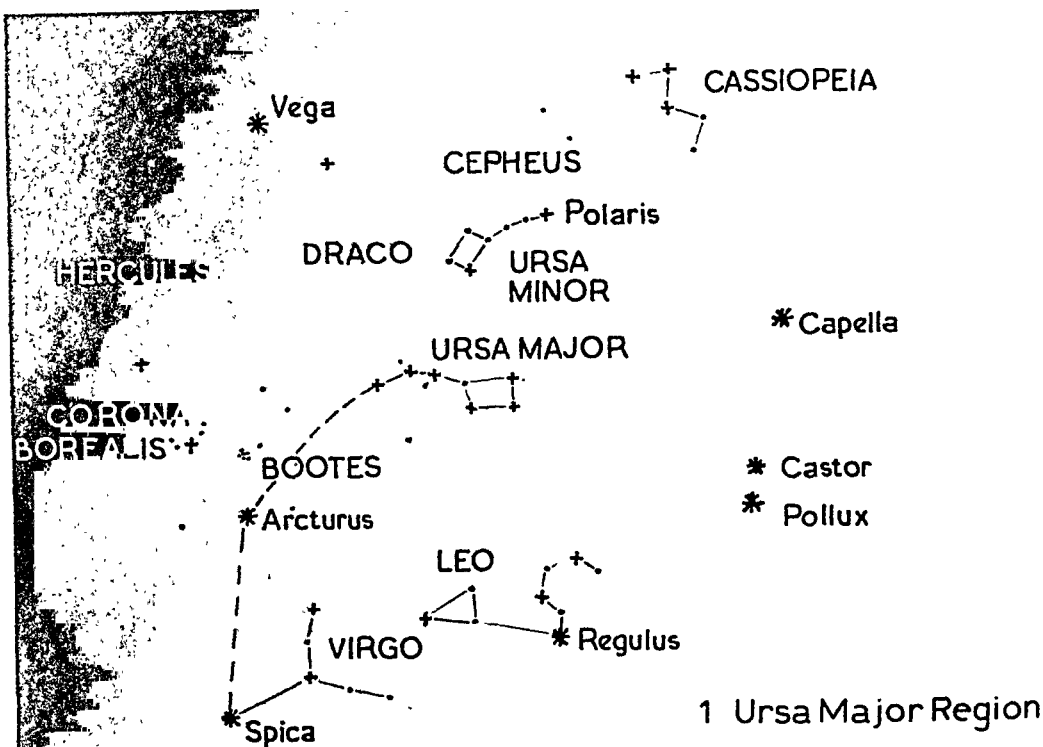

sources of biographical information are Plato's dialogues, Xenophon's *Memorabilia*, and Aristophanes' satirical picture in *The Clouds*; it is uncertain how far Plato attributed his own opinions to S. In philosophy he rejected the search for scientific knowledge, and set himself to guide men to clear thought on ethics and politics; his method was by pretending ignorance to encourage others to talk, and then by cross-examination to expose their inconsistencies. He was accused in 399 of impiety and corrupting the young, and in spite of an eloquent defence condemned to die by drinking hemlock. His

trial and death are movingly described by Plato.

SODA. Common name for sodium carbonate. S.-water is made effervescent by an infusion of carbonic acid under pressure.

SODDY, Frederick (1877-1956). British physical chemist. After working for Rutherford and Ramsay, he was prof. of chemistry at Aberdeen 1914-19 and at Oxford 1919-36. A pioneer of research into atomic disintegration - he coined the term 'isotopes' - he did classic work on radioactivity (*Chemistry of the Radio-Elements*, 1912-14), and was awarded a Nobel prize in 1921. Other scientific books incl. *The Interpretation of the Atom* (1932), and *The Story of Atomic Energy* (1949). Having strong views on education, economics and finance, he also pub. *Cartesian Economics* (1922) and *The Arch Enemy of Economic Freedom* (1943).

SÖDERBLOOM, Nathan (1866-1931). Swedish churchman. He became archbp. of Uppsala and

disintegrated. He became proverbial for wisdom, as is shown by the attribution of the much later *Proverbs*, *Ecclesiastes*, and *Song of Songs* to him. King S.'s Mines were at Aqaba (anc. Ezion-geber): copper and iron ore was smelted.

SOLOMON. Pseudonym of the British pianist S. Cuttner (1902–). B. in London, and first appearing at the age of 8, he is internationally known as an interpreter of the classical composers.

SOLOMON ISLANDS. Archipelago in the W. Pacific, lying E. of New Guinea. The northern members of the group, incl. Bougainville, Buka, and adjacent islands, which belonged to Germany 1899–1918, form part of Australian New Guinea (q.v.). They are very mountainous, with several volcanoes; and produce bananas, coconuts, taros, and sweet potatoes. Kieta, Rawa, and Tiniputs (on Bougainville), are the main harbours. Area 4,100 sq. m.; pop. (1966) 71,762.

The southern members – Guadalcanal (q.v.), Malaita, San Cristobal, New Georgia, etc. – came under British protection 1893–9. The physical features and products resemble those of the Australian group. Area 11,500 sq. m.; pop. (1967) 145,630, nearly all Melanesians.

In 1942–5 the S.I. witnessed fierce fighting between Japanese and Allied forces (U.S. and later Australian).

SOLON (c. 638–558 B.C.). Athenian statesman. Elected archon c. 594, he carried out a revision of the constitution which laid the foundations of Athenian democracy.

SOLoviev, Vladimir Sergeevich (1853–1900). Russian poet, philosopher, and theologian. B. in Moscow, he travelled to England and the East 1875–7, and was dismissed from univ. posts at Moscow and St. Petersburg owing to his unorthodox beliefs. In his writings, e.g. *History of Ethics*, *The Justification of the Good*, and *War, Progress, and the End of History* (1900), he stresses the unity of mankind in its spiritual evolution.

SOLSTICE (sol'stis). Either of the 2 points reached by the sun, when its declination is greatest N. or S. It has also come to imply the time at which each of these occur, namely 21 June and 21 Dec.

SOLTI (shol'ti), Georg (1912–). Hungarian conductor. B. in Budapest, he was musical director of the Munich (1946–52) and Frankfurt (1952–61) operas, before being appointed to Covent Garden, where he infused fresh life by a series of glittering new productions and revivals.

SOLWAY FIRTH. Arm of the sea more than a mile long formed by the estuary of the Esk, and dividing England from Scotland at the W. end of the border. It also receives the Dee, Eden, Annan, and Nith, and merges into the Irish Sea.

SOLYMAN II (söölāmāh'n'), called the Magnificent (1494–1566). Sultan of Turkey. Succeeding his father in 1520, he greatly extended the Turkish Empire. Belgrade was captured in 1521, and Rhodes in 1522: the victory of Mohacs (1526) brought much of Hungary under Turkish rule and in 1529 Vienna was unsuccessfully besieged. Baghdad and Armenia were captured from the Persians in 1534.

SOMA. Indian intoxicating drink obtained from the fermented sap of *Asclepias acida* plant. In ancient times it was worshipped as a deity and used in sacrifices to Indra.

SOMALILAND, FRENCH. Territory in E. Africa, on the coast of the Gulf of Aden. The climate is hot

and dry. Salt is worked, cattle reared, and fishing is a main occupation. The French estab. themselves at Obock in 1862. Djibouti, the cap. and chief port, was created by them in 1888; it is linked with Addis Ababa by rail. Following a referendum 1967 resulting in a majority for continued association with France, S. was re-named Terr. of the Afars and Issas. A liberation movement is supported by the O.A.U. Area 8,500 sq. m.; pop. (1966) 108,000.

SOMALI (sōmah'le) **REPUBLIC.** Country of E. Africa, extending along the coast of the Gulf of Aden and the Indian Ocean, occupying the 'horn' of Africa. The climate is hot and dry, but where water is available the soil is productive. The interior is barren and mountainous; rising to 6,000 ft. The Juba and its trib. the Shebelli are the chief rivers. Rearing of cattle, camels, sheep, and donkeys is the principal occupation; rice, dates, and sugar are grown; gums and resins, hides and skins are exported. Mogadishu; the cap. and chief port; other towns are Berbera, Obbia, and Kismayu on the coast, Hargeisa in the N. inland. Area 246,000 sq. m.; pop. (1968) 2,500,000.

The S.R. was formed in 1960 by the union of former British and Italian Somaliland. Br. Somaliland (68,000 sq. m.) was made a protectorate 1885–7. Ital. Somaliland was estab. as a colony 1927, incorporated 1936 in Ital. E. Africa, conquered 1941 by the British who administered it until 1950 when it was again administered by Italy under U.N. trusteeship until it became independent as the S.R. in 1960. Brit. Somaliland, accorded independence in the same year, elected to join the S.R. The presence across the border of 50,000 Somalis in Ethiopia and 100,000 in Kenya led to disputes with both countries, but agreement was reached 1967.

SOMERS, John, baron (1651–1716). British Whig statesman. B. nr. Worcester, he was among the counsel for the defence at the trial of the 7 bishops, took part in the drafting of the Declaration of Rights, and became Solicitor-General in 1689, Lord Keeper in 1693, and Lord Chancellor 1697–1700.

SOMERSET (sum'-), Edward Seymour, duke of (c. 1506–52). English statesman. The son of a Wilts gentleman, he was created earl of Hertford after Henry VIII's marriage to his sister Jane, and in 1547 became regent for Edward VI, with the title of Protector, and duke of S. A liberal and tolerant ruler, he offended the landowners by his attempts to check enclosure, and the Protestants by his moderate religious policy. He was overthrown in 1549, and beheaded in 1552 on a trumped-up charge of treason. The duchy was restored in 1660 to his descendants.

SOMERSET. County in S.W. England, washed on its N. and N.W. shores by the Bristol Channel. Its coastline consists of low cliffs and marshy tracts of land, whence the sea is kept out by a system of dykes and sluices. The principal rivers are the Avon, Parret, and Exe. In the N. are the Mendip Hills (in which are the Cheddar caves) and in the W. the Quantock Hills and Exmoor, with Dunkery Beacon (1,707 ft.) the highest point. Dairy farming and cider making are distinctive. In the Exmoor district ponies thrive. Principal towns are Bath, Wells, and Taunton (the co. town): part of Bristol is in S. Area 1,613 sq. m.; pop. (1967) 644,460.

SOMERSET HOUSE. Government offices in the Strand, London, built in 1775. It contains the audit, inland revenue, and Registrar-General's offices, and the probate registry, where wills are kept. The E. wing is occupied by King's College.

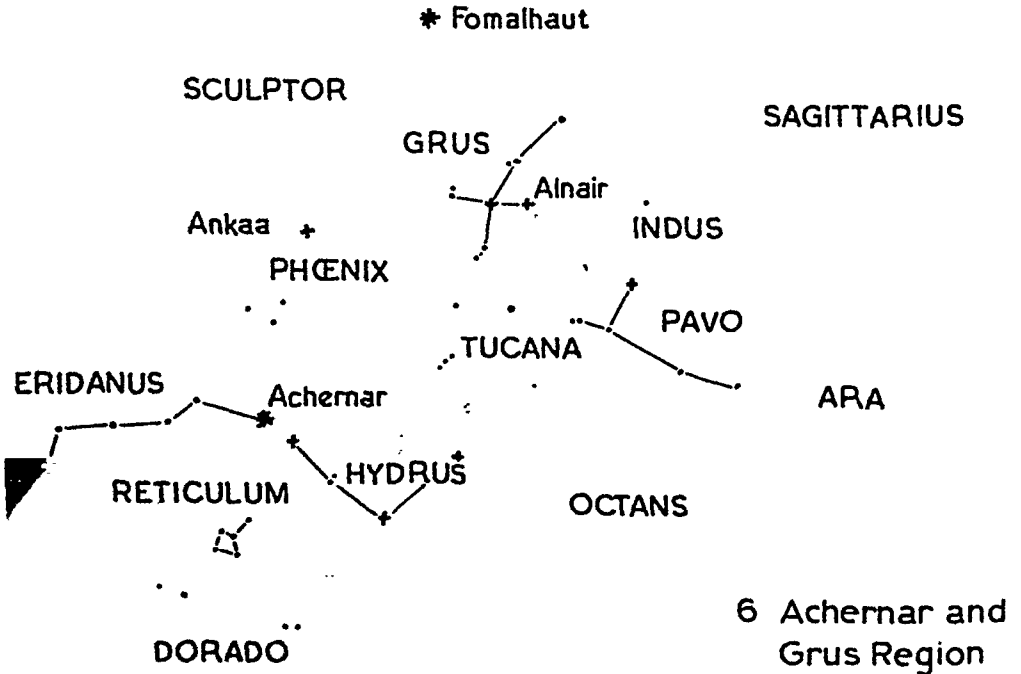

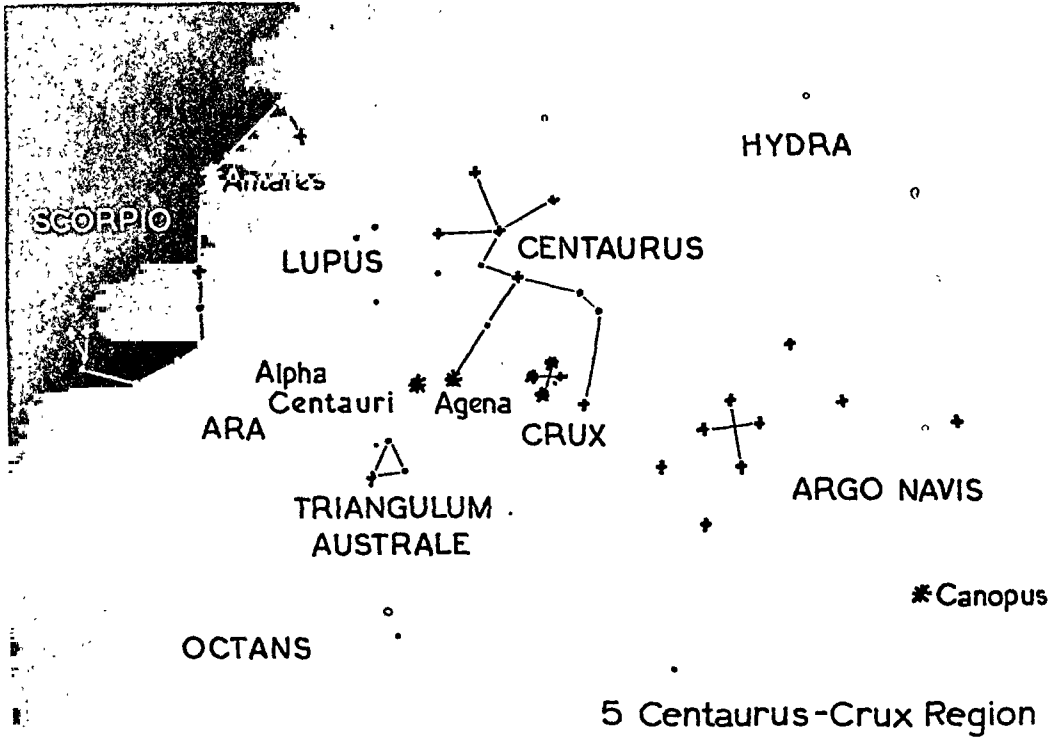

SOMERVILLE, Edith Oenone (1861–1949). Irish novelist, best known for her stories of Irish life written jointly with her cousin, Violet Martin (q.v.).

SOMES, Michael (1917–). British dancer and choreographer. Making his début with the Sadler's Wells co. in 1934, he became the leading male dancer of the Royal Ballet, of which he is also asst. director.

SOUND. For comfortable living and working it is increasingly recognized that acoustics are vitally important. This anechoic (echo-less) chamber, lined with sponge wedges, is for the detailed study of the processes of sound transmission and general acoustic research and forms part of the new physics laboratories of the Building Research Station of the Department of Scientific and Industrial Research opened at Watford in 1963.

Courtesy of the Dept. of Scientific and Industrial Research.

the N. to the Baltic in the S., and separates Denmark from Sweden. It is 30 m. long, 3–37 m. wide.

SOUSA (sōō'zah), John Philip (1854–1932). American composer. B. in Washington, he became bandmaster of the U.S. Marines in 1880, and of his own band in 1892. He is best known for his many marches, e.g. 'Washington Post' and 'Stars and Stripes'.

SOUTH AFRICA, Rep. of (Afrikaans *Republiek van Suid Afrika*). Country occupying the S. extremity of the African continent.

PHYSICAL FEATURES. Most of S. Africa is occupied by the plateau of the High Veld, 3–4,000 ft. In the S. the lesser plateaux of the Little and Great Karroo step down from the Veld. On the S. and E. these plateaux are rimmed by mountain ranges variously named (from S. to N.) the Swartberg, Sneeuwberg, Stormberg, Drakensberg (incl. Mont aux Sources, 10,822 ft., the highest point in the Republic), and Zoutpansberg. In Transvaal the Veld is crossed by the long ridge of

of the to and fro vibration of the air – what is known as the amplitude of the waves. In man, the lowest audible note has a frequency of about 26 vibrations per second, and the highest one of about 18,000: the lower limit of this range varies little with age, but the upper range falls steadily from adolescence onward. See **ACOUSTICS** and **NOISE**.

SOUND. The Arm of the sea which runs from the Kattegat in

Witwatersrand, on which stands Johannesburg. Close to Capetown stands Table Mountain, 3,550 ft. The main rivers are, from N. to S., the Limpopo, Vaal, and Orange. Over much of the country the climate is temperate, though N. Natal is semitropical. Big game is common in many districts, and is preserved in national parks. The Veld is a natural grassland.

ECONOMIC. A world leader in trade and industrial growth, S.A. produces cereals (maize and wheat), fruit (citrus, pears, peaches, apples, grapes, etc.), sugar and tea (in Natal), and excellent wines, the vine having been introduced to the Cape by 17th cent. Huguenot settlers. Cattle and sheep are bred on a large scale, wool being important. Enormous mineral resources incl. gold (q.v.), mainly from the Witwatersrand mines of Transvaal, diamonds, from the Kimberley district, and platinum; and antimony, asbestos, chromite, coal, copper, corundum, graphite, iron ore, lead, magnesite, manganese, nickel, phosphates, tin, titanium, tungsten, and uranium. S.A. has the world's largest oil-from-coal project, and natural gas and oil

were discovered 1969 off the Cape Coast. Industries incl. iron and steel, tobacco, textiles and clothing, jams and fruit canning, fertilizers, pharmaceuticals, synthetic rubber, plastics, leather, furniture, and explosives (the world's largest plant is at Modderfontein). Railways, airways, and harbours are govt.-operated. The chief towns are Johannesburg, Cape-town (the seat of the legislature), Durban, Pretoria (the administrative cap.), Port Elizabeth, Bloemfontein, East London, and Pietermaritzburg.

GOVERNMENT. S.A. is a republic with a state pres. elected for 7 years by an electoral coll. consisting of the members of both houses of parliament, the Senate, partly elected and partly appointed by the govt., for 5 years, and the House of Assembly, elected by white citizens from among their number, also for 5 years. In 1968 Coloured representation in parliament by white members was abolished from 1971, but the Coloured Persons' Representative Council, with limited jurisdiction in Coloured affairs, was enlarged and the franchise extended to all men and women over 21.

POPULATION. A rigid policy of *apartheid* (racial segregation) of white from all Coloured peoples is maintained. Afrikaans and English are both official languages. There are 10 univs. restricted to the white pop.; they incl. Capetown (1918), Witwatersrand (1921) at Johannesburg, Stellenbosch (1916). The univ. of S.A. (1873), centred at Pretoria, is an

STEEL. One of the largest integrated iron and steel works in Europe, the Spencer Works on the marshland at Llanwern, Monmouthshire, was opened in 1962. Features to be noted are: 1, coal stocks; 2, coal-blending bunkers; 3, coke ovens; 4, gasholders; 5, sinter plant; 6, limestone, breeze and boiler coal stocks; 7, cooling towers (a medieval waterway runs at their feet); 8, power plant; 9, blast furnaces; 10, steel plant; 11, hot mill; 12, oxygen plant; 13, hot sheet finishing; 14, central engineering workshop; 15, cold mill.

Courtesy of Richard Thomas and Baldwins.

member of the New English Art Club, he had a delicately sharp individualized style in his landscapes and portraits, e.g. 'The Beach at Walberswick' (Tate Gallery). In 1931 he was awarded the O.M.

STEIN (shtIn), Sir Aurel (1862–1943). British archaeologist. B. in Budapest, he carried out archaeological explorations in central Asia, China, India, and the Middle East. In 1910 he was appointed superintendent of the Indian Archaeological Survey. He became a British subject, and was knighted in 1912.

STEIN (stIn), Gertrude (1874–1946). American author. B. in Pennsylvania, she studied medicine, and in 1904 went to Paris, where she became acquainted with Picasso. In her work she adopted a cinematic technique, using repetition, absence of punctuation, etc., to convey instantaneous continuity. Her works incl. the self-portrait, *Autobiography of Alice B. Toklas* (1933), *Paris France* (1940), and *Wars I Have Seen* (1946).

STEIN (shtIn), Heinrich Friedrich Karl, baron vom (1757–1831). Prussian statesman and patriot, who as chief minister 1807–8 introduced sweeping reforms, was exiled by Napoleon in 1808, helped to establish the Russo-Prussian alliance against Napoleon, and founded the *Monumenta Germaniae Historica*.

STEINBECK, John Ernst (1902–). American novelist. B. in California, he first achieved success with *Tortilla Flat* (1935), a humorous study of the lives of Monterey *palsanos*, following this with *In Dubious Battle* (1936), dealing with the brutal development of a strike by migrant fruit pickers; *Of Mice and*

Men (1937), a compassionate vignette of 2 migrant farm labourers, one a feeble-minded giant, which was dramatized by the author and also filmed; and *The Grapes of Wrath* (1939), the saga of a farming family, refugees from the Oklahoma 'dust bowl', who struggle vainly against the inequitable conditions of the California they once regarded as their 'Promised Land'. Later books incl. *Cannery Row* (1944), *East of Eden* (1952), and *Winter of our Discontent* (1961). In 1962 S. was awarded a Nobel prize.

STEINER (shtIner), Rudolf (1861–1925). Austrian philosopher. B. in Austria, he became leader of the German theosophists, but broke with them and developed his own teaching, known as 'Anthroposophy'. His school, the Goetheanum, near Basle, was destroyed by fire in 1922, but has since been rebuilt.

STEINWAY (shtInwā), Henry Engelhard (1797–1871). German piano manufacturer. He founded a factory in Germany, emigrated to U.S. in 1849 and estab. a firm there (1853).

STELLENBOSCH (-bos). Town of Cape Prov., S. Africa, 31 m. E. of Capetown, centre of a wine-producing dist., seat of a univ. (1918), and, next to Capetown, oldest European settlement in S.A. (1679). Pop. (1960) 22,233 (10,673 white).

STENDHAL (stondahl). Pseudonym of French novelist Marie Henri Beyle (1783–1842). B. in Grenoble, he served in Napoleon's armies, taking part in the ill-fated Russian campaign, and, failing in his hopes of becoming a prefect, lived in Italy from 1814 until suspicion of espionage drove him back to Paris in 1821, where he lived by literary hackwork. The reputation of his novels *Le Rouge et le Noir* (1830) and *La Chartreuse de Parme* (1839), pioneer in their psychological subtlety, began with a review of the latter by Balzac in 1840. From 1830 he was a member of the consular service, spending his leaves in Paris.

STEPHEN (c. 1097–1154). King of England. A grandson of William I, he was elected king in 1135, although he had previously recognized Henry I's dau. Matilda as heiress to the throne. When in 1139 Matilda landed in England, a war began which reduced England to anarchy. It ended in 1153, when S. acknowledged Matilda's son, Henry, as his heir.

STEPHEN I (975?–1038). Hungarian king. He succeeded his father in 997, completed the conversion of Hungary to Christianity, and was canonized in 1083.

STEPHEN, Sir Leslie (1832–1904). British man-of-letters. Editor of the *Cornhill Magazine* 1871–82, and author of *English Thought in the 18th Century* (1876), etc., he is best remembered as editor of the *Dictionary of National Biography* 1885–91. He was knighted in 1902.

STEPHENS, James (1882–1950). Irish author. B.

SOUTH AMERICA. Mountain and river systems.

flowing through dense forest land to the Atlantic, dominates the N. of the continent. In Brazil deep valleys are cut in the highland by many rivers flowing E. and N.; thence, too, the Parana, Paraguay, and Uruguay flow S. to form the La Plata estuary, draining the fertile central plains. S. of the Colorado and Negro is the Patagonian desert, covering the tapering strip of S.A. to Tierra del Fuego.

The Amazon belt has an equatorial type of climate with a heavy rainfall. The rainfall generally is heavy, except in the narrow coastal strips of Peru and N. Chile which, with most of Patagonia, are virtually desert.

Although many pure Indians exist, mainly in Bolivia, Peru, and Ecuador, the introduction of Negroes and Europeans has brought about a thorough racial mixture. Except in Brazil, where Portuguese is spoken, Spanish is the common tongue. The Indian language origins remain obscure; Chibcha, Kichua, and Araukan are the main groups of the W., in Colombia, Peru, and Chile, and other distinct groups exist in the E. Ethnologically and linguistically there are slight affinities with Melanesia and aboriginal Australia.

SOUTHAMPTON, Henry Wriothesley, 3rd earl of (1573–1624). English courtier and patron of Shakespeare, who dedicated 'Venus and Adonis' and 'Lucrece' to him, and possibly addressed him in the sonnets.

SOUTHAMPTON. City and seaport in Hants, England, 79 m. S.W. of London, on S. Water, between the estuaries of the Itchen and Test. The King George V graving dock, constructed 1927–34, is one of the largest in the world, and S. is the chief port for transatlantic routes. The major passenger port – Gateway to Britain – S. is also being developed as a great cargo port. It is also an airport, and has engineering works, flour mills, chemical, plastics, tobacco and other factories. S. univ., founded 1862 as a univ. coll., received

a royal charter in 1952. S. was founded before the Norman Conquest, created a city 1964. Pop. (1961) 204,707.

SOUTH ARABIA, Federation of. Federation formed in 1959 by 6 Arab chiefs in the Western Aden Protectorate; 5 other chiefs had joined when in 1963 the colony of Aden became a member, at which time the Aden Protectorates (E. and W.) were renamed the Protectorate of S. Arabia. Following independence 1967, S.A. became the Democratic Rep. of Southern Yemen (q.v.).

SOUTH AUSTRALIA. State of the Commonwealth of Australia. Dairying and wheat and fruit growing are carried on, especially in the irrigated area in the Murray Valley, but 80 per cent of the state is given to cattle and sheep grazing. S.A. produces 75 per cent of Australia's wine, and 90 per cent of its brandy. Fruit canning is important, and there are also factories making textiles and clothing, metal goods and machines, paper, chemicals, etc. Whyalla exports iron ore and is an industrial centre; uranium is found at Radium Hill and natural gas in the N.E.; and there is an experimental rocket range at Woomera. Govt. is by a legislative council and house of assembly. The cap. is Adelaide. Area 380,070 sq. m.; pop. (1961) 969,258.

SOUTH CAROLINA. A southern, Atlantic state of the U.S.A., one of the original 13. Tobacco, cotton, and soya beans are the principal crops. Industries incl. manufacture of textiles and clothing, paper and wood pulp, furniture, bricks, meat products. The first settlers (1526) were Spaniards; as Carolina, the area was given by Charles I to Robert Heath in 1629. Columbia, the cap., Greenville, and Charleston are the largest towns. Area 31,055 sq. m.; pop. (1960) 2,382,594.

SOUTHCOTT, Joanna (1750–1814). British religionist. B. in Devon, she prophesied the end of the world from 1792 onwards, and shortly before her death from brain disease announced she was about to give birth to a new Messiah. A mysterious box left by her to be opened in time of national crisis proved valueless in 1928, but the claim is still revived.

SOUTH DAKOTA. A northern-central state of the U.S.A. It is for the most part broad prairie, and W. of the 'Bad Lands' rise the Black Hills. The state is drained by the Missouri. Wheat, Indian corn, and oats form the leading crops. Gold, mica and uranium are mined, and the main industries are connected with agriculture. Sioux Falls is the largest town, and Pierre (pop. 10,088) is the cap. Area 77,047 sq. m.; pop. (1960) 680,514.

SOUTH-EAST ASIA TREATY ORGANIZATION (SEATO). Collective defensive system created under a treaty signed 8 Sept. 1954, in Manila, by Australia, France, N.Z., Pakistan, the Philippines, Thailand, the U.K. and the U.S.A. S. Vietnam, Cambodia and Laos are protocol states; France no longer attends meetings.

SOUTHEAST-ON-SEA. Seaside resort (co. bor.) in Essex, England, 35 m. E. of London, at the mouth of the Thames. The famous pier, more than 1½ m. long, was built to accommodate pleasure-steamers at low tide. In addition to catering for visitors, S.-on-S. has light engineering and radio industries, furniture and textile factories, brickyards, boatbuilding yards, etc. Pop. (1961) 164,976.

SOUTHERN CROSS. A constellation in the southern hemisphere of the heavens, consisting of four principal stars arranged in the shape of a cross.

SOUTHEY (sow'dhi), Robert (1774–1843). British poet and author. B. at Bristol, he settled at Keswick, to be near Coleridge. He abandoned his early revolutionary views, and from 1808 contributed regularly to the Tory *Quarterly Review*. In 1813 he became poet laureate, but his verse is forgotten, and he is better known for his life of Nelson, and his *Letters*.

STICK INSECTS. Family of insects (Phasmidae) of the order Phasmida, closely resembling sticks, twigs, etc. Many species are wingless.

STICKLEBACKS. Fishes in the family Gasterosteidae; the popular name is derived from the spines which take the place of the dorsal fin.

STIGMATA. Impressions of marks corresponding to the 5 wounds of Christ received at His crucifixion, which are said to have been received by St. Francis and other saints.

STILICHO (sti'likō), Flavius (c. A.D. 359–408). Roman gen. A Vandal by birth, he distinguished himself in campaigns against the Goths and other barbarian invaders, and under Honorius virtually ruled the western empire. He was executed on a charge of treason.

STILLINGFLEET, Edward (1635–99). Anglican churchman, dean of St. Paul's from 1678, and bp. of Worcester from 1689. He wrote in defence of C. of E.

STILTON. English village in Hunts, on the Great North Road, 6 m. S.W. of Peterborough. It gave its name to a cheese brought here in coaching days from surrounding farms for transport to London. S. cheese is made in Hunts, Leics, and Rutland.

STILWELL, Joseph Warren (1883–1946). American gen., nicknamed 'Vinegar Joe'. B. in Florida, he became in 1942 U.S. military representative in China, led the Chinese armies operating with the British in Burma, and later commanded all U.S. forces in the Chinese, Burmese and Indian theatres. Recalled to U.S.A. in 1944 because of differences with Chiang Kai-shek, he commanded the U.S. 10th Army on Okinawa, so sharing in Japan's final defeat.

STIMSON, Henry Lewis (1867–1950). American statesman. B. in New York, he was War Sec. in Taft's cabinet 1911–13, and 1929–33 Hoover's Sec. of State. In 1940–5 he was War Sec.

STINKHORN. Species of fungus (*Ithyphallus impudicus*). It first appears as a white ball, which breaks, and a cylindrical column of white spongy substance shoots from it. The upper cells are filled with an olive jelly which gives off a penetrating odour attracting blowflies, which assist in its propagation.

STINKWOOD. South African tree (*Ocotea bullata*). The timber smells unpleasant when first felled, but is fine-grained and durable, so that much early S. African furniture was made from it.

STINNES (stin'nes), Hugo (1870–1924). German industrialist and financier. He entered the family business in 1890, and later founded his own firm. He built up a huge industrial 'empire', and was chief contractor of war material during the F.W.W.

STIRLING. Royal burgh and co. town of Stirling-shire, Scotland, 29 m. N.E. of Glasgow, on the Forth. It makes concrete, linoleum, agricultural implements, etc. S. castle, dating from before 1124, when Alexander I died in it, was long a residence of the kings of Scotland. A univ. was estab. in 1964. Pop. (1961) 27,553. See illus. p. 946.

STIRLINGSHIRE. A central county of Scotland, lying between the Firth of Forth and Loch Lomond. Besides the outlying Lennox hills, the northern boundary incl. a fringe of the Highlands. The main rivers are the Forth and Carron. Ben Lomond reaches 3,192 ft. The county contains 3 famous battlefields, Stirling Bridge, Falkirk, and Bannockburn. Near the Forth cereals and potatoes are grown, and sheep are bred; coal is mined, petroleum refined, and aluminium worked. Area 451 sq. m.; pop. (1961) 194,858.

STIRNER (shtēr'ner), Max. Pseudonym of Kaspar Schmidt (1805–56). German philosopher. In his *Der*

STICK INSECT

Einzig und sein Eigentum he advocated an extreme individualism akin to anarchism.

STOAT. See **ERMINE**.

STOCK. Popular garden flower, whose species have been derived from the wild genus *Matthiola*. The chief varieties are simple-stemmed, queen's, and ten-week; night-scented S. is *M. tritris*.

STOCK. In finance, the fully paid-up capital of a company. It is bought and sold by subscribers not in units or shares (see **SHARE**), but in terms of its current cash value.

STOCK EXCHANGE. Institution for the buying and selling of stocks and shares. There are S.E.s in London, Glasgow, Cardiff, and other cities of the U.K.; in Montreal, Sydney, and other British Commonwealth cities; in N.Y. (usually referred to as Wall Street, from its location) and other U.S. cities; in Paris (Bourse), Amsterdam (Beurs), and other Continental caps. and big towns. The London S.E., opened 1801, is the oldest; before 1801 securities were bought and sold in the coffeehouses in Change Alley. The London S.E. is owned by a private company and controlled by a council, elected annually, which is responsible for the rules governing business transactions. Members, totalling some 4,000, pay heavy fees and must provide sureties; they are re-elected annually and are divided rigidly into brokers (who buy and sell stocks and shares for the public on commission) and jobbers (who as a rule deal only with brokers). Strangers are not allowed on the floor of the house. The *S.E. Official List*, pub. daily, is made up from the day's transactions. Stamp duties are payable on the transfer of securities and on the contract notes. There are 2 settlement days in each month, when settlement of accounts must be made.

In S.E. terms a *bear* is a speculator who has sold securities he does not as yet possess in the expectation of buying them back at a lower price before Settling Day; a *bull* buys securities he does not intend to 'take up', i.e. pay for, but hopes to sell at a higher price and pocket the difference; and a *stag* applies for shares in new issues to sell them at a profit as soon as possible to members of the investing public.

STOCKHOLM (stok'hōlm). Cap., important port, and cultural centre of Sweden, on the mainland and island fringe where Lake Mälaren discharges into the Baltic. Staden island, the original settlement, contains the market place, the royal palace (1697–1754), a church dedicated to St. Nicholas (1264), and the imposing town hall (1923). On Norrmalm are the houses

STOCKHOLM. A rich treasure house for the archaeologist, the Swedish warship *Vasa* was raised in 1961 from the harbour where she sank at the outset of her maiden voyage in 1628. Built for Gustavus II Adolphus, she was rediscovered by a Swedish oil technologist, Anders Franzén, in 1956, and has been preserved with most of her original fittings and contents in a special museum. Courtesy of the *Vasa* Museum, Stockholm.

SPACE RESEARCH. Lunar module pilot, Edwin Aldrin, descends the steps of the module ladder to walk on the Moon. This picture was taken by the commander of the Apollo XI mission, Neil Armstrong, with a 70 mm lunar surface camera. On the right, a Saturn vehicle is rolled out for the Apollo IX preliminary mission to evaluate the spacecraft lunar module system's performance during a manned Earth orbital flight.

Courtesy of NASA.

and trading enterprises. Agriculture is carried on mainly in collective farms (q.v.), but some farms are State-owned. Peasants and craftsmen may work on their own account, provided they do not employ the labour of others. Trade in the countryside is largely in the hands of co-operative societies. Industry and agriculture are run in accordance with a plan, usually covering 5 years, drawn up by the State Planning Commission. *See also* articles on the constituent republics.

SOYA (soi'ah) **BEAN.** Leguminous plant (*Glycine hispida*), native to E. Asia, particularly to Japan and China. It is grown as a seed or forage crop, and is used as hay or in oil-form for human consumption. A more recent product has been soya flour.

SPA. Town in Liège prov., Belgium, famous since the 14th cent. for its mineral springs. It has given its name to similar centres elsewhere. Pop. (1962) 9,040.

SPAARK (spahk), Paul-Henri (1899–). Belgian Socialist. From before the S.W.W. he consistently held high office, being For. Min. 1936–8, P.M. 1938–9, For. Min. 1939–46, P.M. and For. Min. 1947–9, For. Min. 1954–7, and assistant P.M. and For. Min. 1961–6. An ardent advocate of international peace, he was awarded the Charlemagne prize in 1957.

SPACE. The continuum which incl. the galaxies. It used to be thought that S. must be empty, but this is now known not to be the case. In the Solar System, there is a great deal of thinly spread matter; there is also a vast amount of gas and dust between the stars of our Galaxy, and probably there is also appreciable matter in intergalactic space. The absorption of light by this tenuous material has to be taken into account in any astronomical investigation involving large distances.

Air S. is the volume of space between the surface of the earth and an altitude of 80,000 metres. Beyond is Outer S., and in 1967 Britain, Russia and the U.S.A. signed a treaty banning nuclear weapons there, and the use of the Moon and other celestial bodies for

military purposes. Europe's chief organizations for space research are Eurospace (non-profit-making assocn. of cos. of 9 countries); European Launcher Development Organization (ELDO, 1962); European Space Research Organization (ESRO, estab. 1962) and the International Committee on Space Research (COSPAR, estab. 1958) – all with H.Q. in Paris.

Space Research earth satellites and S. probes incl.: *Sputnik I* (U.S.S.R.) 4 Oct. 1957 measured temperatures and atmospheric density and orbited at 142–558 m. in 96.2 min.; *Explorer I* (U.S.A.) 31 Jan. 1958 discovered Van Allen radiation belt and orbited at 217–1,100 m. in 106.2 min.; *Vostok I* (U.S.S.R.; Gagarin; q.v.) 12 April 1961, first manned space ship, recovered after single orbit in 89.1 min. at 109–88 m.; *Friendship 7* (U.S.A.; Lieut. Col. Glenn) 20 Feb. 1962, 3 orbits in 4 hr. 40 min. at 100–160 m.; *Telstar* (U.S.A.) 10 July 1962, communications satellite which later transmitted the first live television pictures between

U.S. and Europe, circling the earth at 158 min. intervals at 593–3,502 m.; *Vostok 6* (U.S.S.R.) 16–19 June 1963, the first woman space traveller, Lt. Valentina Tereshkova, 48 orbits of Earth; *Voskhod I* (U.S.S.R.) 12–13 Oct. 1964, first space ship with more than one person aboard (3 men), 16 orbits in just over 24 hr.; *Voskhod II* (U.S.S.R.) 18 March, 1965, Pavel Belyaev and Alexei Leonov (first man to walk in space; *Luna 9* (U.S.S.R.) 3 Feb. 1966, first unmanned soft landing on the Moon; *Gemini X* (U.S.A.) 18–21 July, 1966, docking of space ship and target vehicle; Cape Kennedy, U.S.A., 27 Jan. 1967 three astronauts burned to death testing a spacecraft on the ground; *Soyuz 1* (U.S.S.R.) 24 April 1967, cosmonaut Vladimir Komarov, first man to be killed in space when his ship crashlanded; *Cosmos 186* and 188 (U.S.S.R.) 30 Oct. 1967, unmanned spacecraft achieved automatic link-up, separation and departure in different orbits; *Zond 5* (U.S.S.R.) 15–21 Sept. 1968, first unmanned craft to go round Moon and back to Earth; *Apollo VIII* (U.S.A.) 21–27 Dec. 1968 first manned craft to go round Moon and return – Frank Borman, James A. Lovell and William A. Anders; *Soyuz 4* and 5 (U.S.S.R.) 14–18 Jan. 1969, formed first orbiting space station; *Apollo XI* (U.S.A.) achieved manned landing on the Moon; *see* LUNAR PROBE and MODULE. *See also* MARS and VENUS.

SPAIN (Estado Español, Spanish State). State of S.W. Europe, occupying most of the Iberian peninsula, from the Pyrenees to the Strait of Gibraltar. Most of its area is occupied by the Meseta, a plateau sloping to the S.W. and crossed by several mountain ranges, incl. the Sierra de Guadarrama, the Sierra de Toledo, and the Sierra Morena. This plateau is bounded on the S. by the Sierra Nevada, where the Mulhacen (11,411 ft.) is the highest mountain in Spain; and to the N. by the Pyrenees and by the Cantabrian mountains. The Guadalquivir, Guadiana, Tagus, Douro, and Mino flow to the Atlantic; and the Ebro and its tributaries to the Mediterranean. The Balearic and Canary

their culture are their wall paintings, e.g. at Altamira and Lascaux. They were contemporary with the mammoth, woolly rhinoceros, reindeer, and cave bear, and lived before and during the ice ages. Neolithic man lived in a milder climate, and made the first steps in agriculture, domestication of animals, weaving, and pottery making. In Europe the S.A. merged into the Bronze Age about 2000 B.C.

STONECHAT. Small bird (*Saxicola rubicola*) of the thrush family (Turdidae) frequently found in Europe and Asia. The male has a black head and throat, tawny breast, and dark back; the female has a brown head and a speckled throat.

STONEHENGE. Prehistoric megalithic monument on Salisbury Plain, near Amesbury, Wilts. Several

STONEHENGE. The local sandstone, or 'sarsen', was used for the 18 ft. by 7 ft. uprights which each weigh 26 tons, and were skillfully made slightly convex to give 'true' perspective. A secondary circle and horseshoe within the sarsens was built of bluestones, originally brought from Pembrokeshire.

Photo: A. W. Kerr.

different monuments of differing date have been erected on the site from c. 1900 B.C., and the structure illustrated belongs to the third period c. 1500–1400 B.C. Its main feature consisted originally of a circle of 30 upright stones, their tops linked by lintel stones to form a continuous circle about 100 ft. across. Within the circle was a horseshoe arrangement of 5 trilithons (each of 2 uprights plus a lintel, but set as separate entities), a so-called 'altar stone' – an upright pillar – on the axis of the horseshoe which was open to the north-east, etc. Though probably having a religious purpose, S. was not a Druid temple; the stones are so arranged that they could have been used to make astronomical calculations.

STOOLBALL. An ancient game, considered the ancestor of cricket, the main differences being that in S. bowling is underhand, and the ball is soft.

STOPEs, Marie Carmichael (1880–1958). British advocate of birth control. B. in Edinburgh, she m. in 1918 H. V. Roe and in 1921 founded in London the mothers' clinic for birth control. Her publications incl. plays and verse as well as such best-sellers as *Married Love* (1918).

STORK. Bird, of which the best-known species is the white S. (*Ciconia alba*), which is encouraged to nest on roofs as a symbol of good luck and fertility, hence the popular association with childbirth. About

bronze-black above and is also found throughout most of Europe. The New World has a single S. American species.

STORM, Theodor (1817–88). German author. A lawyer, he devoted himself to literature from 1880, and wrote lyric verse and stories such as the idyllic *Immensee* (1851) and the tragic *Der Schimmelreiter* (1888: *The Rider of the White Horse*).

STORNOWAY. Fishing port and chief town of the Outer Hebrides, a burgh on the E. coast of Lewis, Ross and Cromarty, Scotland. S. was founded by James VI (I of England). Pop. (1961) 5,221.

STOTHARD (stodh'ahrd), Thomas (1755–1834). British artist. His subject pictures, e.g. 'The Canterbury Pilgrims' were colourful and popular.

STOURBRIDGE. English industrial town (bor.) in Wores, 14 m. W. of Birmingham. Glass and fire bricks are manufactured. Pop. (1961) 43,917.

STOUT, Sir Robert (1844–1930). New Zealand Liberal statesman. B. in the Shetlands, he emigrated to New Zealand in 1863, was P.M. 1884–7, and Chief Justice 1899–1926.

STOW, John (c. 1525–1605). English antiquary. B. in London, he wrote chronicles and a detailed and interesting *Survey of London* (1598).

STOWE, Harriet Beecher (1811–96). American author of the anti-slavery novel, *Uncle Tom's Cabin*, first pub. as a serial 1851–2. She was a dau. of Lyman Beecher (q.v.), and m. in 1836 C. E. Stowe, a theological prof.

STOWE. English public school, founded 1923 in S. House (c. 1660), 3 m. N. of Buckingham, until 1889 the seat of the dukes of Buckingham and Chandos.

STRABO (c. 63 B.C.–A.D. 24). Greek geographer. B. in Pontus, he travelled widely to collect material for his *Geography*, which has survived almost entire.

STRACHEY, Giles Lytton (1880–1932). British author. Ed. at Trinity Coll., Oxford, he wrote the attractive *Landmarks in French Literature* (1912), but won fame and set a vogue by his graceful denigration in *Eminent Victorians* (1918) of Cardinal Manning, Florence Nightingale, Thomas Arnold, and Gen. Gordon. In *Queen Victoria* (1921), however, he was almost conquered by his subject.

STRADIVARI (strahd'evah'rē), Antonio (1644–1737). Italian violin-maker, who set up his workshop at Cremona during the 1660s. His sons carried on his work, but the secret of his soft varnish was never revealed.

STRAFFORD, Thomas Wentworth, earl of (1593–1641). English statesman. He sat in James I's and Charles I's parliaments, and was among the leaders of the opposition. In 1628 he went over to the king's side and was created viscount. Wentworth. As Lord Deputy of Ireland from 1632 he pursued a despotic policy. On returning to England in 1639 he became Charles's chief adviser, pressed him to take repressive measures, and in 1640 received an earldom. When the Long Parliament met he was impeached and beheaded.

STRAITS SETTLEMENTS. Former British crown colony, 1867–1946, a prov. of the East India Co., 1826–58, consisting of Singapore, Malacca, Penang, Cocos Is., Christmas Is., and Labuan (qq.v.).

STRALSUND (strahl'soond). Baltic port of Rostock dist., E. Germany, opposite the island of Rügen. Founded 1209, it was a Hanse town. Pop. (est.) 50,000.

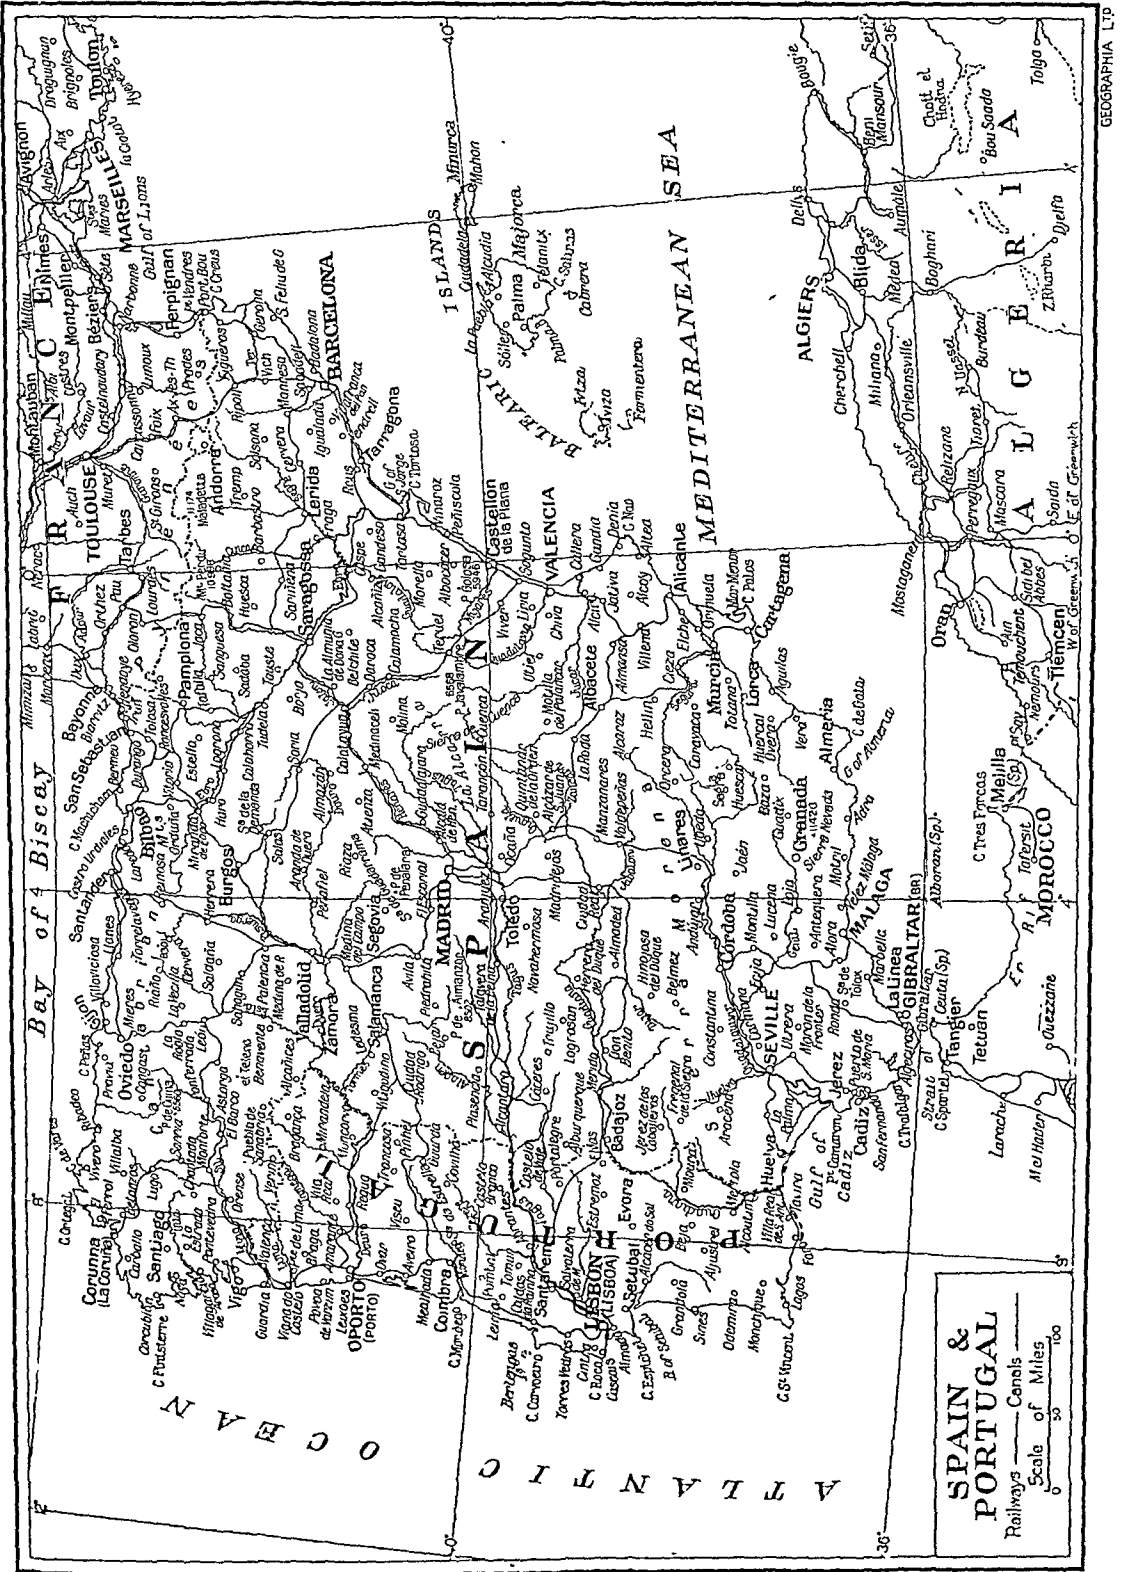

STRANG, William (1859–1921). Scottish artist. He is remembered for his realistic portrait etchings of Hardy, Kipling and others. He settled in London in 1875 and became R.A. in 1921.

STRANG, William, 1st baron (1893–). British diplomat. Entering the Foreign Office in 1919, he was adviser to the C.-in-C. of the British forces of occupation in Germany 1945–7, permanent Under-Sec. of the German section at the Foreign Office 1947–9, and then until his retirement in 1953 permanent Under-Sec. of

HOUSE STORK

3 ft. high, it has striking black and white plumage and red bill and legs. It winters in Africa, returning to Europe (not to Britain) in spring. The black S. (*C. nigra*) nests in trees and though white beneath, is

(18th and 19th cents.); *Modern* Oscar Niemeyer (q.v.) and Antonio Gaudi.

Sculpture. The most outstanding sculptors incl. Borgeña (d. c. 1543), Berruguete (c. 1486–1561), Gregorio Fernandez (1566–1636), Montañes (1564–1649), and Alonso de los Rios.

SPANISH GUINEA. The Spanish overseas provs. of Fernando Po and Rio Muni, which in 1968 became the independent unitary state of Equatorial Guinea (q.v.).

SPANISH SAHARA. Spanish overseas prov. on the Atlantic coast of W. Africa. The cap. is El Aaiún. Morocco and Mauretania lay claim to the area, which is rich in phosphates. Area 102,680 sq. m.; pop. (1967) 48,000.

SPANISH SUCCESSION. Name given to the war of 1701–14 between Britain, Austria, the Netherlands, Portugal, and Denmark on the one side, and France, Spain, and Bavaria on the other, that was caused by Louis XIV's acceptance of the Spanish throne on behalf of his grandson, Philip, in defiance of the Partition Treaty of 1700, whereby it was to pass to the archduke Charles of Austria. The French attempted in 1704 to end the war by a march on Vienna, but were defeated at Blenheim by Marlborough and Eugene of Savoy. The main campaigns were fought in Belgium, where Marlborough won victories at Ramillies (1706), Oudenarde (1708), and Malplaquet (1709). The Allies invaded Spain in 1705, and twice occupied Madrid, but failed to hold it. By the Treaties of Utrecht (1713), and Rastatt (1714), the Allies recognized Philip as king of Spain; Gibraltar, Minorca, and Nova Scotia were ceded to Britain, and Belgium, Milan, and Naples to Austria.

SPANISH TOWN. Town in Jamaica, 15 m. W.N.W. of Kingston. Founded by Diego Columbus c. 1525, it was the cap. of Jamaica 1535–1871. Pop. (est.) 12,000.

SPARK, Muriel. Scottish novelist. B. in Edinburgh, she is a convert to Catholicism, and exercises a stylish gift of enigmatic satire in *Memento Mori* (1959), and *The Prime of Miss Jean Brodie* (1961), the story of an Edinburgh school mistress.

SPARROW. Bird of the genus *Passer* in the family Fringillidae. The house S. (*P. domesticus*) is numerous in N. Europe and Asia, and is naturalized in N. America, Australia and New Zealand. The tree S. (*P. montanus*), less common in Britain, is the prevalent species in parts of Europe and in China. Rearing several families a year, the S. rapidly becomes a pest when natural enemies are few. The American Ss. are buntings.

SPARROW-HAWK. Genus (*Accipiter*) of birds in the family Falconidae. The common S. (*A. nisus*) is a woodland bird, preying on smaller birds and mammals, and so much persecuted by gamekeepers.

SPARROW-HAWK

SPARTA. Ancient Greek city state in Peloponnese, on the r. Eurotas c. 20 m. from the sea. The Dorians formed the ruling race, the original inhabitants being divided into perioeci, tributaries without political rights, and helots or serfs. The state was ruled by 2 hereditary kings, and under the constitution attributed to Lycurgus all citizens were trained for war from boyhood; hence the Spartans became proverbial for their indifference to pain or death, their contempt for luxury and the arts, and their harsh treatment of the helots. They distinguished themselves in the Persian and Peloponnesian wars, but in the 2nd cent. B.C. sank into insignificance.

S., the modern town founded in 1834, is cap. of Laconia nome. Pop. (1961) 7,900.

SPARTACUS (d. 71 B.C.). A Thracian gladiator, who in 73 B.C. led a revolt of gladiators and slaves at Capua. After defeating several Roman armies, he was himself defeated and killed by Crassus, and thousands of his followers were crucified. The *Spartacus League*, a German Socialist organization founded by Liebknecht in 1916 to carry on anti-war activity, in 1919 became the German Communist Party.

SPARTE. Another form of mod. SPARTA.

SPASTICS. Those suffering from cerebral palsy and who consequently have difficulty in moving their arms and legs, and sometimes in speech and swallowing, too. The condition is caused by interference with the development of the brain while it is actively growing before birth, at birth, or in the first year or so of life. It is not progressive, and good training helps to combat the extent of damage. It is more common in cases of premature birth.

SPEAKER. The title applied to the presiding officer charged with the preservation of order in the legislatures of various countries. In the U.K. the Lord Chancellor fills the office in the House of Lords; in the House of Commons Mr. Speaker is elected each parliament, usually occupying the position for considerable periods. The original appointment dates from 1377.

SPECIFIC GRAVITY. The ratio of the weight of a given volume of a substance at a given temperature to an equal volume of some standard substance, usually at the same temperature. The standard substance for liquids and solids is water, normally at 4°C or 20°C, and is therefore an abstract number independent of units. For scientific work *density*, the mass of unit volume, is preferred.

SPECIFIC HEAT. The quantity of heat required to raise unit mass of a substance by one degree. It is usually expressed in calories per deg. C per gram.

SPECTACLES. A pair of lenses fitted in a frame and worn in front of the eyes to correct or assist defective vision. They are said to have been invented in the 13th cent. by a Florentine monk. Few people found the need for S. until printing was invented, when the demand for them increased rapidly. It is not known when S. were introduced into England, but in 1629 Charles I granted a charter to the Spectacle Makers' Guild. Common defects of the eye corrected by spectacle lenses are short sight or myopia, by concave (spherical) lenses, long sight or hypermetropia by convex (spherical) lenses, and astigmatism by cylindrical lenses, the direction of the axes of the cylinders being specified. Spherical and cylindrical lenses may be combined in one lens. For convenience bi-focal S. provide for correction both at a distance and for reading by combining 2 lenses of different curvatures in one piece of glass. See CONTACT LENS.

SPECTROSCOPY. A branch of physics dealing with methods of excitation, detection and study of spectra (see SPECTRUM), covering the complete range of electromagnetic wavelengths from radio through infra-red, visible light, ultra-violet and X-rays to gamma rays (see FREQUENCY SPECTRUM OF ELECTROMAGNETIC WAVES), and of arrangements in order of the energies of collections of atomic particles (electrons, neutrons, etc.). S. is of fundamental importance and wide application in academic research, industry, medicine and forensic science. It provides a rapid and accurate method of detecting, analysing and identifying minute quantities of materials non-destructively, yielding valuable information on the structure of atoms and molecules and the composition and motions of heavenly bodies.

SPECTRUM. An arrangement in order of magnitude of radiated frequencies of electromagnetic waves, or of the energies of atomic particles. The visible S. was first studied by Newton who showed in 1672 that a band of white light (sunlight) passing through a glass

faire views on social and political problems. and in 1855 *Principles of Psychology* appeared. His *Education* (1861) is still of practical value. In the same year he began his *System of Synthetic Philosophy*, in which he applied the evolutionary principle of 'the change from homogeneity to heterogeneity' to the whole field of human knowledge. The chief of the 10 vols. are: *First Principles* (1862), and *Principles of biology, psychology, sociology, and ethics*. Other works are *The Study of Sociology*, *Man v. the State*, *Essays*, and an autobiography.

SPENCER, Sir Stanley (1891–1959). British artist. B. at Cookham-on-Thames, where he spent most of his life apart from his service in the F.W.W., he made village life there his means of interpreting the Christian faith to which he held, e.g. 'Christ Carrying the Cross' and 'Resurrection' (both in the Tate Gallery). His major work is the series of mural paintings for the oratory of All Souls' at Burghclere in Berks, completed 1933. His work combines regard for detail with disregard for reality, achieving a sense of innocence. He was knighted in 1959. In 1962 the *S.P. Gallery*, devoted to his work, was opened at Cookham. His brother Gilbert S. (1892–) is a landscape artist.

SIR STANLEY SPENCER
A self-portrait.

SPENDER, Stephen (1909–). British poet, the nephew of John Alfred S. (1862–1942), editor of the *Liberal Westminster Gazette* 1896–1922. Ed. at Univ. Coll., Oxford, he founded with Cyril Connolly the magazine *Horizon* (of which he was co-editor 1939–41) and 1953–67 was co-editor of *Encounter*. His vols. of verse, characterized by introspective sensitivity, incl. *Twenty Poems* (1930), *Vienna* (1934), *The Still Centre* (1939) and *Poems of Dedication* (1946). Other works incl. the verse drama *Trial of a Judge* (1938), the autobiography *World Within World* (1951), and his joint editorship of *English and American Poets and Poetry* (1963).

SPENGLER (shpeng'ler), Oswald (1880–1936). German philosopher. In his *Decline of the West* (1918), and his political writings, he maintained civilization was doomed, and glorified primitive man. He was much admired by the Nazis.

SPENSER, Edmund (1552–99). English poet. B. in London, he was ed. at Cambridge, entered the service of the earl of Leicester, and in 1579 pub. *The Shepherd's Calendar*. In 1580 he became secretary to the Lord Deputy in Ireland, and at Kilcolman Castle completed the first 3 books of the great moral allegory *The Faerie Queene* (1590). He twice visited England in the vain hope of preferment at court. In 1598 Kilcolman Castle was burnt down by rebels, and S. with his family narrowly escaped. Three further books of *The Faerie Queene* were pub. in 1596, but the remaining 6 were probably lost in the fire. He d. in London, and was buried in Westminster Abbey. S.'s other works incl. the elegy on Sidney, *Astrophen* (1586); the love sonnets or *Amoretti* and the *Epithalamion* (1595); and a prose *View of the Present State of Ireland*. The modern reader is often deterred by the element of allegory, but S. remains the 'poet's poet' in his versification, richness of language, and fertile imagery.

SPERMACELE. Glistening wax-like substance, not a true oil, which is contained in the numerous cells of the huge, almost rectangular, S. 'case' in the head of the sperm whale. It was once much in demand for candles and is today used in ointments. *Sperm oil*, a mixture of sperm whale oil and S., is readily absorbed by the skin and is used in lipsticks and kin creams, and also as a lubricant for submarine

and aeroplane engines, and in the manufacture of detergents. For Sperm Whale see CACHALOT.

SPEYER (shpīr). Ancient city in Rhineland-Palatinate, Germany, on the Rhine, 16 m. S. of Mannheim. The name Protestant originated here, from the protests of the Lutherans to the diet of Speyer, 1529. Pop. (est.) 34,000.

SPEZIA (spet'sē-ah), La. City of Liguria, from 1861 Italy's leading naval harbour. Shelley was drowned in the Gulf of S., 1822. Pop. (1961) 121,191.

SPHINX (sfinks). A fabulous monster, represented in Egyptian art as a lion with a man's head. It also figures in the art of Greece, Assyria, Persia, etc. The best-known example is the Great S. at Gizeh, Egypt, 189 ft. long, built c. 2900–2750 B.C.

SPICE ISLANDS. Old name for the **MOLUCCAS**.

SPICES. Aromatic vegetable substances used as condiments and for flavouring food. They are obtained from tropical plants, and include pepper, cayenne pepper, nutmeg, ginger, and cinnamon.

SPIDER. Animal of the order Arachnida – not an insect – in which the head and breast are merged to form the cephalothorax, connected to the abdomen by a characteristic narrow waist. On the under-surface of the abdomen are the spinnerets from which a viscid fluid is exuded which hardens on exposure to the air to form silky threads, used to spin webs – in which the S. nests and catches its prey – and as a safeguard against falling. Species of particular interest incl. the common garden S. (*Aranea diadema*) which spins webs of remarkable beauty; the zebra S. (*Salticus scenicus*), a longer-sighted species which stalks its prey and has pads on its feet which enable it to walk even on glass; the poisonous tarantula and black widow (qq.v.); the water S. (*Argyroneta aquatica*) which fills a 'diving bell' home with air trapped on the hairs of the body; and the largest members of the group, the bird-eating Ss. of S. America (*Mygale*),

SPIDERS. 1, *Salticus scenicus* (zebra spider); 2, *Tetragnatha solandri*; 3, *Tibellus oblongus*; 4, *Ero theoracica*; 5, *Evarcha falcata*; 6, *Araneus pyramidalis*; 7, *Araneus diadematus* (garden spider); 8, *Araneus quadratus*.

with bodies c. 2 in. long and a leg-span of a foot. Ss. are generally useful to man in their destruction of harmful insects and an acre of English grassland may contain c. 2½ million.

SPIKENARD. Perennial herb (*Nardostachys jatamansi*), of the family Valerianaceae, also called nard, the source of a famous perfume used in ointments by eastern peoples and the Romans.

SPILLANE, Mickey (1918–). American writer. B. in Brooklyn, N.J., he began by writing for pulp magazines and became known for violent crime novels featuring Mike Hammer, the 'one-man police force', e.g. *Vengeance is Mine* and *The Long Walk*.

SPILSBURY, Sir Bernard Henry (1877–1947). British authority on forensic medicine. Home Office

complex Ss. are colonized, the body cavity being lined with cells which absorb nutritious material in the water, or have reproductive functions. Ss. are classified according to the chemical nature and arrangement of the spicules into Calcareous Ss., Glass Ss., Common Ss., Four-rayed Ss., Fleishy Ss., Single-rayed Ss., and Horny Ss. Most Ss., are marine, but some are found in fresh water. The toilet S. is the prepared skeleton of a colony.

SPONTINI, Gasparo Luigi Pacifico (1774–1851). Italian composer. B. in Ancona, he spent many years in Paris and Berlin and is best known for his operas, *La Vestale* and *Agnes von Hohenstaufen*.

SPOONBILL. A family of birds, Plataleidae, characterized by their long, flat bills, dilated at the tip in the shape of a spoon.

SPOONER, William Archibald (1844–1930). British scholar. Warden of New Coll., Oxon, 1903–24, he was famed for lapses of the tongue, e.g. 'Kinquering congs their titles take'. These were exaggerated by repute, and similar errors became known as Spoonerisms.

SPORADES (spor'adēz). Alternative name for the Dodecanese (q.v.).

SPORE. The one-celled reproductive body of Cryptogams or flowerless plants. They are generally light enough to be carried by the wind. Under certain conditions they are produced by bacteria.

SPOROZOA. A large division of unicellular parasitic protozoa. They readily produce reproductive spores which are transmitted from one host to another. Many of them cause serious diseases, such as malaria and sleeping sickness.

SPRAIN. An injury to ligaments or tendons round a joint without dislocation. Its usual cause is a wrench or twist.

SPRAT. European fish (*Clupea sprattus*) of the herring family. The full-grown S. is about 4 in. long, and occurs in large numbers in British seas.

SPRING, Howard (1889–1965). British author. B. in Cardiff, he became a journalist and critic, and estab. his reputation as a novelist with *Shabby Tiger* (1934), *My Son, My Son!* (1938), *Fame is the Spur* (1940), *The Houses in Between* (1951), and *I Met a Lady* (1961). His autobiographical vols. incl. *Heaven Lies About Us* (1939).

SPRINGBOK. Species of S. African antelope (*Gazella eucore*), about 30 in. high and with black, lyrate horns. The coat is tawny, but a stripe of white, erectile hair runs down the middle of the back and the underparts are also white. The name derives from the animal's sudden leaps in the air. It is the national emblem of S. Africa, and her national football team and her soldiers are known as Ss.

SPRINGFIELD. Name of a number of places in the U.S.A., the chief of which are: (1) Cap. of Ill., on the Sangamon, 17 m. S.W. of Chicago. It was the home of Abraham Lincoln 1837–61, and is a manufacturing and agricultural centre, with bituminous coal mines in the vicinity. Pop. (1960) 83,271. (2) City of Mass., on the Connecticut; settled in 1636, it has many industries. Pop. (1960) 174,463. (3) City of Mo., an agricultural centre founded 1830. Pop. (1960) 95,865. (4) City of Ohio, 22 m. E.N.E. of Dayton. Founded 1799, it has heavy industry, and

SPRINGBOK. Remarkable for its periodic migrations, the springbok formerly occurred in such numbers that the herds might be half a mile across and take several hours to pass a given point. This specimen is in the Etosha Pan Game Reserve in S.W. Africa.

Courtesy of Satour.

makes leather goods, paper products, measuring instruments, etc. Pop. (1960) 82,723.

SPRING-TAILS or **Collembola**. Order of wingless insects, belonging to the section Apterygota, commonly known as Ss., from their having the cerci on the abdomen modified into a forked organ which enables the insect to jump. Widely distributed, they may feed on decaying vegetable matter or (in some species) on the living plant.

SPRUCE

SPRUCE. Coniferous trees in the genera *Picea* and *Tsuga*. The Norway S. (*P. excelsa*) and the hemlock S. (*T. canadensis*) are important timber-trees.

SPURGE. Genus of trees and shrubs in the family Euphorbiaceae. Many have fleshy leaves and a milky juice.

SPURGEON, Charles Haddon (1834–92). British Nonconformist. A pastor at 18, he was renowned as a preacher, and was minister of the Metropolitan (S.'s) Tabernacle, specially built for him in London, from 1861: his sermons sold in enormous quantities.

SPURN HEAD. Promontory on the Yorkshire coast, England, forming the N. shore of the Humber estuary.

SPURS, Battle of the. Victory won by Henry VIII at Guinegate, N.W. France, in 1513; the name recalls the speed of the French retreat.

SPY. See SECRET SERVICE.

SQUASH. See PUMPKIN.

SQUASH RACKETS. See RACKETS.

SQUID. Group of marine cephalopod molluscs. The common S. (*Loligo vulgaris*) of the Mediterranean extends in the Atlantic to British waters: the 2 long tentacles are used to seize its prey and the 8 smaller to hold it while feeding. Origin of many tales of sea monsters in the N. Atlantic is the giant S. (*Architeuthis princeps*) which may reach a total length of 50 ft. The flying S. (*Ommastrephes bartrami*) leaps on the surface rather than flies. A number of species carry light organs at certain points on the body and produce striking phosphorescent effects.

SQUIRE, Sir John Collings (1884–1958). British poet. Founder-editor of the *London Mercury* 1919–34, he was knighted in 1933, and as one of the Georgian poets pub. vols. of pleasing verse, incl. such excellent parodies as *Steps to Parnassus* (1913).

SQUIRE or **Esquire**. Originally a young man training for knighthood, who acted as attendant on a knight. From the later Middle Ages the term was loosely applied to a rank between those of knight and gentleman; hence, 'esquire' is used in England after the surname on letters, etc., purely as a courtesy title.

SQUIRREL. Family of rodents (Sciuridae). The common or red S. (*Sciurus vulgaris*) occurs throughout Europe and northern Asia: the fur is a rich red, and the tail handsomely bushy. Omnivorous, it rears its young in nests or 'dreys', and although less active in winter, when it relies for food mainly on stores of nuts, etc., made in the summer, does not hibernate. In Britain the red S. has been almost entirely superseded by the larger

FLYING SQUID

Commissars, a position equivalent to P.M. He was largely responsible for Soviet strategy during the S.W.W., and received the rank of marshal of the Soviet Union in 1943, and that of generalissimo in 1945. He met Churchill and Roosevelt at Tehran in 1943 and at Yalta in 1945, and took part in the Potsdam conference. His writings incl. *Foundations of Leninism* and *Dialectical and Historical Materialism*. After his death his 'cult of personality' and the harshness of his one-man rule were condemned. By his 2nd wife, Nadezhda Alliluyeva, S. had a dau. Svetlana (1925–), who left Russia 1967 and pub. memories of her father in *Twenty Letters to a Friend* (1967).

STALINGRAD. See VOLGOGRAD.

STAMBOUL. See ISTANBUL.

STAMP. See PHILATELY and POST OFFICE.

STANDARD. See FLAG.

STANFORD, Sir Charles Villiers (1852–1924). Irish composer. As prof. of composition and orchestral playing at the R.C.M. from 1882 and of music at Cambridge from 1887, he taught John Ireland, Eugene Goossens, Vaughan Williams, Gustav Holst, etc. His own works are little performed.

STANHOPE (stan'op), Lady Hester (1776–1839). British traveller. Niece to William Pitt, she acted as his private sec., but on his death left England and eventually settled in the Lebanon nr. Sidon, where she held sway over the local tribes: Kinglake (q.v.) was entertained by her, as described in *Eothen*.

STANISLAVSKY, Constantine (1863–1938). Stage-name of the Russian actor-producer Constantine Alexeev. B. in Moscow, he was a founder of the Moscow Art Theatre and excelled as the interpreter of Chekhov and Gorky. His 'method', expressed in *My Life in Art* (1934) and other books, has had an immense influence on modern acting.

STANLEY. See DERBY, EARL OF.

STANLEY, Arthur Penrhyn (1815–81). British Anglican churchman. B. in Cheshire, he was a leader of the Broad Church movement, and was prof. of ecclesiastical history at Oxford 1856–63, when he became dean of Westminster.

STANLEY, Sir Henry Morton (1841–1904). British explorer. B. at Denbigh, reared in a workhouse, and adopted by a cotton broker named S.; he went to New Orleans in 1859, was appointed correspondent for the *New York Herald* in 1867, and was commissioned by Gordon Bennett to go to Africa to find Livingstone. He arrived at Zanzibar in 1871, met Livingstone at Ujiji, and together they explored the N. end of Lake Tanganyika. His book, *How I Found Livingstone* (1872), was a best-seller. He later traced the course of the Congo to the sea, and in 1879 founded the Congo Free State.

STANLEY. Cap. of the Falkland Islands, S. Atlantic, at the extreme E. of the group. Pop. (1962) 1,074.

STAR. A globe of extremely hot gas, radiating because of nuclear processes taking place inside it. The Sun, which is an average star, has a surface temperature of 6,000°C., and a central temperature of between 12,000,000° and 15,000,000°C.; it is at least 6,000 million years old, and will continue radiating in its present form for several thousands of millions of years to come. However, many Ss. are known to be much more luminous than the Sun: S. Doradus, in the southern hemisphere, is equal to at least one million Suns, and yet is so remote that it cannot be seen without a telescope. Even the nearest S., Proxima Centauri, is more than 4 light-years (roughly 25 million million miles) away. The Ss. are of different types, and are divided broadly into Giant and Dwarf branches; the Sun is classed as a dwarf. No telescope

STARFISH

yet constructed will show a S. as anything but a point of light, and our knowledge of them is gained from studies carried out with instruments based upon the principle of the spectroscope. It is thought that many Ss. may well have planetary systems essentially similar to our own Solar System, though direct proof is lacking at present. See charts pp. 996–8.

STARCH. A widely distributed carbohydrate, that occurs in granular form in cereals and pulses, fruits of leguminous plants, and potato tubers. Separation is achieved by macerating potatoes, and fermenting grains. The white powder is then subjected to chemical processes which suit it for use as a stiffener in the textile, paper, and laundering industries.

STAR CHAMBER. Tribunal consisting of members of the king's council which met in an apartment of Westminster Palace, which had a starred ceiling. Under the Tudors it dealt with offenders strong enough to defy the ordinary courts, and was generally respected for its speedy administration of justice. Its harsh persecution of Puritans under Charles I made it unpopular, and in 1641 it was abolished.

STAR CLUSTER. A group of stars, much more closely crowded than is usual in the Galaxy. Cs. may be 'loose' or 'open', such as the Pleiades (Seven Sisters), or 'globular', such as Omega Centauri. Among famous naked-eye open clusters are the Pleiades (q.v.), the Hyades, and Praesepe. Large numbers of telescopic clusters are known.

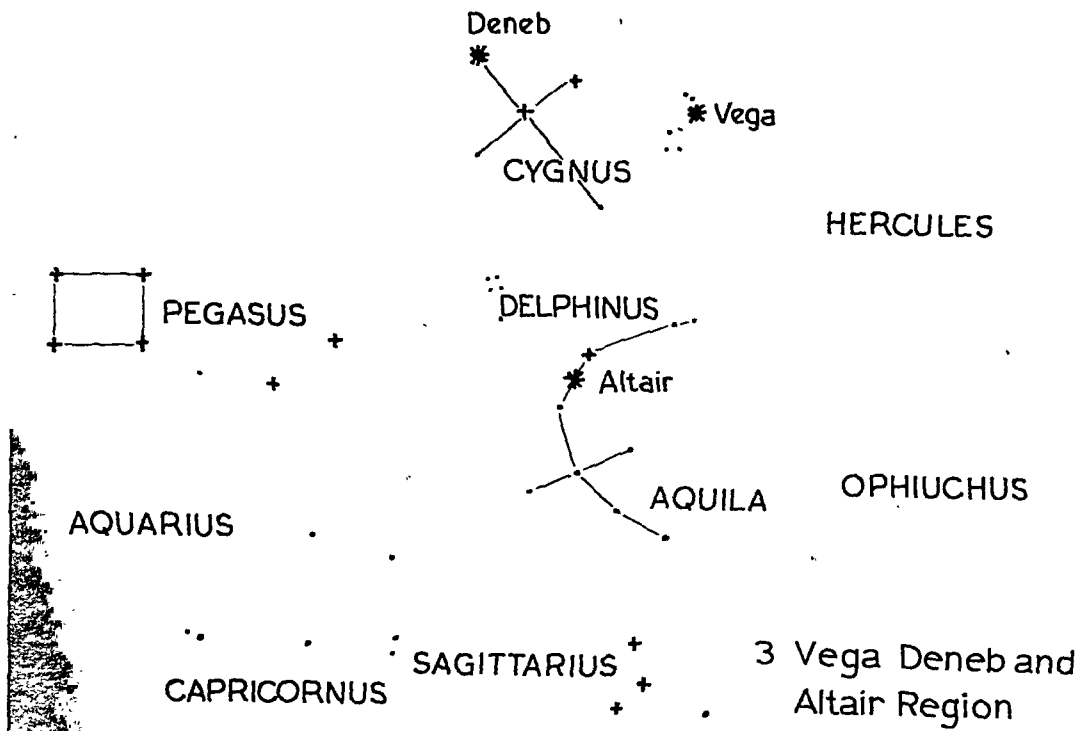

STAR-FISHES. Class of echinoderms, Asteroidea. The body is extended into 5 arms, and is covered with spines and small pincer-like organs. There are also a number of small tubular processes on the skin surface which assist in respiration, and small tube-feet sometimes with suckers at the end. The poisonous and predatory 'crown of thorns' S. of the Pacific, once rare, multiplied disastrously from 1960, destroying large areas of coral reef, e.g. 100 sq. m. of Australia's Great Barrier Reef in less than 10 years and a large section off the coast of Guam.

STARK, Freya (1893–). English traveller, author of many notable books on Arab countries and their people incl. *Baghdad Sketches* (1933), and the autobiographical *Travellers' Prelude* (1950) and *Dust in the Lion's Paw* (1961). She m. in 1947 the orientalist and historian Stewart Perowne.

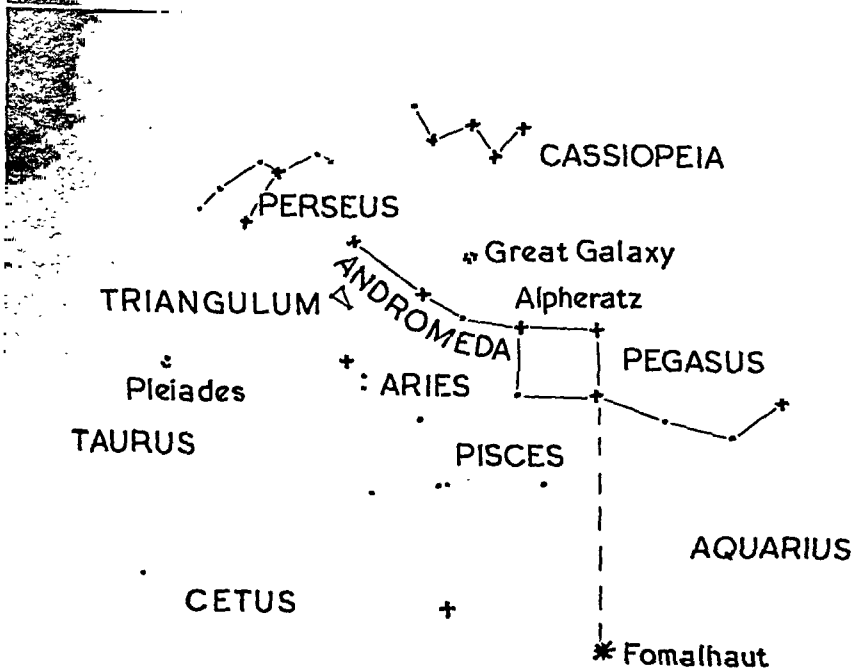

STARLING. Bird (*Sturnus vulgaris*) common in N. Europe and Asia and naturalized in N. America from the late 19th cent. The black, speckled plumage is

STARLING. The short square tail, large feet and pointed wings of the starling make it easily recognizable in the air. Photo: G. Ronald Austing.

3 Vega Deneb and Altair Region

4 Pegasus Region

glossed with green and purple. Its own call is a bright whistle, but it is a mimic of the songs of other birds. Strikingly gregarious in feeding, flight and roosting, it often becomes a pest in large cities, e.g. London, where it becomes attached to certain buildings as 'dormitories', returning each night from omnivorous foraging in the countryside.

STASSEN, Harold Edward (1907–). American Republican politician. B. in Minnesota, he was admitted to the Bar there in 1929, and was governor 1939–43. In 1948 and 1952 he was candidate for the Republican nomination for the presidency, was director Foreign Operations Admin. 1953–5, and special assistant to Eisenhower for disarmament 1955–8.

STASSFURT (shtahs'foort). Town of Magdeburg dist., E. Germany, 18 m. S. of Magdeburg, famous for its salt beds. Pop. (est.) 29,000.

STATE DEPARTMENT. See FOREIGN RELATIONS.

STATEN (stat'n) ISLAND. Island in New York harbour, U.S.A., constituting the bor. of Richmond. Pop. (1960) 221,991.

STATIC ELECTRICITY. Electric charge acquired by a body by means of electrostatic induction or friction. Its effects are due to the electrostatic forces produced by the charge. Separation of electric charge is often brought about in everyday life by rubbing different materials together, and this is rendered visible by the sparks produced on combing one's hair in the dark or removing a nylon vest. S.E. produces serious effects in many industries, e.g. in printing works where measures have to be taken to discharge the S.E. to prevent papers sticking together. In other processes S.E. is useful as in paint spraying where the parts to be sprayed are charged with electricity of opposite sign to that on the paint droplets, and in xerography (q.v.).

STATICS. The branch of mechanics concerned with the behaviour of bodies at rest and forces in equilibrium, and distinguished from dynamics.

STATIONERY OFFICE, H.M. An office estab. in 1786 to supply books, stationery, etc., to British govt. depts., and to superintend the printing of govt. reports, etc., and books and pamphlets in an increasingly wide field from national works of art to industrial and agricultural processes. The corresponding estab. in the U.S.A. is the Govt. Printing Office.

STATIONS OF THE CROSS. A series of pictures or images, usually 14, depicting the closing scenes of the Passion of Christ.

STAUDINGER (stow'dinge), Hermann (1881–1965). German scientist. Prof. of organic chemistry at Freiburg 1926–51, he founded macro-molecular chemistry by researches into the structure of albumen, cellulose, and rubber, and was awarded a Nobel prize 1953.

STAVANGER. Fishing port of S.W. Norway, with shipbuilding, fish canning, soap making, and other industries. Pop. (1967) 79,700.

STAVISKY CASE. French financial scandal. Alexandre S. (1866–1934), made a large fortune by floating fraudulent companies and selling forged bonds, and became owner of several newspapers. When in 1933 his activities were revealed he committed suicide. The discovery that a member of the Chautemps govt. was involved led to the govt.'s fall and the Fascist riots of Feb. 1934.

STEAM. A dry, invisible gas formed by vaporizing water. The visible cloud which normally forms in the air when water is vaporized is due to minute suspended water particles. In this state it is called wet S. The 'saturation temperature' is the temperature at which droplets begin to form from water vapour. S. is widely used in chemical and other industrial processes and for the generation of power.

STEAM ENGINE. A machine which uses steam as the working agent in order to convert heat energy into mechanical work. An account of a S.E. was pub.

by the marquis of Worcester in 1663, and a Frenchman, Papin, described what was unquestionably the first cylinder and piston engine in 1690. Captain Savery patented an engine in 1698. The S.E. was later improved by Newcomen, Beighton, and others, but it remained imperfect until James Watt introduced the separate condenser and air-pump, patented in 1769, and made various other improvements. Richard Trevithick invented the first steam-propelled vehicle in 1801. George Stephenson successfully applied the S.E. to locomotives in 1829 and in 1802 William Symington built the first steamboat, a pioneer attempt which was followed up by Robert Fulton and Henry Bell.

STEARIC ACID ($C_{17}H_{35}COOH$). A saturated fatty acid, soluble in alcohol and ether, but not water. When pure, it is colourless and waxy.

STEARIN ($C_{17}H_{35}COO$)₃.C₃H₇. The name given to the solid first separated on the cooling of many liquid fats or oils; to a mixture of stearic and palmitic acid; and to glycerides of stearic acid.

STEATITE. A hydrous magnesium silicate, usually occurring in beds of metamorphosed serpentine. A massive form of talc, it has a greasy feeling, accounting for its other name, soapstone.

STEBARK. Polish name of TANNENBERG.

STEED (sted), Henry Wickham (1871–1956). British journalist. Foreign correspondent for *The Times* in Vienna 1902–13, he was then foreign editor 1914–19 and editor 1919–22. Owner-editor of the *Review of Reviews* 1923–30, he lectured on central European history at King's Coll., London, 1925–38, and pub. *The Hapsburg Monarchy* (1913), studies of Baldwin and Hitler, *The Press* (1938), etc.

STEEL. Iron containing from 0.1 per cent–1.5 per cent carbon. Mild S., which is used for general structural work, and medium carbon S., used for rails, axles, etc., were formerly made by the Bessemer process (invented in 1856), and subsequently by the open-hearth process of Siemens and Martin (perfected 1864–7). The most recent development in steel making is the expanding use of pneumatic processes for the production of low and medium carbon Ss., mainly the Austrian L.D. and the Swedish Kaldo processes. High carbon Ss., used in cutting tools, etc., are made by electric-arc processes which allow precise control during the refining period, whilst the exceptionally high-alloy Ss. such as high-speed Ss. are melted by induction furnaces.

The mechanical properties of S. can be varied enormously by heat treatment and alloy additions. When special properties such as corrosion resistance (stainless Ss.), wear resistance, high tensile properties, etc., are required, suitable quantities of nickel, chromium, molybdenum, manganese, tungsten, vanadium, etc., are added. See illus. p. 1000.

STEELE, Sir Richard (1672–1729). Irish essayist. B. in Dublin, he entered the guards, and then settled in London, and originated *The Tatler* (1709–11), in which Addison collaborated. They continued their joint work in *The Spectator* (1711–12), and *The Guardian* (1713). He also wrote plays, e.g. *The Conscious Lovers* (1722). He was knighted in 1715.

STEEN (stän), Jan (1626–79). Dutch painter. B. at Leiden, he painted genre pictures from all walks of life e.g. 'The Music Master', and 'Tavern Company'.

STEEN, Marguerite (1894–). British author. She taught dancing, then acted for 3 years with Fred Terry, an experience which paved the way for her biographical *A Pride of Terrys* (1962). Her novels incl. *Matador* (1934: dramatized in collaboration with Matheson Lang in 1936), *The Sun is My Undoing* (1941), and *The Woman in the Back Seat* (1959).

STEEPLECHASE. See HORSE-RACING.

STEER, Philip Wilson (1860–1942). British artist. B. at Birkenhead, he studied in Paris, and was influenced by the Impressionists, becoming a leader (with Sickert) of the English movement. A founder

at Dublin, he is best known for his prose fantasies, *The Crock of Gold* (1912) and *The Demi-Gods*; and vols. of poems beginning with *Insurrections* (1909).

STEPHENSON, George (1781–1848). British engineer. B. near Newcastle, he became engine-wright at Killingworth Colliery, and here built his 1st locomotive in 1814. He also invented a safety lamp in 1815. He was appointed engineer of the Stockton and Darlington Railway, the world's 1st public railway, in 1821, and of the Liverpool and Manchester Railway in 1826. In 1829 he won a £500 prize with his famous 'Rocket'. His son, Robert S. (1803–59), achieved distinction as a civil engineer, constructing railway bridges, notably the high-level bridge at Newcastle, and the Menai and Conway tubular bridges.

STEPHENSON, Sir William (1896–). Canadian industrialist and intelligence expert. B. near Winnipeg, he was an ace fighter in the F.W.W., and in 1922 patented a device for transmitting photos by wireless which made him a millionaire. His business contacts allowed him to keep Churchill informed on Hitler's re-armament programme, and he was invited in 1940 to head British Security Co-ordination (B.S.C.) with its H.Q. in N.Y. Co-operating with Hoover (q.v.) and Donovan, he also helped them to build up the American intelligence service, and was awarded by Truman the Medal of Merit, the 1st foreigner to be so honoured.

STEPNEY. District of the Greater London bor. of Tower Hamlets, on the N. of the Thames, E. of the City. It incl. the Tower, and large docks.

STEPNIAK. Pseudonym of the Russian writer, Sergius Mikhailovitch Kravchinsky (1852–95). He became a revolutionary, and after 1880 lived in exile. His books incl. *Underground Russia* (1883), and the novel *The Career of a Nihilist* (1889).

STEREOPHONIC SOUND. See RADIOGRAM.

STERILIZATION. Destruction of the power of reproduction. A man may be sterilized by tying off the tubes carrying seed from the testicles to the seminal vesicles, a woman by tying the Fallopian tubes. Fertility can be restored by removal of the ligatures, if the tubes are still open. Either sex may be permanently sterilized by cutting out a portion of each tube, or by removing the testicles or ovaries (castration), or by giving them a sufficiently powerful dose of X-rays. Male sterilisation is much used as a birth control measure in India. The word S. is also applied to the killing of bacteria by heat (asepsis) or disinfectants.

STERLING, John (1806–44). Scottish writer, the centre of a literary group incl. Tennyson, J. S. Mill, and Carlyle, who wrote his life.

STERN, G(lady) B(ertha) (1890–). British author. B. in London, she began writing as a child and estab. her reputation with a trilogy of Jewish life, *Tents of Israel*, *A Deputy was King*, and *Mosaic*, collected as *The Rakonitz Chronicles* (1932); the 1st was dramatized 1931 as *The Matriarch*. Later books incl. *Dolphin Cottage* (1962).

STERNE, Laurence (1713–68). Irish writer. B. at Clonmel, Ireland, he took orders in 1737 and became vicar of Sutton-in-the-Forest, Yorks, in the next year. In 1741 he m. Elizabeth Lumley, an unhappy union largely because of his wandering amorous propensities, e.g. his sentimental love affair with Eliza Draper, of which the *Letters of Yorick to Eliza* (1775) is a record. His chief work is *The Life and Opinions of*

Tristram Shandy, Gent. (1760–7), an eccentrically whimsical and bawdy novel which made him a London 'lion'. Also very popular was his *A Sentimental Journey through France and Italy* (1768), born of his journeys abroad in 1762 and 1765 in search of a cure for his tuberculosis.

STETHOSCOPE. Instrument used to ascertain the condition of the heart and lungs by listening to their action. It was invented by R. T. Laënnec (1781–1826), in 1819, and as now used consists of a small plate to be placed against the body and connected by flexible tubes with 2 ear-pieces.

STETTIN (shtetēn'). Ger. form of SZCZECIN.

STETTINIUS, Edward (1900–49). U.S. industrialist and administrator. B. at Chicago, he was lend-lease administrator and special assistant to Roosevelt 1941–3. He was Sec. of State 1944–5, and U.S. representative on the U.N. Security Council 1945–6.

STEVENAGE. English town (U.D.) in Herts, 28 m. N. of London. Dating from medieval times, S. was chosen in 1946 for development as a 'new town'. Pop. (1961) 42,964.

STEVENS, Wallace (1879–1955). American poet. B. in Reading, Penn., and ed. at Harvard and the N.Y. Law School, he became a lawyer, eventually specializing in insurance. His vols. of poems incl. *Harmonium* (1923) – his first and very badly received – *The Man with the Blue Guitar* (1937) and *The Necessary Angel* (1951). A sensuous technician, he had an obscurity that yielded to intimate study.

STEVENSON, Adlai (1900–65). American statesman. B. in Los Angeles, he was ed. at Princeton, and from Northwestern Univ. Law School went on to be admitted to the Bar in 1926. As gov. of Illinois 1949–53 he campaigned vigorously against corruption in public life, and as Democratic candidate for the presidency in 1952 and 1956 was twice beaten by Eisenhower. In 1945 he had been chief U.S. delegate at the founding conference of the U.N.

STEVENSON, Robert (1772–1850). Scottish engineer. B. in Glasgow, he built many lighthouses, incl. that on Bell Rock, 1807–11.

STEVENSON, Robert Louis (1850–94). Scottish author and poet. B. in Edinburgh, he studied at the univ., and became an advocate, but never practised. He travelled on the Continent to improve his health, as recounted in *An Inland Voyage* (1878), and *Travels with a Donkey* (1879). In 1879 he went to the U.S.A., m. Mrs. Osbourne, and returning to Britain in 1880, pub. the vol. of stories, *The New Arabian Nights* (1882), and essays, e.g. *Virginibus Puerisque* (1881), and *Familiar Studies of Men and Books* (1882). Fame came to him with *Treasure Island* (1883), which was followed by *Kidnapped* (1886; with its sequel *Catriona* in 1893), *The Black Arrow* (1888), *The Master of Ballantrae* (1889), *Dr. Jekyll and Mr. Hyde* (1886); and the incomplete *Weir of Hermiston* (1896) and *St. Ives* (1897). The humorous *Wrong Box* and the novels *The Wrecker* and *Ebb-tide* were written in collaboration with his stepson, Lloyd Osbourne (1868–1920). In 1890 he settled at Vailima, in Samoa, where he d. His *A Child's Garden of Verses* appeared in 1885, and his *Letters* in 1899.

STEWART, James (1908–). American actor. B. in Indiana, Pa., he served in the American air force during the S.W.W., and then resumed a career in which his usual film role was the gangly, stubbornly honest, ordinary American, e.g. *Mr. Smith Goes to Washington*.

STEWART, Michael (1906–). British Labour politician. Entering parliament in 1945, he was Under-Sec. of State for War in the Attlee govt. 1947–51, Min. for Education and Science 1964–5, and succeeded Gordon Walker as Foreign Sec. (1965–6), when he followed George Brown as First Sec. of State (1966–8) and Min. for Economic Affairs (1966–7), and as Sec. for Foreign Affairs in 1968.

of parl. and the bank of Sweden. A network of bridges links the islands and the mainland; an underground railway was completed in 1957; there is an airport at Bromma. S. is the usual residence of the king, the seat of most of Sweden's educational institutions and of the Nobel Institute. Industries incl. iron and steel manufacture, engineering, shipbuilding, textile and paper making, sugar refining, printing. Pop. (1966) 781,118.

STOCKPORT. English town (co. bor.) in Cheshire, on the Lancs border, near the Mersey. Cotton goods are manufactured. Pop. (1962) 142,469.

STOCKS. This seven-holed stocks at Winchcomb is said to have been made to give special accommodation for a regular customer — a one-legged drunkard. Photo: George H. Haines.

STOCKS. Wooden device used until the 19th cent. to confine the legs or arms of minor offenders, who were exposed to public ridicule.

STOCKTON-ON-TEES. Former bor. of Durham, England, 5 m. above the mouth of the Tees, which in 1968 was merged in Teesside (q.v.). It has shipbuilding, steel, chemical and other industries.

STOCKWOOD, Arthur Mervyn (1913–). British Anglican churchman. Vicar of the univ. church, Cambridge, from 1955 till he became bp. of Southwark in 1959, he is a prominent modernist. Some of his views have caused much controversy.

STOICS (stō'iks). Greek school of philosophy, founded c. 300 B.C. by Zeno; it derived its name from the Stoa, or porch, at Athens in which he taught. The Ss. were pantheistic materialists who believed that happiness lies in accepting the law of the universe. In ethics they emphasized human brotherhood; their outlook was internationalist, and they denounced slavery. In the 3rd and 2nd cents. B.C. Ss. took a prominent part in Greek and Roman revolutionary movements. After the 1st cent. B.C. Stoicism became the philosophy of the Roman ruling class, and lost its revolutionary significance; outstanding Ss. of this period were Seneca, Epictetus, and Marcus Aurelius.

STOKE-ON-TRENT. English industrial city (co. bor.) in Staffs, formed in 1910 by the amalgamation of Burslem, Hanley, Longton Stoke-upon-Trent, Fenton, and Tunstall. It is the chief centre of pottery making in Britain, the 'Five Towns' of Arnold Bennett's novels. Pop. (1961) 265,506.

STOKE POGES. English village in Bucks, 2 m. N. of Slough. The poet Gray is buried in the churchyard, probably the scene of his 'Elegy'.

STOKER, Bram (i.e. Abraham) (1847–1912). British novelist. He studied pure mathematics at Trinity College, Dublin, qualified as a barrister, and worked in the Irish Civil Service — the Registrar of Petty Sessions Clerk's Department — from 1866 until 1878.

In the latter year he became business manager to Henry Irving, remaining with him for 27 years. His most famous book is *Dracula* (1897), a tale of werewolves and vampires, but he pub. a number of other novels as well as personal *Reminiscences of Henry Irving*.

STOKES, Sir George Gabriel (1819–1903). Irish physicist and mathematician, prof. of mathematics at Cambridge from 1849, and renowned for his researches in the theory of light. He formulated a law for the force opposing a small sphere falling through a viscous liquid, and the c.g.s. unit of kinematic viscosity is named after him.

STOKOWSKI (stokof'ski), Leopold (1887–). American conductor. B. in London of British and Polish parentage, he studied at the R.C.M. and was conductor of the Cincinnati Symphony Orchestra (1909–12) and of the Philadelphia Orchestra (1913–36), becoming an American citizen in 1915. An outstanding experimentalist, he has introduced much contemporary music into the U.S. (notably Mahler's 8th Symphony) and has appeared in several films (e.g. Walt Disney's *Fantasia*, 1940). He conducted the Houston Symphony Orchestra 1955–60 and from 1962 the American Symphony Orchestra.

STOLE. Ecclesiastical vestment of the R.C. Church. It is a narrow strip worn over the shoulders during Mass.

STOMACH. The first receptacle of food after swallowing. It is a bag of muscle situated just below the diaphragm and pear-shaped. Food enters it by the gullet (oesophagus), is digested by the acid juice secreted by the S. lining, and then passes through the pylorus into the duodenum.

STONE AGE. Name given to the period in pre-history before the discovery of the use of metals, i.e. when men's tools and weapons were made chiefly of flint. It is divided into the Old S.A. or Palaeolithic and the New S.A. or Neolithic; in the latter the flint implements were more finely chipped. Sometimes an Eolithic or Dawn Stone Age is distinguished. The
